' ſubject, which ſhould draw reverence and attention ' to be over-ſpangled with lightneſs, I forced, in ex' amples of the Roman gravity and greatneſs; the harſh ' ſeverity of the Lacedemonian government; the riches ' of the Athenian learning, wit and induſtry; and like ' a man that plays divers parts upon ſeveral hints, left ' all the indigeſted crudities, equally applied to kings ' or tyrants: whereas, in every clear judgment, the ' right line had been ſufficient enough to diſcover the ' crooked; if the image of it could have proved cre' dible to men. Now for the ſeveral branches, or diſ' courſes following; they are all members of one, and ' the ſame imperfect body; ſo as I let them take ' their fortunes, like eſſays, only to tempt and ſtir up ' ſome more free genius to faſhion the whole frame into ' finer mould for the world's uſe. The firſt limb of ' thoſe treatiſes, I mean that fabrick of a ſuperſtitious ' Church *, having by her maſterful ambition over em' perors, kings, princes, free-ſtates and councels, with ' her conclave-deceits, ſtrengths, and unthankfulneſs, ' ſpread ſo far beyond my horizon, as I at once gave ' over her, and all her derivations to Gamaliel's infal' lible cenſure, leaving laws, nobility, war, peace †, ' and the reſt, as glorious trophies of our old Pope the ' ſin, to change, reform, or become deformed, ac' cording as vanity, that limitleſs mother of theſe ido' latries ſhould either win of the truth, or the truth of ' them. Laſtly, concerning the tragedies themſelves, ' they were in their firſt creation, three; whereof An' thony and Cleopatra, according to their irregular ' paſſions, in forſaking empire to follow ſenſuality, ' were ſacrificed to the fire: the executioner, the ' author himſelf. Not that he conceived it to be a ' contemptible younger brother to the reſt; but leſt ' while he ſeemed to look over-much upward, he might ' ſtumble into the aſtronomer's pit; many members in ' that creature, by the opinion of thoſe few eyes that ' ſaw it, having ſome childiſh wantonneſs in them, apt ' enough to be conſtrued, or ſtrained to a perſonating ' of views in the preſent governors and government (36).' Towards the latter end of the book, our author ſpeaks again of his burning this tragedy, upon the death of Queen Elizabeth, as follows. ' Thus have I, by the ' reader's patience, given that Ægyptian and Roman ' Tragedy, a much more honourable ſepulture, than ' it could ever have deſerved, eſpecially in making ' their memories attend upon my ſovereign's herſe, with' out any other hope of being, than to wait upon her ' life and death, as their maker did; who hath ever ' ſince been dying, to all thoſe glories of life, which ' he formerly enjoyed, under the bleſſed, and bleſſing ' preſence of this unmatchable Queen and woman (37).' Laſtly, in the concluding chapter of this treatiſe, he reſumes this ſubject of his dramatic compoſitions again, in theſe words. ' Now, to return to the tragedies re' maining, my purpoſe in them was, not with the An' cient, to exemplify the diſaſtrous miſeries of man's ' life, where order, laws, doctrine and authority, are ' unable to protect innocence from the exorbitant ' wickedneſs of power, and ſo out of that melancholy ' viſion ſtir horror, or murmurs againſt Providence: ' nor yet with the Modern, to point out God's reven' ging aſpect upon every particular ſin, to the deſpair ' or confuſion of mortality; but rather to trace out the ' high ways of ambitious governours, and to ſhew in ' the practice, that the more audacity, advantage and ' good ſucceſs ſuch ſovereignties have, the more they ' haſten to their own deſolation and ruin So that, ' to this abſtract end, finding all little inſtruments in ' diſcovery of great bodies to be ſeldom without errors, ' I preſumed, or it rather eſcaped me, to make my ' images beyond the ordinary ſtature of exceſs; where' in again, that women are predominant, is not for ' malice or ill talent to their ſex; but as poets figured ' the virtues to be women, all nations call them by fe' minine names; ſo have I diſcribed malice, craft, ' and ſuch-like vices in the perſons of ſhrews, to ſhew ' that many of them are of that nature, even as we ' are; I mean, ſtrong in weakneſs; and conſequently ' in theſe orbs of paſſion, the weaker ſex commonly the ' more predominant; yet as I have not made all ' women good, with Euripides, ſo have I not made ' them all evil with Sophocles, but mixed of ſuch ' ſorts, as we find both them and ourſelves Again, ' for the arguments of theſe tragedies, they be not ' naked and caſual, like the Greek and Latin; nor, I ' confeſs, contrived with the variety, and unexpected ' encounters of the Italians, but nearer levelled to thoſe ' humours, counſels and practices, wherein I thought ' fitter to hold the attention of the reader, than in the ' ſtrangeneſs, or perplexedneſs of witty fictions; in ' which, the affections or imagination may perhaps ' find exerciſe and entertainment, but the memory and ' judgment no enrichment at all: beſides I conceived ' theſe delicate images, to be over-abundantly furniſhed ' in all languages already.——For my own part, I ' found my creeping genius more fixed upon the images ' of life, than the images of wit; and therefore choſe ' not to write to them, on whoſe foot the black oxe ' had not already trod, as the proverb is, but to thoſe ' only, that are weather-beaten in the ſea of this ' world; ſuch as having loſt the ſight of their gardens ' and groves, ſtudy to ſail on a right courſe, among ' rocks and quickſands; and in this ordaining and or' dering matter and form together, for the uſe of life, ' *I have made thoſe tragedies no plays for the ſtage*; be ' it known, it was no part of my purpoſe to write for ' them, againſt whom ſo many good and great ſpirits ' have already written. But he that will behold ' theſe acts upon their true ſtage, wherein himſelf is an ' actor, even the ſtate he lives in, and for every part ' he may perchance find a player, and for every line, ' it may be an inſtance of life, beyond the author's in' tention or application; the vices of former ages be' ing ſo like to theſe of this age, as it will be eaſy to ' find out ſome affinity or reſemblance between them; ' which whoſoever readeth with this apprehenſion, ' will not perchance think the ſcenes too large, at leaſt ' the matter not to be exceeded in account of words. ' Laſtly for the ſtyle, as it is rich or poor, according ' to the ſtate and ability of the writer, ſo the value of ' it ſhall be enhanced, or cried down, according to the ' grace and capacity of the reader; from which com' mon fortune of books I look for no exemption (38).'

the univerſity of Cambridge, with the allowance of an handſome ſalary to the Profeſſor thereof [I]. Indeed there are many inſtances of his favour and beneficence to learning and learned men; and many of them have not only amply celebrated his excellent ſenſe and ingenuity, but gratefully acknowledged his extraordinary liberality towards, and patronage of them, in the dedications of books and poems, and other literary honours they paid him [K]; which makes it the more ſurprizing, that the ſame nobleman, a man of ſuch

[I] *Was the founder of an hiſtorical lecture in the univerſity of Cambridge, with the allowance of an handſome ſalary to the Profeſſor thereof.*] Our author, for this foundation, Dr Fuller, mentions it under the year 1627, where he informs us that, 'Sir Fulk Grevil, Lord Brook, bred long ſince in Trinity-College, 'founded a place for an Hiſtory-Profeſſor in the Univerſity of Cambridge, allowing him an annual ſtipend 'of an hundred pounds. Iſaac Doriſlaus, Doctor of 'the Civil-Law, an Hollander, was firſt placed therein. 'Say not, this implyed want of worthy men in Cambridge for that faculty; it being but fit, that founders ſhould pleaſe their own fancy in the choice of 'the firſt Profeſſor. The Doctor was a Dutchman, 'very much anglized in language and behaviour. 'However, becauſe a foreigner, preferred to that place, 'his lectures were liſtened to with the more critical attention of Cambridge auditors. Incomparable Tacitus he choſe for his ſubject, and had not yet paſſed 'over thoſe firſt words,—*Urbem Romanam primò Reges habuere*, when ſome exception was taken at his comment thereon. How hard is it for liquors not to reſent of the veſſels they are poured through? for veſſels not to taſte of the earth they are made of? being 'bred in a popular air, his words were interpreted, by 'high monarchicall ears, as over praiſing a ſtate in diſgrace of a kingdom. Hereupon he was accuſed to 'the King, troubled at Court, and, after his ſubmiſſion, hardly reſtored to his place. This is that Doctor Doriſlaus, Cambridge Profeſſor of Hiſtory, in his 'life, who himſelf was made an hiſtory at his death; 'ſlain in Holland, when firſt employed ambaſſador 'from the Commonwealth, unto the States of the 'United Provinces (39).' Among the manuſcripts in the library of Gonvil and Caius-College, there is one entitled, *Articles touching the Intention, &c. of Sir Fulk Grevil in the Univerſity*; which we ſuppoſe may relate to his foundation therein aforeſaid.

(39) Dr Fuller's Hiſtory of the univerſity of Cambridge, fol. 1655, p. 165.

[K] *Many have, not only celebrated his ſenſe and ingenuity, but acknowledged his patronage, in the literary honours they paid him.*] Here, not to enlarge upon what is mentioned of him in the dedication or epiſtle explanatory to Sir Philip Sidney, of that ſcarce and ſometime famous little book of dialogues written by Jordano Bruno, while, or but a ſhort time before he was at Oxford; one copy whereof was ſold in the auction of Mr Charles Bernard's library, at a Coffee-Houſe in Ave Mary-lane, in the year 1711, to Walter Clavel, Eſq; at the extravagant price of above twenty-eight pounds (40), as we may elſewhere more particularly relate; there being many of our own authors, who better knew, and have celebrated him in his moſt proper points of light; beſides John Davis of Hereford, in his epigrams before mentioned; ſuch as, Samuel Daniel; between whom and Sir Fulk Grevil, there paſſed an intercourſe of ſeveral letters, upon ſome improvements or reformation that had been propoſed to be made, in the maſques, interludes, or other dramatical entertainments at Court; which were in great requeſt in their time, eſpecially in the reign of King James I. they being much encouraged by Queen Anne, and the Ladies who attended upon her. Their ſentiments they alſo exchanged in writing, upon the topic of our Engliſh verſification, about the time that Daniel had his controverſy with Dr Campion thereupon, and Sir Fulk's judgment is often applauded, with his munificence to ſeveral practitioners thereio (41). The ſaid Samuel Daniel, has alſo in his printed works, before his Muſophilus, containing a general defence of all learning, in a poetical dialogue between the ſaid Muſophilus and Philocoſmus, prefixed a dedication in verſe to him, ſo early as before he was knighted, it being addreſſed to Mr Fulk Grevil (42). And Biſhop Corbet has honourably remembered him, both for his improvements at Warwick-Caſtle, and hoſpitable entertainment of him there, among his poems, in that which is entitled *Iter Boreale*. But that character which is given of a poet, by the name of Brook, in a noted paſtoral writer of thoſe days, is not to be underſtood of this Lord Brook, who then was not known by this title, but of one Chriſtopher Brook, a Lawyer of the Inner-Temple, and a poet of that time in good eſteem, not only with this paſtoral poet (43), but other eminent wits who were contemporary with him (44). Some diſcourſes and tranſlations alſo in proſe, we have met with dedicated to him; one particularly of a tranſlation from the Spaniſh, of Diana of Montmayor, by Tho. Wilſon, Eſq; in 1596, which though firſt inſcribed to the Earl of Southampton, was afterwards dedicated to the Right Honourable Sir Fulk Grevyll, Knt. Privy Councellor to his Majeſty, and Chancellor of the Exchequer: 'tis a manuſcript, fairly written in quarto, bound in green velvet, and was among the manuſcripts of Baſil Earl of Denbeigh. But the authors of more ſerious and ſolid labours, he more zealouſly cherished, and more ſubſtantially befriended. In 1597, by his aſſiduous ſupplications to Queen Elizabeth, he obtained the office of Clarencieux King of Arms for Mr Camden (45), who very gratefully acknowledges the benefit; where he informs us that, 'this Sir Fulk Grevil doth ſo entirely 'devote himſelf to the ſtudy of real *vertue and honour*, 'that the nobleneſs of his mind, far exceeds that of 'his birth; for whoſe extraordinary favours (adds he) 'though I muſt deſpair of making ſuitable returns, 'yet whether ſpeaking or ſilent, I muſt ever preſerve a 'grateful remembrance of them (46).' Six years after, Mr Camden inſcribed his edition of our old Latin hiſtorians to his ſaid noble patron; and at his death, left him a piece of plate in his will. In the latter end of that Queen's reign, it was by his cordial recommendations of the learned Dr John Overal, to her Majeſty, that ſhe conferred upon him the Deanry of St Paul's (47). He was alſo the riſe and making of a relation, who was afterwards an eminent miniſter of ſtate; for, as Dr Fuller has obſerved, 'Sir John Coke, being 'related to Sir Fulk Grevil, Lord Brook, was preferred to be Secretary of the Navy; then Maſter of 'the Requeſts, and at laſt Secretary of State for twenty years together. A zealous Proteſtant, and did all 'good offices for the advancement of true religion: 'he died in 1644 *.' But for his happy infranchiſment of John Speed the hiſtoriographer, from a mechanic employment, and his commodious enablement of him to purſue the hiſtorical ſtudies to which he had ſuch an uncommon inclination, the hearty and unreſerved acknowledgment he has publickly made, deſerves to be written in letters of gold; where having mentioned in his deſcription of Warwickſhire, the extraordinary reparations which had been made of the decayed caſtle at Warwick, by Sir Fulk Grevil; he adds, '*Whoſe merits to me-wards, I do acknowledge, in ſetting this hand free from the daily employments of a manual trade, and giving it full liberty thus to expreſs the inclination of my mind; himſelf being the procurer of my preſent eſtate* (48).' The Lord Bacon had ſuch an opinion of his knowledge, judgment, and friendly regard to his fame and credit, that he ſubmitted his life of King Henry the VII. to his peruſal and animadverſions; and the reſpect and value which the Lord Brook expreſſed for the ſaid performance upon his return of it, is preſerved by the Lord Bacon's chaplain, in the ſhort account he has given us of him (49). In Eaſter-Term 1618, an information being exhibited by Sir Henry Yelverton, Attorney-General, in the Star-Chamber, againſt one Wraynham, for his libellous defamations of the ſaid Lord Chancellor Bacon; the Lord Brook, and other Lords of the Council there preſent, did all cenſure the ſaid unwarrantable accuſer, in ſupport of the noble character that was ſo injuriouſly treated; as by his, and their ſeveral ſpeeches may appear (50). And long after the ſaid Lord Chancellor's fall, even in the laſt year of his life, the brief, but brilliant character which was given by him of this peer, as has been before quoted, may ſufficiently prove the falſhood of that idle ſtory in a ſatirical hiſtorian, who reports that the Lord Brook's butler had orders to refuſe a meſſenger who came from the Lord Bacon (then retired to his chambers in Gray's-Inn) to beg for a bottle

(50) In a Vindication of the Lord Chancellor Bacon, from the aſperſion of injuſtice caſt upon him by Mr. Wraynham, &c. (firſt publiſhed from the MS. by W. O.) printed for J. Peel in Pater-noſter-row, 8vo. 1725, p. 37, &c. See alſo Wrenham's Caſe in Popham's Reports, 2d edit. fol. 1682, p. 137.

ſuch parts as could both reliſh and cheriſh thoſe who were endowed with the beſt; a man alſo of ſuch aſſiduence and intereſt, as to gain the eſteem and commendations of ſo many ingenious perſons abroad, ſo many humble ſervants without doors, for his friendly gratifications or preferment of them, ſhould at laſt fall a ſacrifice to the incenſed and violent hand of a diſcontented and mortal enemy at home, becauſe he had ſerved him faithfully for many years, without any ſuch reward or proſpect of proviſion, as would afford him a competent ſubſiſtance, if his Lordſhip ſhould die before him, as the moſt early and authentic accounts which have been publiſhed of this fatal event are commonly interpreted; which inform us, that his Lordſhip neglecting or delaying to reward one Mr Ralph Haywood, for that was his Chriſtian name, as it is remembered in one author (*p*), an antient ſervant, who had ſpent the greateſt part of his time in attendance upon him, and expoſtulating thereupon with his Lord, was ſo ſeverely reproved for the ſame, that the ſaid Haywood being then with him in his Lordſhip's bedchamber, at Brook-Houſe in Holborn, gave him a mortal ſtab in the back with a knife, on the firſt of September, 1628, and with the ſame knife ſtabbed himſelf, as in the laſt quoted author it is expreſſed. Another ſays, it was on the thirtieth of September the ſame year that his Lordſhip was ſtabbed (*q*); and another, not mentioning the day he received the wound, agrees with the generality, that it was on this day he died in that year, being then aged ſeventy-four years (*r*): and both of them imply, that the weapon wherewith the murder was committed, was a ſword, with which the aſſaſſin having withdrawn, and locked himſelf into another room, to compleat the bloody ſcene, murdered himſelf, making his own hand the executioner of juſtice, and death his choice, which ſhould have been his puniſhment (*s*). It has been credibly reported, that there remained no written memorial or tradition in this noble family of any other cauſe or reaſon for the ſaid Mr Haywood's extraordinary diſcontent, than what is above ſpecified; but of late ſome further particulars have appeared in print, relating to the confirmation or aggravation thereof. For the Lord Brook having ſettled the whole of his eſtate upon his couſin Robert Greville aforeſaid, by his laſt will and teſtament, he executed the ſame on the eighteenth of February foregoing, which was witneſſed by ſeveral gentlemen then in his ſervice, among whom was this Haywood. And ſome months after, a codicil was added, wherein annuities were granted to thoſe gentlemen, but Haywood omitted; which made him reſent the neglect of him to ſuch a degree, as produced the warm expoſtulation between them, with the tragedy of both beforementioned. Before he died, his Lordſhip ordered another ſhort codicil to be added to his will, in which he left handſome legacies to the ſurgeons, and others who attended him on this occaſion *. A remark or two more upon this unfortunate cataſtrophe, we ſhall remit to the bottom of the page [*L*], and conclude with informing

tle of his beer, when he could not reliſh that which was provided for the commons in the ſaid Inn (51). In ſhort, the Lord Brook apparently ſhowred his favours on learned and ingenious men, to the laſt of his life, more eſpecially to thoſe who had any elegant taſte of hiſtory and poetry; as may appear not only in his preferment of Dr Doriſlaus beforementioned, but his reception of Sir William D'Avenant, when a young man, into his family; with whoſe promiſing genius he was ſo much delighted, that he reſided under him as long as his lordſhip lived; and it is not improbable but he formed the plans of ſome of his firſt plays under his lordſhip's encouragement, they being publiſhed ſoon after his death (52).

(52) Athen. Oxon, Vol. II. col. 411, 413, &c.

[*L*] *A remark or two more upon this unfortunate cataſtrophe, we ſhall remit to the bottom of the page.*] And firſt, there ſeems ſome reaſon to ſuſpect that the knowledge of this murder, or the moſt prevailing motive to it, has been endeavoured to be concealed, or ſecreted from the public and poſterity. When the firſt collection of his lordſhip's poetical works was publiſhed in folio, as is before obſerved, ſo ſoon after his death as five years, it might reaſonably be expected that ſome dedication, account of the author's life, or preface, would have appeared before them, in which the ſaid murder, and the true motives to it, might be more accurately, and particularly related than we have ſince had them: and ſo perhaps they were; for we have frequently obſerved, in at leaſt ten or a dozen copies of that folio volume, and ſome of them printed on large paper, bound in Turkey leather, and moſt richly adorned with gold, and moſt freſhly, fairly, and choicely preſerved, that they are all imperfect, and deprived or mutilated of whatever introduction they had to them. For after the contents of the volume, which are printed on the back of the title page, we jump at once to number 23 at the top of the next page, where the firſt poem begins, and the ſignature D at the bottom of it; ſo that by both teſtimonies, there are twenty two pages manifeſtly wanting. And as no author, who has wrote of this nobleman or his writings, has hitherto taken any notice of, or made any remarks upon this deficiency, we muſt, till we have ſome better light to guide or help us to account for it, follow ſuch as occurs from the moſt rational probability, that there was ſome private diſcovery too expreſsly mentioned for the peruſal of the public, therefore that his lordſhip's executors, relations, &c. obliged the publiſher to caſtrate ſuch prefatory diſcourſes, and ſuppreſs the ſame.

Another remark upon this occaſion, we gather from a manuſcript now before us, containing many arguments, reflexions, authorities and examples, upon the frequent deluſion of domeſtic dependancy; in which, many hopeful novices, of greater abilities than experience, induced by the baits of plenty, eaſe, and idleneſs; or the hopes of intereſt, recommendation, and advancement, have inſenſibly ſuffered a ſtate of freedom, to ſink and ſubſide into one of ſervility, and preferred a courſe of ſplendid poverty, to any of more liberal, laborious and profitable employment; ſo in lingering ſuſpence have worn away their youth, ſtrength, and faculties under ſuch great men, in their great houſes, like the lamps that were kept burning in the ancient vaults and ſepulchres, till they have ſmoaked and ſmoothered their brightneſs out in obſcurity, without benefit to mankind, or reputation to themſelves. Among many inſtances produced to verify this allegation, that of this Lord Brook, and his dependant Mr Haywood aforeſaid, is one, which the author introduces with the following reflections.—— 'Moſt wealthy and dignified men are more fond of external, than intrinſic grandeur, and of being generous before they are juſt. Many examples might be produced, of the humour which predominates in them, to exert themſelves moſt gratefully abroad, and with the utmoſt ingratitude at home; to be ever doing good to thoſe who pay them no ſervice, and none to ſuch as hourly ſerve them; to be moſt prodigal in public, and pernurious in private. What makes the miſchief the more prevailing is, that to diſcover ſuch deficiency and diſproportion among domeſtics, to whom greater miſmanagements are expoſed, is therefore reckoned the more inſignificant. They are looked meanly on, becauſe often on, and ſo overlooked in matters of reward, becauſe ſo near and ſo conſtantly at hand, that they do that for them, at no

time

forming our reader that, on the 27th of October following, his Lordſhip's obſequies were performed with great ſolemnity; his corps being wrapped in lead, and conveyed to Warwick, under the direction of Sir William Segar, Knight, Garter; Sir Henry St George, Knight, Richmond Herald; and Henry Chitting, Eſq; Cheſter-Herald. And there it was interred on the north ſide of the quire of St Mary's church, in his own vault, which had formerly been a Chapter-Houſe belonging thereto; over which a beautiful and ſtately monument of black and white marble had been erected by himſelf. Whereupon, according to his own appointment, was engraved an inſcription, commemorating his friendſhip with the great patron of the Muſes, as his greateſt honour, and moſt permanent epitaph *, in theſe words.

* See Dr John Collop's Poeſis Redeviva, &c. 8vo. 1656, in Epiſt. dedic.

FULKE GREVILE,
Servant to Queen ELIZABETH,
Councellor to King JAMES,
And Friend to Sir PHILIP SIDNEY,
Trophæum Peccati (*t*).

(t) Dugdale's Warwickſhire, Vol. I. p. 152. and Mr Collins as above.

'time of their lives, which they think they have it in 'their power to do at any time. The continual ſight 'of them, dulls all notion of their ſenſe or ſervice; 'they are thought to have no diſcernment, therefore 'no reſentment; ſo the empty name, the very ſha-'dow of patronage, may go down towards domeſtics, 'the ſubſtance muſt be reſerved for ſtrangers, that it 'may make atonement without doors for the neglect 'of all honourable conſiderations within: thus things 'at a diſtance, are looked on moſt wiſhfully; things 'cloſe and familiar to them, they look above and de-'ſpiſe. A man's plentifull poſſeſſions and pompous 'titles, may paſs in the eye of inexperience, for the 'capital attributes of a patron: but if his intereſt and in-'clinations are not proportionable, or his own generoſity 'to ſupport that character, he ſhall diſable you by long 'ſuſpenſe from finding it in another, and give you a 'ſting at laſt, how deſperately ſoever it may be re-'turned, if you grow importunate to find the effects of 'that patronage in himſelf. Such diſregardful treat-'ment of ſuperior attendants, has ſometimes proved 'very fatal to men of dignity and fortune; whereof 'we have, beſides what has been before exemplified, 'a pregnant proof in one of our nobility, Fulk Grevil, 'Lord Brook, who was Under-Treaſurer, Chancellor 'of the Exchequer, Gentleman of the Bed-Chamber, 'and of the Privy-Council to King James and King 'Charles I. A man of breeding, learning and abili-'ties; liberal enough of his power and intereſt among 'diſtant acquaintance, to the commodious accom-'modation of many learned and ingenious men, 'but too parcemonious thereof towards the daily 'attendants within his own walls; who by neg-'lecting as all authors term it, to gratify or make 'any ſuitable recompence to a gentleman who had 'withered away the greateſt part of his life unpro-'fitably in his perſonal ſervice, and was ſoon likely to 'be deſtitute of all ſupport, as his lordſhip had not 'himſelf, by the courſe of nature, long to live, and 'being ſeverely reprimanded for reminding him there-'of, or, not improbably, incenſed with more violent 'provocations, he drew his ſword upon his Lord, and 'killed him, then withdrawing into another room, 'with the ſame inſtrument deſtroyed himſelf. Yet au-'thors have been ſo ſuperficial and indifferent in their 'relation of this deſperate murder, or have ſeemed in 'a manner, ſo to ſtifle and huſh it up, that thoſe who 'have moſt diſtinctly related the untimely end of this 'nobleman, by that attendant, have not dropped ſo 'much as a reflexion in compaſſion of the one, or ab-'horrence of the other. Upon the whole therefore, 'when we conſider how eaſily perſons foreign to the 'ſervice of this nobleman, were by his intereſt hand-'ſomely provided for, and that no proviſion was likely 'to be made for one who had ſo long and nearly ſerved 'him; we may from hence, as well as from the many 'other examples before recited, be inſtructed to believe, 'that all actions or expreſſions from a menial ſervant, 'or any in this domeſtic and ſtationary dependency, 'are regarded but as the water of a ſtanding pool; the 'owner, becauſe he ſees the ſurface every day, thinks 'he has alſo ſeen, and known, all that it contains, 'of what depth or capacity ſoever it be; and eſteems 'every drop flat, and inſipid, that comes from it: 'But the ſervices of any free extraneous perſon, how 'ſhallow ſoever, who does not lie under the conſtant 'eye and command of a maſter, is thought ever freſh 'and grateful, like the waters of a running ſtream. 'Hence it is that the moſt ſuperficial, and ordinary ſer-'vice from an independent perſon, ſo frequently meets 'with great thanks and reward; from a ſervant, with 'neither: for the greateſt performances from ſuch, 'are ſwallowed up, in the thankleſs, bottomleſs gulph 'of duty. Theſe obſervations upon domeſtic patro-'nage and dependency, may ſatisfy thoſe, who are to 'be ſatisfied with any thing leſs fatal than their own 'experience; that the favours of great men, though 'they may ſtream forth from every ſide, like the rays 'from the ſtars which ſome of them wear: yet 'it is commonly in ſuch a manner, contrary to the re-'preſentations which are made of all ſuch reſplendent 'bodies, as if thoſe rays of favour were inverted, or 'darted ſtronger, and more diffuſive, as they extend 'towards the circumference, or furtheſt extreams of 'projection; but tapered away to the ſmalleſt and 'weakeſt points, neareſt the very center of their own 'light (53).' G

(53) The Patron, or Portraiture of Patronage and Dependancy, &c. MS. 4to.

GREW [NEHEMIAH], an excellent Philoſopher, and a Phyſician of good repute and conſiderable practice, in the laſt and part of this century, was born at Coventry, being the ſon of Obadiah Grew, D. D. [*A*] Vicar of St Michael's in that city (*a*). He was bred up by his father, (who had taken the Covenant) in the Puritan way; and ſtudied in one of the

(a) Wood's Athen. ed. 1721. Vol. II. col. 837, 838.

[*A*] *Being the ſon of Obadiah Grew, D. D.*] This Obadiah Grew was born at Atherſton in the pariſh of Manceter in Warwickſhire, in November 1607; admitted a ſtudent of Ballioi-College in 1624, where he took the degrees in arts; and was ordained, at 28 years of age, by Dr Robert Wright, Biſhop of Coventry and Lichfield. But, in the beginning of the civil wars, he ſided with the Preſbyterians, took the Covenant, and became miniſter of the great church of St Michael's in Coventry; where he behaved in a moſt pious, regular, and prudent manner, and diſcharged all the parts of a good, faithful, and diligent paſtor. In 1648, when Oliver Cromwell was at Coventry, in his march to London, Mr Grew took the opportunity to repreſent to him the wickedneſs of the deſign then more viſibly on foot, for taking off the king, and the ſad conſequences thereof, ſhould it take effect; earneſtly preſſing him, to uſe his endeavours to prevent it; and had his promiſe for it. And afterwards when the deſign was too apparent, he wrote a letter to him to the ſame purpoſe, and to mind him of his promiſe. In 1651, he accumulated the degrees in divinity at Oxford; and in 1654, was appointed one of the aſſiſtants to the commiſſioners for ejecting ſuch whom they then called ſcandalous, ignorant, and inſufficient miniſters, &c (1). Refuſing to conform in 1662, he was ejected from his preferment in purſuance of the Bartholomew-act (2). He died October 22, 1689, and was buried in the chancel of St Michael's church aforeſaid (3).

[*B*] *For*

the foreign Univerſities, where he took the degree of Doctor of Phyſic *(b)*. For ſome time he reſided at Coventry [*B*]. But coming to London about the year 1672, he was, through the recommendation of the moſt learned and ingenious Dr Wilkins, Biſhop of Cheſter, choſen Fellow of the Royal-Society *(c)*, to which he proved an ornament, and a very uſeful member. In April 1672, he was appointed Curator to that illuſtrious Society, for the Anatomy of Plants *(d)*: and applying himſelf, with great induſtry and ſucceſs, to the ſtudy of that moſt agreeable part of nature, he publiſhed many curious pieces upon that ſubject [*C*], which were received with great approbation and eſteem, both at home and abroad; and ſeveral of them were tranſlated into other languages [*D*]. On the 30th of November 1677, he was choſen Secretary to the Royal Society, in the room of Mr Oldenburg, and publiſhed the Philoſophical Tranſactions from January 1677-8, to the end of February 1678-9, namely from N°. 137 to 142 inclusive *(e)*. The 30th of September

(e) See Mr J. Ward's Lives of the Profeſſors of Greſham-College, p. 182.

[*B*] *For ſome time he reſided at Coventry.*] The dedication of the firſt book of his *Anatomy of Plants* to John [Wilkins] Lord Biſhop of Cheſter, is dated from Coventry, June 10, 1671.

[*C*] *He publiſhed many curious pieces upon that ſubject.*] Namely, 1. *The Anatomy of Vegetables begun.* London 1671, 8vo. 2. *Continuation of the Anatomy of Vegetables*, Lond. 1673, 8vo. 3. *An Idea of a Phytological Hiſtory propounded*, Lond. 1673, 8vo. 4. *The comparative Anatomy of the Trunks of Plants, with an account of their vegetation*, Lond. 1675, 8vo. ——In 1682, he printed all theſe pieces in one folio volume, with others of the ſame nature, at the requeſt of the Royal-Society; and with many additions and improvements. The general title of which volume is, 'The Anatomy of Plants, with an Idea of a Philoſophical Hiſtory of Plants, and ſeveral other lectures read before the Royal-Society.' This *Idea*, &c. being the ſame as the firſt part of that which he had publiſhed before, under the title of, *An Idea of a Phytological Hiſtory*, is prefixed to the whole, as a proper introduction; but it is conſiderably augmented and improved. The reſt follows in four books, and in this order. 'I. The Anatomy of Plants, begun. With a general account of vegetation, grounded thereupon. Preſented in manuſcript to the Royal-Society, ſome time before the 11th of May 1671, and afterwards in print, December 7, of the ſame year. II. The Anatomy of Roots; proſecuted with the bare eye, and with the microſcope: preſented to the Royal-Society at ſeveral times, in the years 1672 and 1673. With an account of the vegetation of roots, grounded chiefly thereupon. III. The Anatomy of Trunks; proſecuted with the bare eye, and with the microſcope: with an account of their vegetation, grounded thereupon. The figures hereunto belonging, preſented to the Royal-Society in the years 1673 and 1674. IV. The Anatomy of Leaves, Flowers, Fruits, and Seeds; proſecuted with the bare eye, and with the microſcope. In four parts. That of leaves, read before the Royal-Society Oct. 26, 1676. That of flowers, read before the ſame, November 9, 1676. That of Fruits, read in the year 1677. And the figures of the ſeeds, preſented to the ſaid Society, in the ſame year.' To which are ſubjoined ſeven lectures, read before the Royal Society. '1. A diſcourſe, read December 10, 1674. concerning the nature, cauſes, and power of mixture. 2. Experiments in conſort of the luctation ariſing from the affuſion of ſeveral menſtruums upon all ſorts of bodies, exhibited to the Royal-Society, April 13, and June 1, 1676. 3. An eſſay of the various proportions wherein the lixivial ſalt is found in plants. Read before the Royal-Society, March 1676. 4. A diſcourſe concerning the eſſential and marine ſalts of plants. Read before the Royal-Society, December 21, 1676. 5. A diſcourſe of the colours of plants. Read before the Royal-Society, May 3, 1677. 6. A diſcourſe of the diverſities and cauſes of taſtes chiefly in plants. Read before the Royal-Society, March 25, 1675. 7. Experiments in conſort upon the ſolution of ſalts in water. Read before the Royal-Society, January 18, 1676-7.' ——The four books of the Anatomy of Plants, are illuſtrated with eighty-three very curious folio copper-plates, repreſenting the ſeeds, flowers, and many other parts of plants, trees, &c. as they appear to the naked eye, and when magnified by microſcopes: exhibiting a moſt ſurprizing, agreeable, and improving view of the wonderful variety of veſſels in each, for the conveyance and circulation of the air, ſap, and other nouriſhment neceſſary for their perfection and beauty. The author's judicious obſervations upon that intereſting ſubject, in his dedication to King Charles II, are well worth the reader's peruſal; being as follow —— 'By *this* your Majeſty will find, that there are *Terræ Incognitæ* in Philoſophy, as well as Geography. And for ſo much, as lies here, it comes to paſs, I know not how, even in this inquiſitive age, that I am *the firſt, who have given a map of the country.* Your Majeſty will here ſee, that here are thoſe things within a plant, little leſs admirable than within an animal. That a plant, as well as an animal, is compoſed of ſeveral organical parts; ſome whereof may be called it's bowels. That every plant hath bowels of divers kinds, containing divers kinds of liquors. That even a plant lives partly upon aer; for the reception whereof, it hath thoſe parts which are anſwerable to lungs. So that a plant is, as it were, an animal in quires; as an animal is a plant, or rather ſeveral plants bound up into one volume. Again, that all the ſaid organs, bowels, or other parts, are as artificially made; and for their place and number, as punctually ſet together; as all the mathematic lines of a flower or face. That the ſtaple of the ſtuff is ſo exquiſitely fine, that no ſilk-worm is able to draw any thing near ſo ſmall a thread. So that one who walks about with the meaneſt ſtick, holds a piece of nature's handicraft, which far ſurpaſſes the moſt elaborate woof or needle-work in the world. That by all theſe means, the aſcent of the ſap, the diſtribution of the aer, the confection of ſeveral ſorts of liquors, as lymphas, milks, oyls, balſames, with other parts of vegetation, are all contrived and brought about in a mechanical way. In ſum, your Majeſty will find, that we are come aſhore into a new world, whereof we ſee no end.'——The learned author tells us in the preface, that 'The firſt occaſion of directing his thoughts this way, was in the year 1664, upon reading ſome of the many and curious inventions of learned men, in the bodies of animals. For conſidering, that both of them came at firſt out of the ſame hand; and were therefore the contrivances of the ſame wiſdom: he thence fully aſſured himſelf, that it could not be a vain deſign; to ſeek it in both.'——Biſhop Wilkins, to whom the firſt part of it was dedicated, gives it it's juſt commendation, in the following words ——'You was very happy in the choice of this ſubject to write upon; one of the moſt noble and the moſt copious parts of philoſophy; and ſuch an one, as hath hitherto lain uncultivated. And you have been very ſucceſsful in your firſt attempt about it, in ſo many remarkable obſervations and diſcoveries, as you have made already. I could heartily wiſh, that you would ſtill apply yourſelf to this kind of enquiries. You will find that additionals will come in more copiouſly and eaſily. And it is not fit, that any ſhould, by his ſuperſtructions, carry away the praiſe from him who was the firſt inventor, and who laid the foundations, wherein the greateſt difficulty doth conſiſt (4)'

(4) Preface to the Anatomy of Plants, folio edit.

[*D*] *And ſeveral of them were tranſlated into other languages.*] The firſt book of the Anatomy of Plants, a little after it came out, was elegantly and exactly tranſlated into French, by Monſieur le Vaſſeur, an ingenious gentleman at Paris. And the three firſt books of the ſame, were publiſhed in Latin by the collectors of the German Ephemerides; but their unſkilful tranſlator often fails of the grammatical ſenſe. The ſecond lecture of Mixture was alſo very well tranſlated into French by Monſieur Meſmin, a learned phyſician in Paris (5).

(5) See our author's Preface.

September 1680, he was admitted an honorary Fellow of the College of Phyſicians in London (*f*). He publiſhed in 1681, 'A catalogue and deſcription of the natural and 'artificial rarities belonging to the Royal-Society [*E*], and preſerved at Greſham-College. Whereunto is ſubjoined the comparative anatomy of ſtomachs and guts begun. 'Being ſeveral lectures read before the Royal-Society, in the year 1676.' In 1695, he publiſhed alſo a treatiſe on the purging ſalts [*F*]: and ſome ſmall pieces of his appeared in the Philoſophical Tranſactions [*G*]. His laſt work was calculated, as indeed all his writings were, not only to promote the ends of real and ſolid learning, but alſo of true piety and religion. He intitled it, 'A Diſcourſe of the Univerſe, as it is the Creature 'and Kingdom of God [*H*]:' and, having from his youth addicted himſelf to the contemplation of nature; he ſhewed in that book, that religion is ſo far from being inconſiſtent with philoſophy, that it is the higheſt point and perfection of it (*g*). One of his poſitions therein, namely, 'that there is a vital ſubſtance in nature, diſtinct from a 'body (*b*);' hath been reflected upon by Mr Bayle (*i*); and vindicated by Mr John Le Clerc (*k*) [*I*]. Dr Grew's character is ſufficiently plain from all his works. For, they breathe a ſpirit of ſincere piety and goodneſs; and evidently ſhew, that he made that uſe of his knowledge and philoſophy, which all wiſe and good men ought to do; namely, to promote the glory of God, and the good of mankind, and to encourage and recommend virtue and true religion. He died ſuddenly at London, March 25, 1711 (*l*).

(*f*) Regiſter of the College of Phyſicians.

[*H*] *A diſcourſe of the univerſe, as it the creature and kingdom of God.*] The whole title is, *Coſmologia Sacra:* or a diſcourſe of the univerſe as it is the creature and kingdom of God. Chiefly written to demonſtrate the truth and excellency of the Bible; which contains the laws of his kingdom in this lower world. In five books, Lond. 1701, fol.' He obſerves in the preface, that 'having addicted himſelf to 'the contemplation of nature, from his youth upward: 'as he hop'd, he was in ſome meaſure qualified, for 'an eſſay of this kind; ſo he concluded, the applying 'of his ſmall talent hereunto, to be the beſt uſe, he 'ſhould ever be able to make of it.' This excellent diſcourſe being divided into five books, as hath been already mentioned; the firſt book 'ſheweth, That 'God made the corporeal world: and what it is.' And treats, in five chapters, 'Of God: Of the corporeal 'world: Of corporeal principles: Of compounded 'bodies: Of their uſe. Book II. Sheweth, that 'there is a vital world which God hath made: 'and what it is. Comprehending, in eight chapters, 'theſe ſeveral heads; of life: of ſenſe: of mind; 'and of phancy, or phantaſtic mind: of intellectual 'mind: of ſcience: of wiſdom: of virtue: of celeſtial mind. In Book III. Is ſhewed, that God governs the univerſe which he hath made; and in what 'manner. 'Tis divided into theſe ſix chapters; of 'the nature of God's government, or of Providence: 'of the ends of Providence; and firſt in this life: of 'Providence over public ſtates: of the celeſtial life: 'of the rules of Providence; and of the law of nature: of poſitive law. Book IV. Sheweth, that the 'Bible, and firſt the Hebrew code, or old Teſtament, 'is God's poſitive law. This book is divided into 'eight chapters, comprehending theſe ſeveral points; 'of the integrity of the Hebrew code: of the truth 'and excellency of it, as they appear from foreign 'proof: as they appear from the writers hereof: as 'they appear from the contents of the hiſtory: and 'from the miracles related therein: and from the prophecies: of the divine law; firſt of the law given to 'Adam and Noah: and then of the Moſaic law. In Book 'V. is ſhewed, That the New Teſtament is alſo God's 'poſitive law. And the ſix chapters this laſt book is divided into, treat, of the integrity of the New Teſtament: of the truth, and excellency of it; as they appear from the writers thereof: and from the contents 'of the New Teſtament, particularly the miracles; 'as alſo from the doctrine; eſpecially the articles of 'faith: of the laws of the goſpel; and of the precepts which equally concern all: of our Saviour's prophecies.'——In the ſecond chapter of the fourth book, he very learnedly ſhews, the agreement of profane authors with the ſacred writings; both with regard to the matter, and the expreſſions. And in the next chapter, hath many curious obſervations about the authors of the books of the Old Teſtament, and their manner of writing: anſwering, at the ſame time, many of Spinoſa's cavils and objections againſt ſeveral paſſages in thoſe ſacred books. Likewiſe, in the eighth chapter of the ſame book, he gives a large account and deſcription of the Jewiſh tabernacle; a thing as he obſerves (13), hitherto wanting. Upon the whole, it were much to be wiſhed, that ſo uſeful and excellent a work, were read and peruſed with due and univerſal attention; and that it might have a ſuitable effect upon the minds and morals of mankind.

(13) In the Preface.

[*I*] *One of his poſitions therein, namely, that there is a vital ſubſtance—hath been reflected upon by Mr Bayle, and vindicated by Mr John Le Clerc.*] Mr Bayle, in the place above referred to, obſerves that, 'the Atheiſts are very much perplexed to account for the formation of animals, which they aſcribed to a cauſe 'not conſcious of what it did, and yet that followed 'a regular plan, without knowing by what laws it 'went to work. But Dr Cudworth's plaſtic form, and 'Dr Grew's vital principle are exactly in the ſame caſe. 'For, if God could communicate ſuch a plaſtic power, 'it follows that it is not inconſiſtent with the nature of 'things that there be ſuch agents: they may therefore 'exiſt of themſelves, will the adverſary ſay; whence 'it would alſo follow, that the regularity we obſerve in 'the univerſe may be the effect of a blind cauſe, 'which was not conſcious of what it did.' However Mr Bayle ſuppoſed, that theſe two learned gentlemen were not aware of the conſequence, which, according to him, followed from their ſyſtem.——Mr Le Clerc, anſwered to this, 'that the vital or plaſtic 'natures which theſe gentlemen admitted, cannot in 'the leaſt favour the Atheiſts, becauſe theſe natures are 'but inſtruments in the hands of God, and have no 'power or efficacy, but what they receive from him, 'who rules and directs all their actions: that they are 'but inſtrumental cauſes, produced and employed by 'the chief and firſt cauſe: and that it cannot be ſaid, 'that a palace has been built up without art, becauſe 'not only the hammers, rules, ſaws, &c. but even 'the arms of men which made uſe of theſe inſtruments, 'are deſtitute of knowledge. It is ſufficient that the 'mind of the builder directed all theſe things, and employed them according to his deſign. It is therefore 'plain, adds he, that the Atheiſts, who deny the being of an intelligent cauſe, cannot retort our two philoſophers argument upon them.'

C

GREY [Lady JANE], otherwiſe ſtiled Lady JANE DUDLEY; but more commonly than either, Queen JANE, as having been proclaimed Queen of England upon the demiſe, and in purſuance of the appointment, of her couſin King Edward the Sixth (a). She was, as all our hiſtorians agree, moſt nobly deſcended. Her father, Henry Grey Marquis of Dorſet, derived himſelf in a direct line; from, Sir Thomas Grey, Knight of the Garter, Lord Harrington in right of his wife, and created Marquis of Dorſet by Edward the Fourth, who married his mother (b). Her mother, was Lady Frances Brandon, the eldeſt of the two ſurviving daughters of Charles Brandon Duke of Suffolk, by Mary Queen Dowager of France, youngeſt daughter of King Henry the Seventh, and ſiſter to King Henry the Eighth (c) [A]. This marriage proceeded from the great kindneſs which Henry

(a) Cooper's Chronicle, fol. 338. b. Holinſhed, Stowe, Grafton, Speed, Fox, Heylin, Burnet, Strype, Collier.

[A] *And ſiſter to King Henry the Eighth.*] As this article is of great importance in reſpect to our hiſtory, many things relating thereto being obſcurely and imperfectly repreſented, even by our beſt writers, and the facts referring thereto ſo complicated, as to render it very difficult to underſtand the ſhort hints given us by our old hiſtorians and political authors in treatiſes about the ſucceſſion; we think it incumbent upon us, to uſe all the care and diligence imaginable, to ſet all theſe points in as true and clear lights as poſſible, and with this view we will begin with giving in this note, ſuch particulars in relation to Sir Charles Brandon Duke of Suffolk, as belong more particularly to this ſubject, that is, to the deſcent of the illuſtrious Lady of whom we are ſpeaking. He was the ſon of Sir Thomas Brandon, Knight of the Garter, and the grandſon of Sir William Brandon, who carried the ſtandard of Henry Earl of Richmond, at the battle of Boſworth, and in that ſervice was ſlain (1). This Sir Charles Brandon being extremely handſome in his perſon, and withal one of the ſtrongeſt and ſtouteſt men in the kingdom, was a great favourite with Arthur Prince of Wales, and of his brother Henry (2). Upon the acceſſion of that prince to the throne, he was made one of the Eſquires of his body, and Chamberlain of North Wales; afterwards for his ſervices both by ſea and land againſt the French, he was on the 15th of May 1513, advanced to the dignity of Viſcount L'Iſle (3), though Biſhop Burnet erroneouſly aſſerts he was then created Duke of Suffolk (4), which however he was not till the thirteenth of February following (5). In the ſucceeding year he was preſent in France at the marriage of the Princeſs Mary, the King's younger ſiſter, with the French King Lewis the Twelfth (6). At this time the Duke of Suffolk, and Henry Marquis of Dorſet, acquired great reputation in the tournaments that were held on that occaſion, as aſſiſtants to Francis of Valois (7), who ſoon after was himſelf king by the demiſe of Lewis, whom an eminent French hiſtorian affirms, became a victim to his extravagant paſſion for his new Queen (8). That princeſs, who is ſaid to have had no diſlike to the Duke of Suffolk before her marriage, was no ſooner a widow, than ſhe wrote to her brother, to deſire his permiſſion to marry (9); and at the ſame time, as a reverend hiſtorian ſays, told the Duke of Suffolk, that if he did not gain her conſent in four days, he ſhould not be the man (10). But, as the ſame writer juſtly obſerves, this could not put him under any great difficulty, and therefore the marriage was quickly after celebrated, April the 15th 1515 (11), and by the interceſſion of the French King, Francis the Firſt, King Henry, who all along intended the match, was eaſily pacified (12). But here ariſes a queſtion, as to the ſtate this noble perſon was in at the time of his marriage? it is pretty certain that he had been twice married before, but it is not quite ſo clear to whom; one author ſays, his firſt wife was Anne, daughter to Sir Anthony Brown, Governor of Calais (13); another, that it was Margaret, the daughter and coheireſs of John Nevile Marquis Montague (14), and that the other lady was his ſecond wife. It is a difficult matter to know what Sir William Dugdale's opinion was, ſince he aſſerts Margaret to be the firſt wife in his hiſtorical account, and then produces an authentic pedigree of the family in which ſhe is made to be the ſecond (15), as in reality there is good reaſon to believe ſhe was, becauſe ſhe lived many years after his marriage with the Queen, being repudiated as the pedigree ſays, or as ſome writers report divorced (16). The ſame incertainty there is in reference to the children of this Duke, at the time of his marriage, ſome ſay he had one, others two, and while ſome affirm they were by the firſt wife, others as poſitively aſſert that he had no iſſue but by the ſecond (17). It is however to-

lerably clear from comparing the pedigrees of our ancient nobility, that at the time he married the Queen he had two daughters living, both by his firſt wife, but the eldeſt of them Anne, was born before marriage, however ſhe eſpouſed Edward Grey Lord Powis (18), and lived to the reign of Edward the Sixth, when ſhe ſold her title to certain lands that had been her father's, to Sir John Beaumont, Maſter of the Rolls, who as that young monarch tells us under his own hand, forged a deed of this Charles Duke of Suffolk, by which he aſſigned thoſe lands to Anne Baroneſs of Powis, to give the better colour to a decree which was to eſtabliſh his own poſſeſſion, and all this he is ſaid to have confeſſed under his hand (19). The ſecond daughter Mary, born after marriage, became the wife of William Lord Monteagle (20). As for his ſecond wife, who was the widow of Sir John Mortimer, ſhe became after he left her, the ſpouſe of one Robert Horne (21). Upon his third marriage with Mary Dowager of France, he procured a grant in general-tail, of all the lordſhips, manors, lands, and tenements, formerly belonging to Edmund de la Pole, late Earl of Suffolk (22), which Edmund had been beheaded in the Tower, April 30, 1513 (23), for reaſons of ſtate, rather than for any other crime, his elder brother John Earl of Lincoln, having been declared preſumptive heir of the Crown by Richard the Third (24). By this third wife, Charles Duke of Suffolk had iſſue, Henry Brandon, who in the ſeventeenth year of Henry the Eighth, was created at Bridewell Earl of Lincoln, being then as our heralds ſay, twelve years of age (25), in which it is probable there is ſome miſtake, ſince if it was true, he muſt have been born before the marriage of the Duke of Suffolk with his mother (26). He died not long after without iſſue (27). Beſides this ſon, there were two daughters of this marriage, Frances, who married Henry Marquis of Dorſet, as is ſaid in the text; and Eleanor, who became the wife of Henry Clifford Earl of Cumberland, by whom he had only one daughter, Margaret, the wife of Henry, and the mother of Ferdinando Earl of Derby (28). Here it may be proper to obſerve, that among the clandeſtine diſcourſes held in the reign of Queen Elizabeth about the ſucceſſion, there were ſome who preferred the title of this Lady Eleanor, then Counteſs Dowager of Cumberland, to that of the houſe of Suffolk, for which they pretended one reaſon, and kept in reſerve another (29). The diſcloſed reaſon was, that this lady ſtood one degree nearer to her common anceſtor Henry the Seventh, than Lady Katherine Grey (30); but the concealed motive which they held to be much ſtronger, was the Lady Eleanor's being born after the death of Lady Mortimer, ſo that by the help of a poſt contract, after the demiſe of that lady, they conceived that all colour of illegitimacy was taken away with reſpect to the Counteſs of Cumberland and her deſcendants (31). We have now nothing farther to add relating to this matter, except that from the time of her marriage, the King's ſiſter was ſtiled the Ducheſs Queen, and that ſhe departed this life June 23, 1533 (32), having ſeen the King her brother divorced from his firſt Queen Katherine; married to Anne Boleyn Marchioneſs of Pembroke, and that Queen big with child of her daughter Elizabeth; ſhe could not therefore frame any conjecture as to the ſucceſſion of the Crown, as the King had a daughter by one wife; a child begotten, but not born, of another; and his favourite, though baſtard ſon, Charles Fitzroy, Duke of Richmond and Somerſet, Earl of Nottingham, Lieutenant-General beyond Trent, Warden-General of the borders of Scotland, and Lord-High-Admiral of England was then living (33); and a noble hiſtorian gives us this reaſon for heaping ſo many honours upon a child, that the King conſidered as yet he had no lawful

Henry the Eighth had for the Marquis of Dorſet, and his affection for his niece (*d*); but as in many other inſtances, ſo in this, that monarch's conduct was very irregular, ſince either to oblige the Marquis, or to gratify his own inclination, he took no notice of an obſtacle (*e*) that ought otherwiſe to have hindered this match [*B*]. The principal ſeat of the

Since this note was compoſed, and while the article was in the preſs, we been acquainted with the minutes of a ſpeech made in the thirteenth of Queen Elizabeth, on the ſucceſſion, in parliament, which ſtill remain in the Cotton Library, and as they clear up entirely the perplexed account of the Duke of Suffolk's ſeveral marriages and iſſues, we ſhall tranſcribe ſo much of that curious paper as regards this matter *. 'As the next of 'blood, and the true and juſt heirs of our laws, the 'Crown ought to deſcend to the heirs of the French 'Queen, which be the daughters of the Lady Frances 'and the Lady Eleanor. And preſently to the Lady 'Katherine, being the eldeſt daughter to the eldeſt 'ſiſter the Lady Frances. Againſt theſe heirs of the 'French Queen is objected: ſay they, theſe cannot 'inherit. Why ſo? becauſe they were not lawfully 'born. For Charles Duke of Suffolk, had at that 'time when he married the French Queen, another 'wife living, that is the Lady Mortymer. To this I 'anſwer, that although it were true that the Lady 'Frances and the Lady Eleanor were not lawfully born '(as it is not true as ye ſhall hear hereafter) yet it hurt-'eth not the title of the heirs given by King Henry's 'will For it is appointed to the heirs of them not to 'themſelves, as the will plainly declareth. But verily 'this is a mere ſlander grown altogether on *malice*, 'and no accuſation made upon any juſt preſumption. 'For I beſeech you tell me, is it like, or can any rea-'ſonable man think, if Duke Charles had had another 'wife living when he had married the French Queen, 'that King Henry would have conſented that his ſiſter 'ſhould have received ſo great an injury, that ſhe ſhould 'have been kept for a concubine? would the Council 'have ſuffered ſo great infamy, to have come to their 'maſter's ſtock? would the noblity of the realm, with 'ſo great triumph, have honoured ſo unlawful an act? 'would the common people, who many times are 'ready to ſpeak evil of well doing, have holden their 'tongue in ſo manifeſt adultery? Is it like, that in ſo 'long time as the French Queen and the Duke lived 'together as man and wife (that is all the days of the 'French Queen) that ſhe ſhould not have heard of it? 'was it poſſible, that among ſo many women that daily 'reſorted unto her (whoſe natures are to ſeek for all 'ſuch things, be they never ſo ſecret, and to commu-'nicate them to others) that none ſhould have told 'her? is it to be believed, that ſhe, contrary to the 'nature of all women, would have been content that 'another ſhould be partaker of that fleſh, that ſhe 'according to God's word took only to be her own? 'or can any man think that any woman can be con-'tent to live in mean degree when ſhe may be a Du-'cheſs, as the Lady Mortymer ſhould have been juſtly, 'if ſhe had been the Duke's wife? ſurely methinks 'there is no reaſon to make any man to think, how 'much leſs to report ſo? but ſuppoſe that the Duke had 'another wife living at what time he married the French 'Queen, yet for as much as he and ſhe were married 'openly, continued together all their lives as lawful 'man and wife, and nothing ſayd againſt them, and 'every man took them for man and wife: and that 'the ſaid Lady Frances, and the Lady Eleanor, were 'not during their lives taken to be baſtards. Now af-'ter their death, neither they nor their children may 'by the laws of this realm, be convented therefore. 'For the laws of this realm ſay thus, *Nec juſtum eſt ali-'quando mortuum facere baſtardum, qui toto tempore ſuo 'tenebatur pro legitimo:* as appeareth by judgment 'given at Weſtminſter 13 Ed. I. But for the declara-'tion of the truth of this matter, and to pluck out of 'the heads of the people, their fond opinion and con-'ſideration, and maintained of ſuch as paſs not ſo 'much of the truth as they deſire to ſatisfy their fond 'affections; ye ſhall underſtand that the Duke, being 'Sir Charles Brandon, living in the Court, being ſole 'and unmarried, made a contract of marriage with a 'gentlewoman called Anne Brown, and before any 'ſolemnization of marriage, not only had a daughter 'by her, which after was married to the Lord 'Powis, but alſo brake promiſe with her, and openly 'and ſolemnly married the Lady Mortymer. Which 'marriage the ſaid Mrs Anne Browne judicially ac-'cuſed to be unlawful, for that the ſaid Sir Charles 'Brandon, had made a pre-contract with her, and had 'carnally known her. Which being duly proved, 'ſentence of divorce between the ſaid Sir Charles 'and the Lady Mortymer was given. And he 'married ſolemnly the ſaid Mrs Anne Brown. At 'which marriage all the nobility was preſent, and did 'honour it. And after, had by her another daugh-'ter, which was married to the Lord Mounteagle. 'After this the ſaid Mrs Anne Brown continued with 'him all her life as his wife, and died his wife, with-'out any impeachment of that marriage. After whoſe 'death, King Henry having the ſaid Charles Brandon 'in great favour, meant he ſhould for his better pre-'ferment have married the Lady Liſle, being a young 'madam and an inheritrix. Whereupon the ſaid 'Charles Brandon was created Viſcount Liſle: but that 'marriage, by reaſon of her youth, took no place. 'After this he was created Duke of Suffolk, and Lewis 'the French King died, and leaving the ſaid Lady 'Mary, King Henry the Seventh's daughter, a widow, 'the ſaid Duke Charles being ſent into France for her, 'with conſent of King Henry married her twice, 'firſt ſecretly in France, and after openly here in Eng-'land, as before is declared, and then lived together 'quietly as man and wife all their lives. They were 'ſo accepted and taken of all perſons. No perſon im-'pugned or gainſayed the ſaid marriage For there 'was no cauſe, and had iſſue between them, the ſaid 'Lady Frances and Lady Eleanor, againſt whom the 'ſaid Lady Powis their baſe ſiſter, in the time of King 'Edward VI. alledged baſtardy. But they were by 'the laws of the realm and the canon laws declared 'to be legitimate, and born in lawful matrimony. So 'that no man that hath underſtanding can ſay they be 'baſtards; and if they could, yet at this preſent (be-'cauſe it was once adjudged for them, and alſo that 'they be both dead, and dyed taken as legitimate) he 'ought not to be heard by order of any law in the 'world, if he would object againſt them.'

* Biblioth. Cotton. Julius, F. 6.

[*B*] *To have hindered this match*] This Henry Grey Marquis of Dorſet, Baron of Groby, was the ſon of Thomas Marquis of Dorſet, by Margaret, daughter of Sir Robert Wotton, of Boſton in Kent, and the widow of William Medley, Eſq (36); Henry ſucceeded his father in his honours, in the year 1530 (37), and was eſteemed a man of great perſonal courage and much generoſity, to which we may add, that he wanted not ambition, though he was a reſerved man, loved to live in his own way, and was rather deſirous to keep up that magnificence for which our ancient nobility were ſo much diſtinguiſhed, in the place of his reſidence in the country, than to involve himſelf in the intrigues of a court (38). His father having a cloſe friendſhip with William Earl of Arundel, and being deſirous to unite the intereſts of their families as cloſely as poſſible, cauſed this Henry, afterwards Marquis of Dorſet, to eſpouſe the Lady Katherine Fitz-Alan, that Earl's eldeſt daughter, and gave Lady Katherine Grey, his own daughter, to Henry, afterwards Earl of Arundel, then heir apparent to his father (39). This conjunction, by which they were made doubly brothers-in-law, cauſed a great affection and friendſhip between theſe noblemen in their youth; but when Henry Marquis of Dorſet, had caſt his eyes upon the Lady Frances Brandon, and King Henry expreſſed no diſlike to the match, it produced very high reſentment in the Lord Maltravers, afterwards Earl of Arundel, who could could not bear to ſee his ſiſter excluded from her huſband's bed, to make way for another lady, though of the blood royal (40). His complaints, however juſt and well founded, were over-looked and ill-taken; yet by the mediation of friends, an annuity was ſettled upon Lady Katherine, which was duly paid during the Marquis's life, for this lady ſurvived him ſeveral years (41). But notwithſtanding this, and that the Earl was ſtill his brother-in-law by his own marriage; he reſented

the Marquis of Dorſet, was the ſtately houſe of Broadgate in Leiceſterſhire, where it is generally believed, though there is no direct authority to prove it, that the Lady Jane was born, anno domini 1537 (*f*). In other lives, we uſually paſs over the tender years of thoſe of whom we ſpeak, or at leaſt touch them but ſlightly; it muſt however be otherwiſe in the preſent caſe, ſince the infancy of Lady Jane was truly remarkable. Nature (if the expreſſion may be allowed) crowded even that ſtate of her life with wonders, and beſtowed upon her ſo many virtues and graces, that her perſonal accompliſhments outſhone the luſtre of her rank, and made her moſt admired by thoſe who were leaſt affected by the gifts of fortune (*g*). We have no diſtinct account at what time ſhe gave the firſt indication of that aſtoniſhing pregnancy that afterwards appeared; but notwithſtanding this, we may without ſuſpicion of flattery or credulity affirm, that it muſt have been very early. She was certainly within a few months of the ſame age with King Edward; and ſuch as were intimately acquainted with human nature, and had likewiſe an opportunity of knowing him thoroughly, thought him a kind of miracle (*h*). Yet one of theſe, who knew him well and loved him better, very candidly acknowledges, that the Lady Jane was ſuperior to him, and this in every reſpect (*i*). She may be ſuppoſed to have been firſt taught feminine accompliſhments, which in thoſe days were of different kinds, and not ſo eaſily attained as at preſent, yet in theſe ſhe excelled. Her genius appeared in the works of her needle, then in the beautiful character which ſhe wrote, commended by all who had ſeen it; ſhe played admirably on various inſtruments of muſick, and accompanied them with a voice exquiſitely ſweet in itſelf, and aſſiſted by all the graces that art could beſtow (*k*). Her own language ſhe ſpoke and wrote with peculiar accuracy, the French, Italian, Latin, and Greek eſpecially, were as natural to her as her own, for ſhe not only underſtood them perfectly, but ſpoke and wrote them with the greateſt freedom, and this not in the opinion of ſuperficial judges (*l*), but of Mr Aſcham and Dr Aylmer, men who in point of veracity are as much above ſuſpicion, as in reſpect to their abilities they were incapable of being deceived: men who for their learning were the wonder of their own times and of ours, the former famous for Roman accuracy; the latter, one of the ſevereſt criticks in thoſe learned times (*m*). She was verſed likewiſe in Hebrew, Chaldee, and Arabic, and all this while a perfect child. Her parents, as we learn from her own teſtimony, as well as that of others, were both of them ſomewhat auſtere, ſo that notwithſtanding her high birth, ſhe was ſo far from ſuffering by indulgence, that the misfortunes of her tender age, flowed from the contrary extreme (*n*). The Marquis of Dorſet, her father, had himſelf a tincture of letters, and was a great patron of learned men. He had two chaplains, Harding and Aylmer, who were then zealous Proteſtants both, as the latter always continued, but the former became afterwards a Papiſt, and one of the ableſt writers on that ſide (*o*). Theſe great men, for they were truly ſuch, were the tutors and companions of Lady Jane in her infancy. Her tutors as they inſtructed, her companions as they converſed with her, for ſhe had a ſedateneſs of temper, a quickneſs of apprehenſion, and a ſolidity of judgment, that enabled her not only to become the miſtreſs of languages, but of ſciences; ſo that ſhe thought and ſpoke, and reaſoned upon ſubjects of the greateſt importance, in a manner that ſurprized even thoſe who from their own abilities (*p*) were not much inclined to eſteem what the reſt of the world would have thought very extraordinary. With theſe high endowments ſhe had ſo much mildneſs, humility, and modeſty, that ſhe ſet no value at all on theſe vaſt acquiſitions; but ſpoke of the love of learning, as the ſource of happineſs, and profeſſed that, when mortified and confounded by the undeſerved chidings of her parents, ſhe returned with double pleaſure to the leſſons of her tutors, and ſought in Demoſthenes and Plato, who were her favourite authors, that delight that was denied her in all the other ſcenes of life, in which ſhe mingled but little, and ſeldom with any ſatisfaction (*q*). In 1545, when the Lady Jane was in the ninth year of her age, died her grandfather, by the mother's ſide, Charles Brandon, Duke of Suffolk, in as abſolute poſſeſſion of his maſter's favour as he had ever been, though after the deceaſe of the Queen-Dowager of France, he had married a young wife [*C*]. The next year after, her great uncle King Henry the Eighth

reſented this ill uſage from the Marquis, and could never be brought to diſſemble his diſlike of him, till he was created Duke of Suffolk, and Arundel committed to the Tower, for being embarked in the conſpiracy, as it was called, of the Duke of Somerſet (42). But that he diſſembled even then, and was not cordially reconciled to the Duke of Suffolk, or to the Duke of Northumberland, to whom he alſo bore ill-will, appears from his giving ſecret intelligence of King Edward's death to the Lady Mary, which prevented her falling into the hands of the two Dukes, and proved in the end their deſtruction, in every ſtep of which the Earl of Arundel, as he had been before a concealed, was afterwards an active inſtrument (43). This prior marriage of the Marquis of Dorſet, is that blemiſh mentioned in the text, and it is hardly poſſible to conceive a reaſon why the King acted as he did, unleſs it was to embroil the ſucceſſion with ſuch inextricable difficulties, as might render it moſt expedient for the parliament to leave the deciſion of it to his will (44), which project he ſeems to have formed very early in his reign, and to have kept it always in view, though the validity of that laſt act of his, which bore that title, has been juſtly queſtioned (45).

[*C*] *He had married a young wife*] We have already ſhewn, that Charles Brandon, Duke of Suffolk, became a widower by the death of the Dutcheſs-Queen, in 1533, having no iſſue living by any of his wives but daughters, which very probably induced him to marry Katherine, ſole daughter and heireſs of William, Baron Willoughby of Ereſby (46), in hopes of male iſſue in which he was not miſtaken, for by her he had two ſons, Henry Earl of Lincoln, and Lord Charles Brandon, who ſurvived him (47). But beſides *theſe children*, and thoſe which have been already mentioned, he had two natural children, Sir Charles Brandon, who married Elizabeth, daughter and one of the heirs of Thomas Pigott of Rippon in Yorkſhire; and a daughter Frances, who eſpouſed Andrew Billeſby, of Billeſby in the county of Lincoln, Eſq; and by him had iſſue (48). This

(45) King Henry's will was taken off the roll, as never duly executed, in the Reign of Queen Mary.

(48) Baronagium Angl. MS.

Eighth departed this life, and was ſucceeded by his ſon Edward the Sixth (*s*), with whom her father the Marquis of Dorſet was in great favour, and herſelf alſo received many marks of his attention. Yet Lady Jane, ſtill remained for the moſt part in the country, for in Leiceſterſhire we find her in 1550, being the fourth year of that monarch's reign, and the fourteenth of her age (*t*). It was here that Mr Aſcham found her, when he had that conference with her, of which we have given an account elſewhere, and which made ſo ſtrong an impreſſion upon his mind, that he afterwards wrote her a long letter, penned with equal elegance and freedom; which demonſtrates how high an opinion he had of her underſtanding, independent of her learning, and in which he deſires ſhe will write him a Greek epiſtle, and wiſhes that ſhe would likewiſe write his friend Sturmius another, that what he had ſaid of her wherever he came, might be rendered credible by ſuch authentic evidence (*u*). On the 14th of July 1551, died Henry and Charles Brandon, Dukes of Suffolk, of the ſweating ſickneſs, at the Biſhop of Lincoln's palace of Bugden (*w*), which opened a paſſage for Henry Lord Marquis of Dorſet, to obtain by the favour of the Earl of Warwick, and without whom indeed nothing could be obtained, a patent for this new-fallen honour, and accordingly October 11, 1551, he was created Duke of Suffolk (*x*), and on the ſame day, the great Earl beforementioned was created Duke of Northumberland, with precedency to the Duke of Suffolk (*y*); the Earl of Wiltſhire, was likewiſe created Marquis of Wincheſter (*z*); Sir William Herbert, Earl of Pembroke, and Mr William Cecil, one of the Secretaries of State, knighted (*a*). By theſe honours and promotions, it was conceived that all former jealouſies were effaced from their minds, and a firm friendſhip eſtabliſhed amongſt them, for otherwiſe they had not much cauſe to love each other, ſince but a little before, the Duke of Suffolk had been obliged to reſign his wardenſhip of the Marches, which the King had beſtowed on the other duke; Sir William Herbert had been rather of the contrary faction, and Cecil had been impriſoned at the pulling down of the Lord Protector, but now all was forgiven and ſuppoſed to be forgot (*b*). On the ſeventh of November following, Sir Thomas Palmer diſcovered what was called the Duke of Somerſet's conſpiracy, in which ſeveral other noblemen were involved and ſent to priſon, particularly the Earl of Arundel, who, for reaſons that we have before mentioned, had an old grudge to the Duke of Suffolk, and was no friend to the Duke of Northumberland, and Arthur Lord Grey of Wilton, a very brave man, but a little high ſpirited, whom the two dukes had a mind to bend to their purpoſe (*c*). In the midſt of this confuſion, came the Queen-Dowager of Scotland from France, who was honourably received by King Edward, magnificently entertained, and amongſt other ladies of the blood royal, was complimented by the Lady Jane, who was now at Court and much in the king's favour (*d*). As ſoon as theſe ſolemnities were over, and this princeſs, who was mother to Mary Queen of Scots, ſet out on her journey, the trial of the Duke of Somerſet and his aſſociates was brought on. At this the two Dukes with the Earl of Pembroke aſſiſted, and the Marquis of Wincheſter, Lord-Treaſurer, preſided as Lord High-Steward (*e*). The ruin of this potent duke, left Northumberland, who really managed all, without rival and without oppoſition. By his favour the Earl of Arundel gained his liberty, as did alſo the Lord Grey, but upon hard terms, and a promiſe that they would be faithful and obedient for the time to come (*f*). In the next ſummer, the king with his court made a progreſs with a view to divert the mind of that young prince, to diſpel the diſcontents of the people, and to influence the choice of members for the enſuing parliament (*g*). At this juncture in all probability, Lady Jane went to pay her duty to the king's ſiſter, the Lady Mary, at New-Hall in Eſſex, where reproving the Lady Anne Wharton, for making a low curteſy to the Hoſt, ſome officious perſon carried it to the princeſs's ear, who it is ſaid retained it in her heart, and never loved Lady Jane afterwards (*h*). In January 1553, the king caught a great cold, which grew rather worſe than better, from the medicines that were given him; ſo that when the parliament met in March, they were forced to go from Weſtminſter to Whitehall to him, for otherwiſe his bad ſtate of health would have deprived them of his preſence. They ſat only that month, and having finiſhed a few important affairs that were brought before them, were diſſolved (*i*.) The Dukes of Suffolk and Northumberland were now as great as they could wiſh to be, and the only object of their wiſhes was to preſerve the high authority they had gained, towards which they had taken many ſteps already [*D*]. But in the midſt of this proſperity,

This great Duke dying in the full poſſeſſion of his maſter's favour at Guildford, was removed from thence to the collegiate church of Windſor, and there buried at the King's expence, with great ſolemnity (49). We have ſhewn in the text, at what time his two ſons by his laſt wife died, which opened a way for advancing Henry Marquis of Dorſet, to the title of Suffolk, but it will be proper however to remark here, that his other children being but of the half blood, could not inherit any thing from thoſe two Dukes, and therefore in the ſecond of Queen Elizabeth. the deſcendants of Sir William Brandon his Grandfather, being found his next heirs, that great inheritance whereof he died ſeized in fee, came to be ſhared amongſt them, which were theſe, viz. Sir Henry Sydney, Knight, William Cavendiſh, Eſq; Thomas Glemham, Eſq; John Kerſey, and Francis Kerſey, his ſon by Margaret his wife deceaſed, as heir of the ſaid Margaret; Chriſtian Darnell, widow, Walter Aſcoughe, Eſq; and Henry Aſcoughe, his ſon by Elizabeth his wife, and John Trye, Gentleman, and Elizabeth his wife (50).

[*D*] *Towards which they had taken many ſteps already.*] In ſeveral other articles we have had occaſion to take ſome notice of the ſtate of the Engliſh Court at this juncture, and yet ſome points of great conſequence were left to be explained here. Such as can indulge themſelves in a liberty of believing, and which is more, of reporting, that the Duke of Northumberland poiſoned the King his maſter, contrived and executed that plot againſt himſelf, for which the Duke of Somerſet died,

rity, the King's health declining daily, ſeemed to threaten them with ſome ſudden and violent reverſe of fortune (*k*). For this the penetration and ſagacity of the Duke of Northumberland, ſuggeſted no other remedy than altering the ſucceſſion of the Crown, which however he did not think fit to propoſe before certain meaſures were taken for effectually ſecuring the ſafety of his own family, by matching into that to which he meant to transfer the Crown; and having a juſt foreſight of the great hazards to which the muſt be expoſed by ſo bold a meaſure, he contrived to fortify both houſes ſtill more, by other advantageous matches, which, conſidering his preſent high and flouriſhing condition, were eaſily brought about with thoſe who could not ſee ſo far into futurity as this great politician (*l*). His three eldeſt ſons, the Earl of Warwick, then Maſter of the Horſe, Lord Ambroſe, and Lord Robert, were already married, he therefore matched Lord Guilford Dudley his fourth ſon, who of them all, as a certain hiſtorian affirms, had leaſt in him of the father, with our Lady Jane, the Duke of Suffolk's eldeſt daughter (*m*). It was at the ſame time reſolved, that the Lord Herbert, eldeſt ſon to the Earl of Pembroke, ſhould eſpouſe her ſiſter Lady Catherine (*n*); and the ſon of Arthur, Lord Grey of Wilton, was contracted to Lady Mary Grey, the Duke's third daughter, and at that time a perfect child (*o*); the Duke of Northumberland's two daughters were married to Sir Henry Sydney, and the Lord Haſtings, ſon to the Earl of Huntingdon (*p*). On what day the two firſt marriages were celebrated does not any where appear, yet it is certain that it was in the latter end of May, to the King's great ſatisfaction (*q*), who though he was naturally ſparing was however very bountiful upon this occaſion, as may be ſeen at the bottom of the page [*E*]. died, and bent or broke every thing that ſtood in his way, at his pleaſure, may account for all that paſſed in this critical ſituation of affairs without much trouble, but then they are not able to produce any proofs, which is a mode of writing juſtly diſliked at preſent (51). We may indeed agree thus far with them, that this great nobleman meant to eſtabliſh his fortune on the ſtrongeſt foundation poſſible, which was very natural, and his abilities being ſuperior to thoſe of other courtiers he ſucceeded, which is very natural likewiſe. But then if we can point out the means by which he ſucceeded, relying on none but inconteſtable facts, may we not be thought to come nearer the truth, than by recurring to ſuppoſitions that are deſtitute of any tolerable evidence. His firſt ſcheme of greatneſs, was from pulling down of the Duke of Somerſet when Protector, which he managed with great dexterity (52). His next was to reconcile himſelf to that Duke, and to make an alliance between their families; but when he found that notwithſtanding this alliance, the Duke either of himſelf, or through the perſwaſions of his Ducheſs, aimed at recovering his former poſt by his deſtruction; he ſaw plainly that they could not be any longer both ſafe, and being a far better politician, turned the Duke's attempt upon himſelf, and ſacrificed him to his ambition (53). He next ſtruck in with the Duke of Suffolk, and finding him more manageable, projected the maintenance of their greatneſs, by gaining as many of the nobility as it was poſſible to their intereſt, and depriving of all power ſuch as he conceived to be irreconcileable (54). In this too he acted with great dexterity, and in all appearance with great ſucceſs, and not without ſome violence alſo, as appeared in the proſecution of Dr Tonſtall, Biſhop of Durham, the Lord Paget, and ſome others, for all which however he uſed colourable pretences; ſo that his policy ſeemed rather to conſiſt in improving occaſions as they fell out, than in ſuch deſperate contrivances as he is charged with; for if he had really foreſeen the King's death ſo long beforehand, as Heylin (55) and ſome other writers inſinuate, it is not eaſy to conceive why he delayed ſo long the marriage of his ſon with Lady Jane, or why he was ſo late in ſettling the ſucceſſion; for theſe things appear evidently to have been done in a hurry, and with a variety of circumſtances that have much more the appearance of neceſſity than foreſight. His procuring from the King ſuch large grants of the eſtates of the Piercy's, and of the lands belonging to the biſhoprick of Durham, are ſo far from being arguments of his taking meaſures to put the King out of the world, and to ſecure the Crown to his deſcendants, that they are rather evidences to the contrary; for they raiſed him many enemies, and expoſed him to the clamours of the people, which he would probably have avoided, if at this time he had had any ſuch hopes, ſince having his daughter-in-law a Queen, and his ſon perhaps a King, he might then have provided for the reſt of his family with much more decency and ſecurity (56). It is indeed highly probable, that he had earlier and better intelligence of the nature of the King's diſeaſe than others; and it ſeems to be owing to this intelligence that [illegible] time to do what he did, in which however there [illegible] much precipitation, and ſome errors that after[illegible] coſt him dear. ſuch as not ſending for the King's ſiſters in time, confiding as he did in his old enemy the Earl of Arundel, and relying upon his late alliance with the houſe of Huntingdon, who notwithſtanding [illegible] him (57). But with reſpect to the Duke of Suffolk, his numerous family, they all ſtuck cloſe to him, as in their ſuperior fortunes they roſe, ſo they [illegible] fell together (58).

[*E*] *As may be ſeen at the bottom of the page.*] We have an account of the preparations made for theſe marriages in Strype, who, with a kind of religion if not ſuperſtition, collected every thing that bore the ſtamp of antiquity, ſuppoſing that all things how ſlight and indifferent ſoever they may ſeem, become ſome time or other uſeful, and ought therefore to be laid by; or at the worſt, will ſerve for the amuſement of ſuch as love to look back on paſt times, becauſe they take no pleaſure in what paſſes in their own. Let us now hear what he has collected out of the book of warrants, and the records of the wardrobe, in the time of King Edward (59). 'Anno Domini 1553. A little before 'this time (June) were great preparations making for 'the match, which was celebrated in May, of the 'Lady Jane with Guilford, Northumberland's ſon, 'and ſome other marriages that were to accompany 'that, as the Earl of Pembroke's eldeſt ſon with the 'Lady Katherine, the Duke of Suffolk's ſecond daughter, and the Earl of Huntingdon's eldeſt ſon, with 'the Duke of Northumberland's youngeſt daughter, 'and another of the ſaid Duke's near relations; Sir Andrew Dudley was likewiſe matched near the ſame time 'with Margaret Clifford, the Earl of Cumberland's 'daughter. And for the more ſolemnity and ſplendour 'of this day, the maſter of the wardrobe had divers 'warrants to deliver out of the King's wardrobe, much 'rich apparel and jewels. As to deliver to the Lady 'Frances Ducheſs of Suffolk, to the Ducheſs of Northumberland, to the Lady Marchioneſs of Northampton, to the Lady Jane, daughter to the Duke of Suffolk, 'and to the Lord Guilford Dudley, for wedding apparel (which were certain parcels of iſſues and cloth 'of gold and ſilver, which had been the late Duke and 'Ducheſs of Somerſet's, forfeited to the King) and to 'the Lady Katherine, daughter to the ſaid Duke of 'Suffolk, and the Lord Herbert, for wedding apparel, 'and to the Lord Haſtings, and Lady Katherine, 'daughter to the Duke of Northumberland, for wedding apparel, certain parcels of ſtuffs and jewels. 'Dated from Greenwich, the 24th of April. A warrant alſo there came to the wardrobe, to deliver to 'the King's uſe, for the finiſhing certain chairs for his 'Majeſty, ſix yards of green velvet, and ſix yards of 'green ſattin: another, to deliver to the Lady Mary's 'Grace, his Majeſty's ſiſter, a table diamond with a 'pearl pendant at the ſame; and to the Ducheſs of 'Northumberland, one ſquare tablet of gold enamelled 'black with a clock, late parcel of the Ducheſs of

(59) Strype's Memorials, Vol. II. p. 425.

'Somerſet's

The populace, as is commonly the caſe in all countries, were very far from being pleaſed with the exorbitant greatneſs of the Duke of Northumberland, and yet they could not help admiring that beauty and innocence which appeared in Lord Guilford and his bride; but the pomp and ſplendour attending the celebration of their nuptials, was the laſt gleam of joy that ſhone in the palace of King Edward, who grew ſo weak in a few days after, that Northumberland thought it high time to carry his great project into execution, without which he ſaw clearly, that himſelf or his friends could not long continue great, or even ſafe (*r*). Upon theſe motives therefore he determined in the beginning of the month of June, to ſet on foot that ſcheme for which he had been by theſe ſteps preparing, and to conſtrain all upon whom he had any influence, either from love or fear, to do their utmoſt in their reſpective ſtations, to bring about and ſupport that diſpoſition he meant ſhould be made of the Crown (*s*). The firſt motion he knew muſt proceed from the young monarch, and he was unwilling to truſt any but himſelf with the firſt overtures in relation to ſo delicate a ſubject, and at the ſame time there were certain circumſtances that made it no eaſy or acceptable thing for him to break it to a Prince, who though ſo young, was ſo wiſe and worthy in all reſpects as Edward. But neceſſity preſſed him not only in reſpect to the deed, but alſo with regard to the time, of which he had now none to ſpare (*t*). To bring about this contrivance, he ſuggeſted how happy the nation had been under his government, and what a glorious Reformation had been carried on by him: that when ſuch a bleſſing was ſo far advanced, the next point was to ſecure it's continuance, that religion being conveyed to poſterity, in this condition of purity, the public happineſs would be perpetuated, and the beſt proviſion made for the honour of his memory: that if the Crown ſhould deſcend to the Lady Mary, both the civil and religious intereſt of the kingdom would be in great danger: for that it was well known, how ſtrongly that princeſs was inclined to the doctrine and pretenſions of the court of Rome: and in caſe ſhe ſhould marry with ſome powerful prince of that communion, the Engliſh conſtitution might probably be overthrown, and the country made a province to a foreign nation; that both his ſiſters were the iſſue of marriages cenſured and diſallowed in parliament; and beſides, the late King having them by ſeveral venters, they were only of the half blood, and by conſequence could neither be heirs to his highneſs, nor to each other. As for the young Queen of Scots, ſhe had rejected an alliance with his majeſty, engaged with the French, and therefore was no farther to be thought on (*u*). That the Lady Jane, who ſtood next upon the royal line, was a perſon of extraordinary qualities, that her zeal for the Reformation was unqueſtioned, that nothing could be more acceptable to the nation than the proſpect of ſuch a princeſs; that in this caſe, he was bound to ſet aſide all partialities of blood and nearneſs of relation, theſe were inferior conſiderations, and ought to be over-ruled by the public good. In order to corroborate this diſcourſe, the Duke of Northumberland took care to place thoſe about the King, who would make it their buſineſs to touch frequently upon this ſubject; to enlarge upon the accompliſhments of the Lady Jane, and deſcribe her with all imaginable advantages (*w*). The King's affections ſtanding for this diſpoſition of the Crown, he was gained at laſt to overlook his ſiſters, and break through his father's will (*x*). The next thing was to draw an inſtrument, and put the ſettlement in form of law. To this purpoſe, Sir Edward Montague, Chief-Juſtice of the Common-Pleas, received an order from the Privy-Council at Greenwich, to come thither the next day, and bring Sir John Baker, Chancellor of the Firſt-fruits and Tenths, Juſtice Bromley, the Attorney and Sollicitor-General along with him (*y*). This order was ſignified by the Lord-Treaſurer, the Duke of Northumberland, the Earls of Bedford, Shrewſbury, and Pembroke, the Lords Clinton and Darcy, Sir John Gate, Sir William Petre, Sir William Cecil, and Sir John Cheke. When Sir Edward Montague and the reſt came to Court, the King told them that his ſickneſs had given him occaſion to conſider the ſtate of the realm, the courſe of the ſucceſſion, and the conſequences likely to enſue. And here he repreſented the danger to religion and the laws, in caſe the Lady Mary ſhould ſucceed him. And therefore, to prevent a misfortune of this nature, his pleaſure was, the Crown ſhould paſs to ſuch perſons, and under ſuch circumſtances, as were ſpecified in certain articles then laid before them:

'Somerſet's jewels. And laſtly, another warrant to 'Sir Andrew Dudley, to take for the Lady Margaret 'Clifford, daughter of the Earl of Cumberland, and 'to himſelf for their wedding apparel, ſundry ſilks and 'jewels. This laſt warrant bearing date June the 8th.' This paſſage though trivial in appearance, is notwithſtanding clear and ſufficient evidence of ſome points that contribute much to the giving us a right notion of this tranſaction. The contents of it ſhew plainly, that theſe marriages were much to the King's ſatisfaction, and that he meant to expreſs it, by having them celebrated in ſome meaſure at his expence, which with reſpect to Lady Jane, was ſo much the more reaſonable, as ſhe was his very near relation (60). It appears likewiſe from hence, that all was done in a hurry, and with a view to have things ready as ſoon as poſſible, for otherwiſe we cannot conceive that the ſpoils of the Duke of Somerſet's family would have been employed upon this occaſion. Neceſſity may excuſe this, but nothing elſe can. Laſtly, it renders it highly probable, that the deſign of altering the ſucceſſion had not eſcaped from the brain of Northumberland, how long ſoever it had lodged there at this time, for otherwiſe ſome notice would have been taken of it; for though there was enough done for his couſin Jane, yet there was much too little for the preſumptive heir to his Crown; beſides the complement paid to the Lady Mary, carries another appearance, and though this might be appearance only to others, yet the King would not have ſuffered it, if he had underſtood it in this light (61). He was not ſo young or ſo weak as to be impoſed upon groſsly, for what he did afterwards with reſpect to the ſucceſſion, was done ſenſibly and willingly; his underſtanding might be miſled, but he could never have been thus miſled, if he had not had a good underſtanding. This may ſeem ſtrange to ſome, but thoſe who are acquainted with courts, will know it to be truth.

(60) Cooper's Chronicle, fol. 358, b.

(61) There is a letter extant of the Lady Mary acknowledging this mark of favour.

[F] When

them: theſe articles they were to digeſt into method, and draw up an inſtrument to the beſt of their ſkill (z). The Chief-Juſtice and the reſt excepted againſt the order, and deſired to be excuſed: and when further preſſed, moved for time to conſult the ſtatutes and conſider the conſtitution; being afterwards required by a meſſage from the Lords, to go on with expedition, they made their report at the council-board, that having compared the articles with the ſtatutes of ſucceſſion, they found his Majeſty's command impracticable: that in caſe they ſhould draw up an inſtrument purſuant to their inſtructions, not only themſelves, but all their Lordſhips would be in danger of treaſon: that they thought it their duty to inform their Lordſhips how the laws ſtood: that they had not done any thing already, neither had they reſolution enough to run ſuch a riſque, and croſs ſo directly upon the conſtitution (a). The Duke of Northumberland was not in the council-chamber when this anſwer was returned, but being informed of it, he came immediately in. He was highly enraged at the diſappointment, called Sir Edward Montague traitor, ſaid he would fight in his ſhirt with any man in that quarrel, and menaced them to that degree, that Montague and Bromley were afraid he would have ſtruck them. When they appeared next at the board, the King reprimanded them for not diſpatching the inſtrument (b). The Chief-Juſtice told him it would ſignify nothing in law after the King's deceaſe, becauſe the ſucceſſion being ſettled by act of parliament, it could not be alter'd but by the ſame authority. In ſhort, the Chief-Juſtice Montague and the reſt, were at laſt overawed, and drew a ſettlement of the Crown upon the Lady Jane. However they took the beſt precautions the caſe would admit to indemnify themſelves: for they only engaged upon the condition of being authorized under the broad ſeal, and having a general pardon when the inſtrument was finiſhed (c). And to give the conveyance a ſtronger colour of law, all the judges were ſent for, and being required to ſubſcribe the inſtrument, they all put their hands to it, except Sir James Hales, one of the Juſtices of the Common-Pleas (d). None of the Lords of the Council, as far as it appears, ſcrupled the ſigning this inſtrument, except the Archbiſhop of Canterbury. This prelate, though he ap[illegible] the perſon, was not ſatisfied with the method, and therefore endeavoured to fruſtrate the project at it's firſt propoſal. He took the freedom to argue againſt it with the King, the Marquis of Northampton and the Lord Chamberlain Darcy being preſent. He deſired to ſpeak with the King alone, but that could not be granted. The Duke of Northumberland told him, he had miſbehaved himſelf already, in remonſtrating againſt the King's will. The Archbiſhop was not diſcouraged by this rebuke, but bore up againſt Northumberland at the council-board: he inſiſted on his being ſworn to perform the late King's will, and urged the entail of the Crown upon the two Princeſſes Mary and Elizabeth (e). To this the Council oppoſed the reſolution of the judges, and the opinions of others learned in the law, who affirmed, that notwithſtanding this entail the King being in poſſeſſion might diſpoſe of the Crown as he thought fit. This was more than the Archbiſhop could underſtand; but being little ſkilled in the common-law, he ſuffered himſelf to be overcome by the learned in that profeſſion, and more eſpecially the King's Attorney and Sollicitor, and yet in all probability he would not have ventured to ſign, if it had not been for the young King's perſwaſion (f). The concurrence in this meaſure, all things conſidered, was very extraordinary, and it is equally difficult to conceive how ſo many grave and cautious men could be drawn to embark themſelves ſo far as they did, and that after running ſuch a hazard, and knowing their own force, they ſhould notwithſtanding undo all that they had done, and this purely through fear and want of confidence in each other, while their ſtrength was entire, and they had ſuffered nothing either from accident or force (g). But revolutions are always ſudden in this country, and precautions are vain, when the peoples affections are once alienated [F]. This difficult affair once accompliſhed,

[F] *When the peoples affections are once alienated.*] It is juſtly obſerved by as ſhrewd a political writer as any who ever meddled with the affairs of this kingdom, that nothing could be more artfully contrived than this ſcheme, conſidered in all it's branches. It was, to ſay the truth, the utmoſt effort of falſe politics, and one of the ſtrongeſt inſtances of the power of faction, that is to be found in our own hiſtory or in any other. The two Dukes, by a variety of alliances, had connected ſo many great perſons in point of intereſt to themſelves, had diſpoſed of all places and offices in ſuch a manner amongſt their friends, and under pretence of zeal for the Proteſtant religion, influenced the inferior clergy in ſuch a manner, that thoſe who diſliked the act, durſt not expreſs themſelves as freely as they deſired to do, or perſiſt in their behaviour, even to that degree which they expreſſed; ſo that what through hope, intereſt, and fear, a more extenſive influence was hardly ever ſeen (62). The inſtrument which the lawyers were afraid to draw, and which for all that was very well drawn, was, after the execution, ſubſcribed by thirty-three members of the Privy-Council, and amongſt theſe, by all the great officers of the Crown, of whom none but the Archbiſhop of Canterbury ſhewed any ſcruple; the Lord High Treaſurer, the Lord Chancellor, the Lord Chamberlain, and the reſt not only ſubſcribed but promoted it, and took as large a ſhare both before and after (till they found themſelves in danger), and ſeemed as much in earneſt as the two Dukes themſelves could deſire or wiſh (63). This was going a great way, for beſides this capital inſtrument, there was another drawn likewiſe by the King's ſpecial order, of which the more notice ought to be taken, becauſe it is not mentioned by many of our hiſtorians. In this writing they engaged upon their oaths and honour, to adhere to and perform every article and branch contained in the ſettlement of the ſucceſſion; and that if any of them ſhould depart from this engagement, they ſhould look upon it as a ſcandalous infraction, and endeavour to puniſh the offender as a diſturber of the public repoſe. The perſons ſubſcribing are theſe (64). T. Cant. T. Ely. Wincheſter. Northumberland. J. Bedford. H. Suffolk. W. Northampt. F. Shrewſbury. F. Huntindon. Pembroke. E. Clinton. T. Darcy. G. Cobham. T. compliſhed, and the letters-patents having paſſed the ſeals before the cloſe of the month, the Dukes had nothing to do but to concert in the beſt manner they were able, the propereſt method for carry this new ſettlement into execution, and till that was done, to keep it as ſecret as they could (*b*). Northumberland indeed had formed a project, which if he could have executed would have made all things eaſy and ſecure. He directed letters to the Lady Mary in her brother's name, requiring her attendance at Greenwich, where the Court then was, and ſhe was within half a day's journey of that place when King Edward reſigned his ſoul to his Creator, July the ſixth, 1553 (*i*), of which ſhe had immediately notice given her by the Earl of Arundel, and thereby avoided the ſnare which had been laid with ſo much artifice (*k*). The Dukes, though they had been ſo long contriving, and ſo long expecting this event, were notwithſtanding in very great confuſion when it happened, and therefore concealed it for more than two days, that they might have time to gain the magiſtrates and citizens of London, and to procure the conſent of Lady Jane, who was ſo far from having any hand in this buſineſs, that as yet ſhe was unacquainted with the pains that had been taken to procure her the title of Queen, for as to the power ſhe never had it, and perhaps it was never meant ſhe ſhould (*l*). In the management of their affairs at this delicate conjuncture, the Lords, and thoſe who adhered to them, which as yet was every man in the adminiſtration, had as much ſucceſs as they could reaſonably expect, ſo that they flattered themſelves, the beginning of the new Queen's reign would not be attended with any conſiderable diſturbance (*m*) [G]. It does not appear that they ſuffered

fore they had been over-turned. The two Dukes no doubt thought ſo themſelves, but they were diſappointed, and this notwithſtanding they had a conſiderable force at command; which is a leſſon worthy the conſideration of the graveſt politicians; as it ſhews that how broad, how ſtrong ſoever a faction may be, it loſes all it's power, as ſoon as the people comprehend it is but a faction.

[G] *With any conſiderable diſturbance*] The only method of underſtanding this curious but hitherto confuſed part of our hiſtory, is to refer every fact as far as it is practicable to the day on which it happened, and this at the ſame time that it will make the whole ſtory clearer, by throwing things into that natural order in which they fell out, ſo it will afford us an opportunity of diſcovering many falſehoods and inaccuracies that for want of this precaution have eſcaped ſome very diligent writers (65). All agree that the two Dukes, and thoſe who were moſt ſincerely attached to them, uſed the utmoſt caution in order to conceal the King's death, which had it been in their power, they would willingly have done for a fortnight; amongſt other reaſons it is ſaid, in hopes that the Lady Mary might fall into their hands. Of this there would be the more probability, if we could depend upon what a very bitter (66) but a very intelligent writer aſſures us, that Northumberland himſelf kept a ſecret correſpondence with her highneſs, and actually wrote her a letter on the 20th of June, the very day before King Edward's letters-patents paſſed, with the ſtrongeſt aſſurances poſſible of his duty and ſervice. The very next day after the King's death, the Lord High-Treaſurer Wincheſter, the Earl of Shrewſbury, and the Lord High Admiral Clinton, went to the Tower (67), where they turned out Sir James Croſt, who had the charge of that important fortreſs, and adminiſtred the oath of Conſtable to the Lord Admiral Clinton, who immediately gave the neceſſary directions for putting it in a ſtate of defence; for the reception of thoſe who were ſpeedily expected, all which was the more eaſy, ſince ſome (68) ſtep for this purpoſe had been previouſly taken before the death of King Edward. The Tower being thus ſecured, the next ſtep was to ſecure the City, and for this purpoſe, the Council, as it was very common in reſpect to affairs of moment, wrote their letters for Sir George Barnes, with ſix Aldermen, as many Merchant-Adventurers, and the ſame number of the Merchants of the Staple, to repair to the Court, which they accordingly did on Saturday the eighth of July; and being by the Council informed of the ſtate things were in, and of the diſpoſition the King by letters patents had made of the Crown; they were ſworn to Queen Jane and diſmiſſed, with directions to keep the King's death a ſecret (69). We may from hence perceive, that Mr Strype (70) muſt be miſtaken, when he aſſerts that Dr Ridley preached the next day at Paul's-Croſs, in maintenance of Queen Jane's title, who as yet was not proclaimed; and therefore when he ſays there were but two Paul's ſermons preached in this ſhort reign, and the latter by Mr Rogers, who preached only upon the goſpel of the day, it is highly probable that he exchanged the preachers, putting the firſt laſt, and the laſt firſt, as the ſubjects of their ſermons very plainly teſtify, as well as the concurring evidence of the beſt writers (71) of thoſe times, who fix the ſermon of Biſhop Ridley to the ſixteenth, and not to the ninth. Indeed, what probability is there that the Council ſhould recommend ſecrecy to the Lord-Mayor and Aldermen, and at the ſame time give or ſend inſtructions to Mr Rogers (72), who really preached on the ninth, or to Biſhop Ridley, as Strype would have it, to declare Queen Jane's title to the people. So far was this from being their purpoſe, that in their firſt letters to the embaſſadors at Bruſſels, which were diſpatched on the ſaturday (73), though they mention the King's death, yet they ſaid nothing of the ſucceſſion; but finding by the Lady Mary's letters the next day, that ſhe was appriſed of it, and that it could not be kept a ſecret; they then wrote to Sir Philip Hoby, Sir Richard Morriſon, and the Biſhop of Norwich, and acquainted them with Queen Jane's acceſſion. At the ſame time they ſwore the guard and the head officers of the houſhold to Jane (74), and took the reſolution of proclaiming her the next day (75). It is very remarkable, that in purſuance of their engagement, the Council at this time ſtuck together, and acted in all outward appearance with the utmoſt harmony; and yet if they were in earneſt now, they could not, conſiſtent with the principles of conſcience or juſtice, diſlike any thing that paſſed afterwards, ſince that was only in maintenance of what was now done, which might indeed be more dangerous then, but not at all more illegal or unjuſt than now; the truth is, that ſeveral were unſatisfied and only wanted courage to declare themſelves; nay, in the opinion of Sir William Cecil (76), who was at this time Secretary of State, the major part of the Council were rather inclined to Queen Mary's title; ſo that he aſcribed it to ſome impropriety in the conduct of one Hungate, who was intruſted with her letters, than to the diſpoſition of the Council that it did not ſucceed. If this ſeems inconſiſtent with that ſtrong ſtile in which their anſwer to the Lady Mary is penned, the reader muſt conſider that this was the buſineſs of Sir John Cheke, who was very hearty; and when he had drawn it while Northumberland was preſent (77), none of the Council was ſtout enough to decline ſigning it. They apprehended that the face of authority and the ſtrength of the nation was with Jane and the two Dukes, and therefore with them they ſtaid till hearing of the forces that reſorted to Mary, they began to wiſh that they had ſtuck to their firſt notions in favour of her title. This is the plain and naked truth, not taken upon the authority of this or that author, or from a biaſs to, or prejudice againſt, either ſide of the queſtion, but drawn from facts that cannot admit of diſpute, and from the declarations not only of thoſe who lived in theſe times, but of ſome of the principal perſons of whoſe conduct we are ſpeaking, ſuch as Archbiſhop Cranmer, Sir William Cecil, Sir John Maſon, and others. By this ſpecimen the reader will find it no difficult matter to account for and form a right judgment of all that afterwards happened.

ſuffered themſelves to be undeceived in any degree by the letters which they received from Mary, in which, though ſhe did not take the title of Queen, ſhe clearly aſſerted her right to the Crown, took notice of their concealing her brother's death, and of the practices into which they had ſince entered, but intimated that there was ſtill room for reconciliation; and that if they complied with their duty in proclaiming her Queen, ſhe could forgive and even forget what was paſt (*n*). In their anſwer, the Lords and others of the Privy-Council, for it was ſigned by the Archbiſhop of Canterbury, and twenty others, inſiſt upon the indubitable right, and their own unalterable fidelity to Queen Jane, to whom they perſwaded the Lady Mary to ſubmit (*o*). Theſe previous ſteps being taken, the Tower and the City of London ſecured, the Council quitted Greenwich, and came to London, and on Monday July the tenth in the forenoon, the two Dukes repaired to Durham-houſe, where the Lady Jane reſided with her huſband, as part of Northumberland's family (*p*). There the Duke of Suffolk with much ſolemnity explained to his daughter the diſpoſition the late King had made of his Crown by letters-patents, the clear ſenſe the Privy-Council had of her right, the conſent of the magiſtrates and citizens of London; and when he had made an end of ſpeaking, himſelf and Northumberland fell on their knees and paid their duty to her as Queen of England (*q*). The poor lady ſomewhat aſtoniſhed at their diſcourſe, but not at all affected by their reaſons, or in the leaſt elevated by ſuch unexpected honours, returned them an anſwer to this effect (*r*). 'That 'the laws of the kingdom and natural right ſtanding for the King's ſiſters, ſhe would be- 'ware of burthening her weak conſcience with a yoke which did belong to them; that ſhe 'underſtood the infamy of thoſe who had permitted the violation of right to gain a ſcep- 'ter; that it were to mock God and deride Juſtice, to ſcruple at the ſtealing of a ſhilling, 'and not at the uſurpation of a Crown. Beſides (ſaid ſhe) I am not ſo young nor ſo light 'read in the guiles of fortune, to ſuffer myſelf to be taken by them. If ſhe enthrall me, 'it is but to make them the ſubject of her ſpoil; if ſhe raiſe others, it is but to pluck 'herſelf with their ruins; what ſhe adored but yeſterday, is to day her paſtime. And if 'now permit her to adorn and crown me, I muſt to-morrow ſuffer her to cruſh and break 'me in pieces. Nay, with what Crown doth ſhe preſent me? a Crown which hath been 'violently and ſhamefully wreſted from Katherine of Arragon, made more unfortunate by 'the puniſhment of Anne Boleyn, and others that wore it after her; and why then 'would you have me add my blood to theirs, and be the third victim from whom this fa- 'tal Crown may be raviſhed, with the head that wears it? but in caſe it ſhould not prove 'fatal unto me, and that all it's venom were conſumed, if fortune ſhould give me war- 'ranties of her conſtancy, ſhould I be well adviſed to take upon me theſe thorns which 'would dilacerate, though not kill me out-right; to burthen myſelf with a yoke which 'would not fail to torment me, though I were aſſured not to be ſtrangled with it? my 'liberty is better than the chain you profer me, with what precious ſtones ſoever it be 'adorned, or of what gold ſoever framed. I will not exchange my peace for honourable 'and precious jealouſies, for magnificent and glorious fetters. And if you love me ſin- 'cerely and in good earneſt, you will rather wiſh me a ſecure and quiet fortune though 'mean, than an exalted condition, expoſed to the wind, and followed by ſome diſmal 'fall.' But notwithſtanding the prudence, goodneſs, and eloquence of this ſpeech, ſhe was at length prevailed upon, by the exhortations of her father, the interceſſion of her mother, the artful perſwaſions of Northumberland, and above all, the earneſt deſires of her huſband, whom ſhe tenderly loved, to yield her aſſent to what had been and was to be done (*s*); and thus with a heavy heart ſhe ſuffered herſelf to be conveyed by water to the Tower, where ſhe entered with all the ſtate of a Queen, attended by the principal nobility, and, which is very extraordinary, her train ſupported by the Ducheſs of Suffolk her mother, in whom, if in any of this line, the right of ſucceſſion remained (*t*). About ſix o'clock in the afternoon ſhe was proclaimed with all due ſolemnities in the city, which proclamation we are aſſured Sir William Cecil declined drawing (*u*), and it was therefore penned by Sir John Throckmorton, with great ſkill and elegance, and becauſe it contains the ſubſtance of King Edward's letters-patents, and whatever elſe could caſt any colour of right upon the title of Queen Jane, and this in the moſt conciſe terms (*w*), is inſerted at the bottom of the page [*H*]. The concourſe of people, as is uſual on ſuch occaſions, was

[*H*] *Is inſerted at the bottom of the page.*] There is nothing does more honour to Northumberland's management in this affair, than the ſkill and ſpirit with which the papers were drawn, which came either to the eye of the public, or to the hands of particular perſons; and this is ſo much the more ſingular, as the Secretaries Cecil and Petre were not well diſpoſed, but as far as they were able declined acting, which he paſſed by at this time, as being deſirous to be aſſiſted on ſuch critical occaſions by any, rather than concealed enemies; and therefore when Sir John Cheke was not preſent, he frequently drew the letters, and more frequently the minutes himſelf. As for this proclamation Cecil put it upon the Attorney-General, but after all it was thus penned by Sir John Throckmorton.

'JANE, by the grace of God, Queen of England, 'France, and Ireland, defender of the Faith and of 'the Church of England, and alſo of Ireland, under 'Chriſt in earth the ſupreme head. To all our moſt 'loving, faithful, and obedient ſubjects, and to every 'of them greeting. Whereas our moſt dear couſin 'Edward the Sixth, late King of England, France, and 'Ireland, Defender of the Faith, and in earth the ſu- 'preme head under Chriſt of the Church of England 'and Ireland; by his letters-patents ſigned with his 'own hand, and ſealed with his great ſeal of England, 'bearing date the twenty-firſt day of June, in the ſe- 'venth year of his reign, in the preſence of the moſt part 'of his nobles, his counſellors, judges, and divers other 'grave and ſage perſonages, for the profit and ſurety of 'the whole realm thereto aſſenting and ſubſcribing their 'names to the ſame; hath by the ſame his letters-patents 'recited, That for as much as the Imperial Crown of 'this realm, by an act made in the thirty-fifth year of 'the

was very great, but they came rather out of curioſity, than to teſtify their concurrence or conſent; ſo that their acclamations were but faint, moſt being ſilent, ſome teſtifying their diſlike, and amongſt the crowd a vintner's boy had the boldneſs to vindicate Queen Mary's title, for which he was preſently committed (x). This day likewiſe Jane aſſuming the regal title, confirmed the Lords-Lieutenants throughout the kingdom, and wrote to the Marquis

(x) Strype's Memorials, Vol. III. p. 2. Holinſh-d. Vol. II. p. 1084. Burnet's Hiſt. Reform. Vol. II. p. 236.

' the reign of the late King of worthy memory, King ' Henry the Eighth, our progenitor and great uncle, ' was for lack of iſſue of the body of our ſaid late cou- ' ſin King Edward the Sixth, by the ſame act limited ' and appointed to remain to the Lady Mary, by the ' name of the Lady Mary his eldeſt daughter, and to ' the heirs of her body lawfully begotten; and for ' default of ſuch iſſue, the remainder thereof to the ' Lady Elizabeth, by the name of the Lady Elizabeth ' his ſecond daughter, and to the heirs of her body ' lawfully begotten, with ſuch conditions as ſhould be ' limited and appointed by the ſaid late King of wor- ' thy memory, King Henry the Eighth, our progeni- ' tor and great uncle, by his letters-patents under his ' great ſeal, or by his laſt will in writing ſigned with ' his hand. And for as much as the ſaid limitation of ' the Imperial Crown of this realm being limited as is ' aforeſaid to the ſaid Lady Mary and Lady Elizabeth, ' being illegitimate and not lawfully begotten, for that ' the marriage had between the ſaid late King, King ' Henry the Eighth, our progenitor and great uncle, ' and the Lady Katherine, mother to the ſaid Lady [redacted] and alſo the marriage had between the ſaid ' late King, King Henry the Eighth, our progenitor ' and great uncle, and the Lady Anne, mother to the ' ſaid Lady Elizabeth, were clearly and lawfully un- ' done by ſentences of divorces, according to the word ' of God and the Eccleſiaſtical Laws. And which ſaid ' ſeveral divorcements have been ſeverally ratified and ' confirmed by authority of parliament, and eſpecially ' in the twenty-eighth year of the reign of King Henry ' the Eighth, our ſaid progenitor and great uncle, re- ' maining in force, ſtrength, and effect, whereby, as ' well the ſaid Lady Mary, as alſo the ſaid Lady Eli- ' zabeth, to all intents and purpoſes are, and have ' been clearly diſabled to aſk, claim, or challenge the ' ſaid Imperial Crown, or any other of the honours, ' caſtles, manors, lordſhips, lands, tenements, or other ' hereditaments, as heir or heirs, to our ſaid late ' couſin King Edward the Sixth, or as heir or heirs to ' any other perſon or perſons whoſoever, as well for ' the cauſe before rehearſed, as alſo for that the ſaid ' Lady Mary and Lady Elizabeth, were unto our ſaid ' late couſin, but of the half blood, and therefore by ' the ancient laws, ſtatutes, and cuſtoms of this realm, ' be not inheritable unto our ſaid late couſin, although ' they had been born in lawful matrimony, as indeed ' they were not, as by the ſaid ſentences of divorce and ' the ſaid ſtatute of the twenty-eighth year of the reign ' of King Henry the Eighth, our ſaid progenitor and ' great uncle, plainly appeareth. And for as much alſo ' as it is to be thought, or at the leaſt much to be ' doubted, that if the ſaid Lady Mary or Lady Eliza- ' beth ſhould hereafter have and enjoy the ſaid Impe- ' rial Crown of this realm, and ſhould then happen to ' marry a ſtranger born out of this realm, that then the ' ſame ſtranger having the government and the Impe- ' rial Crown in his hands, would adhere and practiſe ' not only to bring this noble free realm into the ty- ' ranny and ſervitude of the Biſhop of Rome, but alſo ' to have the laws and cuſtoms of his or their own na- ' tive country or countries, to be practiſed and put ' in uſe within this realm, rather than the laws, ſta- ' tutes, and cuſtoms, here of long time uſed; where- ' upon the title of inheritance of all and ſingular the ' ſubjects of this realm, do depend to the peril of con- ' ſcience, and the utter ſubverſion of the common weal ' of this realm. Whereupon our ſaid late dear couſin, ' weighing and conſidering with himſelf what ways ' and means were moſt convenient to be had for the ' ſtay of the ſaid ſucceſſion in the ſaid Imperial Crown, ' if it ſhould pleaſe God to call our ſaid late couſin out ' of this tranſitory life, having no iſſue of his body, ' and calling to his rememberance, that we and the ' Lady Katherine and the Lady Mary, our ſiſters, be- ' ing the daughters of the Lady Frances our natural ' mother, and then and yet wife to our natural and ' moſt loving father, Henry Duke of Suffolk, and the ' Lady Margaret, daughter of the Lady Eleanor, then ' deceaſed, ſiſter to the ſaid Lady Frances, and the ' late wife of our couſin Henry Earl of Cumber- ' land, were very nigh of his Grace's blood of the part ' of his father's ſide, our ſaid progenitor and great ' uncle; and being naturally born here within the ' realm, and for the very good opinion our ſaid ' late couſin had of our and our ſaid ſiſters and couſin ' Margaret's good education, did therefore upon good ' deliberation and advice herein had and taken, by his ' ſaid letters patents declare, order, aſſign, limit, and ap- ' point, that if it ſhould fortune himſelf our ſaid late ' couſin King Edward the Sixth to deceaſe, having no ' iſſue of his body lawfully begotten, that then the ' ſaid Imperial Crown of England and Ireland, and ' the confines of the ſame, and his title to the crown ' of the realm of France, and all and ſingular honours, ' caſtles, prerogatives, privileges, pre-eminences, autho- ' rities, juriſdictions, dominions, poſſeſſions, and heredi- ' taments, to our ſaid late couſin King Edward the Sixth, ' or to the ſaid Imperial Crown belonging, or in any wiſe ' appertaining, ſhould for lack of ſuch iſſue of his body ' remain, come, and be unto the eldeſt ſon of the body ' of the ſaid Lady Frances lawfully begotten, being ' born into the world in his life time, and to the heirs ' male of the body of the ſame eldeſt ſon lawfully be- ' gotten, and ſo from ſon to ſon, as he ſhould be of ' antienty in birth, of the body of the ſaid Lady Fran- ' ces lawfully begotten, being born into the world in ' our ſaid late couſin's life-time, and to the heirs ' male of the body of every ſuch ſon lawfully begot- ' ten, and for default of ſuch ſon born into the world ' in his life-time, of the body of the ſaid Lady Frances ' lawfully begotten; and for lack of heirs male of ' every ſuch ſon lawfully begotten, that then the ſaid ' Imperial Crown, and all and ſingular other the pre- ' miſes ſhould remain, come, and be to us by the name ' of the Lady Jane, eldeſt daughter of the ſaid Lady ' Frances, and to the heirs male of our body lawfully ' begotten, and for lack of ſuch heir male of our ' body lawfully begotten, that then the ſaid Im- ' perial Crown, and all other the premiſes, ſhould ' remain, come, and be to the ſaid Lady Kathe- ' rine, our ſaid ſecond ſiſter, and to the heirs male ' of the body of the ſaid Lady Katherine lawfully be- ' gotten, with divers other remainders, as by the ſame ' letters-patents more plainly, and at large may, and ' doth appear. Sithens the making of which letters- ' patents, that is to ſay on thurſday, which was the ' ſixth day of this inſtant month of July, it hath plea- ' ſed God to call to his infinite mercy, our ſaid moſt ' dear and intirely beloved couſin Edward the Sixth, ' whoſe ſoul God pardon; and for as much as he is ' now deceaſed, having no heirs of his body begotten, ' and that alſo there remain at this preſent time, no ' heirs lawfully begotten of the body of our ſaid pro- ' genitor and great uncle King Henry the Eighth; and ' for as much alſo as the ſaid Lady Frances our ſaid ' mother, had no iſſue male begotten of her body, and ' born into the world in the life-time of our ſaid couſin ' King Edward the Sixth, ſo as the ſaid Imperial ' Crown, or other the premiſes to the ſame belonging, ' or in any wiſe appertaining, now be, and remain to ' us in our actual and royal poſſeſſion, by authority of ' the ſaid letters-patents: we do therefore by theſe ' preſents ſignify unto all our moſt loving, faithful, ' and obedient ſubjects, that like as we for our part, ' ſhall by God's grace, ſhew ourſelves a moſt gracious ' and benign ſovereign Queen and Lady, to all our ' good ſubjects, in all their juſt and lawful ſuits and ' cauſes, and to the uttermoſt of our power, ſhall pre- ' ſerve and maintain God's moſt holy word, chriſtian ' policy, and the good laws, cuſtoms, and liberties of ' theſe our realms and dominions; ſo we miſtruſt not but ' they and every of them will again for their parts, at all ' times, and in all caſes, ſhew themſelves unto us their ' natural liege Queen and Lady, moſt faithful, loving, ' and obedient ſubjects, according to their bounden du- ' ties and allegiances, whereby they ſhall pleaſe God, and ' do the thing that ſhall tend to their own preſervations ' and ſureties; willing and commanding all men of all ' eſtates, degrees, and conditions, to ſee our peace and

' accord

Marquis of Northampton, who was Lord Lieutenant of Surry, Northamptonſhire, Bedfordſhire, and Bucks, to aſſiſt and defend her title (y). On tueſday the eleventh, Gilbert Pot, ſervant to Ninion Saunders a vintner, who was convicted of ſpeaking ſeditious words the day before, on the evidence of his maſter a gunner of the Tower; ſtood in the pillory to which his ears were nailed, and when his time of ſtanding was ended, they were cut off, a herald proclaiming his offence, and a trumpet ſounding all the time. An unſeaſonable act of ſeverity, which diſpleaſed rather than terrified the people (z), and which a ſubſequent accident made more remarkable, for his maſter, with one Owen, a gunſmith, coming from the Tower that evening, were drowned in ſhooting London-Bridge (a). On wedneſday the twelfth, a letter was written from Jane to the Emperor, notifying her acceſſion; which was committed to the care of Richard Shelly, who was likewiſe intruſted with the Council's letters to the ambaſſadors at Bruſſels, in which they ſtiled that princeſs our Sovereign Lady (b). This Princeſs and her Council however had their thoughts diverted from matters of form, to things of greater conſequence, by their receiving certain intelligence, that Mary was gone to Keninghall-Caſtle in Norfolk (c), attended by ſome of the nobility, and with ſuch a reſort of the commons, as plainly ſhewed ſhe wanted not thoſe who would ſupport her claim to the Crown, which ſhe had likewiſe ſhewn her own intention to maintain, by aſſuming the title of Queen (d). A ſquadron had been before ſent to cruize upon the coaſt of Suffolk and Norfolk, to prevent her eſcape to Flanders; but now the neceſſity of an army appeared, and the firſt reſolution was, that it ſhould be commanded by the Duke of Suffolk, who had a great ſtake in this buſineſs, and who wanted not either courage or any other abilities to qualify him for that office (e). But the Queen's tenderneſs over-ruled her judgment, and the Council falling eaſily into her opinion, conſented that Suffolk, with the title of guardian to the Queen's perſon, ſhould remain where he was, and that Northumberland, whoſe military talents they magnified, ſhould put himſelf at the head of the forces, which he ſeemed chearfully to accept, becauſe he ſaw [illegible] could not poſſibly be refuſed (f). He then ſignified to the Council, that he would make ready his own power on the morrow after, not doubting but they would ſend theirs with him, or ſpeed them after him; that he muſt recommend the Queen unto their fidelity, of whoſe ſacred perſon he deſired them to be very tender, all which they promiſed him to do (g). And having thus ſettled theſe affairs, they made the Queen acquainted in Northumberland's preſence, with how great readineſs he had taken the danger of that action upon himſelf, to give her the contentment of enjoying her father's company, till the preſent ſtorm was over blown, who humbly thanked the Duke for ſo great a favour, and chearfully deſired him not to be wanting to the public and his perſonal ſafety (h). The ſame day arms and ammunition were ſent from the Tower, for the uſe of the troops that were quickly to be put in motion. On thurſday the thirteenth, after taking due care, ſo far as was in his power, for aſſembling troops ſufficient for the intended enterprize, which was reducing thoſe in arms againſt Queen Jane, and bringing Mary priſoner to the Tower (i); Northumberland went for the laſt time to Court, and having put the nobility and council in mind that Newmarket was the place of rendezvous, he delivered himſelf farther, to this effect (k). 'My Lords (ſaid he) I and theſe other noble perſonages, with the whole 'army that now goes forth, as well for the behalf of you and your's, as for the eſtabliſh-'ing of the Queen's Highneſs, ſhall not only adventure our bodies and lives amongſt the 'bloody ſtrokes, and cruel aſſaults of our adverſaries in the open fields; but alſo we do leave 'the conſervation of ourſelves, children, and families, at home here with you, as toge-'ther committed to your truſt and fidelity. Whom, if we thought you would, through 'malice, conſpiracy, or diſſention, leave us your friends in the briers, and betray us, we 'could as well ſundry ways foreſee and provide for our own ſafe-guards as any of you by 'betraying us can do for your's. But now upon the only truſt and faithfulneſs of your ho-'nours, whereof we think ourſelves moſt aſſured, we hazard our lives, which truſt and 'promiſe if you ſhall violate, hoping thereby of life and promotion, yet God ſhall not 'count you innocent of our bloods, neither acquit you of the ſacred holy oath of alle-'giance, made freely by you to this virtuous lady, the Queen's highneſs, who by your 'and our enticement, is rather of force placed therein, than by her own ſeeking and requeſt. 'Conſider alſo, that God's cauſe, which is the preferment of his word, and the fear of the 'return of Popery, hath been (as ye have heretofore always ſaid) the original cauſe where-'upon ye (even at the firſt motion) granted your good wills and conſents thereunto, as 'by

'accord kept, and to be obedient to our laws, as they 'tender our favour, and will anſwer for the contrary 'at their extreme perils. In witneſs whereof, we have 'cauſed theſe our letters to be made patents. Witneſs 'ourſelf, at our Tower of London, the tenth day of 'July, in the firſt year of our reign.'

Anno Domini M.D.LIII. God Save the QUEEN.

Londini, in ædibus Ricardi Graftoni, Reginæ a typographia excuſum. Cum privilegio ad imprimendum ſolum.

If Mr Strype (78), had ever ſeen a printed copy of this proclamation, or if the laſt line had been preſerved in that which Biſhop Burnet printed amongſt his records, he would not have been ſo angry, that Grafton, who likewiſe printed the proclamation of Queen Mary, was removed, and John Cawood appointed the Queen's printer in his room, or have attributed it as he does, to his being a Proteſtant, and having printed the Bible in Engliſh, ſince it is far more likely, that the cauſe of his being turned out of his employment and meeting with other hard uſage, was for his printing this proclamation. At leaſt this is ſo good a reaſon, that there is no need of looking for a better.

(78) Memorials, Vol. III. p. 13.

'by your hand writing appeareth. And think not otherwiſe but that if you mean deceit, 'though not forthwith, yet hereafter God will revenge the ſame. I can ſay no more, but 'in this troubleſome time wiſh you to uſe conſtant hearts; abandoning all malice, envy, 'and private affections. Which ſaid, and having paused a little, he ſhut up his addreſs 'in theſe following words: I have not ſpoken to you, my Lords, in this ſort upon any 'miſtruſt that I have of your fidelities, of which always I have hitherto conceived a truſty 'confidence, but I have only put you in remembrance thereof, what chance of variance 'ſoever might grow amongſt you in my abſence. And this I pray you, that you would 'not wiſh me leſs good ſpeed in this journey, than you would have yourſelves.' To which laſt words, one of them is reported to have thus replied: *My Lord, if you miſtruſt any of us in this matter, your Grace is much miſtaken in us. For which of us can waſh his hands clean of the preſent buſineſs; for if we ſhould ſhrink from you, as one that is culpable, which of us can excuſe himſelf as being guiltleſs* (*l*)? Little the more aſſured by this quick return he went to take his leave of the Queen, where he found his commiſſion ready ſealed, together with certain inſtructions ſubſcribed by all the Lords of the Council, in which his marches were laid out and limited from one day to another. This is generally ſuppoſed to have been by his own advice, but that he might have the authority of the Privy-Council to plead, for every motion he made (*m*). At his departure the Earl of Arundel, who had been betraying them all the time, and who meditated their deſtruction now, which he ſoon accompliſhed, came to the Duke, profeſſed his ſorrow that he was not appointed to go with him, in whoſe preſence he could find in his heart to ſpend his blood, and to lay his life down at his feet (*n*). Northumberland, accompanied by the Marquis of Northampton and the Lord Grey, went in his barge to Durham-Houſe, and from thence to Whitehall, where having muſtered his forces, and given the neceſſary orders for their march, he returned to Durham-Houſe for that night (*o*). On friday the 14th of July, he marched with two-thouſand horſe and ſix-thouſand foot through Shoreditch, accompanied by the Lord Grey of Wilton, and Sir John Gates his conſtant friend bringing up the rear (*p*). The Duke of Suffolk having the care of the Queen's perſon and of the Tower, found himſelf very fully employed, and in a very little time perceived what a miſtake had been made in ſending Northumberland into a country where he was univerſally hated, and leaving the direction of the council to him who was no politician (*q*). On ſaturday the fifteenth, thoſe intrigues began which deſtroyed that unanimity that in appearance at leaſt had ſubſiſted in Jane's little Court. Sir William Cecil ſeems to have been the perſon who firſt intimated a diſlike of the condition they were in, and he very quickly found that many were in his ſentiments. He had wiſely declined executing his office of Secretary, ſo that moſt of the papers of ſtate had been drawn by Sir John Cheke, which was certainly no diſadvantage to the cauſe; for as he was one of the moſt learned and polite, he was alſo one of the cleareſt and correcteſt writers of that time (*r*). The perſon applied to by Cecil, was the Lord-Treaſurer Wincheſter, whoſe maxim it was, that in ſtormy times, an oak was more expoſed than a willow, and this gave him ſuch a facility in bending, that we find him well rooted, and flouriſhing in every Court from the days of Henry, to the times of Elizabeth (*s*). Arundel was next tampered with, and he contented himſelf with ſaying, that he liked not that air; Paget and Petre were known to be in the ſame ſentiments; theſe cabals were indeed very ſecret, but it was not long before their effects appeared (*t*). On ſunday July the ſixteenth, Dr Nicholas Ridley, Biſhop of London, preached at Paul's-Croſs, where he very juſtly commended the virtues and abilities of Queen Jane, maintained her title by the beſt arguments he could deviſe, and inveighed againſt the claims of King Henry's daughters (*u*) [*I*]. In all this no doubt he acted with great ſincerity,

[*I*] *Againſt the claims of King Henry's daughters.*] It has been before ſhewn, that this ſermon muſt have been preached upon the ſixteenth of July, by directions from the Council, as it ſtands in Stowe and other old writers, and as it was underſtood to be by Biſhop Burnet (79); for though that prelate does not expreſsly ſay this, yet he ſays it in effect, ſince he tells us that it was preached on the very ſame day that Dr Sands preached upon the very ſame ſubject at Cambridge, and the time of preaching that ſermon was never liable to any doubt. But the beſt and moſt conciſe account of this we owe to Heylin (80), who ſpeaks thus: 'On 'ſunday the ſixteenth of the month, Dr Nicholas Ridley, 'Biſhop of London, is ordered by the Lords of the 'Council to preach at St Paul's-Croſs, and in his ſer-'mon to advance the title of Queen Jane, and ſhew the 'invalidity of the claim of the Lady Mary. Which he 'performed according to ſuch grounds of law and po-'lity, as had been laid together in the Letters-Patents 'of King Edward, by the authority and conſent of all 'the Lords of the Council, the greateſt judges in the 'land, and almoſt all the peers of the kingdom. But 'then withal, he preſſed the incommodities and incon-'veniences which might ariſe by receiving Mary for 'their Queen, propheſying that which after came to 'paſs: namely, that ſhe would bring in a foreign 'power to reign over this nation, and that ſhe would 'ſubvert the true religion then eſtabliſhed by the laws 'of this realm. He alſo ſhewed, that at ſuch time 'as ſhe lived in his dioceſe, he had travelled much 'with her, to reduce her to the true religion, but that 'though otherwiſe, ſhe had uſed him with great civi-'lity, ſhe ſhewed herſelf ſo ſtiff and obſtinate, that 'there was no hope to be conceived, but that ſhe 'would diſturb and deſtroy all that which with ſuch 'great labour had been ſettled in the reign of her bro-'ther. For which ſermon he incurred ſo much diſ-'pleaſure, that it could never be forgiven him when 'the reſt were pardoned, by whoſe encouragement 'and command he had undertaken it.' But this remark is only that author's conjecture; for if we govern our notions of Queen Mary's temper by facts, we ſhall find that hereſy was with her a more heinous crime than treaſon. However this ought to be a warning to clergymen not to embark themſelves in ſchemes of policy, with which the goſpel has very little to do; and ſurely therefore it had been better if the Proteſtant cauſe had not mingled ſo much in this diſpute, by which it was made ſo obnoxious to Mary; ſo that it is no wonder if ſhe thought that all who were of her brother's religion, were againſt his ſiſter's ſucceeding him, to which this conduct of Biſhop Ridley might not a little contribute; ſo that after all, theſe kind of declarations ſhould be left to thoſe to whom they properly belong,

(79) Hiſt. Reform. Vol. II. p. 238.

(80) Hiſt. Reform. p. 162.

cerity, for he was a man of primitive piety and unſpotted integrity; notwithſtanding which, this ſermon is with great probability believed to have coſt him his life (w). That evening the Lord-Treaſurer went privately out of the Tower, which was no ſooner known to the Duke of Suffolk, than he cauſed the gates to be ſhut, though it was but ſeven of the clock; and about midnight, we are told, the Lord-Treaſurer was brought in again (x). On monday the ſeventeenth, the ſpirit of diſcord began to work powerfully, upon the Lord-Treaſurer Wincheſter's reporting that the people in general were for Mary; that many of the nobility who were at liberty had joined her; that the ſhips had revolted to her which were ſent to cruize on the coaſt of Norfolk, and that there was very little hopes of Northumberland's ſucceſs (y). All this was abundantly confirmed by letters from Northumberland himſelf, complaining that they had not ſent the powers they had promiſed to Newmarket; that this had diſcouraged his forces ſo, that they began to dwindle, and preſſing them for the ſake of religion, of the Queen, and of themſelves, to haſten their ſupplies (z). Theſe diſpatches were read and debated upon in council, but in private they were buſy in contriving how to get out of the Tower, in which they were already a kind of priſoners, and to which they were afraid of being ſent by another authority for what they were then doing againſt their will (a). On tueſday the eighteenth, Queen Jane by the advice of her council, wrote to Sir John St Lowe, and Sir Anthony Kingſton, to raiſe forces in Buckinghamſhire for her ſupport (b). Yet whatever they did of this kind, though with all the outward zeal and ſolemnity imaginable, was directly againſt their real ſentiments, and entirely owing to the ſtrictneſs and vigilance with which the forces under the command of the Duke of Suffolk kept the gates, ſo that their ſituation ſeemed equally deſperate with reſpect to the meaſures they were taking, and with regard to their deſired eſcape (c). On wedneſday July the nineteenth, the council was aſſembled in the morning, on account of letters received from Lord Rich, Lieutenant of the county of Eſſex, giving them notice that the Earl of Oxford with the forces under his command had deſerted to the Lady Mary, upon which they wrote in the ſtrongeſt terms that could be deviſed, to keep him to his fidelity and to expreſs their own (d); and they had no ſooner ſigned this letter, than ſome of the ſhrewdeſt amongſt them, made it a handle for executing their deſign of getting out of the Tower (e) [K]. With this view they ſuggeſted the abſolute neceſſity they were under of complying without any longer delay, with their engagements to the Duke of Northumberland, and that it was impoſſible for them to do this, without going to levy and preſs men for the ſervice in perſon, and even marching with them, ſince it appeared how little truſt could be repoſed in ſome men's faith, inſtancing Sir Edward Haſtings, the Earl of Oxford, and others, who had carried the forces, raiſed by their orders for the ſervice of Queen Jane, to her competitor (f). The Duke of Suffolk, who was no deep politician, deceived by theſe appearances, and at the ſame time preſſed by neceſſity, gave way to this motion, and agreed, that all ſhould take the beſt meaſures they could for recruiting Northumberland's army, and for the ſupport of his daughter's ſervice, which moſt of theſe zealous people were about to deſert (g). As ſoon as they found themſelves at liberty, the Earls of Shrewſbury and Pembroke, with Sir Thomas Cheyne and Sir John Maſon, went immediately, under pretence of conferring with the French Ambaſſador, to Baynard's caſtle, a houſe in the city that belonged to the laſt of thoſe lords; and, in a very little time, the reſt of the council repaired thither likewiſe (h); where, as ſoon as they were ſet, the Earl of Arundel in a long and bitter ſpeech, for malice is ever copious, ripped up all the failings of Northumberland, laid every grievance, and every reputed grievance, during the late reign, at his door, and concluded, with adviſing the aſſembly to follow his example, which was, to lay all the guilt upon Dudley, to take all the merit of repentance to themſelves, by returning to their duty, and proclaiming Queen Mary without delay (i). The Earl of Pembroke ſpoke next; Heylin ſays he was an unlettered man (k); but how little ſoever he had read, certain it is that he could

We may without believing the Duke of Suffolk ſo weak a man as ſome writers (82) repreſent him, eaſily apprehend he might be deceived by a meaſure like this; for ſuppoſing him to be, as all our hiſtorians (83) allow he was, a man of a plain, open, ſincere, but haſty temper; we may without difficulty conclude, that this letter laid all jealouſies in him aſleep, and left him without the leaſt ſuſpicion. Beſides, if he had not given them leave to go out, it would have been only the

could think, and having been a principal manager of thoſe councils which Arundel had ſet forth in ſuch a ſable dreſs, he conceived it neceſſary to do ſomething extraordinary; and therefore not only ſeconded Arundel's motion, but clapped his hand to his ſword, and avowed himſelf ready to fight in defence of Queen Mary's title, who had married his ſon but a month before to the ſiſter of Queen Jane (*l*). This propoſal was quickly cloſed with, and a meſſage thereupon diſpatched to the Lord-Mayor and Aldermen to be ready, and then the Lords and others proceeded from Baynard's-caſtle through St Paul's Church-yard, to the croſs in Cheapſide, where Sir Chriſtopher Barker, Knight of the Bath and Garter King at Arms, proclaimed Mary, the daughter of King Henry the Eighth and Queen Katharine, the undoubted Queen of England, France, and Ireland, with the loudeſt acclamations of a numberleſs multitude of people aſſembled on this occaſion (*m*). They went next to St Paul's church, and there ſung *Te Deum*. On their return to Baynard's-caſtle, the Earl of Arundel and Lord Paget, with thirty horſe, ſet out to carry this good news to Queen Mary, and ſome companies were detached to ſecure the Tower for the ſervice of the new Queen (*n*) [*L*]. The Duke of Suffolk did not wait for new inſtructions from the Council; the ſhouts of the people, flying from ſtreet to ſtreet, had reached the Tower before their meſſengers arrived; and the Duke having not either power or will to reſiſt went immediately to his daughter's apartment, and in the ſofteſt terms he could, acquainted her with the ſituation of their affairs, and that laying aſide the ſtate and dignity of a Queen, ſhe muſt again return to that of a private perſon (*o*). To which, with a ſerene and ſettled countenance, ſhe made this anſwer: *Sir, I better brook this meſſage than my former advancement to royalty: out of obedience to* you *and my* mother *I have grievouſly ſinned, and offered violence to myſelf. Now I do willingly, and as obeying the motions of my ſoul, relinquiſh the crown, and endeavour to ſalve thoſe faults committed by others, if at leaſt ſo great a fault can be ſalved, by a willing relinquiſhment and ingenuous acknowledgment of them* (*p*). Thus we are come to an end of the diary of that ſhort reign, which, from the time of it's continuance, is ſaid to have given birth to the common proverb of *a nine days wonder* (*q*). A reign in which the ſeeming ſovereign was always apprehenſive of ſeeing herſelf ſuddenly ſunk into the character of a guilty ſubject, and to find thoſe the walls of her priſon which ſerved for a ſhort ſpace to encloſe her court (*r*). A reign, upon which not to beſtow a ſhort reflection would argue an incapacity of writing it, and leave the reader room to think hardly of him who could pen ſuch a ſcene unmoved [*M*]. The Duke of Suffolk having depoſed

the worſe for him, and the better for them, ſince the diſpute would nevertheleſs have been determined by Northumberland's proclaiming Queen Mary at Cambridge (84), which he did, before he received the news of the revolution at London. How this happened, and what really produced ſo ſudden and ſo ſurpriſing a turn, will appear in the next note.

(84) Stowe, Holinſhed, Speed.

[*L*] *For the ſervice of the new Queen.*] We ſhall here as ſuccinctly as poſſible repreſent the motions of Queen Mary, from the time of King Edward's death to that of her being proclaimed at London. It appears ſhe was informed of that event almoſt as early as it was poſſible, for on the day after the King's demiſe (85), ſhe quitted St Edmund's-Bury, under pretence of being afraid of the plague, one of her ſervants having died ſuddenly, and went directly to Keninghall in Norfolk (86), from whence on the eighth, ſhe wrote letters to Sir George Somerſet, Sir William Drury, Sir William Waldgrave, Knights, and Clement Higham, Eſquire, ſignifying unto them the King's death, and thereby her right to the Crown, requiring them to obey no commandment to be iſſued out upon any pretence or gloſs of the deceaſed King's authority, being bound now to be true liegemen unto her only. And laſtly, charging them in all haſte poſſible, to prepare and put themſelves in order to repair to her, where at their coming, they ſhould know farther of her pleaſure. On the ninth, ſhe wrote to the Council (87), and the ſame day to Sir Edward Haſtings (88), who was a warm Papiſt, in the ſame terms ſhe had uſed to Sir George Somerſet; in a few days ſhe was joined by the Earls of Bath and Suſſex (89), and other perſons of nobility and diſtinction. On the twelfth, ſhe ſent orders to the magiſtrates of Norwich to proclaim her Queen, which they refuſed, or rather were afraid to do, as having no certain intelligence of King Edward's death, but being the next day ſatisfied in that particular, they not only complied with her command, but ſent her a ſupply of men, ammunition, and proviſions (90). She removed notwithſtanding this to Framlingham Caſtle (91) in Suffolk, as ſtanding near the ſea, and being at the diſtance of fourſcore miles from London, by which her perſon was more ſecure, time gained for raiſing forces, and an opportunity procured of applying for foreign aſſiſtance, of which however ſhe quickly ſtood in no need, her army being augmented in a few days to thirteen thouſand men, and plentifully furniſhed with proviſions of all kinds (92). This was entirely owing to the general diſpoſition of the nation in her favour, and more eſpecially of the commons, who were in all places devoted to her ſervice, and abſolutely refuſed to act againſt her. What contributed not a little to her ſucceſs, was her promiſes with reſpect to the Proteſtant religion; thoſe who joined her at firſt from Suffolk and Norfolk, being for the moſt part zealous for the Reformation. Of theſe promiſes ſhe was afterwards not forgetful only, but declared her reſolution of breaking them (93), by cauſing Mr Dobbs, a gentleman of Suffolk, to be ſet in the pillory, only for reminding her of them. In proportion as her ſtrength increaſed, Northumberland's diminiſhed, and thoſe that were left about him ſhewed plainly, that they had not either hands or hearts to fight againſt her; nay, when in compliance with the general inclination he had proclaimed her at Cambridge, his very guards ſeized (94) upon his perſon, that he might juſtify them from the guilt of rebellion. Thus it is evident that the people made her Queen, from a perſwaſion of her right, and overturned without bloodſhed, that potent confederacy, which with ſo much art and addreſs had been framed, by thoſe who were at that time in authority, to defeat her ſucceſſion.

[*M*] *Who could pen ſuch a ſcene unmoved.*] There is a very ſingular circumſtance (95), which was preſerved amongſt John Fox's papers, from the information of the very perſon whom it concerned, that will ſerve to ſet the ſuddenneſs of this ſurprizing revolution, in a clearer light than almoſt any other thing that is to be met with. There was one Mr Edward Underhill, deſcended from a good family in Warwickſhire, who for his ſervices in the army, had been taken into the band of gentlemen-penſioners, in which he remained during the reign of Edward, and was now about Queen Jane. He had in his youth been what we call a man of pleaſure, but being converted to the reformed religion, became ſo ſincere and ſo zealous a Proteſtant, that thoſe of the band, who were leſs religious, nick-named him the hot Goſpeller. This gentleman was known to, and very well eſteemed by the Queen, and it fell out while he was upon duty at the Tower, his wife was brought to bed of a ſon. At the chriſtening of this child, which was fixed for the nineteenth of July, 1553, the Duke of Suffolk and the Earl of Pembroke were godfathers by proxy, Queen Jane was godmother, and

(95) Strype's Memorials, Vol. II. p. 115.

deposed his daughter, whom he had forced to ascend the throne, went next to the Council, and subscribed the instructions, that were sent to the Duke of Northumberland, by Rose Pursuivant at Arms, requiring him to disband his forces and submit to Queen Mary, if he meant they should become humble suitors to their sovereign for him and his, as well as for themselves (*s*). In this however Northumberland prevented them; for finding how strong the current ran in the country, he suspected it's source to be at London, and had therefore proclaimed Queen Mary at Cambridge before the Pursuivant arrived (*t*). This did not hinder his being siezed soon after, and sent to the Tower, where it must have added no small weight to the Lady Jane's misfortunes, to see the father of her husband, with all his family, and many of the nobility and gentry, brought prisoners (*u*), for having supported her claim to the crown; and this grief must have met with some accession, from his being condemned soon after and brought to the block (*w*). With him died Sir Thomas Palmer and Sir John Gates (*x*), the former (*y*) supposed to have been his instrument in the ruin of the Protector Somerset, which however he did not confess; and the latter (*z*) held his agent, in perswading King Edward to alter the succession, which the Duke denied, affirming him to have done it of his own accord, and to have been thereby the cause of all this mischief; with what degree of probability every man must judge for himself. On the 27th of July in some (*a*), or, as others say (*b*), on the 28th, she had the mortification of seeing her own father the Duke of Suffolk in the same circumstances with herself; but her mother the duchess not only remained exempt from all punishment, but had such an interest with the Queen, as to procure the duke his liberty on the last day of that month (*c*). Lady Jane, and her husband the Lord Guilford Dudley, remaining still in confinement, were, on the third of November, 1553, carried from the Tower to Guildhall, and with Archbishop Cranmer and others arraigned and convicted of high-treason (*d*) before Judge Morgan, who pronounced on them sentence of death, the remembrance of which afterwards affected him so far, that he died raving (*e*). From this time the unfortunate Lady Jane, and her no less unhappy husband, lived in the very shadow of death, and yet not without some gleams of comfort. For in the month of December, the Marquis of Northampton, who in the same cause had fallen into the like circumstances, was pardoned and discharged; and at the same time the strictness of their confinement mitigated, by permission granted to take the air in the Queen's garden (*f*), and other little indulgences, that would however have been so many acts of cruelty, if the Queen had then intended what she afterwards thought fit to inflict. But this, by the consent of our best historians (*g*), is allowed to be altogether improbable; and that there are good reasons to believe the Queen would have spared Lady Jane, since she had already pardoned her father who was much more guilty, and that she would have extended her mercy to Lord Guilford Dudley as well as to his elder brothers. However, in the first parliament of her reign, an act was passed for establishing the validity of such private contracts, as were dated during Jane's nine days administration, with a proviso, that all public acts, grants of lands, or the like, if any such there were, should be void. Another act likewise passed for confirming the attainders of Northumberland, Canterbury, and the rest, who had been convicted of high-treason, which perhaps was thought necessary, to confirm the opinion of the Judges, who had over-ruled their plea; that what they did was in obedience to the supreme authority then subsisting (*h*): but whatever hopes Lady Jane and her husband might entertain, whatever ease they might enjoy, were quickly taken away by an unhappy event, which it was impossible for them to foresee, and in which it is not so much as pretended that either of them had the least hand. There was a great spirit raised in the nation against the Queen's marriage with Philip of Spain; and upon this a general insurrection (*i*) was concerted, which, if it had been executed with any degree of that prudence shewn in the planning of it, or rather if the Providence of God had not interposed, could scarce have failed of succeeding; Sir Thomas Wiat of Kent, a man of a great estate and a greater influence, managed those who were afraid, under colour of this marriage, the kingdom would be delived up to a foreign prince and his partizans (*k*). Sir Peter Carew, in Cornwall, dealt with such as were desirous of seeing the Princess Elizabeth upon the throne, and in the arms of Courtney (*l*), whom the Queen had lately restored to the title of Devonshire, and the Duke of Suffolk, to whom danger had in vain preached discretion, and who could not learn loyalty even from mercy, made use of that great interest which his large estates gave him, though he held them by the Queen's favour, to mislead her subjects from their duty, and to take up arms against her person (*m*). What the real view of this design was even time has not discovered; but by rashness, and misintelligence of those at the head of it, all miscarried (*n*). The Duke of Suffolk, with his brothers Lord John and Lord Thomas Grey, were in arms, and with a body of three hundred

and as a still higher mark of her favour, directed that the child should be called Guilford after her husband. The person sent to represent the Queen, was Lady Throckmorton, the wife of Sir Nicholas Throckmorton, who at the time she left the Tower, in order to be present at the ceremony, received the commands of the Queen, in a manner suitable to that rank, and carried them to Mr Underhill's. But on her return to the Tower, her amazement must have been great, to find the canopy of state removed, with all other ensigns of royalty, out of which she was quickly drawn, by an intimation from one of the new officers, that her Lady was a prisoner for high-treason, and that she was to attend her under the like circumstances. This relation is not indeed of any great moment in itself, but, all things considered, the reader will perhaps be of opinion, that there is hardly any thing like it in history.

dred horſe preſented themſelves before the city of Coventry (o), in which they had a ſtrong party; but the Queen having ſent down the Earl of Huntingdon, he ſecured that place (p), and Suffolk finding his deſign abortive, and his people dropping away, retired, with as many as he could keep about him, to a houſe of his in Leiceſterſhire, where, having diſtributed what money he had to thoſe who were the companions of his fortune, he adviſed them to ſhift for themſelves, truſting to the promiſes of one Underwood his park-keeper, who undertook to conceal, and who is ſuſpected to have betrayed him to the Earl of Huntingdon (q), by whom himſelf and his brother Lord John being apprehended, were carried to Coventry, and, after ſome ſtay there, ſent to London under a guard, where they did not arrive 'till the tenth of February, and were then committed to the Tower (r), out of which the Duke never came but to his trial and to his death [N]. This weak and ill managed buſineſs gave the miniſters an opportunity of perſwading the Queen, that her ſafety could be no otherwiſe provided for, than by putting Lady Jane and her huſband to death; to which, a learned prelate aſſures us (s), the Queen was not wrought without much difficulty; and it is very remarkable, that Sanders (t) makes the very ſame obſervation, ſo that the truth of it can hardly be called in queſtion. The news of this fatal reſolution made no great impreſſion upon this excellent lady; the bitterneſs of death was paſſed, ſhe had expected it long, and was ſo well prepared to meet her fate, that ſhe was very little diſcompoſed. But the Queen's charity hurt her more than her juſtice. The day firſt fixed for her death was Friday February the ninth (u), and ſhe had in ſome meaſure taken leave of the world, by writing a letter to her unhappy father, who ſhe heard was more diſturbed with the thoughts of his being the author of her death, than with the apprehenſion of his own; which letter the reader will find in the notes [O]. In this ſerene frame of mind, Dr Feckenham, Abbot of Weſtminſter, came to her (w) from the Queen, who was very deſirous ſhe ſhould follow her father-in-law's example, and be reconciled to the Church of Rome. He was indeed a very fit inſtrument (if any had been fit) for this purpoſe; for he had an acute wit, a very plauſible manner of ſpeaking, and a great tenderneſs in his nature. Lady Jane received him with much civility, and behaved towards him with ſo much calmneſs and ſweetneſs of temper, that he could not help being overcome with her diſtreſs; ſo that either miſtaking or pretending to miſtake her meaning, he procured a reſpite of her execution 'till the twelfth (x). Yet he did not gain any thing upon her in regard

[N] *But to his trial and to his death.*] Our hiſtories give us but very dark and indifferent accounts of this inſurrection, which if we may credit one of our old chronicle writers (96), and his authority John Stowe, was purely to prevent the Queen's marriage with a foreign prince: the paſſage is very ſingular and worth reading. 'Upon ſaturday, being the 17th of Febru-'ary, the Duke of Suffolk was arraigned at Weſtmin-'ſter, and there condemned to die by his peers, the 'Earl of Arundel being that day chief judge. Where 'ſome have written, that he ſhould at his laſt going 'down into the country, make proclamation in his 'daughter's name, that is not ſo; for whereas he 'ſtood by in Leiceſter, when at his commandment the 'proclamation was there made againſt the Queen's 'marriage with the Prince of Spain, &c. Maſter Dam-'port, then Mayor of that town, ſaid to him, My 'Lord, I truſt your Grace meaneth no hurt to the 'Queen's Majeſty. No, faith he, Maſter Mayor, lay-'ing his hand on his ſword, he that would her any 'hurt, I would this ſword were through his heart, for 'ſhe is the mercifulleſt Prince, as I have truly found 'her, that ever reigned, in whoſe defence I am, and 'will be ready to die at her feet.' But to this we may oppoſe the authority of a very learned prelate (97), who likewiſe wrote a chronicle, lived himſelf in thoſe times, and publiſhed it within leſs than ſix years after the event. 'Henry Duke of Suffolk, ſays he, father to Lady Jane, 'lately proclaimed Queen, flying into Leiceſterſhire 'and Warwickſhire, with a ſmall company, in divers 'places as he went, again proclaimed his daughter, 'but the people did not greatly incline unto him.' A very judicious and impartial foreigner (98), who had great opportunities of knowing our affairs at this juncture, not only affirms the ſame thing that Biſhop Cooper does, but acquaints us farther, that Queen Mary had an intention, as ſoon as Wyat's riſing in Kent was known, to put the Duke of Suffolk at the head of the troops that were ſent againſt him; to avoid which, being conſcious of his own engagements, and over perſwaded by his brother Lord Thomas Grey, he departed from his houſe at Sheen, on the 25th of January in the evening, in order to raiſe the counties beforementioned. It is not however impoſſible that he might proclaim his daughter in his paſſage, and finding that not ſo well received as he expected, alter his language at Leiceſter; but this is barely a conjecture, and as ſuch ſubmitted to the reader's judgment.

(98) Thuanus, Hiſt. lib. xiii.

[O] *Which letter the reader will find in the notes.*] This letter (99) muſt in all probability have been written before Dr Feckenham procured her reprieve; for upon the firſt of February (100), publick proclamation was made, that the Duke and his company were diſperſed, and ſoon after that (101), himſelf and one of his brothers were taken and carried to Coventry, from whence Lady Jane might have at this time news of his great grief on her account. But it ſo fell out afterwards, that he was brought to the Tower two days before her execution (102), which as ſhe could not poſſibly foreſee, it is improbable ſhe ſhould delay her letter beyond the day firſt fixed for her death.

'FATHER, Although it pleaſeth God to haſten my 'death by you, by whom my life ſhould rather have 'been lengthened; yet can I ſo patiently take it, as 'I yield God more hearty thanks for ſhortening my 'woeful days, than if all the world had been given 'into my poſſeſſion with life lengthened to my will; 'and albeit, I am well aſſured of your impatient do-'lors, redoubled many ways, both in bewailing your 'own woe, and alſo as I hear, eſpecially my unfortunate 'eſtate: yet my dear father, if I may without offence 'rejoice in my miſhaps, methinks in this I may ac-'count myſelf bleſſed; that waſhing my hands with 'the innocency of my fact, my guiltleſs blood may cry 'before the Lord, mercy to the innocent: and yet, tho' 'I muſt needs acknowledge, that being conſtrained, and 'as you well know, continually aſſaied in taking the 'Crown upon me; I ſeemed to conſent, and therein 'grievouſly offended the Queen and her laws: and yet 'do I aſſuredly truſt, that this my offence towards 'God, is ſo much the leſs, in that being in ſo royal an 'eſtate as I was, my inforced honour never mixed with 'my innocent heart; and thus, good father, I have 'opened my ſtate to you, whoſe death at hand, al-'though to you perhaps it may ſeem right woful, to me 'there is nothing that can be more welcome, than, from 'this vale of miſery, to aſpire to that heavenly throne 'of all joys and pleaſure with Chriſt our Saviour: In 'whoſe ſtedfaſt faith, if it be lawful for the daughter to 'write ſo to her father, the Lord that hitherto hath 'ſtrengthened you, ſo continue you, that at laſt we 'may meet in Heaven, with the Father, Son and 'Holy Ghoſt. Amen.

[P] *But*

regard to the design upon which he was sent; on the contrary, though she heard him patiently, yet she answered all his arguments with such strength, such clearness, and such a steadiness of mind (y), as shewed plainly that religion had been her principal care, and that the hopes of being happy in a future state, from acting according to the dictates of her conscience in this, had fortified her not only against the fears of death, but against all doubts or apprehensions whatever [P]. On the Sunday evening, which was the last she was to spend in this world, she wrote a letter (z) in the Greek tongue, as some say on the blank leaves at the end of a Testament in the same language, which she bequeathed as a legacy to her sister the Lady Katherine; which piece of her's, if we had no other left, would be sufficient to render her memory immortal, and therefore the substance of it in English is inserted at the bottom of the page [Q]. The fatal morning being come, the

(z) See the note [Q].

[P] *But against all doubts or apprehensions whatever.*] We have avoided loading these notes with more of this excellent person's writings than were absolutely necessary, and for this reason only we have omitted her letter to Dr Harding, her father's chaplain, and one of her tutors, upon his renouncing the Protestant religion, and reconciling himself to the Church of Rome He had himself about the time of King Edward's death, discovered a clear foresight of all that followed, and exhorted his Protestant brethren to support those trials which they were about to undergo, with christian patience and fortitude. This in all probability induced Lady Jane to write with so much vehemence and zeal, as to one who in her own opinion had quitted his faith through fear, and taken up a new profession in order to escape danger. Dr Aylmer her tutor (103), and who had lived with Harding in the Marquis of Dorset's family, published this letter in his exile, which affords us the clearest proof of it's being genuine.

(103) See Strype's Life of Bp Aylmer, p. 2.

But Feckenham could know nothing of this, otherwise in all appearance he would not have undertaken Lady Jane's conversion. He thought he should have found her in great disorder and confusion, and that it would be no difficult matter to triumph over the feeble understanding of a dejected and heart-broken young woman, but he found it quite otherwise; notwithstanding which, she would have declined the dispute, telling him she had no time to spare, that controversy might be fit for the living, but not for the dying, and that thererefore, the truest sign of his having that compassion for her, of which he made such strong professions, would be to leave her undisturbed in making her peace with God. It was upon this, that he applied himself to the Queen for a short reprieve, with which, when he acquainted this admirable woman, she told him, *That he had entirely misunderstood her sense of her situation, that far from desiring her death might be delayed, she expected and wished for it as the period of her miseries, and her entrance into eternal happiness* (104).

(104) Fox's Acts and Monuments.

Yet she could not then avoid entering into discourse with him, more especially when he desired her to give him a brief account of her faith, that he might clearly understand it, and make a true report thereof to the world. Upon this they discussed the doctrine of the real presence in the Sacrament, which Lady Jane denied in the sense that Feckenham asserted, and that posterity might not be imposed upon by any fallacious account of this conference, she drew up and subscribed a clear and concise account of it, to which, if the reader has any curiosity, he may easily have recourse (105). At length finding he could make no impression, he took his leave of her, and said Madam, 'I am sorry for 'you and your obstinacy, and now I am assured you 'and I shall never meet again.' 'It is most true, Sir, 'said she, we shall never meet again, except God 'turn your heart; for I stand undoubtedly assured, 'that unless you repent and turn to God, you are in a 'sad and desperate case: and I pray to God in the 'bowels of his mercy, to send you his holy spirit, for 'he hath given you his great gift of utterance, if it 'please him to open the eyes of your heart to his 'truth'

(105) Phœnix, Vol. II. p. 28.

We must conceive that this was understood as it was spoken, as flowing from a religious zeal, and not from any distaste of contradiction, or any dislike to his person, since we find that Feckenham, far from deserting, attended her to the very last, and that the Lady Jane shewed a very proper sense of his attention and respect for her, in the sight and hearing of all who were upon or near the scaffold (106). Before we close this note, it may not be amiss to say something of the papers we have inserted, and of those to which we refer, that it may appear we have taken some pains to satisfy ourselves, in order to the reader's satisfaction, that they are really her's. First then with respect to her capacity there can be no doubt at all, Bishop Aylmer was her tutor, Ascham knew her intimately, Sir Thomas Chaloner, Dr Parkhurst, John Fox, John Bale, were her contemporaries, and knew her likewise. Secondly, most of her papers are signed Jane Dudley, which in itself may be presumed a preservative against forgery. Thirdly, they were printed and published as the precious remains of that incomparable person, immediately after her death, and in every bodies hands (107) Fourthly, the titles of them are to be found in John Bale's great work (108), and the first line of the several pieces, which as he tells us, he finished in 1558, within four years of her death, and almost as many before, they were involved in John Fox's voluminous work. Lastly, they have been printed verbatim from the original edition in a late collection of ancient tracts (109), which from the value of those it contains, is now become not very common; taking therefore all this evidence together, there seems to be no colour left to doubt that these pious and extraordinary performances are the very same that fell from the pen of that great and good woman, which intitled her to the universal compassion of those with whom she lived; and [illegible] ought to entitle her, as far as it is possible, to an immortal memory, towards which we have willingly bestowed some diligence in the construction of this little monument.

[Q] *At the bottom of the page*] We shall in another note have occasion to speak more at large of this Lady Katherine Grey, sister in merit and learning, as well as by blood, to Lady Jane, and her sister likewise in misfortunes; which though they brought her not to die in the same manner, yet occasioned her dying in the same place, in a way, which if less violent was more grievous, she had therefore many years, in which she might practise those excellent lessons, bestowed upon her in this prophetic legacy (110).

(110) From an old printed copy of the pieces written by Lady Jane Grey.

'I have here sent you, my dear sister Katherine, a 'book, which although it be not outwardly trimmed 'with gold, or the curious embroidery of the artfullest 'needles, yet inwardly it is more worth than all the 'precious mines which the vast world can boast of It 'is the book, my only best and best loved sister, of the 'law of the Lord: It is the testament and last will 'which he bequeathed unto us wretches and wretched 'sinners, which shall lead you to the path of eternal 'joy: and if you with a good mind read it, and with 'an earnest desire follow it, no doubt it shall bring 'you to an immortal and everlasting life. It will teach 'you to live, and learn you to die: it shall win you 'more, and endow you with greater felicity than you 'should have gained by the possession of our woful father's lands; for as if God had prospered him, you 'should have inherited his honours and manors; 'so if you apply diligently this book, seeking to direct your life according to the rule of the same, you 'shall be an inheritor of such riches, as neither the covetous shall withdraw from you, neither the thief 'shall steal, neither yet the moths corrupt Desire 'with David, my best sister, to understand the law of 'the Lord your God; live still to die, that you by 'death may purchase eternal life; and trust not that 'the tenderness of your age shall lengthen your life; 'for unto God when he calleth, all hours, times, and 'seasons are alike, and blessed are they whose lamps 'are furnished when he cometh, for as soon will the 'Lord be glorified in the young as in the old. My 'good sister, once again more let me intreat thee to 'learn to die; deny the world, defy the devil, and 'despise the flesh, and delight yourself only in the 'Lord

the Lord Guilford earneſtly deſired the officers that he might take his laſt farewel of her (*a*). Which though they willingly permitted, yet upon notice ſhe adviſed the contrary, aſſuring him, that ſuch a meeting would rather add to his afflictions, than increaſe that quiet wherewith they had poſſeſſed their ſoul's for the ſtroke of death; that he demanded a lenitive which would put fire into the wound, and that it was to be feared her preſence would rather weaken than ſtrengthen him; that he ought to take courage from his reaſon, and derive conſtancy from his own heart; that if his ſoul were not firm and ſettled, ſhe could not ſettle it by her eyes nor confirm it by her words; that he ſhould do well to remit this interview to the other world; that there indeed friendſhips were happy and unions indiſſolvable, and that theirs would be eternal if their ſouls carried nothing with them of terreſtrial, which might hinder them from rejoicing. All ſhe could do was to give him a farewel out of a window as he paſſed toward the place of his diſſolution, which he ſuffered on the ſcaffold on Tower-Hill with much Chriſtian meekneſs (*b*). His dead body being laid in a car and his head wrapped up in a linnen cloth, were carried to the chapel within the Tower, in the way to which, they were to paſs under the window of the Lady Jane; which ſad ſpectacle ſhe likewiſe beheld (*c*), but of her own accord, and not either by accident, or as ſome (*d*), without any colour of truth, have inſinuated, by deſign, and with a view to increaſe the weight of her afflictions [*R*]. About an hour after the death of her huſband, ſhe was led out by the Lieutenant to the ſcaffold (*e*) that was prepared upon the green over-againſt the White-Tower. It is ſaid that the court had once taken a reſolution (*f*) to have her beheaded on the ſame ſcaffold with her huſband; but conſidering how much they were both pitied, and how generally Lady Jane was beloved, it was determined, to prevent any commotions, that this execution ſhould be performed within the Tower. She was attended to and upon the ſcaffold by Feckenham (*g*), but ſhe was obſerved not to give much heed to his diſcourſes, keeping her eyes ſteadily fixed on a book of prayers which ſhe had in her hand, after ſome ſhort recollection ſhe ſaluted thoſe who were preſent with a countenance perfectly compoſed; then taking leave of Dr Feckenham, ſhe ſaid, *God will abundantly requite you, good Sir, for your humanity to me, though your diſcourſes gave me more uneaſineſs than all the terrors of my approaching death* (*h*). She next addreſſed herſelf to the ſpectators in a plain and ſhort ſpeech, which is inſerted in the notes [*S*]. Then

'Lord; be penitent for your ſins, and yet deſpair not; 'be ſtrong in faith, yet preſume not; and deſire with 'St Paul, to be diſſolved and to be with Chriſt, with 'whom even in death there is life. Be like the good 'ſervant, and even at midnight be waking, leſt when 'death cometh and ſtealeth upon you like a thief in 'the night, you be with the ſervants of darkneſs 'found ſleeping; and leſt for lack of oil, you be found 'like the five fooliſh virgins, or like him that had not 'on the wedding garment, and then you be caſt into 'darkneſs, or baniſhed from the marriage. Rejoice in 'Chriſt, as I truſt you do, and ſeeing you have the 'name of a Chriſtian, as near as you can follow the 'ſteps, and be a true imitator of your maſter Chriſt Je'ſus, and take up your croſs, lay your ſins on his back, 'and always embrace him. Now as touching my death; 'rejoice as I do, my deareſt ſiſter, that I ſhall be de'livered of this corruption, and put on incorruption; 'for I am aſſured that I ſhall for loſing of a mortal life, 'win one that is immortal, joyful, and everlaſting, 'the which I pray God grant you in his moſt bleſſed 'hour, and ſend you his all-ſaving grace to live in his 'fear, and to die in the true Chriſtian faith. From 'which, in God's name, I exhort you, that you never 'ſwerve, neither for hope of life nor fear of death; 'for if you will deny his truth, to give length to a 'weary and corrupt breath, God himſelf will deny 'you, and by vengeance make ſhort what you by your 'ſoul's loſs would prolong; but if you will cleave to 'him, he will ſtretch forth your days to an uncircum'ſcribed comfort, and to his own glory. To the 'which glory God bring me now, and you hereafter, 'when it ſhall pleaſe him to call you. Farewell once 'again, my beloved ſiſter, and put your only truſt in 'God, who only muſt help you. Amen.'

Your loving ſiſter,

JANE DUDLEY.

had the laſt ſight of her Lord living and dead. It was after this ſad ſight that ſhe wrote three ſhort ſentences in her table book (113), in Greek, Latin, and Engliſh, and this very book, upon Sir John's intreaty that ſhe would beſtow upon him ſome memorial, ſhe preſented him as an acknowledgment for the civility ſhe received from him. By this accident the world came to learn with what ſteadineſs, and at the ſame time with what tenderneſs ſhe looked upon thoſe dear remains. The ſenſe of the Greek ſentence was.

(113) Heylin's Hiſt. Reform. P. 167.

If his ſlain body ſhall give teſtimony againſt me before men, his moſt bleſſed ſoul ſhall render an eternal proof of my innocence in the preſence of God.

The Latin was to this effect.

The juſtice of men took away his body, but the divine mercy has preſerved his ſoul.

The Engliſh ran thus.

If my fault deſerved puniſhment, my youth at leaſt, and my imprudence were worthy of excuſe, God and poſterity will ſhew me favour.

In the place of her confinement, theſe verſes were found as ſome ſay, written with a pin (114).

(114) Holinſhed's Chron. Vol. II. p. 1100.

Non aliena putes homini quæ obtingere poſſunt:
Sors hodierna mihi, cras erat illi tibi.

Stand not ſecure, who ſtand in mortal ſtate,
What's mine to day, ſhall next day be thy fate.

Deo juvante nil nocet livor malus,
Et non juvante, nil juvat labor gravis.
Poſt tenebras, ſpero lucem.

If Heaven protect, Hell's malice cannot wound,
By Heaven deſerted, peace can ne'er be found.
Theſe ſhadows paſt, I hope for light.

[*R*] *And with a view to increaſe the weight of her afflictions*] The Lieutenant of the Tower at this time was Sir John Bridges (111), the anceſtor of the preſent moſt noble family of that name Dukes of Chandos, and who in the month of April following, was himſelf created a Baron (112) by that title, and the ſame to whom ſhe afterwards gave her prayer book upon the ſcaffold. He was with her in the apartment which ſhe had at Mr Partridge's, from the windows of which ſhe

(111) Holinſhed's Chron. Vol. II. p. 1100.

(112) Stowe's Annals, p. 623.

[*S*] *Which is inſerted in the notes.*] This we find printed as her laſt ſpeech by more authors than one, but we publiſh from that little collection (115) of pieces before mentioned, which ſeems to be the moſt authentic.

(115) From an old printed copy of the papers written by Lady Jane Grey.

The

Then kneeling down ſhe ſaid the Miſerere in Engliſh, after which ſhe ſtood up, and gave her women, Mrs Elizabeth Tilney and Mrs Helen, her gloves (*i*) and her handkerchief; and to the Lieutenant of the Tower, whom Heylin (*k*) calls Sir John Gage, but Holinſhed (*l*) Bridges, her prayer-book. When ſhe untied her gown the executioner offered to aſſiſt her (*m*), but ſhe deſired him to let her alone; and turning to her women, they undreſſed, and gave her a handkerchief to bind about her eyes (*n*). The executioner kneeling, deſired her pardon; to which ſhe anſwered moſt willingly (*o*). He deſiring her to ſtand upon the ſtraw, which bringing her within ſight of the block, ſhe ſaid, *I pray diſpatch me quickly*; adding preſently after, *Will you take it off before I lay me down* (*p*); the executioner ſaid, *No Madam*: upon this, the handkerchief being bound cloſe over her eyes, ſhe began to feel for the block, to which ſhe was guided by one of the ſpectators; when ſhe felt it, ſhe ſtretched herſelf forward and ſaid, *Lord, into thy hands I commend my ſpirit*, and immediately, at one ſtroke, her head was divided from her body (*q*). Her fate was univerſally deplored, even by thoſe who were beſt affected to Queen Mary; and as ſhe is allowed to have been a princeſs of great piety, it muſt certainly have given her much diſquiet to begin her reign with ſuch an unuſual effuſion of blood; and, in the preſent caſe, of her near relation, one formerly honoured with her friendſhip and favour, who had indeed uſurped, but without deſiring or enjoying, the royal diadem, which ſhe aſſumed, by the conſtraint of an ambitious father and an imperious mother; and which, at the firſt motion, ſhe chearfully and willingly reſigned. This made her exceedingly lamented at home and abroad, the fame of her learning and virtue having reached over Europe, ſo as to excite many commendations, and ſome expreſs panegyrics in different nations and in different languages. But whereas, ſome of our own writers ſeem to doubt whether ſhe was with child or not at the time of her deceaſe, and foreigners have improved this into a direct aſſertion, that ſhe was five months gone, it ſeems to be improbable, ſince there were at that time ſo many buſy and inquiſitive people, that if the fact had been true it muſt have been known, and would have been perpetually repeated in thoſe pieces that were every day ſent abroad, in order to exaſperate the nation againſt the Queen and her miniſters. On the twenty firſt of the ſame month, the father of Queen Jane, Henry Grey Duke of Suffolk (*r*), loſt his head upon Tower-hill: neither was the jealouſy excited by King Edward's appointment, and their nearneſs in blood to the royal line, ſo fully extinguiſhed by the blood of ſo many victims, but that it revived in the ſucceeding reign, and proved a new ſource of diſquiet to the ſad remains of this unhappy family [*T*]. We have treated this article the more largely, becauſe hitherto, excepting Heylin, none of our hiſtorians have repreſented the public and private life of this admirable perſon with any tolerable degree of diſtinctneſs; but have been content to hurry over her ſhort poſſeſſion of the crown, as if it had been an ordinary

The cloſe varies in words, but not from the ſenſe of what is ſet down in the text.

'My Lords, and you good chriſtian people which 'come to ſee me die; I am under a law, and by that 'law, as a never erring judge, I am condemned to die, 'not for any thing I have offended the Queen's Maje'ſty, for I will waſh my hands guiltleſs thereof, and 'deliver to my God, a ſoul as pure from ſuch treſpaſs, 'as innocence from injuſtice; but only for that I con'ſented to the thing I was forced unto, conſtraint mak'ing the law believe I did that which I never under'ſtood, notwithſtanding I have offended Almighty 'God, in that I have followed over much the luſt of 'mine own fleſh, and the pleaſures of this wretched 'world; neither have I lived according to the know'ledge that God hath given me, for which cauſe God 'hath appointed unto me this kind of death, and that 'moſt worthily according to my deſerts; howbeit I 'thank him heartily that he hath given me time to re'pent of my ſins here in this world, and to reconcile 'myſelf to my Redeemer, whom my former vanities 'had in a great meaſure diſpleaſed. Wherefore (my 'Lords, and all you good chriſtian people) I moſt 'earneſtly deſire you all to pray with me, and for me, 'whilſt I am yet alive, that God of his infinite good'neſs and mercy will forgive me my ſins, how num'berleſs and grievous ſoever againſt him: and I be'ſeech you all to bear me witneſs, that I here die a 'true chriſtian woman, profeſſing and avouching from 'my ſoul, that I truſt to be ſaved by the blood, paſ'ſion, and merits of Jeſus Chriſt my Saviour only, and 'by no other means, caſting far behind me all the 'works and merits of mine own actions, as things ſo 'far ſhort of the true duty I owe, that I quake to think 'how much they may ſtand up againſt me. And now 'I pray you all pray for me and with me.' And at thoſe words ſhe repeated the Pſalm of Miſerere mei; which done ſhe ſaid, Lord, ſave my ſoul, which now I commend into thy hands. *And ſo with all meekneſs of* ſpirit and a ſaint-like patience, ſhe prepared herſelf to the block.

We find theſe Latin verſes written to her memory (116).

Regia ſtirps triſti cinxi diademate crines:
Regna ſed omnipotens hinc meliora dedit.

From Kings deſcended, crown'd on earth with care,
But now in Heaven, an olive-crown I wear.

(116) Clarke's Marrow of Eccl. Hiſt. P. ii. p. 69.

It is impoſſible to cloſe this account of her better, or more truly, than by this diſtich written by John Fox (117).

Tu quibus iſta legis incertum eſt, lector, ocellis:
Ipſe quidem ſiccis ſcribere non potui.

How thine eyes feel, kind reader, know I not:
Mine were *not* dry, when I this ſtory wrot.

(117) Fox's Acts and Monuments.

[*T*] *To the ſad remains of this unhappy family.*] We have ſhewn in the text how ſtrangely the Duke of Suffolk involved thoſe who ought to have been, and who without doubt were neareſt in blood, and deareſt to him in affection, in his laſt, as well as in his firſt misfortunes. It is indeed ſaid, that his brother, Lord Thomas Grey, perſuaded him to concur with Wyat, and if this was proved, it is no great wonder that he felt the ſtroke of juſtice (118) as well as the Duke. However that be, certain it is, that he loſt his head on the 27th of April, being taken in Wales, whither he fled after their defeat in Leiceſterſhire. But Lord John Grey following the Duke rather out of fraternal love, than any principle of diſloyalty, was pardoned by the Queen, (119), and we find him often mentioned afterwards in the next reign, by the title of Lord John Grey of Pyrgo in Eſſex, but his ſon Sir Henry Grey, was again enobled by King James the Firſt, who created him Baron of Groby (120), in the county of Leiceſter, and his grandſon Henry, was raiſed to the title of Earl of Stamford, by Charles (121) the Firſt, which honours are now enjoyed by his deſcendant (122), with a very conſiderable

ordinary inſurrection, and to ſpeak of her death in general terms of compaſſion, with an exaggeration of ſome and a ſuppreſſion of other circumſtances, ſo as to put it out of the power of the reader to form a juſt notion of the whole tranſaction, which we have laboured to deſcribe as accurately and with as much impartiality as poſſible.

conſiderable part of the old family eſtate of the Marquis's of Dorſet Frances Ducheſs of Suffolk ſurvived her huſband many years, ending a miſerable life as Camden (123) tells us, in 1563, after forgetting her greatneſs ſo far, to uſe the words of the ſame author, as to accept for her huſband, Adrian Stokes, a gentleman in low circumſtances (one of her domeſticks) which how much ſoever it might tend to her diſcredit, yet ſeemed to anſwer the view with which it was done, by contributing to her ſecurity. Her ſecond daughter, Katherine, being left by the huſband of her good fortune, who preſently after eſpouſed another Katherine (124), daughter to the Earl of Shrewſbury, lamented for ſome years the diſtreſſes of her family and her own. She was ever looked upon with jealouſy in the Court of Elizabeth, more eſpecially after it was diſcovered that the (125) Spaniards in 1559, had formed a deſign of ſtealing her away. About two years after this, ſhe privately married the Earl of Hertford's eldeſt ſon, by whom proving with child (126), the Queen treated this as an affair of ſtate, and committed both the parties. A ſuit was alſo commenced, and being brought before a court of delegates, where the Archbiſhop of Canterbury ſat as chief, a definitive ſentence (127) was pronounced, that their cohabitation was unlawful, and that for their incontinence, they both deſerved to be puniſhed; but notwithſtanding this, procuring acceſs to her in the Tower, ſhe became again with child, and brought him another ſon (128). Upon this he was charged in the Star-Chamber, with having ſeduced a virgin of the royal blood in the Queen's palace, with breaking priſon, and with abuſing her a ſecond time, and for theſe crimes he was fined five thouſand pounds, and condemned to nine years impriſonment (129). Lady Katherine remained in the Tower to the time of her deceaſe, January 26, 1567. But in a ſucceeding and leſs jealous reign, the validity of her marriage was brought to the deciſion of a jury, of which John Digby, Eſq; (130) was the foreman, and the reſt, gentlemen, who, upon the oath of the miniſter that married them, and other circumſtances, found it to be good; and from the iſſue of this lady, deſcended the late Duke of Somerſet, and the noble families of Northumberland and Egremont, by the female line deſcend; as for the third ſiſter, Lady Mary Grey, though contracted in her nonage to a perſon of equal quality (131, yet ſhe afterwards thought it more ſafe to follow her mother's example, than to hazard the like fate with her elder ſiſters, and therefore took to her bed (132) Martin Keyes, Eſq; Serjeant-Porter to Queen Elizabeth, and by this humble marriage, having no iſſue, ſhe died April 20, 1578 (133).

E

GRIMSTON [Sir HARBOTTLE], a famous Lawyer, and Maſter of the Rolls, in the laſt century, was deſcended from a very antient and good family [*A*], and born at Bradfield-Hall near Maningtree in Eſſex, about the year 1594 [*B*]. In what ſchool he received his education, or whether he was ever a member of one of our univerſities, unleſs it were Cambridge, I am not able to learn. However, he ſtudied the municipal laws of the land, at Lincoln's-Inn (*a*), with great induſtry and ſucceſs; and practiſed in that profeſſion with conſiderable applauſe and eſteem. In Auguſt, 1638, he was choſen Recorder of Colcheſter (*b*), and having purchaſed the houſe of the late diſſolved Crouched-Friers in that town, made it the place of his reſidence. And ſo great did his intereſt become there, that he was choſen one of the repreſentatives of the ſame, in the Parliament which met at Weſtminſter, April 13, 1640; and again in the Parliament which met November 3, the ſame year (*c*). He was then a diſguſted perſon, and one of thoſe anti-courtiers who were branded with the name of Puritans, as appears by ſome printed violent ſpeeches of

(*a*) As appears by ſeveral letters of his in my poſſeſſion.

(*b*) From his letters, M.S.

(*c*) Ruſhworth's Hiſt. Col. Vol. III. p. 1107. Liſt of the repreſentatives in the Hiſtory of Colcheſter.

[*A*] *Was deſcended from a very antient and good family.*] The pedigree of this family is derived from Silveſter Grimſton, of Grimſton, who was Standard-bearer to William the Conqueror, at the battle of Haſtings; and afterwards did homage to that prince for Grimſton, Horton, and Tunſted; and other lands he held of the Lord Roos, as of his manor of Roos in Holderneſs in the county of York: [which Lord Roos, was Chamberlain of the houſhold to King William, and not our Silveſter, as the author of the Iriſh Compendium aſſerts] (1). The three immediate deſcendants of this Silveſter, were Daniel; Sir Thomas, Kt. who lived in King Stephen's time; and John. This laſt had iſſue William, living in 1231; who by ——— his wife, daughter and co-heir of Sir John Callam, of Callam, Knight, had two ſons, Alexander that died without iſſue; and Roger, his eldeſt ſon and heir: this Roger marrying —— daughter of Fulk Conſtable, of Fryſemarſh, had by her Gerard, that left no iſſue; and Walter, who by —— his wife, daughter and heir of Herbert Flinton, of Flinton in Holderneſs, had theſe three ſons, John, Dean of Rocheſter, and afterwards Abbot of Selby; Gerard, that died without iſſue; and William, whoſe wife was Armetruda, daughter of Roland Ryſonn, of Ryſonn in Holderneſs: by her he had three ſons, Thomas, living in 1410; who by Dionyſia his wife, daughter of Guzins Sutton, Baron of Sayre, and Lord of Sutton, had iſſue Robert, that had no children; and Thomas, whoſe poſterity remained ſettled at Grimſton in Yorkſhire.——The two other ſons of William Grimſton abovementioned, were, John, Dean of Rocheſter in the time of King Henry V. and VI. and ROBERT, who came and fixed himſelf at Ipſwich: by his wife ——— daughter of Antony Spilman of Suffolk, he had his only ſon and heir, Edward Grimſton, of Reſing hall and Ipſwich in the ſame county, who married two wives, 1. Mary, daughter of William Drury, of Rougham in Suffolk, and 2. Philippa Lady Roos, daughter and heir of John Lord Tiptoft, and widow of Thomas Lord Roos. By this laſt lady he had no children; but by the firſt he had, John, who died without iſſue, Edward, born 24 March, 1451, Thomas, born 5 July, 1453, Anne, born 26 July, 1457, Elizabeth, born 17 November, 1458, Alice, born 15 February, 1459, Chriſtopher, born 3 July, 1456, and John, who became ſeated with his poſterity at Oxborough in Norfolk. Edward, laſt mentioned, married Margaret, daughter to Thomas Harvey Eſq; and had iſſue Edward; who marrying Anne, daughter of John Garniſh, of Kenton, Suffolk, had a ſon, named Edward, knighted afterwards; and ſome other children. This laſt Edward, was father of another Edward, ſeated at Bradfield in the county of Eſſex; and alſo of Edmund, Serjeant at Arms to King James I. Edward the eldeſt ſon and heir, died 15 Auguſt, 1610. By Joanna his wife, ſecond daughter and coheir of Thomas Riſby, of Lavenham in the county of Suffolk (by —— daughter and heir of —— Harbottle), he had iſſue, Mary the wife of Tho. Cornwallys, Eſq; Harbottle Grimſton, of Bradfield, Eſq; made a Knight, and one of the firſt 200 Baronets created by King James I; and Henry, alſo knighted. Sir Harbottle married Elizabeth, one of the daughters of Ralph Coppinger, of Stoke in Kent; by which he had Edward, who married Elizabeth, daughter of Tho. Marſham, Eſq; but had no ſurviving iſſue; Sir Harbottle, concerning whom we are writing; Henry, and Elizabeth (2).

[C] *As*

of his [C]. And he not only ſpoke, but acted alſo, with vehemence againſt the Court meaſures, as is manifeſt from ſome original letters of his, of which abſtracts are given in the note [D]; as alſo from this other inſtance, that he was in moſt of the committees for

[C] *As appears by ſome printed ſpeeches of his*] He was the firſt that ſtood up in the Houſe of Commons, April 16, 1640, after the reading of the petition from the county of Hertford againſt ſhip-money, projects, monopolies, ſtar-chamber, high-commiſſion-courts, and other grievances; and, in his ſpeech, has theſe words. ——'The Commonwealth hath been miſerably torn 'and maſſacred, and all property and liberty ſhaken, 'the Church diſtracted, the Goſpel and profeſſors of 'it perſecuted, and the whole nation over-run with 'ſwarms of projecting canker-worms and caterpillars, 'the worſt of all the Egyptian plagues: Then, as the 'caſe now ſtands with us, I conceive there are two 'points very conſiderable in it. The firſt is, what 'hath been done any way to impeach the liberties of 'the ſubjects, contrary to the petition of right? the 'ſecond is, who have been the authors and cauſes 'of it? the ſerious examination and diſcuſſion of theſe 'two queſtions, do highly concern his Majeſty in point 'of honour, and his ſubjects in point of intereſt. And 'all that I ſhall ſay to it, are but the words that Ezra 'uſed to King Artaxerxes.——Whoſoever hath not 'done the laws of God and the King, let judgment be 'ſpeedily executed upon him, whether it be unto ba-'niſhment, or to confiſcation of goods, or to impri-'ſonment.——His Majeſty yeſterday did graciouſly 'confirm unto us, our great and ancient liberties of 'freedom of ſpeech; and having his kingly word for 'it, I ſhall reſt as confidently upon it, as the greateſt 'ſecurity under heaven, whileſt I have the honour to 'have a place here, and I ſhall with all humility be 'bold to expreſs myſelf like a freeman (4).'———In the next parliament, November 9, 1640, when the nation's ſpirits were in general much embittered by the haſty diſſolution of the former, he ſpoke in a much ſeverer manner againſt the grievances then complained of, viz. The Speaker's refuſing to put the queſtion in the laſt parliament; adjourning the houſe without the conſent of the ſame; impriſoning ſome of the members, and ſearching their ſtudies and pockets, the new canons, and the oath, et cætera. Towards the concluſion, he breaks out thus. 'Mr Speaker, This is the age; this 'is the age, Mr Speaker, that hath produced and 'brought forth Achitophels, Hamans, Woolſies, Emp-'ſons and Dudleys, Treſilians, and Belknaps. Vipers 'and monſters of all ſorts (5).'——However he adds, 'I doubt not but when his Majeſty ſhall be truely in-'formed of ſuch matters, as we are able to charge them 'withal, we ſhall have the ſame juſtice againſt theſe, 'which heretofore hath been againſt their predeceſ-'ſor, in whoſe wicked ſteps they have trodden.' And that there he retained a due reverence for the regal dignity ——The 18th of December following, he made a virulent ſpeech againſt Archbiſhop Laud, wherein he hath theſe furious words ——'We are now 'faln upon the great man, the Archbiſhop of Can-'terbury; look upon him as he is in highneſs, and he 'is the ſtye of all peſtilential filth that hath infected the 'ſtate and government of this Commonwealth: look 'upon him in his dependences, and he is the man, the 'only man, that hath raiſed and advanced all thoſe, 'that together with himſelf have been the authors and 'cauſers of all our ruins, miſeries, and calamities we 'now groan under. Who is it but he only that hath 'brought the Earl of Strafford to all his great places 'and imployments; a fit ſpirit and inſtrument to act 'and execute all his wicked and bloody deſigns in theſe 'kingdoms? who is it but he only that brought in 'Secretary Windebank into this place of ſervice of 'truſt, the very broker and pander to the whore 'of Babylon? who is it, Mr Speaker, but he only that 'hath advanced all our Popiſh Biſhops. I ſhall name 'but ſome of them, Biſhop Manwaring, the Biſhop of 'Bath and Wells, [William Pierce] the Biſhop of Ox-'ford, [John Bancroft] and Biſhop Wren, the leaſt of 'all theſe birds, but one of the moſt unclean ones.'—— And he concludes with adviſing, that the Archbiſhop ſhould be immediately accuſed of high-treaſon (6).—— He was much more moderate in his next ſpeech, Feb. 9, 1640-1, concerning Epiſcopacy, wherein is this paragraph;——'I muſt confeſs, when I look upon the 'Biſhops, or at leaſt upon ſome of them, and the way 'of their government, I wonder not at all at the multitude of petitioners, and petitions that have this parliament been preferred againſt them.——But it is neceſſary we ſhould diſtinguiſh between the perſons of 'the Biſhops, which are ſo obnoxious, and their functions and offices; for there is no more weight in the 'argument, that becauſe the Biſhops have done amiſs, 'therefore take away Epiſcopacy, than there is in it, 'becauſe the judges of the common law are in fault, 'therefore take away judges, and take away the com-'mon law (7).'

[D] *As is manifeſt from ſome original letters of his.*] The firſt to Mr Wade, Mayor of Colcheſter, is as follows.

'Mr Mayor,

'I received a letter the laſt weeke from Mr Alder-'man Cole, in your abſence when you were att Nor-'wich, it came not to my hands 'till the Frydaie mor-'ninge, after I had diſpatched my letter to you with 'the intelligence of ſuch occurrencies, as happened 'that weeke heere in Parliament; thereuppon I 'thought fitt immediately to give ſome direccons in the 'buſines of Mr Payne, to examine Mr Paine whether 'hee had ſent awaie into Ireland Sir John Byron's 'letter; if it were gone, then to knowe to whome it 'was directed; if otherwiſe, uppon the producinge of 'it, to open it, and to ſee whether there were any 'thinge of danger in it: ſoe ſoone as I came to the 'Parliament-houſe I acquainted the Parliament with 'it, whereuppon they made an order for the ſearchinge 'of Mrs Paine's houſe, and to diſarme her, and to in-'tercept all letters; I doubt not but Mr Cole hath 'imparted the buſines to you. And I ſhould bin 'bene glad this weeke to have heard from you what 'hath beene done in it; I would likewiſe adviſe, that 'att the next quarter ſeſſions of the peace the [illegible] 'for our borrough, that Mrs Paine, and ſoe many of 'her companie and ſervants who come not to church, 'that they ſhould bee indicted, and proclamacion made 'thereuppon accordinge to the ſtatute, that they maie 'bee convicted. As for newes, wee had letters out of 'Ireland uppon Saterdaie laſt, whereby wee are in-'formed, that the rebells do everie day gather ſtrength 'and increaſe in number; that there is a total defec-'cion of nyne counties, and that they expect their ap-'proach to Dublyn very ſuddainely. Wee have alrea-'dy ſent over fyfty thouſand pounds, and are bor-'roweinge two hundred thouſand pounds more for that 'ſervice. The Lo. Leiuetenante is goeinge over with 'ten regiments, which are to be devided into three 'briggades. The firſt is to bee under the command 'of my Lo. himſelf, the ſecond under his Leiutenante 'generall, and the third under Sir Symon Harcourt, 'who is to lie with his forces at Dublyn. The Chardge 'of a regiment for a yeare will come to threeſcore and 'ſix thouſand pownds att the leaſt, which beinge mul-'tiplied by tenn does come to a mighty ſome of mo-'ney, which muſt goe out of our purſes; and tis 'thought that that will not doe it, for the rebells are 'very ſtronge, and have already gotten moſt of the 'greateſt townes of conſequence in Ireland, and where 'they meet with any oppoſicion from the Engliſh they 'cutt their throats, and where they ſubmitte, they 'ſtripp them and turne them out of all they have. 'Sir Symon Harcourt is now goeinge downe into 'Cheſheire with Sir William Brewerton, to beat upp 'drummes, and to raiſe men in thoſe parts beinge 'neereſt, and beinge moſt convenient to bee ſent over 'from thence. Wee have likewiſe ſent awaie inſtruc-'cions to the Parliament of Scotland for the raiſinge of 'men in the north parte of that kingdome. A fleete 'is preparinge to guard and ſecure the Iriſh partes for 'feare they ſhould have releif from forraigne partes, 'It is heere confidently reported, that the Kinge will 'bee at Yorke uppon Thurſdaie next; and Sir Arthur 'Ingram tells mee that his Majeſtie is to lie att his 'houſe, which makes mee give the better credit to 'myne intelligence. Yeaſterdaie one Thomas Beale 'came to the Houſe of Commons, and informed that 'beinge under a bankes ſide, hee heard two men ſaie 'that they had, with two hundred more, taken an 'oath of ſecrecie att a lord's houſe who muſt not yett 'be named. The buſines they were to doe was this,

'uppon

for the redreſs of grievances [*E*], and for bringing thoſe to juſtice who had rendered themſelves moſt obnoxious to the people (*d*). In 1642, he was made one of the Lieutenants of the county of Eſſex, in purſuance of the Parliament's ordinance for the militia (*e*); and in Auguſt the ſame year came down to his borough, and with Sir Thomas Barrington, the other repreſentative of it, publiſhed two orders againſt Sir John Lucas, proclaiming him guilty of high-treaſon, for intending to aſſiſt the King, &c. (*f*). But in proceſs of time, ſhocked at thoſe dangerous extremes which ſome were driving at, he appeared to be one of the worthy patriots who were for reforming the government, and not for totally ſubverting of it, like Cromwell, and other deteſtable tools of ambition. And therefore, from about the year 1644, though he continued in the Houſe of Commons, he concurred not with all the violent meaſures there taken (*g*). However, he ſo well maintained his reputation with all perſons of honeſty, candour, and moderation, that in September 1647, he was appointed one of the Parliament's Commiſſioners at the treaty of Newport in the iſle of Wight (*b*). There he behaved himſelf ſo handſomely to King

(*d*) Nalſon, Vol. I. p. 679, 690. Vol. II. p. 7, 11, &c.

(*e*) Whitelock's Memorials, edit. 1732, p. 59.

(*f*) Ibid. p. 62. Mercurius Ruſticus, edit. 1646, p. 5.

(*g*) 'And continued rather than concurred with them,' as the Lord Clarendon expreſſes it. Hiſtory of the Rebellion, edit. 1751, 8vo. Vol. VI. p. 755.

(*b*) Ibid. Ruſhworth's Hiſt. Col. Vol. VII. p. 1263. Whitelock's Memorials, p. 334. Sir Edw. Walker's Hiſtorical Diſcourſes.

'uppon this daie they ſhould have come to the houſe, 'and quarteringe themſelves in ſeverall places about 'the paſſages from our houſe (being armed with ſwords 'and piſtalls) they ſhould have cutt all our throats; 'at laſt they diſcovered this man; whereuppon, one 'of them ſwearinge a great oath that they were diſco-'vered, ranne his ſword att him, and thought hee had 'killed him, but the hurt proves to bee very ſlight; 'this man is now under examination, and the Earle of 'Worceſter's houſe and other great recuſants have 'beene this daie ſearched, but the men diſcribed can-'not bee mett withall, nor any thinge yet of juſt feare 'diſcovered: The Lord More hath given ſome of re-'bells in Ireland a defeate; with one thouſand men 'hee mett with five thouſand Iriſh, and killed about 'a thouſand of their men and made the reſt runne 'awaie; it is hoped that this loſſe will give them ſome 'diſcouragement. The Kinge of Portugall is in great 'diſtreſſe, and in great danger of looſinge his king-'dome againe; I ſent the order for diſarminge of Mrs 'Paine, and intercepting of letters down to Mr Cole 'the laſt weeke, and my man delivered the letter to 'Mr Humberſton; and the Parliament havinge bene 'poſſeſſed with the buſines, I ſhall bee glad to knowe 'what hath beene done in it. And ſoe with the re-'membrance of my kinde reſpects and love to yourſelf 'and the reſt of the Aldermen your brethren, I reſt

'Your aſſured lovinge friend,

Lyncolnes Inne, 9ber 17, 1641.

'HAR. GRIMSTON.'

Another letter of his, dated November 4, 1642, runs thus:

'MR MAYOR,

'I had intelligence yeaſterdaie, about 3 of the clock, 'that ſome horſes were come from Hamburgh, where-'of 3 were at Maningtree, and the reſt ſtill on ſhip-'board at Harwich; whereuppon imediately I ſent 'downe my warrant to ſtaie them at Maningtree, and 'likewiſe another warrant to the Mayor of Harwich 'and the Captaine of Langerfort, to ſeize upon thoſe 'horſes that are there on ſhippboard, with order to 'ſett riders of our owne uppon them, and to carrie 'them to the Parliament. Praie make ſtaie of thoſe 'horſes att Colcheſter, and ſoe ſoone as I heare from 'Harwich I will give your further direccions in this 'buſines; there came out a declaracion not longe ſince, 'diſcoveringe thus much, that horſes were providinge 'at Hamburgh and in Denmarke to be brought over 'hether to the kinge. That declaracion, together 'with thoſe inſtruccions which myſelf and the reſt of 'the Deputie-Leiuetenants of this county have re-'ceived from both houſes of Parliament, givinge us 'authoritie to ſeaze uppon all horſes, money, and 'plate, which wee ſhall ſuſpect to bee intended to bee 'imploied againſt the kingdome.'

In another letter to the Mayor of the ſame town, dated the next day, he hath theſe words:

'I received yeaſternight late an order from the Par-'liament concerning the ſpeedinge away of our horſes 'for draggoones, whereof I have here incloſed ſent 'you a coppie. I doubt not but you knowe by this 'time the great ſtraightes wee are in; the kinge beinge 'now approached very neare to the cittie with a great 'army; and our army att a great diſtance, ſoe as I 'feare the Earle of Eſſex will not bee able to come in 'time enough to releive us; by this order you maie 'perceive wee are commanded to appoint receivers of 'the horſes, as for this parte of the country noe place 'ſoe fitt as Colcheſter—I therefore I muſt intreate you 'to take the care of this buſines—I have made out 'warrants into all theſe partes to the conſtables, for 'the callinge in of ſuch monies as are ſubſcribed for, 'as allſoe to return the names of ſuch as have not ſub-'ſcribed, or not in a proportion anſwearable to their 'eſtates.'

Another letter of his to the ſame, dated November 16, 1642, is as follows:

'We have received letters from Mr Strickland, 'agent for the Parliament in the Low-Countries, that 'the queene is cominge over with many ſhipps, in 'which ſhee bringes with her money, amunition, and '3000 old ſouldiers, and that her purpoſe is to land 'att Harwich; by his intelligence ſhee ſhould ſett out 'to ſea this day, but the winde is croſſe, which I 'hope will ſtaie her a while, untill wee bee a little 'better provided for her comeinge in our parts. I 'ſuppoſe the deſigne is to make Kent and Eſſex the 'ſeat of the warre, for the kinge is gone over the 'Thames at Kingſton, and tis thought hee will paſſe 'through Surrey into Kent. And if the kinge with 'his forces on the one ſide, and the queene with her 'forces on the other ſide, ſhall comand the Thames 'eaſtward, they will then bee able not onely to inter-'cept all manner of releif of fewell or victuall which 'maie bee brought to the cittie that waie, but like-'wiſe overthrowe their trade, which evidently in a 'ſhort time wil bee their ruine and deſtruction. If the 'queene doe land there, Colcheſter is likely to bee 'the firſt towne they will fall upon.'

In another letter of the 23d following, he has theſe words:

'Since my laſt letter wee have received advertiſe-'ments out of the Low-Countries, that the queene 'hath altered her reſolution of landing at Harwich; 'nevertheleſſe I thinke it very neceſſary you ſhould 'take into your conſiderations the fortifying of your 'towne, for it is poſſible that this is given out to make 'us the more ſecure.—You knowe the Parliament 'hath given 1500l. for the makinge your towne and 'the blockhouſe defenſible; if that will not doe it 'wee muſt ſtraine ourſelves, rather than hazzard the 'towne together with our lives and eſtates—As for 'the men you ſent upp with a fortnight's pay in hand, 'they ſay it was given them but to come upp, and 'they will have paie heere likewiſe for that time, or 'elſe they will not ſerve; and they wil bee comanded 'but by whome they liſt, and goe noe further than 'they pleaſe. They have moſt of them diſcharged 'themſelves.'

[*E*] *He was in moſt of the committees for the redreſs of grievances.*] Namely, in the year 1640, in the committee that examined the new canons (8); and in the committee appointed to conſider of the breach of privileges, in the two former parliaments (9). He was, in 1641, one of the committee to prepare the charge againſt the Earl of Strafford; and one of thoſe members of the Houſe of Commons, who were appointed to be preſent at the examination of witneſſes, preparatory to that Earl's tryal (10). In 1642, he was in the committee, named for vindicating the privileges of parliament, upon occaſion of the King's going to the Houſe of Commons to demand the five members: and in the committee for Iriſh affairs; in which laſt he made, January 5, 1641-2, an excellent ſpeech, at Guild-hall, concerning the power and privileges of parliament.

(10) Idem. Vol. II. p. 7, 21.

[*F*] *That*

King Charles the First, that his Majesty was well satisfied with him; and after his return to parliament, he presſed the acceptance of the King's conceſſions: on which account, and becauſe he was one of the commiſſioners for diſbanding the army, he was in the number of thoſe who were forcibly excluded the Houſe by a party of ſoldiers (*i*). After the cruel and violent death of King Charles the First, he ſeems to have ſo much diſliked his own country, and the new form of government, that he quitted his recorderſhip of Colcheſter, and went and travelled beyond-ſea for a while [*F*]. How long he ſtaid abroad doth not appear; but, in 1656, he was elected one of the ſixteen repreſentatives for the county of Eſſex, in Oliver Cromwell's parliament, according to the new inſtrument of government. And not being approved by the Council, he joined in a moſt excellent remonſtrance with ſeveral other perſons of the greateſt worth and eſtates, thus diſapproved and ſet aſide (*k*). In February 1659-60, he was choſen one of the new Council of State [*G*]; in whom the executive power was lodged by the remains of the Long-Parliament that reſtored King Charles the Second (*l*). And a few months after, was alſo choſen Speaker of the Houſe of Commons in the Healing Parliament, which met April 25, 1660 (*m*). May 11, following, he ſailed to Holland with Sir John Granville, in order to wait upon King Charles the Second at Breda (*n*). After the King's arrival in his dominions Sir Harbottle was much in his favour, and had the honour of entertaining him, on the 25th of June, at his houſe in Lincoln's-inn-fields (*o*). Upon preſenting the money-bills to his Majeſty, September 13, he made an elegant and loyal ſpeech, of which part is given in the note [*H*]. Having thus heartily concurred in the reſtoration and eſtabliſhment of King Charles the Second, he was rewarded, on the third of November, 1660, with the Maſterſhip of the Rolls (*p*); which honourable office he diſcharged for above three and twenty years (*q*) with great abilities and integrity (*r*). He was alſo appointed, in 1660, Chief-Steward of the Burgh of St Albans (*s*), and Recorder of Harwich (*t*); and from the Reſtoration to the time of his death, continued one of the repreſentatives in Parliament for the Burgh of Colcheſter (*u*). For ſeveral years he entertained Dr Gilbert Burnet, afterwards Biſhop of Saliſbury, as his chaplain, or preacher at the Rolls (*w*) [illegible] aſſiſted and encouraged him in his Hiſtory of the Reformation of the Church of England [*I*]. Sir Harbottle never obliged the world with any thing of his own, but he publiſhed the Reports of his father-in-law Sir George Croke, Knight [*K*]. He died [illegible] 31, 1683, aged about ninety (*x*); and was buried in the chancel of St Mich[illegible] in St Albans [*L*]. He was twice married: His firſt lady was Mary, daughter of Sir George Croke juſt now mentioned, by whom he had iſſue, George, Samuel, Mary, and Elizabeth. George married Sarah, daughter and co-heir of Sir Edward Alſton of London, M. D. but died without iſſue. Whereupon the title and eſtate deſcended to Samuel the [illegible] record.

[*F*] *That he quitted his recorderſhip of Colcheſter.*] Upon which occaſion, he writ the following letter, July 6, 1649, to the Mayor of that town.

'Soe long as I was in a capacitie of ſerveing the 'towne of Colcheſter, with a poſſibility of reſettling 'myſelf in the county, I was willing to retayne the 'place of Recorder there, *but a ſad hand of Providence 'hath nowe otherwiſe diſpoſed of affayres*, and having 'loſt my deare yooke fellow, I knowe not howe to 'ſpend my tyme better, than in giveing my ſonne 'ſome education abroad, with whom I intend to travell, 'if I may have leave ſo to do, which I hope to obteyne, therefore out of conſcience, and the true love 'and affection which I beare to the towne, that their 'ſervice may not ſuffer by my abſence, I do hereby 'abſolutely make void the place by my ſurrender, deſiring you to enter it amongſt your records, and to 'give notice thereof to the free-burgiſſes, at a general 'hall, where according to your charter and conſtitutions, you may procede to the choice of another '(11).'

(11) Book of Aſſemblies of that town, July 26, 1649.

[*G*] *He was choſen one of the new Council of State.*] This council conſiſted of thirty-one perſons, with General Monk at their head: moſt of them men of integrity, and well affected to kingly government, as J. Phillips affirms (12). Or, according to Dr Skinner (13), moſt of them for their character, and good inclinations towards the King's ſervice, were accounted of the very choice and flower of the Houſe of Commons.

(12) Ubi ſupra.

(13) Life of Gen. Monk, edit. 1724, 8vo. p. 246.

[*H*] *He made an elegant and loyal ſpeech, of which part is given in the note.*] It began thus, 'Sir, The 'royal favour and fatherly kindneſs unto your people, 'hath naturalized their affections to your perſon, and 'their obedience to your precepts. And as it is their 'duty, ſo it is their deſire to manifeſt the truth and 'reality thereof, by ſupporting and upholding that 'grandeur and ſplendor which is due to the majeſty of 'ſo meritorious a prince as yourſelf. And therefore 'they have reſolved *uno flatu* and *nemine contradicente*, 'to make up your Majeſty's conſtant and ordinary re'venue, twelve hundred thouſand pounds *per annum*, '&c (14).'

(14) Kennet, ubi ſupra, &c. p. 254.

[*I*] *And greatly aſſiſted and encouraged him in his Hiſtory of the Reformation of the Church of England.*] This the Doctor thankfully acknowledges in the following words,——'I muſt acknowledge myſelf highly 'obliged by the favour and bounty of the honourable 'Maſter of the Rolls, Sir Harebottle Grimſtone, of 'whoſe worth and goodneſs to me I muſt make a large 'digreſſion, if I would undertake to ſay all that the 'ſubject will bear: the whole nation expreſſed their 'value of him, upon the moſt ſignal occaſion, when 'they made him their mouth and ſpeaker in that bleſſed aſſembly which called home their King, after 'which real evidence, all little commendations may be 'well forborn. The obligations he has laid on me are 'ſuch, that as the gratitude and ſervice of my whole 'life, is the only equal return I can make for them; 'ſo, as a ſmall tribute, I judge myſelf obliged to make 'my acknowledgements in this manner, for the leiſure 'I enjoy under his protection, and the ſupport I receive from him; and if this work does the world 'any ſervice, the beſt part of the thanks is due to him, 'that furniſhed me with particular opportunities of 'carrying it on (15).'

(15) Preface to Part I. of the Hiſtory of the Reformation, p. 3.

[*K*] *But he publiſhed the reports of his father-in-law Sir George Croke, Knight.*] They were publiſhed under the title of, 'Reports and ſelect caſes of law, &c' in three volumes folio: the firſt containing caſes and reports in the reign of Queen Elizabeth: the ſecond, in the reign of King James I. and the third, in the reign of King Charles I. Lond. 1657, 1658, 1661. Sir George Croke was one of the juſtices of the King's Bench, and died 15 February, 1641-2 (16).

(16) Wood's Athenæ, as above, col. 15.

[*L*] *And was buried in the chancel of St Michael's church in St Albans.*] And not in the church of Gorhambury, as Mr Wood ſays by a miſtake (17), there being no ſuch church. Gorhambury is a manor in the pariſh of St Michael's, famous for having been the reſidence of Sir Nicolas Bacon, Lord-Keeper, and of his ſon, Francis Lord Viſcount Verulam (18). C

(17) Ubi ſupra, col. 15.

(18) Chauncy, ubi ſupra, p. 464.

ſecond ſon, who married, firſt, Elizabeth, daughter of Heneage Finch Earl of Nottingham; and ſecondly, Anne, daughter of John Tufton Earl of Thanet, and left a daughter by each of them, but no ſon. Of Sir Harbottle's two daughters, Mary was married to Sir Capel Luckyn of Meſſing-hall in Eſſex, and was grandmother to the preſent Lord Grimſton, whoſe father was adoptive heir to Sir Samuel Grimſton; and Elizabeth became the wife of Sir George Grubham-How, of Banvick in the county of Wilts, Bart. Sir Harbottle's ſecond lady was Anne, daughter of Sir Nathaniel Bacon of Culford-hall in Suffolk, Knight, and relict of Sir Thomas Meautys, of Gorhambury near St Alban's, of whoſe heirs Sir Harbottle bought that manor and eſtate (y). Sir Henry Chauncy gives this character of him (z). He had a nimble fancy, a quick apprehenſion, a rare memory, an eloquent tongue, and a ſound judgment, which parts he held to the laſt: he was a perſon of free acceſs, ſociable in company, ſincere to his friend, hoſpitable in his houſe, charitable to the poor, and an excellent maſter to his ſervants.

(z) Pag. 465.

GRINDAL [EDMUND], a very learned and pious prelate of the XVIth century, and one of the firſt reformers of our religion under Queen Elizabeth, was born about the year 1519, in a little angle of the county of Cumberland, called Cowpland or Copland, at Henſingham in the pariſh of St Begh's. The hiſtorian of his life, the laborious Mr Strype, gives us no account of his family, which he ſays (a) he is unable to trace. Our prelate, after having gone through his grammar ſtudies, was ſent to the univerſity of Cambridge, where three colleges may boaſt of him; Magdalen college firſt entertained him, and gave him his earlieſt ſeaſoning; afterwards he became a member of Chriſt's college, probably with a view of ſome exhibition or other encouragement; and from thence removed to Pembroke-Hall, where he was choſen fellow in 1538, as ſoon as he was capable of a fellowſhip, being then Bachelor of Arts *. In 1540 he was choſen Junior-Treaſurer of the college, and next year commenced Maſter of Arts. In 1548 he was declared public Proctor of the univerſity, and next year became Preſident of Pembroke-College (b), and is often called in the acts of the univerſity, *Aſſiſtens Vicecancellarii in judiciis, i. e.* the Vicechancellor's aſſiſtant in matters judiciary. Being now Bachelor in Divinity, he was this ſame year, 1549, admitted Lady Margaret's public preacher in Cambridge, by the unanimous conſent of the Maſters and Preſidents of the univerſity (c); and when an extraordinary Act was commenced this year for the entertainment of King Edward's viſitors at Cambridge, Grindal was one of the four diſputants choſen out of the whole univerſity [A]; at which diſputation he acquitted himſelf with great honour and applauſe. Thus our divine made a very conſiderable figure in the univerſity before he began to be diſtinguiſhed in the Church, where his firſt appearance was in 1550, when he removed to London, being appointed by Ridley, then Biſhop of that ſee, to be his chaplain [B]; and the year following, Auguſt 24, was collated to the chantorſhip of St Paul's cathedral, by his patron Biſhop Ridley, who had before deſigned him the prebend of Cantrelles in the church of St Paul's, but was obſtructed by the Council [C]. The ſame year he was, through Ridley's means, made one of the King's chaplains [D]. In July 1552 a Prebend of Weſtminſter was conferred on him for life †, though he afterwards reſigned it to Biſhop Bonner. In November following he was nominated for a Biſhopric in the North, but

† Reg. Weſt.

[A] *Grindal was one of the four diſputants ſelected out of the whole univerſity.*] The viſitors appointed by King Edward VI. were, Goodrich, Biſhop of Ely; Ridley, Biſhop of Rocheſter; Sir William Paget, Sir Thomas Smith, Sir John Cheke, Dr Mey, and Dr Wendy, all very learned men; and the queſtions to be diſputed were, 'Whether tranſubſtantiation could be 'proved by plain and manifeſt words of ſcripture; 'and, whether *it* might be collected and confirmed by 'the conſent of Fathers for theſe thouſand years paſt (1)?' Grindal was one who aſſerted the negative, the other three diſputants being Pern, Gueſt, and Pilkington (2). The diſputation may be ſeen at large in Fox's Martyrology.

(1) Mr Strype, who by miſtake quotes Fuller's Ch. Hiſt. for this paſſage, inſtead of his Hiſt. of the Univerſity of Cambridge, p. 127, thinks theſe laſt words ſhould rather be, For 1000 years after Chriſt.

(2) Fuller's Hiſt. of the Univerſity of Cambridge, p. 127.

[B] *In 1550 he removed to London, being appointed Biſhop Ridley's chaplain.*] Soon after his removal, Martin Bucer, the King's Divinity-Profeſſor, having occaſion to write from Cambridge, upon certain buſineſs of the Biſhop, ſtiles our divine, *eximium eruditione & pietate, membrum Chriſti præcipuum, & collegam ſuum in ſanctiſſimo adminiſtrandi verbi Dei munere*; i. e. 'eminent for his learning and piety, a chief member 'of Chriſt, and his aſſociate in the moſt ſacred miniſtry 'of the word of God.' Such a character, from ſo great a man, does too much honour to our prelate, to be paſſed over in ſilence.

[C] *He deſigned him the prebend of Cantrelles, but was obſtructed by the Council.*] When the Biſhop, upon a vacancy of this prebendſhip, was going to collate his chaplain Grindal to it, one Thomas, clerk of the Council and a great favourite with King Edward, laboured with the King and Council to obtain it for himſelf; but the Biſhop not caring to beſtow it upon him, letters were written to the Biſhop by ſome of the Council, to ſtay his collation of the prebend; ſome of them having procured it to be ſettled for the furniſhing the King's ſtables. This extremely troubled the Biſhop, who thereupon applied to Cheke, Wroth, and Cecyl, at Court, to interpoſe with the King, that with the favour of the Council he might have leave to give this living to his 'well-deſerving chaplain, who was with-'out preferment, and to whom he would grant it with 'all his heart, that ſo he might have him continually 'with him, and in his dioceſe to preach, adding, that 'he was known to be both of vertue, honeſty, diſ-'cretion, wiſdom, and learning.' Mr Strype ſays, he cannot tell whether, after all this, Grindal enjoyed Cantrelles or not, but the Chantorſhip of St Paul's, which was of greater value, becoming vacant ſoon after, the Biſhop gave him that (3).

(3) Strype, p. 5, 6.

[D] *Was appointed one of the King's chaplains.*] In December 1551, a reſolution was taken by the King's Council, that his Majeſty ſhould retain ſix chaplains, whoſe employment was thus fixed. Two of them were always to be with the King in waiting; the other four to be ſent over the kingdom, eſpecially the remoter counties, to preach to the common people, and to inſtruct them in the principles of true religion, and obedience to their prince. Theſe ſix were afterwards reduced to four, and Grindal was one of theſe; the others being Dr Bill, Dr Harley, (afterwards Biſhop of Hereford) and Dr Pern. Their annual ſalaries were 40 l. each (4).

(4) Fuller, ubi ſupra.

[E] *He*

but did not obtain it [E]; and a little before King Edward's death, a report went, that Ridley being to be tranſlated to the ſee of Durham, Grindal was to ſucceed him in London, being then but 33 years old. Upon the death of King Edward in 1553, he retired into Germany, to avoid the perſecution under Queen Mary, and ſettled at Straſburg, and applied himſelf with great diligence to learn the German language, in order that he might preach in the churches there. In 1554 he was engaged in the diſputes among the Engliſh at Franckfort, concerning a new model and form of worſhip, varying from the laſt corrected liturgy under King Edward the Sixth. He was alſo a moſt diligent collector of the writings and accounts of the ſufferers in England for the Proteſtant religion, and greatly aſſiſted Mr John Fox in compiling his Martyrology, both by his continual advice, and by ſupplying him with materials for it, moſt of which he drew up and methodized himſelf, ſo that Fox's work was only to tranſlate into Latin (e). Upon the death of Queen Mary, in 1558, he returned to England, and was employed in many weighty eccleſiaſtical affairs for the reformation of religion, under Queen Elizabeth. He was concerned in drawing up a form of prayer and public worſhip, which was to be preſented to the Queen's firſt Parliament; and was alſo one of the eight Proteſtant divines, choſen to enter the liſt againſt the Popiſh prelates, in a public diſputation, a more particular account of which is to be found in Strype's Annals of the Reformation (f). He was generally appointed to preach before the Queen, Privy-Council, &c. upon public occaſions; and was likewiſe one of her Majeſty's commiſſioners in the North for the royal viſitation, to require the oath of ſupremacy, to inſpect cathedrals and the manners of the clergy, to deſtroy the inſtruments of ſuperſtition and idolatry, &c. This viſitation alſo extended to the univerſities; and at that of Cambridge, Dr Young was removed from the Maſterſhip of Pembroke-hall for refuſing the oath of ſupremacy, and Grindal choſen in his room in 1559 *, though he at firſt declined it; but the college urged him ſo ſtrongly to accept it, that at laſt he yielded to their ſollicitations [F]. The ſame year he was nominated to the biſhopric of London, in the room of Biſhop Bonner depoſed; but labouring under ſome ſcruples with regard to the habits, and certain ceremonies required to be uſed by ſuch as were Biſhops, he conſulted Peter Martyr, then Profeſſor of Divinity at Zurich in Switzerland [G]; and

(d) Godwin's Catalogue of Biſhops, p. 178.

(e) See the Life of JOHN FOX in this work.

(f) Annals of the Reformation, chap. v. p. 88.

* Le Neve's Faſti, p. 424. P. I.

[E] *He was nominated for a biſhopric in the North, but did not obtain it*] What this northern biſhopric was, to which Grindal was nominated, we are left to conjecture. It was concluded in the year 1552, by the King and his Council, that the biſhopric of Durham, then void by the deprivation of Tonſtal, ſhould be divided into two, and they had it under conſideration how to place fit and able perſons in them, as appears by King Edward's memorial, publiſhed by Mr Strype, in his life of Archbiſhop Cranmer (5). There is little doubt but that Grindal, being a north country man, was pitched upon for one of theſe biſhoprics; for the King's memorial, juſt mentioned, was writ by him in October, 1552, and in the next month Biſhop Ridley wrote a letter to Sir John Gate and Sir William Cecil, wherein he gives God thanks, 'for that it had pleaſed 'him to move the heart of the King's Majeſty to chuſe 'ſuch a man, of ſuch godly qualities as Grindal, unto 'ſuch a room;' and begs to have the collation of the prebend which would be vacant upon Grindal's remove. But all this came to nothing, 'there being then, ſays 'Mr Strype, a great topping courtier, that put an end 'to this pious purpoſe of ſupplying thoſe parts where 'ignorance and ſuperſtition moſt prevailed, with two 'Biſhops. For by his ſway he got the whole biſhopric 'diſſolved, and ſettled as a temporal eſtate upon him-'ſelf (6).'

(5) Strype's Life of Abp Cranmer, lib. ii. c. 5.

(6) Strype, p. 8.

[F] *The college urged him ſo ſtrongly to accept it, that at laſt he yielded to their ſollicitations.*] The college now looked on Grindal, who was at this time Biſhop elect of London, as deſigned for the higheſt honours of the Church, and therefore, as well as in regard to his ſuperior merit, they were very deſirous of ſecuring him for their patron, and wrote him a moſt affectionate letter, upon the removal of their late maſter Dr Young, ſaying, 'The time was now come, that they had the 'liberty to chooſe him not only for their Maſter, but 'alſo their Patron and Defender. That the very day 'after Dr Young's deprivation, they haſtened, and, with 'one mind and vote, unanimouſly choſe him their 'Cuſtos: adding, that they hoped he would not refuſe 'that houſe which educated him, nor reject the higheſt 'place there, ſince there was a time when he had not 'refuſed the loweſt; nor yet forſake thoſe men who 'had preſerved his memory when he was abſent; and 'laſtly, they prayed him to embrace them who ſtrove 'together in loving him; and to receive them into his 'protection.' And when Grindal declined their offer, they wrote to the King's viſitors, to deſire them to 'exhort him by their influence and authority to accept 'it;' and alſo wrote again to him, to perſwade him, notwithſtanding his advancement to the biſhopric, to be their head, telling him they had had ſeveral Biſhops for their Maſters. He was prevailed on by this renewed entreaty, to accept the government of their college, which he held but a little time, his other weighty affairs in the Church hindring his reſidence there; and he ſeems to have reſigned in May 1562, if not before (7). The three next maſters who ſucceeded were all recommended by him, ſo great was the reſpect and eſteem the college bore him, and which they took every opportunity of teſtifying. In one of their letters to him, (and there are ſeveral preſerved in the college, expreſſing the love, honour, and high veneration they had for him) there is this paſſage; 'From the time you firſt purged us from the dregs of 'Popery, and took us under your care, we have had 'ample experience of your patronage and favour, and 'in you alone we have repoſed all our counſel and 'hope.'

(7) Strype, p. 310.

[G] *But labouring under ſome ſcruples with regard to the habits and certain ceremonies required to be uſed by Biſhops, he conſulted Peter Martyr.*] The Reformed in thoſe times thought, that in order to the compleat freeing the Church of Chriſt from the errors and corruptions of Rome, every uſage and cuſtom practiſed by that apoſtate and idolatrous Church ſhould be aboliſhed; that all the ceremonies and circumſtances of religious worſhip ſhould be entirely abrogated, and that the ſervice of God ſhould be moſt ſimple, ſtripped of all that ſhew, pomp, and appearance, that had been uſed before. This opinion, which the late Engliſh exiles had more particularly imbibed, gave riſe to Grindal's doubts, whether he might with a ſafe conſcience accept of a biſhopric, as he muſt ſubmit to many of theſe things if he did; therefore he communicated his doubts in a letter to Peter Martyr, in Auguſt 1559, which came to his hands in October following, deſiring his ſpeedy reſolution of them, that he might, according to the light which he ſhould give him, accept the epiſcopal office, or refuſe it. One of theſe doubts was concerning impropriations which were to be annexed to biſhoprics: for the Queen, chiefly to gratify ſome of her courtiers, now made exchanges with her Biſhops, by the authority of a late act of parliament, taking to herſelf their antient good manors and lordſhips, and making over to them in exchange, tythes and impropriations. This was extremely regretted by thoſe firſt Biſhops, who ſcrupled whether they ſhould comply in a point ſo injurious to the revenues of their reſpective

and though he was nominated to the biſhopric in July, he did not abſolutely accept it 'till December, being conſecrated the 21ſt of that month, together with Cox Biſhop elect of Ely, Barlow of Chicheſter, and Scory of Hereford; and theſe four (together with Parker, preferred to the ſee of Canterbury) were the firſt made prelates in the reign of Queen Elizabeth [*H*]. In the year 1560, our Biſhop was made one of the Queen's eccleſiaſtical commiſſioners, appointed by the Parliament to inſpect into the manners of the clergy, and regulate all matters of the Church. He was alſo appointed by the Queen's ſpecial letters to be one of her commiſſioners for changing certain chapters uſed for leſſons, for others more edifying to the common people; and for the making a new calendar for the Book of Common-Prayer, for adorning of chancels, and preſcribing good orders for the collegiate churches. The ſame year he, in conjunction with the Archbiſhop of Canterbury and the Biſhop of Ely, wrote a private letter to the Queen, to perſwade her to marry. He alſo, with the Archbiſhop of Canterbury, this year reformed the kalendar, and ordered that the ten commandments in Engliſh ſhould be ſet upon the eaſt wall of every church throughout the kingdom. In the year 1561, our Biſhop united the pariſh church of St Mary Axe to St Andrew Underſhaft, upon the ſpecial petition of the pariſhioners of the former, who for ſeveral years had been without an incumbent, on account of the narrow revenue of the living (*g*). This year the Biſhop alſo held his primary viſitation of his dioceſe. In 1563,

(*g*) Stryps's Life of Abp. Grindal, p. 53. The inſtrument for uniting the pariſh of St Mary Axe to St Andrew Underſhaft, may be ſeen at large in the appendix to the Repertorium Eccleſiaſticum, No. iii.

ſees, which muſt ſuffer conſiderably by theſe exchanges, and by which all hope would be cut off of reſtoring the tythes ſo long unjuſtly detained from the reſpective churches for the maintenance of the incumbents. Another point at which Grindal ſtuck, was wearing certain peculiar garments, whether *extra ſacra*, or *in ſacris*. Peter Martyr, in the beginning of November wrote him an anſwer. And firſt with regard to impropriations, he thought that Grindal had no occaſion to be ſollicitous; ſince it was a thing not in his power, whence, or how the Queen thought proper to provide a ſupport for her Biſhops and the pariſh miniſters. With reſpect to wearing a cap, whether round or ſquare, and a gown upon ordinary occaſions, when they were not employed about holy things, his judgment was, that they ſhould not diſpute more than was neceſſary about them, ſince ſuperſtition ſeemed not properly concerned in them. But as for the habits to be uſed in the miniſtry of holy things, ſince they carried an appearance of the maſs, and were mere remains of Popery, he obſerved that it was the opinion of Bullinger the chief miniſter of Zurich, that they were to be refrained from by Grindal, leſt by his example, a thing that was ſcandalous, ſhould be confirmed. But Martyr ſaid, that though he was always againſt the uſe of ſuch ornaments, yet he ſaw the preſent danger, leſt they ſhould be excluded the office of preaching; and that perhaps there might be ſome hopes, that as altars and images were already taken away, ſo thoſe appearances of the maſs might in time be likewiſe removed, if Mr Grindal and others, who had taken upon them epiſcopacy, would uſe their endeavours. But notwithſtanding, if it came not to good effect, yet if he ſhould decline the office, another might ſucceed in his place, who would not care to have thoſe relics rejected, but perhaps would rather defend, cheriſh, and maintain them. He was therefore, he ſaid, more backward to adviſe him to refuſe the biſhopric, than to refuſe the uſe of veſtments. But becauſe he ſaw that ſcandals of that kind were by all means to be avoided, he more eaſily had yielded to Bullinger's opinion abovementioned. But if altars and images had been continued and preſerved, then he plainly thought that Grindal ought not by any means to engage in the epiſcopal office. In general, he adviſed him to do nothing againſt his conſcience. He acknowledged that the queſtions he had ſent him, had difficulty in them; and therefore excuſed himſelf that he had not imparted his counſel ſooner, ſince it could not be eaſily given. He added, that when he was at Oxford, though he was a canon, he would never wear a ſurplice in the choir. He knew that his example was no juſt confirmation of Grindal, but that which moved him then, and ſtill did, might perhaps have ſome force with him, viz. that that was not to be done which might confirm the practice of what his conſcience did not approve. The ſame year, in October and November, Mr Grindal wrote other letters to Martyr, for his advice. One of his queſtions was, Whether, ſeeing he was not at liberty with regard to the veſtments, he ſhould accept of the epiſcopal function offered him, becauſe of the impoſition of the matters abovementioned? Martyr's anſwer came too late, for Grindal had accepted of the biſhopric before he received it: but Martyr's advice was agreeable to what Grindal had done, that he ſhould not decline it, becauſe of the great want of miniſters (8), for that it was greatly to be hoped, that if ſuch men as he ſat at the helm, many, if not all, of theſe things might be redreſſed. Grindal had alſo aſked his advice in other matters; firſt, as to the dealing with obnoxious papiſts, and whether popiſh prieſts ſhould be continued in their places, or admitted to livings. Martyr adviſed, that for peace ſake, all paſt ſhould be forgotten, but for the future nothing ſhould be admitted contrary to the preſent religion, and that ſuch as ſhould hereafter be preſented by patrons to the Biſhops for livings, ſhould not be by them inſtituted, unleſs they ſubſcribed to the religion eſtabliſhed. Secondly, whether the ſacramental bread ſhould be unleavened; that is, wafer. Martyr anſwered, the Churches abroad every where uſed it. Thirdly, about going the perambulation in the Rogation weeks, which ſeemed to have been derived from the perambulations or walkings of the heathens. Martyr anſwered, that if God only were prayed to therein, ſuperſtition would be avoided; but that endeavours ought to be uſed to explode ſuch cuſtoms as relicks of the Amorites, and both magiſtrates and people ought to be inſtructed againſt them. In purſuance of this advice, Grindal, the firſt Rogation ſeaſon after his conſecration, ordered that the miniſters ſhould make a perambulation only, not a proceſſion; that they ſhould ſuffer *no* banners, or other marks of ſuperſtition to be carried; that the miniſters ſhould go without ſurplices or lights, and uſe no drinkings, except the diſtance of the place required ſome neceſſary relief; and to uſe at convenient places, the form of prayers and thankſgivings appointed by the Queen's injunctions.

(8) Ibid. p. 28, 29, 30.

[*H*] *Theſe were the firſt made prelates in the reign of Queen Elizabeth.*] It ought to be remembred, that theſe five prelates had the honeſty and courage to prefer a petition to the Queen, for the granting ſeveral things of great uſe and benefit to the Church: as, to ſtop the exchanging of Biſhops lands for the great tythes and impropriations in the Crown, which the Parliament had empowered her to do, to the great detriment of the epiſcopal ſees, and diſabling the Biſhops from encouraging learning, and exerciſing that hoſpitality which was expected from them: and they offered her as an equivalent, 1000 marks a year during their lives. They alſo beſought her Majeſty, in behalf of ſmall biſhoprics, and of the inferior clergy, as may be ſeen more at large in the annals of the Reformation (9). The excellent letter itſelf may alſo be ſeen in the life of Archbiſhop Parker. The petition however had but little effect.

(9) Annal. Reform. p. 98.

It muſt be obſerved, that an exchange of lands was in hand between the Queen and our Biſhop, even before his conſecration, but was not fully ſettled; and ſtill this was done, he could not compound for his firſt fruits, the conſequence of which was, that it hindered him from exerciſing his epiſcopal function; to remedy which inconvenience, he was obliged to have the Queen's expreſs authority, which ſhe gave him by letter, to impower him to exerciſe his eccleſiaſtical juriſdiction.

[*I*] *He*

1563, he, together with the Archbiſhop and ſome Civilians, was employed in preparing a book of ſtatutes for Chriſt-Church Oxford, which as yet had no fixed ſtatutes. This year he alſo greatly aſſiſted the Engliſh Merchants in their ſettlement at Embden in Eaſt-Friezeland (*b*) [*I*]. The ſame year he wrote animadverſions upon Juſtus Velſius's *Chriſtiani Hominis Norma* [*K*]. April 15, 1564, he took the degree of Doctor in Divinity at Cambridge; and the ſame year, by the Queen's peremptory command, he began to preſs the clergy to uniformity [*L*]. October 3, the ſame year, he preached at St Paul's at the celebration of the Emperor Ferdinand's funeral, and his ſermon was afterwards printed [*M*]. In

(*b*) Strype, p. 86, 87, 88, &c.

[*I*] *He aſſiſted the Engliſh merchants in their ſettlement at Embden in Eaſt-Friezeland.*] Our merchants ſettled at Antwerp, and other places in the dominions of Spain, being provoked with the repeated exactions and ill uſage of the Spaniards, thought of removing out of their territories, and fixed upon Embden as the moſt convenient place both for freedom of religion and of trade. To obtain which, they made the Biſhop their friend; they having been formerly ſerviceable to the exiles in Queen Mary's reign, and he chearfully eſpouſed their cauſe, was their mediator with the Queen, and treated with the agent appointed by the Counteſs and Earl of Eaſt-Friezeland; and, in ſhort, managed the affair ſo dextrouſly, that the merchants were ſoon ſettled at Embden.

[*K*] *He wrote animadverſions upon Juſtus Velſius's Chriſtiani Hominis Norma.*] This Velſius was of the Hague in Holland, a man of learning, but very enthuſiaſtical, and held ſome peculiar opinions, and had ſome followers and admirers. He drew up at London, a ſummary of his religion under this title: *Chriſtiani Hominis Norma, ad quam ſe explorare perpetuo quivis debet:* i. e. 'The rule of a Chriſtian man, according to 'which every one ought continually to try himſelf.' It was compoſed by way of queſtion and anſwer. The firſt queſtion was, *What is a Chriſtian?* the anſwer to which was, *one who by participation and grace is rendered, and to be rendered, that which Chriſt was, and is of himſelf, and by nature.* The next queſtion was, *What Chriſt was, and is of himſelf and by nature?* to which is anſwered, *God in man, and afterwards man God.* Velſius likewiſe affirmed in this piece, that *while the Word was made fleſh and dwelt in us, he brought down God from Heaven to us, joined and united him to our paſſible nature; and that by his glorious reſurrection the fleſh was made the Word, and dwelt in God, and lifted up man to God.* He ſpoke of a double regeneration, one of the internal man, and the other of the external; and aſſerted, that the one made Chriſtians *God in man*, in this world; and the other made them *Men-Gods*, in the world to come. Mr Strype has publiſhed this piece in the appendix, No 8. to the firſt book of the life of Grindal. In March, Velſius wrote bold letters to Sir William Cecil the Secretary, and even to the Queen herſelf; ſending his *Norma* to them, which he had done alſo two months before to our Biſhop, who thought fit, upon the Secretary's advice, to write animadverſions upon that piece, extant in the paper office, and publiſhed from thence by Mr Strype, in the appendix No 9, to the firſt book of his life of our Biſhop. Velſius fancied himſelf endued with the ſpirit of prophecy, and that Chriſt dwelt in him. By this authority he took upon him to denounce judgments upon perſons and places, and particularly upon the Queen and the kingdom, in his letter to her, unleſs ſhe and her ſubjects received his doctrine. He ſolemnly by a writing excommunicated Peter Delane, miniſter of the Dutch congregation in London, and delivered him up to Satan, becauſe he would not allow of a challenge to a public diſputation, which Velſius made to one Nicholas, a preacher there. Velſius being cited before the eccleſiaſtical commiſſion, Biſhop Grindal, the Biſhop of Winchеſter, and the Dean of St Paul's, repreſented to him the erroneous doctrine of his *Norma*, which he obſtinately defending, they at laſt charged him in the Queen's name to depart the kingdom. This he complained of in very rude terms to the Queen, telling her, that he could not obey their order, pretending ſome miracle from God to confirm his doctrine (10).

(10) Strype's Life of Grindal, p. 91, 92, 93, 94.

[*L*] *He began to preſs the clergy to uniformity.*] An agreement and uniformity among the clergy in wearing the ſame habits, and uſing the ſame rites in divine ſervice, was hitherto neglected, eſpecially in London, where many of them rejected the orders of the book of Common-Prayer. The plague of late ſpreading itſelf in London and other places, the Biſhops could not take that cognizance, and exerciſe the diſcipline requiſite for this purpoſe. But towards the latter end of this year, by a peremptory order from the Queen to the Archbiſhop of Canterbury, uniformity in the habits and ceremonies were required of the clergy; whereas many hitherto ſhe ſaid, had taken a liberty of varying from her injunctions in this regard. The Archbiſhop therefore having this order, immediately diſpatched his letters to our Biſhop, to ſignify the Queen's mind and reſolution to the reſt of the Biſhops of the province, and that they ſhould ſee the laws and ordinances already eſtabliſhed, ſet forth and complied with every where, and to ſend up thoſe of the clergy who were incompliant. The greateſt difficulty was to correct theſe neglects in London, where there were many who neither wore ſurplice, tippet, nor ſquare cap, and did not uſe the other ceremonies preſcribed in the book of Common-Prayer. This work was incumbent upon our Biſhop, who found great difficulty in redreſſing theſe matters among the city miniſters, after whoſe example the clergy in other parts of the nation would be apt to govern themſelves. So that throughout this and ſome other part of the next year, Biſhop Grindal frequently ſat in eccleſiaſtical commiſſion with the Archbiſhop and other commiſſioners, for the regulating the city clergy, and trying all gentle methods to bring them to conformity. In the beginning of this work, the Archbiſhop of Canterbury thought fit to excite and quicken our Biſhop now and then to ſet diligently upon reforming his London clergy, as he was otherwiſe ſlow in his proceedings againſt them. And by the Archdeacon's means, the Archbiſhop procured a ſpecial letter from the Queen to him, to look particularly after uniformity in thoſe under his charge in London; and he charged him, as he would anſwer it to God, to be diligent in puniſhing all recuſants, by cenſures eccleſiaſtical, ſince the Biſhops had power and authority by act of parliament to uſe them. Mr Strype ſays, the Biſhop went thus tenderly about this work, becauſe he knew the ſcarcity of miniſters at that time; and therefore uſed all gentleneſs and meekneſs with them. But afterwards obſerving the ignorance and obſtinacy of ſome, and the dangerous principles of others, ſtriking at the very eccleſiaſtical order itſelf, he proceeded with more reſolution, and reduced many to compliance; ſome were ſequeſtered, others ſuſpended, and even deprived; ſome, who were Papiſts, went beyond ſea, and ſome were afterwards put in priſon for their diſobedience. Mr Strype ſays (12), that the puritan party, becauſe our Biſhop was not forward to uſe theſe extremities, 'confided 'much in him, and gave out that my Lord of London 'was their own, and all that he did was upon a force, 'and unwillingly, as they flattered themſelves.' However, Biſhop Grindal was not wanting in his endeavours to bring over the Non-conformiſts to be ſatisfied with what was enjoined; and among other means, he publiſhed a letter of Henry Bullinger, the chief miniſter in Switzerland, addreſſed to him and two other Biſhops, viz. Dr Horn of Winchеſter, and Dr Parkhurſt of Norwich, concerning the lawfulneſs of wearing the habits, but drawn up for the ſatisfaction of Samſon and Humfrey, two Oxford divines of great eminence, the former, Dean of Chriſt-Church, and the latter Preſident of Magdalen College. 'The letter was written 'with ſuch a clearneſs of reaſon, ſuch evidence from 'ſcripture, and in ſuch a fatherly compaſſionate ſtyle, 'that it had a very good effect upon many that before 'were ready to leave their miniſtry, but having read 'it were ſatisfied (13).'

(12) P. 105.

(13) Ibid. p. 105.

[*M*] *He preached the Emperor Ferdinand's funeral ſermon at St Paul's.*] It was cuſtomary in thoſe days to celebrate the funerals of crowned heads, with as much ſolemnity as if their bodies were actually depoſited here. Thus at this of the Emperor's, the choir was hung with black, and adorned with eſcutcheons of his arms, of ſundry ſorts, and in it was erected an

In 1567 he convented ſome Separatiſts before him [*N*], and prohibited unlicenſed preachers. In 1568 he made a contribution for the perſecuted Proteſtants abroad, by way of benevolence, or collection from his clergy, for which he was threatened by ſome of them, diſaffected to this cauſe, with a premunire, for laying a charge upon the clergy without authority from the Queen. But this did not diſcourage him. In 1569 he procured the liberty of ſeveral Puritan Separatiſts who had been in priſon, for holding private aſſemblies, and uſing a form of prayer different from that allowed and enjoined by law; and yet theſe very men complained of the Biſhop this ſame year to the Privy Council, which occaſioned him to write a vindication of himſelf to the Council [*O*]. The laſt piece of ſervice our Biſhop did in his dioceſe, before his tranſlation to the ſee of York, was the reformation of the hoſpital of the Savoy, a charitable foundation for the relief and entertainment of poor travellers, which was almoſt brought to utter ruin by the abuſes and ill conduct of it's maſter, whom the Biſhop, having procured a commiſſion from the Queen to viſit the hoſpital, deprived. The ſame year, May 1, 1570, the Biſhop was tranſlated to the archbiſhopric of York [*P*]. One of his firſt ſervices to this ſee was, his recovering

hearſe richly garniſhed; the Queen, by proxy, was chief mourner, attended by the Archbiſhop of Canterbury, and many of the prime nobility. In the ſermon, our Biſhop ſet forth with much eloquence, the Emperor's quality, deſcent, and virtues; and is, as Mr Strype thinks, the only diſcourſe, except one, that was ever printed, and being very ſcarce, he has given part of it in his life of the Biſhop (14).

(14) Ibid. p. 100, 101.

[*N*] *In 1567, he convented ſome Separatiſts before him.*] Mr Strype obſerves, that the refuſers of the orders of the Church, who by this time were commonly called Puritans, were now grown into two factions. The one was of a more quiet and peaceable demeanor, who indeed would not uſe the habits, nor ſubſcribe to the ceremonies enjoined, as kneeling at the Sacrament, the croſs in Baptiſm, the ring in Marriage; but held the Communion of the Church, and willingly and devoutly joined with the common-prayers. But there was another ſort who diſliked the whole conſtitution of the Church lately reformed, charging it with many groſs remainders of Popery, and that it was ſtill full of corruptions not to be tolerated, and anti-chriſtian; and eſpecially the habits which the clergy were enjoined to uſe upon ordinary occaſions, and in their miniſtration. Theſe latter ſeparated themſelves into private aſſemblies, meeting together not in churches, but in private houſes, where they had miniſters of their own. At theſe meetings they rejecting wholly the book of Common-Prayer, uſed a book of prayers framed at Geneva for the congegration of Engliſh exiles lately ſojourning there. This book had been reviſed and allowed by Calvin and the reſt of the divines there, and indeed was for the moſt part taken out of the Geneva form. At theſe private congregations they had not only prayers and ſermons, but the Lord's Supper likewiſe ſometimes adminiſtred. This gave great offence to the Queen, who iſſued out her letters to the eccleſiaſtical commiſſioners, which were ſubſcribed by the Privy-Council, and were to this effect; That they ſhould move theſe Non-conformiſts by gentle means to conformity, or elſe for their firſt puniſhment to loſe their freedom of the city, and afterwards to ſuffer what would follow. About an hundred of theſe Separatiſts having hired Plumber's-Hall, upon pretence of keeping a wedding there, but in reality for a religious meeting, on the 19th of June, they were diſturbed by the Sheriffs, and about fourteen or fifteen of the chief of them ſeized, and examined the next day before the Lord-Mayor, the Biſhop of London, and others of the Queen's commiſſioners. The Biſhop argued with them with great mildneſs, and endeavoured by arguments and reaſoning to convince them of their errors, but was treated by ſome of them with reproaches and rude language, inſomuch, ſays Mr Strype, 'That much notice was taken of it; and finding them ſo irreclaimable, it abated much of the favour which he was inclinable to ſhew them. Beza, the chief miniſter of Geneva, otherwiſe a great favourer of this ſort of men, liked not of their behaviour, and ſignified his diſallowance of it, in an epiſtle to this our Biſhop, wherein he commended his lenity and his patience. They were very ſevere upon him afterwards in their prints, by ſlandering of him in a moſt high manner; and therefore it is the leſs wonder, that this mild and patient man was ſome years after provoked, (obſerving alſo their unquiet diſpoſition) to expreſs himſelf ſomewhat ſeverely againſt them.' As we ſhall ſee in the next note.

[*O*] *He was complained of to the Privy-Council, which occaſioned him to write a vindication of himſelf.*] The ground of the Separatiſts complaint againſt the Biſhop was this. The Separatiſts who in the beginning of this year had the favour ſhewn them, to be ſet at liberty by that Biſhop, ſtill continued their former practices of having private aſſemblies, and performing religious offices in their own way, notwithſtanding the Biſhop's admonition to them at their diſmiſſion, and the threatnings of the Council read to them. Their chief teachers were Bonham and Crane, who at theſe meetings uſed to preach and expound the Scriptures, baptize, adminiſter the communion, marry, (according to the Geneva book, which they ſtiled *the moſt ſincere order*) and withal would inveigh very vehemently againſt the government and religious uſages of the Church of England. When theſe men had been ſet at liberty, through the Biſhop's interceſſion, they promiſed before the Biſhop's vicar-general, and Bonham gave it under his hand, that for the future they would neither preach, nor be preſent at any preaching, contrary to the laws of the land. After which, the Biſhop granted Bonham the liberty of preaching, which he abuſed, and married and baptized according to another form, and ſo did Crane alſo; wherefore Bonham was taken up again by the Biſhop's order, and Crane was forbid to preach any more in his dioceſe. Upon this, the Londoners of their party, who had alſo been under confinement in Bridewell and ſet at liberty, were very angry with the Biſhop, and had even the impudence to lodge a complaint againſt him to the Privy-Council, as though he had broke his word with them, as having allowed them to abſent themſelves from their pariſh churches, and tolerated their different ways and modes of divine ſervice, and given licence to Bonham and Crane to hold private lectures. The Council ſent this petition to the Biſhop, and alſo wrote him a letter, deſiring to know how he had proceeded with them, and what courſe, in his opinion, was fit to be uſed with them. The Biſhop was touched with the ungrateful behaviour of thoſe people, to whom he had ſhewed ſuch gentleneſs and mercy, and eſpecially when he ſaw that they had wrongfully repreſented his dealings with them; he therefore diſpatched an anſwer to the Council's letter, and ſhewed particularly what he had done in the affair, and withal gave his opinion, 'That all the heads of this unhappy faction ſhould be with all expedition ſeverely puniſhed, to the example of others, as people fanatical and incurable. Which puniſhment would breed the greater terror, if it proceeded from their Lordſhips. And becauſe all priſoners, for any colour of any religion, be it never ſo wicked, find great ſupport and comfort in London, it would not be amiſs that ſix of the moſt deſperate of them ſhould be ſent to the common goal of Cambridge, and ſix likewiſe to Oxford, and others of them to other goals near London (15).'

(15) Strype, p. 154, 155, 156.

[*P*] *He was tranſlated to the archbiſhopric of York.*] By the original inſtrument in vellum, of the Dean and Chapter of York, it appears that the Queen's letters-patent to them, to permit them to chuſe a paſtor for their church, bore date at Windſor, April 1ſt, 1570, and they in their letters to the Queen, April 11, declare their election of Grindal for their and for the metropolitical church of York's Archbiſhop (16). This ſee had been vacant ever ſince June 1568, by the death of archbiſhop Young (17). The Lord Henry Howard, brother to the

(16) MS.

(17) Faſti, p. 311.

recovering by law a houſe at Batterſea in Surry, formerly belonging to the Archbiſhops of York, together with 80 acres of demeſne land; which houſe and lands were for the convenience of the Archbiſhops, when they came up to parliament or convocation, or other buſineſs at court *. The ſame year, 1570, the famous Thomas Cartwright having attacked the government of the Church, in his lectures at Cambridge, and thereby occaſioned great diſorders and diſturbances in the univerſity, our Archbiſhop wrote a letter to Secretary Cecil, that a ſtop might be put thereto, and Cartwright ſilenced. This letter Mr Strype has preſerved, and our Church hiſtorian, Mr Collier, has alſo given it at length, in order, as he ſays, to do juſtice to the Archbiſhop's memory, and clear him from all imputation of Puritaniſm (*t*). The year following, 1571, he began his metropolitan viſitation, and gave forth his own injunctions to the clergy and laity, conſiſting of 25 articles, in which he ſhewed a becoming zeal for the diſcipline and good government of the Church. This viſitation continued the next year, 1572, and then the Archbiſhop viſited the Dean and Chapter of York, and gave them alſo injunctions conſiſting of 19 articles. In 1573, he interceded for the clergy oppreſſed by concealments [Q]. In 1574 he held an eccleſiaſtical commiſſion, took an account of ſome Papiſts, and ſent a certificate up of the proceedings againſt them, who were only five in number; for by the great care and diligence of the good Archbiſhop, the number of Papiſts daily diminiſhed in his dioceſe, who a few years before were many and powerful. For one of his chief cares ever ſince the eccleſiaſtical power and conduct had been committed to him, was, to ſupply the churches under him with preachers, of which there was a great ſcarcity every where in his time, though the people then the moſt wanted them, when ſuperſtition and ignorance had, by popiſh policy, ſo much overſpread them. And it muſt be obſerved, to the honour of our Archbiſhop, that while he preſided in the ſee of York, he procured above forty learned preachers, and they Graduates, within leſs than ſix years, to be placed in that dioceſe, (a great number in theſe times) beſides thoſe he found there; 'the fruits of whoſe travails 'in preaching, as he told the Queen, ſhe was like to reap daily, by moſt aſſured daily 'obedience of her ſubjects in thoſe parts.' For his opinion firmly was, that by frequent preaching the word of God, two very good things would prevail among the people, viz. true religion towards God, and obedience and loyalty towards the prince. As a proof of the latter, he mentioned a remarkable inſtance which happened ſome time before in the Queen's reign; which was, that in 1569, when almoſt all the North had roſe and rebelled, the town of Halliſax, which had been better inſtructed than the reſt by good preaching, remained firm and loyal to her, and ſent forth 4000 men armed to quell the rebellion. Our Archbiſhop however was extremely careful in his choice of the miniſtry, he

* Strype, p. 175.

(*t*) Collier's Eccleſ. Hiſt. of G. Brit. Vol. II. p. 525.

the Duke of Norfolk, aſpired to it, and had made great intereſt to obtain it, but being popiſhly inclined, his endeavours proved vain, and Grindal was at length preferred to it, through the favour and intereſt of Secretary Cecyl, and with the approbation of Archbiſhop Parker, who was conſulted about it, and declared, 'That he liked well of his removal, for he 'reckoned him not reſolute and ſevere enough for the 'government of London; ſince many of the miniſters 'and people thereof, notwithſtanding all his pains, 'ſtill leaned much to their former prejudices againſt 'the eccleſiaſtical conſtitution.' But withal he told the Secretary, 'That my Lord of London would be 'very fit for York, who were *a heady and ſtout people*; 'witty, but yet able to be dealt with by good govern-'ance, as long as good laws could be executed, and 'men backed.' When the ſee of York firſt became vacant in 1568, Dr Matthew Hutton, Dean of York, ſenſible of the great need that province ſtood in of a fit and able paſtor, wrote a letter to Secretary Cecyl, ſhewing what qualifications he that was to be ſent among them ought to have, viz. 'That he ſhould be a 'teacher, becauſe the country was ignorant; a virtu-'ous and godly man, becauſe the country was given 'to ſift ſuch a man's life: a ſtout and courageous man 'in God's cauſe, becauſe the country otherwiſe would 'abuſe him; and yet a ſober and diſcreet man, leſt 'too much rigour ſhould harden the hearts of ſome, 'who by fair means might be mollified, &c. and ſuch 'a biſhop likewiſe as was both learned himſelf, and 'alſo loved learning, that that rude and blind country 'might be furniſhed with learned preachers.' And all theſe excellent qualities he reckoned centred in Grindal, for, he adds, '*Such a man was the biſhop of Lon-'don known to be*; and therefore he wiſhed that LONDON were tranſlated to YORK (18).' This agrees very well with the account our Archbiſhop gives of the ſtate of this people, at his firſt coming among them, in a letter to Secretary Cecyl: 'The greateſt part of 'our gentlemen, ſays he, as I am informed, are not 'well affected to godly religion, and that among the 'people there are many remanents of the old. They 'keep holy days and faſts abrogated. They offer 'money, eggs, &c, at the burial of their dead. They 'pray beads, &c. ſo as this ſeems to be another Church, 'as it were, rather than a member of the reſt. And 'for the little experience I have of this people, me-'thinks I ſee in them three evil qualities; which are 'great ignorance, much dulneſs to conceive better in-'ſtruction, and great ſtiffneſs to return to their wonted 'errors. I will labour as much as I can, to cure every 'of theſe, committing the ſucceſs to God.'

(18) Epiſtle dedicatory to the Life of Abp. Grindal, p. 3.

[Q] *He interceded for the clergy oppreſſed by concealments.*] The Queen had by her letters-patent, granted to her Gentlemen-Penſioners, the penalties incurred and forfeited by the clergy, under pretence of concealment of lands and rents given for ſuperſtitious uſes, belonging now by Act of Parliament to the Crown. Upon this they ſent deputies through the kingdom, who being indigent men uſed great extortion, and extremely oppreſſed the clergy. This occaſioned our Archbiſhop to make complaint thereof to the Lord-Treaſurer, who, though he approved not of the thing itſelf, yet the letters-patent being paſſed, wrote back to the Archbiſhop, that the Gentlemen-Penſioners might enjoy the penalties forfeited by the clergy, ſince it was ſo appointed by the Queen, and beſtowed upon them. The Archbiſhop then ſhewed his Lordſhip that he did not intend they ſhould be abridged of it, but that he found fault with their manner of proceeding, which was troubleſome, chargeable, and diſhonourable, ſince they ſummoned all the clergy, as well innocent as faulty, as others of good reputation, to appear before them as the Queen's commiſſioners, whereas they had no ſuch commiſſion; and that they compounded with the clergy for offences paſt and to come; which tended not to the reſtraint of abuſes, but was rather a means to increaſe them. And laſtly, that they were men noted formerly for evil dealing and bribery. He deſired therefore, that for the preventing of theſe troubles, the Gentlemen-Penſioners would ſend him down in articles, a form of proceeding to be obſerved by their deputies, by which the inconveniencies abovementioned might be avoided (19).

(19) Strype, p. 182, 183.

[R] *That*

he allowed that none but men of ſome learning and abilities might might be admitted to the cure of ſouls [*R*]. For this purpoſe he provided, that all who came for inſtitution to livings ſhould be well examined firſt, and ſuch as were found unlearned he rejected, notwithſtanding their preſentations. We ſhall give an inſtance of this in the note [*S*], which may ſerve to ſhew how groſsly ignorant ſome of thoſe who pretended to ſerve God in his Church were in thoſe days. Upon the Death of Dr Matthew Parker in 1575, our prelate was advanced to the archbiſhopric of Canterbury, in which he was confirmed February 15 (*k*) [*T*]. The ſame year a Convocation was held under him, in which, among other things for the advantage of the Church and State, ſome articles for the regulation of the clergy were agreed upon, entitled, 'Articles touching the admiſſion of apt 'and fit perſons to the Miniſtry, and the eſtabliſhing of good order in the Church;' which were publiſhed and printed by the Queen's authority (*l*), The next year he procured a new eccleſiaſtical commiſſion, which was very extenſive, as may be ſeen in Mr Strype's Appendix, No. VI. b. ii. He alſo ſet about reforming ſeveral abuſes and diſorders in his courts, regulated diſpenſations, inhibitions, &c. in which he was aſſiſted at his own deſire by the moſt learned lawyers and civilians of thoſe times. The ſame year he held a metropolitical viſitation; and perceiving ſtill the ignorance and ſloth of the clergy, and the great need there was of more frequent preaching, for the inſtruction of the people in the grounds and truth of religion, upon his firſt coming to the ſee of Canterbury, he ſhewed himſelf more favourable to the exerciſe of propheſying than his predeceſſor had been, and not only attempted to regulate it, but to bring the Queen and Council to have a favourable opinion of it. Theſe exerciſes or propheſyings had been uſed before (but with ſome abuſes) in moſt dioceſes, and had the countenance of the reſpective Biſhops [*U*]. But the well-meaning

(*k*) Strype, p. 190, 193.

(*l*) See Mr Strype's Appendix, No. IV. to b. ii.

[*R*] *That none but men of ſome learning and abilities might be admitted to the cure of ſouls.*] Our Archbiſhop once made proteſtation of this to the Queen. 'That for 'his part, be it ſpoken without oſtentation, he was very 'careful in allowing ſuch perſons only, as were able 'and ſufficient to be preachers, both for their know-'ledge in the ſcriptures, and alſo for teſtimony of their 'good life and converſation; and that he gave great 'charge to the reſt of the Biſhops of the province to 'do the like. That he admitted no man to that of-'fice, that profeſſed either *Papiſtry*, or *Puritaniſm*; 'and that generally the graduates of the Univerſity, 'were only admitted to be preachers; unleſs it were 'ſome few, that had excellent gifts of knowledge in 'the ſcriptures, joined with good utterance, and godly 'perſwaſion.'

[*S*] *We ſhall give an inſtance of this in the note.*] In May 1574, one William Ireland having been preſented to the rectory of Harthil, came to the Archbiſhop to be inſtituted, and was examined by his Grace's chaplain. In his preſentation were the words *veſtri humiles & obedientes*, which the chaplain requiring him to tranſlate, he expounded them, *your humbleneſs and obedience*. The chaplain then aſked him who brought up the people of Iſrael out of Egypt? he anſwered, *King Saul*. And being aſked, who was firſt circumciſed, he could not anſwer. Upon this the Archbiſhop rejected him, and one Hugh Caſſon was preſented to and obtained the benefice of Harthil, which he enjoyed fifty years (20).

(20) Strype, p. 188.

[*T*] *In 1575, he was advanced to the archbiſhopric of Canterbury.*] Archbiſhop Parker died in Auguſt, and the Queen, after three months deliberation, who was fitteſt to ſucceed to that high ſtation, pitched upon Grindal, recommended by the Lord-Treaſurer, his patron. But this honour was not of our Archbiſhop's ſeeking; on the contrary, he had many inward motions to decline it, being very diffident of his own abilities for ſo exalted a ſtation, but was ſwayed thereto by the fears of giving offence; and when the Lord-Treaſurer adviſed him by letter of the Queen's intention to remove him to the ſee of Canterbury, the Archbiſhop did not anſwer his letter till after fifteen days conſideration, the Lord-Treaſurer's letter being dated 25th November, and the Archbiſhop's anſwer 10th December from Biſhopthorpe, in which he ſays, 'I underſtand by your Lordſhip's letter of the 25th of 'of November, what your Lordſhip thinketh of her 'Majeſties inclination for my remove. If her Majeſty 'ſhould ſo reſolve, (although I have had heretofore 'many conflicts with myſelf about that matter) yet I 'have in the end determined to yield unto the ordi-'nary vocation, leaſt in reſiſting of the ſame, I might 'with Jonas offend God, occaſion a tempeſt, &c Be-'ſeeching God to aſſiſt me with his grace, if that 'weighty charge be laid upon me: to the ſuſtaining 'whereof I find great inſufficiency in myſelf.' Grindal was ſucceeded in the archbiſhopric of York, as he had been before in the ſee of London, by Dr Edward Sandys, Biſhop of London; and it is remarkable, that theſe two prelates both ſprung from the town of St Bees, lived together in the Univerſity, and were both fellow exiles in the time of perſecution. Our Archbiſhop, as a ſtanding memorial of his riſing in three removes, from a private ſtation, to the higheſt advancement in the Church, cauſed to be painted upon glaſs, four coats of arms; and to be ſet up at Bekeſbourn, near Canterbury, where was formerly a palace of the archbiſhops of that dioceſe. The firſt was the coat of Grindal by itſelf: the ſecond, ſignificative of his firſt advance, was the coat of the ſee of London, impaled with Grindal. The third, that of York, and the fourth of Canterbury. And though that palace hath been now long demoliſhed, yet, as Mr Strype tells us, 'Theſe four panes of glaſs are yet preſerved in a gen-'tleman's houſe in that pariſh, as ſome remembrance 'of this good man (21).' We muſt not omit here, the compliments paid him by Pembroke-Hall, upon his promotion to the metropolitical ſee of Cantebury, in a congratulatory addreſs, elegantly penned in Latin, wherein after thanking him for ſome late endowment of their college, from his foundation of the ſchool of St Bees, they take notice, 'How in the height of 'his honour he ſtill ſpake moſt affectionately of their 'college, and of the care he ſtill took of them and their 'concerns. And what could be more advantageous, 'more glorious, for Pembroke-Hall, than to be un-'der the kind eye, not only of an excellently learn-'ed and ſingularly pious man, but of a Biſhop, an 'Archbiſhop, and, in one word, of GRINDAL. That 'never was there any nurtured in that univerſity, 'educated in their college, of greateſt fame in hiſtory 'for learning, to whoſe fidelity, virtue, and integrity, 'they would ſooner recommend themſelves, than his; 'that in him, now Primate of all England, the Pem-'brochians gloried; that divers Biſhops, as of Carliſle, 'Exon, Winton, Durham, London, York, formerly 'ſcholars of their college, were praiſe worthy for their 'notable learning and virtue; but now at laſt, to their 'eternal honour, they had not only an Archbiſhop of 'Canterbury, a Metropolitan, a Primate, and the firſt 'prelate of the whole realm, but him adorned with all 'the ornaments of mind and fortune. They triumph-'ed in ſuch a learned Mæcenas, and right noble pa-'tron: And conclude with their earneſt prayers for 'him, that God would long preſerve and protect his 'Grace, as well for their own private benefit, as for 'the common good of Church and State, &c.' Mr Strype has printed the original Latin letter, in the appendix to his life of our Archbiſhop, No. 21. B. 2d.

(21) Pag. 191.

[*U*] *He applied himſelf to encourage and regulate the exerciſes called propheſyings, which had been uſed in moſt dioceſes before, but with ſome abuſes*] The method of theſe exerciſes was thus. The miniſters of a particular diviſion, at a ſet time met together in ſome church belonging to a market town, or other large town; and there

meaning Archbiſhop could not ſucceed in his deſign, being checked in it very angrily by the Queen, who diſapproved of them becauſe they were practiſed by the Puritans, to confirm them in their diſlike of the eſtabliſhed religion; nor did ſhe like that the laity ſhould neglect their ſecular affairs by repairing to theſe meetings; which ſhe likewiſe thought might fill their heads with notions and opinions that might occaſion diſſenſions, and render them turbulent to the State. Add to this, that the Queen ſaw how apt they were to be abuſed; and there had been ſome diſorders at one of theſe conferences, the report of which had been brought and aggravated to the Queen, which ſo provoked her, that ſhe was reſolved to have them all put down; and the Archbiſhop being at Court, ſhe particularly declared herſelf offended at the number of preachers as well as at the exerciſes, and ordered him to redreſs both, urging that it was good for the Church to have few preachers, that three or four might ſuffice for a county, and that the reading of the Homilies to the people was ſufficient. In ſhort, ſhe required him to do theſe two things, viz. to abridge the number of preachers, and to put down the exerciſes. This was no ſmall affliction to the Archbiſhop, who thought ſhe encroached upon his office, to whom the higheſt truſt in the Church of England, next to herſelf, was committed; and therefore that ſhe was ſomewhat too peremptory in requiring this to be done, without adviſing at all with him in a matter ſo directly regarding religion: nor could he in conſcience comply with her commands, having quite different ſentiments of theſe exerciſes, believing they tended much to the improving the clergy, and the exciting them to the ſtudy of the ſcriptures, as well as to the edifying of the people. When he came home therefore, he reſolved to write his mind to the Queen at large, which he did with ſuch a noble ſpirit as became a virtuous man and an Engliſh prelate. We have inſerted the ſubſtance of this famous letter in the note [*W*]. But it was impoſſible to get Elizabeth over her prepoſſeſſions in matters of religion;

there each in their order explained, according to their ability, ſome particular portion of ſcripture allotted them before. And after they had all done, a moderator, who was one of the graveſt and beſt learned amongſt them, made his obſervations upon what the reſt had ſaid, and determined the true ſenſe of the place. All this was to be diſpatched within a ſet ſpace of time. At theſe aſſemblies there was commonly a great concourſe of people to hear and learn, which obliged the miniſters and curates to read authors, and conſult expoſitors and commentators, and to follow their ſtudies, that they might ſpeak to the purpoſe when they were to appear in public, and thus they conſiderably profited themſelves in the knowledge of the ſcriptures. But the exerciſes were attended with ſome inconveniencies, which occaſioned confuſion and diſturbances. For the laity as well as clergy being here allowed to ſpeak, they would ſometimes hold forth, and affect to ſhew their parts, and confute the clergy. Sometimes they would advance heterodox opinions; and ſome who had been ſilenced from preaching, or ſuſpended, or deprived for nonconformity, would intrude themſelves here, and take the liberty to declaim againſt the liturgy, and government of the Church. Sometimes their ſatire was played againſt the State. Sometimes they glanced upon perſons, and run out into particular invectives. The people alſo fell to arguing and diſputing much about religion, in ſhort, the exerciſes degenerated into factions, diviſions, and cenſurings, which brought them into ſome diſreputation. Our Archbiſhop believing theſe irregularities only accidental to the exerciſes laboured to redreſs them, being unwilling utterly to aboliſh a practice, the deſign of which he thought was ſerviceable for the improvement of the people and clergy, and therefore endeavoured to make it anſwer upon experiment, and bring the practice up to the plan. To this purpoſe he drew up a ſet of rules and orders for the better management of the exerciſes, and which would have effectually removed all occaſions of diſorder thereat. They are digeſted into articles or heads, and are extant in the Cotton Library, and alſo publiſhed by Mr Strype (22), and Mr Collier (23).

(22) Pag. 220.

(23) Collier's Eccl. Hiſt. b. ii. p. 553.

[*W*] *He wrote his mind to the Queen at large in a letter, the ſubſtance of which is in the note.*] The Archbiſhop takes notice, that the Queen's not being pleaſed to hear him out upon the argument at his laſt waiting upon her, was the occaſion of his addreſſing this way. He begins with a profeſſion, that nothing but neceſſity and conſcience ſhould make him incompliant. He believes her zeal and meaning were of the beſt, but good princes may be ſometimes miſtaken. He then expoſtulates with her about keeping in the Church but a few preachers, ſhewing her, 'That nothing was 'more plain in Scripture, than that the goſpel of Chriſt 'ſhould be plentifully preached, and that plenty of la-'bourers ſhould be ſent into the Lord's harveſt.' Then he ſhews the great benefit of preaching, not only to religion, but to the State; and in anſwer to what the Queen had ſaid to him, that the reading of the Homilies to the people was ſufficient, he ſays, 'The Homi-'lies have their uſe, but were nothing comparable to 'the office of preaching. That the preacher could ap-'ply his ſpeech according to the difference of times, 'places, and hearers, which could not be done in Ho-'milies. That exhortations, reprehenſions, and per-'ſwaſions, were uttered with more affection to the 'moving of the hearers in ſermons than in Homi-'lies. That they were only deviſed in King Edward's 'time to ſupply the want of preachers, and were by 'his ſtatute not to be preferred, but to give place to 'ſermons, whenever they might be had. And laſtly, 'they were never thought in themſelves alone to con-'tain ſufficient inſtruction for the Church of England.' With regard to the ſecond point, concerning learned exerciſes and conferences amongſt the miniſters, he ſaid, 'He had conferred with diverſe of his brethren the bi-'ſhops, by letters, who thought as he did, that it was 'a thing profitable to the Church, and therefore ex-'pedient to be continued. And he hoped, that her 'Majeſty would alſo think the ſame, when ſhe ſhould 'be informed of the manner and order thereof, and 'what authority they had from ſcripture; what uſe 'they were of, and what inconveniencies would fol-'low if they ſhould be abſolutely taken away.' Then he proceeded to give her an account of theſe exerciſes; 'That both Samuel and Eliza practiſed them. That 'St Paul, 1 Cor. xiv. makes expreſs mention, that the 'like in effect was uſed in the primitive Church, and 'gives rules for the order of the ſame. That he calls 'them prophecies, and the ſpeakers, prophets; names 'odious in our days, becauſe not rightly underſtood; 'for St Paul, by prophecies, does not mean prediction 'of things, but the interpretation and expoſition of the 'ſcriptures; and therefore he attributes to thoſe he 'calls prophets, (in the ſame chapter) doctrine to edi-'fication, exhortation, and comfort.' Then he obſerves, that many biſhops, as of London, Wincheſter, Bath and Wells, Lichfield, Glouceſter, Lincoln, Chicheſter, Exeter, and St Davids, had ſignified by letter to him, the profit and advantage which had accrued by theſe exerciſes; particularly, 'That the miniſters of 'the Church became more ſkilful and ready in the 'ſcriptures, that it reſtrained them from idleneſs; 'and that ſome, ſuſpected in doctrine, were brought 'to open confeſſion of the truth. That ignorant 'miniſters were induced to ſtudy, if not for con-'ſcience, yet for ſhame. That the opinion of the 'laymen concerning the ignorance of the clergy was 'removed. That nothing was ſo ſucceſsful in demo-'liſhing of popery. That where before there were 'not three able preachers, there were now thirty qua-'lified to preach at St Paul's croſs, and forty or fifty 'beſides capable of inſtructing their own cures. That 'only men backward in religion, and contemners of 'learning

religion, and therefore the Archbiſhop's letter availed nothing. She repeated her orders to him for ſuppreſſing the propheſyings, as he did his excellent remonſtrances to her for regulating and tolerating them; and the Queen finding that he was inflexible on that head, in May 1577 ſent her letters to the biſhops to do what the archbiſhop could not be perſwaded to do, viz. to forbid all Exerciſes and Propheſyings, and all preachers and teachers not lawfully called, of which there was no ſmall number. In June, the Archbiſhop ſtill refuſing any compliance, which the Queen and ſeveral of the lords in the ſtar-chamber had required of him, the ſaid lords, by virtue of their eccleſiaſtical commiſſion, confined him to his houſe, and ſequeſtred him from his juriſdiction for ſix months (*m*) [*X*].

(*m*) Strype, ubi ſupra.

Towards

'learning ſet themſelves againſt thoſe exerciſes. That 'the diſſolution of them would occaſion the adverſary 'to triumph. That abuſes might be reformed, and what 'was good be retained; and that he could not with a 'ſafe conſcience, and without the offence of the Maje-'ſty of God, give his aſſent to the ſuppreſſing of theſe 'exerciſes, much leſs could he ſend out any injunction 'for the utter and univerſal ſubverſion of the ſame. 'And that if it were her Majeſty's pleaſure, for this or 'any other cauſe, to remove him out of this place, he 'would with all humility yield thereto, and render a-'gain to her Majeſty that which he received of her. 'That he conſidered with himſelf what an horrible 'thing it was to fall into the hands of the living God; 'and that he that acted againſt his conſcience, *edified* '*to Hell.* And what ſhould he win if he gained (he 'would not ſay a biſhopric but) the whole world and 'loſt his own ſoul.' He then, like an archbiſhop and chief governor of the Church, took upon him to adviſe and warn her in two things, wherein ſhe ſeemed to have gone ſomewhat beyond the limits of her duty. The firſt was, 'That ſhe would refer all eccleſiaſtical mat-'ters which concerned religion, or the doctrine and 'diſcipline of the Church, unto the biſhops and divines 'of her realm, according to the examples of all godly 'Chriſtian emperors and princes in all ages. For that 'they were things to be judged, as an antient Father 'writ, in the Church or Synod, not in the palace. 'That when her Majeſty had queſtion of the laws of 'her realm, ſhe did not decide the ſame in her court, 'but ſent them to her judges to be determined. Like-'wiſe for doubts in matters of religion or diſcipline of 'the Church, the ordinary way was to refer the deci-'ſion of the ſame to the biſhops, and other head mini-'ſters of the Church.' And he quoted to her the words of St Ambroſe to an emperor, for this purpoſe, 'That in caſe of the faith, the biſhops were wont to 'judge of Chriſtian emperors, not emperors of the bi-'ſhops.' The other advice, which he prudently called by the name of a petition, was, 'That when ſhe 'dealt in matters of faith and religion, or that touched 'the Church of Chriſt, ſhe would not uſe to pronounce 'ſo reſolutely and peremptorily, *quaſi ex authoritate*, 'as ſhe might do in civil and external matters; but al-'ways remember that in God's cauſes, his will, and 'not the will of any earthly creature, is to take place. 'That it was the anti-chriſtian voice of the Pope, *ſic* '*volo, ſic jubeo*, and that in God's matters, all princes 'ought to bow their ſceptres to the ſon of God.' He further exhorted her to remember, that ſhe was a mortal creature; and to look not only, as it was ſaid to Theodoſius, upon the purple and princely array where-with ſhe was apparelled, but to conſider withal, what it was that was covered therewith. Was it not fleſh and blood? was it not duſt and aſhes? was it not a corrup-tible body, which muſt return to it's earth again, God knew how ſoon? 'Muſt you not, added he, appear 'alſo one day before the dreadful tribunal of the cru-'cified Chriſt, to receive according as you have done 'in the body? although you are a mighty princeſs, yet 'remember that he that dwelleth in heaven is mightier. 'Take care you never once think of declining from 'God, leſt that be verified of you, which is written of '*Joaſh*, who continued a prince of good and godly 'government for many years together; and afterwards '*when he was ſtrengthned*, ſaith the text, *his heart* '*was lifted up to his deſtruction*; and he neglected the 'Lord. You have done many things well, but ex-'cept you perſevere to the end, you cannot be bleſſed. 'For if you turn away from God, then God will turn 'away his merciful countenance from you.' A re-proof proceeding, probably, from an obſervation the Archbiſhop had made, of ſome lukewarmneſs into which the Queen of late had ſeemed to have ſunk. There is ſo much honeſty, freedom, and plainneſs in this declara-tion of his mind to the Queen, as does honour to his memory; he offers freely the reſignation of the higheſt and nobleſt preferment in the Church, and to be turned again into private life, rather than do any thing againſt conſcience, though the command of his ſovereign, which in all indifferent things bore, as it ought to do, a great ſway with him. Fuller has publiſhed this memorable letter (24), but very incorrectly and imperfectly; and is miſtaken in aſſigning the time when it was written, which he is confident to have been in 1580, whereas it appears to have been written four years before in December 1576. Mr Strype however is not quite cor-rect in his date of it, which is 20th of December, whereas it muſt have been about the 8th, becauſe there is a letter wrote by the Archbiſhop to the Lord-Treaſurer, dated the 16th, wherein he ſays, 'I writt my 'opinion to her Majeſty *about eight days ago*, touching 'the two matters wherewith her Highneſs ſhewed her-'ſelf offended at my laſt beeing at Courte. My Lord 'of Leyceſter delivered my ſaid writing to her Maje-'ſtie. I thank him therefore. But I cannot yet un-'derſtande whether her Highneſs hath redde it or no; 'moche leſſe whether ſhe lyke or diſlyke of it. The 'writing was ſomewhat long, and could not be other-'wiſe, if any proofſes ſhould be uſed.' This letter is taken from a manuſcript, which the author of this life has in his hands of Mr Strype's own hand writing contain-ing a great number of additions and alteration to his life of Archbiſhop Grindal. The next day the Lord-Treaſurer aſſured the Archbiſhop, that he would be careful of this cauſe of the Church. The Earl of Lei-ceſter alſo wrote to him the ſame day his opinion con-cerning the exerciſes, and ſeeming to object only againſt the lay-peoples being preſent at thoſe meetings, the Archbiſhop ſent an anſwer, which he incloſed together with the Earl's letter, in one to the Lord-Treaſurer, dated 17th December, as follows, 'I thank your Lord-'ſhip that you are ſo careful in this cauſe of the Church. 'My Lord of Leyceſter writeth to me in forme as you 'ſee. I pray your Lordſhip return me his letter. I 'ſee no reaſon why the people ſhould be excluded, ſee-'ing St Paul, 1 Cor. xiv. giveth ſo great commenda-'tion to that which was uſed in the primitive Church, 'ſpecially for the benefit that growed thereby to the 'hearers. I have written thanks to my Lord of Ley-'ceſter. I pray your Lordſhip let one of your ſervants 'deliver my letter, &c (25).' The Archbiſhop to give himſelf, or rather others, full ſatisfaction in the law-fulneſs, nay divine authority, of the exerciſe of prophe-ſying, employed ſeveral of his chaplains or other di-vines to tranſcribe what diverſe Fathers, and other mo-dern learned men, had writ concerning the interpreta-tion of the Apoſtle in 1 Cor. xiv; as Chryſoſtom, Hom. 36. Greg. Nazianzen, Ambroſe, Lyra, Calvin, Peter Martyr, &c (26). All which tranſcripts Mr Strype, in this manuſcript, ſays he has in his hands.

(24) Ch. Hiſt. b. ix. 123.

(25) MSS.

(26) Ibid.

[*X*] *The lords confined him to his houſe, and ſeque-ſtred him for ſix months.*] This was an extraordinary thing, ſays Mr Strype (27), to tye up the hands of an archbiſhop of Canterbury, who is the great mover under the prince in eccleſiaſtical matters, and the govern-ment of the Church; the archbiſhop being now alſo in the midſt of his viſitation (28). Cox, biſhop of Ely, was much troubled at this reſentment of the Queen a-gainſt the Archbiſhop, and thought it had been better for him at this juncture to have complied with the Queen, for the ſtop of theſe exerciſes for the preſent; and that in convenient time good rules being made and enjoined for them, they might be renewed again, knowing how very uſeful they were for the improving of the clergy in knowledge (29). Of this diſgrace put upon the Archbiſhop, and of the injury religion ſeemed to ſuffer by it, Sir Robert Cotton hath theſe words. 'In thoſe days there was an emulation between the 'clergy and the laity; and a ſtrife whether of them

'ſhould

Towards the expiration whereof, in November following, the Lord-Treaſurer wrote the Archbiſhop a friendly letter, to acquaint him in what manner the ſtar-chamber would proceed further againſt him, and adviſed him to declare his approbation of the Queen's proceedings in ſuppreſſing the propheſyings; to own himſelf ſorry for his incompliance; to make a general acknowledgment of his fault, and beg the Queen's pardon. The Archbiſhop not conſcious of any crime, refuſed to betray his innocence, and give into ſo abſolute a ſubmiſſion; nor did he appear in perſon before the lords in the ſtar-chamber. However he ſent them a very dutiful though no mean letter, ſubmitting to their cenſure, but apologizing for his conduct, and deſiring they would intercede with the Queen for his liberty, and for the taking off his ſequeſtration, which he had ſuffered for ſix months patiently, and declaring his great trouble of mind at the Queen's diſpleaſure. But as he had not expreſsly owned himſelf to be in the fault, neither this letter, nor a declaration of the inconveniencies and miſchiefs attending this ſequeſtration of the Archbiſhop, as they were drawn up by ſome learned civilian at that time, would procure him either his liberty or the exerciſe of his juriſdiction; and in January following there was even a talk of depriving him, but the deſign was laid aſide [*Y*]. In 1579 his confinement was either taken off, or elſe he had leave for his health ſake to retire to his houſe at Croydon, for we find him there then, conſecrating Dr John Wolton Biſhop of Exeter, Auguſt 2; and in 1580 he conſecrated Dr John Watſon, Biſhop of Wincheſter, at Croydon, alſo Dr Overton Biſhop of Litchfield and Coventry; ſo that he exerciſed this part of his archiepiſcopal function, by commiſſion from the Queen, even under his ſequeſtration. The other affairs of his ſee during this interval were managed by two civilians appointed by the Queen and Council for that purpoſe (two of the Archbiſhop's nomination being ſet aſide), from whom iſſuedall licences to preach, &c. inſtitutions to benefices, commiſſions to viſitations, and the like; yet ſtill with deference to the Archbiſhop, and conſultation with him in what they did. But ſometimes upon letters ſent to him from the Queen or the lords of the Council, he acted in perſon, and iſſued out orders in his own name, was employed upon ſeveral occaſions during his ſequeſtration, and was, as much as may be, active and vigilant in the care of his dioceſe as occaſion offered. In 1580, when there was a violent earthquake, our Archbiſhop, after having iſſued out an order for prayers and humiliations, compoſed a prayer for families throughout his dioceſe, which was allowed of by the Council, who in a letter to him commended his great zeal, and required him to enjoin the obſervation of his new order of prayer in all other dioceſes (*n*). The ſame year the Council referred to the Archbiſhop the deciſion of a diſpute that happened in Merton college, Oxford, where he was viſitor(*o*); and ſoon afterwards he was employed by the Lord Treaſurer in a controverſy between the vice-chancellor and doctors of the town of Cambridge, and the maſters and heads of colleges (*p*). This year alſo the metropolitical viſitation, which had been begun by our Archbiſhop upon his firſt entrance into the ſee of Canterbury, but had been interrupted by his troubles and diſgrace, was renewed; but the commiſſion did not iſſue from the Archbiſhop, but from the civilians who officiated for him. The ſame year a Convocation met at St Paul's, at which, though our Archbiſhop did not appear, yet he had a principal ſhare in the tranſactions of it [*Z*]. Some of the members of this ſynod were

'ſhould ſhew themſelves moſt affectionate to the Goſ-
'pel. Miniſters haunted the houſes of the worthieſt
'men, where jeſuits now build their tabernacles; and
'poor country churches were frequented with the beſt
'of the ſhire. The word of God was precious: prayer
'and preaching went hand in hand together: until
'Archbiſhop Grindal's diſgrace, Hatfield's (perhaps
'Hatton's) hard conceit of propheſying, brought the
'flowing of theſe good graces to a ſtill water (30).'

(30) Strype, p. 230, 231.

[*Y*] *There was a talk of depriving him, but this deſign was laid aſide.*] This deſign of depriving the Archbiſhop, ſays Mr Strype (31), was was very much reſented by the true Proteſtants, and they were highly concerned at it, urging how much it would prove the encouragement and joy of Papiſts. Sir Francis Knowles, treaſurer of the Queen's chamber, wrote to this purpoſe, to Secretary Wylſon. 'If her Majeſty
'will be ſafe, ſays he, ſhe muſt comfort the hearts of
'thoſe that be her moſt faithful ſubjects, even for con-
'ſcience ſake. But if the Archbiſhop of Canterbury
'ſhall be deprived, then up ſtarts the pride and prac-
'tice of the Papiſts, and down declines the comfort and
'ſtrength of her Majeſty's ſafery: and then King Ri-
'chard the Second's men will flock in court apace, and
'will ſhew themſelves in their colours. From the
'which company, the Lord bleſs her Majeſty: and
'the thinking thereof doth ſo abhorr me, that I am
'more fit to die in a private life, than to live a cour-
'tier, unleſs a preventing heart may enter into her
'Majeſty betimes.' Upon the whole, when it was conſidered that the deprivation of the Archbiſhop, eſpecially for a crime that did not merit it, would give ſo great diſguſt, it was determined to proceed more mildly, and that he ſhould only continue under his ſequeſtration (32).

(31) Pag. 238.

(32) Strype, p. 239.

[*Z*] *At which, though our Archbiſhop did not appear, he had a principal ſhare in the tranſactions of it.*] Elmer, Biſhop of London preſided at this Synod, in the room of our Archbiſhop. Though Fuller (33) calls this a Silent Convocation, yet ſeveral weighty affairs were treated of, and laboured to be rectified; as concerning making of miniſters; concerning faculties, commutation of penance and excommunication, and a foundation was laid for ſome good regulations which afterwards took place. Our Archbiſhop, as Mr Strype believes (34), drew up a writing, ſhewing an expedient for keeping up the authority of the ſpiritual courts, againſt ſuch as contemned and diſobeyed them, whereby they incurred the crime of contumacy, commonly puniſhed by excommunication; in the room of which, he propoſed that this cenſure ſhould be wholly aboliſhed, but the conſequence of it, impriſonment after forty days, ſhould remain in force; and that inſtead of a writ *de excommunicato capiendo*, ſhould be a writ *de contemptore juriſdictionis eccleſiaſticæ capiendo*. This is a very good paper, and is preſerved by Mr Strype (35). The writer ſhews that this terrible Church-cenſure was to be uſed very ſparingly, as it was formerly. That in all crimes of the moſt heinous nature, excommunications might be pronounced by the Archbiſhops and biſhops in their own perſons, as was wont to be in the Primitive Church. The handling this weighty ſubject of excommunication, which had been ſo abuſed, was owing in a great meaſure to our archbiſhop, who earneſtly recommended the conſideration and reformation of it to this ſynod. He alſo laboured the reformation of

(33) Ch. Hiſt. b. ix. p. 135.

(34) Pag. 259.

(35) Appendix, No. XV. to b. ii.

were ſo ſtrongly affected with the diſgrace of the Archbiſhop's ſequeſtration, that out of a generous zeal for their metropolitan, they moved againſt entering upon any buſineſs, or ſo much as granting a ſubſidy, 'till the ſequeſtration was taken off, and the Archbiſhop reſtored. But the majority being fearful of offending the Queen, they came to an unanimous reſolution to draw up an humble addreſs to her, for the Archbiſhop's reſtitution. Though this petition was preſented to the Queen it proved ineffectual [*A A*]; nordoes it clearly appear at what preciſe time his ſequeſtration was taken off, though it ſeems moſt probable to have been in the year 1582; but it is certain the ſeverity uſed towards him was far from bringing him over, and the furtheſt advances he made, were only ſuch a ſubmiſſion as became a dutiful ſubject to his ſovereign [*B B*], though he does not ſeem ever after to have enjoyed much of the Queen's favour. In the year 1583, finding himſelf under great infirmities by the loſs of his ſight, which had failed him ſome time before, as alſo by the ſtone, ſtrangury, and colic [*C C*], he reſigned his archbiſhopric, and retired upon a penſion to Croydon [*D D*], where he died two months after, July 6, 1583, (*q*), aged

(*q*) Faſti Angl. Eccl. p. 8.

of another great and neceſſary part of eccleſiaſtical diſcipline, that of penance for open ſins; and that it might not be performed merely as a matter of form, but produce a good effect, to bring the ſinner to amendment, and to ſerve as a ſeaſonable warning and example to all; our Archbiſhop did himſelf draw a form of penance to be for the future obſerved, and laid it before the Synod. The reader may ſee it in Mr Strype's Life of our archbiſhop (36).

(36) Pag. 261.

[*A A*] *The Convocation, at their firſt meeting, drew up an humble petition to the Queen in favour of the Archbiſhop*]. This was done in Latin by the elegant pen of Toby Matthew, Dean of Chriſt-church, in the name of the whole Synod; in this petition, they not only, as far as they dare, endeavour to leſſen his offence to the Queen in reſpect of his conſcience, but alſo ſet forth how well he deſerved of the Church, and 'how exceedingly grieved they were, that he ſhould, 'after ſo many years, fall into ſo great and ſo durable 'an offence of her Majeſty: that he was a man that 'did not often offend, and but once in his life 'ſeemed to have diſpleaſed her, and that not ſo much 'with a wilful mind as by a tender conſcience; of 'which, ſo great was the force, that eminent authors 'and the beſt men had writ, that whatſoever was done, '(the conſcience reclaiming, or erring, or doubting) 'was done amiſs, and to be condemned as no little ſin. 'That the Archbiſhop had led a life free not only of all 'crime, but even from the ſuſpicion of a crime; preſerved his religion not only from all corruption of 'popery, but from ſchiſm, and had ſuffered perſecution 'for righteouſneſs ſake, having wandered abroad in other 'countries for the cauſe of the Goſpel. Therefore 'they moſt humbly and unanimouſly beſeeched her, not 'only to lift up the Archbiſhop, broken and feeble 'with grief, but to reſtore the Church to him and him 'to the Church, to her ſubjects, to his own brethren, 'to foreign nations, and, in a word, to all pious peo'ple,' &c. Fuller ſays (37), that this petition was preſented, but failed of ſucceſs. That ſuch an addreſs was preſented is not to be doubted, but that it was paſſed as an act of Convocation, is more than appears by the extracts from the journal And the learned Dr Heylin, who peruſed the Convocation records at length, ſays he found no ſuch petition (38).

(37) Fuller's Ch. Hiſt. b. ix. p. 120.

(38) Journal Convoc. fol. 144.

[*B B*] *The furtheſt advances he made, extended only to ſuch a ſubmiſſion as became a dutiful ſubject to his ſovereign.*] Mr Strype (39) tells us, that he has ſeen a ſubmiſſion made by the Archbiſhop, without mention of the month or year, which being well taken of the Queen, he thinks might occaſion the taking off his ſuſpenſion After this ſubmiſſion, the lords of the Council ſignified to him the reaſon of the Queen's diſpleaſure againſt him: upon which the Archbiſhop made this following further confeſſion and declaration. 'That 'being advertiſed of the cauſe of her Majeſty's offence, 'as was ſet down by the lords of the Council, and of 'her gracious inclination towards him upon his humble 'ſubmiſſion, doth confeſs, that he is moſt heartily ſor'ry that her Majeſty hath been offended with him, as 'a matter more grievous to him than any worldly ca'lamity. And though he refuſed to execute her Ma'jeſty's commandment by reaſon of ſcruple of conſci'ence, which moved him to think that the Exerciſes 'might have been in ſome points reformed, and ſo 'continued; and underſtanding that her Majeſty there'in did uſe the advice and allowance of certain biſhops, 'his brethren, who by likelyhood certified, that they 'in their own dioceſes found the ſame more hurtful 'than profitable; in and for that he is perſwaded that 'ſhe had herein a ſincere and Godly meaning, to the 'quietneſs of her people; and that alſo her command'ment was not againſt poſitive law or conſtitution 'of the realm; he cannot but think and ſpeak honou'rably and dutifully of her Majeſty's doings, as of a 'Godly prince, meaning well of the Church and her 'people in this her Majeſty's direction and command'ment. And as he is moſt heartily ſorry that he hath 'incurred her Majeſty's grievous offence, for not ob'ſerving that her commandment, ſo doth he moſt 'humbly and lowly beſeech her Highneſs, not to im'pute the ſame to any obſtinate intent, meaning to 'diſobey her Majeſty, but only that he was then 'moved in conſcience to be an humble ſuitor to her 'Majeſty, to be ſpared from being the ſpecial inſtru'ment in ſuppreſſing the ſaid exerciſes. And to the 'intent her Majeſty may think that he meant no diſo'bedience in any maintenance of them to continue 'contrary to her commandment, he doth pray her 'Majeſty to be truly informed how he himſelf did in 'his own biſhopric, and other peculiar juriſdictions 'ſuffer no ſuch exerciſes to be uſed after the time of 'her Majeſty's ſaid commandment.' This ſubmiſſion is as much an excuſe or apology for the Queen's conduct as for the Archbiſhop's, and is far from amounting to a confeſſion that he was in fault, only that he had no fixed purpoſe or intention of offending the Queen, and that he acted only according to the dictates of his own conſcience. Mr Strype places this tranſaction in the year 1582, becauſe there appears to have been a commiſſion iſſued out January 20 that year, in the Archbiſhop's own name, to viſit the city and dioceſe of Lichfield; and alſo an inhibition to the biſhop of Coventry, iſſued out likewiſe from the Archbiſhop himſelf Feb. 18; ſo that he muſt at this time have been reſtored to the exerciſe of his eccleſiaſtical juriſdiction, and his ſequeſtration taken off; though Mr Strype (40) mentions alſo a commiſſion for the commiſſaryſhip of Canterbury, dated January 30, 1581, granted by the Archbiſhop himſelf in his own proper perſon; ſo that it cannot be certainly known when he was reſtored.

(39) P. 271.

(40) Pag. 268.

[*C C*] *As alſo by the ſtone, colic, and ſtrangury.*] The Archbiſhop had been long afflicted with theſe diſorders, as appears from a letter of his to the Lord-Treaſurer in 1547 (41); wherein he ſays, 'I am glad 'to underſtand by your chaplain, that your Lordſhip's 'health hath of late been better than afore; my fits of 'colic, ſtone, and ſtrangury, are very grievous when 'they come, but God ſendeth me ſome intervals, elſe 'they were intolerable'

(41) M. SS. ut ſupra.

[*D D*] *He reſigned his archbiſhopric, and retired upon a penſion to Croydon.*] We are not exactly informed when this was done, nor indeed whether it was done at all. The biſhop had formerly deſired leave to reſign, which the Queen would not then grant; but, in conſideration of his infirmities, it was now thought reaſonable, and in January 1582, the Queen ſent Piers, biſhop of Sarum her almoner, to the Archbiſhop, to ſignify that it was her pleaſure that he might reſign, and have an honourable penſion for life: and ſhe ſoon after ſignified the ſame by the Lord-Treaſurer, to whom the Archbiſhop ſent an anſwer, ſhewing the reaſons that had hindered him from again offering a reſignation after he had been refuſed and that knowing her Majeſty's pleaſure, he would now very willingly reſign, but hoped that he might be permitted to continue in his place till Michaelmas, when the audit of the ſee was kept for the whole year, and that the Queen would grant him

aged 63. He was, at his own deſire, buried in the chancel of the church of Croydon, where a ſtone monument, with his effigies lying at length, is erected on the ſouth ſide of the communion table, againſt the wall [*E E*]. His common motto was, *Turris fortiſſima nomen Domini* (*r*). He lived and died unmarried. He had a brother named Robert, who with his wife and only ſon died in 1567, leaving four daughters, orphans; the ſecond of whom, Anne, married, againſt the Archbiſhop's conſent, William Dacres, ſon of Richard Dacres, Gent. (*s*), which William Dacres was in the rebellion in Cumberland in 1569. The archbiſhop had likewiſe ſeveral nieces by his ſiſter Elizabeth Woodhall. He does not ſeem to have amaſſed much wealth, which is the more admirable, conſidering the large revenues he poſſeſſed, and the length of time he enjoyed them in the three ſees of London, York, and Canterbury, and that all the time free from the incumbrance of a family. This, as Fuller obſerves, may perhaps be imputed erroneouſly to his prodigality, which more truly is to be aſcribed to his contempt of the world, unwilling to die *guilty of much wealth*. The little he had, as it was well gotten, was well beſtowed in pious uſes on the two univerſities, and the building and endowing a free-ſchool at St Begh's, his native place; of which, together with ſome charitable benefactions and legacies left by his will, we ſhall give an account in the note [*F F*]. We do not find that our Archbiſhop left

(*r*) Le Neve's Lives of the Biſhops, P. i. p. 45.

(*s*) Strype, p. 3.

the houſe at Croydon, with ſome land belonging to it, that he might retire to, ſhewing that in all reſignations of biſhops, there had been always one houſe at leaſt belonging to the ſee, aſſigned to the reſigner, for which he cited Matthew Paris. The Queen however would only allow the Archbiſhop till Lady-day to reſign his ſee; which drawing near, and his penſion, the proportioning of which lay very much in the appointment of the Lord-Treaſurer, not being yet ſettled, the Lord-Treaſurer, being then abſent from Court, ſent to put the Queen in mind, that the Archbiſhop was ready to reſign; that he yielded himſelf to her Majeſty's goodneſs to have ſome penſion during his ſhort life, which he (the Treaſurer) wiſhed to be great and honourable, although it ſhould be to the ſucceſſor burthenous for the preſent. But he that ſhould have it, muſt ſhape his garment with his cloth for the time. That he had ſeen into the value of the archbiſhop's poſſeſſions, and found them to be above 2780 l. per ann. according to the rate of the book of firſt-fruits; that he had alſo ſeen the particular books of the annual receipts, which grew ſomewhat, but not much above; and if the then archbiſhop might have ſeven or eight hundred pound a year penſion, he thought his ſucceſſor with good huſbandry might make the reſt to be 2000 l according to which he might compound for his firſt-fruits, and for no more. The letter itſelf written by the Lord-Treaſurer, we find among his memorials (42). The Archbiſhop's reſignation however was not compleated at Lady-day, and in April 1583, being then in a bad ſtate of health, beſides the loſs of his ſight, and growing weary of his burthen, he again ſignified to the Lord-Treaſurer that he was ready to reſign, and tranſmitted a draught of his reſignation to this miniſter, which it is probable was but imperfect, neither ſigned nor ſealed, and only put into the Treaſurer's hands for his approbation: and in this condition we have it in the paper-office, without date, ſeal, or ſubſcription. And indeed it ſeems probable, as Mr Strype ſuppoſes (43), that the Queen was not yet provided with a ſucceſſor for the archbiſhop, Whitgift, biſhop of Worceſter, (according to Fuller, refuſing the Queen to accept of it) (44), reſolving not to enter upon that ſee while Grindal was alive (45). That the reſignation was not executed before the 8th of May following, appears from his will which bears date that day, and wherein he ſtiles himſelf *Archbiſhop of Canterbury, whole of mind and of perfect remembrance*, and in about two months after, he died; neither does it appear the reſignation was further preſſed during this interval; nor was the ſee filled till near a month after Grindal's deceaſe (46), by Whitgift, a divine who had already diſtinguiſhed himſelf by his learning, and regard for the Church of England.

[*E E*] *His monument is erected on the ſouth ſide of the communion table, againſt the wall*] In one part of the monument are theſe verſes placed, as a character of him.

Grindallus *doctus, prudens, Gravitate verendus,*
Juſtus, munificus, ſub cruce fortis erat.
Poſt crucis ærumnas Chriſti gregis Anglia fecit
Signiferum, Chriſtus cælica regna dedit.

Beneath his effigies on one ſide are theſe verſes.

Præſulis eximii ter poſtquam eſt auctus honore,
Pervigilique greges rexit moderamine ſacro,
Confectum ſenio, duriſque laboribus, ecce
Tranſtulit in placidam mors exoptata quietem.

On the other ſide theſe.

Mortua marmoreo conduntur membra ſepulchro,
Sed mens ſancta viget, fama perennis erit.
Nam ſtudia et Muſæ, quas magnis cenſibus auxit,
Grindalli nomen tempus in omne ferent.

The epitaph or inſcription upon his monument is long, and being only hiſtorical, containing a recital of his charitable benefactions, which we ſhall give an account of in another place, we ſhall not inſert it here.

[*F F*] *He founded and endowed a freel ſchool at St Begh's, of which, together with ſome charitable benefactions, and legacies left by his will, we ſhall give an account in the note.*] The ſchool of St Begh's was incorporated by Queen Elizabeth, her letters-patent bearing date the 15th of June, in the 27th year of her reign, by the name of the *Wardens and governors of the poſſeſſions, revenues, and goods, of the free grammar-ſchool of* Edmund Grindal *Archbiſhop of* Canterbury, in Kirkby Beacook, *alias* St Begh's, *in the county of* Cumberland. The pious founder drew up ſome excellent ſtatutes for the good government of the ſchool before his death, and gave 366 l. 13 s. 4 d. for building and furniſhing it, which was done by his executors, upon a piece of ground given by Thomas Chaloner, Eſq; (ſon of Sir Thomas Chaloner) who alſo gave forty loads of coals yearly out of his coal-mines at St Begh's, for the uſe of the ſchool, reſerving a right of placing two ſcholars there by the name of Chaloner's ſcholars. The Archbiſhop ſettled 30 l. per ann. upon the ſchool, viz. 20 l. to the ſchool-maſter; 3 l. 6 s 8 d. to a poor ſcholar to be uſher there; and the remaining 6 l. 13 s. 4 d. to the repairs of the ſchool, and to be laid up for the purchaſe of revenues from time to time, for the maintenance of poor ſcholars in the Univerſities. Sir John Lowther of Whitehaven, added a fair library to the ſchool, and a benefaction of 5 l. a year. Dr Lamplugh, archbiſhop of York, alſo gave 5 l. per ann. to it, but this is ſaid to be ſince withdrawn (47). The moſt remarkable of our Archbiſhop's other charitable benefactions and legacies, are theſe. In yearly revenues to Pembroke-hall in Cambridge, 22 l. viz to the reader of Greek, 2 l. for the maintenance of a fellow, 10 l. of two ſcholars, 6 l. 13 s. 4 d. the reſidue to the uſe of the college. The fellow and ſcholars to be choſen out of ſuch as have been brought up at St Begh's ſchool. This college had at ſeveral times experienced the Archbiſhop's good will and bounty to them. They had enjoyed the ſtipend of 40 s. a year for a Greek reader ever ſince the year 1568, and the inheritance of it was confirmed to them by the Archbiſhop's laſt will. It was about the ſame time that he obtained from a widow lady a perpetual ſcholarſhip for the college. In 1570, he obtained a licence for the college, to purchaſe lands in mortmain to the value of forty pounds. He likewiſe appointed, that out of the

(47) Strype, ut ſupra, p. 291, 292. Ex inform. Ralph Thoreſby Arm. & D. Guil. D. Epiſc. Carliol.

Our Archbiſhop himſelf profeſſed, that the loſs of the Queen's favour was one of the greateſt afflictions of his life; and therefore his advancement to the chair of Canterbury may be reckoned among his chief misfortunes, ſince he was no ſooner ſeated in it than it brought upon him the Queen's frowns, who before mightily eſteemed and valued him for his great goodneſs and excellent abilities. Yet would he take no undue means for the averting this evil, being endued with that immutable conſtancy of mind, in perſiſting in what he thought his duty in the faithful diſcharge of his office; hence his plain but humble refuſal of the Queen's commands to put down the Exerciſes, may be juſtly eſteemed one of the nobleſt paſſages of his life. It proceeded not from any elation of mind on account of his high place and dignity; for ſuch external accidental things made no change in his temper and diſpoſition, which was ever at the ſame ſtay of meekneſs and gentleneſs; however he had been ſeverely charged by ſome with pride, covetouſneſs, perſecution, and the like, which are common imputations upon thoſe who fill ſuch exalted ſtations in the Church as he did. Thomas Sampſon the Puritan, his old acquaintance, and late Dean of Chriſt-church Oxford, took occaſion to tell him of theſe things at large in a letter. The good Archbiſhop returned him a very friendly and obliging anſwer, written (as he ſaid) *ſine fuco aut faſtu*, laying aſide all ſtate, and at large related to him what his own temper really was, and ſolemnly proteſted himſelf to be free and innocent of thoſe rude reports that went of him, and that he loved ſome godly brethren that wiſhed ſuch things reformed as were amiſs; inſomuch that Sampſon in another letter declared himſelf ſatisfied, and that he knew now what to ſay, when hereafter he ſhould hear any ſuch ſlanders ſtarted concerning him (*a*). In fine, the Engliſh nation generally held this Archbiſhop in great honour and eſteem; and ſo likewiſe did the Proteſtant ſtrangers and foreigners reſiding here, who choſe him, when he was biſhop of London, ſuperintendant of their church in Auſtin-friars London, and appealed to him in any differences ariſing among them about matters of religion. And as for the clergy of the land, what high eſteem and veneration they had for him, appears from the concern they took in his diſgrace, and their zealous endeavours to have him reſtored to the Church, by the petition of the Convocation to the Queen in 1580, as we have related above. To conclude, our Archbiſhop, ſays Mr Strype (*b*), in the diſcharge of his high function, lived and died unblameable, and was univerſally eſteemed and beloved. Fair and honourable are the characters our beſt hiſtorians, his contemporaries, give of him with one conſent. Their teſtimonies are too important to the eſtabliſhing his character, and rectifying the ſtrange miſapprehenſions that have been taken up of him, to be omitted here. We have therefore inſerted them in the note [*I I*], that,

(*a*) Strype's Life of Grindal, p. 300, 301.

(*b*) Pag. 304.

flectingly upon the Archbiſhop, ſoon after his diſgrace, the Lord-Treaſurer Burghley wrote to him and charged him therewith. Barnes wrote an anſwer to the Lord-Treaſurer, in which it is obſervable, he does not charge the Archbiſhop with want of ſincerity towards the Church, nor condemns the exerciſes; only, like a courtier, and one who ſought for further favours from the throne, accuſed him of 'Wilfulneſs in contemning the 'regal power, and obſtinacy in not yielding to that 'which their Honours of the Star-Chamber had ſet 'down. And as for the Exerciſes, he confeſſed, that 'being well ordered, they were *De bene eſſe religionis*, 'yet they were not *de eſſe religionis ſinceræ*. And 'therefore not to be urged ſo as to contend with her 'Highneſs and her Council. He ſaid he had ſpoken of 'this only to two or three perſons, and that only in de-'fence of her Majeſty when reports had been ſpread 'that the Archbiſhop had been cruelly dealt with, and 'had not deſerved ſuch treatment; and that the Lord 'Leiceſter and others ſhould further his troubles, which 'he ſaid he knew to be moſt falſe; and that he was 'therefore under a kind of neceſſity to aſſert the Arch-'biſhop's wilfulneſs and undutifulneſs to be the juſt oc-'caſion thereof; and more than this he affirmed he had 'not done; nor, but that he was forced, he ſhould 'not have done or ſaid any thing of him at all.' Mr Strype adds, 'That biſhop Barnes had no good will to-'wards the Archbiſhop, who not long before had dealt 'againſt him for ſome defects, either in diſcharge of 'his epiſcopal function, or for his bribe-taking officers '(54).' As to what biſhop Barnes ſays concerning the report of the Earl of Leiceſter's incenſing the Queen againſt the Archbiſhop, Fuller affirms the ſame thing (55); that about the time of the Archbiſhop's writing his bold letter to the Queen about the exerciſes, the Earl of Leiceſter took occaſion to quarrel with the Archbiſhop, and would have gotten Lambeth houſe from him, and that this was really the reaſon of the Queen's diſpleaſure, the Earl having ſecretly exaſperated her Majeſty againſt him. But it appears that the Earl and Archbiſhop were then good friends, ſince the Archbiſhop made him deliverer of his letter to the Queen; and the Earl and he correſponded together in a friendly manner, as we have ſhewn before. However there was a conjecture, which was current ſince that time, that the Queen was provoked againſt our prelate by that Earl, who had taken offence at him for denying to give a favourable ſentence in behalf of one Dr Julio, the Earl's Phyſician, who had married another man's wife, having alſo one of his own, and was reſolutely proſecuted for the ſame by Grindal, when biſhop of London, notwithſtanding the Earl's interceſſion for him. This is alſo related by Camden (56); who ſeems, ſays Mr Strype, too lightly to have taken it up from the malicious author of Leiceſter's Common wealth, who ſays, that 'This Archbiſhop's overthrow was principally 'wrought by this tyrant, for contraryng his will in ſo 'baſe a command (57).'

(57) Strype, p. 224.

[*I I*] *We have inſerted the honourable teſtimonies of hiſtorians concerning our Archbiſhop in the note*] Archbiſhop Parker, in his book *De Antiq. Britan. Eccleſ.* writes thus of him, *Vir ſpectatæ gravitatis & prudentiæ*, &c. 'He was a man of reſpected gravity and 'prudence; and who in that commiſſion of the Queen 'for eccleſiaſtical cauſes, underwent many labours both 'by day and night, not leſs diligently than ſucceſsfully; and whoſe ſeverity in a buſineſs of that great im-'port was neceſſary, that ſuch as would not be drawn 'by gentleneſs and clemency to the ſervice of God and 'the laws, and ſtood obſtinately in their opinion, 'might more hardly be dealt with, and compelled by 'ſharper chaſtiſement.' Camden in one place ſtiles him *an excellent divine* (58); and when he comes to relate his death (59), ſays, 'He was a religious and 'grave man, that flouriſhed in great grace with the 'Queen, until, by the cunning artifices of his adverſa-'ries, he quite loſt her favour; as if he had leaned to 'conventicles of turbulent and hot-ſpirited miniſters, 'and their prophecies, as they called them; but in 'truth, becauſe he had condemned the unlawful mar-'riage of one Julio, the Italian Phyſician, with ano-'ther man's wife, while Leiceſter in vain oppoſed his 'proceedings therein.' (See the latter part of the preceding note). Holinſhed obſerves (60), that 'This 'good man in his life-time was ſo ſtudious, that his 'books were his bride, and his ſtudy his bride-chamber; 'whereupon he ſpent both his eye ſight, his ſtrength, 'and his health, &c. of whom much might be ſpoken 'for

(58) Camd. Eliz. P. 30. edit. 1675.

(59) Pag. 287.

(60) Holinſhed's Chronicle, p. 1354. a.

that, as juſtice and religion require, right be done to the name and memory of this moſt venerable and apoſtolical Primate. This was the laudable motive, as Mr Strype acquaints us;

' for other's imitation; but this ſhall ſuffice, that as ' his learning and virtues were inſeparable companions, ' ſo the reward of both is the good name that he hath ' left behind him, as a monument perpetual.' Stowe, another faithful hiſtorian and his contemporary, in mentioning the death of our Archbiſhop, ſpeaks of his numerous benefactions: ſo doth Godwin, in his Catalogue of biſhops. Mr Thomas Rogers, chaplain to Archbiſhop Bancroft, in the preface to his book, intitled, *The Faith, Doctrine, and Religion, profeſſed and protected in the realm*, printed in 1607, ſtiles Archbiſhop Grindal ' A zealous confeſſor and tried ſoldier, ' and right worthy prelate.' And remarks that, ' His ' care was great to further the glory of God, but that ' through the envy and malice of his ill-willers, his ' power was but ſmall; his place high, but himſelf ' made low through ſome diſgrace brought upon him ' by his potent adverſaries, which he meekly and patiently endured.' He remarks, that there were two inconveniences which our Archbiſhop's troubles and ſequeſtration occaſioned; the one, the flocking of Jeſuits into the kingdom; the other, the inſolence and boldneſs of the home faction, by which Mr Rogers means the Puritans. And laſtly, this hiſtorian ranks our prelate with the excellent archbiſhops, from Cranmer to Bancroft, all of famous and venerable memory. Sir John Harrington, who lived in and after the time of Queen Elizabeth, undertakes to give ſome ſtrictures of her biſhops, which, ſays Mr Strype, are commonly but light rumours of Court, and often idle and trifling; yet what he ſays of Archbiſhop Grindal points not to any miſgovernment of the Church: but whereas it was commonly ſaid that he was blind ſome years before his death, Sir John would make a myſtery of it, telling us that he was not blind, but that when the Queen enjoined him to keep his houſe, his friends gave out that he was blind, and that he kept at home the better to conceal his puniſhment which the Queen had laid upon him. ' This would have been very likely, ſays Mr (61) Pag. 306. ' Strype (61), had the report of his blindneſs happened ' at the time that the Queen had commanded his con' finement, but he was not blind 'till five years after at ' leaſt. And that he was then blind, I have ſeen the ' ſubſcription of his name, that evidently ſhews it to ' have been written by a blind man. Some other paſſages he ventures to write of the Archbiſhop, ſo ſlight ' and improbable, that I ſhall not repeat them. But ' this author writes not one word of his remiſſneſs in ' government, or countenance towards ſuch as oppoſed ' the conſtitutions of the Church. Mr Fuller appears ' to have been the firſt who vented this notion concern' ing our prelate. His accounts ſeem to be rather ' hear-ſays, than built upon any good authority either (62) Ch. Hiſt. b. ix. p. 130. ' of records or manuſcripts.' He tells us (62), that Grindal was generally condemned for remiſſneſs, in parting with more from the ſee than ever his ſucceſſors thanked him for. Mr Strype obſerves, that this is an hard charge, but ſpoken in general terms; and that if Fuller means exchanges with the Queen, Grindal, and all the reſt of the biſhops, were obliged to make theſe exchanges by an Act of Parliament which paſſed for that purpoſe in the beginning of her reign; but that he and two or three others of the firſt elects wrote a private letter to her Majeſty, and made a voluntary offer of a large yearly equivalent, to forbear making uſe of that power which the parliament had given her, as hath been ſhewn before. And that Grindal was not ſo eaſy to part with the revenues of his biſhopric this hiſtorian ſhew himſelf, by relating how ſtrongly he oppoſed parting with the palace at Lambeth to the great favourite, which, he ſays himſelf, brought upon him the malice of the Leiceſtrian faction. Fuller likewiſe ſpeaks of ſome, ' Who ſtrained a parallel between Eli and Grindal, in ' reſpect of his being guilty of dangerous indulgence ' to offenders; and as a father of the Church, he was ' accuſed of too much conniving at the factious diſtur(63) B. ix. p. 163. ' bers thereof (63).' Mr Strype, in vindication of our Archbiſhop, obſerves, ' That Fuller does not give one ' inſtance thereof; that he ſeems to note theſe things ' concerning the Archbiſhop, rather as reports and rumours taken up in his times, than as matters of un' doubted truth. That after all, he places the Arch' biſhop's remiſſneſs and neglect in requiring ſubſcrip' tion to the laſt year of his life but one; and attri' butes it to his age and impotency; though he adds; ' (to make what he had ſaid before conſiſtent) that in ' greater ſtrength, he did but weakly urge conformity: ' He ſhould not have forgot to mention the Archbi' ſhop's ſuſpenſion, whereby his hands were very much ' tied up from acting in his place and function; during ' which time, great liberty was taken by ſuch as were ' diſaffected to the Church and it's conſtitution.' In the concluſion however, Fuller calls our Archbiſhop, a prelate moſt primitive in all his converſation; and an impartial corrector of mens vicious converſations, and that he undeſervedly fell under the Queen's diſpleaſure, through the malice of his enemies *. Dr Heylin, another of our modern hiſtorians, ſpeaking of thoſe Engliſh Proteſtants who in the beginning of the Reformation ſtood affected to the diſcipline of Geneva, writes (64), that they made uſe of Biſhop Grindal to bring about their purpoſe, by making him inſtrumental to the ſetting up of a church in London for the French Proteſtant refugees, to worſhip God according to the manner uſed in their own reformed churches at home; for, ' That he was known to have a great reſpect to ' the name of Calvin; and that in this church, they ' were not only to erect the Geneva diſcipline, but to ' ſet up a form of prayer that ſhould hold no confor' mity with the Engliſh liturgy; and that Calvin gave ' Grindal thanks for his favour in this tranſaction.' Mr Strype obſerves, that Grindal, no doubt, had a great reſpect to the name of Calvin, as well as to thoſe of Luther, Melancthon, Bucer, Peter Martyr, Bullinger, Zanchy, and the reſt of the pious foreign reformers of religion, with whom he had contracted a friendſhip, and ſtill correſponded: but that the liberty now granted to foreigners, was no more than what had been a little before granted to Grindal and his fellow exiles, in the cities and places abroad, where they ſojourned. The letter, from whence Dr Heylin took the above account, and which *is* extant among Calvin's epiſtles, dated May 15*th*, 1560 (65), is only to return thanks to our Biſhop for his care of the poor French Proteſtants that had ſettled themſelves in London, by his obtaining for them a licence from the Queen of worſhiping God purely, (that is, without the ſuperſtitions of the Romiſh Church) and to deſire that they might have a faithful miniſter of their own to preach God's word, and perform other miniſterial offices among them, And it appears, that to this civil letter of Calvin, the Biſhop gave as reſpectful an anſwer, and withal deſired him to recommend ſome able and fit miniſter to that congregation. And not long afterwards Calvin ſent, by conſent, Nicholas Galaſius, a man of great piety and worth, to ſupply that place: and this was the beginning of the Walloon church, ſituated in Threadneedle-ſtreet, London, which hath continued ever ſince for the uſe of the French nation. ' And ſurely, ſays Mr ' Strype, Biſhop Grindal could do no leſs than this, ' ſince he was too grateful to forget the like reſpects ' ſhewn to him and many others of the Engliſh nation, ' that fled abroad in the laſt reign upon the ſame ac' count of religion, as theſe godly French now did ' hither: and ſince he and they received the like free' dom and favour in the ſeveral places in Germany and ' Switzerland, where they had but lately ſettled them' ſelves. And likewiſe that he might teſtify that chri' ſtian communion and brotherly concord which he bore ' to all the reformed churches.' Our more modern hiſtorians, among whom the chief is Mr Collier, are very favourable to the character of our Archbiſhop. We have already ſhewn that Mr Collier clears him from all imputations of Puritaniſm. The ſame writer alſo obſerves, upon the Archbiſhop's articles at one of his metropolitical viſitations, ' That he was no negli' gent governor, nor a perſon of latitude and indiffe' rence for the ceremonies of the Church (66).' And with regard to the Archbiſhop's behaviour in the matter of the Exerciſes, he writes, ' That Grindal was a ' prelate of more conſcience and courage, than to be ' dazzled with the luſtre of a court, to reſign againſt ' his judgment, and be over-ruled into inſignificancy. ' That his letter to the Queen was penned with a mix' ture of freedom and regard. That *he* writes with the ' ſpirit of a primitive biſhop, like a ſubject in the State, ' and a governor in the Church, and takes care neither ' to forget her Majeſty nor himſelf. His application is ' religiouſly

left much in print behind him. We have already mentioned the ſhare he had in the *Acts and Monuments of the Church*, publiſhed by J. Fox; we ſhall only add, that he wrote a *Dialogue between Cuſtom and Truth*, ſoon after his coming back into England, which is extant in Mr Fox's work (*t*) [*G G*]. It ought not to be forgot that our Archbiſhop, when he returned home from his exile, firſt brought the tamariſk into England, ſo uſeful in medicine againſt diſeaſes of the ſpleen (*u*). We ſhall conclude this article with the character of our prelate as given by Mr Strype, the faithful hiſtorian of his life, backed with the teſtimony of many learned hiſtorians, contempararies of the Archbiſhop. Mr Strype obſerves (*w*), that it has been Archbiſhop Grindal's misfortune to be of later times deemed an ill governor of this Church; but in the time wherein he lived (when he was better known) his epiſcopal abilities and admirable endowments for ſpiritual government, as well as his ſingular learning, were much celebrated. In order therefore to revive the memory, and do right to the name of this holy Primate, Mr Strype (*x*) proceeds to make ſome obſervations upon his temper and qualifications, as a man, as a chriſtian, as a miniſter, a biſhop and chief paſtor of the Church of Chriſt in this kingdom. He always led, ſays he, an unblemiſhed and uſeful life, devoting himſelf to the ſervice of God and the advancement of pure religion, purged from all the dregs of Popiſh ſuperſtition, and for theſe ends ſaved by the good providence of God out of the Romiſh fires, wherein ſeveral of his companions periſhed under Queen Mary. He was a man of great firmneſs and reſolution, though of a mild and affable temper, and friendly diſpoſition; in his deportment courteous and engaging, not eaſily provoked, well ſpoken, and eaſy of acceſs, and that even in his elation, not at all affecting grandeur or ſtate, always obliging in his carriage, kind and grateful to his ſervants, and of a free and generous ſpirit. His fear of God

monies ariſing from the foundation of St Begh's ſchool, every eighth year for ever, ſome new fund ſhould be purchaſed for the maintaining of a ſcholar. And that this college, and that of Queen's in Oxford, ſhould alternately enjoy the benefit accruing from thence every eighth year. But Mr Strype ſays (48), that this has never been done but once, of which the college has complained. The Archbiſhop alſo left the college ſeveral books, ſome of which were Greek of the curious print of Henry Stephens. He alſo gave to the maſter's ſtudy, a curious Hebrew Bible, in ſeveral tomes in ſixteens, which formerly belonged to Thomas Watts, Archdeacon of Middleſex, and was preſerved in an oval box. He alſo gave them a ſtanding cup of above forty ounces, double gilt, which in honour of him they called, *Poculum Cantuarienſe*, i. e. The *Canterbury Cup*. This was a preſent from the Queen to the Archbiſhop the year after his promotion to the ſee of Canterbury. In yearly revenues to Queen's-college, Oxon, he gave 20 l. and 6 l. 13 s. 4 d. yearly for the maintenance of a fellow and two ſcholars, to be choſen out of St Begh's ſchool. He alſo gave them ſome books, a neſt of bowls, and 50 l. in money. To Magdalen-college, Cambridge, he gave 100 l. to purchaſe 5 l. a year for the maintenance of a ſcholar, to be choſen of ſuch as come from St Begh's ſchool. To Chriſt's-college, Cambridge, a ſtanding cup value 13 l. 6 s. 8 d. To the city of Canterbury, to ſet the poor to work, 100 l. To the poor of Lambeth and Croydon, 20 l. For the purchaſe of lands, or other profits, for the relief of the poor alms-houſes in Croydon, 50 l. For the repairs of the pariſh church there, 5 l. To the poor of St Begh's, 13 l. 6 s. 8 d. To the pariſh church of St Begh's, his communion cup and cover double gilt, and his beſt great Bible. To the Queen, a curious Greek Teſtament of Stephens's impreſſion. To his ſucceſſors ſeveral pictures and implements. To his old patron and friend the Lord-Treaſurer Burleigh, a ſtanding cup of fifty ounces, which the Queen had given him the laſt new year's day before he died. To Sir Francis Walſingham, a ſtanding cup of forty ounces. Beſides theſe, there are many other legacies to relations, friends, and ſervants, not material to inſert here, but the reader may ſee them in the will itſelf, No 20, in Mr Strype's appendix (49). Thus did this good Archbiſhop die, poor in eſtate, but rich in good works. He had been very liberal in his benefactions to St Paul's church, having beſtowed on the repairs thereof, at ſeveral times, when he was biſhop of London, 1184 l. 18 s. 11 d. as his executors made appear when they were ſued for dilapidations, by Whitgift his ſucceſſor in the ſee of Canterbury. They alſo proved that he had expended upon London Houſe, during his incumbency, 147 l. 2 s. 2 d. on Fulham-Houſe and the bridges, 356 l. 15 s. 7 d. and upon Hadham-houſe, 200 l. 10 s. 9 d. Thus it appears how freely the Archbiſhop beſtowed a ſhare of his revenues in repairing and keeping up the edifices belonging to the ſees over which he preſided, which he thought it no leſs his duty to do, than to preſerve their revenues. Yet would not this ſave his executors from being troubled for dilapidations, though they affirmed to the Lord-Treaſurer and Secretary Walſingham, the overſeers of the Archbiſhop's will, to whom they appealed, that in general he left his houſes in much better condition than he found them at his predeceſſor Parker's death.

(49) Pag. 103, 104, & ſeq.

[*G G*] *He wrote a dialogue between Cuſtom and Truth, extant in Mr Fox's Acts and Monuments of the Church.*] Mr Strype ſays (50), this piece is written in a clear method, and with much rational evidence, againſt the real, that is, the groſs and corporeal, preſence in the Sacrament. That Grindal was the author of it, Mr Strype is informed, from the manuſcript before cited, wrote by biſhop Wren, and preſerved in Pembroke-hall. Fox indeed has concealed the author's name, (forbid probably by him to diſcloſe it) and only ſays, 'That it 'was writ by a certain learned and reverend perſon of 'this realm, and who, under the perſons of Cuſtom and 'Verity, manifeſtly laid open before our eyes, and 'taught all men not to meaſure religion by cuſtom, 'but to try cuſtom by truth, and the word of God.' He has thought fit to place this diſcourſe next after a public diſputation upon the ſame argument, of the learned Peter Martyr at Oxon. and another by the other learned men before the King's viſitors at Cambridge, and the determination by biſhop Ridley, as a full and ſatisfactory diſpatch of the groſs papal tranſubſtantiation Our author wrote this diſcourſe ſoon after his coming back into England, for the better ſervice of the Church, that was then to be purged of Popiſh doctrines and ſuperſtitions; as appears from this paſſage, wherein Cuſtom is brought in ſpeaking thus. 'Are 'you ſo great a ſtranger in theſe parts? hear you not 'how men do daily ſpeak againſt the ſacrament of the 'altar, denying it to be the real body of Chriſt?' Verity anſwers, 'In ſooth, I have been a great while a-'broad, and returned but of late into this country. 'Wherefore you muſt pardon me if my anſwers be to 'ſeek in ſuch queſtions. But you have been longer 'here, &c.' In this tract, after the author had excellently explained the ſenſe of thoſe words of Chriſt, *this is my body*, he proceeded to produce divers ſentences out of the antient biſhops and doctors of the Church to confirm his interpretation; becauſe Cuſtom had boaſted of doctors and old writers, and men inſpired with the Holy Ghoſt, that were againſt the doctrine of the Proteſtants; and that in theſe days the wiſeſt and beſt learned called them heretics; and at length in the concluſion of the diſcourſe he tells Cuſtom, 'That as ſhortly 'and in as few words as he could, he had declared unto 'him what Chriſt meant by thoſe words, *this is my* '*body*, what the Apoſtles thought thereof, and in what 'ſort they delivered them to their ſucceſſors; and in 'what ſenſe and meaning the holy Fathers and old 'writers, and the univerſal and catholic Church had 'always taken them.'

(50) Pag. 313.

[*H H*] *We*

God and ſincere love of religion, evidently appeared in his willingly foregoing of his own country, his eaſe, his preſidentſhip in Pembroke-hall, his good prebends in the churches of St Paul and Weſtminſter, and all his preferments and hopes; and living abroad in a ſtrange land, that he might preſerve his conſcience, and ſerve God in purity and truth. He was a great preacher in King Edward the Sixth's time, and one of the moſt eminent both at court and univerſity; and in the beginning of Queen Elizabeth's reign, when the Proteſtant Religion was to be declared and inculcated to the people, he was one of the chief employed to that end, frequently in the pulpit at St Paul's, and before the Queen and nobility. He was a prelate of great moderation towards the Puritans, and it was perhaps owing to their intereſt in the cabinet, as well as to his own merits, that he was preferred. He is indeed generally thought to have held the reins too looſe in reſpect to this ſort of men, and is commonly blamed for his ſlackneſs in his government of the Church's affairs. But, as Mr Strype obſerves, this ſeems to be an unjuſt accuſation, by what it is evident he did towards them. He beſt knew what courſes were fitteſt to be uſed, who lived in thoſe times, and obſerved how things then ſtood in the State and Church; and if Grindal be condemned for gentle uſage, Whitgift, his ſucceſſor, is commended for the ſame by Sir George Paul, who writes thus: 'Happy ſure it was for that 'crazy ſtate of the Church, not to meet with too rough and boiſterous a Phyſicician. 'For he preſerved it with conſerves and electuaries, and ſome gentle purges, which with 'ſtrong purges, in all likelihood, might have been much more in danger.' And again that author profeſſes, 'He could not ſufficiently expreſs that Archbiſhop's ſingular wiſdom 'and clemency, albeit ſome younger ſpirits were of opinion that he was much to blame in 'that kind, and imputed it unto his years and want of courage (*y*).' Which words may well enough be applied to our Archbiſhop, when his mildneſs is cenſured, eſpecially ſince that upon occaſion was joined with ſeverity too. Certainly his zeal and affection for the reformed Church ſhewed itſelf particularly, in his endeavouring to reclaim theſe Puritans and Preciſians, as they were called, who for ſome little ceremonies made a breach in Chriſtian Communion. Yet when all his mild perſwaſions and arguments proved ineffectual, when he ſaw that rigour was neceſſary, he thought himſelf bound, as a faithful and careful overſeer of the Church, to make uſe of the ſeverer methods warranted by the laws againſt them. There is nothing, as Mr Strype obſerves (*z*), that lies ſo heavy upon our Archbiſhop, as the matter of the exerciſes and his ſuſpenſion. 'This, ſays he, is the 'ſtumbling block and the rock of offence, whence many have ſurmized an inclination in 'him towards a diſcipline in this Church, different to what was eſtabliſhed.' In order therefore to vindicate our Archbiſhop from any ſeeming compliance with the innovators, or doing any thing, by his countenancing theſe exerciſes, to the prejudice of the religion eſtabliſhed, but rather to the general edification of clergy and people, we have thrown together ſome further remarks upon the uſe and practice of propheſying in the note [*H H*]. Our

(*y*) Strype's Life of Abp. Whitgift, p. 82.

(*z*) Epiſtle Dedicatory, p. 3.

[*H H*] *We have thrown together ſome further remarks upon the uſe and practice of propheſying in the note*] Whether the exerciſes were ſuppreſſed in the province of York, as well as that of Canterbury, or whether the Queen had a better opinion of them afterwards, upon ſome regulation made, is uncertain; but it is certain that not above a year or two after they were forbidden, in 1578, Archbiſhop Sandys in his metropolitical viſitation of his province of York, enjoined them to his clergy there; and even took a part in them himſelf, and as he ſays, did as much as the reſt (51). Whence it appears that theſe prophecies were ſtill countenanced and practiſed; and the biſhops thought them ſtill the beſt means to promote good preaching, and the increaſe of learning in the clergy. It was not above ſeven or eight years after our Archbiſhop's diſgrace, that King James of Scotland, publickly allowed and encouraged them in his kingdom, as excellently conducive to Chriſtian knowledge, without any ſuſpicion of the inconvenience of them, ſince his biſhops were concerned in the appointing and regulating them. The fifth article of his declaration runs thus (52): 'That his Majeſties intentioun was, to main-'tene the exerciſe of prophecy: for the incres and 'continuing of knawledge amongis the miniſtry. In 'the quhilk ane wiſe and grave man ſelectit by the 'biſhop, or commiſſioner, at the ſynodal aſſembly, ſall 'preſide; and rander ane compt of the adminiſtration 'of that bounds quhair the exerciſe is hald in For the 'quhilk cauſe ſome reſpect of leving ſall be had unto 'him, quha ſuſteinis the burding.' From whence it may appear, in what eſteem and requeſt propheſying was in the neighbouring nation among thoſe of the epiſcopal perſwaſion; and that at the ſame time the King had diſcharged the Preſbyterian Church Government, and eſtabliſhed Epiſcopacy, he took particular care for the maintenance of this exerciſe, for the increaſe of knowledge in the clergy, according to the judgment and experience of our Archbiſhop in this kingdom. And further, it is obſervable, that for the more regular and quiet management of theſe propheſyings, the king trod in the Archbiſhop's ſteps, in appointing that there ſhould be ſome wiſe and grave perſon ſelected by the biſhop, or commiſſioner, to preſide within the reſpective bounds of the ſeveral exerciſes. Let us add the judgment of the learned Lord Bacon, in a diſcourſe to King James, then King of England (53): where he conſidered, 'Whether it were not requiſite to renew that good 'exerciſe which was practiſed in this Church ſome years, 'and afterwards put down by order indeed from the 'Church, in regard of ſome abuſes thereof, inconvenient for thoſe times; and yet againſt the advice and 'opinion of *the greateſt and graveſt prelate of the land*, '(as he worthily ſtiled our Archbiſhop) and was commonly called propheſying.' He then deſcribes the manner of it, and ſays, 'That in his opinion, it was 'the beſt way to frame and train up preachers, to 'handle the word of God as it ought to be handled, 'that had been practiſed. Orators have their declamations; Lawyers their moots; Logicians their ſophems; and every practice of ſcience hath an exer-'ciſe of erudition and initiation, before it come to the 'life: only preaching, which is the worthieſt, and 'wherein it is moſt in danger to be amiſs, wanteth an 'introduction.' Mr Collier the hiſtorian ſays, 'He 'will not pretend to determine whether Grindal 'was right or not in pleading for the propheſying meetings, though it muſt be ſaid he has offered a great 'deal in defence of them; and 'tis moſt likely, could 'they have been kept within the compaſs of his regu-'lation, they would have proved ſerviceable to the 'Church*.' We ſhall only add one circumſtance more upon this ſubject, to ſhew the high eſteem our Archbiſhop had even at that juncture, when he lay under his prince's frowns, and that it was not his favour to another Church's diſcipline, and diſlike of this, that was the cauſe of his diſgrace. When Barnes biſhop of Durham, had taken the liberty to ſpeak ſomewhat reflectingly

'religiously brave, and has not the least appearance of 'interest or fear. Besides the piety of the address, 'tis 'managed with great force and advantage. The ad- 'vice is admirable and well directed; nothing could 'be more serviceable to disengage the Queen from the 'flattery of her court, and bring her off from lofty mi- 'stakes her favourites seemed to have led her into '(67).'

(67) Collier, ut supra, p. 554, 557.

GROVE [HENRY], a very learned divine, was born at Taunton in the county of Somerset, January 4, 1683, being the youngest of fourteen children, of whom he only and a sister survived their parents. He was descended, both by his father and mother, from families of considerable repute and antiquity, and which for several generations had been remarkable for strict piety, sincere goodness, and a steady attachment to religious liberty, and the rights of conscience; the Groves of Wiltshire and the Rowes of Devon (a). His grandfather Grove was, soon after the Restoration, ejected from a good Living in Devonshire for nonconformity, at that distinguished period of Church-history, when so many hundreds of the ministers of Christianity gave a noble proof, that their religious profession was not the result of secular policy, but of conscience, by giving up the most considerable worldly interests to preserve the peace and integrity of their minds. His father suffered much and chearfully in the same cause, for lay-nonconformity, under Charles and James the Second (b). The eminent piety of Mr Rowe, his grandfather by the mother's side, may be known from his life, long since published by the learned Mr Theophilus Gale. The character of Mr Grove's parents, with his grateful sense of his obligations to their pious care and tenderness, will be best represented in his own words to Mr Ball (c), printed in the note [A]. His father, in particular, filled a life of eighty years honourably and usefully, and died universally esteemed and lamented, having been remarkable for uncommon prudence and temper, unspotted integrity, a strict yet chearful and amiable piety, and a generous charity. From such parents as these, Mr Grove derived an excellent natural disposition for religion, which discovered itself very soon: he was naturally very modest and benevolent, and had a strong sense of honour, which appeared in variety of instances in early life. His quickness of apprehension and love of literature were soon visible, and carried him through the learning preparatory for the college much sooner than is usual; and he was at fourteen, possessed of as large a stock of classical learning as is commonly thought a sufficient preparation for the academy. The acquaintance he began with the classics at the grammar-school was continued through life, and his relish for them increased, as his judgment and knowledge of mankind improved; the Latin poets, philosophers, and historians, and the Greek moralists, were his delightful companions [B]. Mr

(a) Preface to Mr Grove's Posthumous Works, p. 7.

(b) Ibid.

(c) Letter to the Rev. Mr Ball, p. 19.

[A] *In his own words to Mr Ball, printed in the note*] It runs thus: 'I thank you for the ho- 'nourable mention you make of those two persons, 'whose memory will be ever precious to me. It is 'with pleasure I recollect the example they gave of 'the reality and excellency of every christian virtue in 'their own lives; how far their parental instructions 'were from having any thing sour, austere, and dis- 'couraging in them, and their government from being 'severe and rigid; and that they finished life with 'great decency, wholly taken in exercises becoming 'their age, and in preparation for that better world on 'which they were about to enter. I repeat my thanks, 'Sir, for your having given me an opportunity to of- 'fer this small tribute of grateful acknowledgment to 'the memory of those, to whom, under the supream 'author of my being, I am so much indebted.'

[B] *The Latin poets, philosophers, and historians, and the Greek moralists, were his delightful companions.*] Among the Latin poets, Horace was a favourite, for the delicacy of his sentiments and expression, his knowledge of human life, and nice discernment of the decorum of characters, and the ridicule of vice, appearing peculiarly in his satires and epistles. He was much conversant with Cicero's philosophical works, esteeming his treatise of laws, to contain the solid principles on which the unalterable excellence and obligation of morality is founded; his offices he thought a fine delineation of the beautiful form of virtue; and his discourses of the nature of the Gods, and the immortality of the soul, an unanswerable demonstration of the great necessity and advantage of the Christian revelation against those who would pretend, that when Christ appeared to enlighten and reform the world, he was not wanted, and that unassisted reason was sufficient for this end; for the uncertainty in which Cicero, one of the greatest genius's of paganism, was involved, and represents all their philosophers as involved, with regard to one of the most important doctrines, of the existence, perfection, and providence of God, and their own future existence and state, is an argument from fact which overturns all the specious theories of modern deists; and showed too their great ingratitude, who, enlightened by the gospel, and thus enabled to think more clearly and justly on these subjects, refuse to own their obligations, and employed as an argument against Revelation, the light they really received from it. Among the Latin historians, Mr Grove chiefly admired Sallust and Tacitus; and among the Greek writers, he was greatly pleased with the easy and clear reasonings and fine morality of Xenophon, and the sublime of Plato; the plain, but strong reasoning and virtue of Epictetus, and the unaffected nobleness of thought and substantial worth of the Emperor Antonine, charmed him through all the negligence of his method and expression. Though Mr Grove wanted not a taste for the real beauties of Homer, yet he would often declare himself tired with his everlasting fightings and slaughters, and disgusted with the barbarous manners of his heroes, and the follies and vices of his gods, and on this occasion frequently quotes those lines of Roscommon:

For who, without a qualm, hath ever look'd
On holy garbage, tho' by Homer cook'd?
Whose railing heroes, and whose wounded Gods
Make some suspect he snores, as well as nods (1).

(1) Lord Roscommon's Essay on translated Verse.

For

Mr Grove went through a courſe of academical learning under the Reverend Mr Matthew Warren of Taunton, who was for many years at the head of a flouriſhing academy. Here he read Locke and Le Clerc, and acquainted himſelf with the ſtrong reaſonings and excellent morality of Cumberland. Having gone through a courſe of philoſophy and divinity under Mr Warren, Mr Grove removed to London, and ſtudied ſome time under the Reverend Mr Thomas Rowe, to whom he was nearly related. At this time Mr Grove contracted an acquaintance and friendſhip with Dr Watts, which continued with great mutual eſteem 'till his death, though their judgments were different as to ſeveral points warmly controverted among divines. While he ſtudied under Mr Rowe, he contracted an intimacy with ſeveral other perſons of merit: Mr Rowe was a zealous Carteſian, which occaſioned Mr Grove's examining with a particular exactneſs the philoſophy of Deſcartes; and though he was not entirely ſatisfied with his metaphyſics, and yet leſs with his phyſics; he ſtill thought the learned world very much obliged to that great man: but it was only in the Newtonian philoſophy Mr Grove could find ſatisfaction as to the conſtitution and laws of the material world; and he thus expreſſes his high veneration of that incomparable man (*d*): 'How doth ſuch a genius as Sir Iſaac Newton, from amidſt the darkneſs that 'involves human underſtanding, break forth and appear like one of another ſpecies. 'The vaſt machine we inhabit lies open to him; he ſeems not unacquainted with the ge- 'neral laws that govern it: and while, with the tranſport of a philoſopher, he beholds 'and admires the glorious work, he is capable of paying at once a more devout and more 'rational homage to his Maker.' After ſpending about two years in London, Mr Grove returned into the country, and began preaching with great reputation. An exact judgment, a lively and beautiful imagination, a warmth of devotion, and a rational and amiable repreſentation of Chriſtianity, made his ſermons, delivered by a voice, which though not ſtrong, was ſweet and well governed, generally admired. There appears alſo, even in his firſt diſcourſes, a larger ſtock of well-digeſted learning than could be expected at the age of two and twenty The ſpirit of amiable exalted devotion, which prevailed in his ſermons, early procured him the eſteem and friendſhip of Mrs Singer, afterwards Mrs Rowe; which ſhe expreſſed in a fine manner in an ode on Death, addreſſed to Mr Grove; and the friendſhip begun by this ſimilitude of taſte and temper was improved, and flouriſhed 'till Mrs Rowe's death. Soon after his beginning to preach he married, and at the age of twenty-three was, upon the death of Mr Warren, who had been long tutor of the academy at Taunton, choſen to ſucceed him, by the unanimous vote of a great number of miniſters aſſembled for that purpoſe; and he, with two others, continued the academy, which was then very full. This was an uncommon teſtimony to his early worth The province firſt aſſigned him was Ethics and Pneumatology. His undertaking Ethics was of conſiderable advantage to himſelf as a preacher, as well as to the ſtudents who came under his care. His concern with the academy obliging him to a reſidence at Taunton, he preached for eighteen years to two ſmall congregations in the neighbourhood; and though his ſalary from both was leſs than twenty pounds a year, and he had a growing family, he went through it chearfully. At his firſt entering into the academy he compoſed ſyſtems of Ethics and Pneumatology, and was continually improving His Ethics particularly was his favourite work, which he deſigned for public view, when he had given it all the perfection of which it was capable. Juſt before his death he had begun to tranſcribe it, and give it his laſt hand in order to a publication (*e*). As it is publiſhed in his poſthumous works, though not finiſhed in all it's parts, yet for the clearneſs and ſtrength with which he eſtabliſhes in it the principles of morality, the juſt and beautiful deſcriptions there given of the ſeveral virtues, and excellent directions for attaining them, and the noble repreſentation it contains of the ſupreme happineſs of man, it is well deſerving of the public view. From his ſyſtem of Pneumatology, was taken his *Eſſay on the Immateriality of the Soul*, and a great part of his *Diſcourſe on the Proofs from Reaſon of it's Immortality*; and ſince his death, the *Eſſay to demonſtrate the Being and Perfections of God*; and by theſe the public may judge of the other parts. In the year 1708, Mr Grove publiſhed his *Regulation of Diverſions*, which he drew up for the uſe of his pupils, with a view to take off their attention to pleaſures, and diſpoſe them to improve their time in purſuing cloſely and ſucceſsfully the pleaſures of knowledge and virtue. This his firſt offering to the public ſhews a ſolidity of judgment, and a knowledge of human nature much above his years; and the agreeable manner in which he gives his advice, is well fitted to engage the attention of that age of life, above all, bent on pleaſure, and averſe to harſh inſtruction. About this time, Dr Samuel Clarke publiſhed his excellent diſcourſe on the *Being and Attributes of God*. His proof from our neceſſary ideas of ſpace and duration not convincing Mr Grove, he wrote to the doctor for information and ſatisfaction upon that head. This occaſioned their exchanging ſeveral letters on theſe abſtruſe ſubjects; and after ſome time, not being able to convince each other, the debate was dropped, with expreſſions of great mutual eſteem. The next offering of note which Mr Grove made the public, was ſeveral papers in the eighth volume of the Spectators, viz. No.

(*d*) Spectator, Vol. VIII. No. 635.

(*e*) Sermons and Tracts, in four volumes.

For beauty, variety and grandeur of deſcriptions, as well as true ſublime in ſentiments, he thought our countryman Milton greatly preferable; and though he allowed Homer the praiſe of a very great genius, he thought the Iliad would no more bear a compariſon with Paradiſe Loſt, than the pagan ſcheme of theology with the Chriſtian.

No. 588, 601, 626, and 635. Their finding a place in that celebrated work is ſufficient proof of their worth. By theſe papers Mr Grove ſhewed himſelf well acquainted with the lovely and generous affections of the human ſoul, as well as it's ſurprizing dignity and large capacities for happineſs, which he has repreſented in a manner fit to inſpire his readers with a ſtrong concern to act a part anſwerably generous and noble. The laſt of theſe papers was re-publiſhed by the direction of the Right Reverend Dr Gibſon biſhop of London, in an excellent treatiſe, entitled, *The Evidences of the Chriſtian Religion*, by Joſeph Addiſon, Eſq; 12mo 1731 *(f)*. In 1718, Mr Grove publiſhed his *Eſſay towards a Demonſtration of the Soul's Immateriality*. Mr Grove's continual application weakened a conſtitution naturally tender, ſubjected him to frequent head-aches, and ſcarce a ſpring paſſed without a fever. In the year 1718, a fever brought his life into extreme danger, but it pleaſed God to recover him; upon which occaſion he compoſed the noble ode ſince printed, and juſtly admired for the eaſy harmony of the numbers, and the exalted piety of the ſentiments. Amidſt his various engagements as a tutor and miniſter, Mr Grove did not neglect any of the virtues of a private Chriſtian, but was a moſt amiable example of all. Having been a good ſon, he naturally proceeded to be a good huſband, father, maſter, and friend. He had a large ſtock of natural benevolence, which cheriſhed and improved by Reaſon and Chriſtianity, led him to diſcharge every ſocial duty in the beſt manner; and he was an example of the character he ſo well deſcribes in the Spectator, No. 601. 'Perſons conſcious of their own integrity, ſatisfied with themſelves and with 'their condition, and full of confidence in a Supreme Being, and the hope of immortali-'ty; ſurvey all about them with a flow of good-will. As trees that like their ſoil, they 'ſhoot out in expreſſions of kindneſs, and bend beneath their precious load to the hand of 'the gatherer.' Though his family was growing, and his income as a tutor and a miniſter inſufficient to ſupport it without breaking in on his paternal eſtate, yet he knew not how to refuſe any call of charity, and was bountiful far beyond his fortune. And though his uncommon merit, and the reputation it had gained him, would have given him a fair proſpect of making his fortune in the Church, would he have conformed to the eſtabliſhment, yet he could never turn his thoughts that way: the further he carried his enquiries in religion, the greater reaſon he thought appeared to him for diſliking various doctrines and practices, which had the ſanction of the civil authority; and no worldly intereſt could ever tempt him to ſubſcribe articles, or uſe expreſſions or practices in religion, which he did not inwardly approve: he valued the peace and approbation of his own mind, an unreſtrained liberty to purſue truth, and profeſs and practiſe religion in (what he thought) it's genuine ſimplicity, before all the wealth and grandeur of life; at the ſame time thinking and ſpeaking with great candour and charity of thoſe who could reconcile their judgments to the public forms. The principles on which he founded his conſtant ſelf-enjoyment, and the rules he purſued to improve the goods of life, and brighten the darker occurrences of it, cannot be better repreſented, than he has done them in a letter to a particular friend; for a copy of which the reader cannot but think himſelf obliged *(g)* [C]. Though Mr Grove's great modeſty and love of retirement kept him pretty much out of the way of public notice, yet his uncommon worth would not ſuffer him to be concealed. When he preached occaſionally in ſome of the more conſiderable congregations, he did not fail of gaining numbers of admirers, and had ſeveral invitations to places of note, as Exeter, &c. which he declined, in a great meaſure through his ſtrong affection

(f) Preface to the Poſthumous Works, p. 29.

(g) Ibid.

[C] *For a copy of which, the reader cannot but think himſelf obliged.*] 'It will not, ſays he, be altogether 'out of character, if I write down a few reflections on 'the art of improving human life, ſo as to paſs it in 'peace and tranquillity, and make it yield the nobleſt 'pleaſures it is capable of affording us. The firſt rule, 'and in a manner comprehenſive of all the reſt, is al-'ways to conſider human life in it's connection, as a 'ſtate of tryal, with an everlaſting exiſtence. How 'does this ſingle thought at once raiſe and ſink the 'value of every thing under the ſun? ſink it as part of 'our worldly portion; raiſe it as a means and oppor-'tunity of promoting the glory of the great author of 'all good, and the happineſs, preſent and future, of 'our fellow creatures as well as our own? ——In 'the next place, we are to lay down this for a certain 'maxim, and conſtantly attend to it, that our happi-'neſs muſt ariſe from our own temper and actions, not 'immediately from any external circumſtances. Theſe, 'at beſt, are only conſiderable, as they ſupply a larger 'field to the exerciſe of our virtue, and more leiſure 'for the improvements and entertainments of the mind: 'whereas, the chief delights of a reaſonable being, 'muſt reſult from it's own operations, and reflections 'upon them as conſonant to it's nature, and the order 'it holds in the univerſe. How do I feel myſelf with-'in? am I in my natural ſtate? do I put my faculties 'to their right uſe?——

'To require leſs from others, than is commonly 'done, in order to be pleaſed, and to be more ſtudious 'to pleaſe them, not from a meanneſs of ſpirit, not 'from artful views, but from an unaffected benevo-'lence, is another rule of greater importance than is 'eaſily imagined; and more effectually reaches all that 'is aimed at by ſelf-love, without deſigning it.—— 'To this add, that though we ſhould be impartial, yet 'not ſevere in the judgment we paſs, and the demands 'we make upon ourſelves; watchful againſt the infir-'mities and errors too incident to human nature, but 'not ſuppoſing that we ſhall be entirely free from 'them, nor afflicting ourſelves beyond meaſure to find 'that we are not. Such an over-ſtrained ſeverity 'breaks the force of the mind, and hinders it's pro-'greſs towards perfection.——In the choice of con-'ditions, or making any ſteps in life, 'tis a dictate of 'wiſdom to prefer reality to appearance, and to follow 'Providence as our guide.——To be more indiffe-'rent to life, and all things in it, which the leſs we 'value, the more we ſhall enjoy.——And laſtly, 'to conſider that the happineſs of the preſent ſtate 'conſiſts more in repoſe than pleaſure; and in thoſe 'pleaſures that are pure and calm (which are likewiſe 'the moſt laſting) rather than in thoſe which violently 'agitate the paſſions. Happy are we, when our plea-'ſures flow from the regularity of our paſſions, an 'even courſe of piety and goodneſs, an humble confi-'dence in the mercy of God, and from the hope of 'immortality! not to be contented without a perpetual 'ſucceſſion of other pleaſures beſides theſe, is the way 'never to know contentment.'

[D] *From*

affection to quiet, liberty, and independence; and from his desire to pursue and enjoy, with the least interruption possible, the pleasures of truth, goodness, and devotion [*D*]. Mr Grove's aversion to engage in those angry disputes, which about the year 1719 unhappily divided the Dissenters, was another reason that made him more fond of his retirement. His moderate conduct drew on him the censures and displeasure of some, as if he were indifferent to the truths of the gospel; but they could not prevail on him to alter it, or bring him to believe that the wrath of man could ever work the righteousness of God; or that interposing the authority and decision of fallible man was a proper way of ending controversies of faith, and establishing divine truths. The reasons for this moderate conduct he hath given more largely in his *Essay on the Terms of Christian Communion* [*E*]. No one was better qualified to handle devotional disputes than Mr Grove; his discourse on secret prayer, published since in 1723, at the request of several ministers of note in London, is a proof how well he could treat such subjects, with a warmth free from enthusiasm, and an exactness of judgment without coldness. He added to the second edition two discourses; one upon the rational grounds of prayer, and the other on the qualifications necessary to render it accepted; in which, by arguments brought down to common understandings, he establishes the wisdom and advantage of prayer, in a manner not to be overturned by the most subtile enemy to devotion. In the beginning of the year 1725 he lost his partner in the academy, the Reverend Mr James, with whom he lived in perfect harmony, and to whose character he did justice, in a sermon published on occasion of his death. Mr Grove was now obliged to take the students in divinity under his direction. The duties of this post he discharged with the greatest ease, having made all his other studies center in this one great point, the establishing and illustrating the principal truths and duties of religion; and giving in his preaching a pattern of the best manner of recommending these. He confined himself to no system in divinity, directing his pupils to the best writers on natural and revealed religion; and an impartial examination of the chief controversies therein. He likewise succeeded Mr James in his pastoral charge at Fulwood near Taunton, and engaged his nephew to undertake the other parts of Mr James's work as a tutor. Mr Grove continued at Fulwood 'till his death. He had several invitations from London and other parts during this period, but nothing could prevail on him to quit his settlement. In 1728, he published, at the request of an assembly of ministers, the *Friendly Monitor*; in which he discovered the great delicacy of his moral discernment, and pointed out with great judgment some of the principal errors and imperfections in the conduct of Christians, by which they lessen both their own reputation and that of their religion. In the same year, in a sermon preached and published on occasion of the death of a young lady of great merit, he considered the fear of death as a natural passion, both with respect to the grounds of it, and the remedies against it. He treated the subject in so masterly a manner, that a person of considerable rank in the learned world declared, that after reading it, he could have laid down and died with as much readiness and satisfaction as he had ever done any action of his life (*b*). In 1730 he published the *Evidence of our Saviour's Resurrection considered*, with the improvement of this important doctrine. A late Lord Chief-Baron expressed

(*b*) Preface, p. 44.

[*D*] *From his desire to enjoy the pleasures of truth, goodness, and devotion.*] Mr Grove's temper and taste of life was much like Cowley's; the spirit of whose essays he much admired, and would often repeat, with a peculiar emphasis, those lines of his:

> The wise example of the heavenly lark,
> Thy fellow-poet, Cowley, mark.
> Above the clouds let thy proud music sound,
> Thy humble nest build on the ground.

How much there is in such a turn of mind, we may learn from some observations of one of the best judges of human excellence (*z*). 'I have been inclined to 'think, says he, that there are greater men who lie 'concealed among the species, than those who come 'out and draw upon themselves the eyes and admira'tion of mankind.——If we suppose there are spirits 'or angels, who look into the ways of men, how dif'ferent are the notions which they entertain of us, 'from those which we are apt to form of one another? 'we are dazzled with the splendor of titles, the often'tation of learning, the noise of victories; they, on 'the contrary, see the philosopher in the cottage, who 'possesses his soul in patience and thankfulness, under 'the pressures of what little souls call poverty and di'stress. They do not look for great men at the head 'of armies, or among the pomp of a court; but often 'find them out in shades and solitudes, in the private 'walks and by-path's of life. The evenings walk of a 'wise man is more illustrious in their sight, than the 'march of a General at the head of an hundred thou'sand men. A contemplation of God's works; a vo'luntary act of justice to our own detriment; tears that 'are shed in silence for the misery of others; a private 'desire or resentment broken or subdued; in short, an 'unfeigned exercise of humility, or any other virtue; 'are such actions as are glorious in their sight; and de'nominate men great and reputable. The most famous 'among us are often looked upon with pity, with con'tempt, or with indignation; while those who are 'most obscure among their own species are regarded 'with love, with approbation, and esteem.'

(*z*) Mr Addison, Spectator, Vol. VIII. No. 610.

[*E*] *The reasons for this moderate conduct he hat given, &c.*] Mr Grove has likewise in a sermon of his, on the blessedness of the peace-maker, thus described his own temper and conduct. 'He is not for 'widening of differences, nor representing the diffe'rences in opinion, or in other things, greater than 'really they are; would bring Christians as near to'gether as he can, and perswade them to be of one 'heart at least, if they cannot be of one mind; which 'in this state of doubt and imperfection, is hardly to 'be expected, If his judgment were to be followed, 'all things should continue in the Christian Church as 'the head of it has left them, indifferent things in a 'state of indifference; things disputable, or of less im'portance, to be freely disputed, and never imposed. 'He always acts upon this principle, that liberty and 'charity, in religious disputes, do at once most effec'tually secure the peace of the Church, and we may 'add, the genuine truths of the gospel, and tend to the 'advancement of the power and practice of true godli'ness.'

expreſſed a high value for this performance, as having not only placed the arguments uſually urged, in a very advantageous light, but offered ſeveral thoughts entirely new, as well as of great ſtrength.—The ſame year he publiſhed *Some Thoughts concerning the Proof of a Future State from Reaſon*, in anſwer to the Reverend Mr Hallet, junior, who in his great zeal for the Chriſtian Revelation, and to make it appear abſolutely neceſſary, had endeavoured to weaken the arguments from reaſon for a future ſtate. Mr Hallet replied to this anſwer; and Mr Grove, though very averſe to controverſy, yet this being with him a favourite ſubject, and, as he apprehended, of the laſt importance, to vindicate the moral government of God, determined to review the debate; in which Mr Grove had, beſides the introduction, finiſhed one chapter of the *Weight of Tradition concerning a Future State*, in a manner to make it juſtly regretted that his other avocations firſt, and his death afterwards, prevented his compleating the deſign,. Clamours having been raiſed by divines, more zealous than judicious, againſt ſome paſſages in which Mr Grove had repreſented the uſefulneſs of reaſon in religion; to ſatisfy them if poſſible, that reaſon, of which they were ſo much afraid, was in reality the beſt friend to the goſpel, he publiſhed, in 1732, without his name, *Some Queries offered to the Conſideration of thoſe who think it an Injury to Religion to ſhew the Reaſonableneſs of it*; in which he has ſaid enough to ſatisfy thoſe who think coolly and impartially, and ſilence thoſe who will not. His diſcourſes on *Saving Faith*, on the *Reſurrection of Chriſt*, the *Lord's Supper*, and the *Perfection of the Chriſtian Religion*, not to name others, are a ſufficient proof, that a man may be a friend to Reaſon, yet worthily eſteem Chriſtianity, and be zealous for natural religion, without being indifferent to revealed. In the ſame year he printed a diſcourſe *Concerning the Nature and Deſign of the Lord's Supper*, and treated the ſubject with a plainneſs that makes it inſtructive to common underſtandings, and a judiciouſneſs which will make it approved by all thoſe who are deſirous to obſerve this inſtitution in it's original ſimplicity, and as a means of making them better; not as an imagined equivalent for the want of real holineſs, and an uniform obedience to the Goſpel. In the ſecond edition, he added ſome *Devotional Exerciſes relating to the Lord's Supper*, in which are as much warmth and light united, as are to be found together in any compoſitions of this kind. In 1734 Mr Grove publiſhed, without his name, *Wiſdom, the firſt Spring of Action in the Deity*; in which he endeavours to demonſtrate, that the moral perfections of the Deity, as well as moral virtue and goodneſs in man, are founded in the unalterable relations of things, and the eſſential fitneſs or unfitneſs of actions and diſpoſitions ariſing from hence. This treatiſe, the writer of Mr Grove's life is informed, has been pronounced by a prelate of the moſt diſtinguiſhed merit, and who, if named, would be allowed to be one of the beſt judges of writings of this kind, a maſterly performance, and inferior to none which this age has produced on this argument. And Mr Balguy, whoſe excellent writings on this ſubject muſt give great weight to his approbation, even where he differs from Mr Grove, ſays, the diſcourſe abounds in ſolid remarks and ſound reaſonings. In 1736, Mr Grove publiſhed a *Diſcourſe on Saving Faith*, in which he has not only with great clearneſs repreſented the ſcripture notion of it, and reſcued it from enthuſiaſtical or contradictory interpretations; but, which is entirely new, ſhewn the reaſons why the writers of the New Teſtament often ſpeak of Faith as a great part of religion, and ſometimes as in a manner the whole of it. This treatiſe has alſo had the honour of being particularly approved by the excellent prelate juſt mentioned. About this time Mr Grove met with an affliction, which gave him an opportunity of ſhewing the ſtrength of his Chriſtian patience and pious reſignation; this was no leſs than the death of his wife; from which time he ſeemed to apprehend his own was not far off; for he wrote on the ſermon he preached after her death, *O may I prepare to follow!* And in that ſermon he has ſeveral reflections which ſeemed deſigned to reconcile himſelf to the expectation of a ſpeedy departure out of the body, and his friends to their loſs in his death. And in a little more than a year after this, Providence called him to the tryal; for, having preached on ſunday February 19, 1737-8, and both in his prayers and ſermons had an uncommon flow of ſpirits, which he ſaid he could hardly govern, and which, attended with a pain in his head, made him apprehend an approaching fever; he was violently ſeized at night, and the fever increaſing, in ſpight of all means uſed to abate it, or bring it to an intermiſſion, he died the ninth day, February 27, about ſeven in the morning. This diſorder in a great degree affecting his head, unfitted him for thinking or ſpeaking much, yet left him the uſe of his reaſon 'till the day before he died, and in a capacity of concluding life as he had always lived, with a modeſt greatneſs, and a ſerene compoſure of mind. It is not eaſy to expreſs the concern which the apprehenſion of his death occaſioned in London amongſt his friends, as well as in the country. There was a great deal of beauty and juſtneſs in what one of his hearers ſaid after his death, ſpeaking of the general grief and concern his illneſs excited. 'Our 'ſorrow for Mr Grove's ſickneſs was not like our concern for other friends when dying, 'whom we pity and lament; but a ſorrow ariſing as from the apprehenſion of the re'moval of one of the higher order of beings, who had condeſcended to live on earth 'for a while to teach us the way to Heaven, and was now about to return to his native 'place.' And it may with ſtrict truth be ſaid, that few of his ſituation in life lived more entirely eſteemed and beloved, or died more regretted. His friends erected an handſome monument

monument near his grave, on which is a latin inſcription, compoſed by the very learned Profeſſor of Rhetoric at Greſham-college, who obliges the public alſo with the Engliſh verſion of it; both which ſee in the note [F]. And the generous ſubſcription to his poſthumous works is a proof what rank he bore, not only in the eſteem of the principal gentlemen and miniſters in the diſſenting intereſt, but of ſome of the beſt judges of merit in the eſtabliſhed Church [G]. Mr Grove had thirteen children by his wife, five of whom ſurvived him; the death of ſeveral of them, on account of the ſenſibility of his temper, and the prevalency of the ſofter affections in his conſtitution, gave him opportunities for manifeſting great degrees of a pious reſignation to God. He deſcribes the working of his own heart on theſe occaſions, in the ſermon entitled, *The Mourning Parent*, in the firſt volume of his poſthumous works, which was compoſed upon the death of a very promiſing child. Beſides what may be learnt of Mr Grove's character from the preceding account, all who knew him will agree, that he had a judgment in an uncommon degree, quick and ſolid, together with what does not often attend it, an imagination ſtrong and beautiful,

[F] *Both which ſee in the note F.*

In *Engliſh.*

Here lieth
HENRY GROVE.
A worthy ſon of worthy parents
For his father deſcended from the antient family of the Groves in Wiltſhire
And his mother from the Rowes in Devonſhire. A family no leſs antient
And were both eminent for their piety and beneficence
The ſon who inherited their virtues
Applied himſelf ſo diligently to his ſtudies
That in the twenty-third year of his age he was unanimouſly choſen
By a large aſſembly of divines
To inſtruct youth in the liberal ſciences
For which province his ingenuous temper and ingaging behaviour
Seemed naturally to have formed him
Nor were their hopes diſappointed by the event
For being *employed in that ſtation upwards of thirty* years
With no leſs reputation to himſelf than the benefit of the public
He *carefully* endeavoured to cultivate the minds of his pupils
As well with every virtue as *with the beſt* arts
At the ſame time being *ingaged in the paſtoral office*
He watched *over his flock* with equal fidelity
And both in his ſermons and writings
Inculcating thoſe things which are of the greateſt concern to mankind
Advanced nothing from party views or affection
But with plainneſs and a zeal for truth
Recommended to every one's conſcience
Piety towards God charity towards men and ſelf-government
As the chief doctrines of religion
His mind was ſo happily framed
That to whatever ſubject he applied himſelf
He could think juſtly, diſtinguiſh clearly, judge ſolidly,
And expreſs his ſentiments with eaſe.
But he had ſo modeſt an opinion of himſelf
That he would contend with no one for differing from him
He was contented with his circumſtances though but moderate
Neither envying nor deſiring the greater affluence of others
Adorned with ſo many and great virtues
He was beloved while living and died lamented by all who knew him
On the 27th of February 1737
And the 55th of his age.

[G] *And the generous ſubſcription to his poſthumous works is a proof what rank he bore, &c.*] The poſthumous works of Mr Grove are extant in four volumes in octavo, publiſhed in 1740, from the author's manuſcript. They conſiſt of ſermons and tracts, and the life and character of the author, by Mr Thomas Amory; and the names of near ſeven hundred ſubſcribers of all ranks.

Beſides the ſeveral works of Mr Grove, mentioned in his life, he likewiſe publiſhed a great many ſermons upon ſeveral occaſions, and on variety of ſubjects, and ſome charges delivered by him upon particular occaſions; and alſo a volume of miſcellanies in proſe and verſe.

tiful, yet always under government. He was thus qualified not only to think clearly and juſtly, but to repreſent truth and virtue in a moſt engaging light, and to be a good judge in works of imagination and polite literature, as well as of reaſon and argument; and in theſe latter his genius improved by continual exerciſe and ſtudy, and preſerved uncorrupt by a prevailing love of truth and goodneſs, gave him a right to be ranked amongſt the moſt diſcerning. His moral ſenſe was delicate; his piety as modeſt and unaffected as it was warm and elevated: his benevolence was warm, active, and conſtant; and he was perfectly free from all artifice and diſſimulation. He could converſe with the great without meanneſs, with a reſpectful freedom and an eaſy complaiſance; was obliging in his behaviour to all, and enlivened converſation with a good-natured wit, and enriched it by a ſuperior knowledge of books and men. His taſte for the nobler pleaſures of knowledge, devotion, and goodneſs, made it very eaſy for him to obſerve the ſtricteſt rules of temperance with regard to bodily pleaſures, as his firm faith in the Divine Providence made it eaſy to deſpiſe the wealth and ſhew of the world. How much Mr Grove ſtudied the Scriptures, and how much he valued them, appears from the ſhare they have in his compoſitions. They make a part of his ſtyle, and are not quoted injudiciouſly, and merely by the ſound, but according to their genuine conſiſtent meaning; which he eſtimated by an agreement with the evident principles of natural religion, and the rules of a ſound criticiſm. He had taken great pains on ſome of the moſt difficult parts of Scripture, particularly the Epiſtles to the Romans and Epheſians; and his expoſitions on theſe, had he given them the laſt hand, would have well deſerved the public notice, containing many important obſervations, proper to ſet the Apoſtle's reaſoning throughout in a clear and conſiſtent light. His great knowledge of human nature and human life, qualified him to reach the heart with a peculiar efficacy, in all thoſe diſcourſes where there was room for thoſe ſubjects to enter; and there were few wherein ſomething of them might not properly appear. He made it the great aim of his preaching not to inſpire his hearers with a fondneſs for party notions, but with a love of God and of mankind; with a noble indifference to the intereſts and pleaſures of life. The diſtinguiſhing excellency which runs through his compoſures, is not merely the clearneſs of his thought and expreſſion, and the juſtneſs of his reaſoning; but his every where repreſenting religion in a rational and amiable view, and animating all with a warmth delivered from a ſublime devotion. As for popularity and ſtriking the paſſions, though few were better qualified for this than Mr Grove, yet he would never addreſs the paſſions 'till he had convinced the judgment, nor aim to raiſe the paſſions higher than the ſobereſt reaſon would approve. The contrary practice he thought very miſchievous in religion, leading men to place the main of it, not in ſubſtantial goodneſs, but in a ſudden heat raiſed they ſcarce knew how or why, and vaniſhing without any laſting beneficial effects on the temper or conduct. As a tutor, he was for free philoſophy, as well as for a Scripture Creed. As much as he admired Locke and Newton, he implicitly ſubmitted his underſtanding to neither, but was ſolely determined by the evidence they offered:

Nullius addictus jurare in verba magiſtri.

His great concern with his pupils, was to inſpire and cheriſh in them a prevailing love of truth, virtue, liberty, and genuine religion, without violent attachments or prejudices in favour of any party of Chriſtians; and his reputation on this account, as well as on account of his uncommon abilities, learning, and probity, was ſo great, that ſeveral gentlemen of the eſtabliſhment choſe to place their ſons under his care; and the many perſons of diſtinguiſhed merit in the learned profeſſions, but chiefly in divinity, who were formed under him, will be a laſting proof of his great abilities and fidelity as a tutor, and give the friends to knowledge and goodneſs reaſon to regret, that a man of ſuch eminent abilities, and ſo heartily engaged in ſerving the preſent, as well as the future immortal happineſs of mankind, was removed from among us in the midſt of his days and uſefulneſs (*i*). H

(*i*) Preface to his Poſthumous Works.

GUNTER [EDMUND], an excellent Mathematician, a learned writer, and Profeſſor of Aſtronomy in Greſham-college in the ſeventeenth century. He was the ſon of a gentleman of good fortune in Hertfordſhire, and a native of that county, though deſcended from a family of ſome antiquity, ſeated at Gunter's town in the county of Brecknock in South-Wales (*a*). He was born in 1581, and received the firſt part of his education at Weſtminſter-ſchool; from which royal foundation, when he was about the age of eighteen, he was elected to Chriſt-Church-college in Oxford (*b*). He took the degree of Bachelor of Arts in that univerſity, December 12, 1603 (*c*); as he did that of Maſter, July 2, 1606 (*d*). As he applied very early to the ſtudy of the mathematics, ſo about this time he invented and explained in Latin, thoſe curious and uſeful lines laid down by him upon that admirable inſtrument the SECTOR, which was about this time made according to his directions, though the large Engliſh deſcription thereof, in three books, was not compoſed or

*

or publiſhed 'till many years after (e) [A]. He entered into Holy Orders, and took the degree of Bachelor of Divinity, November 23, 1615 (f): but it is not true, tho' poſitively aſſerted by Mr Wood, that he was at this time Profeſſor of Aſtronomy at Greſham-college, or that he became ſo upon the demiſe of the learned Edward Brerewood, who was the firſt perſon elected into that office (g); though Mr Wood's miſtake may well be excuſed, ſince this was aſſerted as a fact by a very grave and great man (h), through a ſlip of his memory, by whoſe authority the Oxford Antiquary might be eaſily miſled [B]. The real ſtate of the caſe was this, Mr Brerewood was ſucceeded in his Profeſſorſhip by Thomas Williams, Maſter of Arts of Chriſt-Church-college in Oxford, who was the ſon of John Williams of London, Mercer, formerly ſervant to Sir Thomas Greſham; and our author was elected into his place, March 6, 1619, two days after Mr Williams's reſignation (i). A few months after he was ſettled at Greſham-college, he gave the public an authentic teſtimony of the wiſe choice made by his electors, by ſending abroad his CANON TRIANGULORUM, which was the firſt book of it's kind, and which, if he had publiſhed nothing elſe, might alone have preſerved his memory to lateſt poſterity, as it was an admirable help to ſuch as were ſtudious in that ſcience, and as ſuch is gratefully commemorated and highly commended by ſeveral of the moſt eminent Mathematicians who were his contemporaries (k) [C]. But his acute and active genius led him

[A] *Till many years after.*] The reader will obſerve, that we do not in the text attribute abſolutely the invention of the Sector to Mr Gunter, becauſe there is reaſon to believe, that an inſtrument of that name, though different in it's conſtruction from his, had been in uſe before, as may appear from the following paſſage, in a work written by one of his ſucceſſors (1), upon his improving this very inſtrument of our author's. 'Amongſt the many writers, ſays he, that have been 'upon the Sector, Mr Gunter hath done beſt, the lines 'of his inſtrument being moſt in number, and of the 'moſt formal contrivance, and moſt largely commented upon.' The ſame may be likewiſe collected, and moſt of the facts delivered on this head, confirmed from Mr Gunter's concluſion to the reader, at the end of his treatiſe on the Sector, dated Greſham college, May the firſt, 1623, and conceived in the following terms (2). 'It is well known to many of you, that 'this Sector was thus contrived, the moſt part of this 'book written in Latin, many copies tranſcribed and 'diſperſed, more than ſixteen years ſince. I am at the 'laſt contented to give way that it come forth in En'gliſh. Not that I think it worthy either of my la'bour or the public view, but partly to ſatisfy their 'importunity, who not underſtanding the Latin, yet 'were at the charge to buy the inſtrument, and partly 'for my own eaſe: for as it is painful for others to 'tranſcribe my copy, ſo it is troubleſome for me to 'give ſatisfaction herein to all that deſire it. If I find 'this to give you content, it ſhall encourage me to do 'the like for my Croſſe-ſtaffe, and ſome other inſtru'ments. In the mean time bear with the Printer's 'faults, and ſo I reſt.' It is worthy of notice, that in ſpeaking of the inſtrument he deſcribed, he calls it *this ſector*, by which one may fairly ſuppoſe he meant to diſtinguiſh it from any thing of the like ſort. We have no certainty what became of his original Latin treatiſe, or whether it was ever printed. His Engliſh treatiſe bore this ſhort and modeſt title.

Deſcription of the Sector, *in* three *books*, Lond. 1624, 4to. It was afterwards joined to his deſcription of the Croſſe-ſtaffe; and after his deceaſe, the fourth edition of it was diligently corrected by Mr Henry Bond, and with the addition of the Sector altered, by Mr Samuel Foſter, publiſhed in 1661; and a fifth time, with the reſt of our author's works, by Mr William Leybourn, who has likewiſe made ſome alterations, and from theſe the Sectors now in uſe differ conſiderably. The French from it's uſes, inſtead of the Sector, call it the compaſs of proportion, and have ſeveral uſeful treatiſes upon it in their own language.

(2) Gunter's Works, p. 154.

[B] *Might be eaſily miſled.*] The famous Mr William Oughtred, in a ſmall piece of his publiſhed ſeven years after our author's death, has this paſſage (3). 'In the ſpring, 1618, I being at London, went to ſee 'my honoured friend Maſter Henry Briggs at Greſham-'college, who then brought me acquainted with Ma'ſter Gunter, lately choſen aſtronomy reader there, 'and was at that time in Dr Brooks his chamber, with 'whom falling into ſpeech about his quadrant, I 'ſhewed him my horizontal inſtrument. He viewed it 'very heedfully, and queſtioned about the projecture 'and uſe thereof, often ſaying theſe words, *It is a very 'good one.* And not long after he delivered to maſter Briggs, to be ſent to me, mine own inſtrument 'printed off from one cut in braſs, which afterwards I 'underſtood he preſented to the Right Honourable the 'Earl of Bridgewater. And in his book of the Sector, 'printed ſix years after, among other projections, ſet'teth down this; herein ingenuous, that he did not 'challenge it to himſelf as our challenger doth, but 'not ingenuouſly enough acknowledging from whom 'he had it. But ſuch is the providence of God, I 'kept that very letter of Maſter Briggs, wherein he ſent 'me that print from Maſter Gunter, dated from Gre'ſham-college, June 2d, 1618, and the poſtſcript, 'June 4th, and which came to my hands June the '10th. In which letter are theſe words, *Maſter* Gun'ter *doth here ſend you the print of a horizontal diall 'of his drawing after your inſtrument.* This very let'ter hath been left by me in the hands of Elias Allen, 'above theſe two years, to be ſeen of any one that 'will require it.' In reſpect to the time, it is very plain that Mr Oughtred might be right in his facts, though certainly wrong in the circumſtances of Mr Gunter's being then Aſtronomy-Profeſſor, into which he might be eaſily drawn by the company in which he found him, and his coming afterwards into that office. Mr Wood taking it therefore for certain, that he was Profeſſor in 1618, concluded from thence that he muſt have ſucceeded Mr Brerewood, whereas Mr Williams came in between them (4). In reſpect to the horizontal dial, this reverend perſon had certainly no reaſon to complain of Mr Gunter at all, who, if he had ever intended to have laid claim to that invention, would never have furniſhed two ſuch evidences againſt himſelf as the print and Mr Briggs's letter. The former ſent by him, and the latter written at his requeſt. What he delivers in his book of the Sector, is incidentally only, having before ſhewn how the ſame thing might be done another way; but in the ſame work he has ſpoken ſo plainly of other perſons from whom he borrowed, that it is very hard to imagine he had any ſiniſter view in not mentioning Mr Oughtred, who lived a very retired life, and affected ſuch a degree of privacy, that it is very probable Mr Gunter was unwilling to mention him for fear of offending him. Be that as it will, the beſt evidence that learned perſon had to produce againſt his adverſary, was this paſſage in Mr Gunter's book, and this letter from Mr Briggs, as he tacitly admits, by leaving it in the hands of his publiſher. It is indeed evident enough from all Mr Gunter's writings, that his principal aim was to be uſeful to the public, and that he was very far from being ambitious or jealous of reputation, a circumſtance that does him great honour, ſince a deſire to do good is a much more elevated virtue than the thirſt of fame, which however, ſo long as it is kept within due bounds, ought not to be eſteemed a vice.

[C] *Who were his contemporaries.*] The title of this book in the firſt edition runs thus:

Canon Triangulorum, five, *Tabulæ ſinuum artificialium ad radium* 10,0000000 *& ad ſcrupula prima quadrantis.* Lond. 1620, 8vo. This was dedicated to his moſt honoured Lord John Earl of Bridgewater, Viſcount Brackley, &c. but in the ſecond edition, the title runs thus:

him continually to freſh purſuits, in which his quick penetration and very great ſagacity gave him aſtoniſhing ſucceſs. For he it was, that in the very ſame year made that important diſcovery in magnetiſm, which has ſince exerciſed the underſtandings of ſome of the ableſt Philoſophers and Mathematicians in all nations, viz. *That the variation of the* magnetic needle *varies* (*l*); and though this, as we have in another place obſerved, has been aſcribed by Dr Wallis to Mr Gellibrand, as it alſo was by Dr Hook to Mr Foſter, yet it was really due to our author, as will be fully ſhewn in the notes [*D*]. He alſo invented that famous RULE *of* PROPORTION which ſtill bears his name, and which, not long after he made it public, was carried over to France by his friend Edmund Wingate, Eſq; who wrote a treatiſe to explain the uſes of it in French, as our author himſelf alſo did in Engliſh (*m*), with that plainneſs and perſpicuity which were his peculiar talents, and of which he ſeems to have had a juſt eſteem, as appears from the anſwer he made Mr Wingate, when preſſed by him to write upon it ſtill more fully; *it is not to be expected that the* rule *ſhould ſpeak* (*n*); intimating that ſomething was to be left to the diſcretion and induſtry of thoſe who uſed it. By the help of this admirable contrivance, ſuch things as before appeared ſo dark and abſtruſe, as to diſcourage people of ordinary capacities from attempting them, became ſo eaſy and practicable, as to invite even the common ſort to theſe ſtudies, which were of wonderful utility in the ordinary employments of life, and in perfecting mechanic arts; which was a thing of prodigious conſequence, and which was entirely owing

(*l*) Gellibrand's Diſcourſe Mathematical on the Variation.

Canon Triangulorum, *or table of artificial Sines and Tangents to a Radius of* 10,0000000 parts *to each minute of the Quadrant. By* Edm. Gunter, *Profeſſor of Aſtronomy in* Greſham-college, Lond. 1624, 4to.

In this edition, the logarithms were continued from 1000 to 10000, and a rule given at the end for augmenting them to 100,000. How careful he was to avoid all ſuſpicion of aſſuming to himſelf the credit of other men's labours, and how modeſtly he ſpeaks of his own, appears from the following account of the uſe of his canon (5). 'This canon, ſays he, hath like 'uſe as the tables of right ſines and tangents ſet forth 'by others, but the practice ſomewhat more eaſy. For 'keeping to their rules and working by theſe tables, 'you may uſe addition inſtead of their multiplication, 'and ſubtraction inſtead of their diviſion: and ſo reſolve all ſpherical triangles without the help of ſecants 'or verſed-ſines. The like may be done for the ſolution of right lined triangles, by the help of the logarithms of my old collegue and worthy friend Mr 'Henry Briggs (10000 whereof follow). For both 'proceed from the ſame ground, and ſo require the 'ſame manner of work, as I often ſhew in my public 'lectures in Greſham-college. Where I reſt a friend 'to all that are ſtudious of mathematical practice.' But his right to this improvement of logarithms in their application to ſpherical triangles, is largely and clearly aſſerted by Edmund Wingate, Eſq (6); by Mr Burton (7), by Mr Henry Bond, ſenior (8), who was himſelf an eminent mathematician, and never queſtioned by any.

(5) Prefixed to the table of Logarithms in Gunter's Works.

(6) Preface to the Conſtruction and Uſe of Logarithmical Tables.

(7) Anatomy of Melancholly, p. 285.

(8) Advertiſement at the cloſe of Norwood's Epitome of Navigation.

To this work of his, Mr Gunter prefixed a large diſcourſe concerning the general uſe of the canon and table of logarithms, written with admirable plainneſs, and calculated, as all his other performances were, to leſſen the difficulties in learning, and to excite a ſpirit of induſtry in proſecuting mathematical knowledge, by demonſtrating it's extenſive utility, and by what ſhort and eaſy methods thoſe ſpeculations which had coſt him ſuch infinite pains and labour, might be rendered uſeful in the hands of others.

[*D*] *As will be fully ſhewn in the notes.*] The very learned Dr Wallis, in a letter to Sir Hans Sloane, dated Oxford, September the 30th, 1701, ſhews a very great zeal in vindicating Engliſh inventions and diſcoveries, and diſcourſing on that head, has the following paſſage (9). 'I think it is now agreed on all 'hands, that what we call the Variation of the Variation, is an Engliſh diſcovery of Mr Gellibrand, if I 'miſtake not, one of Sir Thomas Greſham's profeſſors 'at Greſham-college, about the year 1635.' In another letter directed to Captain Edmund Halley, dated Oxford, May 23d, 1702, he proſecutes this matter ſtill farther, 'The doctrine of the magnet, ſays he, 'hath been moſtly improved at Greſham-college, or 'by thoſe related thereunto, and there converſant for 'an age or two laſt paſt; as Blagrave, Gunter, Gelli'brand, Gilbert, Norwood, Wright, Briggs, Foſter, '&c. and of late by yourſelf. If I have miſtaken 'ſome names, or miſplaced them, or omitted others, 'you will be able to rectify it. I have given ſome 'intimation of it, but very imperfectly, in a letter of 'mine inſerted in the Tranſactions for the month of 'December 1701, where beſide divers literal faults, 'they have unhappily miſ-printed 1635, inſtead of '1625.' Dr Robert Hooke, in treating of this ſubject, in one diſcourſe of his, ſays (10), 'Later ob- (10) Ibid. No. CCLXXVIII.
'ſervations have found that this magnetical variation 'varies, though the parts of the earth do not ſeem at 'all to have altered their poſition; this was found by 'Mr Foſter and others, in the year 1635.' In a lecture read at Greſham-college, July the 7th, 1686, he treats this matter expreſsly and at large, and delivers himſelf thus (11). 'It was ſuppoſed, ſays he, that va- (11) Hook's Poſthumous Works, p. 482, 483.
'riations would be found always regular and the ſame, 'in the ſame place at all times, as proceeding from 'the greater attraction from the parts of the earth, 'which were prominent and elevated, and which were 'not likely to be altered by time, at leaſt, not enough 'to make a ſenſible variation of the variation. This 'was Dr Gilbert's, but in proceſs of time this was by 'Mr Gellibrand of this college and ſome others found 'to alter, and there was found a variation of the variation of the magnetic needle in the ſame place, and 'that not verified in one, but in thouſands of places. 'This overthrew all the former hypotheſes, and we are 'now to ſeek a new one; Mr Bond and Mr Philips, 'and ſome others, have been hammering at a new hypotheſis, wherein they make the magnetic virtue to 'be in the air, and ſo the magnetic poles to be moveable in circles round about the poles of the æquinoc'tial, and the magnetic axis of the earth, to have a 'conical motion about the axis of the diurnal revolution: which conical motion they ſuppoſe to be per'formed in a certain number of years; ſo that at 'length the polar points of the magnetic virtue, after 'they have revolved a periodick circle, return from 'the ſame point from which they did begin.' But as Mr Ward very candidly obſerves (12), if this diſcovery (12) Lives of Greſham Profeſſors, p. 80. See Mr Petit's curious letter to Mr Oldenburgh in Philoſophical Tranſactions, No. XXVII. p. 530.
thereſore was owing to one of Sir Thomas Greſham's profeſſors, and made ſo early as 1625, it muſt be attributed to Mr Gunter, and not to Mr Gellibrand, who did not come from Oxford to Greſham-college, till the latter end of the year following, upon Mr Gunter's death. The truth of the matter ſeems to be, that our author has a clear right to this diſcovery, for theſe reaſons: I. His experiment at Deptford, was in 1622, while Mr Gellibrand was at Oxford, and ſoon after he began to apply himſelf to the mathematicks, ſo that in point of time, it is the earlieſt of which we have any good account. II. The variation obſerved, was within two minutes of five degrees, which made it very remarkable, and removed all ſuſpicion of it's proceeding from any accident or error in obſervation, and therefore could not fail of exciting the attention of ſo able a mathematician. III. Mr Gellibrand himſelf acknowledges, that it was Mr Gunter's obſervation that induced him to make another at the ſame place, that is at Deptford, in 1634, and finding then a variation of above two degrees in twelve years, it put him upon writing his diſcourſe on that important ſubject.

(9) Philoſophical Tranſactions, No. CCLXXVI. p. 1036.

[*E*] Of

owing to the quickneſs of his invention, and to that wonderful facility he had of communicating his conceptions to others (o) [E]. Our author likewiſe drew the lines on the dials in Whitehall-garden, and wrote the deſcription and uſe of them by the direction of Prince Charles, in a ſmall tract which he afterwards printed by order of his Majeſty King James, in the year 1624 (p). The dials were placed, as he deſcribes them, on a ſtone, which, at the baſe, was a ſquare of ſomewhat more than four feet and an half, the height three feet and three quarters, and unwrought contained above eighty feet, or five ton of ſtone. Five dials were deſcribed on the upper part, one on each of the four corners, and a fifth in the middle, which was the chief of all, the great horizontal concave. Beſides the dials at the top, there were others on each of the ſides, eaſt, weſt, north, and ſouth. But for the ſeveral lines drawn upon theſe dials, and the uſes of them, I muſt refer to the book itſelf (q). There was, as he tells us, a ſtone of the ſame ſize and form, with the like planes and concaves, and dials on them, in that place before; but the lines on his dials were much different, excepting thoſe which ſhewed the hour of the day. This ſtone remained to our times, and was removed not many years ago; but the dials were in a great meaſure defaced by the drunken frolics of a nobleman in the reign of King Charles the Second (r), from whence our author's book, by the ſole aſſiſtance of which they may be at any time and in any place reſtored, is become ſo much the more valuable [F]. To him alſo we are indebted for the invention of a ſmall portable quadrant, and ſeveral other inſtruments, which were ſucceſſively made the ſubjects of his lectures at Greſham-college, and afterwards diſpoſed into treatiſes, and printed in his works (s) [G]. There is

(o) See the authors before cited, and all the Epitome's and other Treatiſes on Navigation.

(p) See this point explained in note [F].

(q) Deſcription and uſe of his Majeſty's Dials in Whitehall-garden, 4to.

(r) Ward's Lives of Greſham Profeſſors, p. 80.

(s) See Gunter's Works, 1662, 4to.

[E] *Of communicating his conceptions to others.*] When we ſpeak only of the *Line* of *Numbers*, it is commonly called *Gunter's Line*, and with very great propriety, ſince he firſt thought of this eaſy and excellent method of combining Arithmetic and Geometry, and this not in a matter of ſpeculation, but in a manner adapted to practice, and which very far tranſcended whatever had been done upon any mathematical rulers before; but when we ſpeak of *Gunter's Scale*, it takes in all the other lines laid down and fitted to the line of numbers, all which are admirably explained by our author himſelf, in that book of his which we ſhall preſently mention. His title to this invention, than which there hardly ever was one of ſo general uſe, is confeſſed by Mr Oughtred, in as clear terms as could be expected (13). 'With regard to the circles of proportion, he confeſſes that he had not ſo good a claim againſt all men, as for his horizontal inſtrument, tho' againſt Mr Delamain he had. The honour of the invention, ſays he, next to the Lord of Merchiſton, and our Maſter Briggs, belongeth (if I have not been wrongly informed) to Maſter Gunter, who expoſed their numbers upon a ſtreight line, which being once done, was there any ſuch maſtery to bring the ſame line about a circle? and what doth this new inſtrument (call it the circles of proportion, or call it the ring, or what other name you liſt) ought elſe, but only bowe and inflect Maſter Gunter's line or ruler.' This is candid and clear, and as his circles of proportion, ſo Brown's ſpiral, and all the tribe of ſliding rulers flow from hence. It is not intended by any thing here ſaid, to prejudice the inventions or improvements of other men, for that would be a barbarous and invidious taſk; but to ſhew the excellence of Mr Gunter's capacity, and to vindicate his title as the parent of inſtrumental arithmetic, and whatever depends upon it.

(13) Oughtred's Letter Apologetical, p. 22.

[F] *Is become ſo much the more valuable.*] The title of our author's book runs at large thus:

The deſcription and uſe of his Majeſty's Dials *in* Whitehall *Garden*, Lond 1624, 4to.

In reſpect to theſe dials, however, there is a great miſtake in Dr Wallis's letter before cited, to Captain Halley (14). 'It was, ſays he, about the beginning of the reign of King Charles the Firſt, that Mr Gellibrand (if I have not been miſ informed) cauſed the great concave dial to be erected in the Privy-Garden at Whitehall, (which I think is yet remaining) with great care to fix a true meridian line, and with a large magnetic needle, ſhewing it's variation from that meridian from time to time. I think it were not amiſs if exact obſervation were now made, whether the meridian be now juſt the ſame as it was then. For it is very poſſible that the pole of the earth may in time ſuffer ſome little variation, which may not readily be diſcerned, which may cauſe an alteration of the meridian line. And this, if ſo, will be more diſcernible nearer the pole than farther off. And tho' ſuch proviſion as was now ſayd, were made at Whitehall, for obſerving the needle's variation from the true North; and though no doubt notice have been given many times (there and elſewhere) what the variation hath been at ſuch times: yet I doubt no regiſter hath been kept of ſuch obſervations, whence we might form a ſcheme how ſuch variations do proceed from time to time.' We may very eaſily pardon this miſtake, though in juſtice to our author, we could not avoid taking notice of it, when we conſider the honeſt deſign of the doctor, which was to excite a deſire of preſerving the memory of paſt improvements as neceſſary helps towards increaſing the ſtock of true ſcience in times to come; his generous zeal for the honour of his country, founded upon the true baſis of the worthy deeds of it's inhabitants; and what not only atones for theſe ſmall imperfections, but ſhould teach us to admire him, he inforces his petitions, by obſerving that he was then eighty-ſix; that it was probably his laſt requeſt, and that he made it for the public and not for himſelf. But after all, there were once in the ſame place ſome other dials equally curious and extraordinary, made by one Francis Hall, alias Line, an Engliſh Jeſuit, erected on a ſtone pedeſtal in the year 1669. Theſe dials were placed in ſix ranks one above another, in form of a pyramid. But as the ſurface of them was all of glaſs and expoſed to the weather, they ſoon decayed for want of a cover. The contriver publiſhed a deſcription of them a few years after they were ſet up (15), at which time they were, as he complains, much damaged.

(14) Philoſophical Tranſactions, No. CCLXXVIII. p. 1107, 1108.

[G] *And afterwards diſpoſed into treatiſes, and printed in his works.*] The ſhorteſt method of anſwering the intention of this note, is to give the reader the title at large of the only treatiſe of our author, which has not been hitherto mentioned.

The Croſſe-Staffe, *in three* books; *the* firſt, *containing it's deſcription and the uſe thereof in taking of* heights *and* diſtances; *the* ſecond, *contains the uſe of the* lines *thereon in the meaſuring of all manner of* ſuperficies *and* ſolids, *as board, glaſs, land, timber, ſtone, and gauging of veſſels, as alſo in the famous art of navigation*; *the* third, *contains the uſe of the* lines *of* numbers, *ſines and tangents in* dialling, *and an excellent and compendious treatiſe, fully teaching, and amply explaining, the grounds and reaſons thereof, from a projection of the* ſphere *in plano*. To which is added an appendix, *containing the deſcription and uſe of a ſmall* portable quadrant, *for the more eaſy finding the* hour *and* azimuth, *and other* ſolar *concluſions of more frequent uſe. By* Edmund Gunter, London, 1624, 4to.

All his works collected together were printed in quarto, carefully corrected by Mr Henry Bond, and the fourth edition of them appeared in 1662, with the addition of two new inventions, and tracts deſcribing them, by Samuel Foſter, as we have mentioned elſewhere; the fifth edition was publiſhed by William Leybourn, who was the printer of the former edition, and the editor and corrector of this, in which he inſerted, as he ſays, divers neceſſary things and matters through the whole work; but, as Mr Ward judiciouſly obſerves, it

(15) An Explication of the Dial ſet up in the King's garden at London, anno 1669, in which very many ſorts of dials are contained, by which, beſides the hours of all kinds diverſly expreſſed, many things alſo belonging to Geography, Aſtrology, and Aſtronomy, are by the ſun's ſhadow made viſible to the eye; amongſt which very many dials, eſpecially the moſt curious, are new inventions, hitherto divulged by none: all theſe particulars are ſhortly yet clearly ſet forth for the common good, by the Reverend Father Francis Hall, otherwiſe Line, of the Society of Jeſus, Profeſſor of Mathematics. Printed at large by Guiſlm Hene ry Street, in the year of our Lord 1673. Superiorum Permiſſu. 4to. p. 60.

is no reaſon to doubt, conſidering the many great things he performed in ſo ſhort a time, that the public would have reaped ſtill greater advantages from the fertility of his genius, and that laudable diſpoſition to communicate his diſcoveries, if he had lived to an advanced age; but he was removed from his life and labours, December 10, 1626, in the forty-fifth year of his age, at his apartment in Greſham-college (*t*). He was buried in the pariſh of St Peter le Poor in Broadſtreet, without any monument or inſcription, as the judicious and accurate Mr Ward obſerves; the want of which, however, will be the leſs regretted, ſince the publication of his excellent work (*u*).

(*t*) Hiſt. & Antiq. Oxon. lib. ii. p. 271.

(*u*) Lives of Greſham Profeſſors, p. 81.

it is to be wiſhed he had ſo printed them, that they might have been diſtinguiſhed from what belongs to his author. This laſt edition was alſo printed at London in 1673, in quarto; for though we ſometimes meet with books which bear in their title the ſixth edition 1680, yet that title is all that is new in them, as the inquiſitive reader will eaſily perceive. E

H.

HACKET [JOHN], Biſhop of Lichfield and Coventry in the XVIIth century, was born in the Strand near Exeter-houſe, within the pariſh of St Martin's in the fields and liberty of Weſtminſter, September 1, 1592 (*a*). His father Andrew Hacket, deſcended from an antient family of that name at Putferin *in* Scotland (*b*), was then a Senior Burgeſs of Weſtminſter, and afterwards of the Robes to *Prince Henry* [*A*]. When very young, he was admitted into Weſtminſter-ſchool, where he became known to Dr Lancelot Andrews, Dean of the collegiate church there; who, in the neceſſary abſence of the maſter, coming ſometimes into the ſchool to teach the boys, took notice of this young ſcholar for his great diligence, modeſty, pregnancy of parts, and ſtrong inclination to learning and virtue, which he afterwards conſtantly cheriſhed both at the ſchool and univerſity. In 1608, he was elected, with Mr George Herbert the pious poet, into Trinity-college in Cambridge [*B*]; where he was ſoon taken notice of, not only for his parts and learning, but alſo for his ſobriety and great integrity. He took the degree of Bachelor of Arts in 1612, and was choſen Fellow of his college as ſoon as capable according to the Statutes (*c*). In 1615 he commenced Maſter of Arts (*d*), and grew into ſuch credit, that he had many pupils, and of many of the beſt families in England. One month in the long vacation, retiring with his pupil, afterwards Lord Byron, into Nottinghamſhire, he there compoſed a Latin comedy intituled Loyola, which was twice acted before King James the Firſt (*e*), and printed in 1648 (*f*). At his return to college, he applied himſelf wholly to the ſtudy of Divinity; and, in December 1618, received Holy Orders from Dr J. King Biſhop of London, who expreſſed a ſingular affection and kindneſs for him upon all occaſions: as did alſo Biſhop Andrews, from whom he oftentimes received preſents of money to buy books. But, above all others, he was taken notice of by Dr John Williams, Dean of Weſtminſter and Biſhop of Lincoln: for he being appointed Lord-Keeper of the Great Seal in 1621, choſe Mr Hacket for his chaplain, and ever loved and eſteemed him above the reſt of his chaplains. In 1623 he took the degree of Bachelor in Divinity; and the ſame year was made chaplain in ordinary to King James the Firſt [*C*], and collated December 20 to the prebend of Aileſbury in Lincoln-cathedral

[*A*] *Was then a ſenior burgeſs of Weſtminſter, and afterwards of the Robes to Prince Henry.*] His father and mother were both true Proteſtants, and great lovers of the Church of England, conſtant repairers to the divine prayers and ſervice thereof; and would often bewail to their young ſon after the coming in of their countrymen with King James, the ſeed of Fanaticiſm then laid in the ſcandalous neglect of the publick liturgy, which all Q. Elizabeth's time was exceedingly frequented, the people then reſorting as devoutly to prayers, as they would afterwards to hear any famous preacher about the town (1).

(1) Account, &c. by Plume, as above, p. 3.

[*B*] *In* 1608, *he was elected, with Mr George Herbert the pious poet, into Trinity-college in Cambridge.*] When his father (though unacquainted) ſpoke in his behalf to Dr Nevil, Maſter of Trinity-college; the Doctor preſently bid him ſpare further ſpeaking to any one; 'For that boy ſhould go to Cambridge, or he 'would carry him upon his own back.' And his maſter, Mr Ireland, ſaid, at parting, to him and George Herbert. That he expected to have credit by them two at the Univerſity, or would never hope for it afterwards by any while he lived (2).

(2) Ibid. p. 5.

[*C*] *And chaplain in ordinary to K. James I.*] He preached in his courſe before his Majeſty; particularly once upon the *Gowries Conſpiracy*, for which a Thankſgiving was continued all that King's reign on Auguſt the 5th. And though ſome people have denied the treaſon, 'Yet (ſays Dr Plume) our good biſhop was 'aſſured, that the moſt religious Biſhop Andrews once 'fell down upon his knees before King James, and be-'ſought his Majeſty to ſpare his cuſtomary pains upon 'that day, that he might not mock God unleſs the 'thing were true:' the King replied, 'Thoſe people 'were much to blame who would never believe a trea-'ſon unleſs their Prince were actually murdered: but 'did aſſure him in the faith of a Chriſtian, and upon 'the word of a King, their treaſonable attempt againſt 'him was too true (3).'

(3) Account, &c. as above, p. 8.

dral (g). The year following, upon the Lord-Keeper's recommendation, he was preſented to the rectory of St Andrew's Holbourn by his Majeſty, in whoſe diſpoſal that living was, by reaſon of the minority of Thomas Earl of Southampton. His patron procured him alſo, the ſame year, the rectory of Cheam in Surrey [D], fallen likewiſe into the King's gift by the promotion of Dr Senhouſe to the biſhopric of Carliſle. In 1625, he was named by the King himſelf to attend an embaſſador into Germany: yet, upon ſecond thoughts, he was diſſwaded from the journey, by reaſon, that being the author of the comedy of Loyola abovementioned, which ſeverely reflected upon the Jeſuits, he was told, he would never be able to go ſafe though in an embaſſador's train. In 1628 he commenced Doctor in Divinity. At his return to Holbourn his fame increaſed exceedingly; for, by indefatigable ſtudy, conſtant preaching, and wiſe government, he reduced that great pariſh to a perfect and regular conformity (b); and, by his charity and exemplary piety and converſation, endeared himſelf to all (i). In the year 1631, his patron Dr Williams, Biſhop of Lincoln, conſtituted him Archdeacon of Bedford, to which he was collated October 4 (k) [E]. His church of St Andrew's being very old and decayed, he undertook to rebuild it [F]; and, for that purpoſe, obtained very large ſubſcriptions from the nobility and gentry, and from many other of his well-affected pariſhioners. About the year 1639 he had got together many thouſand pounds, in ſtock and in ſubſcriptions; but, upon the breaking out of the civil wars, the Parliament ſeized them, as well as what had been gathered for the repair of St Paul's cathedral. In March 1641, he was one of the ſub-committee appointed by the Houſe of Lords, to conſult of what was amiſs and wanted correction in the Liturgy [G], in hopes by that means to diſpel the cloud then hanging over the Church. Whilſt the bill for taking away deans and chapters was depending in the Houſe of Commons, ſeveral members of that Houſe being friends to the Hierarchy, moved, that no man's freehold might be taken away in Parliament, without hearing them ſpeak for themſelves: whereupon, the whole committee abovementioned, deſired Dr Hacket forthwith to depart to his own houſe, and meet them again the next morning, prepared to ſpeak as the Advocate of the Church of England in the behalf of deans and chapters. Accordingly he made a ſpeech the day following [H], which had a very

(g) Survey of the Cathedral of Lincoln, &c. by Br. Willis, Eſq; Vol. II. p. 134.

(b) Account &c. p. 6—10.

(i) Ib. p. 13, 14.

(k) Ibid. Br. Willis, ubi ſupra, p. 125.

[D] *His patron procured him alſo, the ſame year, the rectory of Cheam in Surrey.*] Telling him, that he intended him Holbourn for wealth, and Cheam for health. Theſe two livings, being within a ſmall diſtance of ten miles, he held till the troubles came, and though he was a great lover of reſidence, and would ſay non-reſidence was never to be excuſed, but when utility to the Church, or neceſſity to the perſon for his real health or fitting ſtate, required it: yet he would often diſpute the neceſſity of a country living for a London miniſter to retire to in hot ſummer-time, out of the ſepulchral air of a church-yard. At Holbourn he generally reſided till the end of Trinity-term, and then retired to Cheam for health and privacy till Michaelmas-term (4).

(4) Ibid. p. 8, 9.

[E] *Dr Williams, biſhop of Lincoln, conſtituted him Archdeacon of Bedford, &c.*] In his charges to his clergy, he uſed to exhort them, to keep ſtrictly to the orders of the Church, to all regular conformity to the doctrine and diſcipline by law eſtabliſhed, without *under* or *over* doing; aſſerting in his opinion, that Puritaniſm lay on both ſides; whoſoever did more than the Church commanded, as well as leſs, were guilty of it. And that he only was a true ſon of the Church, that broke not the bounds of it either way (5).

(5) Account, &c. by Plume, p. 12.

[F] *He undertook to rebuild it.*] It muſt alſo be remembred, That in 1625, when there was a very great plague; upon complaint of the common-council-men of his pariſh, that *they* wanted room to bury *their* dead, he purchaſed for that end the new church-yard in Shoelane (6).

(6) Ibid. p. 15.

[G] *In May 1641, he was one of the ſub committee appointed by the Houſe of Lords, &c.*] That houſe ſettled (among many other committees) a committee for religion, conſiſting of ten Earls, ten Biſhops, and ten Barons: and, at the ſame time, appointed a ſub committee to prepare matters fit for their cognizance. The Biſhop of Lincoln was chairman in both, and was authorized to call together divers biſhops and other divines, to conſult about what was amiſs, and to ſettle peace. Of the ſub-committee, thoſe that appeared and conſulted together, were, beſides the chairman, Ja. Uſher Archbiſhop of Armagh, Tho. Morton biſhop of Durham, Joſ. Hall, then biſhop of Exeter; the Doctors, Sam. Ward, John Prideaux, Wi. Twiſſe, Rob. Sanderſon, Dan. Featly, Ralph Brounrigg, Ric. Holdſworth, Joh. Hacket, Corne. Burges; Mr John White, Steph. Marſhall, Edm. Calamy, and Tho. Hill. The place of their meeting was the Jeruſalem-chamber, in the Dean of Weſtminſter's houſe. And the points they conſulted upon, were, innovations in doctrine, and diſcipline; concerning the Common-prayer-book; the regulation of eccleſiaſtical diſcipline, &c. The committee condeſcended, to print the liturgick pſalms of the laſt tranſlation, to expunge all apocryphal leſſons, and alter ſome paſſages in the body of the Common-prayer-book, and certain other things, which divers of the Preſbyterian divines ſaid were ſatisfactory. And when a furious party ſtill preſſed at conferences for further abatement of conformity, and the laws eſtabliſhed, J. White told them, time would come when they would wiſh they had been content with what was offered. Theſe conſultations were held on ſix ſeveral days, till the middle of May, when the bringing in the bill into the Houſe of Commons for taking away deans and chapters, defeated all theſe pacific ſchemes (7).

(7) Ibid. p. 16, 17. T. Fuller's Church-Hiſtory, book xi. p. 174, 175.

[H] *Accordingly, he made a ſpeech the day following.*] Which was the 12th of May. This ſpeech is publiſhed at length in the biſhop's life, by Dr Plume, from a copy found among his papers. Dr Hacket began with obſerving, that, 'The unexpectedneſs to be 'thus employed was joined with another diſadvantage, 'namely, the not having heard upon what crimes or 'offences of the deans and chapters, ſo great a patri-'mony as they enjoyed was called in queſtion, that 'they might purge themſelves of ſuch imputations; 'but only reports flying abroad had arrived to their 'ears.' That cathedral and collegiate churches with their chapters, were accounted by ſome to be of no uſe or convenience.——In anſwer to which, he ſhews the great uſe and convenience of them, 1. In the daily ſervice of public prayer. 2. In conſtant preaching. 3. For the advancement and encouragement of learning; our principal grammar-ſchools being maintained by the charity of thoſe churches; and the preferments there, an encouragement, as well as a reward and maintenance to the greateſt men in the kingdom. 4. That the deans and chapters are the council of the biſhops, to aſſiſt him in his juriſdiction. 5. That the firſt monuments of piety built in this kingdom, were cathedral churches.——Then he offers the following additional arguments. That multitudes of officers have their maintenance, and no other livelihood but by them, ſome one cathedral church having three hundred perſons and more depending upon it. That the tenants had proſpered better by holding leaſes from deans and chapters, than farmers elſewhere under other incorporations. That the cities, eſpecially thoſe that were not maritime, are very poor in trade, but very much in-riched

very good effect upon the House: so that, notwithstanding Dr Corn. Burges's reply, it was put to the question, and carried by a great majority, that the revenues of deans and chapters should not be taken away. Yet not long after, in the same session, after an unparliamentary manner, they put it to a second vote; and without a second hearing voted the contrary (*l*). The committee being thus at an end, private meetings were held at the Doctor's house by bishops and other eminent clergy, who wrote letters to all divines in England of learning and reputation, to exhort them to stand fast in the cause of the King and Church. They also desired the opinion of the most celebrated foreign divines upon the points in debate, which they freely communicated (*m*). March 28, 1642, he was presented by the King to a Prebend and Residentiary's place in the church of St Paul's London, vacant, and fallen into his Majesty's disposal by the promotion of Dr Thomas Winniff to the see of Lincoln (*n*). But the troubles coming on, he had no quiet enjoyment of it, nor of his rectory of St Andrew's [*I*]: and besides, some of his parishioners there having articled against him at the Committee of Plunderers, his friend Mr Selden told him, it was in vain to make defences, and advised him to retire to Cheam, where he would endeavour to keep him quiet. But he could not be long so; for the Earl of Essex's army marching that way, took him prisoner along with them: and he rejecting great offers made him by the Earl and others, if he would turn to their side, they dismissed him after a while. From that time he lay hid in his retirement at Cheam, where he constantly officiated [*K*], and did much good in the country, by keeping many gentlemen firm to the Protestant religion, who were much assaulted by lurking Romish Priests (*o*). In 1648-9, he attended, in his last moments, Henry Rich Earl of Holland, who was beheaded for attempting the relief of Colchester (*p*). At the restoration of King Charles the Second, Dr Hacket recovered all his preferments, and was offered the bishopric of Gloucester, which he refused: but he accepted shortly after of that of Lichfield and Coventry [*L*], and was consecrated December 22, 1661 (*q*), upon the same day that he had forty-three years before received his first orders (*r*). The spring following he repaired to Lichfield; where finding the beautiful cathedral almost ruined to the ground [*M*], he set up, in eight years, a compleat church again, better than ever it was before, at the expence of twenty thousand pounds, a thousand pounds of which he had from the dean and chapter, and the rest was of his own charge and procuring from benefactors. Being finished, he dedicated it anew with proper solemnity on the 24th of December, 1669, and feasted three companies for three days (*s*). He laid out also a thousand pounds upon a prebendal house, which he was forced to live in (his palaces at Lichfield and Eccleshall having been demolished during the civil wars), and thought to procure an Act of Parliament for annexing it to the see, but did not (*t*). And likewise he added to Trinity-college in Cambridge a peculiar building called Bishops-Hostel, which cost him twelve hundred pounds; ordering, that the rents of the chambers should be laid out in buying books for the college library (*u*). Besides these great acts of munificence, he left several benefactions by will [*N*]. Having arrived to a good old age of seventy-eight years, one month, and twenty-seven days, he died at Lichfield, October 28, 1670, and was buried in his cathedral, under

riched partly by the hospitality of the clergy, partly by great numbers of the inhabitants being chosen to be the officers of those churches, and partly by the frequent resort unto them. That this kingdom affording better livelihood to most degrees and ranks than the neighbouring kingdoms do; it is but reasonable, that the clergy should have a better maintenance than in the neighbour reformed Churches. And, finally, That the clergy paid greater sums to the Exchequer by first-fruits, tenths, and subsidies, according to the proportions enjoyed by them, than any other estates or corporations in the kingdom; besides finding horse and arms for the defence of the realm. He concludes with this epiphonema; Upon the ruins of the rewards of learning no structure can be raised up but ignorance; and upon the chaos of ignorance no structure can be built but profaneness and confusion (8).——T. Fuller hath inserted in his Church-history (9), the brief heads of this speech, copied (with the Doctor's leave) out of his own papers.

(8) Account, &c. by Plume, p. 28—25.

(9) Book xi. p. 177, &c.

[*I*] *Nor of his rectory of St Andrew's.*] One sunday while he was reading the common-prayer in this church, a soldier of the Earl of Essex came, and clapped a pistol to his breast, commanding him to read no further. The doctor smiled at his insolency in that sacred place, and not at all terrified, said, he would do what became a divine, and he might do what became a soldier; so the tumult for that time was quieted, and the doctor permitted to proceed (10).

(10) Plume, as above, p. 26.

[*K*] *Where he constantly officiated.*] He preached there every sunday morning, expounded the Church Catechism every afternoon, read the common-prayer all sundays and holidays, continued his wonted charity to all poor people, that resorted to it upon the week days, in money, besides other relief out of his kitchen, 'till the committee of Surrey enjoyned him to forbear the use of it by order of Parliament at any time, and his catechising out of it upon sunday in the afternoon. Yet, after this order, he ever still kept up the use of it in most parts, never omitting the Creed, Lord's-Prayer, and Ten Commandments, Confession and Absolution, and many other particular collects (11).

(11) Ibid.

[*L*] *But he accepted of that of Litchfield and Coventry.*] After it had been kept vacant about a year, to try whether R. Baxter would conform, and take it (12).

(12) Wood's Ath. Vol. II. col. 1147.

[*M*] *Where finding the beautiful cathedral almost ruined to the ground.*] For the stone-roof, the timber, lead, and iron, glass, stalls, organs, and utensils of rich value, were all embezelled. Two thousand great shot, and fifteen hundred granadoes, that had been discharged against it, had quite battered down the spire, and most of the fabrick. But the bishop, the very next morning after his arrival, set his own coach-horses on work, together with other teams, to carry away the rubbish; which being cleared, he procured the best workmen of all sorts: and, in eight years, as is said above, caused the whole roof from one end to the other to be all repaired with stone, 411 feet in length; to be all laid with good timber, given by K. Charles II; and all leaded throughly *. He also beautified the choir with comely stalls of exquisite workmanship; and set up an excellent organ, which cost above 600l. He had even contracted for six large bells, but lived only to have the tenor hanged, the rest being done by his executor (13).

* Plume, p. 31.

(13) Ibid. p. 52.

[*N*] *He left several benefactions by will.*] Among the rest, fifty pounds to Clare-hall; to St John's-college in Cambridge fifty pounds; and to the University-library, he bequeathed all his own books, which had cost him about 1500l (14).

(14) Ibid. p. 49.

[*O*] *Under*

under a handſome tomb [O], erected by his eldeſt ſon Sir Andrew Hacket, a Maſter in Chancery (w). By his firſt wife, which died in 1637, he had ſeveral children, as he had alſo by his ſecond wife; and by both lived to ſee thirty-two children and grandchildren (x). We ſhall give his character in the note [P]. He publiſhed only the comedy of Loyola abovementioned; and a ſermon preached before the King at Whitehall, March 22, 1660, on Acts xv. 39. Lond. But after his deceaſe, 'A Century of 'his Sermons upon ſeveral remarkable ſubjects, was publiſhed by Thomas Plume, D. D.' Lond. 1675, fol. And 'The Life of Archbiſhop Williams', written by him, was printed at London in 1693, fol. of which an excellent and improved abridgment was publiſhed in 1700, 8vo. by Ambroſe Phillips. His ſtyle is but indifferent, very diffuſe and verboſe, and full of ſcraps of Latin and new-coined words. He intended to have written the Life of King James the Firſt, and for that purpoſe the Lord-Keeper Williams had given him Mr Camden's manuſcript notes or annals of that King's reign, [which therefore our author did not ſteal, as Mr Wood invidiouſly ſuggeſts (y)], but having loſt many of his books and papers upon his ſequeſtration at Holbourn, he was diſabled from going through that undertaking (z).

(w) Ibid. p. 54, 55. Wood's Athen. ubi ſupra.

(x) Plume, p. 10.

(y) Athen. Vol. I. col. 484.

(z) Plume, p. 10.

[O] *Under a handſome tomb.*] Of which there is a repreſentation at the end of his life, prefixed to his Century of ſermons. That part of the epitaph thereon which includes his character, is in the following words:

Primævæ pietatis
Et ſummæ eloquentiæ præſulem,
Eccleſiæ Anglicanæ & fidei orthodoxæ
Aſſertorem ſtrenuum,
Concionatorem etiam ad ultimum aſſiduum,
Et
Superſtitionis Babylonicæ tam maturum hoſtem,
Ut penè in cunis ſtraverit Loyolitas;
Vitæ denique integritate, & innocentiâ,
Morum ſuavitate & candore,
Charitate erga pauperes eximiâ,
Et liberalitate erga ſuos inſignem typum, &c.

[P] *We ſhall give his character in the note.*] As to his perſon; he was ſmall and ſlender of ſtature, in all parts clean and well ſhaped, of a very ſerene and comely countenance, lively eyes, with an uncommon alacrity and ſweetneſs of aſpect: his conſtitution was rather delicate than ſtrong, yet through temperance and cuſtom, grown patient of long fitting and hard ſtudy. His voice was wonderfully ſweet and clear, and called by ſome the fineſt bell in the univerſity (15). In his behaviour, he was modeſt, humble, genteel, and civil; and though naturally irritable, and ſubject to great irruptions of anger, yet he was exceeding placable, and ready to be appeaſed; and too generous to be revengeful (16). He was extremely charitable; and when made a biſhop, no man was leſs greedy of gain: for he deſired to hold nothing in commendam; he renewed all his leaſes for years, and not for lives, and upon very moderate fines; and ſpent a very conſiderable ſhare thereof upon the repairs of his cathedral. His bounty ſometimes extended to perſons of a differing religion, with whom he held no Chriſtian communion but in this one thing of giving, and never looking to receive again (17). His dreſs was always plain, not moroſe or careleſs, but never coſtly (18). He was very hoſpitable, chearful and pleaſant at table, and free, communicative, and improving in his converſation (19). When young, he had a moſt lively and acute wit, which rendered him acceptable to all companies, but ever tempered with wiſdom and learning, that rendered him more acceptable to the beſt; and with it he had a prodigious and immortal memory, whereby he ever bore about him a conſtant chronicle of all occurrences, ſo that he was able to give a preſent account of whatſoever he had at any time read, heard, or ſeen (20): By a conſtant ſtudy he had ſearched into all kinds of learning, and particularly into Natural Hiſtory; but could never make himſelf maſter of the eaſtern languages. And indeed he often bewailed, that many good wits of late years proſecuted the eaſtern learning ſo much, as to neglect the weſtern learning and diſcretion too. And Mr Selden and Biſhop Creighton both affirmed to him, that they often read ten pages for one line of ſenſe, and one word of moment, and did confeſs there was no learning like to what ſcholars may find in Greek authors, as Plato, Plutarch, &c (21). He had taken great pains in the ſtudy of Antiquity; and in the Eccleſiaſtical Hiſtory was inferior to very few: but in the hiſtory of our own Church, there was nothing whereof he was ignorant (22). In his younger time he had been much addicted to ſchool-learning, then much uſed in the univerſity; but afterwards grew weary of it, and profeſſed he found more ſhadows and names than ſolid juice and ſubſtance in it; and would much diſlike their horrid and barbarous terms more proper for incantation than divinity (23) He was an enemy to all ſeparation from the Church of England, of whatſoever faction or ſect; and in all points a perfect Proteſtant according to the articles of the Church of England. But in the Predeſtinarian controverſy, he was of the ſame ſentiments as Biſhop Davenant and Dr Ward, under whom he was bred (24). He thought the increaſe of Popery ought to be ſtrictly watched, not only for the perniciouſneſs of it's tenets, as being in his opinion idolatrous and favouring of rebellion, but likewiſe for the cruelty and ſanguinary minds of Papiſts themſelves; for whereas Proteſtants expreſs a charitable reſpect towards the ſouls and bodies of Papiſts, abhorring all bloody perſecutions of them; on the other ſide *deſignant nos oculis ad mortem*; Papiſts ever bear bloody minds towards us, and want nothing but power and opportunity to make as many bonfires in England, as they had done formerly (25). He abounded not only with great learning, acute wit, excellent judgment and memory, but with an incomparable integrity, prudence, juſtice, piety, charity, conſtancy to God and to his friend in adverſity, and in his friendſhip was moſt induſtrious to fulfil it with good offices (26). His motto was, Serve God and be chearfull.

Haddoni Lucubrat. edit 1567, 4to. p. 17, 33, 35.

[A] *In the year* 1516.] This is manifeſt from his age at the time of his death; as appears from his epitaph ſet down below. The Haddon family took their ſurname, either from Haddon in Derbyſhire, or Haddon in the counties of Northampton or Huntingdon: and were wont to write their name de Haddon. For we find John de Haddon, Prebendary of Welton-Beckhall, in the Church of Lincoln, from 1363 to 1372 (1).

[B] *His education in grammar-learning was at Eaton-ſchool, under Richard Cox, then maſter.*] This, Mr Strype poſitively affirms (2): and it is quite plain from ſeveral paſſages in Dr Haddon's works; where writing to Dr Cox, or ſpeaking of him, he calls him *præceptorem*

(1) Survey of the Cathedral of Lincoln, &c. by Br. Willis, Eſq; Vol. II. p. 255.

(2) Life of Archbiſhop Parker, edit. 1711, fol. p. 36b.

whom, very probably, he was not only grounded in polite literature, but alſo in the principles of the Proteſtant religion. In 1533, he was elected ſcholar (c), and ſoon after fellow, of King's-college in Cambridge; of which he became one of the greateſt ornaments, nay of the whole univerſity, in his time. For, being a moſt diligent and accurate reader of the beſt antient authors, particularly of Tully's works, he attained to a fine Ciceronian ſtyle [C], and was accounted one of the moſt elegant Latin writers among all his contemporaries (d). He ſtudied alſo the Civil Law (of which he took the degree of Doctor), and read public lectures in that faculty at Cambridge in 1547, and the two years following: which ſo endeared him to the univerſity, that upon a vacancy in the Profeſſor's chair, in 1550, they recommended him in the ſtrongeſt terms to King Edward the Sixth and his Council [D], as the propereſt perſon to fill that place (e). He was alſo for ſome time Profeſſor of Rhetoric, and Orator of the univerſity (f). During King Edward's reign, he was one of the brighteſt lights of the Reformation, in that noble ſeminary of learning wherein he was planted, and promoted it to the utmoſt of his power. Upon the deprivation of Biſhop Stephen Gardiner, he was conſtituted, in his room, Maſter of Trinity-hall, and ſerved the office of Vice-Chancellor in 1550 (g). Through the earneſt recommendation of the Court, though not qualified according to the ſtatutes, he was choſen, September 30, 1552, Preſident of Magdalen-college in Oxford; and incorporated, the ſecond of December following, Doctor of Laws in that univerſity. But he quitted his Preſident's place, October 30, 1553 (h), upon the death of King Edward the Sixth and acceſſion of Queen Mary, for fear of being expelled, or worſe uſed, at the time of Biſhop Gardiner's viſitation of the ſaid college. Some have ranked him among the Engliſh exiles in Queen Mary's days (i); but others have affirmed, with more probability, that he ſheltered himſelf in private during that reign (k, [E]. On the acceſſion of Queen Elizabeth to the throne, he was ordered by the Privy-Council to repair to her Majeſty at Hatfield in Hertfordſhire (l); and ſoon after was conſtituted by her one of the Maſters of the Court of Requeſts (m) [F] His good friend and intimate acquaintance, Dr Matthew Parker Archbiſhop of Canterbury, made him alſo Judge of his Prerogative Court (n). In the royal viſitation of the univerſity of Cambridge, performed in the beginning of Queen Elizabeth's reign, he was one of her Majeſty's commiſſioners, as appears by the ſpeech he then made, which is printed among his works (o). But, in the years 1565 and 1566,

præceptorem meum (3), my maſter; *& excellentiſſime & ornatiſſime præceptor:* and himſelf, *alumnus diſciplinæ tuæ* (4), *& ego tuus diſcipulus* (5), i. e. his ſcholar —— As to his being educated at Eaton-ſchool, he acknowledges it in theſe elegant words, which are the beginning of an oration he made to the Eaton ſcholars. —— *Magnam locus admonitionis vim habet, ſuaviſſimi pueri. Nam hæc ipſa cernens, quondam mea, nunc veſtra ſtudiorum incunabula, communium memini veſtrarum literarum, & vos amo tenentes illum vitæ curſum, in quo vos ipſe ſum antegreſſus. Quales enim vos nunc eſtis tales nos olim pueri fuimus, & quales nos jam eſſe cernitis, tales vos dies efficiet* (6).

[C] *He attained to a fine Ciceronian ſtyle.*] So that his own words were applicable to him. *In omni vero dicendi ratione, nos & ſcribendi, Cicero expolit* (7), i. e. We learn from Cicero all the polite arts of ſpeaking and writing. And he recommends to Henry Brandon Duke of Suffolk, the continual reading of Cicero, in words, that ſhew, he himſelf was not inſenſible of the praiſes beſtowed upon him on account of his Ciceronian ſtyle. *Si continua Ciceronis lectione confirmabitur unus aut alter annus, talem nobis Suffolcienſem afferet, qualis nunquam Haddonus fuit, quem multitudo aliquid eſſe credit, nimirum ipſa quoniam parum intelligit* (8).

[D] *They recommended him in the ſtrongeſt terms to K. Edward VI and his Council.*] For that purpoſe they made uſe of the elegant pen of Roger Aſcham (9), whoſe recommendation to the King was in theſe words: *Princeps prudentiſſimus Henricus octavus pater tuus, Illuſtriſſime Rex, maximam & ſibi laudem, ad ſempiternam nominis memoriam: & huic Academiæ ſpem, ad ſingularem Doctrinæ cultum excitavit: cujus divino beneficio factum eſt, ut omnium linguarum & optimarum ſcientiarum optimi profeſſores, ampliſſimis ab eo donati præmiis, in hac Academia conſtituerentur. Inter hæc patris tui immortalia monumenta, munus profitendi juris civilis nunc vacuum eſt. Cujus ſcientiæ præclaram doctrinam, tanto ingenio, eruditione, & aſſiduitate, frequentiſſimo hominum concurſu Gualterus Haddonus hoc triennium apud nos tradidit, ut nihil prius, univerſi nos una voce a Majeſtate tua contendamus, quam ut hoc docendi munus huic doctiſſimo viro conferatur. Et talem virum Majeſtati tuæ commendamus, cujus unius ingenio, & illuſtri doctrina, univerſa hæc Academia commendatior exiſtit.*——Part of the recommendation to the Privy-Council was as follows.—— *Schola Juris Civilis nunc apud nos conticeſcit. Quæ cum hos aliquos præteritos annos, doctiſſima Gualteri Haddoni voce, ad illius immenſam laudem, ad Academiæ ſummam utilitatem, circumſonuit: lubentes quidem hoc tempore facimus, ut cujus divino ingenio, & ſingulari doctrina, univerſa hæc Academia mirifice illuſtrata eſt, is ipſe etiam, publica Academiæ voce, viciſſim ad hoc munus commendaretur. Quanquam non Haddoni cauſſam, ſed literarum cum præſentem ſalutem, tum poſteram ſpem agimus.*——The ſubſtance of which is, That K. Henry VIII. to his immortal praiſe, and the ſingular benefit of learning, having founded profeſſorſhips for all languages, and the beſt ſciences, in the univerſity of Cambridge; and the profeſſorſhip of civil law being then vacant, they unanimouſly and earneſtly beſought his Majeſty, to confer that office upon the moſt learned Dr Walter Haddon; who had, for three years before, read lectures in that ſcience, with great ingenuity, learning, and applauſe; to his own honour, and the advantage of the univerſity, &c.

[E] *Some have ranked him among the Engliſh exiles in Queen Mary's days, &c.*] Particularly the induſtrious Mr Strype *; grounding himſelf upon this paſſage of John Bradford the martyr's letter to the univerſity of Cambridge, in 1555, a little before his martyrdom, viz. 'Call to mind the threatnings of God, now 'ſomething ſeen by thy children, Lever and others. Let 'the exile of Lever, Pilkington, Grindal, Haddon, 'Horne, Scory, Ponet, &c. ſomething admoniſh thee.' But it appears from the Diſcourſe of the troubles at Franckford (10), that it was James Haddon, the doctor's brother (11), who was one of the exiles abroad, during Queen Mary's cruel and perſecuting reign.

(11) Vide Haddoni Lucubrationes inter Poemata, p. 100.

[F] *One of the Maſters of the Court of Requeſts.*] The Court of Requeſts was a court of equity of the ſame nature with the Court of Chancery, but inferior to it; and inſtituted principally for the relief of ſuch petitioners, as in conſcionable caſes addreſſed themſelves by requeſt, or ſupplication, to the King or Queen. Of this court, the Lord Privy-Seal was chief judge, aſſiſted by the two Maſters of Requeſts. It began firſt about the 9th of Henry VII. and was taken away by ſtatute 16 and 17 Caroli I. c. 10. Some have called it the Poor Man's Court, becauſe there he was to have juſtice without paying any money: [No wonder therefore it was ſuppreſſed!] otherwiſe the Court of Conſcience (12).

(12) See the Commonwealth of England, by Sir Tho. Smith, edit 1635, 12mo. p. 234.

1566, he was engaged in affairs of a more public nature. For he was one of the three Engliſh Agents (*p*) ſent to Bruges, for reſtoring the commerce between England and the Netherlands upon the antient terms (*q*) [*G*]. Some authors affirm that he was employed in ſeveral embaſſies (*r*), which ſeems to be a miſtake; for he doth not appear to have been employed in any other but that juſt now mentioned. He died January 21, 1571-2, in the 56th year of his age, and was buried the 25th of the ſame month, in Chriſt's Church in London; where a fair monument was erected to his memory [*H*], which was deſtroyed with that church by the great fire in the year 1666 (*s*). An account of his writings is given below in the note [*I*]. Throughout every part of them, his piety appears equal to his learning and politeneſs. The famous Leland celebrates him in his poems (*t*), as does alſo Biſhop Parkhurſt (*u*).

(*p*) The others were, the Lord Viſcount Montacute and Nicholas Wotton.

[*G*] *For reſtoring commerce between England and the Netherlands, upon the ancient terms*] The cruelties of the Duke of Alva, and the perſecutions of Cardinal Granvell, together with the fears of the Inquiſition, had cauſed the Engliſh, about this time, to remove the mart from the Netherlands to Embden. But Diego Guſman de Sylva, then embaſſador in England, a wiſe man, and zealous for the intereſt of his maſter, uſed his utmoſt endeavours to reconcile all differences. For, as Mr Camden rightly obſerves (13), 'He we'l knew, 'how great gainers the Flemings were by their trade 'with England, ſince Lodowic Malanus Earl of Flan-'ders, about the year 1338, had allured the Engliſh, 'by the grant of very ample privileges, to ſettle the 'ſtaple of Engliſh wool at Bruges From that time, 'the reſort was ſo general of people of all nations 'into Flanders, to buy the Engliſh cloth, and 'other Engliſh goods, and to diſpoſe of their own; 'that 'tis incredible, what an advance it made in the 'merchants, and retale trade, and how much it im-'proved the fiſhery and ſhipping of the Nether-'lands. Inſomuch, that the Engliſh wool has proved 'to them a true Golden Fleece; to which the famous 'order of the Golden Fleece owes it's origin, and the 'Dukes of Burgundy their great riches.' The ſame learned author adds, that 'In this time, (as appeared 'by authentic accounts) the trade between England 'and the Netherlands amounted to above twelve mil-'lions of ducats of gold (14) per annum; and the En-'gliſh cloths yearly exported to Antwerp, (without 'reckoning the lead, tin, &c.) were valued at five 'millions of ducats of gold. D. Guſman therefore 'wrought ſo hard and ſo effectually, that the trade, 'which had been interrupted, was reſtored to it's 'former ſtate; and whatever ordinances had been 'made on both ſides to the contrary from Jan. 1. in 'the firſt year of Queen Elizabeth, were ſuſpended, 'till further orders from commiſſioners of both nations. 'But the year following (1565) when the Lord Viſ-'count Montacute, Nicolas Wotton, and Walter 'Haddon, deputies from England; Montigni, Aſſon-'ville, and Joachim Giles, commiſſioners for the 'Flemings, came to treat upon thoſe points at Bruges, 'the troubles in the Netherlands put a ſtop to the con-'ferences; after it had been agreed, that there ſhould 'be an open trade, 'till one prince denounced war a-'gainſt the other; and the merchants in that caſe to 'have forty days notice to diſpoſe of themſelves and 'their effects.'

(16) Lucubr. p. 341.

† Extract of Heraldical Collections from the library of the late Sir Henry St George, by W. O'dys, Eſq; 4to. p. 18.

[*I*] *An account of his writings is given below in the note.*] I. He, and Sir John Cheke, rendered into elegant Latin, and were partly concerned in drawing up, that uſeful code of eccleſiaſtical law, publiſhed, in 1571, by the learned John Foxe, under this title, *Reformatio Legum Eccleſiaſticarum*, 4to. As appears by this paſſage in the editor's preface 'Summæ negotii præ-'fuit *Theo. Cranmerus*, Archiepiſc. Cant. Orationis lumen '& ſplendorem addidit *Gualterus Haddonus*, vir diſer-'tus, & in hac ipſa juris facultate non imperitus. 'Quin nec ſatis ſcio an *Joan. Checi* viri ſingularis eidem 'negotio adjutrix fuerit manus (17).' 'Tis pity that ſo neceſſary a work was not confirmed by parliament; but the lovers of the glorious uncertainties in the law have always oppoſed it: becauſe, as Biſhop Burnet obſerves, 'It was found more for the greatneſs of the Preroga-'tive, and the authority [and intereſt] of the civil 'courts, to keep that undetermined (18).' II. He publiſhed in 1563, a letter, or anſwer to an epiſtle directed to Queen Elizabeth, by Hierom Oſorio Biſhop of Silva in Portugal, and intituled *Admonitio ad Elizabetham Reginam Angliæ* (19). Wherein the Engliſh nation, and the reformation of the Church of England, were miſrepreſented, abuſed, and treated in a harſh and ſcurrilous manner. This anſwer of Dr Haddon is publiſhed among the reſt of his Lucubrations; and an abſtract of it is given in Engliſh, by the induſtrious Mr Strype, in his Annals of the Reformation (20). H. Oſorio's letter being tranſlated into French, and alſo into Engliſh, and printed at Lornin in 1565, under the title of *A Pearl for a Prince*; one Abra. Hartwell publiſhed, the ſame year, a tranſlation of Dr Haddon's anſwer, which he intitled *A ſight of the Portugal Pearl, in anſwer to the Epiſtle of Hierom Oſorius, entit. A Pearl for a Prince.* And Oſorio having replied to Dr Haddon, in three books, intitled, *In Gualterum Haddonum Elizabethæ reginæ Magiſtrum libellorum ſupplicum de vera Religione libri* III. Oliſſipone 1567, 4to. The Doctor began an anſwer; but, when he had gone about through half of it, being prevented by death, John Foxe compleated it, and publiſhed it in 1577, under this title, *Contra Hieron. Oſorium, ejuſque odioſas inſectationes pro Evangelicæ veritatis neceſſaria defenſione reſponſio apologetica*, 4to. tranſlated into Engliſh by James Bell, 1581, 4to (21). III. The other works of Dr Haddon, were collected by Tho. Hatcher of King's college Cambridge, and publiſhed in 1567, 4to. under this title, *G. Haddoni Legum Doctoris, S. Reginæ Elizabethæ à ſupplicum libellis, Lucubrationes paſſim collectæ, & editæ.* This collection contains ten Latin orations, and fourteen letters beſides that abovementioned to Oſorio: as alſo our learned author's poems; the chief of which are a paraphraſe upon the 5th, 6th, and 7th, chapters of St Matthew, and on the Epiſtle of St James; and the reſt moſtly upon religious ſubjects. For, to his honour, he was a pious and modeſt poet——A new edition of theſe poems, or another collection of Dr Haddon's is mentioned by *Ant.* Wood (22), printed at London, 1592, 8vo. But we have not been able to obtain a ſight of them at any rate.——Several original letters written by him, in Latin, are preſerved in the Harleyian Library of MSS.

C

HAKLUYT [RICHARD], our moſt eminent and worthy Naval Hiſtorian in the reign of Queen Elizabeth, was deſcended of an antient and genteel family at Eiton, or Yetton, in Herefordſhire; of which we may read, in the liſts of High-Sheriffs for the ſaid county, that ſeveral of this name were elected to that office, from the reign of King Edward the Second to King Henry the Eighth; and in the ſecond of Henry the Fourth, of Sir Leonard Hakluyt, whoſe ſeat or abode was then at Yetton in that county, and his arms, *Gules, three battle-axes, or* (a). We alſo meet with Thomas Hakeluet, who was Chancellor of the dioceſe of Hereford in the latter part of King Edward the Third's reign, anno 1349 (b). But this Richard was born, as we take it, in or near London, about the year 1553. He had it ſeems three brothers; and two of them, beſides himſelf, were trained up in Weſtminſter ſchool, that fruitful nurſery, as he terms it, of literature (c). The eldeſt, named Thomas, was elected from thence to Trinity-college in Cambridge, anno 1567 (d). The next was this Richard; and he mentions himſelf to have been one of the Queen's ſcholars in that ſchool, from whence he removed to Oxford (e), as we ſhall ſoon obſerve. The third, named Oliver Hakluyt, was ſent to the ſame college in that univerſity, to which his ſaid brother was elected, but it was three years after him (f); and applying himſelf to the ſtudy of Phyſic, is celebrated for his practice in that faculty with reputation and ſucceſs (g). His laſt and youngeſt brother was Edmund Hakluyt, who was tutor ſome years to the Lord William, ſon and heir of the Lord Admiral Howard (h). While this Richard, the ſubject of our enſuing diſcourſe, was a youth at Weſtminſter, he was wont to viſit his couſin Richard Hackluyt of Eyton, Eſq; at his chambers in the Middle-Temple; but our author never ſtudied the municipal law there, as A. Wood miſtakes of him, inſtead of his ſaid couſin (i), who was well known and eſteemed of, as well by ſome pincipal miniſters of ſtate, as by ſeveral moſt noted perſons among the mercantile and maritime part of the kingdom, as a great encourager of Navigation, and the improvement of trade, arts, and manufactures [A]. The arms alſo of this Mr Hakluyt,

[A] *A great encourager of navigation, and the improvement of trade, arts, and manufactures.*] This Mr Richard Hakluyt the elder, of the Temple, had ſo great a knowledge in thoſe products of foreign countries, which would be of the greateſt advantage to the improvement of our trade; and was a man of that public ſpirit, ſo famous for encouraging the importation of all ſuch commodities, as other climates enjoyed in greater plenty or excellence; eſpecially ſuch uſeful vegetables as our ſoil would foſter, and ſupply our own wants in thoſe reſpects, that he was continually applied to, and ſollicited by our ſea-officers, merchants, and their agents, for his notes of direction and enquiry; which, as he moſt chearfully imparted, ſo he received many curious memorials from them, of whatever was obſervable in their ſaid voyages, and might be beneficial to thoſe ends. This may ſufficiently appear, in ſo much of the intercourſe that was held between him and ſome of his ſaid correſpondents, as hath been preſerved by our author his couſin, in ſeveral parts of his naval hiſtory: and as the heads or titles, with a few extracts from ſome of them, will teſtify the exemplary vigilance and aſſiduity of our predeceſſors, to import or naturalize, whatever would conduce to the emolument, or embelliſhment of their native country, and may awaken a like propenſity in the drowſy part of their poſterity, ſuch diſcourſes, notes of enquiry, and remembrance of vegetable importations, are therefore here mentioned and referred to in our author, as follow: I. *A Diſcourſe of the Weſt-Indies; written at the requeſt of this Mr Hakluyt of the Temple, by Henry Hawkes, Merchant, Anno* 1572, *when he made his voyage to Nova Eſpanna; where, travelling for the ſpace of five years, he obſerved many notable things*; which are in the ſaid voyage recorded (1). II. The ſaid *Mr Hakluyt's advice and notes to divers gentlemen of Sir Martin Frobiſher's company, in their North-Weſt diſcovery; in his third and laſt voyage to Meta Incognita*, 1578 (2). III. *Mr Anthony Parkhuſt's letter to the ſaid Mr Hakluyt, reporting the true ſtate and commodities of Newfoundland, November* 13, 1578; in which there is a great encomium upon that Mr Hakluyt, for ſo zealouſly devoting himſelf to the public good, and acquiring the glorious character, not only of a friend, but a ſervant to his country (3). IV. *Mr Hakluyt's directions to Morgan Hubblethorn, Dier, ſent into Perſia*, 1579 (4). V. *A letter from Henry Lane, Eſq; to the ſaid Mr Hakluyt, concerning the firſt embaſſy from the Ruſſian Emperor to Queen Elizabeth, at Otelands, in Auguſt* 1567. Where the ſaid Mr Lane, being in his office, obſerved that, after the Ruſſian ambaſſadors had repeated the long ſtiles and title of their maſter, they delivered their letters and preſents; which were, ſables for tippets, and lucerns, and other rare furs: 'For, 'at that time, ſays he, that princely ancient ornament 'of furs, was yet in uſe; and great pity but that it 'might be renewed, eſpecially in Court, and among 'magiſtrates, not only for reſtoring of an old worſhipful art and company, but alſo becauſe they are for 'our climate, wholeſome, and better, with ſmall coſt 'to be preſerved, than thoſe new ſilks, ſhags and rags, 'wherewith a great part of the wealth of the land is 'haſtily conſumed (5).' From which obſervation it may in ſome meaſure be computed, when the general wear of furs went out of faſhion among perſons of diſtinction in that reign, as this letter was written ſoon after the year 1579. VI. *Mr Hakluyt's inſtructions to Arthur Pit, and Charles Jackman, in their voyage by ſea towards Cathay, ſet out by the Muſcovy Company, for their diſcovery of the North Eaſt Straights* 1580 (6). VII. The *report of Mr Oliver Dawbeny to the ſaid Mr Hakluyt of the Temple, of Mr Hore's voyage to Newfoundland and Cape Briton*, in 1536: wherein is comprehended, alſo the report made to our author, Mr Hakluyt of Oxford, of ſome other incidents in the ſaid diſtreſsful voyage, as will be ſomewhat further related, from the only perſon living, who had been in it, named Mr Thomas Buts, ſon of Sir William Buts of Norfolk; the ſame learned Knight we take it, who having been a famous doctor of Phyſic of Cambridge, alſo phyſician to King Henry VIII, and one of the founders of the College of Phyſicians in London, died in 1545, and was buried in the church at Fulham near the ſaid city (7). VIII. *Mr Hakluyt's Remembrances of things to be endeavoured at Conſtantinople, and other places in Turkey; touching our clothing and dying; and the vent of our native commodities*: with other probable and judicious inſtructions for an Engliſh Factor at *Conſtantinople*, Anno 1582 (8). In his directions and advertiſements to the ſaid factor, having ſpoke of the colours that are uſed in dying, ſuch as anile, woad, ſumack, ſaffron, &c. and declared how neceſſary it is to have them growing, or plentiful and cheap, in England; having alſo ſhewn, how commodiouſly our country is ſeated for the art and manufacture of cloathing; what waters, earths, and drugs we have for that purpoſe, being only ſomewhat deficient in plenty of oil: he adds, 'The want whereof, if any man could deviſe 'to ſupply at the full, with any thing that might become natural in this realm, he, whatſoever he were, 'that could bring it about, might deſerve immortal 'fame in this our commonwealth; and ſuch a device 'was offered to the parliament, and refuſed; becauſe 'they denied to endow him with a certain liberty, 'ſome others having obtained the ſame before, that 'practiſed to work that effect by radiſh-ſeed, which 'only made a trial of ſmall quantity, and that went no 'further, to make the oil in plenty: and now he that 'offered

kluyt, as one of the moſt eminent members, and probably benefactors, of the ſociety in that Inn of Court, were painted in one of the windows of the hall belonging to the Middle-Temple, and correſpond with thoſe abovementioned in all but the blazonry; the field here being azure, and the axes gules, according to the ſculpture that was etched of them by the delicate and admired hand of that rare artiſt, Wenceſlaus Holler (*k*). At his chambers, young Hakluyt was, in one of thoſe viſits, ſo highly entertained with certain books of Coſmography, and maps of the world, which lay upon the table, that his couſin ſeeing him curious, and taking uncommon delight therein, beſtowed ſome pains to inſtruct him, and explain thereby the diviſion of the earth; firſt, into three parts, after the antient diſtribution, and afterwards, according to the more modern and improved diſtinction, into more (*l*). He then more particularly pointed out to him with a wand, all the known ſeas, rivers, gulphs, bays, ſtraights, capes, dukedoms, kingdoms, empires, and other territories of each part; and diſtinguiſhed what productions or commodities they yielded, and in what they were deficient. Hence he inferred, how, from the benefits of traffic, and the intercourſe of merchants, the wants of all nations are mutually ſupplied. Then he turned to the Scriptures, and ſhewed how ſolemnly, how ſublimely, the wonders of the Lord are expreſſed; and how his mercies, no leſs than his menacies are manifeſted in the Deep (*m*). Theſe books of voyages, travels, and maps, together with the ſolemn words of the Scripture, and his couſin's judicious paraphraſe upon, or deductions from them, ſo captivated his

(*m*) Pſalm cvii. ver. 23, &c.

'offered this device, was a merchant, and is dead, and 'withal the device is dead with him (9).' He alſo ſpeaks of making oil of the ſeed of ſeſamum, as they did in Egypt (9); which is mentioned alſo by Pena and Lobell, beſides other Botaniſts, ancient and modern, to be a coddled herb, full of oily ſeed. But the invention of a more excellent oil, drawn from the Beech-maſt, of which our iſland would yield enough, however it might not be conſtantly, in ſuch great plenty, as it does once in three years, to ſupply all our wants, eſpecially in our woollen manufacture, was not then known, it ſeems among us; though it was many years uſed in France, before the project was here ſo vigorouſly ſet on foot, under a patent granted by Queen Anne in October 1713, to the late Aaron Hill, Eſq, that, if it had not been for ſome miſmanagements, might have furniſhed our nation with a much better oil, and cheaper, than that which is drawn from Rape ſeed, and have ſaved vaſt ſums of money, which are deſperſed abroad for worſe oils to ſupply our clothiers, ſoap boilers, &c (11). But to return, our author recommends, among his other things to be remembered, by the factor beforementioned, his enquiry into the vent or conſumption they have in Turkey for their ſaffron; as in Tripoly, and ſome parts of Barbary, there is ſuch great uſe of it according to Leo and others, that though they have it in good plenty, they have not ſufficient for their purpoſe: and as there is no better than we have in England, we might, if it was more wanted, ſet our poor more to work, in Eſſex, Cambridgeſhire, and Herefordſhire, where the beſt of all England grows, ſays he, and the ſoil yields the wild ſaffron commonly (12). Then he goes on thus: 'It is reported at Saffron-'Walden, that a pilgrim, propoſing to do good to his 'country, ſtole an head of ſaffron, and hid the ſame in 'his palmer's ſtaff, which he had made hollow before of 'purpoſe, and ſo he brought this root into this realm, 'with venture of his life; for if he had been taken, 'by the law of the country from whence it came, he 'had died for the fact (13). If the like love in this 'our age, were in our people that now become great 'travellers, much knowledge, and many trades, and 'many herbs and plants might be brought into this 'realm, that might do it good: and the Romans having that care, brought from all coaſts of the world 'into Italie, all arts and ſciences, and all kinds of 'beaſts and fowles, and all herbs, trees, buſhes and 'plants, that might yield profit or pleaſure to their 'country: and if this care had not been heretofore in 'our anceſtors, then had our life been ſavage now; 'for then we had not had wheat nor rie; peaſe nor 'beans; barley nor oats, pear nor apple; vine, nor 'many other other profitable and pleaſant plants; bull 'nor cow, ſheep nor ſwine, horſe nor mare, cock nor 'hen, nor a number of other things that we enjoy; 'without which our life were to be ſaid barbarous: 'For theſe things and a thouſand that we uſe more, 'the firſt inhabitors of this iſland found not here. And 'in time of memory, things have been brought in, 'that were not here before: as the damaſk roſe, by 'Doctor Linaker, King Henry the Seventh's and King 'King Henry the Eight's phyſician (14); the turky-'cocks and hens, about fifty years paſt, the artichoke 'in time of King Henry VIII; and of late time was 'procured out of Italie, the muſk roſe plant; the 'plum, called the Perdigwena, and two kinds more, 'by the Lord Cromwell, after his travell; and the 'abricot, by a French prieſt, one Wolfe, gardiner to 'King Henry the Eight: and now, within theſe four 'years, there have been brought into England, from 'Vienna in Auſtria, divers kinds of flowers called, 'Tulipas; and thoſe, and others procured thither, a 'little before, from Conſtantinople, by an excellent 'man, called M. Carolus Cluſius; and it is ſaid, that 'ſince we traded to Zante, the plant that beareth the 'coren, is alſo brought into this realm from thence; 'and although it bring not fruit to perfection, yet it 'may ſerve for pleaſure, and for ſome uſe; like as our 'vines do, which we cannot well ſpare, although the 'climate, ſo cold, will not permit us to have good 'wines of them: and many other things have been 'brought in, that have degenerated by reaſon of the cold 'climate; ſome other things brought in, have by negligence been loſt. The Archbiſhop of Canterburie, Edmund Grindall, after he returned out of Germany, 'brought into this realme, the plant of tamariſk from 'thence (15); and this plant he hath ſo increaſed, 'that there be here thouſands of them; and many 'people have received great health by this plant: and 'if, of things brought in, ſuch care were had, then 'could not the firſt labour be loſt. The ſeed of To-'bacco hath been brought hither out of the Weſt-Indies; it groweth here, and with the herb, many have 'been eaſed of the reume, &c. Each one of a 'great number of things were worthy of a journey to 'be made into Spain, Italie, Barbarie, Egypt, Zante, 'Conſtantinople, the Weſt-Indies, and to divers other 'places, nearer, and further off than any of theſe; 'yet foraſmuch as the poor are not able, and for that, 'the rich, ſettled at home in quiet, will not, therefore we are to make ſute to ſuch as repair to foreign 'kingdoms for other buſineſſes, to have ſome care here-'in, and to ſet before their eyes the examples of theſe 'good men, and to endeavour to do for their parts the 'like, as their ſpecial buſineſs may permit the ſame. 'Thus giving you occaſion, by way of a little remembrance, to have a deſire to do your country good, 'you ſhall, if you have an inclination to ſuch good, do 'more good to the poor ready to ſtarve for relief, than 'ever any ſubject did in this realm, by building of 'alms-houſes, and by giving of lands and goods to the 'relief of the poor: thus may you help to drive idle-'neſs, the mother of moſt miſchiefs, out of this realme, 'and win you perpetual fame and the prayers of the 'poor, which is more worth than all the gold of Peru, 'and of all the Weſt-Indies (16).' There are moreover, ſome other things written by, or to this Richard Hakluyt, Eſq; as that letter from Virginia, by Ralph Lane, Eſq; Sir Walter Raleigh's deputy, or governor there, directed to the ſaid Mr Hakluyt, and dated in 1585; which is alſo preſerved in our author's collections (17): and among Mr Selden's manuſcripts at Oxford, there is this Richard Hakluyt's diſcourſe of the places in the Eaſt-Indies, where ſundry ſorts of ſpices grow, with the prices of precious ſtones, which is not printed, I think, in his kinſman's naval collections.

his attention, and wrought ſuch deep impreſſions on his youthful apprehenſions, hitherto unpoſſeſſed with inferior engagements, that he thenceforth nouriſhed a conſtant reſolution, if ever he were preferred to the univerſity, where he might have ſufficient leiſure and conveniencies to enjoy his ſtudies, that he would proſecute before all others this kind of knowledge and literature, to which the ſweet and delightful taſte he now received had already raiſed in him ſo great an appetite. According to this reſolution, when he was not long after, in the year 1570, removed to Chriſt-church-college in Oxford *(n)*, he beſtowed all his vacant hours, that were not employed in his uſual academical exerciſes, upon the cultivation of thoſe coſmographical ſtudies; and to that end, made himſelf ſuch a proficient in the languages antient and modern, that he read over whatever printed or written diſcourſes of voyages and diſcoveries, or naval enterprizes, and adventures of all kinds, which he found extant, either in Greek, Latin, Italian, Spaniſh, Portugueſe, French, or Engliſh; 'till he became ſo conſpicuous, that he was choſen to read public lectures upon theſe branches of ſcience, whereof he had made himſelf ſuch an able maſter; and was the firſt man among them who produced and diſtinguiſhed both the old imperfectly compoſed, and the new lately reformed maps, globes, ſpheres, and other inſtruments of this art, for demonſtration in the common ſchools, to the great inſtruction and general ſatisfaction of his auditory. In proceſs of time he became, through theſe uncommon acquirements, familiarly converſant with, and highly reſpected by, the principal ſea commanders, the greateſt merchants, and moſt ſkilful mariners in our nation. And though it was but few years after, that he went to reſide a long time beyond-ſea, his fame made ſeveral voyagers thither long before him. It is not unlikely, when the King of Spain's Coſmogropher, Abraham Ortelius, was in England, as the author of his life, before his *Theatrum orbis Terrarum (o)*, acquaints us he was, in the year 1577 *(p)*, but he became acquainted, among other learned men, with Mr Hakluyt; for after his return home, we find they correſponded together, and with other eminent foreigners, alſo of exalted fame for their improvements in Coſmography, he was likewiſe held in great eſteem, amongſt whom Gerard Mercator was not the leaſt conſiderable; one of whoſe friendly letters to him, upon an Engliſh undertaking to diſcover the north-eaſt paſſage, dated from Duiſburg in Clive, the 28th of July, 1580, our author has himſelf communicated to the public *(q)* Nor could he long behold the advancements in Coſmography which had been publiſhed by foreign authors; what that celebrated Venetian, Battiſta Ramuſio, or Francis Lopez de Gomara, and others, had ſet forth of the diſcoveries and improvements in navigation, which had been made by the voyagers of other countries; or what Mr Richard Eden and Richard Willes had exhibited, as patterns of imitation for our own *(r)*; but he was ſoon fired with an emulation to improve upon them, and ſhew the world what gallant figures, more particularly ſome of our own brave and adventrous Argonauts would make in ſuch like hiſtorical repreſentations. At firſt indeed he laid open but a ſparing ſample of the treaſure that was to be produced, and gave us only an earneſt of his future communications. This appears in a ſmall *Collection of Voyages and Diſcoveries*, which he publiſhed two years after in 1582, and dedicated the ſame to the moſt laudable promoter of all ingenious and uſeful knowledge in that illuſtrious reign under which he flouriſhed, Mr Philip Sidney; but this Collection being afterwards ſwallowed up, like little ſtreams or rivers in the ocean of his larger naval collections, the ſaid firſt edition has been overlooked or undiſtinguiſhed, by thoſe who have attempted any catalogue of his publications in particular, or of travels and voyages in general. It appears in the ſaid epiſtle dedicatory, that his *Lecture of Navigation* beforementioned, was ſo well approved of by the renowned Sir Francis Drake, that he made ſome propoſals to continue and eſtabliſh it in Oxford [*B*], upon the proſpect which Mr Hakluyt ſoon after had of ſome engagement

[*B*] *Sir Francis Drake made ſome propoſals to eſtabliſh his lecture of navigation at Oxford*] This particular we remember to have read ſome years ſince, in the dedication aforeſaid, by our author, of the firſt collection of his voyages, abovementioned: and as by the abſtract we then took thereof appears, Sir Francis Drake did ſo well conceive the uſefulneſs of promoting naval knowledge in that manner, and was ſo well inclined to patronize, and be himſelf an encourager thereof, that he deſired Mr Hakluyt to find out a proper perſon to read or continue ſuch lecture at Oxford in his abſence; on whom he propoſed to ſettle a ſalary of twenty pounds a year, and to advance twenty pounds towards furniſhing him with books. Hakluyt did accordingly find a perſon willing and qualified to read ſuch lectures; but he inſiſted on forty pounds per annum, alledging that leſs would not do to maintain him; but Sir Francis, not propoſing that ſuch employment ſhould entirely engroſs his time, did not mean that he was to be intirely maintained by it: and ſo that matter dropped (18). Several years after, when Sir Francis Drake was dead, our author reſumed this topic; and ſo zealouſly recommended the foundation of ſuch a lecture in the city of London, to the Lord Admiral Howard, that his hearty good will for the ſervice of his country has been much applauded by ſome judicious men. Mr Hakluyt's addreſs to the ſaid Lord-Admiral, upon conſidering his Lordſhip as the father and principal favourer of the Engliſh navigation, is expreſſed to him in theſe words: 'I truſt it ſhall not be impertinent, in paſſing by, to 'point at the means of breeding up of ſkillful ſeamen 'and mariners in this realm. Since your Lordſhip is 'not ignorant that ſhips are to little purpoſe, without 'ſkillful ſeamen; and ſince ſeamen are not bred up, 'to perfection of ſkill, in much leſs time, as it is ſaid, 'than in the time of two 'prentiſhips; and ſince no 'kind of men, of any profeſſion in the commonwealth, 'paſs their years in ſo great and continual hazard of 'life; and ſince of ſo many, ſo few grow to gray 'hairs, how needful is it, that by way of lectures and 'ſuch like inſtructions, theſe ought to have a better 'education than hitherto they have had, all wiſe 'men may eaſily judge. When I call to mind how 'many noble ſhips have been loſt, how many worthy perſons have been drenched in the ſea, and how 'greatly this realm hath been impov'riſhed by the loſs 'of great ordinance, and other rich commodities, 'through the ignorance of our ſeamen, I have 'greatly *wiſhed there were a Lecture of Navigation read in this city* for the baniſhing of our for- 'mer

(18) See Hakluyt's Dedication to Mr Phil. Sidney, of the firſt edition of his Voyages, in 4to. 1582.

ment abroad. But while he was at home, there could not be a more lively or emphatical teſtimony given, of his eagerneſs in the purſuit of all ſatisfactory authority or confirmation in theſe maritime adventures, than that he once about this time, as we compute, rode a journey of two hundred miles, purpoſely, or for no other end than, to acquaint himſelf with the true incidents and circumſtances of a certain perilous voyage which had been made to Newfoundland, in the twenty-eighth year of King Henry the Eighth, from the mouth of a worthy gentleman, in the firſt note of this article beforementioned, Thomas Butts, Eſq; who was then the only ſurviving adventurer therein (*s*); in which voyage, the ſaid company was driven to ſuch diſtreſs for want of food, that ſeveral of them were providentially preſerved from periſhing only out of a bird's-neſt, with the fiſhes of various kinds which were hourly brought in great plenty thither by an oſpray to her young (*t*); but that proviſion being too ſcanty to ſupply them all, or the greateſt part of two ſhips crew, they were driven to feed upon the weeds and roots of the earth, and at laſt, by the increaſing rage of hunger, upon one another; 'till thoſe wretched ſtarvelings who were left alive, among whom was the ſaid relator, emaciated to ſuch a ſkeleton, that his parents at his return did not know him, meeting with a French ſhip plentifully victualled, ſeized upon and returned in it to England; where, when King Henry heard the lamentable ſtory of their manifold ſufferings and extremities, inſtead of puniſhing his ſubjects for the capture complained of, he ordered a princely recompence to be made to the owners for the loſs and damages they had ſuſtained (*u*). In ſhort, the many ſingular proofs which Mr Hakluyt gave of his unwearied diligence, to compaſs and commemorate every extraordinary enterprize made by our countrymen or others, in any foreign nation, that would redound to the glory or advantage of his own, could not remain long concealed from the notice and approbation of the State; inſomuch that he received particular encouragements from Secretary Walſingham, by letters dated in the latter end of the year aforeſaid, to perſevere in

(*s*) This Mr Tho. Butts had not been long or but few years dead, when Mr Hakluyt publiſhed this Narrative of his ſaid Adventures, in the firſt folio edition of his Voyages, 1589, p. 517.

(*t*) Idem, p. 518.

(*u*) Ibid. p. 519. and in the laſt edition of his Voyages, Vol. III. folio, 1600, from p. 129 to 131.

'mer groſs ignorance in marine cauſes, and for the encreaſe and general multiplying of the ſea-knowledge 'in this age, wherein God hath raiſed ſo general a deſire, in the youth of this realm, to diſcover all parts 'of the face of the earth, to this realm in former ages 'not known. And that it may appear that this is no 'vain fancy or device of mine, it may pleaſe your 'lordſhip to underſtand, that the late Emperor Charles 'V. conſidering the rawneſs of his ſeamen, and the 'manifold ſhipwrecks that they ſuſtained, in paſſing 'and repaſſing between Spain and the Weſt Indies, 'with high reach, and great foreſight, eſtabliſhed, 'not only a pilot-major, for the examination of ſuch 'as ſought to take charge of ſhips in that voyage, but 'alſo founded a notable lecture of the art of navigation, 'which is read to this day in the Contractation-houſe at 'Sevil: the readers of which lecture, have not only care'fully taught and inſtructed the Spaniſh mariners by 'word of mouth, but alſo have publiſhed ſundry exact 'and worthy treatiſes concerning marine cauſes, for the 'direction and encouragement of poſterity. The 'learned works of three of which readers, namely 'Alonzo de Chavez, Hieronymo de Chavez, and 'Roderigo Zamorano, came long ago very happily to 'my hands, together with the ſtraight and ſevere exa'mination of all ſuch maſters as deſire to take charge for 'the Weſt-Indies. Which, when I firſt read, and 'duely conſidered, it ſeemed to me ſo excellent and ſo 'exact a courſe, as I greatly wiſhed that I might be ſo 'happy as to ſee the like order eſtabliſhed here with us. 'This matter, as it ſeemeth, took no light impreſſion 'in the royal breaſt of that moſt renowned and victo'rious prince, King Henry VIII. of famous memory; 'who, for the encreaſe of knowledge in his ſeamen, 'with princely liberality, erected three ſeveral guilds, 'or brotherhoods; the one at Deptford, here upon the 'Thames; the other at Kingſton upon Hull; and the 'third at Newcaſtle upon Tine; which laſt was eſta'bliſhed the twenty-eighth year of his reign. The 'chief motives which induced his princely wiſdom 'hereunto, himſelf expreſſeth in the manner following. 'Ut Magiſtri, Marinarii, Gubernatores, et alii Offi'ciarii Navium, Juventutem ſuam in Exercitatione Gu'bernationis Navium tranſigerentes, mutilati aut aliquo 'alio caſu in paupertatem collapſi, aliquod relevamen 'ad eorum ſuſtentationem habeant, quo non ſolùm illi 'reficiantur, verùmetiam alii juvenes moveantur et in'ſtigentur ad eandem artem exercendam, ratione cu'jus doctiores et aptiores fiant navibus et aliis vaſis no'ſtris, et aliorum quorumcùnque in mare gubernandis 'et manutenendis, tam Pacis quam Belli tempore, 'cum opus poſtulet. To deſcend a little lower; 'King Edward VI, that prince of peerleſs hope, with 'the advice of his ſage and prudent counſaile, before 'he entred into the North-Eaſtern diſcovery, advanced 'the worthy and excellent Sebaſtian Cabota, to be '*Grand Pilot of England*; allowing him a moſt boun'tiful penſion of one hundred ſixty-ſix pounds, ſix ſhil'lings and eight pence by the year, during his life, as 'appeareth in his letters-patents; which are to be ſeen 'in the third part of my work. And if God had 'granted him longer life, I doubt not, but as he dealt 'moſt royally in eſtabliſhing that office of Pilot-Major, 'which not long after to the great hindrance of this 'commonwealth, was miſerably turned to other pri'vate uſes, ſo his princely Majeſty would have ſhewed 'himſelf no niggard, in erecting, in imitation of Spain, 'the like profitable lecture of the art of navigation. 'And ſurely, when I conſider of the late memorable 'bounty of Sir Thomas Greſham, who, being but a 'merchant, hath founded ſo many chargeable lectures, 'and ſome of them alſo, which are mathematical, tend'ing to the advancement of marine cauſes, I nothing 'doubted of your Lordſhip's forwardneſs, in ſettling 'and eſtabliſhing of this lecture; but rather, when your 'Lordſhip ſhall ſee the noble and rare effects thereof, 'you will be heartily ſorry, that all this while it hath 'not been erected. As therefore our ſkill in naviga'tion hath hitherto been very much bettered and en'creaſed under the Admiralty of your Lordſhip; ſo, 'if this one thing be added thereunto, together with 'ſevere and ſtraight diſcipline, I doubt not but with 'God's good bleſſing, it will ſhortly grow to the higheſt 'pitch and top of all perfection; which, whenſoever it 'ſhall come to paſs, I aſſure myſelf it will turn to the in'finite wealth and honour of your country, to the proſ'perous diſcovery of many rich lands and territories of 'Heathens and Gentiles, as yet unknown; to the 'honeſt employment of many thouſands of our idle 'people, to the great comfort and rejoycing of our 'friends, and to the terror, daunting and confuſion of 'our foes, &c (19).' Among others who have expreſ'ſed their good liking to this public-ſpirited exhortation, the learned Dr Hakewill is not to be forgotten: who having recommended ſuch pains to be taken upon our author's works as they deſerve, to render them capable of being read in the moſt general manner, and intelligible to other nations no leſs than our own, 'proceeds alſo to revive and confirm the above recommendation to that nobleman, in the following words: —— 'For 'the better breeding, continuance, and increaſe of ex'pert pilots among us, it would doubtleſs be a good 'and profitable work, according to Mr Hukluyt's ho'neſt mention, in his epiſtle dedicatory to the Lord-'Admiral then being, if any who had the means, had 'likewiſe the mind to give allowance for the reading 'of a lecture of navigation in London, in imitation of 'the late Emperour Charles V (20)'. So proceeds to relate the benefits of that prince's foundation, and the learned lectures it produced, as beforementioned.

[C] *Such*

in his ſaid commendable collections and communications, as well in juſtice and honour to their anceſtors and contemporaries, as for the example or inſtigation of their hopeful poſterity. He alſo gave him a commiſſion to confer with the mayor and merchants of Briſtol, upon the naval expedition they were undertaking for Newfoundland, and incitements to impart to them ſuch uſeful intelligence and advertiſements, as did much encourage the ſame, and they gratefully acknowledged to the ſaid Secretary, in the beginning of the next year, 1583, would be ſignally inſtructive and beneficial to them [C]. It appears to be ſo early as this year laſt mentioned, that Hakluyt had ſome tempting offers made him, to accompany that accompliſhed and adventrous knight Sir Humphrey Gilbert, in his ſaid laſt voyage to Newfoundland; becauſe the learned and ingenious Stephanus Parmenius of Buda, who compoſed an heroic poem in praiſe of ſuch naval expeditions, and our brave adventurers in them (*w*), upon his departure to that country; wrote alſo, when he arrived at St. John's port there, a letter to Mr Hakluyt, in Auguſt the year aforeſaid, wherein he mentions his expectation that he would have followed them (*x*). But Providence had otherwiſe decreed it; for they loſt their lives in that voyage, while Hakluyt was elſewhere more ſafely engaged. For his excellent qualifications having recommended him to the patronage of Sir Edward Stafford, a deſcendant of that Duke of Buckingham, who fell a ſacrifice to the revenge of the puiſſant and over-bearing Cardinal Wolſey (*y*), Mr Hakluyt was received by him as his chaplain, or other principal attendant, when he went over, in the quality of her Majeſty's Ligier Ambaſſador, to France; whoſe inſtructions to negotiate with the Queen-Mother and the Duke of Alançon, we find were ſome time among the State Papers of Sir Francis Walſingham (*z*). Here our author bore him company for ſome years, during the dangerous and expenſive reſidence of that careful and diſcreet miniſter at the French court, in the Queen of England's ſervice (*a*). And as we are informed that Mr Hakluyt, then Maſter of Arts and Profeſſor of Divinity, had obtained in the month of May 1585, the royal mandate for the next prebend that ſhould become vacant; which happened, it ſeems, by the death of Dr John Gough, who had long enjoyed the ſame (*b*), to be one in the firſt ſtall in the church of Briſtol; and it appearing that Hakluyt was poſſeſſed of it in 1586 (*c*), we compute that he was elected or preferred to the ſame while he was now at Paris. Here he found opportunity of renewing his beloved reſearches, and approving himſelf a ſingular pattern of induſtry, no leſs abroad than at home; for being acquainted with ſome eminent Mathematicians, Coſmographers, and other Literati, in his own ſphere of ſtudy, he enquired after every thing that had any relation to, or affinity with, our Engliſh diſcoveries; and prevailed with ſome men to ſearch their libraries for the ſame: at laſt, having met with a choice narrative in manuſcript, containing *The Notable Hiſtory of Florida*, which had been diſcovered about twenty years before, by Captain Lou ionniere and other French adventurers, he procured the publication thereof, at his own expence this year laſt mentioned, in the language of that country, wherein they wrote it, by an able and ingenious Profeſſor of the Mathematics, named Martin Baſaniere (*d*); who has, in a dedication thereof to Sir Walter Ralegh, highly extolled his perſeverance and liberality upon the like enterprize, of his own late diſcovery, and conjunction to the Engliſh dominions, of the bordering country of Virginia. There are alſo ſome poetical encomiums prefixed to this book, in honour of Sir Walter Ralegh, and thoſe other diſcoverers, by Joannes Auratus, the French King's poet and interpreter; alſo by the ſaid Martin Baſaniere and Mr Hakluyt, as hath been partly before obſerved in another work (*e*), and may hereafter be more particularly in this. How grateful the publication of that hiſtory of Florida was to the ableſt miniſters of ſtate in France, and how warmly they expreſſed their reſentments the next year, when the impreſſion of it was well diſperſed

[C] *Such uſeful intelligence as they acknowledged to the Secretary, would be ſignally beneficial to them.*] One of the letters beforementioned, which was written by the ſaid Secretary of State to our author, encouraging him in the ſtudy of Coſmography, and the furthering of new diſcoveries, is as follows:

SIR FRANCIS WALSINGHAM to M. RICHARD HAKLUYT of *Chriſt Church* in OXFORD.

'I underſtand, as well by a letter I long ſince 'received from the Mayor of Briſtol, as by conference 'with Sir George Pekham, that you have endeavoured 'and given much light for the diſcovery of the Weſtern 'partes, yet unknowen: as your ſtudie in theſe things 'is very commendable, ſo I thanke you much for the 'ſame; wiſhing you do continue your travell in theſe, 'and like matters, which are like to turne, not only to 'your owne good in private, but to the public benefite 'of this realme. And ſo I bid you farewell. From 'the Court, the 11 of March 1582.

'Your living friend,

'FRANCIS WALSINGHAM (21).'

(21) Hakluyt's third volume of Voyages, folio, 1600, p. 181.

There is another letter written by Sir Francis, dated the ſame day and year with that above, from the Court, alſo then at Richmond, to Mr Thomas Aldworth, Merchant, and Mayor of Briſtol; which he ſent thither, by Mr Hakluyt and Mr Thomas Steventon to him; wherein he commends the Mayor's good inclinations towards the Weſtern diſcovery, under Sir Humfrey Gilbert, then preparing for the ſame; and therein refers himſelf further to Mr Hakluyt and Steventon, recommending the Mayor to their conferences thereupon (22). And in Mr Aldworth's anſwer ſent to Sir Francis, in the latter end of the ſame month, next year, he acknowledges ſome good lights given by Mr Hakluyt to the merchants, who were leaſt acquainted with the country, the enterprize, and proſpects of advantage in the ſame, whereof they were ſo well ſatisfied by his repreſentations, that they readily ſubſcribed towards the expence thereof, upwards of a thouſand marks. Beſides which, they agreed to fit out a ſhip of threeſcore, and a bark of forty tuns, to be left in the country, under the government of the ſaid Secretary's ſon-in-law, Captain Chriſtopher Carliſle: ſo entreating his further direction by letters to the company, becauſe they meant to proceed on the voyage by the end of April next, he concludes from Briſtol, on the 27th of March 1583 (23).

(22) Idem. p. 182.

(23) Ibid.

[D] *How*

diſperſed among them, that it was no ſooner brought to light, we refer to our author's own words [*D*]: and that his countrymen might want for no intelligence, directions, or admonitions, in the proſecution of their plantations and ſettlements in America, which the hiſtory of this diſcovery would afford, he forthwith tranſlated it into our own tongue. And this Engliſh tranſlation he made of that *Hiſtory of Florida*, is dedicated by himſelf alſo to Sir Walter Ralegh, in the beginning of May, 1587 [*E*]. But Hakluyt could not reſt here; for, ever deſirous of extending our knowledge into the American world, and exciting our ambition, like other Europeans, to avail ourſelves of it's undeflowered treaſures, and partake our ſhare of it, he publiſhed another hiſtory about the ſame time, when he tranſlated that of the French expedition to Florida, ſetting forth the diſcoveries, conqueſts, and ſettlements, which had been made in America by the active and adventrous Spaniards; that their example alſo might inflame us to emulation. For having with great care and diligence reviſed and corrected, he brought forth, the ſame year laſt mentioned, at Paris, a new edition of Peter Martyr's book, entitled, *De Orbe Novo* [*F*], illuſtrated with

[*D*] *How warmly the French miniſtry expreſſed their reſentments that it was no ſooner brought to light, we refer to our author's own words*] His own account of this acceptable publication is as follows.——'In the 'year 1587, when I had cauſed the four voyages of 'Ribault, Loudonniere, and Gourges, to Florida, at 'my own charges to be printed at Paris; which by the 'malice of ſome, too much affected to the Spaniſh 'Faction, had been above twenty years ſuppreſſed; as 'ſoon as that book came to the review of the reverend 'and prudent councellor Monſieur Harlae, the Lord-'Chief-Juſtice of France, and certain other of the wiſeſt 'judges; in great choler they aſked, Who had done ſuch 'intollerable wrong to the whole kingdom, as to have 'concealed that worthy work ſo long? proteſting fur-'ther that, if their Kings and the State had thoroughly 'followed that action, France had been freed of their 'long civil wars, and the variable humours of all ſorts 'of people might have had very ample and manifold 'occaſions of good and honeſt employment abroad, in 'that large and fruitful continent of the Weſt Indies '(24).'

(24) Mr Hakluyt's Dedication to Sir Robert Cecil, before his ſecond volume of Voyages, folio, 1599.

(25) See the Arrival, &c. of Mr Hawkins in Florida, in Hakluyt's Voyages, edit. folio, 1589. p. 543.

[*E*] *His tranſlation of that Hiſtory of Florida, is dedicated by himſelf to Sir Walter Ralegh, in the beginning of May*, 1587.] It appears that there have been two editions of Mr Hakluyt's tranſlation of this Hiſtory of Florida publiſhed by himſelf. The firſt, in a ſmaller ſize, was printed ſingly, in the ſame year it was tranſlated, as it ſeems, by an extract from it, of Mr. afterwards Sir John Hawkins his courteſy to the diſtreſſed Frenchmen upon that coaſt, which our author has quoted into the firſt folio edition of his voyages (25); and the ſecond impreſſion of that tranſlation, he reprinted in the laſt folio edition of them (26). It appears alſo in our tranſlator's dedication, *To the Right Honourable Sir Walter Ralegh*, &c. that the firſt edition of his ſaid tranſlation had a large alphabetical table annexed to the end of the work, which in the folio edition is omitted. And many other ſpecial points concerning the commodities of thoſe parts, he thinks needleſs to recount; becauſe, as he ſays, in the ſaid dedication, the ſame, with other things of chief importance, were lively drawn, at Sir Walter's no ſmall charges, in colours, by that ſkilful painter, James Morgues, or Le Moyne, ſome time living in the Black-Fryers, London; whom Admiral Chaſtillon had ſent with Loudonniere for that purpoſe. This French Painter alſo recorded in writing, many ſingular deſcriptions of Florida, not mentioned in this hiſtory of that country, which he afterwards publiſhed, together with the portraitures (27). And after Le Moyne's death, Loudoniere's hiſtory of Florida was tranſlated alſo from the French, together with Le Moyne's narrative, or deſcriptions of the religious ceremonies, habits, and manners of the people, into Latin; likewiſe his drawings of the inhabitants in their ſaid habits, &c. from the life, were elegantly engraved on copper plates, by Theodore de Bry, and all publiſhed by him, in one part of his coſtly collection of voyages; in the like manner as Sir Walter Ralegh's Diſcovery of Virginia is printed, and adorned, in the beginning of the ſame volume (28). In the reſpectful dedication aforeſaid of Mr Hakluyt to that great encourager, as well of his naval collections, as thoſe of De Bry, the gallant Sir Walter Ralegh; our author has not only very intelligently ſet forth his expenſive and aſſiduous proſecution of the Virginian diſcovery towards an happy eſtabliſhment, and pointed out ſuch uſeful precautions, as may be gathered from this of Florida, but alſo greatly commended him for permitting the fertility of thoſe regions to come to light, by his chriſtian and charitable endeavours. And indeed the generous zeal of that great man to enlighten our knowledge in the like diſcoveries, was ſuch, that he once purchaſed the narrative of a voyage made to the Red Sea by Stephen Gama, the Portugal Viceroy of the Eaſt Indies, written by Don John de Caſtro, which, as he ſays himſelf, he gave to Mr Hakluyt to publiſh (29); and, as we are informed by the publiſher o. our author's remains, who has given us an abridgment of it, had coſt Sir Walter no leſs than threeſcore pounds, beſides the coſt he was alſo at, to a perſon of learning and leiſure, to make a tranſlation thereof, and the pains he was himſelf at, in correcting the phraſe, and making marginal notes upon it with his own hand (30). We obſerve that Mr Hakluyt's dedication aforeſaid to Sir Walter Ralegh, of Loudonniere's Hiſtory of Florida, is dated from London, the firſt of May, 1587, which, however right in the time, we think may import ſome miſtake in the place, and that it ſhould rather have been dated then, from Paris, or ſome other part of France, as may appear, no leſs by other circumſtances, than by the number of years which he mentions himſelf, as we ſhall ſee above in the text, to have continued there. Another Hiſtory of Florida, we ſhall hereafter ſpeak of, which was alſo tranſlated by our indefatigable author, from the Portugueze, and publiſhed in the next reign.

(26) Entituled, A Notable Hiſtorie, containing four voyages, made by certain French Captains into Florida, &c. tranſlated out of French into Engliſh, by Mr Richard Hakluyt. In his Voyages, Vol. III. folio, 1600. p. 301.

(27) Idem, in his Dedication to Sir Walter Ralegh.

(28) Vide Secunda Pars Americæ, apud Theodore de Bry, folio, 1591. being the next year, after the ſaid de Bry publiſhed his curious Engliſh edition in folio, at Francfort, of a brief and true Report of the new found land of Virginia, by T. Hariot; with the Manners and Cuſtoms of the People, tranſlated from the Latin by Mr Hakluyt, and the picts of their faſhions from the drawings of Mr John White: and others of the antient picts (which John Speed has copied in wooden prints) all dedicated by de Bry to Sir Walter Ralegh, in folio, 1590.

[*F*] *He brought forth at Paris, a new edition of Peter Martyr's book*, De Orbe Novo.] This book is entitled, De Orbe Novo Petri Martyris Anglerii Mediolanenſis, *Protonotarii, et* Caroli *quinti ſenatoris, Decades Octo, diligenti temporum Obſervatione et utiliſſimis Annotationibus illuſtratæ, ſuoque nitori reſtitutæ. Labore et Induſtria* Richardi Hakluyti, Oxonienſis, Angli *Additus eſt, in uſum Lectoris, accuratus totius Operis Index. Pariſ* 8vo. 1587. There is prefixed, a copious dedication in Latin, as was ſaid, in about nine pages, to *The Illuſtrious and Magnanimous Sir Walter Raiegh*, &c. as he ſtiles him; wherein our editor has juſtly celebrated his memorable and much applauded enterprize upon Virginia; his ſettlement of colonies there; his liberal encouragement of navigators, officers, and ſurveyors thereof; ſuch as the learned Mr Thomas Harriot, and others; with many commendable exhortations, both from argument and example, to proceed in that, and ſuch like heroic undertakings, for the honour, advantage, and aggrandizement of his country; as may be more particularly read in the addreſs itſelf. This dedication is dated from Paris, on the 8th of the calends of March in the year aforeſaid. There is printed in this edition, beſides his brief marginal notes, to illuminate the text, or point out the chief heads of the hiſtory, and a commodious index of the contents, at the end, alſo a map at the beginning, from a copper ſculpture of New England and America, having the Engliſh poſſeſſions engraved, or marked thereupon. And the ſaid map is inſcribed to our author Mr Hakluyt, as an eminent promoter of ſuch coſmographical diſcoveries and plantations. This ſculpture is alſo dated from Paris, on the calends, or firſt of May, in the ſame year. And that this work might be rendered more generally exemplary to his countrymen, it was, through his recommendation, near twenty years after, in the next reign, when ſuch adventures, eſpecially to Virginia, were in ſome danger of ſtagnation, tranſlated into Engliſh. This tranſlation bears the title of, *The Hiſtorie of the Weſt-Indies: Containing the Actes and Adventures of the Spaniards, which*

(30) Purchas's Pilgrims, Part II. fol. 1122.

with marginal notes, a commodious index, a map of New-England and America, and a copious dedication, alſo to Sir Walter Ralegh. And the ſaid book, written by Peter Martyr, he afterwards cauſed likewiſe to be tranſlated into Engliſh. But this induſtrious revival, and liberal diſplay of the brave exploits of the Spaniards and other foreigners, in this new-found world, ſerved only, with many, to confirm that character wherewith the Engliſh nation had been aſperſed by ſome among them, of indolence and negligence, in ſuch like glorious and gainful acquiſitions; and that we, who had greater advantages than other nations for ſuch enterprizes, made the leaſt uſe of them. For not only in ſociety, but in his ſtudy among their books, he found us more durably branded therewith, as he ſays himſelf (*f*); and that, as well in their compoſitions as their converſation, he found other countries marvellouſly extolled for their notable diſcoveries and atchievements by ſea, but the Engliſh of all others, for their ſluggiſh ſecurity, and continual neglect of the like attempts, eſpecially in ſo long and happy a time of peace, either ignominiouſly reported of [G], or exceedingly condemned; with whoſe ſingular opportunities, if ſome other

(*f*) In his Dedication to Sir Francis Walſingham, of the firſt folio edition of his Voyages, as before.

which have conquered and peopled thoſe Countries; inriched with varietie of pleaſant Relation, of the Manners, Ceremonies, Lawes, Governments, and Warres of the Indians. Publiſhed in Latin by Mr Hakluyt, and tranſlated into Engliſh by M. Lok, Gent. London, printed for Andrew Hebb, &c (31). 'This 'work, ſays that tranſlator, of the Decades, written 'by Peter Martyr, a Millanoiſe, of Angleria, intituled '*The Hiſtory of the Newe World*, containeth the firſt 'diſcovery of the Weſt Indies, together with the ſub'jection and conqueſt thereof. Wherein we are chiefly 'to conſider the induſtry and travails of the Spaniarde, 'their exceeding charge in furniſhing ſo many ſhips for 'this intended expedition; their continual ſupplies to 'further their attempts, and their active and undaunted 'ſpirits in executing matters of that quality and difficul'ty; and laſtly their conſtant reſolution of plantation: 'all which may be exemplary unto us, to perform the 'like in our Virginia; which being once thoroughly 'planted and inhabited with our people, may return as 'great benefit to our nation in another kind, as the 'Indies do unto the Spaniard. For although it yield 'not gold; yet is it a fruitful pleaſant country, re'pleniſhed with all good things, neceſſary for the life 'of man, if they be induſtrious who inhabit it. But 'we leave this to them who have authoritie and good 'purſes to further a matter of ſuch important con'ſequence, and return to our purpoſe. Beſides the 'firſt diſcoverie of this countrie of the Weſt-Indies, 'this hiſtory likewiſe declareth the conqueſt and ſub'jection of the people, the manner how, and what 'myriades of millions of poor naked Indians were 'ſlaughtered and ſubdued through the conquering 'ſword, and the number of the Spaniards that at'tempted and performed the ſame. Wherein the 'chief men of note, and principal commanders have 'their particular names ſet down, and Chriſtopher 'Columbus, Fernando Cortes, Fern. Magellanus, and 'the reſt, whom the author hath expreſsly men'tioned, to their eternal commendation; and for the 'incitement and provocation of the living to the like 'honourable and high attempts. Here alſo are the 'people deſcribed, by their ſeveral nations, particular 'rites, ceremonies and cuſtoms; by their habit and at'tire, either in war or in peace; alſo by their reli'gion, ſacrifices, and other demeanour and geſtures 'whatſoever: ſo that to read the particulars diſcourſed 'there at large, which I briefly mention here, will ſo 'allure the reader, that nothing may ſeem more plea'ſing and delightful. For as in faſhions of apparell, 'and ordinary diet, we like extraordinary variety and 'change, though both tranſgreſs the rules of modeſtie 'and ſobrietie, yet either of theſe pleaſe the appetite 'and intemperate deſires: ſo doth varietie of hiſtorie 'yield more pleaſure and contentment; which, being 'a thing of more indifferency, and as ſtrong a motive 'in another kind, cannot but affect the ſenſes, and in'tellectual faculties with far greater delight. Hereunto 'he addeth the ſpeciall diſcription of the ſeveral coun'tries, with their particular ſituation, bounds, abut'ments, and quality of ſoil; together with their moun'tains, hills, rivers, meddows, paſtures, woods, fo'reſt, vallies, plains and champions, and what 'goodlie cities and fortified towns are there erec'ted, with the matter and manner of their archi'tecture and building, with all the ornament and 'elegancie thereof; their huge palaces, and houſes 'of pleaſure, far exceeding many princes courts; 'their orchards, gardens, and other incloſures, 'for wild beaſts and fowls of divers kinds, beau'tified with wonderful art and curioſity; their 'mightie lakes, whereof ſome are little inferior to the 'Euxine ſea, abounding with excellent fiſh, and what'ſoever elſe the divine bountie might beſtow upon a 'bleſſed countrie, to enrich them with all earthly fe'licity. And laſtly, he largely diſcribeth what thoſe 'mountains, hills, vallies, and champions, rivers and 'lakes ingender, and bring forth; what minerals, as 'gold and ſilver, and what pearls and precious ſtones; 'what wild beaſts, prodigious and ſtrange; what 'fowl and fiſh; flies and worms of the earth, and 'other noyſome things are bred there; and of the na'ture and qualitie of all theſe. All which, this hiſto'rian, moſt learnedly, in a more large and ample 'manner diſcribeth, than this ſhort narration can re'port; which, leaſt it exceed the juſt meaſure of due 'limits and bounds, I willingly perſuade the reader to 'have recourſe unto the author himſelf; from whence 'he ſhall receive a more perfect ſatisfaction touching 'particulars, than this generality doth include, &c '(32).' About ſome five or ſix years after, there was another edition of this tranſlation publiſhed, *with* ſome variation in the title; wherein the author's name is mentioned, with other particulars, more expreſsly; and probably by the direction of Mr Hakluyt. This edition appears under the title of, *De Orbe Novo, or The Hiſtorie of the Weſt-Indies*, &c. *Compriſed in eight Decades; written by* Peter Martyr, *a* Millanoiſe *of* Angleria; *chief Secretary to the Emperour* Charles V. *and of his Privy Council: Whereof three have been formerlie tranſlated into Engliſh by* R. Eden; *whereunto the other five are newly added, by the induſtrie and painful Travaill of* M. Lok, *Gent* Lond. *Printed for* Tho. Adam, *Quarto*, 1612. Before this Engliſh edition is prefixed a dedication by the ſaid tranſlator Mr Lok, in Latin, to Sir Julius Cæſar, Chancellor of the Exchequer, and afterwards Maſter of the Rolls; wherein, he informs his ſaid patron, that this tranſlation was undertaken and performed, by the perſuaſion and encouragement of the accompliſhed Mr Richard Hakluyt, who had ſo well deſerved of the publick. There was another impreſſion of this Engliſh tranſlation publiſhed in the beginning of King Charles the Firſt his reign, about the year 1628.

(31) In 4to. without date.

(32) Mr Lok's Preface to his Tranſlation of Peter Martyr's Hiſt. of the Weſt Indies, 4to. no date.

[G] *The Engliſh, of all others, for their ſluggiſh ſecurity, &c. ignominiouſly reported of*] Here Mr Hakluyt produces the authority upon which theſe reflexions are partly grounded, of a noted French writer; where ſpeaking in commendation of the Rhodians, who being iſlanders, like ourſelves, were excellent in navigation; he thereupon wonders much that the Engliſh made no greater figure than they had done, or were not more famed in naval exploits. This made that French author ſometimes inquiſitive, what it might be, that could hinder the Engliſh, who had wit, means, and courage enough, from riſing to great reputation among all chriſtian countries, and from making themſelves more conſiderable, or accounted of, upon the ſea; ſince that element is, and ſhould be more natural to them than other people; who ſhould ſubmit and be inferior to them, in the building, fitting out, and conduct of their navies; as he had oftentimes obſerved in many places among them: for this is the ſenſe of his own words, which are; '*Ce qui m'a fait autresfois rechercher les 'occaſions, qui empeſchent que les Anglois, qui ont d'eſ'prit, de moyens, et valeur aſſez, pour ſaquerir un 'grand honneur parmi tous les Chreſtiens, ne ſe font 'plus valoir ſur l'element, qui leur eſt, et doit eſtre 'plus naturel qu'à autres peuples; qui leur doivent 'ceder en la ſtructure, accommodement, et police de Na'vires:*

other people, our neighbours, had been bleſſed; their proteſtations were frequent and vehement, that they would far otherwiſe have uſed them (*g*). Such like reflections made Hakluyt ſoon recollect, that while he was paying honour to the writings and actions of worthy men abroad, he might be charged himſelf with neglect, in forbearing longer to produce and exemplify that which was juſtly due to thoſe at home. Inſomuch, that after his abode now in France five years with Sir Edward Stafford, returning into England in company with the accompliſhed Lady Sheffield, ſiſter to the Lord Admiral Howard (*b*), in the latter end of 1588, that memorable year wherein his countrymen ſo bravely defeated one of the great enterprizes which the Spaniards themſelves accounted invincible, he grew impatient to ſet forth the naval hiſtory of England more expreſsly and extenſively than it had ever yet appeared. And ſo intenſe were his zeal and application herein, that however incompliable he found ſome contracted and tenacious tempers, he obtained the communications of many other perſons of the greateſt diſtinction and experience in maritime knowledge. And to give farther intereſt, countenance, and credit, to his ſaid laudable undertaking, Sir Walter Ralegh choſe him, among other gentlemen and merchants in the latter end of the year aforeſaid, one of the corporation of counſellors, aſſiſtants, and adventurers, to whom he aſſigned his patent for the proſecution of diſcoveries and plantations in America (*i*). And now he applied himſelf ſo cloſely to amaſs, tranſlate, and digeſt, all ſuch voyages, journals, narratives, patents, letters, inſtructions, &c. as any way concerned the Engliſh navigations, which he could procure either in print or manuſcript; that in the latter end of the next year, 1589, he publiſhed his ſaid collections in one folio volume [*H*], with a dedication before it to Sir Francis Walſingham, who was a principal patron

(*g*) Idem.

(*b*) Ibid. Alſo his Dedication to the ſaid Lord Admiral, Charles Earl of Nottingham, before the firſt volume of his laſt edition of Voyages, &c. folio, 1598.

(*i*) See Sir Walter Ralegh's Aſſignment to divers gentlemen and merchants of London, for the inhabiting and planting of our people in Virginia; dat. 7 Mar. 31 Eliæ. in Hakluyt's firſt folio edit. p. 815. And the Life of Sir W. Ralegh, folio, as before, p. 48, 49.

' *vires: comme j'ay veu en pluſieurs endroits parmi eux* ' (33).' Thus Hakluyt, both hearing and reading the obloquy of our nation, but finding few of our own people inclined, or able to reply herein, and ſeeing none forward in recommending to the world, the induſtrious labours, and painful travels of our countrymen; that he might prevent the diſperſion of ſuch reproaches, he determined, upon his return from France, to undertake the burden of that work, wherein all others pretended either ignorance, lack of leiſure, or ſufficient argument: whereas, ſays he, to ſpeak truly, the auge toil, and ſmall profit, were the chief cauſes of their refuſal He calls the work a burden, becauſe theſe voyages lay ſo diſperſed, and ſo hidden in the hands of huckſters, that he wonders at himſelf, to ſee how he was able to endure he delays, ſcruples, and backwardneſs of many, from whom he was to receive his originals (34). But paſſing over the difficulties and diſcouragements, which he at laſt ſurmounted, he proceeds, in confutation of ſuch reflections, to make it appear wherein our countrymen have been moſt ſignally worthy of praiſe, for their many notable and extraordinary adventures and expeditions, performed with the greateſt intrepidity, expertneſs, and ſucceſs, to the great increaſe of experience, profit and renown, in their voyages of diſcovery, traffic and alliance with many kingdoms and regions, moſt diſtant and divided. ' It cannot be ' denied, ſays he, but as, in all former ages, they have ' been men full of activity, ſtirrers abroad, and ſearchers of the remote parts of the world; ſo in this ' moſt famous and peerleſs government of her moſt excellent Majeſty, her ſubjects, through the ſpecial aſſiſtance and bleſſing of God, in ſearching the moſt ' oppoſite corners and quarters of the world, and to ſpeak plainly, in compaſſing the vaſt globe of the ' earth, more than once, have excelled all the nations, ' and people of the earth. For which of the Kings of ' this land, before her Majeſty, had their banners ever ' ſeen in the Caſpian Sea? which of them hath ever ' dealt with the Emperor of Perſia, as her Majeſty hath ' done, and obtained for her merchants, large and loving priviledges? who ever ſaw, before this regimen, ' an Engliſh Leiger in the ſtately porch of the Grand ' Signor at Conſtantinople? whoever found Engliſh ' Conſuls and Agents at Tripolis in Syria, at Aleppo, ' at Babylon, at Balſara, and which is more, who ever ' heard of Engliſhmen at Goa, before now? what Engliſh ' ſhips did heretofore ever anchor in the mighty river of ' Plate? paſs and repaſs the unpaſſable, in former opinion, Straight of Magellan; range along the coaſt of ' Chili, Peru, and all the back ſide of Nova Hiſpania, ' further than any Chriſtian ever paſſed; travers the ' mighty breadth of the South Sea; land upon the Luzones, in deſpight of the enemy: enter into alliance, ' amitie, and traffic, with the Princes of the Moluccaes, and the Iſle of Java; double the famous cape ' of Bona Speranza; arrive at the Iſle of Santa Helena; ' and laſt of all, return home moſt richly laden with ' the commodities of China, as the ſubjects of this new ' flouriſhing monarchy hath done (35)?' and in theſe ſhining courſes they continued to exert themſelves, till the end of that renowned reign; ſtill enlarging their honour and glory, by their naval exploits; whether in the diſcovery or inveſtigation of unknown countries, in the conqueſt of their enemies, or inlargement of commerce with their friends; as may moſt evidently appear in the voyages ſet forth by Maſter Hakluyt; wherefore a Dutch author, who in the former part of the next reign, had a juſt knowledge of their maritime merits, has in one of his nautical diſcourſes given them a character equal thereunto; where he delivers it for an unconteſted truth, That the Engliſh, at that time, ſurpaſſed all nations, even the Hollanders themſelves, for their induſtry and ſkill in navigation: *Hoc certum eſt*, ſays that author (36), *omnibus bodiè gentibus, navigandi, induſtria et peritia, ſuperiores eſſe Anglos; et poſt Anglos, Hollandos.*

(36) Barth. Keckerman.

[*H*] *In the latter end of the next year*, 1589, *he publiſhed his ſaid collections in one folio volume, &c.*] This work is intituled, *The Principall Navigations, Voyages, and Diſcoveries of the Engliſh Nation, made by Sea, or over Land, to the moſt and furtheſt diſtant Quarters of the Earth, at any time within the Compaſs of theſe Fifteen Hundred Years: Divided into three ſeveral Parts, according to the Poſitions of the Regions whereunto they were directed, &c. Imprinted at London by Geo. Biſhop and Ralph Newberrie, Deputies to Chr. Barker, Printer to the Queene's moſt excellent Majeſty.* Folio 1589 It is dedicated by the author, as we have before obſerved, To the Right Honourable Sir Francis Walſingham, Knight, Principal Secretary to her Majeſtie, Chancellor to the Duchie of Lancaſter, and one of her Majeſtie's moſt Honourable Privy-Councell, and dated from London, 17 November (in the year aforeſaid) After the dedication, from which we have receited ſome uſeful particular, and in which it appears that the whole work had paſſed the cenſure and approbation of that learned phyſician, Dr James, according to the deſire and direction of Sir Francis, there is a very diſtinct and articulate preface, wherein we are made acquainted with the author's method, or diſpoſition, and digeſtion of the whole work, according to the diviſion propoſed in his title: ſhewing how he has marſhalled all our voyages of greateſt importance, 1. To the South, and Southern parts of the world. 2. The North and North-Eaſtern voyages. 3. And laſtly, The Weſtern navigations, which have been more latterly made, for the diſcovery and plantation of the New, and American World, &c. Under all which heads he inſtances ſome of our capital expeditions. Whereunto is added, the laſt renowned voyage round the globe of the earth, by Mr Thomas Cavendiſh; which being the more circumſtantial, renders the want of Sir Francis Drake's, in this edition, the leſs neceſſary; wherein though our author took extraordinary pains to correct, digeſt, and adapt it to his work, yet was he diſſuaded, contrary to his expectation, from inſerting the ſame, leſt it might anticipate the undertak-

ing

patron and promoter of the ſaid publication; from which epiſtle we have received ſome good intelligence and directions in this article relating to the author himſelf, as may be perceived in our frequent references thereto. In 1590, when the fifth voyage was undertaken to Virginia by three ſhips, under Governor White, for relief of the colony there; and Sir Walter Ralegh had, at the requeſt of Mr Hakluyt and the other aſſignees, ſent a licence from the Queen, for thoſe under the governor, with orders to proceed, notwithſtanding the embargo which was then laid upon all Engliſh ſhipping, and other private oppoſitions; the maſters and mariners under the governor, by excurſions after Spaniſh prizes, loſing their ſeaſon, returned, without ſeeing the planters, and not without ſome loſſes ſuſtained by ſtorms; as appears in the Governor's letter afterwards to Mr Hakluyt, dated the fourth of February, 1593 (*k*); but the greateſt loſs of all was, a Spaniſh Mexican prize, which the Little John, their Vice-Admiral, had rendered ſo leaky and diſabled, by great ſhot, about the Organes, that, ſinking before they could board, to clear it, they loſt fifteen pipes of ſilver, by the conqueſt they had too effectually made thereof; as appears in the Governor's journal of that voyage, printed alſo by our author with his letter aforeſaid (*l*). Though about this time, or the year 1594, as we compute, he entered into the ſtate of matrimony, it diverted not the continuation of his collections; the labour and

(*k*) Hakluyt's Voyages, Vol. III. p. 287.

(*l*) Idem, p. 29.

ing of another perſon, to draw the ſervices of that Knight into one volume.

From the ſaid preface, as it was never afterwards reprinted, we may the rather alſo here remember, that our author gratefully acknowledges from whoſe friendly intereſt, communications, and encouragement, this collection was chiefly compiled. For, as he accounted thoſe unworthy of future, who are unthankful for former favours, ſo, ſays he, 'I 'ſhould think it groſs ingratitude, to forget, and wil-'full maliciouſneſs not to confeſs that man, whoſe 'only name doth carry with it ſufficient eſtimation and 'love, and that is, Maſter Edward Dier;' of whom he further ſays thus much, in few words; That, 'both myſelf, and my intentions herein, by his friendly 'means, have been made known to thoſe, who, in 'in ſundry particulars, have much ſteaded me: more 'eſpecially in my firſt part, Mr Richard Staper, Mer-'chant of London, hath furniſhed me with divers 'things touching the trade of Turkie, and other places 'in the Eaſt. Maſter William Burrough, Clerk of her 'Majeſtie's Navy, and Maſter Anthony Jenkinſon, 'both gentlemen of great experience and obſervation 'in the north regions, have much pleaſured me in the 'ſecond part: in the third and laſt, beſides my own 'extream travaile, in the hiſtories of the Spaniards, 'my chief light hath been received from Sir John 'Hawkins, Sir Walter Ralegh, and my kinſman, Ma-'ſter Richard Hakluyt, of the Middle-Temple (37).'

(37) Hakluyt's Dedication to Sir F. Walſingham, as above.

And whereas, in this hiſtory, mention is often made of many beaſts, birds, fiſhes, ſerpents, plants, fruits, herbs, roots, apparel, armour, boats, and ſuch other rare and ſtrange curioſities, which wiſe men take great pleaſure to read of, but more to ſee, our author was ſingularly delighted in beholding them gathered together, at no ſmall coſt, and preſerved with no little diligence, in the excellent cabinets of his worſhipful and learned friends, Mr Richard Garth, one of the Clerks of the Petty-Bag, and Mr William Cope, Gentleman-Uſher to the Lord-Treaſurer Burghley

As for geeographical and hydrographical tables, he contented himſelf with inſerting into the work, one of the beſt general maps of the world only, till the publiſhing of a very large and moſt exact terreſtrial globe, collected aad reformed according to the neweſt, moſt ſecret, and late diſcoveries, both Spaniſh, Portugal and Engliſh, compoſed by Mr Emmery Mollineux of Lambeth, a rare gentleman in his profeſſion; being therein, for divers years, ſupported, by the purſe and liberality of that worſhipful Merchant. Mr William Sanderſon: ſo wiſhing the reader's profit and pleaſure as great as his labour and pains had been, our author concludes the ſaid preface.

(38) Vide Viaggio Atorno il Mondo, fatta & deſcritto per M. Ant. Pigafetta, Vincentino. Caval. de Rhodi, in primo volume & terza editione Delle Navigationi & Viaggi raccolto gia da M. Gio. Batt. Ramuſio, &c. fol. Venet. 1563. p. 352, b. Alſo an Abſtract thereof in Eden and Willes's Hiſt. of Trav. &c. 4to. 1577. p. 432.

After that preface, from whence theſe extracts are produced, we have ſome poetical encomiums upon the author and his labours, in Greek, by Mr Hugh Broughton; in Italian, by Marc. Antonio Pigafetta, who was the ſon, or other relation, of that famous voyager ſo named, with Magellan round the world (38); and in Latin, by Mr Camden and Philip Jones. In the whole collection, the voyages, travels, journals, &c. are between ninety and one hundred; and the records, patents, privileges, letters, embaſſies, commiſſions, inſtructions, orders, rules, edicts, paſſports, notes of commodities, direction, enquiries, &c. are about one hundred and three-ſcore, contained in 825 pages. Beſides the dedication and preface beforementioned, there are alſo in this volume ſome few voyages, inſtruments, and other things, which, partly to avoid being too voluminous, were not revived in his next and more ample edition; particularly the Itinerary of Sir John Mandeville, the greateſt Aſian traveller that had been in Europe; which he dedicated to King Edward the Third, and of which we have here a more correct impreſſion in Latin than had hitherto been publiſhed (39); however ſome writers have ſpoken very diſpairingly of ever ſeeing a genuine and uncorrupted edition thereof, in any language, though we have many old manuſcripts of this author, at Oxford, Cambridge, and in other libraries. Some letters alſo in this volume, and that aſſignment of Sir Walter Ralegh above cited, are omitted in the next edition; and in that is likewiſe wanting, an accurate and uſeful index, wherewith this is ſupplied. But his rules of conduct in both, are more explicit, ſatisfactory, and hiſtorical, than in moſt other ſucceeding collections of voyages. He records the teſtimonies of his authors word for word, in whatever language written; refers to the pages of their books, and ſubjoins his own tranſlations, or the ſubſtance of their narratives, in Engliſh; has aſcribed each voyage to the adventurer who performed and the author who compiled it, that every man may anſwer for himſelf: has confined his collections to the navigations of our own nation, and annexes the evidence of ſtrangers to confirm or enlarge the Engliſh accounts of them; but for ſeveral adventures and tranſactions of his countrymen in foreign nations, he could only be beholden to the relations of foreigners, from whom, concerning ſeveral of our antient travellers, he received more intelligence, in ſome reſpects, than any of our own hiſtorians, except Bale, Fox, and Eden. He has left out little ſhort trading voyages to neighbouring and European ports; and alſo many of warfare and hoſtility; as that againſt the Spaniſh armada, and the Portugal expedition; thoſe of Sir Francis Drake upon the bay of Cadiz, and near the iſlands, upon the huge Eaſt Indian carrack, which firſt diſcharged Molucca ſpices on the Engliſh ſhores: ſuch as theſe were at preſent intermitted, as what being recent, might at any time hereafter be incorporated, but at preſent, beſides his preſcribed limits, and not of ſcope or extention enough to advance our experience in Coſmography and Traffic, or engage our curioſity in diſcoveries and plantations, the chief ſubject and drift of his preſent plan; but he afterwards enlarged and enriched it with thoſe particulars, in the next edition, as the invaſions of our enemies, and our repulſe of them, gave occaſion: for then, perceiving that ſuch examples, as would train his countrymen to the naval arts of domeſtic defence, might ſometimes concern us more nearly than thoſe which would make us rovers after diſtant and extraneous acquiſitions, he therefore very acceptably and inſtructively recorded all ſuch naval engagements of moment as intermediately occurred in his ſaid latter impreſſion; wherein it appears more to the honour and renown of the Engliſh nation, than in any other work, that we were then become more expert, formidable, and famous, by our warlike exploits at ſea, than any of our neighbours could, by the like heroic and victorious atchievements, boaſt to have rendered themſelves.

(39) There was an old Latin edit. before printed, intituled Joan. de Mandeville Itinerarium a Terra Angliæ, in partes Ieroſolymitanas, & ulteriores tranſmarinas, ab autore primum Gallice conſcriptum, anno 1355. & poſtea Latine verſum, 4to. in the time of King Henry VIII. Alſo an edition in Italian, 12mo. 1567, &c. And laſtly, one in old Engliſh, publiſhed from a MS. in the Cotton library, by Mr David Caſley, 8vo. 1725. in which may be ſeen ſome account of the author; alſo in Leland, Bale, and Pitts; Gerard Mercator, Abr. Ortelius, and J. Weever's Funeral Monuments.

[*l*] *Whereof*

and expence of many years, could not abate his vigorous endeavours ſtill to go on, not only in reſcuing our naval antiquities from the wreck of oblivion, and preſerving the memorable enterprizes of our modern navigators from the like hazard; but in ſuch manner, as to adjuſt the diſplaced and ſcattered limbs, as well of antient and late voyages by ſea as travels by land, and traffic of merchandize by both, into one regular body; reſtoring each divided and diſlocated member to it's natural order and ſymmetry; and, as he ſays himſelf, by the help of Geography and Chronology, which he calls the ſun and moon, or right and left eye of all hiſtory, referring each particular relation to it's due time and place (*m*). To accompliſh this arduous taſk, what reſtleſs nights and painful days he endured; how many long and chargeable journeys he travelled; how many famous libraries he ſearched; what variety of antient and modern writers peruſed; what a number of records, patents, privileges, letters, and other manuſcript vouchers, he tranſcribed and revived from their graves; what variety of acquaintance he contracted; what monies diſburſed; and yet what fair opportunities of private profit, preferment, and eaſe, he neglected, though his readers could hardly imagine, he daily found and felt, as he ſays himſelf, and ſome of his intimate acquaintance could ſufficiently teſtify (*n*): yet no bodily toil, perplexity of mind, or detriment to his ſubſtance, was inſuperable to him, or could diſcourage his indefatigable perſeverance: *The honour and benefit of this Commonwealth*, ſays he, *hath made all difficulties ſeem eaſy, all pains and induſtry pleaſant, all expences of light value and moment to me* (*o*). With this undiſcourageable ſpirit he went on, 'till his Collection of Engliſh Voyages laſt mentioned was augmented into three folio volumes; whereof he publiſhed the firſt in 1598, and the others in the two enſuing years ſucceſſively [*I*]. The firſt

(*m*) Hakluyt's pref. to the laſt edit. of his Voyages, Vol. I.

(*n*) Idem.

(*o*) Ibid.

[*I*] *Whereof he publiſhed the firſt in* 1598, *and the others in the two enſuing years, &c.*] In this laſt edition of our author's collections, though the former part of the title is much like that of the foregoing edition, yet the contents or diſpoſition of the parts are different, being titled, *The Principal Navigations, Voyages, Traffiques, and Diſcoveries, of the Engliſh Nation, made by ſea or over-land, to the remote and furtheſt diſtant quarters of the Earth, at any time within the compaſs of theſe* 1500 *years; divided into three volumes, &c. The firſt, containing the worthy Diſcoveries, &c. of the Engliſh towards the North and North-Eaſt, by ſea, &c. with many notable Teſtimonies of the antient foreign Trade, the warlike and other ſhipping of this Realm: alſo a brief Commentary of the true State of Iceland and the Northern Seas, with the memorable defeat of the Spaniſh Armada in* 1588, *and the victory at Cadiz,* 1596 *. By* Richard Hakluyt *Maſter of Arts, ſometimes Student of Chriſt-Church in Oxford. Imprinted folio,* 1598, *in* 619 *pages.*

* For theſe two, though they ought to have been placed among the Southern Voyages, yet to ſatisfy the importunity of friends, who impatiently deſired them, our author ſays, in his preface, that he ſomewhat ſtrained his propoſed method.

Herewith is uſually bound, *The ſecond volume of the principal Navigations, &c. of the Engliſh Nation, &c. to the South and South-Eaſt parts of the World, within the compaſs of theſe* 1600 *years: divided into two parts; the firſt, through and within the Straite of Gibraltar, to Algier, &c. almoſt to China the ſecond, without the Straite of Gibraltar, to the Iſlands of Azores, &c. By* R. Hakluyt, folio, 1599, in 312 pages, the firſt part; and 204 the laſt. Beſides dedications, preface, and tables of contents.

The third and laſt volume of the Voyages, &c. of the Engliſh Nation, and in ſome few places where they have not been of Strangers performed, within and before the time of theſe 100 *years, to all parts of the new found World of America, or the Weſt-Indies, from* 73 *degrees of northerly, to* 57 *of ſouthern latitude, &c. together with the two renowned and proſperous Voyages of Sir Francis Drake and Mr Tho. Candiſh round the whole Earth, &c.* by R. Hakluyt, *&c.* and printed, as the others, by G. Biſhop, &c. folio, 1600, in 868 pages, beſides the dedication and tables.

The Poems to the author, before the laſt edition, are reprinted before the firſt volume of this, all but one copy, and a diſtich, writ by P. Jones, which are left out for two copies by Richard Mulcaſter, who was Maſter of Paul's ſchool. Some copies of the firſt volume appear dated alſo the next year after it was printed; not that the volume was then reprinted, but only the title page; in which all notice of the Cadiz voyage was left out, and the voyage itſelf, at the end of the volume, cancelled in moſt of the copies, which then remained unſold, leſt offence ſhould be given by ſuch an honourable memorial of the Earl of Eſſex's moſt proſperous expedition, at the time when he was fallen under the Queen's unpardonable diſpleaſure. But at laſt an uncaſtrated copy being found, in the library of Auditor Jett, as I remember, about the year 1723, this voyage was thence reprinted, and has made many imperfect copies complete. Moreover, in the dedication of the firſt volume to the Lord Admiral Howard, dated Lond. 7 Octob. 1598. our author acknowledges himſelf much bound to the Biſhop of Chicheſter (40), for procuring him the liberty of tranſcribing ſome curious manuſcripts out of the Lord Lumley's ſtately library (41); which, as Mercator and Ortelius informed him, they had many years inquired after in vain. He alſo mentions a little medicinal manuſcript which he deſigned to have printed, for the relief of thoſe diſtempers to which travellers are ſubject in hot countries (42); but declined it, upon the admonition he received from Dr W. Gilbert, that eminent Phyſician, who wrote ſo learnedly upon the loadſtone, how defectively the ſaid manuſcript was written. Each of the two laſt volumes, as we ſaid, are dedicated to Sir Robert Cecil, Secretary of State, Maſter of the Court of Wards, and one of her Majeſty's Privy-Council: the former, on the 24th of October, 1599; the latter, on the 1ſt of September, 1600; and we have before quoted as much as may be thought neceſſary in this article out of them. The whole three volumes contain the hiſtorical accounts and particular narratives of near two hundred and twenty voyages, beſides above three hundred and ſeventy patents, privileges, inſtructions, orders, letters, paſſports, inquiries, &c. of princes and their miniſters, admirals, officers, merchants, and others, of power or experience; which are a great credit to the collection, and, as more preferable, for the greater regard and authority they are of, than if prefaces or introductions had been prefixed to every voyage, by the hand of an editor, though it were ſuch a one as Ramuſio or Hakluyt himſelf: ſo may they ſerve as forms of precedent, in any ſuch enterprizes or engagements as ſhall be hereafter appointed, or undertaken: For this edition is built upon a very comprehenſive plan, and may, at all times, be no leſs ſerviceable many ways, than reputable to the nation; as it is a magazine, ſo richly ſtored with ſome of the moſt adventrous atchievements of our anceſtors, that were of the moſt national concern, atteſted by eye-witneſſes, as well as other moſt credible and authentic vouchers. Containing, not only ſuch examples as may animate their poſterity to diſpiſe all hazard and hardſhip, bloodſhed and death itſelf, for a knowledge of the uncultivated world, and the honour that may be reaped in it, to their own advantage, and the aggrandizement of their country: not only ſuch examples, as may ſhame the gallants, who make it their heigheſt breeding and accompliſhments to travel abroad, for ſuch faſhions and corruptions in foreign countries, as may poiſon them with prejudice againſt their own; not only ſuch mercantile voyages, as may be further improved to our enrichment by traffic, and the importation of beneficial productions; not only ſuch voyages of diſcovery and enlargement of the Britiſh dominions, with new poſſeſſions, by colonies and plantations upon ſtrange coaſts, unpoſſeſſed by Chriſtian people, as may be extended to the further civilizing of ſavage nations; but witnal ſuch martial and heroic expeditions and exploits, as may, after thoſe great exemplers teach us to keep

(40) Dr Anth. Watſon.

(41) There is an alphabetical Catalogue of the Ld. Lumley's reſerved Library, among Sir Hen. Puckering's MSS. in Trin. Coll. Camb.

(42) George Watſon's Cure of Hot Diſeaſes, incident to travellers in long ſouthern Voyages, dedicated to the Queen, in MS.

firſt volume is properly dedicated to the Lord Admiral Howard, and each of the laſt to Sir Robert Cecil, then Principal Secretary of State; from whom he acknowledges that he received

keep ourſelves able, in like manner; and ever watchful to uphold our naval ſtrength, ſkill and courage, by good œconomy, diſcipline and practice, ſo as to preſerve what we are already poſſeſſed of, from the treacherous encroachments of falſe, faithleſs, and ambitious neighbours. Such triumphant voyages here are, as may inſpire us to keep up the ſuperiority of Engliſh fleets, to reaſſume our ſovereignty of the Britiſh ſeas, or aſſert our priority of poſſeſſions by land; ſuch as may encourage us to encreaſe or ſecure our fiſheries and factories, and yield matter of intelligence and direction, eſpecially out of the rich treaſury of maritime records here repoſited, in many future embaſſies, for maintaining our ancient rights and privileges, in treaties of alliance, commerce, &c (43). Such alſo do here occur, which may give continual lights and hints of improvement in the ſciences of Aſtronomy, Coſmography, Hydrography, Navigation, and other parts of the Mathematics, no leſs than in the Natural Hiſtory of animals, plants, metals, minerals and drugs; uſeful in phyſic, painting, dying, beſides many other arts, manufactures and occupations of life: and laſt of all, though above all, ſuch as may no leſs conſtantly infuſe a grateful ſenſation of the Divine Providence, in ſo many wonderful deliverances, from ſtorms, ſhipwrecks, pyrates, ſlavery, famine, and other moſt imminent perils in peace, no leſs than war, and by land as well as ſea.

(43) See the American Library, 4to. 1713. in the Dedication by Dr White Kennet, after Biſhop of Peterborough.

Though we would willingly give an inventory of the treaſures in this collection, as what might be here very acceptable, from the voyages of King Arthur, down to thoſe of Hawkins and Frobiſer, Gilbert and Grenvile, Drake and Ralegh, Davis and Cavendiſh, beſides the Earls of Nottingham, Eſſex, Cumberland, and the reſt of thoſe illuſtrious navigators, who in the reign of the moſt renowned Elizabeth, laid the foundation of our naval glory (44); yet when we conſider the number of our voyages and inſtruments herein preſerved, we cannot in this place, engroſs ſo much room, as the moſt ſuccinct recapitulation of them would require: and as the bare titles of theſe voyages, &c. in what years performed, to what places bound, with the adventurers names, and the authors by whom recorded, have been lately drawn forth to public view, in the moſt conciſe manner, with the moſt cordial deſire to recommend this valuable work to a new impreſſion, yet, as they take up above twenty pages in octavo, we muſt at preſent refer thoſe who cannot readily conſult the originals, to that draught in minature of them (45), and the obſervations thereunto annexed; while we here proceed to aſſemble a few of the diſperſed characters that have been occaſionally delivered both of this compiler and his collection: among which, ſuch as ſhould contain the moſt liberal acknowledgments to our author, might be expected to be found in Mr Purchas, who was moſt obliged, for the beſt, if not the greateſt part of thoſe four volumes, which he has named his Pilgrims, to the unpubliſhed remains of Mr Hakluyt. Some portions indeed of his gratitude we may find diſperſed in thoſe volumes, but not equal to the benefits he received, or the merits of his benefactor: as, where he refers to our author's painful performances, who hath ſo well deſerved of this iſland, and it's Neptunian heroes; and accounts ſome parts of his own narratives, but as ſummaries or indexes to Mr Hakluyt (46). Where he confeſſes that, to Hakluyt's labours, his own are ſo much indebted (47): and where he applauds him as a great, or happy diſcoverer of diſcoveries, according to his ingenious faculty of jingling, and ringing the changes, or otherwiſe playing now and then, with the ſame words; which kind of ſtile appeared of ſuch force and beauty to him, that he could not forbear flouriſhing out his very title with it, in the graved frontiſpiece of his ſaid work (48). And King James's head was ſo turned to, or with this ſort of rhetorick, and other like reading, which made him ſuch a proficient in theology, philoſophy, politics, poetry, pedantry and punning, as he was, that he read over a large volume of this writer's, adorned with ſuch flowers of ſcience, preliminary to thoſe of his pilgrims, no leſs than ſeven times; as the ſaid Mr Purchas has informed, as well his Majeſty's royal ſon and ſucceſſor, as the Archbiſhop, to whom he was chaplain (49); but neither the fondneſs of one King to his writings, nor a promiſe from the other, of a deanry, made any reparation of the ruinous expence he was at, in thoſe publications; which he did not long ſurvive. The truth is, his genius was thought too narrow or deſultory for his capacious and weighty undertaking, which tempted him, however ſeveral good narratives in his collection are left entire and unimpaired to uſe ſome of his materials in a waſteful manner, and to have drawn but inaccurate or ſuperficial accounts from them; not ſo much for any needful retrenchment of redundances, ſo often pretended in the mangling and multilating of good authors, as the reſtleſs deſire of novelties, varieties, and continuations. And as arguments are never wanting in ſuch ſchemes of monopoly, to contract and deminiſh the records of the greateſt actions performed by our moſt worthy anceſtors, that room may be left more ſpaciouſly to compliment thoſe of the moderns, which muſt be annexed to them: ſo Purchas has been ſufficiently imitated, and ſurpaſſed, in that point of gratitude, with relation to Hakluyt; in whom, more than a whole volume of the moſt renowned and memorable exploits by ſea, during the long reign of Queen Elizabeth, that are to be found in all our annals, we ſhall ſometimes behold, ſo dwarfiſhly ſhrunk up, into a meagre chapter; ſo enervated, emaſculated, and ſtripped of every thing intereſting, affecting, animating and remarkable (50), that moſt of theſe comprehenſive ſchemes from the earlieſt to the lateſt times, in ſuch contracted compaſs, ſkimming over the ſurface of generalities, and graſping wide but not deep, are apt to leave as little impreſſion of excitement, or emulation upon our minds, as ſo many almanacks. Dr Hakewill's project to enlarge the fame of our author, together with that of his country, was much more noble and eligible, than any that has attempted to leſſen both, by the diminution of his works; where having, not only obſerved, 'What excellent precepts have been given 'for the art of navigation, by Pedro de Medina (51), 'Baptiſta Ramuſio, and others; but how happily the 'art itſelf hath been practiſed, by the Portugals, Spaniards, Hollanders, and our own nation, whoſe 'voyages and diſcoveries, Maſter Hakluyt hath collected and reported, in three ſeveral volumes, &c. he 'adds, and it were to be wiſhed as well for the honour 'of the Engliſh name, as the benefit that might there'by redound to other nations, that his collections and 'relations, had been writtan in Latin, or that ſome 'learned pen would be pleaſed to turn them into that 'language (52).' And to the ſame purpoſe, he further wiſhes, that the commendable treatiſe of Mr Hues upon the celeſtial and terreſtrial globes, for the inſtruction of navigators in the principles of geometry and aſtronomy, were, for the better uſe of ſuch as are ignorant in the Latin tongue, alſo tranſlated into our language (53). Thus Dr Hakewill we ſee, near an hundred and twenty years ſince, recommended an edition of this collection, in Latin, which doubtleſs would be a moſt reputable work to us, among foreigners, at leaſt ſhew them as well how much we had been miſrepreſented, as how glorious we have been at ſea; and what glory will accrue to the preſent age, in ſhewing by compariſon what we are, our deſcendants may moſt freely and impartially judge. If a Latin edition were commendable, to acquaint foreigners with the ſpirit of our anceſtors, how much more would an Engliſh one be ſo, to revive, or preſerve that ſpirit, among ourſelves, and poſterity? We find the tranſlation of Hakluyt's voyages into French, ſo particularly deſired alſo by that nation, that M. Thevenot has accordingly taken pains to render ſome of them intelligible to his countrymen, in that language; together with ſome of the inſtructions, and other original records, which authorized or animated the ſame, as neceſſary motives, and appendages thereto (54); of ſuch conſiderable ſervice and importance, that nation eſteemed this collection: and ſhall foreigners think it worth their while to be at the labour and expence of tranſlating and printing an Engliſh author, whom Engliſhmen will not be at the pains, without the charge, as it may be done by ſubſcription, only to reprint? ſince the ſcarcity of the book was obſerved above threeſcore years ago (55), and the neglect of a new impreſſion complained of as then much wanting among us. Dr Fuller ſpeaking of Hakluyt's large collections of voyages ſays, 'They were taken partly out of pri-'vate

received ſome ſubſtantial teſtimony of favour, or, as he expreſſes it, whoſe earneſt deſires to do him good, lately broke out into moſt bountiful and acceptable effects (*p*); which might, from the fair proſpects thereof, incline him to the thoughts of purſuing, more particularly than he had hitherto done, his own perſonal intereſt; but could never, when he had attained, perhaps by the death of his elder brother, or the fortune of his wife, an eaſy competency, break his reſt, with aſpiring after rich benefices and high titles or dignities in the Church; never relinquiſh his brave naval adventurers, or withdraw his conſtancy in the commemoration of thoſe who had moſt hazardouſly put their truſt in the moſt inconſtant element; however, we may now read in the laſt of thoſe dedications to this Secretary, that, 'As he long ſince foreſaw, his profeſſion of Divinity, the care of his family, and other occaſions, might call and divert him from theſe kind of endeavours, he 'therefore had, for three years paſt, encouraged and furthered in theſe ſtudies of Coſmography, and foreign hiſtories, his honeſt, induſtrious, and learned friend, Mr John 'Pory; one of ſpeciall ſkill, and extraordinary hope, to perform great matters in the ſame, 'and beneficial to the commonwealth (*q*).' The fruits of his ſaid encouragement and furtherance of Mr Pory was, that this gentleman having undertaken, at the inſtance or recommendation, and probably under the inſpection, of Mr Hakluyt, to give the public a tranſlation from the Spaniſh of John Leo's excellent Hiſtory of Africa, it was this year, 1600,

(*p*) Hakluyt's dedication to Sir Robert Cecil, before his third volume of Voyages, folio, 1600.

(*q*) Idem.

'vate letters, which never were, or without his care 'had not been, printed; partly out of ſmall treatiſes, 'printed and ſince irrecoverably loſt, had not his pro'vidence preſerved them. For ſome pamphlets are pro'duced, which for their cheapneſs and ſmallneſs, men 'for the preſent neglect to buy, preſuming they may 'procure them at their pleaſure; which ſmall books, 'their firſt and laſt edition being paſt, like ſome ſpirits 'that appear but once, cannot afterwards with any 'price or pains be recovered: In a word, many of 'ſuch uſeful tracts of ſea adventures, which before were 'ſcattered as ſeveral ſhips, Mr Hakluyt hath imbodied 'into a fleet, divided into three ſquadrons, ſo many 'ſeveral volumes. A work of great honour to Eng'land; it being poſſible that many ports and iſlands 'in America, which being baſe and barren, bare only 'a bare name for the preſent, may prove rich places 'for the future; and then theſe voyages will be pro'duced and pleaded, as good evidence of their be'longing to England, as firſt diſcovered and denomi'nated by Engliſhmen *.' As for that anonymous writer, who had no true taſte of this collection, nor due information of many others, he undertakes to characterize; reported to have been one Mr Locke, but apparently not the underſtanding Locke; he has betrayed his want of knowledge in the very beginning of his criticiſm upon our author, where he ſpeaks of Hakluyt, as the firſt Engliſhman who compiled any collection of travels; and his want of judgment is no leſs viſible, in making the warlike expeditions and naval victories which are preſerved by our author, ſo much to the honour and reputation of our country, a matter of objection; as if the art of war by ſea, was not moſt eſſentially requiſite to us who are ſurrounded by it. Then he cannot reliſh the charters, patents, commiſſions, privileges, treaties, letters, and inſtructions, which are the very foundation of all regular expeditions, from which their authority is derived, which ſhew the motives and reaſons of them, and diſtinguiſh all lawful proceedings of this kind from thoſe of pyrates and robbers: theſe he ſeems to think unneceſſary, though they will often be uſeful precedents, as was obſerved before, and Mr Thevenot thought ſome of them ſo curious as to tranſlate them into the French language. Then as to what he calls Pilgrimages, though ſome were made by pious perſons to Jeruſalem, which are very pertinent in a general collection of voyages and travels, for letting us into the knowledge of places, as well as the manners of the times; yet he confounds without any diſtinction, thoſe which were made by ſome religious orders of men to the Holy-Land, with the warlike expeditions undertaken by ſome of our greateſt Kings, Princes, Peers, and Knights of higheſt renown, to recover it from the hands of infidels. Yet in the whole, this author allows Hakluyt's collection to be ſcarce and valuable, for the good that is to be picked out of it; as he does alſo of Purchas his collection, though he has thrown in all that came to hand, and is full of his own notions, quibbling and playing upon words (56). On the other ſide, a later author, in his edition of another collection, has more adviſedly made a greater difference between theſe two collectors, and ſet them at a much greater diſtance in point of merit from one another: where he ſays, 'We have in our own lan'guage, as good and as bad collections as ever were 'made; one inſtance of each may ſuffice. Mr Hak'luyt was an able, ingenious, diligent, accurate, and 'uſeful compiler; and his collections are as valuable 'as any thing in their kind; on the other hand, Purchas his Pilgrims are very voluminous, and for the 'moſt part a very trifling and inſignificant collection: 'his manner, for I cannot call it method, is irregular 'and confuſed; his judgment weak and pedantic; his 'remarks often ſilly and always little to the purpoſe 'This ſhews how much depends upon the care and ſkill 'of the collector; who on the one hand is to provide, 'what may entertain and pleaſe, and on the other, is 'to be careful, that knowledge and inſtruction be con'veyed with pleaſure and amuſement (57).' There was at laſt, about forteen years ſince, ſo much regard paid to Mr Hakluyt's collection, that a propoſal was then printed for giving us a new impreſſion of it, in one folio volume, of three hundred ſheets, as the manner then prevailed, by weekly publications. The ingenious editor in his account of this new intended edition, having given a deſerved character of the work, and it's compiler, ſets forth in what manner he propoſes to comprehend the ſame in the compaſs aforeſaid, by ſome little reformation of the ſtyle, in changing of obſolete, and diſcharging ſuperfluous words, without any alteration of the ſenſe, or curtailing the ſubſtance of the author. Alſo by omitting the diſcourſes, articles, &c. in Latin, and other languages, retaining the tranſlations after they have been compared with the originals. Alſo by dividing each of the three books into two; the firſt including the travels, voyages, and diſcoveries; and the ſecond, the naval expeditions and ſea fights, &c. with the ſeveral inſtruments relating to trade, maritime affairs, &c. and with no other alterations than the author would have made, had he been now alive, to publiſh himſelf a new edition; as it may be preſumed from the alterations he made in the laſt. To which ſome improvements were to be added, in notes from other and later authors; or obſervations to ſupply deficiences, rectify latitudes, and correct proper names, with an addition or ſupplement of Mr Hakluyt's poſthumous remains, from Purchas, which he gathered preparatory to another impreſſion. Likewiſe ſome account in the preface of the principal worthies, who'ſe adventures and diſcoveries have enriched this excellent collection; as well as of the worthy collector himſelf. Hoping the publication would be the more ſeaſonable at that juncture, as it compriſes a branch ſo conſiderable of the Engliſh hiſtory, and might ſerve to revive ſuch a ſpirit of trade and induſtry, as prevailed among us formerly, or has of late poſſeſſed the nations of Europe, moſt remarkable hitherto for their ſloth and indolence (58). But the foundation being inſufficient to ſupport the expence, the publication gave way to others, and it was dropped: yet Hakluyt went on, to be pillaged, abridged, and reduced, as he had been; to be tranſpoſed and transformed, diſguiſed and deformed; ſo has been publiſhed and republiſhed, little or much of him, from one end to the other, in a confuſed, or indiſtinct conjunction with other collections; and no true genuine Hakluyt, or grateful acknowledgment to Hakluyt, after more than one hundred and fifty years, revived yet.

1600, brought forth from the preſs [*K*]. But Hakluyt himſelf appeared not long behind him, with the tranſlation of another hiſtory, in 1601, written by A. Galvano in the Portugueſe tongue; containing a compendious relation of the moſt conſiderable diſcoveries that had been made in various parts of the univerſe, from the earlieſt to the later times [*L*]. And this ſpecimen, no leſs than many others of our author's induſtry, has yielded no ſcanty contributions to Mr Samuel Purchas's voluminous collections. About the year 1605, Doctor Richard Webſter, Prebend of the fourth ſtall at Weſtminſter, dying (*r*), he was ſucceeded therein by Mr Hakluyt; which, with the rectory of Wetheringſet in the county of Suffolk (*s*), is all the eccleſiaſtical promotion we can find he arrived at. And about this time, as we compute, the tranſlation of Peter Martyr's Hiſtory of the Weſt-Indies was undertaken, and firſt publiſhed by Mr Lok at the requeſt and encouragement of our author; and what is ſaid in the preface thereof before cited, might happily conduce to promote the grant of a patent by King James, for continuing or renewing the plantation of Virginia, dated April 10, 1606, wherein we find Richard Hakluyt, Clerk, named and choſen as one of the ſaid corporation (*t*). Certain it is, that beſides the reputation he acquired by his own publications of Naval Hiſtory, far ſuperior to any thing of the like kind that had ever appeared in this kingdom before; and his incitements of others, to tranſlate, and familiarize among us, the conqueſts and diſcoveries of foreign adventurers, with the advantages accrueing thereby; the ſpirit he alſo animated to the like national benefits, in thoſe of his countrymen who were engaged in the like enterprizes, by

(*t*) Sam. Purchas's Pilgrims, Part IV. fol. 1625. p. 1683.

* [*K*] *It was this year*, 1600, *brought forth from the preſs.*] This book is entituled, *A Geographical Hiſtorie of* Africa, *written in Arabick and Italian by* John Leo, *a More, born in Granada, and brought up in Barbarie, &c.* To which is prefixed, *A Map of Africa, with a general Deſcription of Africa and other Places, undeſcribed by Leo:* and there is added at the end, *A Relation of the great Princes, and the Religions in Africa: tranſlated and collected by* John Pory, *lately of Gonvill and Caius College in Cambridge.* Lond. *Impenſ* Geo. Biſhop, fol. 1600. The ſaid tranſlator, in his dedicatiation to Sir Robert Cecil, Principal Secretary to her Majeſtie, &c. deſires him to accept of this Geographical Hiſtory, as it pleaſed him, not long ſince, moſt favourably to take in good part thoſe commendable endeavours of his reverend friend Mr Richard Hakluyt; 'Who, ſays he, out of his mature judgment in 'theſe ſtudies, knowing the excellence of this ſtory, 'above all others in the ſame kind, was the only man 'that moved me to tranſlate it.' Dated at London, the forty third coronation day of her Majeſty, 1600.

As for the author, John Leo, 'tis ſaid he was born at Granada in Spain; and when it was taken by King Ferdinand and Iſabella, in 1491, he removed to Africa, whence he was called Africanus, as may be ſomewhat implied from the application of his own fable, concerning the amphibious bird (59), to that occaſional conformity, neceſſary for the ſafety of all diſcreet travellers; where he profeſſes, that when he heard the Africans ill ſpoken of, he would affirm himſelf to be of Granada; and when the people of this country were diſcommended, he would declare himſelf an African; yet he ſays expreſsly but a little before, according to this tranſlation (60), that he was born in Africa; or at leaſt, according to his own words in Ramuſio, that he was nurſed and educated there (61). However it appears, in the ſecond book of his hiſtory, that he was no older than ten years at the deſtruction of Azaſi by the Portugueſe. We may ſee throughout, that he was well trained in the learning of that country, and in good manners, for which he was much eſteemed (62). And that he was well allied, may be gathered from his uncle's being ſent ſometimes upon embaſſies by the King of Fez (63); and being beloved by him for his accompliſhments, being a good orator and poet, as his nephew this author alſo was, who at ſixteen years of age, compoſed verſes upon the Prince of Tenueres, which ſo pleaſed him, that he gave him fifty ducats, beſides a good horſe, and ten ducats apiece to his ſervants (64). He copied the epitaphs in the temple of Sella, in the year of the Hegira 915, which was about our year 1506. Between this and the year 1512, he ſerved Mahomet King of Fez in his wars againſt the Portugueſe, at Arzella, and was ſent Ambaſſador from the ſaid King to Morocco, about that or the next year (65). And in his travels, was once near being drawn into the water by crocodiles, and twice in danger of being devoured by lions. He mentions alſo himſelf other books of his writing; as an *Arabian Grammar* (66), which has been commended by thoſe who have ſeen it: alſo a *Diſcourſe of the Mahometan Religion* (67), with a treatiſe of the Arabic Poetry (68), and the lives of the Arabian Philoſophers, which were printed by Hottinger at Zurich. His laſt voyage that we read of, was from Fez to Conſtantinople, and from thence to Egypt; but in his return, he was taken priſoner between Tunis and Tripoly, by ſome Italian corſairs, who carried him to Rome, and his Hiſtory of Africa with him, in which it appears he had been writing, 'till about or beyond the year 1520. They were both preſented by the patron who bought him, to Pope Leo X. who won him over to Chriſtianity, and he was baptized John Leo, after the Pope's name. While he was at Rome, he learnt the Italian tongue, and tranſlated this Hiſtory from his own Arabic copy into that language, in the year 1526; which, coming afterwards into the hands of Ramuſio, Secretary to the republic of Venice, he has given us a correct edition of it in the firſt volume of his Voyages, as above quoted; alſo a character, to the author's commendation, in his Epiſtle Dedicatory to his friend Fracaſtorius. This, with the approbations of our author Mr Hakluyt, who accounted that Hiſtory the beſt, moſt particular, and methodical of any, which was come to light of thoſe territories; and the teſtimonies alſo of Ortelius, before his maps of Africa and Barbary, with others by John Bodin, in his Method of Reading Hiſtory, cap. iv. as alſo by Ant. Poſſevinus de Hiſtoricis, cap. ii. ſect. 7. may be ſeen in this Engliſh tranſlation (69). See likewiſe Bernard Aderete, *lib.* iii. art. Hiſp. & Afric. cap. v. Nic. Antonio, Bibl. Hiſp. H. Hottinger, in Biblioth. Libertus Fromandus, Meteor. lib. v. cap. 2, 3. and Voſſius de Hiſtor. lib. iii. As Leo was the firſt author who has given any faithful and diſtinct account of thoſe parts of the world, from his own knowledge and obſervation, many have been his tranſlators into the European languages; and beſides Marmol, ſeveral others have been his plagiaries; but Wedmanſtadius is the only one who ſays he forſook Chriſtianity and returned to Mahometaniſm.

[*L*] *Galvano's Hiſtory of Diſcoveries, &c. from the earlieſt to the later times.*] This work is known in Engliſh by the title of *The Diſcoveries of the World, from the firſt original to the year* 1555: *written in the Portugal tongue, by* Antonio Galvano, *&c. corrected, much amended, and tranſlated into Engliſh, by* Richard Hakluyt, *Lond. quarto*, 1601. The author was Governor of Ternate, the chief iſland of the Molucca's; and his Hiſtory, for the authority, conciſeneſs, and regular ſeries of it, has been involved and ſwallowed up, as others that are copious and diſtinct have been contracted and cramped up in larger works. Particularly Mr Purchas, in that part of his Collections which he entitles *the Voyages of Spaniards and Portugueſe*, taken out of this treatiſe, ſays in a marginal note, 'That the 'ſaid author writ in Portugal, a ſummary of diſcoveries 'in chronological order, from the beginning of the 'world; and that he was tranſlated and publiſhed in a 'ſmall book in quarto by Mr Hakluyt.' Whereunto he adds, 'I have choſen theſe which follow out of his 'book; thoſe which are here omitted I have more fully 'delivered in other parts of this voluminous work (70).'

(70) Pilgrims, Part II. fol. 1625. p. 1671.

[*M*] *Which*

by his moſt intelligent and communicative converſation, gained the higheſt eſteem and honour to his name and memory, by mariners in general of all ranks, in the moſt diſtant nations, no leſs than his own, whereof there are ſeveral inſtances; and particularly, in thoſe northern diſcoveries that were made at the charge of the Muſcovy Merchants in 1608, under Captain W. Hudſon; when, among other places there denominated, on the continent of Greenland, which were formerly diſcovered, they diſtinguiſhed an eminent promontary, lying in eighty degrees northward, by the name of Hakluyt's Headland, which continues to be ſo called, ſays our author, to this day (*u*). And now he exhibited another laborious proof of his faithful affection to Virginia, and the inviolable attachment thereof to the crown of England, in his tranſlation from the Portugueſe, of an Hiſtory, which ſhews how highly that country ought to be prized; by another deſcription of Florida, contiguous to it, from the travels of Don Ferdinando de Soto, the Adelantado thereof; which tranſlation he publiſhed in the beginning of 1609 [*M*]. Two years after, in 1611, we find Edmund Hakluyt, the ſon of our author, entred a ſtudent of Trinity-college Cambridge (*w*). And in the ſame year, that the northern diſcoverers, under the company aforeſaid, in a voyage to Pechora in Ruſſia, denoted a full and flowing ſtream they arrived at, having it ſeems a pure and active current, by the name of Hakluyt's River (*x*); and three years after, anno 1614, it appears, that the banner and arms of the King of England were erected at Hakluyt's Headland abovementioned (*y*). All that we meet with more of our author is, that he paid his laſt debt to nature, probably at his apartments in the college at Weſtminſter, on the 23d of November, in 1616, and was buried in the church of that abbey, dedicated to St Peter, on the 26th of the ſame month; leaving to his ſon Edmund aforeſaid, whom he had by his wife Frances, his manour of Bridge-Place, and ſeveral houſes in Tothil-ſtreet Weſtminſter (*z*). Some authors inform us, that he left a fair eſtate to an unthrifty ſon, who embezzelled or ſquandered it away; yet was wont to boaſt, how much he had deceived the covetous uſurer who bought it, and had given him ſpick and ſpan new coin for the dirty old clods of his great-grandfather (*a*). Our author's literary treaſures, however, met with a fate ſomewhat more favourable, and much more than thoſe of the celebrated Ramuſio; one part of whoſe manuſcript remains, which might, to his Naval Hiſtory, have added a fourth volume, being burnt in the houſe of his Printer; but Hakluyt's remaining collections, whereof he left at leaſt as much as would have made another volume alſo to his three, falling into the hands of Mr Purchas, he has ſcattered them, or parts of them, about his four volumes, after his irregular and curtailed or contracted manner; and though in the whole not with due juſtice to the author, yet has he now and then dropped ſome ſhort but emphatical and deſerved praiſes of him, as was before obſerved; thereby concurring with thoſe writers of eſtabliſhed judgment, who have diſtinguiſhed, according to his deſerts, the ſurpaſſing knowledge and learning, diligence and fidelity, of this Naval Hiſtorian.

(*a*) T. Fuller's Worthies, in Herefordſhire, fol. 40. Alſo the Apophthegms of the Engliſh Nation, 4to. MS.

[*M*] *Which tranſlation he publiſhed in the beginning of* 1609.] 'Tis printed under the title of *Virginia richly valued, by the Deſcription of the maine Land of Florida, her next Neighbour; out of the four years continual Trauell and Diſcoverie for above one thouſand miles Eaſt and Weſt, of Don Ferdinando de Soto, and ſix hundred able men in his companie. Wherein are truely obſerved the Riches and Fertilitie of thoſe parts, abounding with things neceſſarie, pleaſant, and profitable, for the life of Man: with the Natures and Diſpoſitions of the Inhabitants. Written by a Portugal Gentleman of Elvas, employed in all the Action, and tranſlated out of Portugueſe, by* Richard Hakluyt. *London, printed by* F. Kyngſton, *quarto*, 1609. It is dedicated from his lodgings in the college of Weſtminſter, 15 April the ſame year, To the Right Honourable the Right Worſhipful Counſellors and others, the chereful adventurers for the advancement of that Chriſtian and noble plantation of Virginia. And our author, after producing authorities for the richneſs of that country, which is contiguous to Virginia, ſays to them, 'What 'need I to ſtand upon foreign teſtimonies, ſince Maſter 'Thomas Heriot, a man of much judgment in theſe 'caſes, ſignified unto you all at your laſt ſolemn meeting, at the houſe of the Right Honourable the Earl 'of Exeter, how to the ſouthward of our old fort in 'Virginia, the Indians often informed him, that there 'was a great melting of red metal; reporting the 'manner in working the ſame. Beſides our own Indians lately have found either this or another rich 'mine of copper or gold, in a town called Ritanoe, 'near certain mountains lying weſt of Roanoac.' So he goes on to enumerate the other rich and uſeful commodities of that country, with the manners and diſpoſitions of the inhabitants: and concludes with exhorting them, that, by their wiſe inſtructions, all things in their intended ſettlement at Virginia, may be carried on to the beſt advantage, for the honour of God, and the enlargement of his Majeſty's dominions.

Upon the revival of our plantation in that country, which afterwards enſued, Michael Drayton the poet ſpeaks thus to and of our author, in his

ODE

To the

VIRGINIAN VOYAGE.

Thy Voyages attend,
Induſtrious Hakluyt;
Whoſe reading ſhall inflame
Men to ſeek fame,
And much commend,
To after times thy wit.

G

HALE [Sir MATTHEW], a man of great learning and integrity, and Lord Chief-Juſtice of the King's-Bench in the laſt century, was the only child of Robert Hale a Barriſter of Lincoln's-Inn [*A*], and born at Alderley in Glouceſterſhire November 1, 1609. Having loſt his mother before he was three years old, and his father before he was five, he was committed to the care of Antony Kingſcot, Eſq; a near kinſman of his; who being puritanically inclined (*a*), cauſed him to be educated in grammar-learning by Mr Staunton, Vicar of Wotton-under-Edge, a noted Puritan (*b*). In Michaelmas term 1626, he was admitted in Magdalen-hall in Oxford, and put under the tuition of Obadiah Sedgwick, a zealous man of the ſame party. He was an extraordinary proficient at ſchool, and for about three years at Oxford: but the ſtage players coming thither, he became ſo much corrupted by ſeeing many plays, that he not only forſook his ſtudies, but alſo ran into many of the levities and extravagances of youth; ſtill preſerving however his purity, and a great probity of mind. Yet, being over-fond of rough and martial exerciſes, he was preparing to go along with his tutor Sedgwick, who was chaplain to the Lord Vere in the Low-Countries, with a reſolution of entering himſelf in the Prince of Orange's army. From this raſh deſign he was diverted, by being engaged in a law-ſuit with Sir William Whitmore, who laid claim to ſome part of his eſtate. For Serjeant Glanvill, who was recommended to him for his counſellor, obſerving in the young man a clear apprehenſion of things, a ſolid judgment, and a great fitneſs for the drudgery of the Law, took pains to perſwade him to forſake all thoughts of being a ſoldier, and to apply himſelf to the ſtudy of the Law. His perſwaſions were ſo effectual, that November 8, 1629, Mr Hale was admitted into Lincoln's-Inn, being juſt entered into the 21ſt year of his age. Deeply ſenſible of the great quantity and value of the time he had loſt, he reſolved to redeem it, by following his ſtudies with an incredible diligence: for he ſtudied for many years at the rate of ſixteen hours a day. At the ſame time, he threw aſide all fine cloaths, and betook himſelf to a plain faſhion [*B*], which he continued to uſe in many points to his dying day (*c*). Still he went on keeping too much company with ſome vain people, 'till he was frightned from it by an unhappy accident that befel one of his companions [*C*]. But thenceforward he forſook all his bad acquaintance, and divided himſelf between the duties of religion [*D*] and the ſtudies of his profeſſion (*d*). Not being ſatisfied with the law-books then publiſhed, and firmly reſolving to take things from the fountain-head, he was very diligent in ſearching records. And, with collections out of the books he read, mixed with his own learned obſervations, he made a moſt valuable common-place-book [*E*]. He was early taken notice of by a gentleman of the ſame inn with himſelf, William Noy, Eſq; the Attorney-General, who directed him in his ſtudies, and grew to have ſuch a friendſhip for him, that he came to be called young Noy (*e*). The great and learned Mr Selden alſo ſoon found him out; and though much ſuperior to him in years, took ſuch a liking to him, that he not only lived in great friendſhip with him, but alſo left

(*a*) Life and Death of Sir Matthew Hale, by G. Burnet, D. D. Lond. 1682. 8vo. p. 1, &c.

(*c*) Burnet, as above, p. 4—7.

(*d*) Idem, p. 7—10.

(*e*) Idem, p. 10—12.

[*A*] *Was the only child of Robert Hale, a Barriſter of Lincoln's-Inn*] His grandfather was Robert Hale, an eminent clothier of Wotton-under Edge in Glouceſterſhire, where he and his anceſtors had lived for many deſcents; and they gave ſeveral parcels of land for the uſe of the poor, which are enjoyed by them to this day. This Robert acquired an eſtate of ten thouſand pounds, which he divided almoſt equally amongſt his five ſons; beſides the portions he gave his daughters, from whom a numerous poſterity has ſprung.——His mother was Joan, daughter of Matthew Poyntz of Alderley, Eſq; deſcended from the noble family of the Poyntz's of Acton.——His father was a man of that ſtrictneſs of conſcience, that he gave over the practice of the Law, becauſe he could not underſtand the reaſon of giving colour in pleadings, which as he thought was to tell a lye; and that, with ſome other things commonly practiſed, ſeemed to him contrary to that exactneſs of truth and juſtice which became a Chriſtian, ſo that he withdrew himſelf from the Inns of Court to live on his eſtate in the country [A very uncommon inſtance, ſeldom practiſed ſince, and the like to which could hardly be found now-a-days!] As the care he had to ſave his ſoul, made him abandon a profeſſion in which he might have raiſed his family much higher, ſo his charity to his poor neighbours, made him not only deal his alms largely among them while he lived, but at his death he left (out of his ſmall eſtate which was 100 l. a year) 20 l. a year to the poor of Wotton, which his ſon confirmed to them with ſome addition, and with this regulation, that it ſhould be diſtributed among ſuch poor houſe-keepers, as did not receive alms of the pariſh; for to give it to thoſe, was only, as he uſed to ſay, to ſave ſo much money to the rich, who by law were bound to relieve the poor of the pariſh (1).

(1) Burnet, as above, p. 1, 2, 3.

[*B*] *And betook himſelf to a plain faſhion.*] 'Paſſing thus from the extream of vanity in his apparel, to that of neglecting himſelf too much, he was once taken, when there was a preſs for the King's ſervice, as a perſon fit for ſea-ſervice; for he was a ſtrong and well built man: but ſome that knew him coming by, and giving notice who he was, the preſs-gang let him go. This made him return to more decency in his clothes, but never to any ſuperfluity or vanity in them (2).'

(2) Burnet, as above, p. 12.

[*C*] *He was frightned from it by an unhappy accident that befel one of his companions*] The accident was this. 'Mr Hale with ſome other young ſtudents being invited out of town, one of the company called for ſo much wine, that, notwithſtanding all that Mr Hale could do to prevent it, he went on in his exceſs till he fell down as dead before them: ſo that all that were preſent were not a little affrighted at it, and did what they could to bring him to himſelf again. This did particularly affect Mr Hale, who thereupon went into another room, and ſhutting the door, fell on his knees, and prayed earneſtly to God, both for his friend, that he might be reſtored to life again; and that himſelf might be forgiven for giving countenance to ſo much exceſs: and he vowed to God, that he would never again keep company in that manner, nor drink a health while he lived. His friend recovered, and he moſt religiouſly obſerved his vow, 'till his dying day (3).'

(3) Burnet, p. 8, 9.

[*D*] *And divided himſelf between the duties of religion.*] 'He was ſo regular in the duties of religion, that for ſix and thirty years, he never once failed going to church on the Lord's-day.' Which is an obſervation he made himſelf (4).

(4) See Burnet, p. 10.

[*E*] *He made a moſt valuable common-place-book.*] It was done with great induſtry and judgment. Inſomuch, that an eminent Judge of the King's Bench having borrowed it of him, (though he very unwillingly lent it, as thinking it too imperfect,) the judge, after having peruſed it, ſaid, that though it was compoſed by him ſo early, he did not think any lawyer in England could do it better, except he himſelf would again ſet about it (5).

(5) Idem, p. 14.

left him at his death one of his executors. It was this acquaintance that firſt ſet Mr Hale on a more enlarged purſuit of learning, which he had before confined to his own profeſſion. So that by his uncommon induſtry and good natural parts, he arrived at a conſiderable knowledge in the Civil Law, in Arithmetick, Algebra, and other mathematical ſciences, as well as in Phyſick, Anatomy, and Chirurgery. He was alſo very converſant in Experimental Philoſophy, and other branches of philoſophical learning; and in Antient Hiſtory and Chronology. Nor was he unacquainted with the antient Greek Philoſophers, but want of uſe wore out his knowledge of the Greek tongue; and though he never ſtudied Hebrew, yet by his frequent converſations with Selden, he underſtood the moſt curious things in the Rabinical learning. But, above all, he ſeemed to have made Divinity his chief ſtudy; to which he not only directed every thing elſe, but alſo arrived at that perfection in it, that thoſe who read what he wrote on thoſe ſubjects, will think they muſt have taken moſt of his time and thoughts (*f*) [*F*]. Some time before the civil wars he was called to the Bar (*g*), and began to make a figure in the world. But, upon their breaking out, obſerving how difficult it was to preſerve his integrity and to live ſecurely, he reſolved to follow theſe two maxims of Pomponius Atticus (*h*), whom he propoſed to himſelf as a pattern: namely, to engage in no faction, nor meddle in publick buſineſs; and, conſtantly to favour and relieve thoſe that were loweſt. Accordingly he avoided all publick employment, and the very talking of news; being ſtrictly careful, never to provoke any in particular, by cenſuring or reflecting on their actions. And he often relieved the Royaliſts in their neceſſities [*G*]. This ſo ingratiated him with them, that he came generally to be employed by them in his practice. He was one of the Counſel to the Earl of Strafford, Archbiſhop Laud, and King Charles himſelf (*i*): as alſo to the Duke of Hamilton (*k*), the Earl of Holland, the Lord Capel, and the Lord Craven (*l*) [*H*]. But being eſteemed a plain honeſt man, a perſon of great integrity and knowledge in the Law, he was entertained by both parties, the Preſbyterians as well as Loyaliſts. *In 1643* he took the Covenant, and appeared ſeveral times with other lay perſons among the Aſſembly of Divines. He was then in great eſteem with the Parliament, and employed by them in ſeveral affairs, for his counſel, particularly in the reduction of the garriſon at Oxford; being, as a lawyer, added to the commiſſioners named by the Parliament to treat with thoſe appointed by the King. In that capacity he did good ſervice, by adviſing them, eſpecially the General, Fairfax, to preſerve that famous ſeat of learning from ruin. Afterwards, though the barbarous death of King Charles I. was a great grief to him, yet he took the oath called the Engagement. And, on the 20th of January 1651-2, was one of thoſe appointed to conſider of the Reformation of the Law (*m*) [*I*]. Oliver Cromwell, who affected

[*F*] *Will think they muſt have taken moſt of his time and thoughts.*] 'It may ſeem almoſt incredible, as 'Dr Burnet obſerves (6), that one man, in no great 'compaſs of years, ſhould have acquired ſuch a va'riety of knowledge: and that in ſciences, which re'quire much leiſure and application. But as his parts 'were quick, and his apprehenſion lively, his memory 'great, and his judgment ſtrong; ſo his induſtry was 'almoſt indefatigable. He roſe always betimes in the 'morning; was never idle; ſcarce ever held any diſ'courſe about news, except with ſome few in whom 'he confided entirely. He entered into no correſpon'dence by letters, except about neceſſary buſineſs, or 'matters of learning, and ſpent very little time in eat'ing or drinking; for as he never went to public 'feaſts, ſo he gave no entertainments but to the poor; 'for he followed our Saviour's direction (of feaſting 'none but theſe) literally: and in eating and drinking, 'he obſerved not only great plainneſs and moderation, 'but lived ſo philoſophically, that he always ended his 'meal with an appetite; ſo that he loſt little time at 'it, (that being the only portion which he grudged 'himſelf) and was diſpoſed to any exerciſe of his 'mind, to which he thought fit to apply himſelf im'mediately after he had dined. By theſe means he 'gained much time, that is otherwiſe unprofitably 'waſted. He had alſo an admirable equality in the 'temper of his mind, which diſpoſed him for what'ever ſtudies he thought fit to turn himſelf to; and 'ſome very uneaſie things which he lay under for 'many years, did rather engage him to, than diſtract 'him from, his ſtudies.'

(6) Life, as above, p. 18, 19.

[*G*] *And he often relieved the Royaliſts in their neceſſities.*] 'This he did in a way no leſs prudent than charitable, conſidering the dangers of that time: for he often depoſited conſiderable ſums in the hands of a worthy gentleman of the King's party, who knew their neceſſities well, and was to diſtribute his charity according to his own diſcretion, without either letting them know from whence it came, or giving himſelf any account to whom he had given it (7).'

(7) Burnet, Life, as above, p. 21, 22.

[*H*] *And the Lord Craven.*] When he was counſel for this Lord, he pleaded with that force of argument, that the then Attorney-General, Edmund Prideaux, threatned him for appearing againſt the government: to whom he anſwered, He was 'pleading in defence of 'thoſe laws, which they declared they would maintain 'and preſerve, and he was doing his duty to his client, 'ſo that he was not to be daunted with threatnings '(8).'

(8) Idem, p. 21.

[*I*] *Was one of thoſe appointed to conſider of the Reformation of the Law.*] The reſt of the committee, were, William Steel, Eſq; Recorder of London, Charles George Cock, Eſq; Mr Manby, Mr Sadler, Col. Blount, Sir Henry Blount, Kt. Mr Berners, Major General Deſborough, Mr Moyer, Col. Tomlinſon, John Fountaine, Eſq; Alderman Fowke, Hugh Peters clerk, Major Packer, Sir William Roberts, Mr Meltwold, Mr Manſell, John Ruſhworth of Lincoln's-Inn, Mr Sparrow, and Sir Antony Aſhley Cooper, Bart. 'They were to take into conſideration what inconveniences there were in the law; how the miſchiefs which grew from delays, the chargeableneſs, and irregularities in the proceedings of the Law might be prevented, and the ſpeedieſt way to prevent the ſame. And to preſent their opinions to the committee of Parliament appointed for that purpoſe, and they or any ſeven of them had power to ſend for any perſons to confer with them in this buſineſs, and for records.' They met ſeveral times, and deſired the Judges in their ſeveral courts to return to them a liſt of their ſeveral officers, what fees they received, and what they did for the ſame. And none was more buſy than Hugh Peters, who underſtood little of the Law, and was very opinionative. On the 21ſt of February next enſuing, they paſſed the following reſolutions. 'If the defendant in a perſonal action, before pleading, tender 'ſatisfaction to the plaintiff with coſts of ſuit, and it 'appear afterwards at the trial to the jury ſufficient 'and not accepted of, the plaintiff to loſe his own and 'pay the other's coſt in the ſuit. That ſummons be 'the firſt proceſs in all perſonal actions, with the true 'date when ſued forth and executed upon oath, and 'returnable within fifteen days after the ſervice; the 'defendant to have a copy from the original, under 'ſeal, given or left at his houſe, and the cauſe of the 'ſuit

fected the reputation of honouring and trusting persons of eminent virtues, and wanted such a man as Mr Hale to give countenance to his courts, never left importuning him, 'till he accepted of the place of one of the Justices of the Common-Bench, as it was then called. For which purpose he was by writ made Serjeant at Law, on the 25th of January 1653-4 (*n*). In that station he acted with great integrity and suitable courage [*K*]. The same year he was elected one of the five Knights to represent the county of Gloucester, in the Parliament which began at Westminster, September 3, 1654 (*o*). He duly attended the House, on purpose to obstruct the mad and wicked projects then set on foot, by two parties, that had very different principles and ends (*p*) [*L*]. When the Protector died, he not only excused himself from accepting of the mourning that was sent him, but also refused the new commission offered him by Richard; alledging, 'He could act 'no longer under such authority (*q*).' He did not sit in Oliver's second Parliament, in 1656; but, in Richard's, which met January 27, 1658-9, he was one of the Burgesses for the university of Oxford (*r*). And in the Healing Parliament, anno 1660, which recalled King Charles II. he was elected one of the Knights for the county of Gloucester, through the Lord Berkeley's interest, and without any charge to himself, though he had a competitor that had spent near a thousand pounds; a great sum to be employed that way

'suit set down in the body of the writ; that upon default of appearing, a further process be granted to 'arrest the party, till he appear or give warrant. And 'in case of non appearance, the defendant's lands and 'goods to be distrained to a certain value, 'till he appear or give warrant.' The 23d of March, they presented to the Committee of Parliament, the draughts of several acts: two of which were, For 'taking away common recoveries, and the unnecessary charge 'of fines, and to pass and charge lands intailed, as 'lands in fee simple. For ascertaining arbitrary fines 'upon descent, and alienation of copyholds of inheri-'tance (9).' Very necessary laws to restrain the oppressions of Lords of Manors.

(9) Whitelock, as above, p. 520, 521, 523, 528. Wood Ath. as above, col. 574.

[*K*] *In that station, he acted with great integrity and suitable courage.*] He had at first great scruples concerning the authority under which he was to act. And, after having gone two or three circuits, he refused to sit any more on the crown side; that is, to judge criminals. He had indeed so carried himself in some tryals, that the powers then in being were not unwilling he should withdraw from meddling farther in them; of which Dr Burnet gives the following instances (10). Not long after he was made a judge, when he went the circuit, a tryal was brought before him at Lincoln, concerning the murder of one of the townsmen, who had been of the King's party, and was killed by a soldier of the garrison there. He was in the fields with a fowling-piece on his shoulder; which the soldier seeing, he came to him, and said, it was contrary to an order which the Protector had made, *That none who had been of the King's party should carry arms*; and so he would have forced it from him But as the other did not regard the order, so being stronger than the soldier, he threw him down, and having beat him, left him. The soldier went into the town, and told one of his fellow-soldiers how he had been used, and got him to go with him, and lye in wait for the man, that he might be revenged on him. They both watched his coming to town, and one of them went to him to demand his gun; which he refusing, the soldier struck at him; and as they were struggling, the other came behind; and ran his sword into his body; of which he presently died. It was in the time of the assizes, so they were both tryed: against the one there was no evidence of forethought felony, so he was only found guilty of manslaughter, and burnt on the hand; but the other was found guilty of murther: and though Col. Whaley, that commanded the garrison, came into the court, and urged, *That the man was killed only for disobeying the Protector's order*, and *that the soldier was but doing his duty*; yet the Judge regarded both his reasons and threatnings very little; and therefore he not only gave sentence against him, but ordered the execution to be so suddenly done, that it might not be possible to procure a reprieve; which he believed would have been obtained, if there had been time enough granted for it. —— Another occasion was given him, of shewing both his justice and courage, when he was in another circuit. He understood that the Protector had ordered a jury to be returned for a tryal, in which he was more than ordinarily concerned. Upon this information, he examined the sheriff about it, who knew nothing of it, for he said he referred all such things to the under-sheriff; and having next asked the under-sheriff concerning it, he found the jury had been returned by order from Cromwell; upon which he shewed the statute, that all juries ought to be returned by the sheriff or his lawful officer: and this not being done according to law, he dismissed the jury, and would not try the cause. Upon which the Protector was highly displeased with him, and at his return from the circuit, he told him in anger, *He was not fit to be a judge*; to which all the answer he made was, *That it was very true.* —— Another thing met him in the circuit, upon which he resolved to have proceeded severely. Some Anabaptists had rushed into a church, and had disturbed a congregation while they were receiving the sacrament, not without some violence. At this he was highly offended, for he said, *It was intolerable for men, who pretended so highly to liberty of conscience, to go and disturb others; especially those who had the incouragement of the law on their side* But these were so supported by some great magistrates and officers, that a stop was put to his proceedings; upon which he declared, he would meddle no more with the tryals on the Crown side —— — When Penruddock's tryal was brought on, there was a special messenger sent to him, requiring him to assist at it. It was in vacation time, and he was at his country house at Alderley: he plainly refused to go, and said, *The four terms, and two circuits, were enough, and the little interval that was between, was little enough for their private affairs*; and so he excused himself. But if he had been urged, he would not have been afraid of speaking more plainly.'

(10) Life, p. 23, 25, &c.

[*L*] *On purpose to obstruct the mad and wicked projects then set on foot by two parties, &c.*] One of those parties, who were down right brainsick Enthusiasts, were resolved to pull down a standing ministry, the law and property of England, and all the ancient rules of this government, and set up in their room an indigested Enthusiastical Scheme, which they called the Kingdom of Christ, or of his saints; many of them being really in expectation, that one day or other Christ would come down, and sit among them, and at least they thought to begin the glorious thousand years mentioned in the Revelation. —— The others, taking advantage from the fears and apprehensions all the sober people of the nation were in, lest they should fall under the tyranny of that distracted sort of people, (who, to all their other principles added great cruelty, which they had copied from those at Munster in the former age) intended to improve that opportunity to raise their own fortunes and families Amidst these, Judge Hale steered a middle course; for, as he would engage for neither side, so he, with a great many more worthy men, came to parliaments, more out of a design to hinder mischief, than to do much good; that is, to oppose the ill designs of both parties, the Enthusiasts as well as the Usurpers. Among the other extravagant motions made in this parliament, one was, to destroy all the records in the Tower, and to settle the nation on a new foundation; so he took this province to himself, to shew the madness of this proposition, the injustice of it, and the mischiefs that would follow on it; and did it with such clearness and strength of reason, as not only satisfied all sober persons (for it may be supposed that was soon done) but stopt even the mouths of the frentick people themselves (11).

(11) Burnet, Life, &c. p. 28, 29, 30.

[*M*] *Constituted*

way in thoſe days (s). In that parliament, he moved that a committee might be appointed to look into the propoſitions that had been made, and the conceſſions that had been offered by King Charles I. during the late war; that from thence ſuch propoſitions might be digeſted, as they ſhould think fit to be ſent over to the King at Breda (t). He was alſo very earneſt and inſtrumental in getting the act of indemnity paſſed (u). The 22d of June, his Majeſty recalled him, among others, by writ, to the degree of Serjeant at Law (w). And, upon ſettling the courts in Weſtminſter-hall, conſtituted him, November 7 the ſame year, Chief-Baron of the Exchequer (x) [M]. Some time after he was knighted (y) [N]. He continued eleven years in that place; and very much raiſed the reputation and practice of the Court, by his exact and impartial adminiſtration of juſtice [O], as alſo by his generoſity, vaſt diligence, and great exactneſs in tryals (z). According to his rule of favouring and relieving thoſe that were loweſt, he was now very charitable to the Nonconformiſts, and took great care to cover them as much as poſſible from the ſeverities of the law [P]. He thought many of them had merited highly in the buſineſs

[M] *Conſtituted him, November 7, the ſame year, Chief Baron of the Exchequer.*] When the Lord Chancellor Clarendon delivered him his commiſſion, he made a ſpeech to him according to cuſtom, wherein he expreſſed his great and juſt eſteem for him in the following words. 'That if the King could have found out an 'honeſter and fitter man for that employment, he 'would not have advanced him to it; and that he had 'therefore preferred him, becauſe he knew none that 'deſerved it ſo well (12).'

(12) Idem, p. 32.

[N] *Some time after he was knighted.*] It is an honour uſually conferred upon the Chief Judges; but Mr Hale deſired to avoid it: and therefore declined for a conſiderable time all opportunities of waiting on the King. Which the Lord Chancellor obſerving, he ſent for him upon buſineſs one day, when the King was at his houſe, and told his Majeſty, 'There was his 'modeſt Chief-Baron;' upon which he was unexpectedly knighted (13).

(13) Idem, p. 33.

[O] *By his exact and impartial adminiſtration of juſtice.*] Of which we have the following inſtances. 'He would never receive any private addreſſes or recommendations from the greateſt perſons, in any matter in which juſtice was concerned. One of the firſt Peers of England went once to his chamber, and told him, 'That having a ſuit in law to be tried before him, 'he was then to acquaint him with it, that he 'might the better underſtand it, when it ſhould come 'to be heard in court.' Upon which Sir Matthew interrupted him, and ſaid, 'He did not deal fairly to 'come to his chamber about ſuch affairs, for he never 'received any information of cauſes but in open court, 'where both parties were to be heard alike;' ſo he would not ſuffer him to go on. Whereupon his Grace (for he was a Duke) went away not a little diſſatisfied, and complained of it to the King, as a rudeneſs that was not to be endured. But his Majeſty bid him 'content himſelf that he was no worſe uſed,' and ſaid, 'He verily believed he would have uſed himſelf no 'better, if he had gone to ſollicite him in any of his 'own cauſes.' Another paſſage fell out in one of his circuits, which was ſomewhat cenſured as an affectation of unreaſonable ſtrictneſs; but it flowed from his exactneſs to the rules he had ſet himſelf. A gentleman had ſent him a buck for his table, that had a tryal at the aſſizes; ſo when he heard his name, he aſked, 'If 'he was not the ſame perſon that had ſent him veni'ſon?' and finding he was the ſame, he told him, 'He could not ſuffer the tryal to go on, till he had 'paid him for his buck:' to which the gentleman anſwered, 'That he never ſold his veniſon, and that he 'had done nothing to him, which he did not do to 'every judge that had gone that circuit,' which was confirmed by ſeveral gentlemen then preſent: but all would not do, for the Lord Chief Baron had learned from Solomon, That *a gift perverteth the ways of judgment*; and therefore he would not ſuffer the tryal to go on, till he had paid for the preſent; upon which the gentleman withdrew the record. And, at Saliſbury, the Dean and Chapter having, according to cuſtom, preſented him with ſix ſugar-loaves in his circuit, he made his ſervants pay for the ſugar before he would try their cauſe (14).'

(14) Idem, p. 37, 38.

[P] *And took great care to cover them as much as poſſible from the ſeverities of the law.*] The honourable Roger North, Eſq; affirms, that he was even partial to them. His account of Sir Matthew, in his judicial capacity, is as follows (15).——'While Hales was 'Chief Baron of the Exchequer, by means of his great 'learning, even againſt his inclination, he did the 'crown more juſtice, in that court, than any others, 'in his place, had done with all their good will and leſs 'knowledge. But — his foible — was leaning towards the popular; yet, when he knew the law was for the King, (as well he might, being acquainted with all the records of the Court, to which men of the law are commonly ſtrangers) he failed not to judge accordingly. He was an upright judge, if taken within himſelf; and when he appeared, as he often did, and really was, partial, his inclination or prejudice, inſenſibly to himſelf, drew his judgment aſide. His bias lay ſtrangely for, and againſt, characters and denominations; and ſometimes the very habits of perſons. If one party was a courtier, and well dreſſed, and the other a ſort of puritan, with a black cap and plain cloaths, he inſenſibly thought the juſtice of the cauſe with the latter. If the diſſenting, or anti court party was at the back of a cauſe, he was very ſeldom impartial; and the Loyaliſts had always a great diſadvantage before him.——It is ſaid he was once caught. A courtier, who had a cauſe to be tried before him, got one to go to him, as from the King, to ſpeak for favour to his adverſary, and ſo carried his point; for the Chief Juſtice could not think any perſon to be in the right, that came ſo unduly recommended.'——Mr North adds theſe further particulars concerning him.—'He became the cuſhion exceeding well: his manner of hearing patient, his directions pertinent, and his diſcourſes copious and, though he heſitated often, fluent. His ſtop, for a word, by the produce always paid for the delay; and, on ſome occaſions, he would utter ſentences heroic. One of the bankers, a courtier, by name Sir Robert Viner, when he was Lord-Mayor of London, delayed making a return to a mandamus, and the proſecutor moved for an attachment againſt him. The Recorder Howel appeared; and, to avert the rule for an attachment, alledged the greatneſs of his magiſtracy; and the diſorder that might happen in the city, if the Mayor were impriſoned. The Chief Juſtice put his thumbs in his girdle, as his way was, and, *Tell me of the Mayor of London*, ſaid he? *Tell me of the Mayor of Queenborough*: but ſtill this was againſt the Court. He put on the ſhew of much valour, as if the danger ſeemed to lie on that ſide, from whence either loſs of his place, (of which he really made no great account) or ſome more violent, or as they pretended, arbitrary inflictions might fall upon him. Whereas, in truth, that ſide was ſafe, which he muſt needs know, and that all real danger, to a judge, was from the impetuous fury of a rabble, who have as little ſenſe and diſcretion as juſtice; and from the Houſe of Commons, who ſeldom want their wills, and, for the moſt part, with the power of the Crown, obtain them. Againſt theſe powers he was very fearful; and one bred, as he was, in the rebellious times, when the government, at beſt, was but rout and riot, either of rabble committees, or ſoldiers, may be allowed to have an idea of their tyranny, and conſequently ſtand in fear of ſuch bruiſh violence and injuſtice as they committed. But it is pleaſant to conſider that this man's not fearing the Court was accounted valour; that is by the populace, who never accounted his fear of themſelves to have been a mere timidity. Whatever his courage or fear was, it is moſt certain his vanity was exceſſive; which grew out of a ſelf-converſation, and being little abroad.'——Mr North adds moreover (16), That 'this great man was often a ſlave to prejudice, a ſubtiliſer, and an inventor of unheard of diſtinctions, and exerciſing

(15) Life of the Hon. Sir Francis North, Baron of Guilford, &c. Lond. 1742. 4to. p. 61, &c.

(16) Ibid. p. 64.

buſineſs of the King's Reſtoration, and at leaſt deſerved that the terms of Conformity ſhould not have been made ſtricter than they were before the war. But as he lamented the too rigorous proceedings againſt them, ſo he declared himſelf always of the ſide of the Church of England, and ſaid, Thoſe of the Separation were good men, but they had narrow ſouls, who would break the peace of the Church about ſuch inconſiderable matters as the points in difference were (*a*). After the Fire of London, he was one of the principal Judges that ſat in Clifford's-inn, to ſettle the differences between landlord and tenant; being the firſt that offered his ſervice to the city in that affair: wherein he behaved himſelf to the ſatisfaction of all parties concerned (*b*). In 1668, he earneſtly promoted the Comprehenſion then ſet on foot between the Church and the Nonconformiſts, and drew up the bill to be preſented to Parliament for that purpoſe (*c*). On the 18th of May 1671, he was promoted to the place of Lord Chief Juſtice of England, that is of the King's Bench, vacant by the death of Sir John Keeling. He behaved in that high ſtation with his uſual ſtrictneſs, regularity, and diligence [*Q*], and thereby drew moſt of the buſineſs of the other courts after him (*d*). But, about four years and a half after this advancement, he, who had hitherto enjoyed a firm and vigorous health, to which his great temperance and the equality of his mind did not a little conduce, was on a ſudden brought very low by an inflammation in his midriff: In two days time it broke his conſtitution to ſuch a degree, that he never recovered; for his illneſs turned to an aſthma, that terminated in a dropſy, which brought him to his end (*e*). Finding himſelf unable to diſcharge the duties of his function, he petitioned, about the beginning of the year 1675 6, for a writ of eaſe: but it being delayed, he ſurrendered his office into the Lord Chancellor's hands, the 21ſt of February 1675-6. He had now nothing to do but to prepare himſelf for his death, which happened the 25th of December following. On the 4th of January, he was interred in the churchyard of Alderley [*R*] among his anceſtors; and a plain monument, according to his direction, was ſoon after erected over his grave (*f*) [*S*]. The moſt material part of his character, as drawn up by Dr Burnet and others, is given below in the note [*T*] He was

exerciſing criticiſms to get the better of known maxims of the law, and thereby to tranſmit great eſtates and intereſts from ſome perſons and families to others. This over-ruling temper of his did not ſo much take place in ſmall concerns, and in thoſe between common men; for there his juſtice ſhined moſt, and armed him with reputation that ſuſtained his authority to do as he pleaſed in greater. Whereby it ſeems that if he never had dealt in other but great cauſes, to hear and determine them, he might have been accounted the worſt judge that ever ſat.——Yet the generality, both gentle and ſimple, lawyers and laymen, did idolize him.——His voice was oracular, and his perſon little leſs than adored. This faſcination, as Mr North ſtyles it, proceeded [in his opinion,] from faction, and had, at the root, more of confederacy than judgment; for becauſe the Chief Juſtice was, in principle, averſe to Monarchy and the Court, they all, with one voice, exalted him, in order to have him lead the Law, and all the lawyers, that way; and left no room for juſt thoughts of him, which attributed enough of honour and commendation, but all that he ſaid was right, and whoever ſaid to the contrary was wrong.'——Mr North having delivered himſelf thus freely about Sir Matthew Hale, concludes his account of him with the following apology (17).——'I muſt not part without ſubjoining my ſolemn proteſtation, that nothing is here ſet down for any invidious purpoſes, but merely for the ſake of truth; firſt, in general, for all truth is profitable; and, ſecondly, in particular, for juſtice to the character I write of (18), againſt whom never any thing was urged ſo peremptorily as the authority of Hales; as if one muſt of neceſſity be in the wrong, becauſe another was preſumed to be in the right. Theſe two Chiefs were of different opinions in matters of private right, as well as touching the publick. And if one were a Solomon, Saint, and Oracle, what muſt the other be taken for? therefore I have underſtood it abſolutely neceſſary for me, as I have done, to ſhew Hales in a truer light than when the age did not allow ſuch freedom, but accounted it a delirium, or malignancy at leaſt, not to idolize him; and thereby to manifeſt that he had his frailties, defects, prejudices, and vanities, as well as excellencies; and that he was not a very touchſtone of law, probity, juſtice and publick ſpirit, as, in his own time, he was accounted: but that ſome, that did not agree with him, might have thoſe virtues as eminently, in the eye of a juſt obſerver. This is the only conſideration that moved me ſo freely to diſplay the matters aforegoing; wiſhing only that I had means, or ability, of doing it with more punctuality. I conclude with this obſervation; that it is a general error of the commonity, learned and unlearned, when a man is truly great in ſome capacities, by the meaſure of them to magnify him in all others, wherein he may be a ſhallow pretender. But it is the office of a juſt writer of the characters of men, to give every one his due, and no more.'

(17) Ibid. p. 69.

(18) Viz. Sir Francis North, Chief Juſtice of the Common Pleas, and afterwards Lord Keeper.

[*Q*] *He behaved in that high ſtation with his uſual ſtrictneſs, regularity, &c.*] 'One thing was much obſerved and commended in him, viz. that when there was a great inequality in the ability and learning of the counſellors that were to plead one againſt another, he thought it became him, as the judge, to ſupply that: ſo he would enforce what the weaker counſel managed but indifferently, and not ſuffer the more learned to carry the buſineſs by the advantage they had over the others, in their quickneſs and ſkill in law, and readineſs in pleading, 'till all things were cleared, in which the merits and ſtrength of the ill-defended cauſe lay. He was not ſatisfied barely to give his judgment in cauſes; but did, eſpecially in all intricate ones, give ſuch an account of the reaſons that prevailed with him; that the counſel did not only acquieſce in his authority, but were ſo convinced by his reaſons, that he brought them often to change their opinions; ſo that his giving of judgment was really a learned lecture upon that point of law. And even the parties intereſted were generally ſatisfied with the juſtice of his deciſions, even when they were made againſt themſelves (19).'

(19) Burnet, Life, &c. as above, p. 55, 56.

[*R*] *He was interred in the church-yard of Alderley.*] He did not much approve of burying in churches, and uſed to ſay, 'The churches were for the living, and the church-yards for the dead (20).'

(20) Ibid. p. 70.

[*S*] *And a plain monument, according to his direction, was ſoon after erected over his grave.*] The ſides are of black and white marble, and the top a plain black marble, with the following inſcription ordered by himſelf.

Hic inhumatur corpus
Matthei Hale, *Militis*;
Roberti Hale, *et* Joannæ,
Uxoris ejus, Filii unici.
Nati in hac Parochia de
Alderly, *primo die Novembris Anno Dom.* 1609.
Denati vero ibidem viceſimo quinto die Decembris,
Anno Dom. 1676.
Ætatis ſuæ LXVII.

[*T*] *The moſt material part of his character, as drawn up by Dr Burnet and others, &c.*] 'His capacities,

was author of several things, some of which were published by himself [U], and others after

cities, says Dr Burnet, were great, and much improved by constant study; which rendered his learning various. He rose always early in the morning; loved to walk much abroad, not only for his health, but he thought it opened his mind, and enlarged his thoughts, to have the creation of God before his eyes. He had great vivacity in his fancy, as appears by his inclination to poetry, and his poetical performances; but he looked on eloquence and wit as things to be used very chastly and sparingly. He was a devout Christian, a sincere Protestant, and a true son of the Church of England; moderate towards Dissenters, and just even to those from whom he differed most. He used constantly to worship God in his family, performing it always himself, if there was no clergyman present: he was also very regular in his private devotions. So far was he from covetousness, that he did not make the profits he might have had by his practice: taking, in common cases, only ten shillings for his fee And he raised his estate, from *one hundred pounds a year not quite to nine hundred*; of which a very considerable part came from his share of Mr Selden's effects, to whom he was an executor, and residuary legatee. In his practice; if he saw a cause was unjust, he, for a great while, would not meddle further in it, but give his advice that it was so: if the parties, after that, would go on, they were to seek another counsellor, for he would assist none in acts of injustice: if he found the cause doubtful or weak in point of law, he always advised his clients to agree their business. In his pleading, he abhorred those too common faults of mis-reciting evidences, quoting precedents or books falsly, or asserting things confidently; by which ignorant juries, or weak judges, are too often influenced. He pleaded with the same sincerity that he used in the other parts of his life, and used to say, 'It was as great a dishonour as a man was capable of, 'that for a little money he was to be hired to say or 'do otherwise than as he thought.' All this he ascribed to the immeasurable desire of heaping up wealth. When he was a practitioner, differences were often referred to him, which he settled; but would accept of no reward for his pains, though offered by both parties together, after the agreement was made; for he said, 'In those cases he was made a judge, and a judge 'ought to take no money.' *Festina lente*, was his beloved motto, which he ordered to be ingraven on the head of his staff; and was often heard to say, 'That 'he had observed many witty men run into great er-'rors, because they did not give themselves time to 'think.' He laid aside the tenth penny of all he got for the poor, and took great care to be well informed of proper objects for his charities; and, after he was a judge, many of the perquisites of his place were sent by him to the jayls, to discharge poor prisoners. He usually invited his poor neighbours to dine with him, and made them sit at table with himself: and if any of them were sick, so that they could not come, he would send meat warm to them from his table. But as to common beggars, if they were able to work, he would employ them. He loved building much, wherein he consulted usefulness more than magnificence: for, in that, as well as his furniture and clothes, he avoided every thing that looked like pomp or vanity. He was a gentle landlord to all his tenants, and was ever ready, upon any reasonable complaints, to make abatements; for he was merciful as well as righteous. After he was made a judge, he would needs pay more for every purchase he made than it was worth; of which he assigned this reason, 'That it became judges to pay more for 'what they bought than the true value; to the end, 'those they dealt with, might not think they had any 'right to their favour, by having sold such things to 'them at an easy rate.' He was of a most tender and compassionate nature; and, at trials, behaved himself with that regard to the prisoners, which became both the gravity of a judge, and the pity that was due to men whose lives lay at stake. His mercifulness extended even to his beasts, for when the horses that he had kept long, grew old, he would not suffer them to be sold, or much wrought, but ordered his men to turn them loose on his grounds, and put them only to easy work (21). He was a great encourager of all young persons, that he saw followed their books diligently, to whom he used to give directions concerning the method of their study, with a humanity and sweetness, that wrought much on all that came near him: and, in a smiling pleasant way, he would admonish them, if he saw any thing amiss in them. He was very free and communicative in his discourse, which he most commonly fixed on some good and useful subject, and loved for an hour or two at night, to be visited by some of his friends (22).'——Mr North suggests (23), that those friends were none but flatterers. For, says he, 'When 'he was off from the seat of justice, and at home, his 'conversation was with none but flatterers.'——'He 'was, adds Mr North (24), the most flatterable crea-'ture that ever was known; for there was a method of 'resignation to him, and treating him with little meals, 'and private, with his pipe, at ease, which certainly 'captivated him. *In short*, to give every one his due, 'there was in him the most of learning and wisdom, 'joined with ignorance and folly, that ever was known 'to coincide in the character of any one man in the 'world.' But he doth Sir Matthew this justice, to testify of him, that his 'reputation for his great ability 'in the law, and rigorous justice will be very long 'lived in Westminster-hall, and the Inns of Court and 'Chancery.'——And praises him, for 'his great 'learning in the history, law, and records of the En-'glish constitution:' styles him, 'an upright judge;' and says, 'he was allowed on all hands to be the most 'profound lawyer of his time'——R. Baxter gives this character of him (25). 'He was an unwearied 'student, a prudent man, a solid philosopher, a fa-'mous lawyer, the pillar and basis of justice, (who 'would not have done an unjust act for any worldly 'price or motive) the ornament of his Majesty's 'government, and honour of England; the highest 'faculty of the soul at Westminster-hall, and pattern to 'all the reverend and honourable Judges, a godly se-'rious practical Christian, a lover of goodness and all 'good men; a great contemner of riches, pomp, and 'vanity of the world, a pattern of honest plainness and 'humility, &c'——Dr Burnet concludes his character in these words: 'That he was one of the greatest 'patterns this age has afforded, whether in his private 'deportment as a Christian, or in his publick employ-'ments, either at the bar or on the bench.'

[W] *And*

after his deceaſe [*W*]. By his Will, he bequeathed to the ſociety of Lincoln's-inn, his manuſcript books [*X*] of ineſtimable value, which he had been near forty years in gathering, with very great induſtry and expence. An account of his wives and family is given below in the note [*Y*].

[*W*] *And others after his deceaſe*] They were, 1. 'Pleas of the Crown: or a Methodical Summary of 'the Principal Matters relating to that Subject.' Lond. 1678. 8vo. 2. 'Diſcourſe touching Proviſion for the 'Poor' Lond. 1683. 12mo 3. 'A Treatiſe touch-'ing Sheriffs Accounts.' Lond. 1683 8vo To which is joined his 'Tryal of Witches at the Aſſizes held at 'Bury St Edmunds on the firſt of March, 1664.' His condemnation of thoſe poor crazy wretches, was the worſt and the moſt culpable action in his whole life (27). 4. His 'Judgment of the Nature of True Re-'ligion, the Cauſes of its Corruption, and the Churches 'Calamity by Mens Additions and Violences; with 'the deſired Cure,' Lond. 1684. 4to Publiſhed by R. Baxter. 5. 'Several Tracts, as A Diſcourſe of 'Religion under three heads, &c His Treatiſe con-'cerning Proviſion for the Poor, already mentioned: 'A Letter to his Children, adviſing them how to be-'have in their ſpeech: A Letter to one of his Sons, 'after his recovery from the ſmall-pox' Lond. 1684. 8vo. 6. 'Diſcourſe of the Knowledge of God and of 'our Selves, firſt by the Light of Nature, ſecondly by 'the Sacred Scriptures.' To which is added, 'Brief 'Abſtract of the Chriſtian Religion: and conſiderations 'ſeaſonable at all times for the cleanſing of the Heart 'and Life.' Lond. 1688. 8vo. 7. 'The Original 'Inſtitution, Power, and Juriſdiction, of Parliaments.' Lond. 1707. 8vo. 8. '*Hiſtoria Placitorum Coronæ.* 'The Hiſtory of the Pleas of the Crown. Firſt pub-'liſhed, in 1736, from his original manuſcript, and 'the ſeveral references to the Records examined by the 'Originals, with large notes, By Sollom Emlyn of 'Lincoln's-inn, Eſq; 2 vols fol.' The Houſe of Commons had made an order, 29 Novemb. 1680. that it ſhould then be printed; but it was never printed 'till now. The *Pleas of the Crown*, &c printed in 1678, 8vo. (as above) was only a plan of this work.

He left ſeveral other pieces in manuſcript, as, 'Concerning the Secondary Origination of Mankind, fol. 'Concerning Religion, 5 vols fol.' and many others, of no great value: whereof an account may be ſeen at the end of his life by Dr Burnet (28).

(27) See Dr Hutchinſon's Hiſtorical Eſſay concerning Witchcraft, Lond. 1718. 8vo. p. 109, &c.

(28) P. 213, &c.

[*X*] *By his Will he bequeathed to the ſociety of Lincoln's-inn his manuſcript books, &c*] They are of ineſtimable value; as being, Cloſe and Patent Rolls, and Charter Rolls in the time of King John for the clergy: the principal matters in the Cloſe and Patent Rolls of Henry III. from the 9th to the 56th of his reign: Cloſe Rolls of King John: *Placita de tempore Reg. Johannis, Edw.* I. *Edw.* II. *Edw* III. *Ric.* II. *Henr.* IV. *and* V. *Placita de Banco, Edw.* I *ab anno* 1 *ad annum* 21: the Pleas in the Exchequer, ſtyled *Communia*, from 1 to 46 Edw. III. Cloſe Rolls of Edw. II. and III. Cloſe and Patent Rolls in the time of Edward III Leagues of the Kings, Edw. I. II. and III. in many volumes. 'He deſired they ſhould be kept ſafe, 'and all together, bound in leather, and chained; 'not lent out or diſpoſed of: only, if any of his poſte-'rity of that ſociety ſhould deſire to tranſcribe any 'book, and give good caution to reſtore it again in a 'preſixed time, they ſhould be lent to him, and but 'one volume at a time. They are, ſays he, a treaſure 'that are not fit for every man's view; nor is every 'man capable of making uſe of them (29).'

(29) Burnet in the ſame Life, p. 116, &c. See North, as above, p. 63.

[*Y*] *An account of his wives and family, &c*] He was twice married. His firſt wife was Anne, daughter of Sir Henry Moor of Faley in Berkſhire, by whom he had ten children: the four firſt dyed young, the other ſix lived to be all married; and he outlived them all except his eldeſt daughter and his youngeſt ſon. The name of his eldeſt ſon was Robert, to whoſe children he left his eſtate. Their poſterity is ſtill ſeated at Alderley. Sir Matthew, it ſeems, was not very happy in his children (30).——His ſecond lady was Anne, daughter of Mr Joſeph Biſhop of Faley abovementioned. She was his own ſervant: and it was upon occaſion of his marriage with her, that he made uſe of this ludicrous ſaying, 'That there is no wiſdom below the 'girdle (31).

(30) North, as above, p. 63.

(31) Ibid.

HALES [JOHN], an excellent Divine and Critick (*a*) uſually diſtinguiſhed by the appellation of *ever memorable* *; ſeems to have been deſcended from a family of ſome note [*A*] in Somerſetſhire, and was born in that county at the city of Bath in St James's pariſh anno 1584; where being put to ſchool, he made a progreſs in grammar learning ſo quick as to be judged fit for the univerſity at the age of thirteen, and in the beginning of the year 1597 being ſent to Oxford, became a ſcholar of Corpus-Chriſti-college, where he continued for ſome time; and taking his firſt degree in Arts, ſignalized himſelf prodigiouſly in all his academical exerciſes (*b*), and was much famed for his accurate ſkill in the Greek language. Such rare talents particularly engaged the attention of Sir Henry Savile then Warden of Merton, who always ſtudious to promote the honour and intereſt of his ſociety, took care to bring Mr Hales into it [*B*]; and in 1605 he was choſen fellow there, his merit having procured him the firſt place in the election (*c*). He had not been long in this ſtation, when the learned Warden reſolving to make uſe of his aſſiſtance in preparing St Chryſoſtom's works for the preſs, had the ſatisfaction to receive continually freſh proofs of his abilities (*d*). In the interim he was appointed Greek Lecturer in the college, and preferred in 1612 to the public lecture of that language in the univerſity (*e*), Upon the death of Sir Thomas Bodley founder of the Bodleian Library, January 28, 1613 (*f*), that univerſity determining to interr the corpſe in the moſt ſolemn manner, choſe Mr Hales to make the funeral oration which he ſpoke on the 29th of March (*g*), and on the 24th of May (*h*) following was admitted Fellow of Eton-college (*i*), being then in Holy Orders, and a few years after an eminent preacher according to the taſte of thoſe times [*C*]. In 1618

places

1618 he accompanied Sir Dudley Carlton Embaſſadour to the Hague in quality of chaplain, by which means he procured admiſſion into the ſynod of Dort [*D*]; and though he was not properly a member (*k*), yet his letters to Sir Dudley giving an account of their proceedings, are penned with greater reſpect to that aſſembly, than thoſe written on the ſame occaſion by Mr Balcanqual Commiſſioner there for the Scottiſh Church [*E*]. Every body

(*k*) This is evident from his letters, though the contrary is aſſerted by two authors cited by Mr Des Maizeaux, ubi ſupra. p. 82. in the notes.

places of Scripture, which 'tis ſaid was printed in 1617 at Oxford in 4to. (4) ſeems inferior to none that we have of his in any point, and is freer than moſt of them from that affected archneſs of argument and quaintneſs of expreſſion and obſervation, which indeed was the vice of the times, and he was a compleat adept therein. It will not be amiſs to give one inſtance as a ſpecimen. We ſhall take it from his firſt ſermon of Duels preached at the Hague before the Embaſſador; wherein obſerving that the Scriptures every where inculcate gentleneſs, meekneſs, and peace, he proceeds thus, 'The Son of 'God, who is the wiſdom of the Father, and who for 'us men came down from heaven, firſt, and before all 'other virtues, commended this unto the world: for 'when he was born, the ſong of the Angels was, '*Peace upon earth, and good will towards men.* All 'his doctrine was peace, his whole life was peaceable, 'and no man *heard his voice in the ſtreets*; his laſt legacy and bequeſt left unto his diſciples was the ſame; '*Peace*, ſaith he, *I leave unto you, my Peace I give* '*unto you:* as Chriſt ſo Chriſtians.' So far the piety and gravity of the preacher is truly admirable, the hearer muſt needs feel and acknowledge the force of his eloquence; but this it is that ſerves to make the contraſt in what follows ſo much the more conſpicuouſly odious, for thus he ſhuts up the argument, 'In the building of 'Solomon's temple there was no noiſe of any hammer, 'of any inſtrument of iron; ſo in the ſpiritual building 'and frame of a Chriſtian, there is no ſound of iron, 'no noiſe of any weapons, nothing but peace and gen-'tleneſs (5).' Can this be read upon the ſubject of duels without ſuggeſting theſe two lines of Hudibras,

Ah me what perils do inviron,
The man that meddles with cold iron.

In reality, a ſolid and pious ſtrain of reaſoning, pointed with ſuch a quaint witticiſm at the end, is thereby metamorphoſed into a compleat piece of drollery. However this is no more than a ſingle ſtroke, and the only one that diſgraces that ſermon, and ſuch a one too as provokes indignation as much as laughter. But whoever has the curioſity to peruſe the firſt of the four ſermons [not in the Remains] publiſhed in 1673, will find himſelf held in a continued twitter throughout. It is abſolutely a maſter-piece in the art of text-ſplitting ſo much admired in thoſe days; and as our author was then probably young, being alſo, as he tells us himſelf, of a gay temper *, it will perhaps not be doing him any wrong to ſuppoſe, the review of ſuch a lucky production of his own genius could not fail of raiſing a ſmile in him. Somewhere in theſe ſermons, if I miſtake not, he tells a ſtory which naturally ſtarts up on this occaſion, of Zeuxis the famous Grecian painter, who having finiſhed the picture of an old woman exactly to his mind, was ſo extremely delighted in viewing the delicious piece, that he killed himſelf with laughing at it. After all, in juſtice to our author it muſt be allowed, that theſe diſcourſes abound with excellent uncommon turns of reaſoning and oratory, as well as curious hiſtorical reflections; and in that light are indeed *non vulgaris monetæ*, as is intimated by his friend Mr Farindon (6).

[*D*] *He procured admiſſion into the ſynod of Dort.*] This ſeems to have been his principal view in going to Holland with Sir Dudley, who, beſides his brother the Biſhop of Landaff firſt Engliſh Commiſſioner, recommended him to Bogerman Preſident of the Synod, and ſome others of the leading men there (7); by which means he got acquainted with their moſt ſecret deliberations, and being conſtantly preſent at their open ſeſſions, he was a witneſs to their public tranſactions, and gave an account of every thing in a ſeries of letters to the Embaſſador, from whoſe archives they were obtained, and thence inſerted in his *Golden Remains* †.

[*E*] *His letters are more reſpectful to the Synod than thoſe of Mr Balcanqual.*] This appears evidently upon the face of the letters; we ſhall give one inſtance as a ſpecimen. Mr Balcanqual, in a letter dated the 13th of February (it ſhould be January), 1618, writes in theſe terms. 'The confuſion here in handling of buſi-'neſs is very great; they don't know how to put any 'thing to committees to agree of buſineſs, and then 'afterward to propound it to the Synod to be approved 'or diſapproved, which hath been the cuſtom obſerved 'in all Councils and Synods; but nothing is known 'till it be propounded in the Synod, and then there 'are almoſt as many ſeveral voices as heads; if your 'Lordſhip would give your advice to ſome of the Eſtates 'in this kind, it may be they would apprehend it, and 'we ſhould bring buſineſs to ſome iſſue. The Palatine 'divines and we (8) have met now three times, and 'we have agreed on the ſame propoſitions, and have 'reſolved to call one of every college of the foreign 'divines, and communicate the ſame with them, that 'ſo, if it be poſſible, all we ſtrangers may ſet up, and 'throw down the ſame concluſions. For the Provin-'cials, for any thing I can ſee, they are ſo far ſet againſt 'the Remonſtrants, I wiſh not their perſons as well as 'their opinions, that I am afraid they will not like 'well of our moderation. For the diſmiſſion of the 'Remonſtrants, ſince your Lordſhip is pleaſed to take 'notice of it, I hope I may without offence ſay, that 'it was certainly ſuch as did the Synod much wrong. 'On friday when they ſeemed to yield, then the *Exteri Theologi* could not be heard for the continuing 'them in the Synod. Nay the trick which was put 'upon them was a litt'e too palpable: *For the Dele-'gates [of the Eſtates General] had the decree of their 'diſmiſſion written before they came into the Synod.* 'Yet our voices were aſked, hoping it ſhould have 'been anſwerable to their decree; but finding it was 'otherwiſe, without ſo much as laying their heads to-'gether for conſultation, *they publiſhed a decree which 'they brought written with them into the Synod.* On 'Monday the late acts of the Remonſtrants incredible 'obſtinacy being read, the *Theologi Exteri* gave ſuffra-'ges for their diſmiſſion; only one, to wit Steinius, 'gave a bitter ſentence, their [the foreigners] voices 'being aſked only, who are not above a third part of 'the Synod, they were called in and diſmiſſed with 'ſuch a powdering ſpeech, as I doubt not but your 'Lordſhip hath heard with grief enough. I proteſt I 'am much afflicted, when I think of it; for if the 'Remonſtrants ſhould write, that the Preſident pro-'nounced a ſentence, which was not the ſentence of 'the Synod, they ſhould not lye. The civil lawyers 'and canoniſts of France, who write much about the 'formalities omitted in the Council of Trent, urge 'exceptions of leſs moment than theſe; ſo neither was 'there above *a third part of the voices aſked ex quibus 'ſententia ferri nequit:* neither was the ſentence con-'ceived in writ, and approved by the Synod, and the 'bitter words in the ſentence were not the words of 'any of the ſuffrages, unleſs that ſome of them were 'ſpoken by one man only (9).' Thus Baleanqual, whoſe letter is followed by that of Mr Hales, dated January $\frac{13}{23}$, 1618, upon the ſame ſubject, viz. the diſmiſſion of the Remonſtrants, wherein he relates the ſimple matter of fact, without making any reflections thereon, except in the ſingle ſtep of omitting to take the votes of the Provincials, for which he offers, what was undoubtedly the true reaſon, by way of apology. 'When the foreigners had ſpoken, ſays he, it 'was thought ſufficient; neither did the Præſes proceed 'to aſk the judgment of the Provincials, *knowing belike 'before what it was.*' The ſame caution of ſticking barely to the matter of fact is obſerved by him in the next letter wrote the day following on the ſame ſubject (10): and he begins a third letter dated $\frac{14}{24}$ January, with the apology of the Synod, on account of the unbecoming heat ſhewn in that proceeding. Thus,

'Right Honourable and my very good Lord,

'The errours of public actions (if they be not very 'groſs) are with leſs inconvenience tolerated than a-'mended. For the danger of alteration, of diſgracing 'or diſabling authority, makes that the fortune of ſuch proceedings

body knows the iſſue of that ſynod in general; but the reſult thereof to our author was, that he went thither a Calviniſt and returned home an Arminian. The convert of Epiſcopius [F] he grew fond of the Remonſtrants method of theologizing [G], and being naturally

' proceedings admits no regreſs, but being once howſo-
' ever well or ill done, they muſt for ever after be up-
' held. The moſt partial ſpectator of our ſynodal acts
' cannot but confeſs, that in the late diſmiſſion of the
' Remonſtrants with ſo much choler and heat, there
' was a great overſight committed; and that whether
' we reſpect our common profeſſion of Chriſtianity, *quæ*
' *nil niſi juſtum ſuadet & lene*; or the quality of this
' people apt to mutine by reaſon of long liberty, and
' not having learnt to be imperiouſly commanded, in
' which argument the Clergy above all men ought not
' to have read their leſſon. The Synod therefore to
' whom it is not now *in integro* to look back, and rec-
' tifie what is amiſs without diſparagement, muſt now
' go forward, and leave events to God, and for the
' countenance of their action do the beſt they may.
' For this purpoſe have they lately, by deputies ap-
' pointed for that end, made a declaration of all their
' proceedings unto the States General, from whom
' they have procured a decree in confirmation of them
' (11).' This inſtance of our author's temper and judgment above that of his fellow correſpondent with the embaſſador, was afterwards as unavoidably ſo unde-ſignedly inſinuated by an eminent divine among the Remonſtrants in Holland (12), who to ſerve that cauſe, publiſhed among other letters fifteen of Mr Balcanqual's and ſeven of Mr Hales's in Latin, with the following account of them prefixed in the preface of his book. ' Sed & non pauca hic quibus hiſtoriæ veritas explorari poteſt, monumenta comparent; & inter alia in epiſtolis Johannis Halefii & Gualtheri Balcanqualli, plura in Synodo Dordracena ſecreto & poſt ſiparium geſta, ac hactenus orbi Chriſtiano incognita, diductis quaſi velis reteguntur, illa autem hic ea fide ac certitudine exhibentur, quæ omnem dubitandi anſam penitus excludunt.' He then informs his reader what the ſtation of each of them was at the Synod, and proceeds to confirm the indiſputable authority of their ſeveral accounts by a circumſtance which he deſcribes in the following words, ' Uterque res eodem quo ſcribebant ' die aut ſaltem hebdomade geſtas, quarum proinde re-
' cens erat memoria Legato narrat, & Balcanquallus
' *nonnunquam non ſine indignatione.*'

[F] *The diſciple of Epiſcopius.*] So Mr Farindon informs us. ' You may pleaſe, ſays he to Mr Garthwait ' (13), to take notice, that in his younger days he was ' a Calviniſt, and even then when he was employed in ' that Synod [of Dort], and at the well preſſing of St ' John iii. 16 by Epiſcopius there *I bid John Calvin* ' *good night* as he often told me.' This account is confirmed by Mr Montague, one of the truſtees to our author's laſt will (14). To the ſame effect is the remark of Dr Walker (15) who relates that a friend of Mr Hales finding him one day reading *Calvin's Inſtitutions*, aſked him if *he was not paſſed that book?* to which he anſwered, *In my younger days I read it to inform myſelf, but now I read to reform him.* But however certain it be that he changed his opinion upon the points of the Predeſtinarian controverſy, yet it is not leſs certain that he eſteemed it to be no more than an opinion. For we find him in his ſermons declaring, with regard to that diſpute (in which he obſerves the Churches were then at variance), that the will of God and his manner of proceeding in Predeſtination is undiſcernable, and ſhall ſo remain until that day, wherein all knowledge ſhall be made perfect, and that each ſide in that diſpute had an equally favourable countenance of ſcripture, which indeed was herein ambiguous, and therefore that the beſt courſe would be, ' To think that ' theſe things which with ſome ſhew of probability we ' deduce from ſcripture are at the beſt but *our opinions*, ' for that this peremptory manner of ſetting down our ' own concluſions under this high commanding form of ' neceſſary truths, is generally one of the greateſt cauſes ' which keeps the Churches this day ſo far aſunder; ' when as a gracious receiving of each other by mutual ' forbearance in this kind might peradventure bring ' them nearer together (16).' This propoſal of a mutual toleration is ſtrenuouſly pleaded for in the ſpeech of Epiſcopius at the Synod of Dort, as the only method of ſettling theſe differences. It is indeed the main drift of that ſpeech, as appears from the abſtract thereof taken by our author, and printed in his *Golden Remains* (17).

[G] *He grew fond of the Remonſtrants method of theologizing.*] Beſides what is mentioned in the laſt remark, where we have ſeen him ſide with Epiſcopius againſt the then eſtabliſhed doctrine of the Engliſh Church, in reſpect to the prudential neceſſity of the article concerning Predeſtination (18). There is another point generally held to be of much greater importance, wherein he ſeems to follow the ſame maſter, at leaſt he embraces the ſame opinion with that leading divine among the Remonſtrants. I mean the neceſſity of believing the article of Chriſt's divinity (19). Here follows his doctrine concerning that point. It is in his famous tract of Schiſm, where ſpeaking of that ſpecies of it, which is occaſioned by variety of opinion, he expreſſes himſelf thus. ' It hath been the common ' diſeaſe of Chriſtians from the beginning, not to con-
' tent themſelves with that meaſure of faith, which
' God and ſcriptures have expreſsly afforded us, but
' out of a vain deſire to know more than is revealed,
' they have attempted to diſcuſs things, of which we
' can have no light neither from reaſon nor revelation,
' neither have they reſted here; but upon preſence of
' Church-authority which is none, or tradition, which
' for the moſt part is but figment, they have peremptor-
' rily concluded, and confidently impoſed upon others,
' a neceſſity of entertaining concluſions of that nature,
' and to ſtrengthen themſelves have broken out into di-
' viſions and factions, oppoſing man to man, ſynod to
' ſynod, till the peace of the Church vaniſhed, with-
' out all poſſibility of recall. Hence aroſe thoſe an-
' cient and many ſeparations among Chriſtians, occa-
' ſioned by Arrianiſm, Eutychianiſm, Neſtorianiſm, Pe-
' lagianiſm, Sabelliaaiſm, and many more both ancient
' and in our time; all which indeed are but names of
' ſchiſm, howſoever in the common language of the Fa-
' thers, they were called Hereſies. For Hereſy is an act
' of the will, not of reaſon, and is indeed a lye, not a mi-
' ſtake, elſe how could that known ſpeech of Auſtin go
' for true, *Errare poſſum, hæreticus eſſe nolo.* Indeed
' Manicheeiſm, Valentinianiſm, Marcioniſm, Maho-
' metaniſm, are truly and properly hereſies. For we
' know that the authors of them received them not,
' but minted them themſelves, and ſo knew that which
' they taught to be a lye. But can any man avouch
' that Arrius and Neſtorius, and others, that taught
' erroneouſly concerning the Trinity, or the perſon of
' our Saviour, did maliciouſly invent what they taught,
' and not rather fall upon it by error and miſtake?
' till that be done, and that upon good evidence, we
' will think no worſe of all parties than needs we muſt,
' and take theſe rents in the Church to be at the worſt
' but Schiſms upon matter of opinion (20).' We have given the paſſage intire, as containing in itſelf a clear proof, needing no comment, of the truth of the aſſertion, that our author held the no neceſſity of believing the article of Chriſt's divinity. And that herein he followed his maſter Epiſcopius, ſeems probable in that he was of a contrary opinion before he went to Holland, as appears from a paſſage in his ſermon on 2 Pet. iii. 16. printed as we have already obſerved in 1617, where ſpeaking of the abuſe of ſcripture by too much ſubtility of wit, as the great fault of the Greek Church, he has the following words. ' The Grecians, till barbariſm
' began to ſteal in upon them, were men of wonderous
' ſubtility of wit, and naturally over indulgent unto
' themſelves in this quality. Thoſe deep and ſubtile
' hereſies concerning the Trinity, the Divinity of
' Chriſt, and of the Holy Ghoſt, the union and diviſion
' of the divine ſubſtance and perſons, were all of them
' begotten in the heat of their wits, yea by the ſtrength
' of them were they conceived and born and brought
' to that growth, that if it had been poſſible for the
' gates of Hell to prevail againſt the Church, they
' would have prevailed this way; wherefore as God
' dealt with his own land, which being ſometimes the
' mirrour of the world for fertility and abundance of
' all things, now lies ſubject to many curſes, and eſpe-
' cially to that of barrenneſs; ſo at this day is it with
' Greece, where ſometimes was the flow and luxury of
' wit, now is there nothing but extreme barbariſm and
' ſtupidity.

(11) Ibid. p. 84, 85. Mr Hales 'tis true before he left Dort grew out of humour with the Synod, and cenſures one ſtep very freely; but this was only under paſſed in a private ſeſſion. See his laſt letter dat. 7 Feb. 1619.

turally of an open frank diſpoſition [*H*], he both talked and wrote in ſuch a ſtyle as brought him under ſome ſuſpicion of leaning a little to Socinianiſm [*I*]. But however that

' ſtupidity.——God as it were purpoſely plaguing ' their miſerable poſterity with the extreme want of ' that, the abundance of which their fathers did ſo ' *wantonly* abuſe (21).'

(21) Golden Remains, p. 7. 8.

[*H*] *Of a frank and open diſpoſition*] Dr Heylin tells us (22), that as he was a man of infinite reading, ſo had he not leſs ingenuity; being free of diſcourſe, and as communicative of his knowledge as the celeſtial bodies of their light and influences Biſhop Pearſon likewiſe obſerves, that though no ſollicitations of his friends who often urged him to it, could prevail with him to write any thing for the public, yet that he cannot be accuſed for hiding his talent, *being ſo communicative, that his chamber was a church and his chair a pulpit* (23). We are informed too by Mr Farindon, ſpeaking of the letters written by him, that he had much trouble in that kind from ſeveral friends; and, continues he, I heard him ſpeak of that friend's letter you (24) mention pleaſantly, Mr ——, *He ſets up tops, and I muſt whip them for him.* Laſtly to the ſame purpoſe, Mr Wood tells us, that being highly eſteemed by learned men beyond and within the ſeas, he ſeldom failed to receive letters every week, wherein his judgment was deſired as to ſeveral parts of learning (25).

(25) Ath. Ox. Vol. II. col. 200.

[*I*] *He wrote in ſuch a ſtyle as brought him under the ſuſpicion of leaning to Socinianiſm.*] As to the fact that he was ſuſpected of Socinianiſm it is even notorious and has been obſerved already by Des Maizeaux (26), (and after him by Dr Birch in the General Dictionary) (27) who has ſufficiently expoſed that part of the charge which made him the author of two books actually written by profeſſed Socinians. Theſe are (1.) *Brevis Diſquiſitio an & quomodo vulgo dicti Evangelici Pontificios ac nominatim Val. Magni de Acatholicorum credendi regula Judicium ſolide atque evidenter refutare queant. Eleutheropoli apud Godfridum Philalethium*, 1633, 12mo. (2) *Diſſertatio de Pace & Concordia Eccleſiæ* [*edita per Irenæum Philalethen*] *Eleutheropoli*, 1628, 12mo. The firſt of theſe pieces was written by Joachimus Stegmannus a Socinian Divine, and the other by Przipcovius a Poliſh Knight and an Unitarian, as appears from Sandius's *Bibliotheca Anti-trinitariorum*, p. 123, 132, 133. Who obſerves that this letter had been aſcribed to *Epiſcopius*. So far is clear on the ſide of Mr Des Maizeaux, who goes on thus. ' For the reſt it is not unlikely but ' what gave occaſion to attribute theſe books to Mr ' Hales, was the general principles they are grounded ' upon, viz. having no rule of faith but the ſcripture ' explained according to ſound reaſon, and allowing all ' Chriſtian communions an equal right to interpret the ' ſcripture to the beſt of their judgment, and to order ' their government and diſcipline accordingly; that ' theſe general principles, I ſay, were agreeable to ' Mr Hales's notions, as they are, it muſt be acknowledged, principles common to all Proteſtants, but explained and inſiſted upon with more freedom and in ' a particular manner by our author.' This conjecture evidently points to Dr Heylin, who ſtands principal in the liſt of thoſe who have laid theſe books to our author's charge (28), and whoſe notions of Church power are aſſerted to be very different from thoſe of Mr Hales. Now though we ſhould allow all this to be true, yet it may be obſerved that the truth, as it ſtands in the paſſage juſt cited, is a little unfairly repreſented, though perhaps not deſignedly. For the charge of Socinianiſm might very well take it's riſe from the danger that was then particularly apprehended from the ſpreading of Socinian principles, ſince at ſuch a juncture (29), the ſingular freedom and particular manner uſed by our author, would be unavoidably watched with a more jealous eye, which in ſome things too might find matter to ſuſpect him inclining that way In his tract concerning the ſacrament of the Lord's ſupper, having obſerved, that generally the reformed divines do falſly report that holy action, whether you regard the eſſence or uſe thereof, and given ſome inſtances of both reſpects, he proceeds thus. ' Now all theſe miſtakes ' and errors have riſen upon ſome ungrounded and ' fond practices crept long ſince (God knows how) ' into the Church, and as yet not ſufficiently purged ' out. I will be bold to inform you what it is, which ' is πρῶτον ψεῦδος, the main fundamental fallacy ' whence all theſe abuſes have ſprung. There hath ' been a fancy of long ſubſiſtence in the Churches, that ' in the communion there is ſomething given beſides ' bread and wine, of which the numerality given men ' have not yet agreed: ſome ſay it is the body of God ' into which the bread is tranſubſtantiated, ſome ſay it ' is the ſame body with which the bread is conſubſtantiated: ſome, that the bread remaining what it was, ' there paſſes with it to the ſoul, the real body of God ' in a ſecret unknown manner. Some, that a further ' degree of faith is ſupplied us: others, that ſome degree of God's grace, whatever it be, is exhibited, ' which otherwiſe would be wanting. All which ' variety of conceits muſt needs fall out, as having no ' other ground but conjecture weakly founded. To ' ſettle you therefore in your judgment, both of the ' thing itſelf, and of the true uſe of it, I will commend ' to your conſideration theſe few propoſitions. Firſt, ' In the communion there is nothing given but bread ' and wine. Secondly, The bread and wine are ſigns ' indeed, but not of any thing there exhibited, but of ' ſomewhat given long ſince, even of Chriſt given for us ' upon the croſs ſixteen hundred years ago and more. ' Thirdly, Jeſus Chriſt is eaten at the communion table ' in no ſenſe, neither ſpiritually by virtue of any thing ' done there, nor really, neither metaphorically nor ' literally. Indeed that which is eaten (I mean the ' bread) is called Chriſt by a metaphor; but it is eaten ' truly and properly. Fourthly, The ſpiritual eating ' of Chriſt is common to all places as well as the Lord's ' table. Laſt of all, the uſes and ends of the Lord's ' ſupper can be no more than ſuch as are mentioned in ' the ſcriptures, and they are but two. Firſt, The ' commemoration of the death and paſſion of the Son ' of God ſpecified by himſelf at the inſtitution of the ' ceremony. Secondly, To teſtify our union with ' Chriſt and communion one with another; which end ' St Paul hath taught us. In theſe few concluſions the ' whole doctrine and uſe of the Lord's ſupper is fully ſet ' down, and whoſo leadeth you beyond this, doth but ' abuſe you. *Quicquid ultra quæritur non intelligitur* ' (30).' He had before argued againſt the neceſſity of uſing any words of conſecration, or their having any force to that purpoſe, and maintaining that the action would be perfect without any, concludes his argument thus. ' And in truth to ſpeak my opinion, I ſee no ' great harm could enſue, were they [the words of *inſtitution*] quite omitted. Certainly thus much good ' would follow, that ſome part (though not a little ' one) of the ſuperſtition that adheres to that action by ' reaſon of an ungrounded conceit of the neceſſity and ' force of the words in it, would forthwith pill off and ' fall away (31).' Such as are acquainted with the controverſies on this ſubject, need not be told, that theſe tenets are maintained by the Socinians, in conſequence of their doctrine concerning the perſon and office of Chriſt, and the ordinary reader may find it particularly ſhewn in each article by Dr Waterland, who likewiſe expreſsly takes notice of our author's unorthodox opinion in one of them (32). He is treating of the ſanctifying grace conferred in the Euchariſt againſt the Socinians, and having anſwered other objections, he concludes thus. ' Some perhaps may think it an ' objection to what has been pleaded, that grace is alſo ' promiſed ſometimes to prayer, ſometimes to faith, ' and ſometimes to hearing, and therefore is not peculiar to the ſacraments. For it has been ſuggeſted, ' that *the ſpiritual eating of Chriſt is COMMON to all places as well as to the Lord's table* (33). This I ' have touched upon before, and ſhall only add here, ' that we do not confine God's grace to the ſacraments, ' neither do we aſſert any peculiar grace as appropriate ' to them only, but what we aſſert is ſome peculiar degree of the ſame graces, or ſome peculiar certainty or ' conſtancy as to the effect, in the due uſe of thoſe means ' (34).' To conclude, there ſeems to be no good grounds for the inſinuation that it was only our author's particularly free manner of handling the Popiſh controverſy, which occaſioned the cenſure of Socinianiſm, neither does Mr Des Maizeaux produce any inſtance to confirm it. A liberal freedom was apparently the natural turn of his genius, and he might be more eaſy in indulging it on thoſe occaſions, in the view of letting his ſmart antagoniſts ſee, that as he was a match at leaſt for them in ſubtlety of reaſoning, ſo he knew how to return their ſcorn with a ſuitable ſtile of contempt (35).

(26) Account, &c. p. 4. & ſeq. in note [*B*].

(27) Vol. V. p. 703. in note [*E*].

(28) I mean with regard to Des Maizeaux's Account, &c. p. 26. note [*G*]. Dr Birch has added Dr Sam. Ward one of the Commiſſioners at Dort. See Uſher's Life, &c. by Parr, let. 181. p. 473. edit. Lond. 1686. fol. But theſe gentlemen mention only one of theſe books, intitled *Diſquiſitio brevis*, &c. The other called *Diſſertatio de Pace & Concordia Eccleſiæ*, is aſcribed to our author by Mr Wood, ubi ſupra, col. 202.

(29) About the year 1628, when Dr Heylin obſerves that Archbiſhop Laud was particularly buſied in ſuppreſſing Socinian books, as is likewiſe remarked by Des Maizeaux in another place, viz. in Account, p. 26. note [*G*]. And the Canons of 1640 are obſerved by Lord Clarendon to contain more expreſs declarations againſt Socinianiſm than are made by any other Church. Clarendon againſt Creſſy, p. 190, or thereabouts, Lond. 1674. 8vo.

(30) Tract on the Sacrament of the Lord's Supper among his Tracts in 1677, 8vo. p. 58 to 62.

(31) Ibid. p. 47.

(32) Viz. the 4th. See his Review of the Doctrine of the Euchariſt, &c. chap. x. p. 423, 424. Lond. 1737. 8vo.

(33) Here he refers in the margin to Hales's Tract, p. 57.

(34) To confirm this he quotes the following words of Voſſius de Sacramentis, p. 251. *Verbum & Sacramenta in eo conveniunt, quod ambo gratiam regenerationis offerant & exhibeant, ſed quod nonnunquam Sacramentis peculiariter adſcribi videtur, id inde eſt quod fides in Sacramentis hanc gratiam videat clarius, apprehendat fortius, teneat certius.*

(35) The like apology in reſpect to another of our author's Tracts, The power of the keys, is offered by Des Maizeaux himſelf. Account, p. 81.

[*K*] *He*

that be, 'tis certain that he gave into the opinion of thoſe who were afterwards called Latitudinarians. His ſentiments in that reſpect were expreſſed very unreſervedly, in the ſmall tract which he wrote for the uſe of his friend Mr Chillingworth (*l*), about the year 1636, concerning Schiſm, &c. [*K*]; and being informed that Archbiſhop Laud was diſpleaſed with it, he drew up a vindication of himſelf, which he addreſſed in a letter to his Grace [*L*], who in 1638 ſent for him to Lambeth, and after a conference of ſeveral hours appears to

(*l*) Ath. Ox. Vol. II. col. 202.

[*K*] *He gave into the opinion of the Latitudinarians, as appears by his tract of Schiſm.*] This has never been denied, and indeed is evident beyond all contradiction, from the following paſſages in that tract. 'Were liturgies and public forms of ſervice ſo framed, ſays he, as 'that they admitted not of particular and private fancies, but contained only ſuch things as in which all 'Chriſtians do agree, Schiſms on opinion were utterly 'vaniſhed. For conſider of all the liturgies that either 'are or ever have been, and remove from them whatſoever is ſcandalous to any party, and leave nothing 'but what all agree on, and the event ſhall be, that 'the public ſervice and honour of God ſhall no ways 'ſuffer: whereas to load our public forms with the private fancies upon which we differ, is the moſt ſovereign way to perpetuate ſchiſm unto the world's end. 'Prayer, confeſſion, thankſgiving, reading of ſcriptures, expoſition of ſcripture, [illegible] ſacraments in the plaineſt and ſimpleſt manner, were 'matter enough to furniſh out a ſufficient liturgy, tho' 'nothing either of private opinion or of Church pomp, 'of garments, of preſcribed geſtures, of imagery, of 'muſic, of matter concerning the dead, of many ſuperfluities which creep into the Churches under the 'name and order of decency, did interpoſe itſelf. For 'to charge churches and liturgies with things unneceſſary, was the firſt beginning of all ſuperſtition, and 'when ſcruples of conſcience began to be made and 'tended, then ſchiſms began to break in. The ſpiritual guides and fathers of the Church would be a little 'ſparing of incumbring churches with ceremonies, and 'not over rigid either in reviving obſolete cuſtoms, or 'impoſing new, there would [illegible] 'ſchiſm or ſuperſtition; and all the inconvenience, 'likely to enſue, would be but this, they ſhould in ſo 'doing yield a little to the imbecillities of inferiours; 'a thing which St Paul would never have refuſed to 'do (36).' After this ſpeaking of ſchiſm, occaſioned by epiſcopal ambition, and particularly the ſuperiority of biſhops in different ſees, he declares that it had been from time to time a great treſpaſſer againſt the Church's peace, and was now the final ruin of it. The Eaſt and the Weſt, through the fury of two prime biſhops, being irremediably ſeparated without all hope of reconcilement. 'And beſides, continues he, all this 'miſchief, it is founded in a vice contrary to all humility, without which no man ſhall ſee his Saviour: for 'they do but abuſe themſelves and others, that would 'perſuade us, that biſhops by Chriſt's inſtitution have 'any ſuperiority over other men further than of reverence; or that any biſhop is ſuperiour to another, 'further than poſitive order agreed upon amongſt Chriſtians hath preſcribed. For we have believed him 'that hath told us, *That in Jeſus Chriſt there is neither high nor low, and that in giving honour every man ſhould be ready to prefer another before himſelf*, 'which ſayings cut off all claim moſt certainly to ſuperiority by title of Chriſtianity, except men can think, 'that theſe things were ſpoken only to poor and private 'men. Nature and religion agree in this, that neither 'of them hath a hand in this heraldry of *ſecundum ſub & ſupra*, all this comes from compoſition and agreement of men among themſelves. Wherefore this 'abuſe of Chriſtianity to make it lacquey to ambition, 'is a vice for which I have no extraordinary name of 'ignominy, and an ordinary, I will not give it, leſt 'you ſhould take ſo tranſcendent a vice to be but trivial (37).' Theſe paſſages are quoted by Dr Stillingfleet in his Irenicum (38), as ſerving his purpoſe in that treatiſe wrote plainly in the view of promoting the *Comprehenſion*, and to the Doctor we may add another gentleman who will not perhaps take it wrong to be ſtiled the *Aleſius noſtri temporis*, and who having declared his opinion in favour of moderation, proceeds thus. 'And now if men ſhould ſay I perſwade to indifferency, I muſt bear it as well as I can, I am not 'yet without remedy as they are; for patience will 'help me, and reaſon cannot cure them' The words are borrowed from a pious, ingenious, earned, charitable, and ſweet tempered Biſhop, who with a noble candour and generous openneſs, pleads the cauſe of liberty of propheſying, and who never was cenſured for it by any man worth the mentioning (39), though probably he was reviled by thoſe who called Tillotſon an Atheiſt. If theſe two excellent prelates, and Eraſmus, and Chillingworth, and John Hales, and Locke, and Epiſcopius, and Grotius,—had been contemporaries, and had met together freely to determine the important queſtion. *What makes a man a Chriſtian, and what profeſſion of faith ſhould be deemed ſufficient*, they would probably have agreed, notwithſtanding the diverſity of opinion they might all have had in ſome theological points (40). In reality it was the Latitudinarian (and not the pretended Socinian) principles advanced in this tract of ſchiſm, which occaſioned ſo much notice to be taken of it by the writers on each ſide in that controverſy. As is evident by the account [illegible] in the Athen. under our author's [illegible] and more largely in Des Maizeaux's account of [illegible] Life, &c.

(36) Tract of Schiſm, p. 215 to 218.

(37) Ibid. p. 224, 225.

(38) B. I. c. vi. And the doctor, as is uſual on ſuch occaſions to a brother militant in the ſame cauſe, prefaces them with the higheſt elogiums of our author, to whom indeed it happens they are juſtly due.

(39) Biſhop Taylor's Liberty of Propheſying is joyned in the ſame cenſure with that of Mr Hales's Tract of Schiſm, in a piece intitled Mr Hales's Tract of Schiſm, &c. examined and cenſured, Lond. 1678. 8vo. by Mr Tho. Long.

(40) Remarks [illegible] Eccleſiaſtical [illegible]

(*l*) *He wrote an expoſtulatory Letter to Archbiſhop Laud.*] This remarkable letter was firſt printed in Dr Clarke's *Lives and Abſtracts &c.* 7th Edition [illegible] It contains our author's [illegible] given only [illegible] Maizeaux and [illegible] in the [illegible] in the order it lies, as follows. [illegible] of late an abortive diſcourſe [illegible] the uſe of a private friend, [illegible] without [illegible] wandered abroad, [illegible] it's way to [illegible] at your Grace's hands: I have taken the boldneſs to preſent myſelf before you in behalf of it, with this [illegible] apology or excuſe [illegible] rently, being reſolved *in utramvis aleam*, to beg either your approbation or your pardon. Whatſoever there is in that ſchedule, which may ſeem apt to 'give offence, conſiſts either in phraſe and manner of 'expreſſion, or in the conceits and things themſelves 'there preſſed and inſiſted upon. For the firſt, whoſoever has the misfortune to read it, ſhall find in it 'for ſtile ſome things over-familiar and ſubruſtick, 'ſome things more ſour and ſatyrical. For theſe my 'apology is but this, that your Grace would be pleaſed 'to take into conſideration, firſt, what the liberty 'might entice me to. Secondly, I am by genius open 'and uncautelous, and therefore ſome pardon might be 'afforded to harmleſs freedom and gaiety of ſpirit, utterly devoid of all diſtemper and malignity. Thirdly, 'ſome part of the theme I was to touch upon, was '(or at leaſt ſeemed to me) of ſo ſmall and inconſiderable a moment, and yet hath raiſed that noiſe and 'tumult in the Church, that I confeſs it drew from me 'that indignation which is there expreſſed. For all 'theſe things which I have above touched upon, my 'anſwer is, *incumbant in ſpongiam*, and I could heartily wiſh, (for in the caſe I am, I have nothing but 'good wiſhes to help me) that they into whoſe hands 'that paper is unluckily fallen, would favour me ſo 'much as to ſpunge them out.' After this declaration he proceeds concerning the things diſcuſſed in that pamphlet, 'I humbly beg leave before I come to particulars, to ſpeak for myſelf thus much in general. If they 'be errors which I have there vented (as perchance 'they are) yet my will hath no part in them, and 'they are but the iſſues of unfortunate inquiry. Galen 'that great phyſician ſpeaks thus of himſelf, Ἐγὼ δ' οὐκ οἶδ' ὅπως εὐθὺς, &c. I know not how, ſays 'that worthy perſon, even from my youth up in a wonderful manner, whether by divine inſpiration, or by 'fury and poſſeſſion, or however you may pleaſe to 'ſtyle it, I have much contemned the opinion of 'the many; but truth and knowledge I have above 'meaſure affected; verily perſuading myſelf, that a 'fairer, more divine fortune could never befall a man. 'Some title, ſome claim, I may juſtly lay to the words 'of this excellent perſon; for the purſuit of truth 'hath been my only care, ever ſince I firſt underſtood 'the meaning of the word. For this I have forſaken

'all

to have been reconciled to him [*M*], telling him that he might have any preferment that he pleased, which was modestly declined by him; yet a Canonry of Windsor was pressed upon him the next year in such a manner, he thought himself obliged, though unwilling, to accept it [*N*], and was installed June the 27th 1639 (*m*); however he enjoyed it only for two years 'till the beginning of the civil wars in 1642 (*n*). And the same year his tract of Schism was printed in one large sheet in 4to. without his consent, being thought to

(*m*) He succeeded Dr James Rowlandson, who died on the 9th of May. Ath. Ox. Vol. I. col. 670. and Mr Hales's patent bears date May 23. Walker's Sufferings of the Clergy, p. 94. c. i.

(*n*) Gen. Dict. where last cited.

'all hopes, all friends, all desires, which might biass me, and hinder me from driving right at what I aimed. For this I have spent my money, my means, my youth, my age, and all I have; that I might remove from myself that censure of Tertullian *suo vitio quis quid ignorat*. If with all this cost and pains, my purchase is but error; I may safely say to err hath cost me more, than it hath many to find the truth; and truth itself shall give me this testimony at last, that if I have mist of her, it is not my fault, but my misfortune. And howsoever I may have miscast some parcels of my account, yet am I most certain that the sum total is right, for it amounts to no more than that precept of the apostle. As far as it is possible have peace with all men; and surely there can be no great harm in the premises, where the conclusion is nothing else but peace.' These things being premised, he goes on, 'All that may seem to lie open to exception, is comprised under two general heads, my carriage: 1. Towards antiquity. 2. Towards authority.' He answers first those who thought he had been too sharp in censuring antiquity beyond that good respect which is due unto it [illegible] and as to authority, whereas in one point speaking of Church authority, I bluntly added, [*which is none*], I must acknowledge it was uncautiously spoken, and being taken in a generality is false, though as it refers to the occasion, which there I fell upon, 'tis as I think I may safely say most true. By Church authority, I do not mean the jurisdiction of ecclesiastical persons in Church causes or matter of fact, wherein the said persons in cases of their cognizance have the same authority, as any other have to whom power of jurisdiction is committed. Their consistories, their courts, their determinations stand upon as warrantable evidence, as the decisions of other benches and courts do. But what I visibly meant was the decision of ecclesiastical persons in point of Church questions and disputable opinions. I count in point of decision of these, if I say of the authority of the Church that it was none, I know no adversary that I have, the Church of Rome only excepted; for this cannot be true, except we make the Church judge of controversies; the contrary of which, we generally maintain against that Church. Now it plainly appears, that upon this occasion I spake it; for beginning to speak of schism arising by reason of ambiguous opinion, I brought in nakedly those words, which gave occasion of offence; which if I had spoken with due qualification, I had not erred at all. Again, whereas I did too plainly deliver myself *de origine dominii*, and denied it to be founded either in nature or religion; I am very well content to put off the decision of this point till Elias comes; since it is but a point of meer speculation, which in common life and use hath no place at all. And whether dominion *in civilibus* or *in sacris*, be κτισις &c. or comes in by divine right, it concerns them to look to who have dominion committed to them: To others whose duty it is to obey (and myself above all who am best contented to live and die a poor and private man) it is a speculation merely useless; save only, that what is commanded to private persons by their superiors, may be done with good conscience.' Lastly, he vindicates himself against some persons, who by reason of the passage cited in the preceding note, wherein he sharply takes episcopal ambition, suspected that in his heart he did secretly lodge a malignity against the episcopal order, and that under pretence of taxing the ancients, he secretly lashed at the then present times; shewing that he had not given the least pretence for such an imputation: and concludes by rejoycing at the happy condition of Episcopacy in the Church of England, as it was then, and had been settled for well near one hundred years.

[*M*] *The Archbishop after a conference at Lambeth seems to have been reconciled to him.*] The best account we have of this much talked of conference, is that given by Dr Heylin (42), of which the substance is, That the Archbishop, intent to prevent the spreading of Socinianism, had directed the suppressing all books of that kind imported from abroad. That one of these called *Disquisitio brevis*, was commonly ascribed to Hales of Eton. That there passed also up and down a *Discourse of Schism* in MS. levelled chiefly against the authority of the Church, which being dispersed about this time [1638], gave the Archbishop occasion to send for him to Lambeth, in hope to gain the man whose abilities he was well acquainted with. About nine o'clock in the morning, he came to know his Grace's pleasure, who took him into his garden, giving orders not to be disturbed upon any occasion. There they continued in discourse till the bell rang to prayers, and after prayers till dinner was ready, and after that too, till the coming in of the Lord Conway and some other persons of honour, put a necessity upon some of his servants to give him notice how the time had passed away. So in they came high coloured, and almost panting for want of breath; enough to shew that there had been some heats between them not then fully cooled. '[illegible] chance, continues he, to be there that day (43), and I found Hales very glad to see me (44), as being himself a meer stranger there, and unknown to all. He told me afterwards, that he found the Archbishop (whom he knew before for a nimble disputant) to be so well versed in books as business, that he had been ferreted by him from one hole to another, till there was none left to afford him any further shelter, that he was now resolved *to be orthodox, and declare himself a true son of the Church of England, both for doctrine and discipline*. That to this end he had obtained leave to call himself his Grace's chaplain, that naming him in his public prayers for his lord and patron, the greater notice might be taken of the alteration. Thus was Hales gained unto the Church, and gained a good preferment in it; promoted not long after by the Archbishop's commendation to a prebend at Windsor, and to hold the same by special dispensation with his place in Eton.' Mr Des Maizeaux, thinking this too severe upon our author's memory, hath spent more than thirty pages (45), in labouring to invalidate it, which surely was altogether needless upon the plan of his piece, since Mr Hales's letter to the Archbishop, compared with the subsequent conduct of each, and the well known temper and principles of Dr Heylin, furnish the best key for interpreting his narrative. We shall only observe in regard to Mr Hales's saying, *he was resolved to be orthodox, and to declare himself a true son of the Church of England*: that in such a speech, according to the known language of those times, the word orthodox was not opposed to the heretic, as Mr Des Maizeaux apprehended, but the puritan (46), and is explained in the following words, a *true* son of the Church, &c. which set forth a zealous and steady advocate thereof, the word *true* being opposed to *false*, in the sense only of *lukewarm*. But such mistakes are pardonable in a foreigner, not acquainted with the critical history of our language.

[*N*] *He accepted the Canonship of Windsor unwillingly*] We owe this particular to the General Dictionary (47), where it is related as follows. 'As to Mr Hales's being discontented (48), he was so far from it, that he would willingly have waved the Prebend of Windsor when it was sent to him, knowing nothing of it by Archbishop Laud; and he would have refused it, but that it was presented to him at a public dinner among many friends, who persuaded him to the contrary. Archbishop Laud did also send for him, and told him he might have what preferment he pleased, and he answered, *If it please your Grace, I have what I desire*.' Mr Des Maizeaux (p. 18) tells us, that our author assisted the Archbishop in preparing the edition of his book against Fisher the Jesuit, which was printed this year, but no authority is produced to vouch the truth of this fact, only we are referred to compare A. C's objections in that work, with some pieces of Mr Hales.

[illegible] No preacher makes frequenter [illegible] of the Fathers than our author does in his sermons, and generally with that judgment and impartiality for which he was distinguished. Yet in one of these he carries their authority so high, as to subscribe to the truth of the miracle of the thundring legion. A degree of credulity which would not be thought very judicious at this time of day. Sermon on Duels in Golden Remains, p. 80, 81.

(42) In Cyprianus Anglicus, ad anno 1638.

(43) He was chaplain to the Archbishop.

(44) The doctor calls Mr Hales his dear friend in the Quinquarticular History, Part I. chap. v. § 7 and 10.

(45) Viz. from p. 27 to p. 35 in note [*G*] against Dr Heylin the principal, and from 35 to 58 against his followers. I. Dr Sam Parker, in his Reproof to the Rehearsal transposed, Lond. 1673. 8vo. II. Tho. Long, in a piece mentioned already in remark [*K*]. III. Mr Wood, in the first edition of his Ath. Ox. Vol. I. col. 124. IV. Dr Walker, in Sufferings of the Clergy, &c. Lond. 1714. fol. Part II. p. 95. V. Mr Echard, in his History of England, Lond. 1718. fol. Vol. II. p. 143.

(46) And he might have observed that this speech of our author's was so understood by Mr Wood, Ath. Ox. Vol. II. col. 200.

(47) Vol. VII. p. 236, note [*B*].

(48) Mr Wood is hereby corrected, who in the article of our author, c. l. 202. relates this supposed discontent as one cause of Mr Hales's writing his Tract of Schism.

[*O*] *He*

to favour the then prevailing party (o). About the time of the Archbiſhop's death, he retired from his lodgings in the college into a private chamber at Eton (p), where he remained for a quarter of a year unknown to any, and ſpent in that time only ſixpence a week, living only upon bread and beer; and as he had formerly faſted from tueſday night to thurſday night, ſo in that time of his retirement he abſtained from his bread and water; and when he heard that the Archbiſhop was murdered, he wiſhed that his own head had been taken off inſtead of his Grace's (q). He continued in his fellowſhip at Eton though refuſing the Covenant, nor complying in any thing with the times; but was ejected upon his refuſal to take the Engagement *, and Mr Penwarden put into his room, to whom he gave a remarkable proof of the ſteadineſs of his principles with regard to the public [O]; and to a gentleman of the Sedley family in Kent he gave another no leſs remarkable proof of the ſteadineſs of his temper with regard to a private and ſtudious life (r). In this reſolution he retired to the houſe of a gentlewoman near Eton about a year after his ejection (s), accepting of a ſmall ſalary with his diet to inſtruct her ſon (t); here he officiated as chaplain, performing the ſervice according to the liturgy of the Church of England; and Dr Henry King the ſuffering Biſhop of Chicheſter being at the ſame houſe (u) with ſeveral of his relations, they formed a kind of college there (w). But this retirement, which muſt in his preſent circumſtances needs have been very agreeable to him, he was not ſuffered to enjoy long (x); for upon a declaration by the State, prohibiting all perſons to harbour Malignants, i. e. Royaliſts, he left that family [P], notwithſtanding the lady aſſured him that ſhe would readily undergo all the danger which might enſue by entertaining him. His laſt retirement was to a lodging in Eton, at the houſe of a perſon (y) whoſe huſband had been his ſervant. Here he was entertained with great care and reſpect, but being now deſtitute of every other means of ſupporting himſelf, he ſold a great part of his valuable library to a Bookſeller in London (z) for 700 pounds (aa). However though his fortune was much broken by his ſufferings, yet the current ſtory of his being reduced to extreme neceſſity appears by his Will not to be well grounded [Q]. He was not long ſick, about a fortnight, and

(o) See Wood where laſt cited, and Des Maizeaux, and Gen. Dict. in our author's article.

(p) Probably at Hannah Dickenſon's Houſe. See our author's Will in remark [R].

(q) Gen. Dict. ib.

* The Engagement was enacted in 1648 or 1649. It was an oath to be faithful to the Commonwealth of England as then eſtabliſhed, without a King or Houſe of Lords.

(r) He refuſed 100 pounds a year with his diet and ſervant, and a couple of horſes, which was offered him by that gentleman. Ath. Ox. ubi ſupra.

(s) He ſeems to have reſided at Dickenſon's houſe that year again.

(t) The lady's name was Salter (ſiſter as Mr Wood imagined to Dr Duppa Biſhop of Sarum).

(u) The Biſhop was there before Mr Hales's coming. Gen. Dict. Vol. VIII. p. 236.

(w) Walker's Sufferings of the Clergy, &c. p. 94.

(x) This is collected from his laſt Will, where he ſays he had been at Hannah Dickenſon's houſe a long time ſince his extruſion from his college

(y) Hannah Dickenſon. Mr Wood ſays ſhe had formerly at her marriage received of Mr Hales's bounty. See his Will.

(z) His name was Cornelius Bee. Idem ibid. but Wood is miſtaken in ſuppoſing it was his whole library. See his Will.

(aa) Dr Walker, ubi ſupra, tells us, he ſhared this money with ſeveral deprived miniſters, ſcholars, and others; and the ſame is alſo intimated by Dr Pearſon in his preface to Golden Remains.

The ſalary was 50 pounds a year. Her ſon is called in our author's Will William Salter of Rich-Kings, Eſq;

[O] *He gave a proof of his ſteady loyalty*] Some time after Mr Penwarden was put into his fellowſhip, he voluntarily offered to reſign the place to Mr Hales, who refuſed it, declaring that the Parliament having put him out, he was reſolved never to be put in again by them. Mr Des Maizeaux, who thought this account of Wood (49) too looſely worded, has explained it by ſuppoſing the refuſal was grounded upon the conſideration, that he could not be re-admitted without complying with ſuch things as he did not think lawful or proper for him to ſubmit to (50). That gentleman alſo further obſerves (51), that when the rebels had uſurped the ſupream authority, Mr Hales's loyalty to the King, and his zeal for the Church of England, made him part cheerfully with his fellowſhip and canonry. For this he quotes Mr Wood in the firſt edition of his Ath. Oxon. but the word *cheerfully* is not in the ſecond edition of that work, and though the circumſtance may perhaps not be improbable with reſpect to the canonry, yet as to his fellowſhip it is hardly conſiſtent, with his own words in his will, where he calls that ejectment *an unjuſt and cauſeleſs extruſion* (52). But Mr Des Maizeaux knew nothing of our author's will, and ſuppoſed likewiſe that he loſt his canonry and fellowſhip at the ſame time. The former of theſe was kept void till the Reſtoration, when it was filled, ſays Wood, by Anthony Hawles, D. D. ſometime of Queen's-college in Oxford.

(49) Ibid. col. 200.

(51) Ibid. in the text.

(52) See a copy of the Will in Rem. [R].

[P] *He left that family upon a declaration againſt harbouring Malignants.*] It is ſaid that the ſame order which carried Mr Farindon from his preaching in London, removed Mr Hales from Lady Salter's, he affirming that he would be gone, leſt he ſhould miſchief his friends (53). This, if true, will ſerve to explain the account given of Mr Farindon, by the author of the Athen. Oxon. who tells us (54), that this friend of Mr Hales having been made Vicar of Bray in 1634, and ſoon after divinity reader in the King's chapel at Windſor, was turned out of the firſt place after the breaking out of the civil wars, and at length out of all. That thus reduced, he was invited by Sir John Robinſon kinſman to Archbiſhop Laud, and ſome pariſhioners of St Mary Magdalen Milk-ſtreet London, to be paſtor there. That in 1647, he publiſhed ſome of the ſermons he had delivered to them, and that he died in his houſe at Milk ſtreet, September 1658.

(53) Gen. Dict. Vol. VII. as laſt cited.

(54) Vol. II. p. 226. 2d edit.

[Q] *The ſtory of his being reduced, appears by his will not to be well grounded.*] The ſtory is this, that 'Mr Farindon coming one day to ſee Mr Hales a few 'months before his death, found him in his mean 'lodgings at Mrs Powney's houſe (55), but in a temper gravely cheerful, and well becoming an excellent 'Chriſtian in ſuch circumſtances, after a ſlight and very 'homely dinner, and ſome diſcourſe concerning the 'times, Mr Hales deſired Mr Farindon to walk out 'with him into the church-yard, where this great man's 'neceſſities preſſed him to tell his friend that he had 'been forced *to ſell his whole library*, ſave a few books 'which he had given away, and ſix or eight little 'books of devotion which lay in his chamber, and 'that for money he had no more than what he then 'ſhewed him, which was about ſeven or eight ſhillings, 'beſides, ſaid he, I doubt, I am indebted for my 'lodging. Mr Farindon it ſeems did not imagine 'that it had been ſo very mean with him, and was 'much ſurprized to hear it, and withal ſaid, I have at 'preſent money to command, and to-morrow will pay 'you fifty pounds in part of the many ſums I and my 'poor wife have received of you in our great neceſſities; 'and will pay you more ſuddenly as you ſhall want it. 'To which he anſwered, No, you don't owe me a penny; or if you do, I here forgive you, for you ſhall never 'pay me a penny; I know you and your's will have occaſion for much more than what you have lately gotten. 'But if you know any other friend that hath too full a 'purſe, and will ſpare ſome of it to me, I will not refuſe that; to which he added, when I die (which I 'hope is not far off, for I am weary of this uncharitable world) I deſire you to ſee me buried in that 'place of the church yard, pointing to the place But 'why not in the church, ſays Mr Farindon, with the 'Provoſt [Sir H. Savile], Sir Henry Wotton, and the 'reſt of your friends and predeceſſors? becauſe, ſays 'he, I am neither the founder of it, nor have I been 'a benefactor to it, nor ſhall I ever now be able to be 'ſo; I am ſatisfied.' Dr Walker, who tells this ſtory, acquaints us likewiſe how he came by it. This diſcourſe, ſays he in a marginal note, between Mr Faringdon and Mr Hales, I had out of a looſe ſheet which was one of Mr Faringdon's papers retrieved by Mr Fulman of C. C. C. in order to have written the life of Mr Hales. It was communicated to me by the late Mr Archdeacon Davies of Saperton in Glouceſterſhire, among ſeveral other notices relating to my undertaking. Wood. Ath. Vol. II. p. 625 (56). In ſhort the ſtory is ſo circumſtantially told, and ſo well atteſted, that it could not have been diſcredited by any evidence leſs than that of Mr Hales's will. Something of the ſtory ſeems to have come to the ears of Andrew Marvel, which drew from him the following remark, *That it is not one of the leaſt ignominies of that age, that ſo eminent a perſon ſhould have been by the iniquity of the times reduced to thoſe neceſſities under which he lived* (57).

(55) She was not then married to Powney, but Dickenſon's widow, as appears by the Will in the following remark. She married Simon Powney afterwards. Wood in our author's article.

(56) Walker's Sufferings of the Clergy, &c, p. 94.

(57) The Rehearſal tranſproſed, p. 175, 2d edit. 1672. 8vo.

and then not very ill; but discoursed with all his friends as freely as in his health 'till within half an hour before his death (*b b*), which happened on the 19th of May 1656, being aged 72 years; he dyed in his last mentioned lodging, and the day after was buried according to his own desire [*R*] in Eton-college church-yard, where a monument was erected over his grave by Mr Peter Curwen (*c c*). As to our author's person, he had the marks of great ingenuity in his countenance, which was sanguine, cheerful, and full of air; his stature little, his body well proportioned, and his motion quick and sprightly (*d d*) He never married, and probably never had any inclination that way [*S*]. As to the rest, all writers agree in giving the character of one of the greatest as well as the best men of that or any other age (*e e*). And Bishop Pearson in particular gives the following elogium (*f f*) of him, wherein he declares, he shall speak no more than his own long experience, intimate acquaintance, and high veneration grounded upon both, shall freely and sincerely prompt him to. 'Mr Hales, says he, was a man I think of as great a sharpness, quickness, 'and subtility of wit, as ever this or perhaps any nation bred: his industry did strive if 'it were possible to equal the largeness of his capacity, whereby he became as great a ma- 'ster of polite, various, and universal learning [*T*], as ever yet conversed with books. 'Proportionate to his reading was his meditation, which furnished him with a judgment 'beyond the vulgar reach of man, built upon unordinary notions, raised out of strange 'observations and comprehensive thoughts within himself. So that he really was a most 'prodigious example of an acute and piercing wit, of a vast and illimited knowledge, of 'a severe and profound judgment. Although this may seem, as in itself it truly is, a grand 'Elogium;

(*b b*) Gen. Dict. Vol. VIII p. 236. where it is observed that Mr Montague was then talking with him, and leaving him only for half an hour found him dead on his return.

(*c c*) Who was bred at Eton, and was a great admirer of our author. The inscription, which is not ill done, may be seen in Wood ubi supra, col. 202, 203. only observing that the last word instead of *choro* should be *consortio*. Le Neve's Monumenta Anglicana, &c. p. 44. Lond. 1718. 8vo.

(*d d*) Ath. Ox. ubi supra.

(*e e*) In this character not only the advocates of his principles, who might be suspected of partiality, but the opposers of them, concur. Ibid.

(*f f*) In his Preface to the Golden Remains.

[*R*] *He was buried in the church-yard according to his own request.*] It was declared in his will, of which the following is a copy:

In Dei nomine Amen Maji decimo nono A. D. 1656.

'*My soul having been long since bequeathed unto the mercies of God in Jesus Christ my only Saviour; and my body naturally bequeathing it self to dust and ashes, out of which it was taken. I John Hales of Eton in the county of Bucks, Clerk, by this my last will and testament, do dispose of the small remainder of my poor broken estate, in manner and form following.*

First, I give to my sister Cicely Combes, five pounds. More, I give to my Sister Bridget Gulliford, five pounds. More, I give to the poor of the town of Eton, to be distributed at the discretion of my executrix hereafter named, five pounds. More, I give to six persons, to be appointed by my said executrix to carry my body to the grave, three pounds, to be distributed among them by even portions. More, I give to Mr Tho. Manfield of Windsor, Grocer five pounds. More, I give to Mrs Mary Collins, wife to Mr John Collins of Eton, five pounds, to this end and purpose, that she would be pleased to provide her a ring in what manner she listeth, to remain with her in memory of a poor deceased friend. All which monies here bequested, do at this present rest intrusted in the hands of my singular good friends Mr William Smith and Mr Thomas Montague.

Moreover all my Greek and Latin books (except St Jerom's works, which I give to Mr Thomas Montague) I give to my most deservedly beloved friend William Salter of Rich Kings, Esq; to whom I further give five pounds, to this end, that he would provide him a fair seal-ring of gold engraven with his arms and hatchments doubled and mantled, to preserve the memory of a poor deceased friend. All my English books, together with the remainder of all monies, goods, and utensils whatsoever, I give and bequeath to Mrs Hannah Dickinson of Eton, widow and relict of John Dickinson lately deceased. In whose house (for her's indeed it is, and not mine, as being bought with her money, howsoever for some reasons I have suffered the public voice to entitle me to it) in whose house, I say, I have for a long time (especially since my unjust and causeless extrusion from my college) been with great care and good respect entertained. And her the said Hannah, I do by these presents constitute and ordain my sole executrix. And unto this my last will I make overseers my very good friends Mr Thomas Montague and Mr William Smith of Eaton, and to each of them I give five pounds, humbly requesting them to be assistance to my said executrix with their best advice to help, if so be she chance to find any trouble.

Now because monies are many times not at command, but may require some time to take them up, I ordain, that in six months after my departure, she see all these my bequests and legacies orderly and faithfully discharged.

As for my funeral, I ordain, that at the time of the next even-song after my departure (if conveniently it may be) in the church-yard of the town of Eton, (if I chance there to die) as near as may be to the body of my little godson Jack Dickenson *the elder; and this to be done in a plain and simple manner, without any sermon, or ringing the bell, or calling the people together; without any unseasonable commessation or compotation, or other solemnity on such occasions usual.*

And I strictly command my executrix, that neither of her own head, neither at the importunity or authority of any other, neither upon any other pretence whatsoever, to take upon her to dispense with this point of my will; for as in my life I have done the Church no service, so will I not, that in my death the Church do me any honour.

The will was proved before Richard Allestree, D. D. Provost of Eton, Ordinary of that exempt jurisdiction, on the 29th of March 1666.

[*S*] *He had no inclination to marry.*] He intimates this dislike to matrimony in a letter to Sir Dudley Carlton from Dort (58), where speaking of the deliberations in that synod about ordering the manner of catechizing, he relates the practice of the several Protestant Churches, and concludes with the following remark. But doubtless the most effectual way of all the rest to bring young persons to learn their catechisme, was that which was related by one of the Helvetian Deputies. *For*, he told us, *that in his country the manner was, that all young persons, that meant to marry, were to repair, both he and she, unto their minister, a little before they meant to marry, and by him to be examined how well they had conned their catechism. If they had not done it perfectly to his mind, he had power to defer their marriage, till they had better learnt their lessons.* I was much addicted, continues he, to this course, when I heard it; and I thought that doubtless it was a speedy way to make all young persons, *excepting myself and two or three more, that mean not overhastily to marry*, to be skilful in their catechism.

(58) Golden Remains, 2d part, p. 11.

[*T*] *He was a great master of polite learning.*] Mr Wood informs us that he used to divert himself with writing verses, and his talent that way appears from Sir John Suckling's session of poets (59). And as he was an excellent critic, his company was much desired by the greatest wits of that time, Lord Falkland, Sir Will. Davenant, Ben. Johnson, &c. and there is a letter in verse among Sir John Suckling's works (60), which appears to be wrote from London, to our author at Eton or Windsor, inviting him, as the oracle of his friends, to come to town and enjoy their company. Mr Wood also tells us, that when the King and Court resided at Windsor, he was much frequented by noblemen and courtiers, who were extremely delighted in his company, not for his profound learning, but for his polite discourses, stories and poetry. In conversation he had one felicity which could not fail of making him their darling, that with all his knowledge, he was so modest, as to be patiently contented to hear the disputes of persons at table, and those of small abilities, without interposing or speaking a word till desired (61).

(59) In those lines which begin thus, Hales sat by himself, &c. Fragmenta aurea, &c. by Sir John Suckling, p. 149. 3d edit. 1658. 8vo. See also Rowe's Life of Shakespear.

[*U*] *He*

'Elogium; yet I cannot eſteem him leſs in any thing which belongs to a good man, 'than in thoſe intellectual perfections: and had he never underſtood a letter, he had 'other ornaments ſufficient to endear him. For he was of a nature (as we ordinarily 'ſpeak) ſo kind, ſo ſweet, ſo courting all mankind; of an affability ſo prompt, ſo ready 'to receive all conditions of men, that I conceive it near as eaſie a taſk for any one to be-'come ſo knowing as ſo obliging. As a Chriſtian, none more ever acquainted with the 'nature of the Goſpel, becauſe none more ſtudious of the knowledge of it, or more curi-'ous in the ſearch, which being ſtrengthened by thoſe great advantages beforementioned, 'could not prove otherwiſe than highly effectual. He took indeed to himſelf a liberty of 'judging, not of others, but for himſelf; and if ever any man might be allowed in theſe 'matters to judge, it was he, who had ſo long, ſo much, ſo advantageouſly conſidered; and 'which is more, never could be ſaid to have had the leaſt worldly deſign in any of his 'determinations. He was not only moſt truly and ſtrictly juſt in his ſecular tranſactions '[U], moſt exemplary meek and humble, notwithſtanding his perfections, but beyond all 'example charitable, giving unto all, preſerving nothing but his books to continue his 'learning and himſelf: which when he had before digeſted he was forced at laſt to feed 'upon, at the ſame time the happieſt and moſt unfortunate *hellto* of books, the grand ex-'ample of learning, and of the envy and contempt which followeth it.' None of his pieces, except that upon Schiſm and one or two ſermons (*gg*), were publiſhed in his life-time. We ſhall give the contents below of his poſthumous works [*W*].

(gg) Beſides the firſt already mentioned in remark [C], Mr Farindon ſeems to inſinuate, that the 1 could have alſo been printed, ſoon after it was preached, and Mr Wood, in the firſt edit. col. 125. of his Ath. Ox. ſays that the ſermon of Duels was alſo printed. But it is not mentioned in the ſecond edition of that work.

[*U*] *He was ſtrictly juſt.*] Mr Wood obſerves the ſame, and in confirmation of it gives the following remarkable inſtance, That while he was Burſer of his college, when he had taken any bad money, he laid it aſide, and put good of his own in the room of it to pay others. Inſomuch that ſometimes he hath thrown into the river 20l. or 30l. at a time, all which he hath ſtood to at his own loſs, rather than others of the ſociety ſhould ſuffer any (62).

(62) Ibid.

[*W*] *The contents of his poſthumous works.*] The firſt collection of theſe, intitled *Golden Remains of the ever memorable Mr* John Hales *of Eton-college*, which was publiſhed in 1659. 4to. contains (1.) Nine Sermons. (2.) Mr Hales's and Mr Balcanqual's letters, thirty of the former and fifteen of the latter, ſent from Dort to Sir Dudley Carlton. To the whole is prefixed, beſides a letter of Mr Ant. Farindon intimating the genuineſs of theſe papers, a preface by Dr (afterwards Biſhop) Pearſon, containing a character of the author; to which is ſubjoined an advertiſment, ſignifying that the editor had ſome more of Mr Hales's ſermons and tractates in his hands, and inviting others who had any to communicate them to the Printer, F. Garthwait, upon promiſe, and any other engagement, that he will take care to ſee them printed, and ſet forth, by themſelves. In 1673 came out the ſecond edition in 4to. with this title, *Golden Remains, &c. with additions from the author's own copy, viz. Sermons and Miſcellanies Alſo Letters and Expreſſes concerning the Synod of Dort (not before printed) from an authentick hand.* The additions are firſt five Sermons ſubjoined to the former. Theſe are followed by the *Miſcellanies*, which are 1.) Mr Hale's *Confeſſion of the Trinity*. The following remark in the General Dictionary (63) ſeems to relate to this paper 'Mr Montague (64) ſays that 'he [Mr Hale] gave an explication of his belief con-'cerning the Trinity to Mr Salter (65), according to 'the doctrine of the Church of England' Upon what occaſion is not there mentioned; perhaps it might be drawn up for the ſatisfaction of his friends, on account of thoſe ſuſpicions already mentioned of his orthodoxy in that article. (2.) *How we come to know the Scriptures to be the word of God.* Here he inſiſts only upon the external evidence waving the internal, as unfit to yield argument by way of diſpute, to ſtop the captious curioſities of wits diſpoſed to wrangle. (3.) *Concerning the Lawfulneſs of Marriages betwixt firſt couſins and couſin germans*, in a letter dated Sept 8, 1630. It ſeems to be wrote at the requeſt of ſome friend who was a Civilian, he gives his opinion for the lawfulneſs of ſuch marriages. (4.) *The Method of reading Hiſtory.* At the end there is laid down an excellent method for common placing in that ſtudy. (5.) *A Letter to an honourable Perſon concerning the Weapon-ſalve*, dated from Eton college 23 Novemb. 1630. The ſubject is the then new deviſed cure of wounds, by applying the ſalve to the weapon that did the miſchief. As this cure was ſuppoſed to be wrought by ſome particular concentricks or epycicles of ſimpathies and antipathies of eradiations or emanations of ſpirits, our author takes occaſion from thence to banter with his uſual pleaſantry the viſionary conceits of the Roſicruſians. Laſtly, in this edition to the former letters concerning the Synod of Dort, are ſubjoined ſix more to the Archbiſhop of Canterbury, one from Sir Dudley Carlton and five from the Engliſh deputies, and a letter of the firſt of theſe, the Biſhop of Landaff, to Sir Dudley. It has been conjectured, that theſe additions were only ſuch papers as are ſaid to be in the hands of the former editor, and an advertiſement, &c. to Robert Pawlet, for whom this edition was printed, appears here again after Dr Pearſon's preface of the ſame purport with the former, inviting others to communicate. But the ſame year four other ſermons of our author were printed by themſelves, and by the ſame Printer Tho. Newcomb, but for another Bookſeller R Marriot (66), with this title, *Sermons preached at Eton by* John Hales, *late Fellow of that college. The ſecond edition.* 1673. 4to (67). In 1688 the third edition of the *Remains* was publiſhed, from the ſecond, without theſe four ſermons. In 1677 there appeared another collection in 8vo. intitled, *Several Tracts by the ever memorable Mr* John Hales *of Eton-college*, with the author's picture before it. There is no preface nor advertiſement, but it is handſomely and carefully printed, and contains. (1.) *A Tract concerning the Sin againſt the Holy Ghoſt.* He confines the commiſſion of this blaſphemy to thoſe who were eye-witneſſes of Chriſt's miracles In which opinion he is followed by Dr Tillotſon, if I miſremember not, in a ſermon upon that ſubject. (2.) *A Tract concerning the Sacrament of the Lord's Supper.* To which ſhould be added, *and the queſtion, Whether the Church may err in Fundamentals* Among the abuſes of this Sacrament, he reckons that of making it an arbitrator of civil buſineſſes, &c —'We teach, continues he, that 'it confirms our faith in Chriſt, whereas indeed the 'receiving of it is a ſign of faith confirmed, and men 'come to it, to teſtifie that they do believe, not to 'procure that they may believe. For if a man doubt 'of the truth of Chriſtianity, think you that his 'ſcruples would be removed upon receiving of the Sa-'crament: I would it were ſo, we ſhould not have ſo 'many doubting Chriſtians, who yet receive the Sacra-'ment oft enough' Surely the argument here is a little looſely worded, for as the doubter is deemed an *incompetent perſona*, unqualified for this Sacrament, and therefore cautioned not to receive (68). The proceſs from confirming our faith to the procuring it, ſeems in reality (to uſe a ſchool phraſe well known to our author) to be a meer *Ignoratio Elenchi.* Is it not moſt manifeſt, that the word confirming is applicable neither to the unbeliever nor the doubter, but underſtood of a wavering unſteady or ineffective faith. He proceeds in the ſame uncautious ſtile to cenſure the practice of the Church in *the Communion to the Sick*, intimating it to be uſed as a *viaticum morientium*(69). He concludes this tract with excuſing himſelf (by reaſon of the narrow bounds of a letter) for not producing the proofs of his doctrine. But theſe may be ſupplied from a late treatiſe upon that ſubject (70). In the ſecond part, falling upon fundamentals, he expoſes with his uſual gaiety as well as ſolidity, the merriment (as he calls it) newly ſtarted [by the Papiſts], of requiring a liſt of them. In this part it is obſervable that he expounds thoſe words, *The gates of hell ſhall never prevail againſt it* [the Church], to a ſenſe contrary to that which appears in his *Remains*, aſſerting

(63) Vol. VIII. ubi ſupra, from a letter of Dr Narb. Ingelo to Richard Marriot, dated Oct. 29, without mentioning the year.

(64) One of the truſtees to his Will.

(65) Probably the ſame already mentioned of Rich-Kings, Eſq;

(66) If this be the ſame Richard Marriot mentioned in the Gen. Dict. in note 63, it will help us to the year about which Dr Ingelo's letter was written.

(67) Theſe are bound up with a copy of the Remains, 2d edit. now lying before me. Mr Des Maizeaux ſays, the ſecond edit. of the four ſermons was printed the ſame year in 8vo. by T. Newcomb, Bookſeller.

(68) See the Exhortation in the Communion Office.

(69) This paſſage was animadverted on by Dr Tho. Smith in his account of the Greek Church, p. 169. Lond. 1680. 8vo.

(70) See a Diſcourſe upon the Sacrament of the Lord's Supper, Lond. 1736. 8vo. by Biſhop Hoadly, who therein follows the ſentiments of our author.

asserting here that they contain no promise of persevering in the truth to the Visible Church; as in a passage of one of his sermons inserted in remark [G] is intimated they do, but an assurance of final victory in the resurrection against death and ["Adhc] hell to the Invisible Church, i. e. to such as do persevere in the truth. (3.) The third tract is *A Paraphrase on St Matthew's Gospel*, chap. xii. Here he likewise expounds the Sin against the Holy Ghost to the same sense as in the first tract. (4.) *A Tract concerning the Power of the Keys and auricular Confession*, dated from his study the 8th day of March, 1637. In this piece he indulges the freedom and pleasantry of his wit more than any where else. (5.) Is the *Tract concerning Schism and Schismaticks, where is briefly discovered the original causes of all Schism, never before printed by the original copy* These last words are added to shew, that all the former editions are spurious, as well that already mentioned of 1642, as the subsequent ones (71) They are indeed so very incorrect, and maimed and mangled, that the sense of the author is often either perverted or rendered unintelligible. We shall give one instance of the former, which at the same time will be of use in illustrating that passage of our author's letter to Archbishop Laud, where he intimates that he had not forgotten to pay all good respect to antiquity in this tract. Having noted the Schism occasioned by the disputes about the time of keeping Easter, he makes the following remark upon it. 'By the way, says he, by this you may see 'the danger of our appeal to antiquity for resolution in 'controverted points of faith, and how small relief we 'are to expect from thence. For if the discretion of 'the chiefest guides and directors in the Church did in 'a point so trivial, so inconsiderable, so mainly fail 'them, as not to see the truth, wherein it is the greatest 'marvail how they could avoid the sight of it; can we 'without the imputation of extream grossness and folly 'think so poor-spirited persons competent judges of 'the questions now on foot betwixt the Churches. 'Pardon me, I know *not* what temptation drew that 'note from me.' Here the importance of the word *not* in the conclusion is notorious: and Mr Des Maizeaux (72) has marked a strong ridicule, which one of the censurers of this tract suffered himself to be led into, by following a spurious edition of it, in this conclusion, where that important negative is unluckily omitted (6.) After the Tract of Schism follow, *Miscellanies*, under these heads, (1.) *How to know the Church.* (2.) *To the Description of the Church.* (3.) *How Christ is the Head of the Church.* (4.) *Of Peter's Ministerial Headship in the Church.* (5.) *Answer to the Bishop of Rome's Practice of Supremacy.* Besides these two volumes of Mr Hales's Posthumous Works, there has since appeared two of his letters, one from Archbishop Laud, printed in 1716, mentioned in remark [L], and the other to Mr Oughtred the famous Mathematician, for which see his article. P'

(71) Some one of these is generally inserted into the copies of his Golden Remains.

(72) Towards the end of his account of our author's Life, &c. The ridicule lies in the animadvertor's archly turning his own purpose in several notable conjectures concerning that particular temptation supposed to be here hinted by Mr Hales.

HALL [Joseph], successively Bishop of Exeter and Norwich, in the last Century. The account given of this learned Prelate by Mr Bayle, in his Dictionary, being very imperfect, we shall endeavour, in this article, to supply his omissions.—He was born July 1, 1574. in Bristow park, within the parish of Ashby de la Zouch in Leicestershire, of honest parentage. His father was an officer to Henry Earl of Huntingdon, then President of the North, and under him had the government of that market-town, wherein stands the chief seat of that Earldom His mother Winifride, of the family of the Bambridges, was a woman of uncommon piety (*a*). Having from his infancy been devoted by his parents to the ministry, he was for that purpose educated in the public school of his native place: and, at the age of fifteen, was admitted into Emmanuel-college in Cambridge [*A*]; whereof he was chosen Scholar; and took the degree of Bachelor of Arts in 1592 (*b*). About three years after, his scholarship being expiring, and the statutes of the college, which allow but one person of a county to be Fellow, cutting off all hopes of his settling there; he intended to remove into the island of Guernsey, where a place was offered him. But the Earl of Huntingdon having prevailed upon Mr Hall's countryman and tutor, Mr Gilby, to resign his fellowship [*B*], room was, by that means, made for Mr Hall, who was unanimously chosen Fellow. In 1596 he took the degree of Master of Arts: and thenceforth acquitted himself with good success in the public disputations, which he was often called to. He read also the Rhetoric Lecture in the Schools, for two years, with considerable applause. But, thinking it diverted him from his favourite study of Divinity, he gave it up to Dr Dod; and entering into Holy Orders, preached often, as occasion offered, both in country villages, and before the university (*c*). After having continued about six or seven years in the college (*d*), he was recommended, by the Master Dr Chaderton, to the Lord Chief Justice Popham, for the Mastership of Tiverton-

[*A*] *And at the age of fifteen was admitted into Emmanuel-college in Cambridge.*] He tells us, that, instead of being sent to the university, he was very near being placed for education under the care of one Mr Pelset, who was lately come from Cambridge, to be the publick preacher of Leicester. But his elder brother having occasion to go to Cambridge, and waiting upon Mr Nath. Gilby, Fellow of Emmanuel-college; the latter, on 'hearing of the diversion of the father's 'purposes from the university, importunately dissuaded 'from that new course, professing to pity the loss of so 'good hopes. The elder brother, moved with those 'words, at his return home fell upon his knees to his 'father, and besought him to alter so prejudicial a re'solution, and not suffer the young man's hopes to 'be drowned in a shallow country channel: but that 'he would revive his first purposes for Cambridge; ad'ding in the zeal of his love, that if the chargeableness 'of that course were the hindrance, he would rather 'be pleased to sell some part of that land which in 'course of nature he was to inherit, than to abridge 'his brother of that happy means to perfect his educa'tion.' A very uncommon instance of generosity!—But after our author had been two years at the university, he had like to have been called away from thence in an untimely and disagreeable manner; of which he pleased to take the account in his own words. 'My 'two first years were necessarily chargeable, above 'the proportion of my father's power, whose not very 'large cistern was to feed many pipes besides mine; '[for he had twelve children] his weariness of expense 'was wrought upon by the counsel of some unwise 'friends, who perswaded him to fasten me upon that 'school as master, whereof I was lately a scholar. 'Now was I fetcht home with an heavy heart, and 'now this second time had mine hopes been nipt in the 'blossom, had not God raised me up an unhoped be'nefactor, Mr Edmund Sleigh of Darby, out of no 'other relation to me, save that he married my aunt, 'pitying my too apparent dejectedness, he voluntarily 'urged, and solicited my father for my return to the 'university, and offered freely to contribute the one 'half of my maintenance there, till I should attain to 'the degree of Master of Arts; which he no less really 'and lovingly performed (1).'

[*B*] *But the Earl of Huntingdon having prevailed upon Mr Hall's countryman and tutor, Mr Gilby, to resign his fellowship*] By taking him for his domestic chaplain, and promising him preferment (2).

[*C*] *With*

Tiverton-school in Devonshire, then newly founded by Mr Blundel. He had accepted of it, and was but just come out from the Chief-Justice's, when he met a messenger in the street, who delivered him a letter from the Lady Drury of Suffolk; offering him the Rectory of Halsted near St Edmund's-bury, and very earnestly desiring him to accept of it, which he did, and relinquished the school (e). Being thus settled in that sweet and civil country of Suffolk, as he expresses it (f), his first work was to rebuild his parsonage-house, which was extremely ruinous. Two years after, he married a daughter of Mr George Winniff of Bretenham, with whom he lived happily nine and forty years. In 1605 he accompanied Sir Edmund Bacon to the Spa, where he composed his second Century of Meditations (g). He had an opportunity, in this journey, to inform himself with his own eyes of the state and practices of the Romish Church; and, at Brussels entered into a conference with Coster the Jesuit. About a year and a half after, his patron Sir Robert Drury refusing to restore to the Living of Halsted about ten pounds a year, which he unjustly detained, our author went to London to sollicit him upon that point. And being invited by the Earl of Essex's tutor to preach before Prince Henry at Richmond, who much admired his Meditations; the Prince so well liked the two sermons he preached before him, that he made him one of his chaplains (h). In the mean time, Sir Robert Drury, by his unjust detention abovenamed, refusing to make his living a competent maintenance; though our author alledged to him, among other arguments, that he was forced to write books in order to be able to buy some; he resolved therefore to embrace the first opportunity of removing from Halsted. While he was taken up with those anxious thoughts, Edward Lord Denny, afterwards Earl of Norwich, gave him the Donative of Waltham-Holy-Cross in Essex. And about the same time, which was in the year 1612, he took the degree of Doctor in Divinity; having taken the degree of Bachelor in 1603 (i). Thus, as he says, he returned home, happy in a new master, and in a new patron, betwixt whom, he divided himself and his labours, with much comfort and no less acceptance (k). In the second year of his monthly attendance on the Prince, when he came for his dismission, his Highness ordered him to stay longer; and, at last, when he allowed him to depart, offered him the honour of being continually resident at Court, with promise of suitable preferments. But being loth to forsake his noble patron, who had placed much of his heart upon him, he waved that offer, and remained two and twenty years at Waltham, where he preached a long time thrice a week, as he had done before at Halsted. In the mean time, he was made Prebendary of the collegiate church of Wolverhampton, and was the chief instrument in recovering a considerable estate, detained from that church by a fraudulent conveyance (l). In 1616, July 12, he attended the embassy of James Hay, Viscount Doncaster, into France: During his absence, the King conferred upon him the Deanery of Worcester, which he had promised him before his departure (m); and he was presented to the same December 9, 1616 (n). Before he could go to take possession of it, namely, on the 14th of March 1616-17 (o), he attended his Majesty into Scotland, as one of his chaplains. In 1618, he was sent to the Synod of Dort, with other of our English divines [C]; but by that time he had stayed two months there, the unquietness of the nights, in those garrison towns, working upon the tender disposition of his body, brought him to such weakness through want of rest, that he was obliged to return home. However, before his departure he preached a Latin sermon before the Synod; which, by their President and Assistants, took a solemn leave of him: and the Deputies of the States dismissed him with an honourable retribution, and sent after him a rich golden medal, having on it the portraiture of the Synod (p). He was not rigid in the five points controverted in that Synod, as appears by a treatise he writ soon after [D]. Having refused, in 1624, the bishopric of Glocester, which was earnestly offered him (q); he accepted, in 1627, of that of Exeter [E], to which he was consecrated December

[C] *With other of our English divines.*] The rest of the English divines sent by K. James I. to the synod of Dort, were, Dr Geo. Carleton, then Bishop of Landaff, and afterwards of Chichester; Dr John Davenant, Regius Professor of Divinity in Cambridge, and Master of Queen's-college; Dr Samuel Ward, Master of Sidney-college; and Dr Thomas Goad, sent in Dr Hall's room (3).

(3) See Fuller's Church-History, book x. p. 77, &c.

[D] *As appears by a treatise he writ soon after.*] It was printed amongst his remaining works (4), under this title; 'Via media. The way of Peace in the five busy 'Articles commonly known by the name of Arminius; 'touching, 1. Predestination. 2. The extent of 'Christ's death. 3. Man's Free-will and corruption. '4. The manner of our conversion to God. 5. Perseverance. Wherein is laid forth so fair an accommodation of the different opinions as may content both parts and procure happy accord.' And he gives this account of it (5); upon occasion of 'Mr 'Montague's tart and vehement assertions, —— I 'wrote a little project of Pacification, wherein I desired to rectify the judgment of men, concerning this 'misapprehended controversy; and because Bishop 'Overall went a midway betwixt the two opinions 'which he held extream, and must needs therefore 'somewhat differ from the commonly-received tenet 'in these points, I gathered out of B. Overall on the 'one side, and out of our English divines at Dort on 'the other, such common propositions concerning 'these five busy articles, as wherein both of them are 'fully agreed; all which being put together, seemed 'unto me to make up so sufficient a body of accorded 'truth, that all other questions moved hereabouts, appeared merely superfluous, and every moderate Christian might find where to rest himself, without hazard of contradiction: these I made bold by the 'hands of Dr Young, the worthy Dean of Winchester, 'to present to his excellent Majesty.'—

December 23 (r), holding with it in commendam the rectory of St Breok in Cornwall (s). Though he was reckoned a favourer of Puritaniſm (t), yet he writ, at the beginning of the troubles in this kingdom, with great ſtrength and elegance in defence of Epiſcopacy [F]. The 15th of November 1641, he was tranſlated to the ſee of Norwich, vacant by the death of Dr Richard Montague (u). But, on the 30th of December following, having joined with the Archbiſhop of York, and eleven other Biſhops, in the Proteſtation [G] againſt the validity of all laws made during their forced abſence from Parliament (w); he was voted among the reſt to the Tower, and committed thither the 30th of January, in all the extremity of froſt, at eight o' clock in a dark evening. Shortly after, they were impeached by the Commons of high-treaſon; and, when they ſhould have made their defence, were told, that it being then late they ſhould have another day: but that day never came. At length, about June 1642, he was releaſed upon giving 5000 l. bail: whereupon he withdrew to Norwich (x). Here he was received with more reſpect than he could have expected in ſuch times, and frequently preached to numerous audiences; enjoying peace 'till the beginning of April, 1643. But then the ordinance for ſequeſtring notorious delinquents eſtates being paſſed, wherein he was included by name (y); all his rents were ſtopped, when he was in hopes of receiving the foregoing half year, for the maintenance of his family. And, a very few days after, ſome of the ſequeſtrators came to ſeize upon his

' me ever ready to encourage thoſe whom I found conſcionably forward, and painfull in their places, and willingly giving way to orthodox and peaceable lectures in ſeverall parts of my dioceſs, opened their mouths againſt me, both obliquely in the pulpit, and directly at the Court; complaining of my too much indulgence to perſons diſaffected, and my too much liberty of frequent lecturings within my charge. The billowes went ſo high, that I was three ſeverall times upon my knee to his Majeſty, to anſwer theſe great criminations, and what conteſtation I had with ſome great Lords concerning theſe particulars, it would be too long to report; only this, under how dark a cloud I was hereupon, I was ſo ſenſible, that I plainly told the Lord Archbiſhop of Canter. [Laud] that rather than I would be obnoxious to thoſe ſlanderous tongues of his miſinformers, I would caſt up my Rochet; I knew I went right wayes, and would not endure to live under undeſerved ſuſpicions'—

[F] *He writ, at the beginning of the troubles in this kingdom, with great ſtrength and elegance in defence of Epiſcopacy.*] His ſeveral pieces upon that ſubject, were, 1. 'Epiſcopacie by divine Right aſſerted.' Lond. 1640, 4to. This treatiſe was occaſioned, by G. Grahame, Biſhop of Orkney's, renouncing his epiſcopall function, openly, before the whole body of the aſſembly of the clergy at Edinburgh, and craving pardon for having accepted it, as if thereby he had committed ſome hainous offence (7). 2. He publiſhed, 'An humble Remonſtrance to the high Court of Parliament, by a dutifull Sonne of the Church.' Lond. 1640, 4to. in behalf of the Liturgy and Epiſcopacy.——— To this, Stephen Marſhall, Edmund Calamy, Thomas Young, Matthew Newcomen, and William Spurſtow jointly wrote an anſwer, under the name of *Smectymnvvs*, being the initial letters of their names; and under the title of, *An Anſwer to a Book entituled, An humble Remonſtrance. In which the originall of Liturgy, Epiſcopacy, is diſcuſſed; and Quæries propounded concerning both*, &c. Lond. 1641, 4to (8).——— Whereupon Biſhop Hall, wrote, 3. 'A Defence of the Humble Remonſtrance againſt the frivolous and falſe Exceptions of Smectymnvvs. Wherein the right of Leiturgie and Epiſcopacie is clearly vindicated from the vaine cavils, and challenges of the Anſwerers. Seconded (in way of appendance) with the judgement of the famous Divine of the Palatinate, Abrahamus Scultetus, late Profeſſor of Divinitie in the Univerſitie of Heidelberg: concerning the divine Right of Epiſcopacie, and the No-right of Lay-elderſhip.' Lond. 1641.——The ſame Smectymnvvs replying, in *A vindication of the Anſwer* to the *Humble Remonſtrance, from the unjuſt Imputations of Frivoloufneſſe and Falſehood: Wherein the Cauſe of the Liturgy and Epiſcopacy is further debated.* Lond. 1641, 4to. Biſhop Hall concluded the diſpute with, 4. 'A Short Anſwer to the tedious Vindication of Smectymnvvs. By the author of the humble Remonſtrance.' Lond. 1641, 4to. Theſe ſeveral pieces of our learned author are written in a very handſome, lively, and witty manner; as his adverſaries diſtinguiſh themſelves by a peculiar *fierceneſs of ſpirit, and much aſperity in language* (9). In ſhort, they write with uncommon pertneſs and confidence, like perſons ſupported by the ſecular arm, and that could depend upon ſtronger and more irreſiſtable arguments, than thoſe upon paper.

(9) Ibid.

[G] *Having joined with the Archbiſhop of York, and eleven other Biſhops in the Proteſtation*, &c.] This Proteſtation is printed in Ruſhworth's (10) and Nalſon's collections (11), and in the Lord Clarendon's (12) and Rapin's Hiſtories (13), and other places; therefore need not be inſerted here. But Biſhop Hall having mentioned ſome curious particulars relating thereto, it will be proper to lay them before the reader.——'Upon our reſolved forbearance, (ſays he) *from Parliament*, the Archbiſhop of York [Williams] ſent for us to his lodging at Weſtminſter, lays before us the perillous condition we were in, adviſes for remedy (except we meant utterly to abandon our right, and to deſert our ſtation in Parliament) to petition both his Majeſty and the Parliament; that ſince we were legally called by his Majeſties writ to give our attendance in Parliament, we might be ſecured in the performance of our duty and ſervice againſt thoſe dangers that threatned us; and withall to proteſt againſt any ſuch acts as ſhould be made during the time of our forced abſence, for which he aſſured us there were many precedents in former Parliaments, and which if we did not, we ſhould betray the truſt committed to us by his Majeſtie, and ſhamefully betray and abdicate the due right both of ourſelves and ſucceſſours. To this purpoſe, in our preſence he drew up the ſaid petition and *Proteſtation*, avowing it to be legall, juſt, and agreeable to all former proceedings, and being fair written ſent it to our ſeverall lodgings for our hands, which we accordingly ſubſcribed, intending yet to have had ſome further conſultation concerning the delivering and whole carriage of it. But e're we could ſuppoſe it to be in any hand but his own, the firſt newes we heard, was, that there were meſſengers addreſſed to fetch us in to the Parliament upon an accuſation of high treaſon. For, whereas this paper was to have been delivered, firſt to his Majeſties Secretary; and after peruſall by him to his Majeſtie, and after from his Majeſtie to the Parliament, and for that purpoſe to the Lord Keeper, the Lord Littleton, who was the Speaker of the Houſe of Peers; all theſe profeſſed not to have peruſed it at all, but the ſaid Lord Keeper willing enough to take this advantage of ingratiating himſelf with the Houſe of Commons and the faction, to which he knew himſelf ſufficiently obnoxious, finding what uſe might be made of it by prejudicate minds, reads the ſame openly in the Houſe of Lords: and when he found ſome of the faction apprehenſive enough of miſconſtruction, aggravates the matter as highly offenſive, and of dangerous conſequence; and thereupon not without much heat and vehemence, and with an ill preface, it is ſent down to the Houſe of Commons, where it was entertained hainouſly, Glynne with a full mouth crying it up for no leſs than high-treaſon; and ſome comparing, yea preferring it to the Powder-Plot.———Though, when it came to be debated, one of their oracles being demanded his judgment concerning the fact, profeſſed to them, they might with as good reaſon accuſe them of adultery (14).'

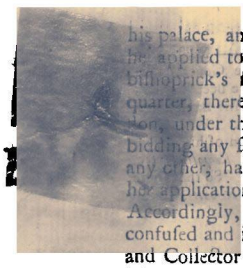
[H] *And*



his palace, and all his eſtate both real and perſonal [*H*]. Thus deprived of all ſupport, he applied to the committee at Norwich; which allowed him 400 *l.* a year, out of the biſhoprick's revenues. And yet this took no effect; for, before he could gather one quarter, there came down an order from the ſuperior committee for ſequeſtrations at London, under the hand of Serjeant Wild the chairman, and procured by Miles Corbet, forbidding any ſuch allowance: and telling the Norwich-committee, that neither they, nor any other, had power to allow him any thing; but if his wife needed a maintenance, upon her application to the Committee of Lords and Commons, ſhe ſhould have a fifth part. Accordingly, upon her petition, though after long delays, it was granted her. But ſo confuſed and imperfect an account was brought in to the Sequeſtrators, by their Sollicitor and Collector (who had both his temporal and ſpiritual revenues in their hands) that the Biſhop could never come to know what a fifth part meant; and therefore, it ſeems, was obliged to take what they thought fit to give him (*z*). And, which was yet harder! whiles he received nothing, yet ſomething was required of him. For they were not aſhamed, after they had taken away and ſold all his goods and perſonal eſtate, to come to him for aſſeſſments and monthly payments for that eſtate which they had ſeized, and took diſtreſſes from him, upon his moſt juſt denial. Nay, they vehemently required him to find the arms uſually furniſhed by his predeceſſors, when they had left him nothing. And, upon many occaſions, offered him inſolent affronts and indignities (*a*) [*I*]. Still he remained in his palace, though with a poor retinue and maintenance: but at laſt he was forced to quit it at three weeks warning, (though his wife offered to pay rent for it out of her fifths) and might have lain in the ſtreet; ſuch was the inexorableneſs of his mercileſs enemies! had not a neighbour in the Cloſe voided his houſe, to make room for him and his family. This was his hard meaſure, as he writ it down May 29, 1647 (*b*). Shortly after, he retired to a little eſtate which he rented at Higham near Norwich; where, notwithſtanding the narrowneſs of his circumſtances, he diſtributed a weekly charity to a certain number of poor widows. In this retirement he ended his life September 8, 1656, in the 82d year of his age: and was buried in the church-yard of that pariſh, without any memorial (*c*). He is univerſally allowed to have been a man of incomparable piety, meekneſs, and modeſty, having a thorough knowledge of the world, and of great wit and learning (*d*). As to his writings (beſides thoſe already mentioned in this article, and by Mr Bayle) a ſhort account is given of them in the note [*K*].

(*z*) See his Hard Meaſure, p. 56—60.

(*c*) Cl. W. Richardſon, edit. Godwini de Præſul. ut ſupra, p. 444. and Walker's Sufferings of the Clergy, &c. P. II. p. 56. In his Will he has this paſſage, 'I do not hold God's houſe a meet repoſitory for the dead bodies of the greateſt ſaints.'

(*d*) Walker. ibid. Neal's Hiſt. of the Puritans, Vol. II. p. 397. Vir rerum uſu peritus, ingenio ſubtili & exercitato, eruditione multiplici inſtructus, nec interim minor erat modeſtiæ & indolis manſuetiſſimæ laus. W. Richardſon, p. 444.

[*H*] *And all his eſtate both real and perſonal.*] He gives the following account of the hard uſage he met with upon that occaſion. The Sequeſtrators 'ſent 'certain men appointed by them, (whereof one had 'been burnt in the hand for the mark of his truth) to 'appraize all the goods that were in the houſe; which 'they accordingly executed with all diligent ſeverity, 'not leaving ſo much as a dozen of trenchers, or my 'childrens pictures, out of their curious inventory. 'Yea they would have appraized our very wearing 'clothes, had not *ſome of them* declared their opinion 'to the contrary. Theſe goods, both library and 'houſhold-ſtuff of all kinds, were appointed to be ex'poſed to publick ſale. But in the mean time Mrs 'Goodwin, a religious good gentlewoman, whom yet 'we had never known or ſeen, being moved with 'compaſſion, very kindly offered to lay down to the 'ſequeſtrators that whole ſum which the goods were 'valued at; and was pleaſed to leave them in our 'hands for our uſe, till we might be able to re-purchaſe 'them. As for the books, ſeveral ſtationers look on 'them, but were not forward to buy them: at laſt 'Mr Cook, a worthy divine of this diocеſs, gave bond 'to the ſequeſtrators, to pay to them the whole 'ſum whereat they were ſet, which was afterwards ſa'tiſfied out of that poor pittance, that was allowed me 'for my maintenance (15).'

(15) Ibid. p. 57, 58.

[*I*] *And upon many occaſions offered him inſolent affronts and indignities.*] He gives himſelf two inſtances of it, the firſt, that one morning, before his ſervants were up, there came to his gates a London trooper, attended with others, requiring entrance, and threatning if they were not admitted, to break open the gates. The pretence for their coming, was, to ſearch for arms and ammunition. And though the Biſhop told them, he had only two muſkets; yet not reſting upon his word, they ſearched round about the houſe, looked into the cheſts and trunks, and examined the veſſels in the cellar. Finding no other warlike furniture, they took away one of the Biſhop's two horſes, though he told them his age would not allow him to travel on foot.——At another time, the mob beſet his palace at a very unſeaſonable hour, for having ordained ſome perſons in his own chapel, and had the inſolence to demand his appearance before the Mayor (16).

(16) Hard Meaſure, p. 58, 61.

[*K*] *As to his writings (beſides thoſe already mentioned in this article, and by Mr Bayle), &c.*] They make in all V. volumes in folio and 4to. The 1ſt. printed (or rather collected) together, in 1617, and again in 1624; contains 'I. Meditations and Vowes, di'vine and morall: three centuries. 2. Heaven upon 'earth; or, of true Peace and Tranquillity of mind. '3. The Art of divine Meditation; with a Meditation 'of Death 4. Holy Obſervations. 5. Some of 'David's Pſalmes, metapharaſed, in verſe. 6. Cha'racters of Vertues and Vices, in two Books. 7. 'Solomon's divine Arts, of Ethicks, Politicks, Oeco'nomicks; with an open and plaine Paraphraſe upon 'the Song of Songs. 8. Epiſtles, in ſix Decads. 9. 'Six Sermons. 10 A common Apologie of the 'Church of England, againſt the unjuſt challenges of 'the Browniſts; [viz. Smith and Robinſon] 11. A 'brief ſumme of the Principles of Religion, by way of 'Catechiſme 12. Contemplations upon the princi'pall Paſſages of the holy Storie, in eleven books: To which, in the edition of 1624, eight more books were added, making in all nineteen. In that edition alſo is inſerted, 'The Honour of the married Clergy 'maintained, &c.' 'And three new ſermons.——II. The ſecond volume of his works, is 'A plaine and 'familiar Explication (by way of Paraphraſe) of all 'the *hard Texts* of the whole Scripture of the Old and 'New Teſtament.' Lond. 1633, fol. in two columns. ——III. The third volume, printed in 1634, contains, 'Meditations on the New Teſtament; 13 'Sermons; Tracts againſt Popery; Meditations, '&c.——The IVth volume, publiſhed in 1660, after his deceaſe, in 4to, is intituled, 'The Shaking of the 'Olive-Tree. The remaining works of that incompa'rable Prelate Joſeph Hall, D. D. late Lord Biſhop 'of Norwich. With ſome Specialties of divine Pro'vidence in his life. Together with his Hard Mea'ſure. Written by himſelf.' This volume conſiſts chiefly of ſermons, letters, ſpeeches in Parliament, &c. V. The laſt volume contains, 'Divers Treatiſes written 'upon ſeveral occaſions. Now firſt collected into one 'volume, Lond. 1662, fol.—His moral works were reprinted at London in 1738, fol.——Beſides all the above pieces, he publiſhed in 1597, '*Virgidemiarum*. 'Satires in ſix books.' 'And calls himſelf, in the Prologue, the firſt Satyriſt in the Engliſh language.

I firſt adventure, follow me who liſt,
And be the ſecond Engliſh Satyriſt.

The

The three first books are called Toothless Satires; poetical, academical, moral. The three last biteing Satires. They were re-printed at Oxford in 1753, 8vo.

In his manner of writing, he has imitated Seneca, more than any of our other English authors; for which reason he is styled the Christian Seneca (17). But we do not find that he published any book under that title, as Mr Bayle seems to think (18), deceived undoubtedly by the translators either of his Letters or Meditations; who so entituled them, on account of their resemblance to Seneca's Morals.—N. B. The critical remark after note [C] in the General Dictionary, under this article, might have been spared; for instead of W. D. Revolted, it is in Mr Bayle's original French (19), *à W. D. Revolté, &c.* Which is a literal translation of Dr Hall's direction of his *Serious Dissuasive from Popery, To W. D. Revolted, &c.* namely from the Protestant Religion. So that there was no danger of any one's mistaking *Revolted* for an Italian surname. C

(17) Sir Henry Wotton, in his letter to Dr Collins.

(18) At the end of the article HALL [JOSEPH].

(19) [illegible] note [C], edit. [illegible]

HALLEY [EDMUND], was born near London, October 29 (*a*), 1656, in the parish of St Leonard Shoreditch, at a place called Haggerston, which then consisted of little more besides a country house belonging to his father Edmund Halley, who was a Citizen and Soap-boiler in Winchester-street; and having acquired an opulent fortune in his business, resolved to give this son, his only child, and a youth of the most promising genius, an education suitable to it. In this view he put him at a proper age to St Paul's-school, under the care of that eminent master Dr Thomas Gale. Our author in a short time outstripped the rest of the boys, and became captain of the school at the age of fifteen (*b*). He not only excelled in every branch of classical learning, but was particularly taken notice of for the extraordinary advances he made at the same time in the Mathematicks. In so much, that he seems not only to have acquired almost a masterly skill in both plain and spherical Trigonometry, but to be well acquainted with the science of Navigation, and to have made a great progress in Astronomy before he was removed to Oxford [*A*]. Where he was entered a Commoner of Queen's-college in act-term 1673, being then in the 17th year of his age *. At the university, having brought a curious apparatus of instruments (purchased by his father, who spared no expence to encourage his son's genius) (*c*), he continued eager in the pursuit of these studies, applying himself with surprizing dexterity and skill as well to practical as geometrical Astronomy, and the success of his industry was felt by the learned world in a short time. For with respect to the latter, at 19 years of age he published a *Direct and Geometrical Method of finding the Aphelia and Eccentricity of the Planets* (*d*), the want of which 'till that time had been an opprobrium to Kepler's hypothesis [*B*]. Nor did he less distinguish himself in the former part of Astronomy. Besides

(*a*) In our author's Eloge in the Memoirs of the Royal Academy at Paris, in 1742, his birth is placed Nov. 8, 1656.

(*b*) Manuscript Memoirs, communicated by our author's son-in-law Mr Price.

* Wood's Ath. Ox. Vol. II. col. 981.

(*c*) MS. Memoirs, &c. Among these were his tube and sextant, the first 24 feet long, and the second 2 feet diameter; he carried them to St Helena, to Dantzick, to Paris, and Rome; and after his marriage set them up at Islington, whence they became the chief instrument of his fame; and it is no wonder that he was particularly fond of them.

(*d*) Printed in Phil. Trans. No. 128.

[*A*] *A great progress in Astronomy before he was removed to Oxford*] Mr Wood (1) tells us, our author had at this time perfectly learned the use of the celestial globe, and could make a compleat dial; and we are informed by Mr Halley himself, that he observed the change of the variation of the magnetic needle at London in 1672 (2), that is a year before he left school.

[*B*] *An opprobrium to Kepler's hypothesis.*] Kepler having built his theory upon the sure foundation of facts, as they appeared in the astronomical tables of Tycho, thought that sufficient, leaving the geometrical proof of it to others. Mr Halley supplied this defect in a paper which was published in Phil. Trans. anno 1676, No. 128. with the following title, *Methodus directa & geometrica cujus ope investiganturAphelia, Eccentricitates, Proportionesque Orbium Planetarum Primariorum, absque supposita æqualitate anguli motus ad alterum ellipseos focum, ab Astronomis hactenus usurpata*, i. e. *A direct and geometrical method of investigating the Aphelia, Eccentricities, and Proportions, of the Orbits of the Primary Planets, without supposing the equality of the angle of motion*: granting this equality, the proposition had been demonstrated by others, and particularly by Dr Seth Ward, in a piece intituled, *Astronomia geometrica, ubi methodus proponitur, qua planetarum primariorum astronomia, sive elliptica, sive circularis, possit geometrice absolvi* (3), Lond. 1656, 8vo. Before Kepler's time there had been supposed what the astronomers call a center of middle motion, that is a point from whence the motion of the earth would be always seen in a mean between it's quick and slow progress in the ecliptic. Copernicus and many others, who maintained that opinion, thought it absurd to suppose the earth carried in a circle (as they did) whose center was not the center of equal motion, seeing then the earth's motion must not only be in appearance but really unequal, and in some part of the periphery of it's orbit it would move faster, and in others slower, contrary to their established maxim of having all the motions perfectly uniform (4). But Kepler, when he had shewn from Tycho's observations, that Mars and the other planets were not carried round in circular but in elliptic orbits; and that the sun was in one of the foci of these ellipses; and that the planets in moving round him did so regulate their motions, that a line or ray drawn from the sun to the planet, did sweep an elliptic area or space always proportionable to the time the planet moved, he thought it but reasonable to suppose the earth in turning round the sun should observe the same law, and be carried likewise in an elliptic orbit. This theory answers exactly to all appearances in the phænomena, but it follows from it, that there are no centers of equal or middle motion, from which the planets can be seen to describe angles proportional to the times. And therefore many astronomers still adhering to the opinion that there were centers of equal motion, rejected Kepler's rule of the planetary motions, though they retained the elliptic form of their orbits, and because in the axis of an ellipsis, there are two points equally distant from the center which are called the foci, in one of which they with Kepler placed the sun, the other, which is distant from the sun the double of the eccentricity, they imagined to be the center of equal motion, and round it they supposed the planets to describe angles proportionable to the times; which indeed in ellipses that are not very eccentrical, such as are described by most of the primary planets, is nearly true, as Kepler also acknowledges. This they liked the better, because in the theory of Kepler, there was no direct or geometrical method to find out the true anamoly from the mean *, which was easily done by their own theory; and this indeed was evidently the reason, why Bishop Ward contented himself with shewing a geometrical method of describing the planetary orbits upon that theory, though he knew it was not strictly true. So much of this subject, though a little dry, was thought clearly necessary to give the reader a right apprehension of the importance of author's problem (5), in confirming the true system of the world, which though first discovered by Kepler, yet received it's first geometrical foundation from Mr Halley. And I cannot forbear remarking, that the first draught by which the demonstration of the system was completely perfected, and shewn from the laws of gravity necessarily to obtain in nature, happened to be executed by Mr Newton this same year 1676 (6). Mr Wood observes that our author's name will be for ever famous by the solution of this problem, and the writer of his eloge (7) at Paris, declares it to be 'A 'work, which might justly excite the envy of the most 'skilful astronomers of that time, and which put an end 'to a celebrated dispute that had long subsisted among 'them upon that subject †. Des Cartes, continues 'this writer, began his geometry with a problem, 'that had stopped the progress of the ancients, and the 'first

(1) Ath. Ox. Vol. II. col. 981.

(2) Phil. Trans. No. 195. where it is inserted into his table of those variations.

(3) Mr Halley in drawing up his title had apparently his eye upon this of Seth Ward's treatise, as he also put an end to the dispute between that author and Bullialdus; upon which see Gregory's Astronomy, book iii. where is inserted this problem of Mr Halley, prop. 3.

(4) To suppose these motions otherwise was thought incongruous to the nature of those intelligences, which, according to the philosophical Creed of the Ancients, presided over the planets, and directed their motions; and Epycicles were therefore invented to salve the apparent irregularities. *Eras. Oswaldi in Purbachii theoremata Commentaria*, p. 3. Basil. 1556. folio.

* That is a problem of another nature, and much more intricate than this of our author. See the article KEIL [JOHN].

(5) Viz. In respect to Astronomy. What it's merit is in regard to Geometry, he has signified himself in the conclusion of his paper. *Ostendi quomodo ex tribus locis heliocentricis planetæ, & distantiis a sole observatis, describi possit orbita istius planetæ, quod non nisi quinque talibus observationibus hactenus effectum videtur.*

(6) See his article.

(7) Mr Mairan.

† We have already mentioned that dispute in note (3).

Beſides an eclipſe of the moon, June 27, 1675, obſerved at his father's houſe in Wincheſter-ſtreet (*e*), ſeveral obſervations made by him concerning a ſpot in the ſun, ſeen at Oxford in July and Auguſt 1676, were publiſhed, with others by Mr Flamſtead upon the ſame ſubject, in the Philoſophical Tranſactions (*f*). By theſe the motion of the ſun round it's own axis, a phænomenon 'till then not well aſcertained (*g*), was fully and finally determined. The ſame year he likewiſe obſerved there, Auguſt 21, an occultation of Mars by the moon (*h*), which he made uſe of afterwards, with others, in ſettling the longitude of the Cape of Good Hope againſt the objections of the French Aſtronomers (*i*). During his ſtay at Oxford he alſo accurately obſerved the motions of Jupiter and Saturn, whereby he made ſeveral corrections in the beſt aſtronomical tables then extant of thoſe planets (*k*). About this time alſo, before his voyage to St Helena, he had diſcovered the method now well known of conſtructing eclipſes of the ſun, by which means the calculation of parallaxes in thoſe phænomena was ſuperſeded *. Neither yet was his induſtry confined within theſe limits. All the time from his firſt admiſſion he had been careful to make the proper obſervations for aſcertaining the true places of the fixed ſtars, and thereby correcting the errors of Tycho Brahe. His original view therein was to carry on the deſign of that firſt reſtorer of Aſtronomy, by compleating the catalogue of thoſe ſtars from his own obſervations; but upon further enquiry, finding this province taken up by Mr Hevelius and Mr Flamſtead, he dropped that purſuit, and immediately formed a reſolution of perfecting the whole ſcheme of the heavens, by the addition of the ſtars which lie ſo near the ſouth pole [*C*], that they could not be obſerved by thoſe Aſtronomers, as never riſing above the horizon either at Dantzick or Greenwich. Fired with the proſpect of making ſo diſtinguiſhed an improvement in his favourite ſcience, he left the univerſity before he had been there long enough to take any degree, and returning to his father, applied for his conſent to ſo remote a voyage, as was neceſſary for carrying his project into execution. Here he met with all the encouragement which ſo hopeful a ſon could either expect or wiſh from the affection of an indulgent parent (*l*). Whereupon he addreſſed himſelf to Sir Joſeph Williamſon (*m*) then Secretary of State, and to Sir Jonas Moor Surveyor of the Ordnance, both of them great promoters of theſe ſtudies, and the latter an able Mathematician. Theſe gentlemen highly applauding his purpoſe, mentioned it to King Charles the Second. His Majeſty was much pleaſed therewith, and without any delay gave him a letter of recommendation to the Eaſt-India-Company (*n*), who thereupon promiſed to ſupply him with all the accommodations and conveniencies that lay in their power, and to carry him to St Helena (*o*), which he pitched upon as a very proper ſituation (*p*) for his deſign. Accordingly he loſt no time, but embarked for that iſland in November 1676, and arriving there ſafely in three months, he ſtuck cloſe to his teleſcope, 'till he had entirely finiſhed the taſk he had ſet himſelf, and compleated his catalogue. This done he returned to England in November 1678. While he continued at St Helena, he made ſeveral other curious phyſical remarks (*q*) and aſtronomical obſervations, which were of uſe to him in promoting thoſe branches of literature, as ſhall be mentioned in their proper places. During

(*p*) It lies in the latitude of 15° 55′ ſouth.

(*q*) Among others he found himſelf obliged to ſhorten his pendulum to make it keep the ſame time as in England. This being told ſeveral years after by Mr Hook to Sir Iſaac Newton, he declared it was the firſt notice he had of ſuch an experiment, and he made uſe of it to confirm his opinion of the oblate ſpheroidical figure of the earth. See a letter of Sir Iſaac to our author in General Dictionary, Vol. VII. p. 800. in notes. b.

' firſt path ſtruck out by Mr Halley, conducted him at ' once to the moſt remote and abſtruſe parts of aſtro-' nomy.' A compariſon betwixt Des Cartes, and Dr Halley, might be the natural reſult of that remarkable affinity of genius, which appears in the works of theſe two great maſters of philoſophy; a genius ſcarcely leſs diſtinguiſhed by the bold flights of it's imaginative faculties in ſtarting hypotheſes, that it is by the ſagacity and ſolidity of it's reaſoning powers in making uſeful improvements, and alike happy alſo in ſetting forth it's productions in the moſt engaging dreſs. That particular inſtance of this affinity, here remarked by Mr Mairan, is indiſputably well choſen for the purpoſe of an eloge; but if we ſhould allow the politeneſs of the Frenchman's compliment therein to the latter, it ought not, becauſe it cannot fairly, be denied, that the compliment is carried much higher on the ſide of the former, it is carried even beyond the truth. A cenſure which perhaps will not be thought too ſevere, when we ſee it ſupported by Mr Halley himſelf (8), who gives it for one reaſon of his taking pains to correct and publiſh the preface of *Pappus Alexandrinus* to the ſeventh book of his mathematical collections, that it might appear thereby how unjuſtly Des Cartes had accuſed the Ancients of ignorance, in boaſting himſelf to have been the firſt mortal who was able to conſtruct a *locus* to four right lines, which had been attempted by Euclid; ſince *Apollonius* had plainly enough ſhewn, that he had done it in the place where he ſays it is impoſſible to give that conſtruction compleat, without thoſe propoſitions found by himſelf, and inſerted in the third book of his Conicks; which, continues Mr Halley, is the ſame thing as to ſay, that by the help of thoſe propoſitions, it would have been eaſy and obvious for Euclid to have conſtructed the *locus*; and truly whoever compares that operoſe ſolution, perplexed with a monſtrous algebraical calculus, given by Des Cartes in the beginning of his geometry, with that wonderful concinnity in which the whole buſineſs is compleated geometrically, and without any calculus at all, in the 17th, 18th, and 19th *lemmata* to the firſt book of the *Mathematical Principles of Natural Philoſophy*, by the help of two propoſitions in the third book of the ſaid Conics, will never doubt, but *Apollonius* had performed more in this matter than Des Cartes thought he had. To this it may be added, that as to the problem *de ſectione determinata*, a full ſolution of which was given by Apollonius, the whole difficulty of deſcribing the *locus* lies in finding the fifth point. But from five given points, Pappus ſhews how to deſcribe the elliptic locus, lib. 8. prop. 13, 14, and by the ſame method, *mutatis mutandis*, without any greater difficulty is the locus hyperbolicus deſcribed through the ſame points.

(8) In præfat. ad Apollonium de ſectione rationis. An account of which ſee below.

[*C*] *To complete the catalogue of the fixed ſtars, adding thoſe near the ſouth pole*] There were two accounts of theſe ſouthern ſtars than extant; one, wherein they were named by the Portugueze, and corrected by Peter Theodore, was inſerted in Kepler's catalogue of the fixed ſtars; the other was that upon Bleau's celeſtial globe laid down, as is generally reported, from the obſervations of one Frederic Houtman, a Dutchman (9). But both theſe were very imperfect and inaccurate, and this part of the celeſtial globe very ill deſcribed, being done chiefly from the rude obſervations of mariners, who had other thoughts in their view, than that of improving aſtronomy. Conſequently Mr Halley's catalogue of theſe ſtars was an entirely new acquiſition to the learned world, in what may not unaptly be called *Cœlum Auſtrale eo uſque incognitum*; and thence he acquired an indiſputable claim to the title which was not long after given him by Mr Flamſtead (10) of our Southern Tycho.

(9) Greg. Aſtron. book ii. p. 229.

(10) In his preface to the Doctrine of the Sphere, in Sir Jonas Moor's Syſtem of the Mathematics, Lond. 1681. 4to.

ring the navigation, in his paſſage, he had frequently experienced a great inconvenience in an inſtrument well known to the ſeamen by the name of Davis's Quadrant, which then had only a ſhadow-vane to the leſſer arch. Wherefore immediately after his landing he added a glaſs to that vane [*D*], and then haſtened to prepare the beſt teſtimonial, he could give of his gratitude to his royal benefactor. Having delineated a planiſphere, wherein with the niceſt accuracy he laid down the exact places of all the ſtars near the ſouth pole, from his own obſervations, he preſented it with a ſhort deſcription to his Majeſty, who was greatly ſatisfied therewith [*E*], and gave him at his own requeſt a letter of *mandamus* to the univerſity of Oxford for the degree of Maſter of Arts [*F*]. This letter was dated November 18, and the ſame month he was alſo choſen Fellow of the Royal-Society; and he gave an ample confirmation of his juſt claim to thoſe honours in the three pieces mentioned below (*G*), which were publiſhed by him the following year †. Theſe works were

† According to the Bookſeller's ſtile, but in the ſame year 1678 in the common computation.

[*D*] *He added a glaſs to that vane.*] Mr Wood (11), to whom we owe this particular, obſerves very juſtly, that this was a very conſiderable improvement in that uſeful inſtrument. As the ſpot of light exhibited by the glaſs can be clearly ſeen at ſuch times when the ſhadow is ſo faint, that it's edge cannot be ſufficiently diſcerned. Mr Hadley's reflecting quadrant is ſtill a farther improvement in this article (12), and the friendly intercourſe which was obſerved between them, makes it more than probable that the invention was not perfected without the aſſiſtance of Dr Halley.

(11) Ubi ſupra.

(12) See a deſcription with a draught of it by the inventor, in Phil. Tranſ. No. 376.

[*E*] *His Majeſty was greatly ſatisfied with it.*] This planiſphere diſcovered a remarkable inſtance of our author's addreſs. Among theſe ſtars there appeared the *Conſtellation of the Royal Oak*, with this deſcription. *Robur Carolinum in perpetuam ſub illius latebris ſervati Caroli ſecundi Magnæ Britanniæ Regis memoriam, in cælum merito tranſlatum.* Thus as the writer of his eloge obſerves (13), Mr Halley recorded his gratitude in thoſe ſkies, which the patronage and liberality of that prince enabled him to ſurvey.

(13) Ubi ſupra.

[*F*] *A mandamus for the degree of Maſter of Arts.*] The recommendatory words of this letter were, That *His Majeſty has received a good account of his learning as to the mathematicks and aſtronomy, whereof he has gotten a good teſtimony by the obſervations he has made during his abode in the iſland of St Helena.* The degree was conferred at Oxford the third of December following (14). Mr Wood hereupon remarks, that our author made no return by this voyage but that of praiſe (15); and indeed we do not find that he was preſented either with a purſe or a place on this occaſion, but his heart was not ſet upon ſuch rewards *. He was abundantly ſatisfied with his degree, which conſidering that his admiſſion in the univerſity was little more than five years before, and that he had not taken his bachelor's degree, was no doubt a very diſtinguiſhing atteſtation of his extraordinary merit. Mr Wood alſo intimates, that this mandamus was particularly requeſted by Mr Halley (16), and if ſo, there is ſome room to imagine, that he had then the Savilian profeſſorſhip in his wiſh at leaſt, if not in his view at this time. We are told that Mr (afterwards Dr) Edw. Barnard, who then ſat in the Aſtronomical chair, though highly delighted therewith for a while, yet ſoon grew leſs fond, and in a few years became ſo weary of it, that he was even deſirous to reſign either to Mr Flamſtead or Mr Halley, who he ſaid had cultivated that ſcience with prodigious application and ſucceſs, and with the applauſe of all Europe (17). But whatever may be thought of this conjecture, 'tis evident our author had a filial affection for his *Alma mater*, returning to her arms preſently after his landing from St Helena, and making the honours ſhe could confer the chief view of his ambition. He was likewiſe particularly eſteemed by the other Savilian Profeſſor Dr Wallis, as appears from a letter he wrote while our author was at Dantzick, recommending him to Mr Hevelius, the firſt Aſtronomer of the age, not only on account of his merit in that ſcience, but alſo for the hearty ſincerity and ingenuity of his temper, the letter was in theſe terms.

Clariſſimo et Spectatiſſimo Viro
Domino Johanni Hevelio
Conſuli Dantiſcano
Johannes Wallis Geometriæ Profeſſor
Savilianus Oxonii. S.

'*Clariſſime Vir,*
'*Deſtinaveram ad te literas per Dominum Hallejum noſtrum ſerendas; qui, ante ſex menſes credo, ad Te appulit, avidus tuorum apparatuum Spectator; ſuaque Tecum communicaturus obſervata. Sic autem accidit, ut Londino Ille prius diſceſſerit, quam ad Eum ſerrentur meæ literæ, fuerimque ea ſpe deſtitutus. Non autem erat oblitus (ſpero) Te meo nomine quam humaniſſime & officioſe ſalutare; hoc utique hinc diſceſſurus in ſe ſuſcepit. Quin gratus tibi fuerit acceſſus ejus non dubito; cum et Ipſe Vir ſit ingenuus, variaſque, Tibi impertiendas, habuit Obſervationes ſtellarum Europæis inconſpicuarum; ſoleaſque Tu ſumma cum humanitate advenas accipere. Num adhuc in Angliam redierit haud certus ſcio; Oxonii certe nondum eum vidiſſe contigit reducem. Fama interim hic accepimus Te alteram partem tuæ cæleſtis Machinæ abſolviſſe. Quo quidem gaudeo, atque ut curioſiſſimarum obſervationum Theſaurum amplexabor, rei Aſtronomicæ magno emolumento futurum, &c. Vale. Scribebam Oxonii, 8, Julii, S. V. 1679 *.*'

* *Excerpta ex literis illuſtrium & clariſſimorum virorum ad nobiliſſimum ampliſſ. & conſultiſſ.* Dn. Johannem Hevelium Conſ. Gedanenſem perſcriptis, &c. *Studio ac opera* Johannis Erici Olhoffii, *Secretarii*, p. 189. Gedani, 1683. 4to.

[*G*] *Three pieces mentioned below.*] Theſe are, (1.) *Catalogus ſtellarum Auſtralium, ſive ſupplementum catalogi Tychonici exhibens longitudines & latitudines ſtellarum fixarum, quæ prope polum antarcticum ſitæ in horizonte Urinaburgico Tychoni inconſpicuæ fuere, accurato calculo ex diſtantiis ſuputatas, et ad annum* 1677 *completum correctas* (18), *cum ipſis obſervationibus in inſula* S. Helenæ *cujus latitudo eſt* 15°. 55′. *auſtr. et longitudo* 7° 00′ *ad occaſum a* Londino, *ſumma cura et ſextante ſatis magno* †, *de cælo depromptis. Opus ab Aſtronomicis hactenus deſideratum. Accedit Appendicula de rebus quibuſdam Aſtronomicis notatu non indignis.* Authore Edmundo Halleio, e Coll. Regin Oxon ‖. In the preface he notes, That from his ſaid obſervations it is clear, that all the aſtronomical tables till then extant, were defective in calculating the motions of the celeſtial bodies, that Saturn moves much more ſlowly and Jupiter more ſwiftly than is reckoned upon; that hereupon he began to go about to correct them, but preſently foreſaw, that it could never be well done without a more correct catalogue of the fixed ſtars, the performance whereof was already undertaken by other hands, that he choſe therefore to take upon himſelf the ſtating of the places of the fixed ſtars near the ſouth pole, and out of our horizon, which no one that he knew had with proper inſtruments before undertaken. What Frederick Houtman's inſtruments were, by whoſe obſervations in *Sumatra* Bleau pretended to correct his celeſtial globe, our author declares he knew not, but ſaith, that by comparing that globe with this his preſent catalogue, it appears he underſtood little of aſtronomy. That conſidering this, and being alſo approved and encouraged by divers perſons of much worth and honour, as the Lord Viſcount Brounker, Sir Joſeph Williamſon ‡, and Sir Jonas Moor, and others, and even by the King alſo, he thereupon furniſhed himſelf with proper inſtruments for the purpoſe, which he particularly mentions and deſcribes, that of theſe he made the moſt aſſiduous uſe he could in a place of ſo thick and cloudy a ſky as he found that of S Helena, contrary to the common report, that he had reſtored about 350 fixed ſtars which were omitted in *Catalogo Tychonico*, the places whereof, he preſumes, he had truly aſſigned with reſpect to the places of ſome of the fixed ſtars in Tycho's catalogue. That the obliquity of the ecliptic is ſuppoſed to be 23°. 30′. which he obſerves is moſt certainly too much; yet becauſe he deſigned not a correction of the whole ſphere, and becauſe it was not then known within half a minute how great the obliquity is, and that this his own catalogue may be eaſily reduced to any obliquity, he thought not fit to meddle with that. After the preface follows the obſervations themſelves, wherein, to his own, he has added an ancient catalogue out of Clairus's

(18) They were afterwards fitted to the year 1726, and inſerted in Flamſtead's *Hiſtoria Cœleſtis Britannica*, Vol. III.

† See note (c) above in the text.

‖ There is an account of this book in Phil. Tranſ. No. 141. for Sept. Oct. and Nov. 1678. 'Tis none of the leaſt inſtances of our author's active induſtry that he publiſhed this book, procured a mandamus for his degree, went to Oxford and took it, reſolved to go to Dantzic, and wrote this letter to Hevelius, and was choſen F. R. S. all within the compaſs of a month after his landing from St Helena.

‡ This gentleman had been a conſiderable benefactor to Queen's-college in Oxford, of which Mr Halley was at this time a member. Ded. of Phil. Tranſ. Vol. IX. for the year 1674. which year Sir Joſeph took his degree of Doctor of Laws, being then Fellow of Queen's college, and lately made Secretary of State. Wood's Faſti, Vol. II. col. 197.

were ſcarcely out of the preſs, when he was pitched upon by the Royal-Society [*H*] to go to Dantzick, for the ſatisfaction of Mr Hevelius, with regard to the diſpute betwixt him and Mr

Cluſius's commentaries in *Sphæram Johannis de Sacro Boſco*, and that of *Bartſchius e tabulis Rudolphinis Keplери*; that by comparing them with theſe his obſervations it might evidently appear, how much the ancient globes do almoſt every where differ from the heavens. From theſe obſervations, as he proceeds, he propoſeth ſome conjectures of the corruptibility, or at leaſt the mutability of the fixed ſtars ‡. Next to theſe are tables of the right aſcenſions of the ſouthern fixed ſtars and their diſtances from the pole, for the uſe of ſeamen. The *Appendicula* contains, (1.) *Mercurii tranſitus ſub ſolis diſco, Octob.* 28, *An.* 1677, *cum tentamine pro ſolis parallaxi.* Upon the ſubject of the ſun's parallax, he remarks in the preface, that were the place of Mercury's node once found, the ſaid parallax might be deduced from this his obſervation of Mercury §. (2.) *Modi quidam pene geometrici pro parallaxi Lunæ inveſtiganda.* Of theſe ways there are propoſed three, yet the beſt way of finding the lunar parallax would be, as he notes in his preface, by comparing the meridian altitude of the ſun obſerved at St Helena and in Europe at the ſame time. (3.) *Quædam Lunaris Theoriæ emendationem ſpectantia.* Under this article our author ſhews that the elliptical figure of the moon's orbit, is more curve in her quadratures with the ſun than it is in the ſyzigies. This had never been publiſhed by any one before. The Hiſtory of the Academy of Sciences in France tells us indeed, under the year 1698, that the ſame thing had been obſerved in 1668 by Mr Picard. In this tract likewiſe Mr Halley firſt of any one ſeparated from the other inequalities in the moon's motion, that particular one which ariſes from her increaſed and diminiſhed periodical time about the earth, by reaſon of the diminiſhed or decreaſed diſtance of the earth from the ſun, i. e. That which depends upon the earth's mean anamoly (19). All the annual equations or corrections for finding the moon's motion, were then neglected in the conſtruction of tables except this; and though this was obſerved by Tycho, Kepler, and Horrox, yet they confounded it with the other. Sir Iſaac Newton obſerves that Horrox was the firſt who advanced the theory of the moon's motion moving in an ellipſe about the earth placed in the lower focus *, and that our author improved the notion by putting the center of that ellipſe in an epicycle, whoſe center is uniformly revolved about the earth, and from the motion in this epicycle ariſes that inequality in the progreſs and regreſs of the apogee, and in the quantity of the eccentricity. Our author having obſerved in the preface, that aſtronomy is moſt of all defective with regard to the theory of the moon, in order to incite the lovers of the ſcience to ſupply that defect, remarks, that if ever the irregularities of the moon's motion were truly determined by celeſtial obſervations, and a true phyſical theory, and the places of the fixed ſtars rightly determined by the obſervations of Hevelius and Flamſtead, then a moſt exact method would be given to find the longitude. Agreeably to this remark we ſhall find him making the theory of that planet, the principal ſubject of his aſtronomical ſtudies hereafter, during the whole courſe of his life.

‡ This conjecture was occaſioned by his diſcovering, whilſt at St Helena, a lucid ſpot in the Centaur. He proſecuted this ſubject afterwards in Phil. Tranſ. No. 346 and 347, having in 1714 diſcovered a 6th new ſtar in the conſtellation of Hercules.

§ See remark [*BB*] and [*GG*].

(19) Dr David Gregory mentions it to the honour of his uncle Mr James Gregory, that he ſuſpected this inequality to belong to the moon in his Optica Promota. Schol. to prop. 86. See Gregor,'s Aſtronomy, book iv. prop. 29.

* See *Nova Lunæ Theoria* inter Horroxii opera poſthuma, edit. 1673. in 2 vols 4to. and Princ. Math. lib. iii. p. 35. ſchol. 2d edit. 1713. 4to. compared with a paſſage upon this ſubject in a letter of Sir Iſaac, dated Oct. 24, 1694. inſerted in remark [*EE*]. The reader will obſerve that the moon's orbit is only elliptical in reſpect to the ſun, and not a perfect ellipſe, that planet moving round the earth's annual orbit abſolutely in a line of the ſpiral kind, which is always concave toward the ſun.

[*H*] *He was pitched upon by the Royal-Society to viſit Mr Hevelius*] That gentleman having employed himſelf in preparing a new catalogue of the fixed ſtars, obſerving that it would not be complete without the ſtars near the ſouth pole, applied to the Royal-Society, of which he was a member †, wiſhing that ſome ſkilful perſon of their body might be prevailed upon to execute that part of his deſign ‖. This motion being approved, and the obſervations completed, he wrote to Mr Flamſtead to procure them for him. That letter, as will appear preſently, is dated ſome months before our author's arrival from St Helena, but the catalogue of thoſe ſtars being printed ſoon after, a copy of it was ſent to the Conſul, with the following letter by Mr Halley.

Præclariſſimo Ampliſſimoque Viro
Johanni Hevelio Conſ. Gedanenſi
Aſtronomorum facile Principi. S. P.

Nudius tertius eſt, Vir Clariſſime, ex quo literas tuas $\frac{13}{23}$ *Auguſti datas mecum communicavit amicus meus Dominus Flamſtedius, ex quibus non ingratas Tibi futuras obſervationes meas ſtellarum prope polum antarcticum lucentium intellexi, catalogum meum paucos ante dies editum ad Te mitto, quem, ſi conceſſa fuiſſet commoda aliqua tranſmittendi opportunitas, citius in manus dediſſem veſtras, lætatus admodum hac occaſione tanti Viri amicitiam mihi conciliari poſſe. Honores a Te mihi deſignatos, labores meos quales quales tuorum monumentis adjungendo, gratiſſime habeo; vereor tamen, ne hæc cœpta mea juvenilia non accurata ſatis apud Judicem adeo oculatum videantur, nec digna, quæ exquiſito illi catalogo, quem de Te expectat orbis literatus, connectantur. Obſervationibus vero ineſt ſincera fides pro ratione inſtrumenti, ut & calculo iis ſuperſtructo, in quo ſuppoſui plerumque latitudines duarum Tychonicarum cum diſtantia obſervatas, namque meridianas altitudines cœlum plerumque nubilum nequaquam permiſit obſervatas. In catalogo meo ſuppono obliquitatem Tychonicam* 23°. 31′. 30″. *& præceſſionem æquinoctiorum, ſive longitudinum 1 Stellæ* ♉ 18°. 41′. *quanta fuit ineunte anno* 1678, *utraſque vero a Te paulo aliter ſtatutas non dubito; quocirca calculi laborem repetere non gravarer, ſi modo correctiora haberem fixarum, quibus uſus ſum, loca de catalogo Tuo deſumpta, ut potius Heveliani quam Tychonici Catalogi ſupplementum, opus meum inſcriberem. Qualia ſint noſtra obſervata, comparatione cum veſtris facta in quibuſdam ſtellis ab utroque noſtrum obſervatis, facile conſtabit, nec magnas inveniri differentias auſim ſpondere. Ipſe vero de ſe loquetur Catalogus, quo Tui juris facto utere pro lubitu, ac ſi dignum recenſeas, quem lucubrationibus veſtris adjungas, me plurimis officii vinculis obſtrictum tenebis, Animumque Tui & Aſtronomiæ fervidum majori ardore accendes; hoc etenim pacto inter volumina tua nunquam moritura nomen meum oblivionis fato ereptum apud poſteros quantumvis ſeros legetur, nec majus hominibus (me ſaltem judice) contingit bonum, quam grata per cuncta ſecula memoria de bene geſtis in uſus publicos vel literarum parta. Dominus Flamſtedius, qui jam ad Te ſcribit, obſervationes eclipſeos Lunaris Octobris* ♈ *a Nobis feliciſſime habitas tranſmittere promiſit, itaque me ea de re excuſatum habeos velim. Brevi, Deo valente, Civitatem veſtram viſurus iter ſuſcipio, ut Virum apud Eruditos univerſos celeberrimum, quemque non ſine æmulationis quadam ſpecie veneror, oculis meis agnoſcam, utque inſtrumenta Tua modumque obſervandi expertus intelligam, utque de ulteriori Aſtronomiæ profectu Te conſulam. Juventuti vero noſtræ, quæ vix hodie vigeſimum ſecundum annum attingit, venia impetranda eſt, dum Reverentiam Veſtram majoribus curis occupatam ineptiis meis laceſſo. Vale, Vir Clariſſime, meque omnibus obſervantiæ ac obſequii vinculis Tibi devinctum ne dedigneris redamare*

Dabam Oxoniæ,
Novemb. 11, ſt. vet.
1678.

EDMUNDUM HALLEIUM †.

† *Excerpta ex literis ad Heveliun*, p. 182, 183, 184, ubi ſupra.

It appears by this letter, that Mr Halley had reſolved already upon making a viſit to Dantzick; accordingly he took ſhip for that city in May the enſuing year, carrying with him from the Royal Society, the following letter to Hevelius.

'Vir Clariſſime,

'Cum Vir admodum ingenioſus et eruditus Dominus 'Edmundus Halleius e ſocietate noſtra, inſigni prorſus 'erga ſtudium Aſtronomicum amore jampridem incaluerit, eoque accenſus longinquam navigationem in 'inſulam Sanctæ Helenæ ſuſceperit, ut ſtellarum Auſtralium, quæ ob ſuam polo antarctico vicinitatem, 'hactenus Aſtronomis noſtris inobſervatæ fuerunt, catalogum adornaret, Tychonico ceu Mantiſſo loco adjiciendum; (quod accurata obſervationum adminiſtratione egregie præſtitit, earumque longitudines et 'latitudines in tabulis digeſſit) jam ſecundam peregrinationem Aſtronomiæ duntaxat cauſa inſtituat, utque Te Patrem & Principem Aſtronomorum hujus ſeculi 'videre propius, et ſuper his rebus conſulere poſſit, 'Dantiſcum excurrere cogitet; Voluit idcirco Societas 'noſtra Virum tam eximie de Re Aſtronomica meritam, ſuis ad Te literis cohoneſtare; Etſi ſatis perſpectum habeat, quam Tu propenſo affectu in Eos ſis, 'qui divinam hanc ſcientiam colunt atque amant intimius: præcipue in Talem Virum, qui quantus in his 'ſtudiis futurus ſit, jam edito in publicum ſpecimine

'ſatis

‖ *Annus Climactericus Jo. Hevelii*, p. 14. *Gedani*, 1685. ſchol.

Mr Hook, about the preference of plain or glass sights in astroscopical instruments. Mr Halley set out for that city on the 14th of May (r), 1679, and arriving there the 26th, immediately waited on the Consul, and after some conference, agreed to enter upon the business of his visit that same night [I]; on which, and every night afterwards (the sky permitting) the two Astronomers made their observations together 'till the 18th of July, when our author taking leave, gave his opinion of the surprizing accuracy of the Consul's observations, in a letter addressed to himself [K]. Returning home to his father, he

(r) MS. Memoirs.

'satis ostendit Scribebam Societatis jussu ac nomine.
'Londini, Aprilis 3, st. vet. Anno 1679.

'Tuæ Claritatis

'Cultor assiduus

'Gulielmus Croun, M D.

'Societ. Reg. Soc. (21).'

(21) Ibid. p. 185. Dr Croun's letter was read the same day it was dated before the R. Society, and a copy of it is preserved in their letter-book, Vol. VIII. p. 73.

Let us now hear from the Consul's own mouth, how acceptable our author's coming was to him. After mentioning the day of his arrival, he proceeds in these terms. '*Cujus adventus mirifice mibi extitit gratus, non solum eam ob causam quod a præclarissimo* Gulielmo Croun, M D. Societ. Regiæ Socio, *nomine totius Ill Societatis perquam mibi esset commendatus, tanquam Vir de Re Astronomica eximie meritus, sed quod nunc tandem id obtinuissem, quod jampridem exoptassem, me nempe talem invisisse rerum Astronomicarum bene gnarum, & probe exercitatum in observationibus, instrumento pinnacidiis telescopicis instructo expediendis, qui etiam secum ejus generis sextantem apportasset.*' He concludes the paragraph with testifying his satisfaction in having an eye-witness of the accuracy of his own observations made with plain sights *. Mr Halley had likewise particularly recommended himself both in the preface to his catalogue of the southern stars, where he had mentioned the Consul's observations with respect, and in the letter which accompanied it, wherein he expresses his desire to make this visit in the view of his own improvement, as it would give him an opportunity of inspecting both into the manner of observing made use of by the first astronomer in Europe, and likewise into the curious contrivance of his instruments. Concluding with an insinuation, how honourable the employ would be to himself a youth, scarcely two and twenty years of age, while Mr Hevelius, as appears from his *Annus Climactericus* (22), was an observer of 49 years practice. How Mr Halley acquitted himself in this visit, will be seen in the remark [K]

* Jo. Hevelii Annus Climactericus, ubi supra.

(22) In pref. p. 4. This was one reason of giving his book that title, 49 being, as he observes, a climacterical number. Besides he reckons some other remarkable events which happened to him that year, as (1.) The finishing of the second part of his *Machina Cælestis*. (2.) The sending of Mr Halley by the R. Society. (3.) The loss of all his instruments, which, together with his observatory, were totally destroyed by a fire on the 26th of Sept. this same year, occasioned by the negligence or malice of a servant.

[I] *Entered upon the business that same night*] It is worth seeing how Mr Hevelius himself represents the matter. '*Itaque quamprimum hic appulisset (Halleius) omni remota mora, me dic scilicet 26 Maii visitatum venit.—Ex primo autem colloquio inter nos inito satis superque perspiciebam ardorem illius ad res nostras cælestes, summumque Ejus desiderium Uraniam meam invisendi, organaque nostra contemplandi, manibusque suis tractandi; Idcirco protinus eo ipso die vesperi, cælo etiam annuente, ad speculam meam illum deduxi. Simul ac advenisset, petiit ut haud gravarer sextante meo orichalcico distantiam, et quidem Reguli et Spicæ observare, quippe inquiens se dubitare, me posse in minutis integris eandem ipsam quam forte olim dimensus fuerim, in sua præsentia determinare. Exoptassem quidem, fateor, Hospitem meum gratissimum Autumnali vel Brumali tempore advenisse, quo noctes obscuriores ac plerumque defæcatiores sunt, nec non Stellæ clarius multo in oculos incurrunt, quam hoc tempore æstivo, Sole jam in sexto gradu Geminorum existente, atque ad solstitium vergente, brevissimis illis noctibus, longissimo et intensissimo crepusculo; accedebat, quod Luna splendente eoque fere plena observationes suscipere deberem; adeo ut respectu mei vix commodum videretur observationum examina nudis oculis, pinnacidiisque instituere; verum dixisses Clarissimum Halleium studio sine dubio hoc tempore advenisse, quo posset instrumenta mea eo rigidius accuratiusque examinare, viresque nostras explorare, atque sic postea rebus bene succedentibus concludere, si nobis liceret tempore æstivo lucidissimis noctibus tum Luna affulgente et plena aliquid dignum præstare, utique credendum, etiam obscurissimis serenissimisque noctibus, Luna silente nos perficere quicquam posse.*' He then proceeds to relate that the distance between these two stars Regulus and Spica †, was taken by three several observations by them both, and afterwards compared, at Mr Halley's request, with the same distance as set down in the Machina Cælestis, Lib. IV. p 171 from observations made by Mr Hevelius in 1653, 1661, 1665, and 1671. He concludes with testifying that the same distance was again observed on the 1st and 7th of June, for Mr Halley's further satisfaction, who was present when he made those last observations (23). The Consul also wrote a letter on Midsummer-day following, to Dr Grew, then Secretary to the R. S. wherein he expresses the greatest satisfaction in Mr Halley's presence (24).

† The distance between these two stars had been long before particularly proposed by him, to try the accuracy of his observations and instruments. See his letter to Mr Oldenburg, dated June 13, 1660, printed in An. Climac. p. 41, 42.

he continued there 'till the latter end of the ensuing year 1680; when he set out upon what is usually called the Grand Tour. He was accompanied by the celebrated Mr Robert Nelson (s), so eminently distinguished for his piety. That gentleman had been his school-fellow (t), and always retained a just esteem of his merit. They crossed the water in December to Calais; and in the mid-way, from thence to Paris, Mr Halley had first of any one a sight of the remarkable comet, as it now appeared a second time that year, and thence gave as it were a new æra to the astronomical world. It was at this time in it's ascent or return from the sun, he had the November before seen it in it's descent, and he now hastened to compleat the gratification of his curiosity, in viewing this extraordinary, and at that time unaccountable (u), phænomenon, from the Royal Observatory of France [L]. That building had been finished not a great many years before (w), and our author's design in this part of his tour was to settle a friendly correspondence between the two royal Astronomers of Greenwich and Paris; and at the same to neglect no means, if any offered, of improving himself as he had done before with Mr Hevelius, so now with so

(u) Sir Isaac Newton for some time concluded it to be a different comet from that which appeared in November, there being then no apprehension, that these, like other planets, twisted round the sun.

(w) M. Cassini first began to observe there in September 1671. *Du Hamel's Regiæ Scientiarum Academiæ Historia*, Paris. 1701. 2d edit. fol.

at parting made him as obliging a compliment as the nature of the case would in the most favourable sense admit. I offer myself, says he, [in the above words, marked *] voluntarily a witness of the scarcely credible certainty of your instruments, against any one who shall hereafter call the truth of your observations into question; since I have seen with my own eyes not one or two, but several observations of the fixed stars made with your large brass sextant by different observers, and some of them by myself, which even when repeated did most accurately and almost incredibly agree, and never differed but in the trifling part of a minute. This letter (among others), together with the observations, was printed by M. Hevelius in 1685, and the book presented to the Royal Society. Wherein Mr Halley finding his compliments censured by some as too high strained, and observing the true state of the observations unfairly represented, and the two foot sextant which he took to Dantzic spoken of as a large instrument by M. Hevelius, thought it necessary to set the matter right, and at the same time not to be wanting in any part of the respect due to that Astronomer's acknowledged merit. A very candid account of the *Annus Climactericus* (27) was given to the Royal Society by Dr Wallis, which having displeased Mr Flamstead, the doctor in his own defence sent him a letter, where among other things he writes thus. 'As to 'Mr Halley, if you think (as you seem to intimate) 'that he hath been too lavish in his commendations, 'you must needs think Mr Hook hath been so in his 'reprehensions. Nor are the instruments and observa'tions so contemptible even in your judgment, as he 'seems to represent them.—If Mr Halley think it convenient, as perhaps he may, to say any thing in defence 'or excuse of his own instruments and observations, he 'may do it without disparaging those of Hevelius, 'which he has already so much commended, and I 'think he may best do it by way of answer to Mr Molyneux's letter. And for that reason I think it must 'be advisable not to print that letter (though they of 'Ireland desire it) 'till that of Mr Halley be ready to 'print with it. He may there say, without offence, 'what rectification for parallaxism is to be allowed; 'what observations were taken in his absence, which 'therefore as he cannot attest so neither can he contradict, and I presume they are none of those at which 'Hevelius says he was present; and what quadrant, if 'any be, (for I do not perceive which you mean) is 'misnamed a sextant, with what else of like nature 'he thinks fit. And then I do not see, but that each 'may succeed in what way himself thinks best without 'offence to one another. For my own part, I am so 'little versed in observing either way, that I do not 'pretend to judge of the point in question, whether 'plain or telescopic sights be every way the best. But 'this I think is undeniably evinced, that Hevelius with 'his instruments can distinguish by plain sights, not'withstanding what hath been said to the contrary, to 'a small part of a minute.' This letter is dated Feb. 12, 168$\frac{5}{6}$, and upon the 20th another was written to Mr Flamstead upon the same subject by Mr William Molyneux from Dublin, who also takes notice of that of our author, mentioned by Dr Wallis, as follows. 'I perceive the controversy between Hevelius and our English Astronomers, will never be ended 'whilst the old man lives, and indeed, if it be as you 'say, I think Hevelius much to blame, that he did not 'in the relation of the contest between Mr Halley's 'and his instrument, fairly declare the matter of fact. 'For, as you rightly observe, he calls Mr Halley's 'quadrant a sextant, and speaks of it, though but two 'foot radius, as of a very large instrument ‖, and this '*gave occasion to my error of thinking that instrument the* '*same Mr Halley used at St Helena.* ---I understand 'Mr Halley is printing a letter against Hevelius's '*Annus Climactericus*, but surely he cannot for shame 'contradict that large encomium he gives of Hevelius's 'instruments in his epistle in that book, neither can he 'possibly evade it, by giving that letter a different con'struction; for it is very literal, and plainly to be 'understood. So how he will come off I know not. 'As soon as Mr Halley's letter comes out, if it be por'table in a letter, I wish you would wrap it up, and 'send it to me. But above all Hevelius is to blame, 'that he mentions not the allowance of any thing for 'correction in Mr Halley's instrument. Indeed I ad'mire at his disingenuity in this particular. But yet I 'say, let it be how it will, if Hevelius takes distances 'and altitudes to five seconds, it is as much as can be 'expected from man, and if I am not forgetful, when 'I was with you at the Observatory, you shewed me 'that Hevelius and you differed only in *contemnenda* '*minuti parte* (28).'

(27) Printed in Phil. Trans. No. 175. p. 1162.

‖ The passage of the *Annus Climact.* here referred to is in p. 30, 31. where Mr Halley's sextant is called only a much larger instrument than a quadrant of a foot radius, then made use of by Hevelius in taking the meridian altitude of some fixed stars.

(28) See these two letters intire in the articles of Wallis and Molyneux in the General Dictionary.

We shall close this remark, with an extract of a letter from Dr John Fell, [in the Excerpta ‡, by mistake called Jell] Dean of Christ-Church and Vice-Chancellor of Oxford, to Hevelius, on receiving his Cometographia, presented to the University. After many other high compliments as usual on such occasions, the Dean concludes with a most extraordinary eloge upon his plain-sighted instruments, in the following words: 'A bonis illis viris, apud quos telescopio seu perspicil'lis uti, cæcutientis plane animi certissimum est indi'cium; quibus obstinatio pro fide, inveteratus error 'pro constantia habetur, & omnis in scientia profectus 'hæresis quædam audit, frustra expectaveris, ut studia 'hæc tua ullatenus placeant: veritatis interim & litera'rum cultoribus alia longe futura est sententia, cui 'ultro accedere, atque publico juxta et privato nomine 'calculum suum apponere, compendio gestit

Oxonii, 12 Nov. Anno 1668. 'Dignitatis meritique Vestri

'Æstimator Addictissimus,

'J. F.'

‡ *Excerpta ex literis ad Hevelium*, &c. ubi supra, p. 123, 124. where p. 152 is a letter of De Chales, author of the *Cursus Mathematicus*, dated Paris, 14 Nov. 1675. ingenuously informing the Consul on the other hand, that his admirer Bullialdus was there called a heretic in Astronomy for his warm adherence to plain-sights.

[*L*] *In viewing that phænomenon from the Royal Observatory of France.*] One part of our author's view in visiting Mr Cassini, was to inform himself more particularly in that astronomer's observations upon this comet at it's appearance in November before For this purpose he carried with him, both his own upon it, and those made then by Mr Flamstead, who likewise afterwards sent him others made during his stay at Paris †. He found the astronomical apparatus here much inferior to that of Greenwich. The radius of the instrument for taking distances, being not half so large, and yet more difficult to manage. However our author assisted Signor Cassini in making several observations upon that comet, which were of great service to Sir Isaac Newton (29) in settling the path of it, and thereby laying the foundation of a new astronomy with regard to those celestial bodies.

ſo great a maſter as Signor Caſſini. From Paris our author went with his fellow-traveller by the way of Lyons to Italy, where he ſpent a great part of the year 1681*. But his affairs then calling him home, he left Mr Nelſon at Rome, and returning by land, he made ſome ſtay a ſecond time at Paris, being received with the greateſt reſpect by the moſt eminent perſonages there. He had not been long in England, when he changed his condition, and in 1682 married Mary daughter of Mr Tooke, Auditor of the Exchequer, a young lady equally amiable for the gracefulneſs of her perſon and the beauties of her mind, in whoſe ſociety he lived happy for fifty-five years. Upon his marriage, he took a houſe at Iſlington near London, where he immediately ſet up his tube and ſextant, the attendance on theſe being his darling employment (*x*). The following year, 1683. our author publiſhed his Theory of the variation of the magnetical compaſs [*M*], wherein he ſuppoſes that the whole globe of the earth is one great magnet, having four magnetical poles or points of attraction †, near each pole of the equator two, and that in thoſe parts of the world which lie near adjacent to any of theſe magnetical poles, the needle is governed thereby, the neareſt pole being always predominant over the moſt remote (*y*). By reaſon of the well known difficulty of the ſubject, this hypotheſis in it's firſt dreſs was well received both at home and abroad: however, upon a review, being found by himſelf liable to ſome unanſwerable objections, he offered ſeveral years after an amendment of his theory, not without venturing to advance a new and bold conjecture concerning the fabrick of the internal

* There is an account by him of ſome very conſiderable obſervations made at [illegible] in India, ſeeking to find the longitude of that place, &c. in Hook's Philoſophical Collections, No. 5. p. 124. anno 1681.

(*y*) Phil. Tranſ. No. 148.

[*M*] *The theory of the magnetical compaſs.*] The indiſpenſible neceſſity there is for every ſeaman to be thoroughly acquainted with this excellent theory, having made it vulgarly known, the inſerting it here might well be thought tedious, and the hiſtory of the variation from it's firſt diſcovery hath been already touched upon (30). We ſhall therefore employ the preſent remark, agreeably to one principal deſign of this work, in exhibiting a view of our author's ſituation, with reſpect to the enquiry in general, and intimate what were the particular motives which firſt turned his induſtry this way. To come at this, when Mr Halley's profound veneration for the Royal Society is conſidered, there needs no other clue, than the ſeveral papers of that ſociety which were publiſhed from time to time, to excite and encourage the undertaking. Thus in 1666, preſently after the reſolution was taken to print their moſt uſeful papers under the title of Philoſophical Tranſactions, there appeared No. 24, wherein the firſt piece contained directions to all maſters of ſhips, pilots, and others, to be diligent in obſerving the variation of the needle, ſhewing them ſeveral ways of doing it accurately both by ſea and land, from the inſtructions of Sir Rob. Moray and Mr Hook, wherein alſo the great uſefulneſs of making exact obſervations of this kind is taken notice of (31). Two years afterwards, in 1668, No. 40 preſented the variations of the magnetick needle, predicted for 50 years at London, by Mr Henry Bond, an eminent teacher of the mathematicks in London, with a table ſhewing the particular variation for each year, and ſo to be continued to the world's end, deduced from former obſervations of his own and others. In 1670, No. 58, there was inſerted a paper intitled, An Obſervation of Mr Adrian Azout, a French Philoſopher, made in Rome (where he now is) about the beginning of the year 1670, concerning the declination of the magnet: out of an Italian printed paper, extracted by the publiſher of the Tranſactions. This extract, whereby it appears that Mr Azout had not been able to aſcertain the variation exactly, for want of proper meridians, concludes in theſe terms. 'It were 'well to obſerve, whether the declination which hath 'been almoſt through all Europe eaſtward, be now 'every where weſtward, as alſo in America, where 'the declination was almoſt every where weſtward, be 'increaſed in proportion, and ſo of other parts of the 'world. Noting withall the year, (which is not at 'all minded by ſome who relate the obſervations with-'out aſſigning the year) in regard it will be very uſeful 'to know the preſent declination, that it might be put 'into journals for navigation, and for the uſe of mag-'netic quadrants.' In purſuance of this, orders were hereupon given by the R S. that preciſe meridians be made in ſeveral places of England, for obſerving the preſent declination of the needle from time to time here in London, and in other parts of the kingdom, and that thoſe meridians that were made very exactly ſome time ago, be examined by a careful deſcribing of new ones, to ſee whether they ſtill hold true in regard of the ſuſpected alteration in nature (32). As to the manner of obſerving the variation, the curious are here referred to No. 24, already mentioned. Laſtly, to name no more, in 168⅔, No. 143, came out, *Epiſtola Invitatoria ad obſervationes magneticæ variationis communi ſtudio junctiſque laboribus inſtituendas. Dat. Altorfi Nouicorum pridie Feſti Paſchalis* 1682. Dr Sturmius, Math. Prof. at Altorf, the author of this epiſtle, having mentioned the ſeveral ſteps by which the doctrine of the magnet had been advanced to it's then preſent ſtate, from the firſt diſcovery of it's verticity to the poles, by our countryman Roger Bacon, to that of the variation of the declination taken notice of within a few years before by Hevelius, Auzout, Petit, Volkanner, and others, concludes from theſe laſt, that the variations are regularly made. Whereupon he here invites the ingenious in all countries to give their joint aſſiſtance to bring the point to a certainty, from 'whence, ſays he, we may rea-'ſonably expect among other particulars, great im-'provements in theſe two, navigation and geometry.' By theſe means it came to paſs that many magnetical experiments were made, and the variations diligently obſerved by the navigators: and it was by the help of theſe, together with ſeveral of his own made in his voyage to and from St Helena, that our author formed his theory. We have already mentioned Mr Bond's attempt of the like kind in 1668; and after him Mr Hook alſo in 1673, propoſed to the Royal Society, another not much different, that the magnet hath it's peculiar poles diſtant 10 degrees from the poles of the earth, about which they move, ſo as to make a revolution in 370 years, whence, ſays he, the variation hath altered of late 10 or 11 minutes every year, and will probably continue to do ſo for ſome time, till it begins to grow ſlower and ſlower, and will at length be ſtationary, and retrograde, and in all probability may return (33). But it is obſervable, that both theſe attempts laboured under the ſame defect, the want of obſervations ſufficient to ground a reaſonable hypotheſis upon; and it is perhaps none of the leaſt commendations of Mr Halley's judgment, that prompt and eager as he was by nature to advance forward, we here find him waiting however till ſuch a number of facts could be obtained, as might provide a ſure foundation for the ſuppport of a probable theory; and that the facts might be better aſcertained, he made an improvement in the azimuth compaſs, to take the needle's declination more accurately than before (34). The ſucceſs was anſwerable; and the theory as it ſtands in it's laſt improvement, received ſo perfect a completion from the Spaniſh journals mentioned in the text, that one cannot help wiſhing our author's life had been extended a few years longer, that ſo he, who always made a diſintereſted honeſt fame the grand motive of his induſtry, and who particularly conſulted the honour of his own country in every undertaking, might have ſeen thoſe journals, and what Admiral Anſon ſays upon that occaſion, that 'he eſteems the obſervations therein, none of the 'leaſt advantages of his voyage, that they were, though 'in vain often publickly called for by Dr Halley, and 'to his immortal reputation, confirm as far as they ex-'tend his wonderful hypotheſis, very nearly corre-'ſponding in their quantities of the variation to the 'predictions he publiſhed above fifty years ſince, long 'before he was acquainted with any one obſervation 'made in thoſe ſeas *.'

* Anſon's Voyage by Walter, in the introduction.

[*N*] *He*

internal parts of the earth; the probability of which, though little respected for a great number of years, seems to be favoured by some late observations made on another occasion both by the French and English in different parts of the world [*N*]. Whatever may prove

[N] *He ventured to advance a bold hypothesis, &c. which has been favoured by several late observations.*] His opinion is, that within the outward surface of the earth, as a *shell*, there is contained a *nucleus* or inner globe, with a fluid medium between, which, having the same common center and axis of diurnal rotation, turns about with our earth each 24 hours; only this outer sphere, having it's turbinating motion a small matter either swifter or slower than the internal ball, and a very minute difference in length of time by many repetitions becoming sensible, the internal parts will by degrees recede from the external, and not keeping pace with one another, will appear gradually to move either eastwards or westwards, by the difference of their motions. Supposing therefore the external *shell* and internal *nucleus* to be both magnets, having their poles at different distances from the poles of diurnal rotation, he gives a reasonable account of the four magnetical poles, which he presumes are demonstrated by the phænomena, as he does likewise of the needle's variations; to do which, so as to satisfy the whole state of the fact comprehending the latest observations, had been till then unattempted. This hypothesis, like some others started by him, has been generally thought too whimsical to merit any serious attention. But before passing sentence, let us look at those of his præcursors on the same mysterious work of nature, and then perhaps we may be a little reconciled to it. The conjectures of Kircher, Gilbert, Des Cartes, are taken notice of by our author, and severally shewn in this paper, to be inconsistent with the fact of the change in the variation. After those, Mr Gellibrand referred to in the preceding remark note (30), having in 1635, proposed an ingenious explication of Dr Gilbert's hypothesis †, supposing the variation to be constant, stops there, as in the generally received opinion, without venturing any further. Nay, in contemplating the change of the variation (then indeed scarcely well ascertained) he stands perfectly wonder struck, as at some præternatural event hardly possible to happen according to the ordinary course of nature's workings, and in that situation of mind, he refers to a report of Galileo, concerning a change in the position of the earth's axis, said then to be lately discovered by a gentleman of the Marsilian family in Italy. This though only a hearsay story, delivered in general terms, without any circumstances, is thought worth notice, as promising to throw some light into a subject, which mocked the efforts of the best philosophical wits at that time; all whose conjectures about the cause of this wonderful phænomenon being, as Mr Gellibrand insinuates, nothing better than so many fanciful conceits; such for instance as that, which he gives for a sample of the rest, of ascribing it (as he hints) according to the philosophy then in vogue, to a sympathy between the poles of the magnet and those of some of the planets, whereby the motion of the former holds a correspondence with the latter. The change in the position of the earth's axis mentioned by Galileo, had been advanced before by *Dominicus Maria*, of Ferrara, master to Copernicus, who collecting it by comparing the latitude of some places in Ptolemy's geography, with his own observations, seems therein to have found the cause of the needle's variation, but it is rejected by Dr Gilbert (35), on account of the uncorrectness of Ptolemy, who, as he remarks, took frequently his latitudes from Hipparchus, without observing himself. Yet this change called a libration in the earth's axis, was also assigned for the like change in the variation of the needle, by Hevelius in 1642 ‖. The truth is, the question concerning the former change, though bandied in discourse, was never till of late properly searched into. Dr Halley, whose eyes were every where, communicated some papers upon the subject to the Royal Society ‡, and recommended a method of determining it effectually, by procuring some good observations of the altitude of the pole at Aracca in Syria, that altitude having been taken, as he found, very accurately by Albatagni above 800 years before *. In 1670, the change in the variation of the needle being found to amount to 10° or more, Mr Azout, already mentioned, observes, that such a difference cannot be attributed to the change of the pole of the earth, as some, says he, esteemed perhaps before they knew it was so great; wherefore rejecting this as well as other causes that had been started as altogether insufficient, he declares it to be very difficult to hit upon the true cause, but is inclined to believe, that it may depend upon the flux of a certain matter passing through the earth and the exterior part streight along the axis. In support of this opinion he alledges, that the change in the variation may be said to proceed from the changes made in the said flux, which, supposing the inequalities in the earth, and the alterations both artificial and natural † continually made therein, cannot but in progress of time change it's situation; he proceeds to illustrate this by an example taken from rivers, which although they be running streight, cannot remain long without winding and changing their course, if it happen that the ground over which that streight course tends, be unequal or of a different nature; so it is probable, that the changes in the earth may in time occasion some bending in the current of the magnetic matter, and make it change it's bed and channel: whence it comes to pass, that the needle changes it's direction, according as the current changes which directs it: and if you well consider the variety of motions and directions seen in rivers with their cause, possibly a reason may be rendered of the many differences observed in the declination of the needle, e. g. why in some parts the needle varies much in a little time, why in others it is always turning without any station, as some say they have observed it; why the greater alterations are met with in going in and out of islands, and many other things, which for brevity sake, continues he, we pass by, as we also omit to deduce from it divers particulars relating to navigation; he then proceeds to observe, that if what is thus suggested should prove the true cause of the declination, then there would be no hopes of finding a regular hypothesis, since it would depend upon causes that have no regularity at all in them, as most of the motions in nature are. Mr Azout concludes these conjectures with the following remark: That if there be a proportion between the force of the said current and the earth, *that* may be able by changing it's bed to remove *this* from it's proper site, which would produce an alteration in the height of the pole as some think they have observed, if that may not be ascribed to a defect in the observations, of which we may be rendered certain, when more exact ones shall have been made: and so, whereas others would impute the various declinations of the magnet to the change of the pole; on the contrary, the change of the pole should be imputed to the declination of the magnet *. In 1673, Mr Bond undertook to shew the cause of the variation of the magnetical needle or compass, by the motion of two magnetical poles, as also how these poles are found, and what their distance is from the poles of the earth, what their annual motion is, and whence it proceeds. This famous teacher of navigation gave out also that he was able to find the longitude of any place in the world, by the help of a table which he had calculated to every five minutes, of the inclination of the inclinatory or dipping needle; both these proposals were published at once in the Philosophical Transactions, No. 95, in the view of procuring a proper recompence for the discovery of them. But not meeting with encouragement then, we find a paper of the like import in No. 130. of the same Transactions, for the year 1676, where Mr Bond declares that his discovery was the result of no less than thirty-eight years study. However, the true reason of his disappointment, no doubt, was a defect in that most essential point, the true state of the fact, that is, a sufficient number of observations accurately taken. This Mr Halley could not but see, and therefore we find he did not advance his hypothesis till the true state of the fact was a good deal better ascertained, but still it was very far from being fully known. He observes that the exact determination of several particulars in the magnetic system, was reserved for remote posterity: all, continues he, that we can hope to do, is, to leave behind us observations that may be confided in, and to propose an hypothesis, which after-ages may examine, amend, or refute. In the mean time he offers several arguments in favour of it. One of these is drawn from a proposition of Sir Isaac Newton, concerning the force of the moon in producing the tides, where the moon is shewn

† His proposal is to apply a needle to a terrella, first entire, and then exculped in some places like the face of the earth. See his Discourse mathematical of the Variation, &c. Lond. 1635. 4to. p. 7. Something of the same kind was offered for a solution of the change in the Variation by Mr De la Hire, but being tried with a terrella of the R. S. did not succeed. Phil. Transf. No. 188. for the yea 1687. It has been found since, that no good magnet has more than two poles. Phil. Transf. No. 430.

prove at laſt to be the fate of a theory which preſumes to dive into the dark womb of our common parent, yet the phænomena of the variation of the needle upon which it is raiſed, being ſo many certain and undiſputed facts, our author ſpared no pains to poſſeſs himſelf of all the obſervations relating to it, he could poſſibly come at. To this end he procured an application to be made to King William the Third (z), who appointed him Commander of the *Paramour Pink*, Auguſt 19, 1698, with expreſs orders to ſeek by obſervations the diſcovery of the rule of the variation (*aa*). He ſet out on this attempt the 24th of November following, and proceeded ſo far as to croſs the Line; but his men growing ſickly and untractable, and his firſt Lieutenant mutinying, he returned home in the end of June 1699; and having got his Lieutenant tried and caſhiered, he took his departure a ſecond time in September following, having the ſame ſhip accompanied with another of leſſer bulk, of which he alſo had the command. Thus equipped, he traverſed the vaſt Atlantic Ocean from one hemiſphere to the other, as far as the ice would permit him to go; and in his way back touched at St Helena, the coaſt of Brazil, cape Verd, Barbadoes, Madeiras, the Canaries, the coaſt of Barbary, and many other latitudes, arriving in England September 1700 [O]. Having thus furniſhed himſelf with a competent number of obſervations, he publiſhed a *General Chart* (*bb*), *ſhewing at one view the Variation of the Compaſs in all thoſe ſeas where the Engliſh Navigators were acquainted.* Hereby he firſt of any one laid a ſure foundation for the diſcovery of the law or rule whereby the ſaid variation changes all over the world. The phænomena ſo far all anſwered perfectly to his theory. They were verified afterwards by the concurrent obſervations reported by the French pilots (*cc*); and as the ſame law has been ſince confirmed by a ſeries of others for the ſpace of more than 150 years, found in the Spaniſh Journals, taken by (the then Commodore now) Lord Anſon (*dd*), in his paſſage through the ocean which divides Aſia and America, and which was, as Captain Halley obſerves, the great deſideratum 'till then wanting to compleat the truth of the theory, this invention muſt be eſteemed one of the moſt uſeful benefactions that mankind ever received from a fellow-creature. Having thrown what related to the ſubject of the magnetical variation into one veiw, we ſhall now return to the ſeries of our author's life, in which for a long courſe of time there ſcarce paſſed a year, wherein he did not either deviſe ſome uſeful invention, or make ſome new diſcovery and improvement in one or other of the arts and ſciences. The method of finding the longitude

(z) See note (x x).

(*aa*) The reſt of his commiſſion runs thus; to call at his Majeſty's ſettlements in America, and make ſuch further obſervations as are neceſſary for the better laying down the longitude and latitude of thoſe places, and to attempt the diſcovery of what land lies to the ſouth of the weſtern ocean.

(*bb*) It was publiſhed in 1701, and fitted for the preceding year, which cloſed the XVIIth century.

(*dd*) See the Chart in his Voyage by Walter, Lond. 1748. 4to.

ſhewn to be denſer than the earth in the proportion of 9 to 5. If ſo, ſays Mr Halley, why may we not reaſonably ſuppoſe the moon, being a ſmall body and a ſecondary planet, to be ſolid earth, water, ſtone, and this globe to conſiſt of the ſame materials, only four-ninths thereof to be cavity within and between the internal ſpheres, which I would render not improbable. But in this argument our author very appoſitely overlooked another propoſition in the ſame book, where Sir Iſaac, in determining the figure of the earth, founds his calculus upon the ſuppoſition of an uniform denſity, which was never called into queſtion by thoſe who diſpute the figure he aſſigned to the earth (36). However this laſt diſpute has occaſioned ſeveral experiments to be made, as well by the vibrations of pendulums, as by meaſuring a degree of the earth in different parts of it's ſurface. And by theſe experiments, the earth is found indeed to be an oblate ſpheroid, as Sir Iſaac had concluded from his theory; but at the ſame time they give reaſon to think, that the variation of the denſity of it's internal parts is conſiderable; and to enable us to form ſome judgment of this, Mr Maclaurin has enquired mathematically, what proportion of the ſemidiameter of the equator and of the ſemi axis, as alſo of the gravitation at the pole to the gravitation at the equator would ariſe, not only when the denſity is ſuppoſed to increaſe or decreaſe gradually towards the center, but even when the earth is ſuppoſed to be hollow with a *nucleus* included, according to the ingenious hypotheſis (ſo he ſtyles it) advanced by Dr Halley. By this enquiry he found that the hypotheſis of a greater denſity towards the center, may account for a greater increaſe of gravitation from the equator to the poles, than that of an uniform denſity, but not for a greater increaſe of the degrees of the meridian; and the hypotheſis of a leſs denſity towards the center, may account for a greater increaſe of the degrees of the meridian, but not for a greater increaſe of the gravitation; ſuppoſing always (according to Sir Iſaac Newton) the columns of the earth to extend from the poles, and the equator to the center, and there to ſuſtain each other. This was likewiſe the reſult of his computations, when he ſuppoſed the denſity to increaſe or decreaſe continually from the ſurface of a ſpheroid to the center, ſo as to be uniform in the different parts of any one ſimilar and concentric elliptical ſuperficies, and in ſeveral other caſes. And here, continues he, there ſeems to be ſome foundation for propoſing it as a query, whether the internal conſtitution of the parts of the earth abovementioned, that was propoſed by Dr Halley, for reſolving ſome of the phænomena of the magnetic needle, will not be found to account in a probable manner for the increaſe of gravitation, and at the ſame time of the degrees of the meridian from the equator to the poles, as it has been determined by the beſt obſervations hitherto (37). We muſt not conclude this remark without taking notice, that Kepler in his phyſical aſtronomy accounting for the elliptical orbits of the planets, ſuppoſes each of them to conſiſt of an exterior cruſt, whoſe axis keeps a given poſition, namely *that* about which the planet is turned in it's diurnal motion, and a globe within, ſeparate and divided from this cruſt, and no ways yielding to it's diurnal motion, whoſe axis and right lines parallel thereto, may ſuſtain the places of the libratory fibres, according to the direction of which to the ſun, it's attractive power acts upon the planet with greater or leſſer force, and therefore while theſe libratory fibres keep the poſition neceſſary for that effect (by means of which the planets move not in circular, but in elliptical orbits) the exterior cruſt revolves by a diurnal motion peculiar to itſelf (38). That our author was no ſtranger to this hypotheſis, of the cauſe of the elliptical orbits of the planets, will ſcarcely be queſtioned, and we leave it to others to judge, whether he might not probably enough thence take the firſt hint of his own, concerning the variation of the needle; however that be, 'tis well known he was very fond of it (39), and ſeveral years afterwards applied it to account for the *aurora borealis*, by ſuppoſing the ſubtle luminous vapour contained between the *ſhell and the nucleus*, to iſſue at the poles of the earth, and produce all the appearances of that phænomenon (40).

[O] *He arrived in England in* 1700.] In ſpeaking of this voyage, he has been heard to ſay more than once, that tho' he croſſed the Line 4 times, and went directly as many times into the coldeſt climates of the South, yet he had the good fortune not to loſe a ſingle man of his company by ſickneſs, which, no doubt, muſt be owing in a great meaſure to the extraordinary care he took of them, and to that humanity, which was a diſtinguiſhing part of his character. However this happineſs was daſhed with the misfortune of loſing a favourite boy, who by ſome unlucky accident was thrown over board and drowned, and the captain was ſo deeply affected with the loſs, that during his whole life afterwards he never mentioned it without tears (41).

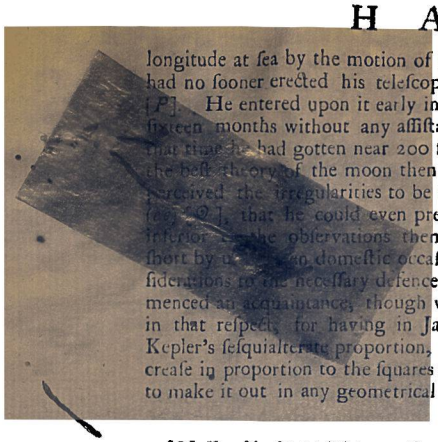
[P] *He*



longitude at sea by the motion of the moon was an early thought of our author *; and he had no sooner erected his telescope at Islington, but he resolved to put it into execution [P]. He entered upon it early in the year 1683, and held on observing for the course of sixteen months without any assistance, and yet without any interruption; so that within that time he had gotten near 200 several days observations, most of which he collated with the best theory of the moon then extant; and having placed the errors in an abacus, he perceived the irregularities to be so regular within the revolution of the Sarotic period [Q], that he could even predict the errors of the tables with a certainty not much inferior to the observations themselves. But his sanguine views were now suddenly cut short by unforeseen domestic occasions (ff), which obliged him to postpone all other considerations to the necessary defence of his patrimony [R]. It was not long before he commenced an acquaintance, though without any such view, which proved of service to him in that respect; for having in January 1684 turned his thoughts upon the subject of Kepler's sesquialterate proportion, he concluded from it that the centripetal force must decrease in proportion to the squares of the distances reciprocally; but finding himself unable to make it out in any geometrical way [S], he first applied to Mr Hook and Sir Christopher

* See remark [G] at the end.

(ee) He calls it sometimes the Plinian period, from the mention made of it in that author's Natural History, lib. ii. cap. 13.

(ff) See the Append x to the second edition of Street's Caroline Tables, published by Mr Halley in 1710. 4to.

[P] *He resolved to put it into execution.*] This was no trifling event or common enterprize. It was necessary for the purpose, that the true theory of the moon should be ascertained to a degree of exactness at that time unhoped for; since it was not only an intricate, but also a tedious subject, requiring to compleat it a continued series of observations for a long period of time, which had never been attempted by any of his predecessors in astronomy. But all these difficulties and discouragements did not deter Mr Halley from undertaking the arduous task 'Tis true, Hevelius and Flamsteed had both of them this point among other *desiderata* in their view, but their observations to that end were very sparse, being taken as their other designs gave them leisure. We shall know what to think of the latter, when we see what our author says of them hereafter; and as to the former, though from the time of publishing his *Selenographia* in 1647, he had raised some expectations of applying himself particularly to this undertaking, yet nothing hitherto had come from him answerable to those expectations, and his great age now cut off all hopes for the future. In a word, to say the truth, this theory had been always before our author's attempt esteemed above the compass of one man's daring, and we find the same intimated by Dr Seth Ward, Savilian Professor of Astronomy at Oxford, in a place (42), where he particularly compliments Hevelius upon the subject, as follows. 'Quis tanto labore atque constantia opibus aut honoribus inhiavit unquam? quanto Tu Lunæ phænomenis multorum annorum spatio invigilasti? Eo certe fine, ut opprobrium 'illud astronomicum tollas, ut proximam terris Sydus 'accurate factis observationibus, in hypothesin certam 'atque naturæ rerum congruentem redigere homines 'possint. Atque hæc quidem res tam demum peragetur, 'cum librationis lunaris legibus perspectis, centrique 'variatione intellecta, in usum ducendæ erunt accuratis'simæ observationes, quas præstitisti. Incumbis itaque 'non immerito in hanc rem, Vir Clarissime, ut ex epi'stola ad J. B Riciolum (quam ad me transmittero dig'natus es) satis innotescit. Atque habes in hoc negotio ex 'gente nostra nostraque academia comites præstantissi'mos, adeo ut communi studio et labore perfectam iri Se'lenographiam speremus, atque ad usus omnes astrono'micos accommodatam.' Dr Ward in proceeding declares, that himself was with-held, by this expectation of seeing the Selenography perfected, from meddling with the motions of the moon and her theory, and then concludes in these terms, which strongly intimate the great difficulty of compassing that most desirable work 'Utcunque Tu certe laude dignus es immortali, 'quod hominibus ostenderis quid sit agendum, et quali 'molimine res attentanda sit, ut ad Syderis istius desi'deratissimam scientiam perveniatur *.'

(42) The dedication of his Astronomia Geometrica to the Counsul. Oxon. 1655. 4to.

* Vid. epist. Wallisii, inter excerpta ex lite is ad Hevel. ubi supra, p. 16.

[Q] *The Sarotic period.*] This period, which as is well known, consists of 223 lunations, or 18 years, wherein all the correspondent new and full moons are supposed to return, having been long neglected by the Astronomers, was restored to it's ancient reputation by our author, who made it the ground-work of all his enquiries towards settling that part of the lunar theory. He happened from this year 1683, to survive three of these periods, and made tables of the eclipses that recurred between 1701 and 1718, from the best observations both of his own and others, by the help of which he was able to predict an eclipse to half an hour without any trouble (43).

(43) See more of this in rem. [OO] and [XX].

[R] *He was interrupted in this favourite pursuit by unforeseen domestic occasions.*] This unexpected stroke seems to have fallen upon him at the death of his father, who although possessed of an estate of a thousand pounds a year in houses before the fire of London, yet as he was a great sufferer by that fire, so entring into an imprudent second marriage, he became unable to renew the leases of his houses, when the old ones expired, whence it came to pass, that his fortune mouldring away by degrees, sunk at last into a low ebb (44). The difficulties into which his son and heir must necessarily be brought on that occasion, may well be thought sufficient to produce the change in his studies mentioned in the text. It may be further observed, that his family increasing apace from this time, he never had leisure sufficient to prosecute steadily, nor even without great interruptions, this his favourite plan for compleating the moon's theory, till he was settled in the Royal Observatory at Greenwich. However, the attendance he gave at this time to that theory, diligent as it was, did not hinder him from considering other subjects as occasion offered; for instance, besides the observations concerning the longitude of Ballasore, mentioned above, he published, (1) *A correction of Mr Huygens's numbers in regard to the theory of the Satellite of Saturn*, in Phil. Trans. No 145, for March 168$\frac{3}{4}$. (2.) Dr Thomas Smith having in 1683, sent to the Royal Society an extract from the manuscript of Mr John Greaves, in the Savilian library at Oxford, containing astronomical and geographical observations made by him in Egypt *. This paper was read before that society, December 19, 1683, and referred to the consideration of Mr Halley, who made his report on the 9th of January following, and collected from it the latitude of Constantinople to be 41°. 7′. $\frac{1}{2}$ N and that of Alexandria to be 31°. 4′. N. These two remarks are evidently made by our author in the view of settling the great difficulty concerning the obliquity of the ecliptic; accordingly we find him taking notice elsewhere on that occasion, that this latitude of Alexandria, taken with a sufficient instrument by Mr Greaves, was but 6′ more than that given by Ptolemy and Eratosthenes †. Mr Halley was also very desirous to have good observations of the eclipses of the moon at Alexandria, as well as those at Bagdat and Aleppo, in order to ascertain an opinion first started by him, that the moon accelerates her mean motion about the earth, which was countenanced and accounted for also by Sir Isaac Newton ‖. (3.) Our author's theory of the tides at the bar of Tonquin ‡ in China, was published in Phil. Trans. No. 162, for Aug. 1684. The tides in that port are so extraordinary, so seemingly irregular, and so different from all others, that nobody before him had attempted to give any solution of them. Indeed to account for this phænomenon by the action of the moon, he confesseth was then a task too hard for his undertaking. Whence it is more surprizing to see, how easily that task was not long afterwards performed by Sir Isaac Newton in the third book of his *Principia*. Lastly, it seems to be about this time that our author had a dispute with De L'Isle, and the French Geographers, about the longitude of the Cape of Good-Hope, an account of which he afterwards published in Phil Trans. No. 189 §.

(44) MS. Memoirs.

* Vitæ quorundam eruditiss. & illustr. Virorum, a T. Smith, in præfatione, p. ix. & x.

§ Letters of the R. S. Vol. IX. p. 3, & seq.

† Phil. Trans. No. 190. prop. iii.

‖ Phil. Trans. No. 204. & Princip. Math. &c. lib. iii. prop. 42. 2d edition.

‡ The account of these tides had been lately brought to England by one of the factors of our East-India Company.

§ He prosecuted this point further in No. 361. for the year 1718. where, he says, it was then about 35 years since he had this dispute with the French.

[S] *Not being able to make it out geometrically.*] Mr Halley's argument was in general the same of that of Sir Isaac Newton, and in substance this, That all force re-

pher Wren, and meeting with no assistance from either of them, he went to Cambridge in August to Mr Newton, who supplied him fully with what he had so ardently sought (*gg*). Seeing this, Mr Halley, always indefatigable in the service of Astronomy, pursued the matter further. Having now found an immense treasure of that learning, he could not rest 'till he had prevailed upon the owner to enrich the public therewith, and to this interview the world is in some measure indebted for the *Principia Mathematica Philosophiæ Naturalis* [*T*]. Before the conclusion of the following year 1685, Dr William Musgrave Secretary to the Royal-Society declining to act (*hh*), our author was appointed Assistant-Secretary;

(*gg*) Sir Isaac not finding readily his paper then, sent the calculation shortly according to his promise to London by Mr Paget, Mathematical Master of Christ's hospital, and upon the perusal of it Mr Halley made a second journey to Cambridge. See Sir Isaac Newton's article.

(*hh*) The place is reckoned com. an. 1685 year; for Musgrave was then Secretary to the Philosophical Society at Oxford, and Fellow of New-college. Phil. Transf. No. 178.

specting the sun as it's center, and depending upon matter, must needs exert itself more vigorously in a small sphere, and weaker in a greater, in proportion as it is contracted or expanded; and if so, seeing that surfaces of spheres as are the squares of the radii, this power at several distances will be as the squares of those distances reciprocally, and then it's whole action upon each spherical surface, be it great or small, will be always equal; so that by this rule, the whole planetary system would be supported (45). This was right enough, and sufficient also for the purpose, had he been able to carry the calculation through all the phænomena as he designed and attempted; but these in the pursuit presently became so variously complicated, though from the uniform action of the single power of gravitation, that he presently found himself obliged to desist.

(45) See in Phil. Transf. No. 179. for Jan. and Feb. 1686. a paper intitled, *A Discourse concerning Gravity and it's Properties*, written, as our author declares, preparatory to Sir Isaac's *Principia*, which was then almost ready for the press.

[*T*] *The world is indebted to Mr Halley for Sir Isaac Newton's Principia, &c.*] The following extracts from a letter of Sir Isaac upon this occasion to our author, and his answer thereto, contain several particulars relating to this matter, which though published in the General Dictionary (46), the reader may fairly expect to find here. The first is dated from Cambridge June 20, 1686, in the conclusion whereof, Sir Isaac, mentioning a proof that had been sent by Mr Halley, and his approbation of it, proceeds to inform him particularly of his design, viz. That the whole was to consist of three books, the second of which was finished the preceding summer, being short, and only wanted transcribing, and drawing the cuts fairly. That some propositions, he had thought on since, might as well be omitted. That the third book wanted the theory of comets. That the autumn before he had spent two months in calculations to no purpose, for want of a good method, which made him afterwards return to the first book, and enlarge it with divers propositions, some relating to comets, others to other things found out the preceding winter. That he now designed to suppress the third. '*Philosophy*, continues he, *is such an impertinently litigious lady, that a man had as good be engaged in law suits, as have to do with her. I found it so formerly* (47), *and now I am no sooner come near her again, but she gives me warning. The two first books, without the third, will not so well bear the title of* Philosophiæ naturalis principia mathematica, *and therefore I had altered it to this,* De Motu Corporum Libri duo. *But upon second thoughts I retain the former title. 'Twill help the sale of the book, which I ought not to diminish now 'tis your's. The* articles *are with the largest to be called by that name. If you please you may change the word to* Sections, *though it be not material. In the first page I struck out the words,* uti posthac docebitur, *as referring to the third book. Which is all at present from your affectionate friend and humble servant,*

(46) In the article of Sir Isaac Newton.

(47) He means upon the subject of his Theory of Light and Colours.

' Is. Newton.'

To this our author returned the following answer from London, June 29, 1686.

Sir,

' I am heartily sorry that in this matter, wherein all mankind ought to acknowledge their obligations to you, you should meet with any thing that should give you disquiet, or that any disgust should make you think of desisting in your pretensions to a lady, whose favours you have so much reason to boast of. 'Tis not she, but your rivals envying your happiness, that endeavour to disturb your quiet enjoyment; which when you consider, I hope you will see cause to alter your resolution of suppressing your *third book*. There being nothing which you can have compiled therein, which the learned world will not be concerned to have concealed. Those gentlemen of the society to whom I have communicated it, are very much troubled at it, and that this unlucky business should happen to give trouble, having a just sentiment of the author thereof. According to your desire in your former, I waited upon Sir Christopher Wren, to enquire of him, if he had the first notion of the reciprocal duplicate proportion from Mr Hooke. His answer was, that he himself very many years since, had had his thoughts upon making out the planets motions by a composition of a descent towards the sun and an impressed motion; but that at length he gave over, not finding the means of doing it. Since which time Mr Hooke had frequently told him, that he had done it, and attempted to make it out to him, but that he never was satisfied that his demonstrations were cogent. And this I know to be true, that in January 1683, I having from the consideration of the sesquialterate proportion of Kepler, concluded that the centripetal force decreased in the proportion of the squares of the distances reciprocally, came on Wednesday to town [from Islington] where I met with Sir Christopher Wren and Mr Hooke, and falling in discourse about it, Mr Hooke affirmed, that upon that principle all the laws of the celestial motions were to be demonstrated, and that he himself had done it. I declared the ill success of my attempts, and Sir Christopher to encourage the enquiry said, that he would give Mr Hook or me two months time to bring him a convincing demonstration thereof, and besides the honour, he of us that did it, should have from him a present of a book of forty shillings. Mr Hooke then said he had it, but that he would conceal it for some time, that others trying and failing, might know how to value it when he should make it public. However I remember that Sir Christopher was little satisfied that he could do it, and though Mr Hooke then promised to shew it him, I do not find that in that particular he has been so good as his word. The August following, when I did myself the honour to visit you, I then learned the good news, that you had brought this demonstration to perfection, and you were pleased to promise me a copy thereof, which I received with a great deal of satisfaction from Mr Paget [Mathematical Master of of Christ's Hospital] and thereupon took another journey to Cambridge, on purpose to confer with you about it, since which time it has been entered upon the register books of the society.' He goes on to vindicate Sir Isaac's right against the pretensions of Mr Hooke, and says, the Royal Society were all of opinion that Sir Isaac ought to be considered as the inventor. ' I am sure, concludes he, the Society have a very great satisfaction in the honour you do them, by the dedication of so worthy a treatise. Sir, I must now again beg you not to let your resentments run so high as to deprive us of your third book, wherein the application of your mathematical doctrine to the theory of comets, and several curious experiments, which, as I guess by what you write, ought to compose it, will undoubtedly render it acceptable to those, who will call themselves Philosophers without mathematicks which are much the greater number (48). Now you approve of the character and paper, I will push on the edition vigorously. I have some times had thoughts of having the cuts neatly done in wood, so as to stand in the page with the demonstrations, it will be more convenient and not much more charge. If it please you to have it so, I will try how well it can be done; otherwise I will have them in some-what a larger size than those you have sent up.

(48) Sir Isaac then intended to write it in a popular method. See his article.

' I am, Sir,

' Your most affectionate humble servant,

' E. Halley.'

[*U*] *An*

Secretary; in which poſt the firſt paper that he publiſhed contained a tract of his own upon the ſubject of gunnery (*ii*), wherein he gave an improvement in that uſeful art [*U*]. This paper was preſently followed by another (*kk*), wherein our author firſt of any one diſcovered that eaſy method (ſince ſo well known) of meaſuring the elevation of very high mountains, ſteeples, and other eminences, by the barometer [*W*]. The ſame year ſaw a third tract by the ſame canal (*ll*), containing both the hiſtory and phyſical cauſe of the trade winds and monſoons [*X*], he likewiſe publiſhed a chart repreſenting their direction, wherever they are found to blow, through all parts of the globe known to the Engliſh mariners (*mm*). Sir Iſaac Newton's *Principia* being finiſhed the ſame year 1686, Mr Halley (who had the whole care of the impreſſion) (*nn*), by the direction of the Royal-Society preſented it to his Majeſty King James II. with a proper diſcourſe of his own [*Y*]. He alſo wrote an elegant copy of verſes in Latin, which are prefixed to that

(*ii*) Ibid. No. 179.

(*kk*) Ibid. No. 181.

(*ll*) Ibid. No. 183.

(*mm*) For want of longitude and 30° of latitude, they are repreſented in the ſame chart with the variations of the compaſs. The north part of the Pacific Ocean, being known only to the Spaniards, is not included therein.

(*nn*) See the preface by Sir Iſaac, who on this occaſion calls our author *Virum in omni genere doctrinæ eruditiſſimum*.

[*U*] *An improvement in the art of gunnery.*] This improvement conſiſts in the ſolution of a problem concerning the beſt elevation of a mortar: it had exerciſed the wits of ſome of the firſt rate genii of thoſe times. The problem was this, *To hit an object above or below the horizontal line, with the greateſt certainty and leaſt impelling force.* This problem, though of the greateſt uſe in gunnery, was left untouched by Torricelli the firſt writer upon the ſubject. It had indeed been ſolved by Mr Anderſon in 1674 (49), but his ſolution required ſo large a calculus, that it put our author upon the ſearch if it might not be done more eaſily, and the reſult was, that in 1678, he found out the rule, and thence the geometrical conſtruction, delivered in this piece 'Tis true, a large treatiſe was afterwards publiſhed, intitled, *L'Art de jetter les Bombes*, by Monſ. Blondel, wherein he gave a ſolution of this problem by Meſſieurs Buet, Romer, and De la Hire, but none of them being the ſame with our author's, or in his opinion more eaſy, and moſt of them more operoſe, and beſides his rule finding the tangent which generally determines the angle better than it's ſign, he ſays, '*He thought himſelf obliged to print it, for the uſe of all ſuch as deſire to be informed in the mathematical part of the art of gunnery.*' In 1696, reſuming this ſubject (50), he conſidered how to improve the practical part thereof, and found out a more compendious method for practice than before; whereby it became as eaſy to ſhoot with a mortar at any object on demand, as if it were on the level, there being no need in this new invention of any computation, but only ſimply laying the gun, ſo as to paſs in the middle line between the zenith and the object, giving it it's due charge He intimates a method of laying a mortar in the required elevation (which may be of uſe in the want of inſtruments) by a piece of looking glaſs plate applied parallel to the muzzle, on which the engineer looking along a thread with a plummet, raiſes or depreſſes the piece, till the object appears on the ſame part of the ſpeculum where the plummet falls; but he obſerves, that this method depends upon the muzzle of the mortar being turned truly ſquare to the bore of the piece, and both that and the looking glaſs muſt be a true plane, which they are not exact enough for this practice. However, as the thing is done very eaſily with inſtruments, all that remains is by good and valid experiments to be aſſured of the force of gun powder, how to make and conſerve it equal, and to know the effect thereof in each piece, that is, how far differing charges will caſt the ſame ſhot out of it; this he thinks may moſt conveniently be engraved on the outſide thereof, and were this matter well aſcertained, it might be worth while to make all mortars of the like diameter, as near as may be alike in length of chaſe, weight, chamber, and all other circumſtances. This ſubject of gunnery has been lately re-conſidered by Mr Benjamin Robins, F. R. S. (51), and ſeveral improvements made therein, eſpecially in the article of the charges proper for each piece here recommended for further examination by our author.

(49) See his Treatiſe of the genuine uſe and effects of the gun, printed that year in 4to.

(50) Phil. Tranſ. No. 216.

(51) In a piece intituled, *A Propoſal for increaſing the ſtrength of the Navy, by changing all the guns, from the 18 pounders downwards, into others of equal weight, but of a greater bore*, Lond. 1742. 4to.

[*W*] *A method of meaſuring the height of eminences by the barometer.*] This is done by obſerving the proportionable aſcent of the mercury. To this he added, an attempt to diſcover the true reaſon of the riſing and falling of the mercury upon change of the weather. His hypotheſis is founded upon the principal obſervations that had been then made upon this inſtrument; whence he concludes, that the riſe and fall of the mercury is chiefly owing to the variable winds which are found in the temperate zones, and whoſe great inconſtancy here in England, ſays he, is moſt notorious. From this ſingle principle, joined to the uncertain exhalation and precipitation of the vapours lodged in the air, which too in a great meaſure depends upon the former, he ſolves all the phænomena of that weather gage (52). When Mr Halley went to St Helena, he carried one of theſe inſtruments, having a thermometer (as it has been ſince denominated) joined to it, and fitted for the ſea uſe by Mr Hook, along with him (53), and having found it very ſerviceable in that voyage, by giving early notice of all the bad weather he had, this engaged his attention the more to it; accordingly we find ſeveral papers in the Philoſophical Tranſactions, containing an account of the improvements which he made therein (54); for inſtance, in No. 197, he firſt gave the hint and propoſed the making thermometers of quickſilver, or the mercurial thermometer, which being brought into uſe long afterwards by Mr Farenheit, hath ſince gone by his name, Ph. Tr. No. 381. He alſo propoſed an improvement in Patrick's barometer for taking the height of places, ibid. No. 366. In the preface to which (as his manner was) he gives an hiſtorical account of all the improvements made in this inſtrument from Torricelli the firſt inventor, down to that time. We ſhall only add, that Mr Cotes of Cambridge, in his hydroſtatical, &c. lectures, conſtantly read Dr Halley's account of the riſe and fall of the mercury, &c. as what he perfectly approved, and it is inſerted in the appendix to Mr Cotes's Hydroſtatical and Pneumatical Lectures publiſhed by Dr Smith, the ſecond edition, 1747.

[*X*] *The phyſical cauſe of the trade winds and monſoons.*] Upon this ſubject our author obſerves, that as wind is nothing elſe but a ſtream or current of air, ſo where ſuch a current is fixed and permanent in it's courſe as in the trade winds, it muſt neceſſarily proceed from a permanent unintermitting cauſe. This he takes to be no other than the action of the ſun-beams upon the air and water as it paſſes every day over the oceans, which he finds to anſwer all the phænomena of the general trade winds; and he obſerves, that if the whole ſurface of the globe was ſea, theſe would undoubtedly blow all round the world as they are found to do in the Atlantic and Ethiopic oceans; but ſeeing that ſo great continents do interpoſe and break the continuity of the oceans, regard muſt be had to the nature of the ſoil, and the poſition of the high mountains, and theſe he ſuppoſes the two principal cauſes of the ſeveral variations of the winds from the former general rule. This he ſhews with reſpect to the Atlantic and Ethiopic ſea, as well as in the great South-Sea or Pacific Ocean. Two of the three branches into which he divides the univerſal ocean; but in the third branch, or Indian ſea, he allows there are ſome difficulties not well to be accounted for, as firſt, why the change of the monſoons from the north-weſt to the ſouth-eaſt (as the ſun is on the north or ſouth ſide of the equator) ſhould be any more in this ocean than in the ſame latitudes in the Ethiopic, where there is nothing more certain than a ſouth-eaſt wind all the year. He thinks it alſo very hard to conceive, why the limits of the trade winds ſhould be fixed about the 30th degree of latitude all round the globe, and that they ſhould ſo ſeldom tranſgreſs or fall ſhort of thoſe bounds, as likewiſe that in the Indian ſea, only the northern part ſhould be ſubject to the changeable monſoons, and in the ſouthern there be a conſtant ſouth-eaſt. Which particulars he recommends to future enquirers (55).

(55) The writer of his Eloge obſerves, that this Eſſay is the reſult of numberleſs obſervations and extenſive reading, as well as his Theory of the Variations, with which it ſhould always be joined.

[*Y*] *Preſented the Principia to King James, II. with a diſcourſe of his own.*] In this diſcourſe, which he firſt read before the Royal Society, having given a general account of the aſtronomical part of that book, where

that book. This year likewiſe our author undertook to explain the cauſe of a natural phænomenon, which had 'till then baffled the reſearches of the ableſt Geographers. The Mediterranean ſea is obſerved not to ſwell in the leaſt, notwithſtanding there is no viſible diſcharge of the prodigious quantity of water, which runs into it from nine large rivers, beſides ſeveral ſmall ones, and from the conſtant ſetting in of the current at the mouth of the Streights (*o o*). His ſolution of this difficulty gave ſo much ſatisfaction to the Society, that he received their orders to proſecute theſe enquiries. He did ſo (*p p*) with the moſt ſurprizing diligence and ſagacity [Z]. But that employ was not enough to fill up the ſphere of

(*o o*) Phil. Tranſ. No. 189.

(*p p*) Ibid. No. 192.

where in the eaſieſt language he ſhews the moſt ſtriking excellence of the great author's genius therein, to conſiſt in being able to deduce the vaſt ſyſtem of the world from the common principles of projectiles. He afterwards enters into a more particular explication of the theory of the tides contained in it. This was a ſubject upon which his own thoughts had been turned pretty much about this time ‡, and he introduces it with a polite addreſs to His Majeſty, to whom, as having (when D. of York) been High-Admiral, that ſubject, he obſerves, could not be unintereſting. This paper was not publiſhed in the Philoſophical Tranſactions, 'till many years afterwards, of which there is given the following account. 'It may perhaps ſeem 'ſtrange, that this paper being no other than a partial 'account of a book long ſince publiſhed, and whereof 'a fuller extract was given in No. 187, of theſe Tranſ'actions, ſhould again appear here; but the deſire of 'ſeveral honourable perſons, which could not be with'ſtood, hath obliged us to inſert it here, for the ſake of 'ſuch, who being leſs knowing in mathematical mat'ters, and therefore not daring to adventure on the 'author himſelf, are notwithſtanding very curious to 'be informed of the cauſes of things, particularly of 'ſo general and extraordinary phænomena, as are 'thoſe of the tides. Now this paper having been 'drawn up for the late K. James's uſe (in whoſe reign 'the book was publiſhed) and having given good ſa'tisfaction to thoſe that got copies of it, it is hoped, 'the *Savans* of the higher form, will indulge us this 'liberty we take, to gratify their inferiors in point of 'ſcience, and not be offended that we here inſiſt more 'largely on Mr Newton's theory of the tides, which, 'how plain and eaſy ſoever, we find is very little un'derſtood by the common reader (56).' With regard to the fifty Latin verſes prefixed, Mr Mairan, who ſcruples not for this ſingle eſſay to dignify our author with the title of Poet, gives the following account of his poetical inſpiration. That while Mr Halley was employed in preparing Sir Iſaac Newton's *Principia* for the preſs, he found it impoſſible to be the inſtrument of exhibiting ſo many objects of aſtoniſhment and admiration, and to ſee them conſtantly paſſing in review before him, without catching the fire of ſublime enthuſiaſm, which broke out in fifty Latin verſes, in a deſcription of the wonders which he ſaw, 'Tycho 'Brahe, continues this writer, was inſpired with a like 'poetical impulſe at the ſight of the inſtrument with 'which *Copernicus* made his obſervations, and changed 'the face of the heavens. Tycho's verſes were en'graven on the inſtrument which inſpired them, thoſe 'of Mr Halley prefixed to that immortal work which 'is their ſubject, being themſelves worthy to ſhare it's 'immortality.' Theſe lines are too well known to be inſerted here, and the Engliſh reader may find the tranſlation of them in his own language in verſe, in *Martin's General Monthly Magazine. Mathematical, &c.* No. 1, for Jan. 1755. But the occaſion ſuggeſts a curioſity of the like kind, with which we ſhall here oblige the reader. Mr Halley's verſes (as well as his diſcourſe) were no doubt preſented along with the *Principia* to K. James II. and the following Latin verſes written by his grandfather King James, I. were prefixed to Tycho's works, in 1610.

‡ See remark [*E E*].

(56) Phil. Tranſ. No. 226. for 1696-7. where it is intitled, *The True Theory of the Tides, extracted from the admired Treatiſe of Sir I. Newton.*

* This Eloge was compoſed in 1593, when his Majeſty granted a patent to Tycho's heirs for the ſole printing his works in Scotland for 30 years.

Jacobi Scotorum Regis, *
De
Generoſi viri Tychonis Brahe Dani
Aſtronomicis operibus,
Eulogium.

Æthereis bis quinque globis, quatis machina mundi
Vertitur, ut celſo eſt cruſtatus fornice Olympus
Ignibus, et pictus fulgentibus undique lychni:
Pellucent vitreis domibus cui, quæ planetæ
Orbibus, ut geminant curſus vi et ſponte rotati;
Ut miti aut torvo adſpectu longe ante futura
Præmonſtrant, regniſque Tonans quæ fata volutet
His tellure cupis, quæ vis, quis motus, et ordo,
Cernere, ſublimem deducturque æthera terræ;
Tychonis pandunt operæ, lege, diſce, videbis
Mira, domi mundum, invenies, cælumque libello.

Qui regit ignivomos æthere curſu bellus equos,
Plus Tycho; cuncta aſtra regis; tibi cedit Apollo,
Chorus et Uraniæ te hoſpes, alumnus, amor.

Mr Halley's verſes are evidently formed upon the ſame plan with the firſt copy of theſe royal ones, and as he frequently turned over the works of Tycho, he muſt often have ſeen them; whether he took thence the hint of his own plan or no, let the reader judge. But thus much we will venture to ſay, that whoever reads thoſe of Mr Halley with a juſt degree of admiration, will certainly read theſe of His Majeſty, not without an equally juſt degree of amazement

[Z] *He proſecuted it with ſurprizing diligence and ſagacity.*] Having ſhewn, by the moſt accurate experiments, how that great increaſe of water was actually carried off in vapours raiſed by the action of the ſun and wind upon it's ſurface; he proceeded with the like ſucceſs to point out the true method uſed by nature, to return the ſaid vapours into the ſea. This circulation he ſuppoſes to be carried on by the winds driving theſe vapours to the mountains, where being collected they form ſprings, which uniting become rivulets or brooks, and many of theſe again meeting in the vallies, grow into large rivers, emptying themſelves at laſt into the ſea. Thus demonſtrating in the moſt beautiful manner, the way in which the equilibre of receipt and expence is continually preſerved in the univerſal ocean. Our author's account of the origin of ſprings, is too well known to allow our enlarging upon the ſubject ‖. And ſuch as (if there be any who) are not acquainted with it, will not take it amiſs to be referred to the original in the Philoſophical Tranſactions, where they will be no leſs pleaſed with the eaſineſs of the ſolution, than with the beauty of the deſcription. But we muſt not omit to take notice, that he aſſures us, this theory of ſprings is not a bare hypotheſis, but founded on experience; which, ſays he, 'it was my luck to gain in 'my abode at St Helena, where in the night time on 'the tops of the hills about eight hundred yards 'above the ſea (57), there was ſo ſtrange a conden'ſation, or rather precipitation, of the vapours, that 'it was a great impediment to my celeſtial obſerva'tions. For in the clear ſky the dew would fall ſo 'faſt, as to cover each half quarter of an hour, my 'glaſſes with little drops, ſo that I was neceſſitated to 'wipe them ſo often: and my paper on which I wrote 'my obſervations, would immediately be ſo wet with 'dew, that it would not bear ink. By which it may 'be ſuppoſed, how faſt the water gathers in the 'ridges of the higheſt mountains †.' In purſuing the ſubject of the riſe of vapours, he obſerves that vapours, raiſed by the ſun in ſtill weather, hang on the ſurface of the water cloathing it like a fleece; whence he takes occaſion to give an account of that odd phænomenon of ſeeing the cattle in the Iſle of Dogs from Greenwich at high water, when none of them are to be ſeen at low water. 'For, ſays he, the vaporous effluvia of 'the water, having a greater degree of refraction than 'common air, may ſuffice to bring down the beams to 'the eye, which, when the water is retired and the 'vapours ſubſided with it, paſs above; and conſe'quently the objects ſeen at one time, may be con'ceived to diſappear at the other (58).'

‖ It was borrowed, though without naming him, by *Carolo Fontana*, an Italian, in a treatiſe intitled *Utiliſſimo Trattato del Acque correnti, Capitolo*, V. *Romæ* 1696, fol.

(57) This meaſure was probably aſſigned by the rule he afterwards gave for ſuch things by the barometer, and was therefore known to him at St Helena.

† He alſo obſerved, that though the ſteep on this iſland are very fertile, ſo as commonly to have each two or three lambs yearly, yet they are very ſhort-lived, dying of the [droſical] rot, which he took to be the effect of the great moiſture on the hills. Huſbandry and Trade improved, &c. by John Houghton, F. R. S. Paper xxxiv. Vol. I. in 4 vols 8vo. 2d edit. 1727.

(58) Phil. Tranſ. No. 212. This paper is intitled the Evaporation of Water in a cloſe room at Greſham.

of his activity. This induſtrious bee at the ſame time ranged into the fields of Speculative Geometry, where obſerving ſome imperfections in the methods laid down by others (*q q*), for conſtructing ſolid problems or equations of the third and fourth powers; for the better aſſerting the purpoſe, he furniſhed new rules, which were both more eaſy and more elegant than any of the former. Nor did this ſatisfy him, 'till he had proceeded to ſhew a new way of finding the number of roots in ſuch equations, as alſo the limits of them; and this too by the help of that particular curve line, the rectification of which being the firſt performance in that way, was firſt compleated by our countryman Mr Neil, and thence called the *Neilian Parabola* (*r r*) [*A A*]. The year after, being that of the Revolution, Mr Halley publiſhed the following ſheet in 8vo. *Ephemeris ad annum a Nativitate Domini* 1688, *& ad Longitudinem Urbis Londinenſis ex novis hypotheſibus exactiſſime ſupputata, & Reg. Soc. dicata* [*B B*]. Our author ſtill continued to give his labours to the world by the canal of the Philoſophical

(*q q*) Theſe were Harriot, Des Cartes, Schooten, and Baker, names of eminent note in the mathematical republic.

(*r r*) Phil. Tranſ. No. 188 and 190.

[*A A*] *The Neilian Parabola.*] It was in the ſame Tranſaction ‖ alſo that he firſt ſtarted the hint of aſcribing Noah's flood to the ſhock of a comet. Having read to the Society an account, which he had lately received of ſome obſervations made at Nuremberg, ſhewing that the latitude of that place had continued without any ſenſible alteration, for two hundred years then laſt paſt, he makes the following remark upon it. That from theſe obſervations it would follow, that if the inundations, which have actually happened, were produced by any regular motion of the poles of the earth, it would require a prodigious number of ages to effect thoſe changes; neither could ſuch inundations be fatal to the inhabitants, who might foreſee them, and provide for their ſafety. 'But, continues he, the holy 'ſcripture and pagan tradition do unanimouſly agree, 'that the laſt great deluge was brought to paſs in a 'few days without any previous notice; ſo that the account we have thereof, could not by this hypotheſis 'be made out, without the ſuppoſition of a great and 'ſudden alteration in the poles of the earth's diurnal 'revolution; for which, whether we ſhould have recourſe to the intelligent power, that firſt impreſſed this 'whirling motion on the ball, or *leave it to be performed naturally by the caſual ſhock of ſome tranſient body, ſuch as a comet, or the like*, whereby the former 'axis might be loſt, and a new revolution produced, 'differing both in time and poſition from the old, I 'will not undertake to diſpute.' However, he obſerves, 'that ſuch a ſuppoſition would always include 'a change in the length of the year, and the eccentricity of the earth's orbit, *for which*, ſays he, *we have no ſort of authority*.' Hence it appears, that at this time he did not incline to the opinion which aſſigned the chock of a comet for the cauſe of the Deluge, as not being agreeable to the account given thereof in the ſcripture. But having conſidered the ſubject further, he read another paper before the Society in December 1694 ‡, wherein favouring that opinion as neither impoſſible nor entirely improbable, he endeavours to reconcile it with the ſcripture in the following manner. 'The account, ſays he, we have of the univerſal 'deluge, is no where ſo expreſs as in the holy ſcriptures, and the exact circumſtances as to point of time 'ſhew, that ſome records had been kept thereof, more 'particularly than is wont in thoſe things derived 'from remote tradition, wherein the hiſtorical *minutiæ* 'are loſt by length of time.' He proceeds to obſerve, that the ſcripture account ſeems much too imperfect to be the reſult of a full revelation from the author of this dreadful execution upon mankind, who would have ſpoke more amply as to the manner thereof, had he thought fit to lay open the ſecrets of nature to the ſucceeding race of men; 'and *I doubt not*, continues he, '*but to all, that conſider the* 17*th chapter of Geneſis impartially, it will paſs for the remains of a much fuller account of the Flood left by the patriarchs to their poſterity, and derived from the revelation to Noah and his ſons*.' To this cauſe he aſcribes the difficulties that are found in ſeveral particulars of that account; as in the conſtruction of the ark, the reception, and agreement of the animals therein, and the preſervation of it during that wind, in ſo immenſe and boundleſs an ocean, which was ſent to drive the waters away; '*but it muſt alſo be allowed*, ſays he, *that length of time may have added, as well as taken away, many notable circumſtances, as in moſt other caſes of the ſtory of remote times and actions*.' And hence he infers, that the Deluge might be occaſioned by the near approach of a comet to the earth, notwithſtanding the ſilence of ſcripture in that particular. Upon the whole it is obſervable (which too is one principal reaſon of inſerting the preſent remark) that our author here all along very frankly intimates his opinion, that Moſes had the account he gives of the Deluge merely from tradition alone, however it might be matter of revelation to Noah and his ſons.

‖ No. 190. paper iii. for November 1687.

‡ It was not printed 'till the year 1724. in Phil. Tranſ. for that year.

[*B B*] *He publiſhed an Ephemeris for the year* 1688.] This is inſerted upon the authority of Mr Wood *. It is certain that our author, as Secretary to the Royal Society, was at this time the publiſher of the Philoſophical Tranſactions. The firſt of theſe Ephemerides came out in the year 1685 for 1686, of which there is an account in thoſe papers (59), to the following effect. 'That there being then great want of proper Ephemerides of any tolerable exactneſs, thoſe which had been done before having been complained of by Mr Flamſtead in his tables of the Eclipſes of Jupiter's Satellites ‡; therefore ſeveral gentlemen well ſkilled in theſe things had engaged in this undertaking, and had executed the preſent Ephemeris from tables of their own, which anſwer with great preciſeneſs to the celeſtial motions, except in the moon, whoſe motion, by reaſon of her manifold inequalities, not being yet reduced to the nicety of the planets, it was thought needleſs to do more, than to reduce her tychonic places in argol to our meridian, and compute the true altitudes. The account concludes with declaring, that the ſeveral perſons concerned propoſed a continuation of theſe Ephemerides for ſome years to come.' From this account it ſeems very probable that Mr Halley was one, if not the chief of theſe perſons. The deſign was carried on to the year of the Revolution, and then ſeems to have been dropt, but for what reaſon does not, as I know of, any where appear; perhaps the public commotions at that juncture might be the occaſion †: of which, if the following ſtory which paſſed current ſeveral years afterwards concerning his behaviour then, has any foundation, Mr Halley was far from being an unmoved ſpectator. The ſtory is this, That the grateful ſenſe of the favours he had received from the two preceding princes, lying always near his heart, he continued to expreſs it with his uſual warmth and openneſs after the Revolution: That after ſome time the matter reaching the ears of King William, His Majeſty upon the firſt news was a little alarmed, and thought the behaviour of a perſon of ſo great reputation, and ſo conſpicuous in the learned world, as Mr Halley then was, ſhould not be neglected; but upon a nearer enquiry, being truly informed that the warmth of our author's zeal for the ejected prince, was the pure effect of his gratitude, and without any mixture of particular diſlike to his ſucceſſor, and eſpecially obſerving he was continually employed at his teleſcope, determined not to diſturb his ſpeculations; being ſatisfied from his character, that his cloſe attachment to theſe, would effectually prevent him from puſhing his affection any further at moſt than drinking a health. The credit of this ſtory is left to the reader, but whatever be it's fate, it will be proper and agreeable to the general plan of theſe memoirs, to obſerve that a few years after, viz. in 1691, there was publiſhed *a diſcourſe* of his *tending to prove at what time and place Julius Cæſar made his firſt deſcent upon Britain* (60). In this diſcourſe (whatever occaſioned him to turn his thoughts upon the ſubject) beſides an accurate ſkill in the Greek language, he has given an admirable inſtance of his expertneſs in applying aſtronomy to determine critical diſputes upon points of hiſtory. The difficulty was this, Cæſar had not been exact in relating the time or place of his landing. Dr Halley therefore having determined the former to an hour by calculating an eclipſe of the moon, proceeds to inquire into the place; whereupon he obſerves, that though Dion Caſſius in relating that expedition makes

Philoſophical Tranſactions, of which for many years his pieces were the chief ornament and ſupport [*C C*]. In 1691 he publiſhed there a paper, entitled, *De Viſibili Conjunctione inferiorum Planetarum cum Sole Diſſertatio* (*ss*). The tables in this diſſertation are obſerved to exhibit the periodical conjunctions of Mercury and Venus with the Sun to a ſurprizing degree of exactneſs [*D D*]; and he afterwards ſhewed one extraordinary uſe to be made of thoſe relating to the conjunctions of the latter (*tt*), towards diſcovering the true diſtance of the ſun from the earth [*E E*]. This year Dr Edward Bernard reſigning the

(*ss*) Ibid. No. 193.

(*tt*) Ibid. No. 348.

makes uſe of an expreſſion, which had been generally conſtrued to import, that Cæſar on his landing firſt engaged the Britons in a fenny country; yet the words (61) of that hiſtorian, as he ſhews from Suidas, Polybius, and others, may fairly be underſtood to mean no more than that this conqueror engaged the Britons at the *water's edge*; whence it follows, that he might, conſiſtently enough with that deſcription of Dion, actually make his firſt deſcent in a firm champaign country as the Downs is, where this firſt landing ſeems to be determined, as our author ſhews, by Cæſar's own account of the matter (62). Mr Halley likewiſe printed in the ſame Tranſactions (63) a few years afterwards, another peice of criticiſm upon Harduin's Pliny (then lately printed). The title is, *Emendationes et Notæ in tria loca vitioſe edita in textu vulgato Naturalis Hiſtoriæ, C. Plinii.* Theſe emendations are another proof (no ways inferior to the former) of his critical acumen, as will be found upon the peruſal, to which, for fear of being too tedious, we muſt refer, in order to make room for the two following ſpecimens of the like kind. Some Engliſh merchants who had viſited the ruins of Palmyra in 1678, communicating their obſervations to Mr Halley, he thereupon in Philoſophical Tranſactions, No. 218, publiſhed a ſhort hiſtory of that ancient city, together with ſeveral ingenious remarks on the inſcriptions found there. And the ſame ruins having been lately reviewed with great accuracy by ſeveral gentlemen of learning, a further account was publiſhed of them in a piece intitled, *The Ruins of Palmyra*, Lond. 1753, fol. in the preface whereof by Mr Robert Wood, the ingenuity of our author's remarks, though ſhort, has received a freſh encomium. (2.) The other piece intimated above is, *Ptolemy's catalogue of the fixed Stars*, inſerted in the ſecond volume of *Geographiæ veteris Scriptores Græci minores*, publiſhed in 2 vol. 8vo. Ox. 1712, by Dr Hudſon, who gives the following reaſon ‖ for ſubjoining it to that work, *quod vero hiſce omnibus ſubjungere placuerit Ptolomæi catalogum fixarum ſtellarum, alicui forſan mirum videatur, cum ſit argumenti plane diſſimilis, minime tamen dubito, quin hoc mihi ignoſcat, qui noſcit, quot ab illis ſideribus maculas abſterſit, quantamque eis lucem affudit, Cl. Halleius, eandem ſcilicet, qua Ptolomæo illa contemplante, enituerant, cum in libris tam manuſcriptis quam editis ob voces perturbatas, numeroſque confuſos, illa cæli lumina croſſis obvoluta fuiſſent tenebris.* To theſe muſt be added alſo another critical piece upon Mr Dodwell's book *De Cyclis*, in a letter of our author to Mr Brookſby, and ſubjoined by him to his life of Dodwell, Lond. 1715, 8vo.

(61) The word in diſpute is τὰ πρανῆ. Dion Caſſ. Hiſt. lib. 9. which Mr Halley renders *ad vadum maris*.

(63) No. 194.

‖ In præfat. ad finem.

[*C C*] *His papers were for ſeveral years the ornament of the Philoſophical Tranſactions.*] Their various merit is thrown into one view by the writer of his eloge, who, having mentioned his *hiſtory of the trade winds and monſoons*, proceeds in theſe terms. 'This 'was immediately followed by his, *eſtimation of the* 'quantity of aqueous vapours which the ſun raiſes from 'the ſea; the circulation of vapours; the origin of 'fountains; queſtions on the nature of light and tran- 'ſparent bodies; a determination of the degrees of mor- 'tality, in order to adjuſt the valuation of annuities on 'lives*, and many other works, in almoſt all the ſciences, aſtronomy, geometry, and algebra, optics and dioptrics, baliſtic and artillery, ſpeculative and experimental philoſophy, natural hiſtory, antiquities, philology, and criticiſm; being about twenty-five or thirty diſſertations, which he produced during the nine or ten years of his reſidence at London; and 'all abounding with ideas new, ſingular, and uſe- 'ful ‖.'

‖ See a tranſlation into Engliſh of this Eloge, printed in the Gentleman's Magazine for Oct. and Nov. 1747. N. B. When our author left Iſlington, he removed to a houſe in Golden-Lion-court Alderſgate-ſtreet, London.

[*D D*] *Exact tables of the conjunctions of Mercury and Venus with the Sun.*] Dr Smith, Plumian Profeſſor of Aſtronomy at Cambridge, ſpeaking of this diſcourſe (64) in the year 1738, obſerves, 'That it con- 'tains a moſt accurate theory for finding the viſible 'conjunctions of Mercury and Venus, with a ſpecimen 'thereof in tables, comprehending all the times of 'their appearance in the ſun's diſk for two centuries, 'beginning from the time of the invention of tele- 'ſcopes (65). Which tables, compared he, agree with 'the lateſt and beſt obſervations to a wonderful degree 'of exactneſs; ſo that for the future, aſtronomers may 'truſt theſe tables to a few minutes, as the author has 'juſtly obſerved, and not wait with the uncertainty of 'hours, nay days, as had been lately done.' In 1725 our author publiſhed ſome corrections of the tables of Mercury, in Phil. Tranſ. No. 386.

(64) In his Optics, Vol. II. p. 230. Lond. 1738. 2 vols 4to.

(65) Before that invention, theſe tranſits, as well as the ſpots in the ſun, being imperceptible by the naked eye, could at moſt be only a ſubject for conjecture by the Antients: and ſo had never fallen under philoſophical ſpeculations.

[*E E*] *A method of diſcovering the diſtance of the earth from the ſun, more nearly than it yet done.*] We have obſerved above, that our author's papers were the chief ornament and ſupport of the Philoſophical Tranſactions for ſome time. The truth of this appears conſpicuouſly, not only when we conſider the great number and variety of the ſubjects, but alſo that peculiar recommendation which they carry with them to the public, from his entertaining manner of handling them. To paſs over at preſent, how much the ſtrength of his reaſoning is enforced with a ſpirited and mettled diction. There is one thing in almoſt all his pieces, which never fails to leave the reader's mind after he has peruſed them, in that ſtate of full complacency and ſatisfaction, which is the teſt of good writing. I mean thoſe ſhort but accurate hiſtorical accounts of the ſubjects that are improved by him. We have an inſtance of this in the problem now before us, of determining the diſtance of the ſun from the earth. 'There is no 'problem, ſays he, more difficult than this, nor more 'unſettled by the beſt aſtronomers hitherto. Ptolemy 'and his followers, as alſo Copernicus and Tycho, 'make the ſun's diſtance to be only 1200 ſemidiami- 'ters of the earth, Kepler raiſes it near 3500 of theſe 'ſemidiameters. Ricciolus doubles the diſtance of Kep- 'ler, which Hevelius only enlarges by an half. All 'theſe computations were founded upon the ſuppoſed 'magnitude of the inferior planets, which by the ra- 'diancy of their reflected light, were taken to be 'much larger than the truth. Theſe errors received 'their firſt correction by viewing thoſe planets within 'the diſk of the ſun. For when thus ſtripped of their 'borrowed ſplendor, their ſemidiameters were found 'to be much leſs than was before thought. Thus 'Venus ſubtends not above a quarter of a minute. 'Mercury, at it's mean diſtance, is ſeen under an 'angle of ten ſeconds. Saturn, under the ſame angle, 'and Jupiter, the greateſt of all the planets in one, not 'above a third of a minute. Hence ſome modern aſtro- 'nomers arguing from analogy, have thought the ſe- 'midiameter of the earth alſo, when ſeen from the ſun, 'to ſubtend an angle at the intermediate magnitude of '15″ equal to Venus, and therefore concluded the 'ſun's diſtance from the earth, at near 14000 of her 'ſemidiameters. But by this ſuppoſition, at the ſame 'time that the earth, a ſuperior planet, is aſſerted to 'be no bigger than Venus an inferior one, yet the 'moon, a ſecondary planet, is advanced to be no leſs 'than Mercury a primary one, which would break the 'order and harmony wherein the planetary ſyſtem 'ſeems to be eſtabliſhed. Let then, continues he, 'the ſemidiameter of the earth ſeen from the ſun, or, 'which is the ſame thing, let the horizontal parallax 'be 12½″ (whence the moon will be leſs than Mer- 'cury, and the earth bigger than Venus) and then the 'earth will come out 16500 ſemidiameters diſtant from 'the ſun.' But Dr Pound and his nephew Dr Bradley (the preſent Aſtronomer Royal) by many repeated trials made with the niceſt inſtruments, found this parallax not to be more than 12″, nor leſs than 9″ (66). Whence our author ſets it at a medium to be 10 ½″. Yet this parallax might have been brought to a much greater degree of exactneſs, had the ſeveral conjunctions which have happened of Venus with the ſun been carefully obſerved by former aſtronomers. But our countryman Mr Horrox, was the firſt mortal who ſaw this phænomenon in the year 1639, and Dr Halley has ſhewn in the piece now under conſideration, that the ſame

(66) See Phil. Tranſ. No. 363, 366. Dr Halley was preſent at ſome of theſe obſervations, and likewiſe obſerved the ſame himſelf.

the Savilian Profeſſorſhip of Aſtronomy at Oxford, Mr Halley applied for that place, but was diſappointed [*FF*] Not long after this mortification, our author produced a ſmall tract

ſame appearance will happen again in 1761. When on May 6th, near 6 in the morning at London, Venus will appear on the ſun's diſk not above 4′′ ſouth of it's center, the tranſit will continue almoſt eight hours, from two in the morning till almoſt ten, and therefore the ingreſs into the ſun's diſk cannot indeed be ſeen there; but it may nevertheleſs be obſerved in other parts of the world; and he aſſures us from his own obſervations on Mercury at St Helena (67), that the beginning and end of the tranſit of this planet over the ſun's diſk may be obſerved to the exactneſs of 1′′ of time. 'I had the good luck, ſays he, to ſee Mercury as 'he was entring the ſun's limb, and made a black notch 'in it, and was certain of the inſtant of this total ingreſs 'by a fine thread of the ſun's light, which immediately 'broke out from the ſun on the anterior contact of the 'two limbs, and ſtruck my eye inſtantly; and at the 'beginning of the egreſs of Mercury, the like thread 'of light was broken, and vaniſhed inſtantly at the 'other anterior contact.' If the like obſervations be duly made upon the enſuing tranſit of Venus, with a good clock and teleſcope in ſeveral diſtant countries, he ſhews in what manner we may thence determine the ſun's parallax and diſtance from the earth to the exactneſs of a 500th part of the whole. Whereas by the beſt obſervations made till the time when this diſcourſe was written (in 1717), we were not abſolutely certain of theſe quantities to leſs than about a 7th part of them. He concludes with exhorting, in the moſt pathetic terms, all aſtronomers who ſhall be then alive, to be prepared for that important obſervation, and to exert their utmoſt ſagacity and ſkill in remarking every circumſtance of a phænomenon ſo rare and ſo deciſive. Hence the writer of his eloge remarks, that tho' 'he 'indulged no flattering hope of being himſelf a witneſs 'to this appearance, yet he was not on that account 'leſs ſollicitous about the event, or negligent of any 'thing which might contribute to it's ſucceſs. All 'philoſophy, continues that writer, which weakens our 'deſire of being uſeful to poſterity, and takes from us the 'pleaſure we poſſeſs in a probable proſpect of obtaining 'that end, ſaps the foundation of true heroiſm, and 'ought to be rejected with abhorrence and indignation.'

(67) On the third of November, 1677.

§ This was the fourth time that phænomenon had been ſeen ſince the invention of the teleſcope. Mr Shakerley went on purpoſe to Surat to ſee the ſecond in 1661, which happened when it was night in Europe.

[*FF*] *He was diſappointed of the Savilian Profeſſorſhip.*] Concerning this matter we have the following ſtory by Mr Whiſton *, who tells us from Dr Bentley, as he ſays, 'that our author being thought of 'for ſucceſſor to the mathematical chair at Oxford, 'Biſhop Stillingfleet was deſired to recommend him at 'Court; but hearing that he was a ſceptic and a banterer of religion, the Biſhop ſcrupled to be concerned, 'till his chaplain Mr Bentley ſhould talk with him 'about it, which he did; but Mr Halley was ſo ſincere 'in his infidelity, that he would not ſo much as pretend 'to believe the Chriſtian religion, though he thereby 'was likely to looſe a profeſſorſhip, which he did accordingly, and it was then given to Dr Gregory.' Whatever truth there may be in this ſtory, for the right underſtanding of which, Mr Whiſton's religious principles ſometimes bantered † by his friend, will perhaps be thought a proper key; 'tis certain that in this affair our author found an enemy in Mr Flamſtead. From the time of Mr Halley's acting as Secretary to the Royal Society, there had been a miſunderſtanding between theſe two celebrated aſtronomers, which ſeems to have taken it's riſe from a jealouſy in Mr Flamſtead, of his ſuffering ſome diſparagement in the eſteem of Sir Iſaac Newton, from our author's growing friendſhip with that great man. To evince the truth of this aſſertion, it will be neceſſary to obſerve, that Mr Flamſtead, beginning with the year 1683 ‖, continued for ſome years following to publiſh a tide table of the high water at London-bridge, which he had been at ſome pains to make very accurate; to this was ſubjoined the following rule for applying them to ſerve for any other ports in his Majeſty's dominions or neighbouring countries, viz. To ſubtract or add ſo much time to the high water noted in it, as the high water obſerved in ſuch places ſhall be found to precede or follow the time of the high water the ſame day herein noted; 'for, continues he, by ſuch accounts as I have received and met with of the tides in remote places, I find there is every where about England, the ſame difference betwixt the ſpring and nepe tides that is here obſerved in the river of Thames,' and according to this rule he added tables for the ſaid reduction in ſeveral ports, among which, that of Dublin was included ‡. Theſe tables being ſeen by Sir Iſaac Newton, when he was engaged in drawing up his theory of the tides, he thought proper to apply to Mr Flamſtead on that occaſion, and in a letter dated Sept. 19, 1685, writes to him as follows. 'I *perceive by your tide tables you have been curious upon 'that ſubject, which makes me hope, that you can tell 'me, how much the perpendicular riſe and fall of the 'ſpring tides about the ſolſtices is greater than the like 'riſe or fall of the neap or quarter tides at the ſame 'time of the year, and alſo how much the one is greater 'than the other at the equinoxes.*' Whatever was Mr Flamſtead's anſwer, 'tis certain that on this ſubject of the tides, Sir Iſaac particularly conſulted Mr Halley, who had long made that phænomenon one part of his ſtudies, and we find him proſecuting the enquiry with his uſual diligence and ſagacity, and thence diſcovering a miſtake in the rule which had been given by Mr Flamſtead for applying his tables to other ports, beſides that of London, and eſpecially to the port of Dublin. Our author having applied to Mr Will Molyneux, for an account of the courſe of the tides in this laſt mentioned port, and received the ſame, publiſhed it in the Phil. Tranſ † with the following remark. 'This ob- 'ſervation makes the tides upon the quarter moons 'come in later in reſpect of the moon's ſouthing, than 'upon the new and full moons by half an hour, where- 'as in the Thames as high as London, the quarter 'moons make high water above an hour and a quarter 'ſooner in that reſpect, than the new and full, as may 'be ſeen by the accurate tide tables of Mr Flamſtead. '*But it is from hence found that the ſaid tables are not 'applicable to the ſea ports*, where there is not the 'ſame reaſon for the anticipation of the nepe tides 'upon the quarter moons. The cauſe of this phæno- 'menon ſeems to be, that the impulſe of the ſun on 'the quarter moons is not ſo vigorous as in the new 'and full, nor the motion of the waters ſo quick, as 'is found by daily experience; whence it comes to 'paſs, that in the open ſeas, and in ports upon the ſea- 'coaſt, as Dublin, the high-water time falls out later 'than when the motion is more rapid in the new and 'full *: But on the contrary in rivers at any conſider- 'able diſtance from the ſea, the reſiſtance of the 'weight of the freſh water, which is kept ſuſpended 'during the time of the flood, is longer overcome by 'the more potent impetus in the new and full, than by 'weaker in the quadratures, and from hence this dif- 'ference ſhould be more and more conſiderable as the 'port is farther removed from the ſea.' Before this paper was publiſhed, Mr Flamſtead having got an intimation that our author had procured ſome account of the tides at Dublin from Mr Molyneux, grew a little jealous as it ſeems of that friend, and expreſſed his uneaſineſs in a letter to him; in anſwer to which Mr Molyneux writes from Dublin, Nov. 13, 1686, as follows, 'The only information I wrote to Mr Halley 'about our tides, was what I wrote to you about three 'years ago, in mine of Aug. 11, 1683. I can aſ- 'ſure you there was nothing more, ſo that you need 'not miſtruſt my kindneſs in that point. He propoſed 'the ſame queries to me, that then you propoſed, and 'I anſwered him in the ſame way, only indeed he 'added, on the coaſt of Ireland, whereabouts do the 'two floods meet. To this I then anſwered him not, 'becauſe I had not yet got information, but ſince that 'I am informed, that it is between Carlingford, in 'Ireland, and Solway Frith in Scotland.' Some time before this letter could arrive at Greenwich, out came Mr Halley's account, &c. with the remarks juſt mentioned, containing the ſtur upon Mr Flamſtead's tide tables. Whereupon the Royal Aſtronomer broke all meaſures with his competitor, and even endeavoured to draw Mr Molyneux into his quarrel, as appears from another letter dated Feb. 1, 1686 7, wherein that gentleman writes thus: 'I much admire at H——'s 'dealing with you, and I thank you for the advice 'you give me of being cautious what I communi- 'cate. But I think my circumſtances are ſuch, that 'it lies not in his way to do me or my reputation any 'harm. For as to this late buſineſs about the tides, I 'know not what to ſay to ſay to it. I have never ſeen 'the

* In the memoirs of his own life, Vol. I. p. 108. edit. 1753.

† See idem ibid. p. 207, 208. where Mr Whiſton relates, that on his refuſal of a glaſs of wine from him on a friday, this friend ſaid *he was afraid he* [Whiſton] *had a Pope in his belly.* However, Mr Halley's friendſhip to the man of learning and integrity was not thereby abated, as will appear from ſeveral inſtances both in the preſent memoir, and in that of Mr Whiſton. See Mr Whiſton's Memoirs, ubi ſupra, p. 205 and p. 259. and his Aſtronomy in the preface.

‖ Phil. Tranſ. No. 143. for Jan. 1682-3.

‡ Ibid. 155. for 1684. The rule was not inſerted in the firſt for 1683, for want of ſufficient informations from the ſeveral ports.

† No. 184. for Oct. 1686.

* In a letter to Flamſtead, dated May 17, 1687. Mr Molyneux writes, from the information of one Glover, a good ſeaman and Mathematician, that there is little or no difference at Dublin in the times of flowing and ebbing at the ſyzigiæ and quarters.

tract (*uu*), which from the nature as well as extenſive uſefulneſs of it, is perhaps more known, eſpecially at home, than any thing that ever came from his pen; I mean his *Tables*

(*uu*) Ibid. No. 196.

' the Tranſaction wherein it is inſerted. I am a ſtran-
' ger to what he ſays of it; and being ſo, I think it
' were improper for me to take any notice of it by my
' Brother to the Society. What you ſay concerning it
' in your's of January 17th, is very reaſonable, and Mr
' Halley ſeems to be in the wrong, but I cannot pro-
' perly take notice of your information to juſtify myſelf
' to the Royal Society, for that were to bring you
' upon the ſtage in my cauſe, which trouble I know
' you do not deſire, neither would I willingly give it
' you. Indeed Mr Halley himſelf wrote to me the
' 27th of laſt November, in which letter he has this
' paſſage. *I thank you for the communication of the*
' *manner of the tides at Dublin. I make this remark*
' *thereon, that the neap-tides with you are half an*
' *hour later in reſpect of the moon's ſouthing, than the*
' *ſpring tides upon the new and full moons. Whereas at*
' *London, upon the quarter moons, it is high water near*
' *upon an hour and a half ſooner than upon the new and*
' *full moons in reſpect to the moon's ſouthing. It were*
' *worth conſidering what ſhould be the reaſon thereof.*
' *My conjecture is, that the impulſe whereby the water*
' *is driven forward in the flood, is ſtronger in the new*
' *and full; and ſo in the open ſea, or in a bay as with*
' *you, the high water happens ſooner, by reaſon the*
' *water is heaped up with a greater velocity. But in a*
' *river, the weaker tides upon the quadratures are ſooneſt*
' *checked by the weight of the freſh, which it ſtops, which*
' *the greater force of the ſpring tides is able to repell*
' *much longer. Thus far Mr Halley.*' An anſwer to this being ſent preſently by Mr Flamſtead, who it ſeems had undertaken his friend's cauſe without his privity. Mr Molyneux made this return thereto. Dublin, March 24, 1686-7. My honoured friend, ' I return
' you my hearty thanks for your endeavours to vindi-
' cate my credit againſt the falſe deduction, which you
' ſay (as it was managed by the publiſher of the Tranſ-
' actions) is like to reflect on me. I am ſufficiently
' perſuaded by your laſt of February 12, of the groſs
' errors therein; and I wonder how it ſlipt from Mr
' Halley. But though I acknowledge myſelf indepted
' to you for your care of my repute, and the kindneſs
' and love you have ſhewed me therein; yet I muſt
' confeſs, I myſelf am not concerned about it; for I
' place ſo little ſtreſs upon conjectural aſſigning of
' cauſes, that I heed not whether they be true or falſe,
' mathematical or not; ſo that I can eaſily forgive Mr
' Halley, and ſhall never quarrel with any man about
' a notion. *I lately received a letter from Mr* Halley,
' *wherein he expreſſes his concern at the breach between*
' *you, and ſeems very deſirous of an accommodation.* I
' am ſo certain of your good nature and chriſtian piety,
' that I need only mention this to move you thereto.
' And *therefore pray let all miſunderſtanding be cleared*
' *between you, and renew your former friendſhip. If*
' *you pleaſe you may take notice of my mediation in the*
' *caſe, for in his letter he deſires to know of me, where-*
' *in I think you ſo highly injured as to deſerve theſe ſe-*
' *vere reſentments. And in my return to him, I con-*
' *feſs, I was rather for making peace than renewing the*
' *conteſt; and therefore deſired all may be paſſed over.*
' He alſo deſired from me a little paper I wrote, *de*
' *apparente magnitudine ſolis humilis & ſublimis*; but
' ſince I ſent it to him, I have wiſhed I had ſent it firſt
' to you; but I know you may have it from him to
' read it, if you will take that trouble.' Notwith-ſtanding, this mediation came from ſo good a friend, yet being attended with a ſuggeſtion in our author's favour, it was not accepted by Mr Flamſtead, who retained his old grudge much longer, as we find by a letter to him from Sir Iſaac Newton, dated October 24, 1694, where he expreſſes himſelf in theſe terms.—
' A day or two before I left London, I dined with Mr
' Halley, and had much diſcourſe with him about the
' moon. I told him of the parallactic equation a-
' mounting to about 8′ or 9′, or at moſt 10′, and of
' another equation, which is greateſt in the octants of
' the moon's apogee, and might there amount to about
' 6′ or 7′, though I had not yet computed any thing
' about it. He replied, that he believed there might
' be alſo an equation depending upon the moon's nodes.
' To which I anſwered, that there was ſuch an equa-
' tion, but ſo little as to be almoſt inconſiderable But
' what kind of equation this was, I did not tell him; and
' I believe he does not yet know it, becauſe it is too lit-
' tle to be eaſily found out by obſervations, or by any
' other way than the theory of gravity. He told me
' ſome years ago his correction of the moon's eccentric-
' ty, and repeated it, when I was with him laſt at Lon-
' don, and this made me free in communicating my
' things with him. By your obſervations I find it to be a
' very good correction. I reckoned it a ſecret which he
' had intruſted with me, and therefore never ſpake of
' it till now. Upon my ſaying that I hoped to mend
' the moon's theory by ſome obſervations you had
' communicated to me, and that thoſe obſervations
' made the parallactic equation in the quadratures be-
' tween 8′ and 10′, he was deſirous to view them;
' but I told him, he muſt not take it ill if I refuſed
' him that, becauſe I ſtood engaged to communicate
' them to no body without your conſent. *I am very*
' *glad, that there is like to be a new correſpondence be-*
' *tween you, and hope it will end in friendſhip.*'
Such were Sir Iſaac's wiſhes, but inſtead of reconciliation, the breach between them grew ſtill wider, as is evident from the following extracts of a letter, and the remarks upon it, written in 1698, in the firſt of which Dr Wallis, then engaged in printing the third volume of his mathematical works, and having received ſome aſtronomical obſervations to be inſerted in that work from Mr Flamſtead, returned this anſwer. Oxford, December 28, 1698. ' Sir, I received on
' Monday laſt, December 26th, your letter of De-
' cember 24th, and the packet of papers directed to
' me, of which I ſhall take care; and at the ſame
' time I received another letter from one in London,
' which deſires me not to print any paragraph in your
' letter, which ſpeaks of your giving to Mr Newton
' obſervations of the moon. He is a friend to both of
' you, but he does not give me his reaſons why. I
' thought fit to acquaint you with it, and deſire your
' advice upon it.' Mr Flamſtead wrote the following notes on this letter. ' You ſay Dr Gregory is a friend
' to both of us. I much doubt it, had he been a
' friend of mine, he would have ſent me word that
' paragraph would diſpleaſe Mr Newton. A letter
' would have come hither, and an anſwer have gone
' back in almoſt as little time as one goes from Lon-
' don to Oxford. It is much to be ſuſpected, he is
' only Mr Newton's friend for Mr Montague's ſake,
' ſince his countrymen gave out formerly, that he had
' found abundant errors in his *Principia*. Now that
' Mr Newton gave them to him, (to deal plainly with
' you) his friends reſort to Hindmarſh's ſhop in Corn-
' hill, and who they are, you may eaſily be informed
' even at Oxford.

' That I was at London the Friday they arrived, and
' the following. That I wrote to Mr Newton on Mon-
' day, and ſent him an account of what Dr Gregory
' wrote to Dr Wallis, as alſo the paragraph of my let-
' ter which Dr Gregory would ſuppreſs. That re-
' ceiving no anſwer by Thurſday morning, I then
' wrote to him again for one. That ſince he takes no
' notice of my letter; I conclude, I need not take
' notice of Dr Gregory's nor you neither, and there-
' fore think you need not alter the paragraph at all.
' Dr Gregory is a friend of Mr Halley, though he was
' his competitor. But I perceive by this tranſaction,
' he is no friend of mine, though I ſhewed him more
' friendſhip than he could reaſonably expect on that
' occaſion, and Mr Halley as much enmity. But he
' thinks Mr Halley has an intereſt in Mr Newton, and
' therefore is become his friend, and takes the ſame
' courſes Halley did to ingratiate with him, whoſe fa-
' vour may be of uſe to him with Mr Montague (68)'.
Thus the Royal Aſtronomer, we ſee, carried his enmity againſt Mr Halley at this time ſo high, as to extend it to ſuch as lived in friendſhip with him, and amongſt theſe, the occaſion leading him to it, his laſh is particularly exerciſed upon Dr David Gregory. That occaſion was Mr Flamſtead's letter concerning the parallax of the polar ſtar, which being publiſhed at the end of Dr Wallis's works as mentioned above, Dr Gregory took pains to conſider it, and in his *Aſtronomia Phyſica* (69), &c. publiſhed in 1702. expoſed the defects and inconcluſiveneſs of Mr Flamſtead's obſervations for proving that parallax. In theſe laſt letters we ſee another cauſe beſides that of the tides of Mr Flamſtead's diſguſt

(68) The ſeveral letters whence theſe extracts are taken, are printed at length in the General Dictionary, under the articles MOLYNEUX, WALLIS, and NEWTON.

(69) Prop. 55. book iii.

(*w w*) It was first published at the request of Mr Will. Molyneux, in an appendix to his Treatise of Dioptrics. It is well explained and illustrated in a supplement to Dr Gregory's Element's of Catoptrics and Dioptrics, by Dr Brown. Something also of the like kind done by Mr Cotes is printed in the notes to Vol. II. of Dr Smith's Optics.

Tables shewing the value of Annuities for Lives, calculated from the Bills of Mortality at Breſlaw in Silesia [*G G*]. This piece was publiſhed in 1692, and the ſame year came out his famous *Universal Theorem for finding the Foci of Optic Glaſſes*, produced as an inſtance of the great advantage of modern Algebra (*w w*). On the firſt of January this year he reſigned his place of Aſſiſtant-Secretary to the Royal-Society (*x x*); however, there is ſcarce a ſingle number in the Philoſophical Tranſactions for the three following years [*H H*], without ſome remarkable paper of his publiſhed there, beſides which he communicated

(*x x*) Wood, ubi ſupra. Mr Waller being appointed Secretary in the room of Dr Muſgrave.

diſguſt to the ſtudy of the theory of the moon. We have already mentioned Mr Halley's reſolution to bring that theory to perfection, in the view particularly of finding the longitude at ſea, and that he entered on it in the year 1683; and it is obſervable, that Mr Flamſtead publiſhing his catalogue of the eclipſes of Jupiter's Satellites the ſame year, ſubjoined an information concerning it's uſe, wherein he makes the following declaration. 'I muſt confeſs, ſays he, it is 'ſome part of my deſign to make the more knowing 'ſeamen aſhamed of that refuge of ignorance, their 'idle and impudent aſſertion, that *the longitude is not 'to be found*, by offering them an expedient, that will 'aſſuredly afford it, if their ignorance, ſloth, covetouſneſs, and ill nature, forbid them not to make 'uſe of what is propoſed. Thoſe of them, continues 'he, that pretend to greater talents or ſkill than others, will acknowledge that it might be found by 'obſervations of the moon, if we had tables, that 'would anſwer her motions exactly. But after two 'thouſand years experience (for we have ſome obſervations of eclipſes much ancienter) we find the beſt 'tables extant erring ſometimes in two minutes or 'more in her apparent place, which would cauſe a 'fault of half an hour or 7° ½ in the longitude, deduced by comparing her place in the heavens with 'that given by the tables: I undervalue not this 'method, for I have made it my buſineſs, and have 'ſucceeded in it, to get a large ſtock of good lunar 'obſervations, in order to the correction of her theory, 'and is a good ground-work for better tables, *but the 'examination will be a work of long time, and if we 'ſhould happily afterwards attain what we ſeek, yet 'the calculation will be ſo perplexed and tedious, that 'it will be found much more inconvenient and difficult, 'than that I propoſe by obſerving the eclipſes of Jupiter's Satellites, which therefore at preſent I muſt prefer.*' He adds the two following objections againſt the way of finding the longitude by the moon in reſpect to her eclipſes; firſt, the difficulty there is to determine the true time of the moon's ingreſs into the ſhade; and ſecondly, that there are ſcarcely four eclipſes of the moon viſible in a year; and then concludes with a further recommendation of the method here propoſed by the eclipſes of Jupiter's Satellites, in that, as he aſſerts, a teleſcope of eight foot long, which would be ſufficient for obſerving theſe eclipſes, might be eaſily managed at ſea *. On the other hand, Mr Halley, though he approved and promoted the deſign of applying the tables of the eclipſes of the Satellites, to the finding the longitude at land †, yet was far from agreeing with Mr Flamſtead, as to their uſe in that view at ſea. Inſomuch, that three years after that propoſal in the diſcourſe which he read to King James II. when he preſented His Majeſty with Sir Iſaac Newton's *Principia*, &c. ſpeaking of the theory of the moon, he expreſſes himſelf thus: *Though by reaſon of the great complication of the problem, he* [Mr Newton] *has not yet been able to make it purely geometrical, 'tis to be hoped, that in ſome further eſſay he may ſurmount the difficulty, and having perfected the theory of the moon, the long deſired diſcovery of the longitude* (which at ſea is only practicable this way) *may at length be brought to light, to the great honour of your Majeſty, and advantage of your ſubjects* ‖.

* Phil. Tranſ. No. 154. for Dec. 1683.

† See remark [*B B*] note (59).

‖ Phil. Tranſ. No. 226.

[*G G*] *His tables calculated from the bills of mortality at Breſlaw.*] In theſe bills then lately communicated to the Royal Society, both the ages and ſexes of all that died were monthly delivered, and compared with the number of the births for five years preceding the then preſent year 1692; and falling of courſe into the hands of Mr Halley, who was ſtill Aſſiſtant-Secretary to the Society, they appeared to him, on examination, to be drawn up with all the impartiality and exactneſs that the purpoſe required; whereupon he applied himſelf to make a proper uſe of them, in adjuſting thereby the valuation of annuities upon lives. He was induſtrious to calculate a table ſhewing the value of theſe annuities for every fifth year of age, to that of ſeventy; 'leaving it to the ordinary arith-'metician (theſe are his words) to compleat the calcu-'lation, whenever bills of mortality ſhould be given 'for a ſuitable large number of years.' But experience and obſervation having ſhewn theſe to be ſufficient, the ſubject has been proſecuted by others, and brought upon his grounds to a very uſeful degree of perfection (70). In 1736, there was publiſhed *an eſſay to aſcertain the value of leaſes and annuities for years and lives*, by Weyman Lee, Eſq; wherein the author attacked the juſtneſs of Mr Halley's rules. This brought out the following piece, *Obſervations on an Eſſay, &c. Wherein Dr Halley's method is particularly conſidered, and rules laid down for eſtimating the chances of the duration of lives, and the value of annuities for years and lives, in a letter to a friend*, by H. B. I. T. S. 1739, 8vo. Beſides this principal uſe of theſe bills, there are two more ſubjoined by our author which ought not to be omitted, as they are conſpicuous proofs of that religious and benevolent turn of mind with regard to his fellow creatures, which was ſo amiable a part of his character. Firſt then he infers from theſe tables, 'how unjuſtly we repine at the ſhort-'neſs of our lives, and think ourſelves wronged if we 'attain not old age. Whereas it appears hereby, 'that the one half of thoſe that are born, are dead in 'ſeventeen years time. So that inſtead of murmuring 'at what we call untimely death, we ought with patience and unconcern to ſubmit to that diſſolution, 'which is the neceſſary condition of our periſhable 'materials, and of our nice and frail ſtructure and 'compoſition: and to account it as a bleſſing, that we 'have ſurvived perhaps many years that period of life, 'whereat the one half of the race of mankind does not 'arrive. A ſecond obſervation, continues he, I make 'from the ſame table is, that the growth and increaſe 'of mankind is not ſo much ſtinted by any thing in the 'nature of the ſpecies, as it is from the cautious diffi-'culty moſt people make to adventure on the ſtate of 'marriage, from the proſpect of the trouble and 'charge of providing for a family; nor are the poorer 'ſort herein to be blamed, ſince their difficulty of ſubſiſting is occaſioned by the unequal diſtribution of 'poſſeſſions, all being neceſſarily fed from the earth, 'of which ſo few are maſters; ſo that beſides themſelves 'and families, they are yet to work for thoſe who own 'the ground that feeds them. And of ſuch does by very 'much the greater part of mankind conſiſt, otherwiſe 'it is plain that there might well be four times as many 'births as we now find. For by computation from 'the table, I find that there are nearly 15000 perſons 'above 16 and under 45 years of age, of which at leaſt '7000 are women capable to bear children; of theſe, 'notwithſtanding, there are but 1238 born yearly, 'which is but little more than a ſixth part, ſo that 'about one in ſix of theſe women do breed yearly. 'Whereas were they all married, it would not appear 'ſtrange or unlikely, that four of ſix ſhould bring a 'child every year. The political conſequences hereof 'I ſhall not inſiſt upon; but the ſtrength and glory of a 'King conſiſting in the multitude of his ſubjects, I ſhall 'only hint, that above all things celibacy ſhould be diſcouraged, as by extraordinary taxing and military 'ſervice, and thoſe who have numerous families of 'children to be countenanced and encouraged by ſuch 'laws, as the *jus trium liberorum* among the Romans; 'but eſpecially by an effectual care to provide for the 'ſubſiſtence of the poor, by finding them employments 'whereby they may earn their bread without being 'chargeable to the public.'

(70) See De Moivre's Annuities upon lives, the ſecond edit. of which was publiſhed in 1743, and another piece ſoon after on the ſame ſubject by Mr Simpſon.

[*H H*] *The three following years.*] The moſt conſiderable of theſe will be found occaſionally inſerted in the courſe of this memoir, except his new method of determining the exact time of the ſolſtices *. Wherein he proves, againſt the opinion of all former Aſtronomers both antient and modern, that it is eaſier to aſcertain the ſun's entrance into the tropical points, than it is to obſerve the

* Phil. Tranſ. No. 215.

nicated others that were not then printed. Among theſe was a piece in 1694, containing an *Hypotheſis concerning the Phyſical Cauſe of the Univerſal Deluge, by the approach of a Comet involving the Earth in it's watery Atmoſphere* (*yy*), which was firſt made uſe of afterwards by Mr Whiſton in his *New Theory of the Earth*. When the government had reſolved upon recoining the ſilver ſpecies, there being for diſpatch five mints erected on that occaſion, Mr Halley was appointed Comptroller of the Office at Cheſter in 1696 (*zz*). This employ brought him to that city, where he reſided for two years, that is, as long as the office was continued. In the mean time the attendance upon that buſineſs put no check to the vivacity of his active genius in following thoſe purſuits to which his inclination led him. Accordingly we find him at this time ſending to the Royal Society an account of an extraordinary ſtorm of hail, which fell in Wales and at Cheſter on the 29th of April 1697 (*aaa*), and preſently afterwards climbing to the top of Snowdon-hill, in order to improve the rule he had before recommended, for meaſuring great heights by the proportionable fall of the mercury in the barometer (*bbb*). He likewiſe made ſome uncommonly curious obſervations upon a ſurprizing rainbow ſeen by him at Cheſter on the 6th of Auguſt the following year 1698 (*ccc*) [*II*]. An account of this was publiſhed in the Philoſophical Tranſactions for Novemb r, and it was in the third of the ſame month, as has been already mentioned, that he ſet ſail in the Paramour Pink man of war, in order to obſerve the variation of the compaſs, &c (*ddd*). wherein we are informed, that his own private views were of much greater extent than the inſtructions of the Court. The Captain, for he had now acquired that ſtile and character, had been at home little more than half a year, when he went in the ſame ſhip, with another expreſs commiſſion from the King, to obſerve the courſe of the tides in every part of the Britiſh Channel at home, and take the longitude and latitude of the principal head-lan ſs, in order to lay down the coaſt truly (*eee*). Theſe orders were executed (*fff*) with his uſual expedition, and ſoon after his return he publiſhed, in 1702, a large map of the Britiſh Channel. The Emperor of Germany having come to a reſolution to make a convenient and ſafe harbour for ſhipping in that part of his dominions which borders upon the Adriatic, Captain Halley was ſent this year by Queen Anne to view the two ports on the Dalmatian coaſt lying to that ſea. He embarked in the Thames on the 27th of November, went over to Holland, and paſſing thence through Germany to Vienna, and having conferred with Mr Stepney the Engliſh miniſter there, he proceeded to Iſtria, with a view of entering on the execution of the Emperor's deſign; but ſome oppoſition being then given to it by the Dutch, he returned to Vienna, where being introduced by Mr Stepney to Leopold, he gave him an account of two harbours on the Iſtrian coaſt. Whereupon his Imperial Majeſty preſented him with a rich diamond ring from his own finger, and gave him a letter of high commendation, written with his own hand, to Queen Anne. He was likewiſe received with great reſpect by the King of the Romans, by Prince Eugene, and the principal officers of that Court. Preſently after his arrival in England he was diſpatched again upon the ſame buſineſs. This time he paſſed through Oſnaburg and Hanover, where he ſupped with his preſent Britiſh Majeſty then Electoral Prince, and his ſiſter the Queen of Pruſſia. Arriving at Vienna, he was preſented the ſame evening to the Emperor, who directly ſent his chief engineer to attend him to Iſtria, where they repaired and added ſome new fortifications to that of Trieſte, the port of Boccari being found by the Captain fit to receive all kind of ſhipping with ſafety (*ggg*). Having ſeen the work finiſhed he returned to England, where he arrived juſt before the great ſtorm which happened November 26, 1703; and Dr Wallis being deceaſed a few weeks before (*hhh*), our author was appointed Savilian Profeſſor of Geometry at Oxford in his room, and had

(*yy*) See remark [*A d*] above.

(*zz*) MS. Memoirs, ubi ſupra. N. B. This place was not improbably procured by Sir Iſaac Newton's intereſt with Mr Montague, who was alſo Preſident of the R. S. about this time. See the dedication of Vol. XIX. Phil. Tranſ. and remark [*F F*].

(*aaa*) Some of the hail-ſtones weighed 3 quarters of a pound. Phil. Tranſ. No. 229.

(*bbb*) Ibid. No. 240. he found the height of Snowdon to be 1240 yards perpendicular.

(*ccc*) Idem, ib. He alſo gave in the ſame number an account of an extraordinary rainbow ſeen by him in Abchurch-lane in 1695.

(*ddd*) The writer of his Eloge takes notice, that his rout in that voyage is marked on the laſt maps of Mr De L'iſle, among thoſe of the moſt eminent ſailors, in the number of whom he may be reckoned in reſpect to meer practical navigation, and the working of a ſhip.

(*eee*) He had long before obſerved that little had been done towards eſtabliſhing a true theory of thoſe tides. See Phil. Tranſ. No. 162. As to the ſurvey of the coaſt, Mr Whiſton tells us, our author wanted proper inſtruments for that purpoſe. Whiſton's Mem irs, Vol. I. p. 335. 2d edit. 1753.

(*fff*) Mr Maſon obſerves, that they were executed with an accuracy which ſeldom accompanies diſpatch. Dr Halley's Eloge, ubi ſupra.

(*ggg*) MS. Memoirs, ubi ſupra. The laſt cited author, who had his intelligence from Mr Folkes, late Preſident of the R. S. ſeems to inſinuate that this buſineſs was a cover to ſome private negotiation with which Mr Halley was charged.

(*hhh*) The doctor died Oct. 28, 1703. See his monument in St Mary's church at Oxford.

the true time of the equinoxes. He ſhews how to perform it by three ſubſequent obſervations, made near the tropics at proper intervals of time, which are capable of all the exactneſs requiſite; and that without any conſideration of the parallax of the ſun, refraction of the atmoſphere, the greateſt obliquity of the ecliptic, or the latitude of the place. Beſides what he publiſhed himſelf, our author was very ready to aſſiſt others in the purſuit of any laudable deſign. Of this, among others, there is the following inſtance; one Mr John Houghton, already mentioned †, F. R. S. projecting about the year 1682, to write a courſe of papers upon the ſubject of huſbandry and trade, found it neceſſary for his purpoſe to get ſome knowledge of the quantity of land in England. Upon that occaſion he took the freedom of applying to Mr Halley, whoſe communicative diſpoſition was no leſs known, than his excellent talent at contriving expeditious methods for diſpatch, when the caſe required it. Accordingly the following expedient was immediately put into practice by him. He procured the beſt map of England extant at that time, and having very carefully cut off the ſea all round the coaſt, he then ſtruck the largeſt circle that was poſſible upon it, and cutting it out, he took the weight of that in the niceſt ſcales, as alſo of the reſt of the map. This done, the rule of proportion would give the whole quantity of land. Thus, As the weight of the circle is to the weight of the reſt of the map: So the quantity of land in the circle (to be meaſured geometrically) is to the quantity of land in the reſt of the map, which two quantities put together make up the whole. This though acknowledged to be but a rude way, yet was thought to come as near the truth as any computation then extant, and being judged exact enough for Mr Houghton's purpoſe, was made uſe of by him, and inſerted (as well as the contents of each county performed in the ſame manner by Mr Halley) in his weekly paper for the improvement of huſbandry and trade (71)

† In note † to remark [*Z*].

[*II*] *A ſurprizing rainbow at Cheſter.*] This rainbow was a ſecondary arch produced by reflection from the river Dee Our author queries whether any ſuch had ever been obſerved before, and declares he had never read of any. '*For though*, ſays he, Des Cartes *ſpeaks of an inverted one, yet it is not poſſible to be ſeen as he deſcribes it.*' Mr Halley afterwards wrote a geometrical diſſertation concerning the rainbow, in which, by a direct method, is ſhewn how to find the diameter of each bow, the proportion of refraction being given; and *è contra* (72). This ſubject had been left very imperfect by Des Cartes, who in his chapter of meteors uſed only an indirect and tentative method. In which too he had been followed by other writers of eminent note upon this ſubject.

(71) No. 24 and 25. publiſhed in Jan. 1692-3. 8vo. in the firſt volume of Huſbandry and Trade improved. N. B. To this volume is prefixed a recommendation of this undertaking by ſeveral members of the R. S. and of Mr Halley among the reſt.

(72) Phil. Tranſ. No. 267. in the year 1700.

had the degree of Doctor of Laws conferred upon him by that univerſity. He was ſcarce well ſettled at Oxford, when Dr Aldrich, Dean of Chriſt-Church, engaged him in an undertaking that had been entered upon by Dr Bernard, which was, to tranſlate into Latin from the Arabic, *Apollonius de ſectione rationis*: the taſk was no ſlight one, eſpecially to our new profeſſor, who then was entirely unacquainted with the Arabic language, and his predeceſſor in the work had done no more than a few paſſages only. But Dr Halley, who was a perfect maſter of the ſubject, knew how to make uſe of theſe as a key to the reſt, by which means he in a manner decyphered the whole, and compleated the tranſlation with a ſucceſs that was very ſurprizing [*K K*]. At the ſame time our editor, from the account given of them by Pappus, reſtored the two books which are loſt, of the ſame author, *De Sectione Spatii*, and the whole work was put into one volume, and publiſhed by him at Oxford, 1706, 8vo. with the following title, *Apollonii Pergæi de Sectione rationis libri duo, ex Arabico manuſcripto latine verſi. Accedunt ejuſdem de Sectione ſpatii libri duo reſtituti. Opus Analyſeos Geometricæ ſtudioſis apprime utile. Præmittitur Pappi Alexandrini præfatio ad ſeptimum collectionis Mathematicæ nunc primum Græce edita: cum Lemmatibus ejuſdem Pappi ad hos Apollonii libros. Opera & ſtudio Edmundi Halley, apud Oxonienſes Geomet. Profeſſ. Saviliani.* Oxonii e Theatro Sheldoniano, 1706 (*l l l*). This was no ſooner out of his hands, than he took a ſhare with his colleague Dr David Gregory, in preparing for the preſs the ſame *Apollonius's Conics*.. Here again he engaged in that which was by far the moſt difficult part of the work, and ventured to ſupply the whole eighth book, which is loſt, of the original [*L L*]. Nor was this arduous undertaking ſufficient to employ the whole extent of his faculties. He likewiſe added the treatiſe of *Serenus on the Section of the Cylinder* (*k k k*) *and Cone*, printed from the original Greek, with a Latin tranſlation *, in two books, and publiſhed the whole in 1710 in folio †. At the ſame time he alſo prepared for the preſs an edition of *Menelaus's Spherics*

(*i i i*) He dedicated it to Dr Aldrich, ut *ſummo bonarum literarum præſertim mathematicarum Fautori ac Vindici in perpetuum grati animi teſtimonium.*

(*k k k*) He made an excellent uſe of this ſection in demonſtrating the proportional heat of the ſun upon the earth in all latitudes, where he ſhews the advantage of the preſent oblique poſition of the earth to the ſun. Abridgm. of the Phil. Tranſ. Vol. II. p. 126.

* The Greek original was never before printed.

† With this title, *Apollonii Pergæi Conicorum libri octo, & Sereni Antiſſenſis de ſectione Cylindri & Coni libri duo.*

(*l l l*)

[*K K*] *He reſtored and publiſhed Apollonius de ſectione rationis*] The Arabic manuſcript of this tract of Apollonius, περὶ λόγου ἀποτομῆς, was firſt diſcovered among thoſe of Selden in the Bodleian library by Dr Edward Bernard, who reſolved to tranſlate it into Latin, but laid it aſide before he had gone through a tenth part of the work, probably by reaſon of the difficulty thereof. For beſides that the manuſcript was very ill wrote, and the letters left frequently without the uſual points of diſtinction, very often words, and ſometimes whole periods, were omitted; and the letters marking the lines of the diagrams very incorrect. Some time after Dr Bernard's death, what he had left of the verſion was reviſed and corrected by Dr Gregory his ſucceſſor, who alſo procured a fair copy thereof to be written. This being ſhewn by Dean Aldrich to our author, then lately made Savilian Profeſſor of Geometry, he immediately reſolved to compleat the verſion, however difficult the taſk muſt be, eſpecially to him who then knew nothing at all of the Arabic language. The method therefore he took was, firſt to obſerve carefully the ſenſe of all ſuch words in the original, which Dr Bernard's verſion furniſhed, after that by conſidering the argument of Apollonius, he began by degrees to deſcry the ſenſe of the reſt, and thus going on in this way of decyphering, he read the whole book through; and in a manner underſtood it, ſo that by a ſecond peruſal he brought it to the form in which we now have it, without the help of any other perſon whatſoever. Dr Sykes, then Hebrew Profeſſor at Cambridge, and the greateſt orientaliſt of his time, was particularly ſurprized therewith, and told a friend, that the Captain talking with him upon this ſubject, ſhewed him two or three paſſages in the original, which ſhould be amended, telling him what the author actually there ſaid, and what he ſhould have ſaid; which ſenſe Dr Sykes found the words in queſtion would eaſily admit, with only a ſmall correction ‖. With regard to the Arabic manuſcript, Mr Halley obſerves that it is the only verſion extant of the original Greek, which is loſt: that as to it's antiquity, the poſſeſſor's name written in the firſt page, anno Hegiræ 633, that is of Chriſt 1235, ſhews it to be done at leaſt 500 years before. That there is no certain proof how much older it is, but he conjectures it was made a little after the year 820 of the Chriſtian æra, when Almaimon, Chalif or Emperor of the Saracens, purchaſed of the Grecian Emperors the books of their beſt Philoſophers and Mathematicians, and procured them to be tranſlated into Arabic. He obſerves that theſe pieces (as well as ſeveral more of the ſame author by others) had been after a manner reſtored before by Willebrozd Snellius, this being no difficult matter to do for any one ſkilled in Algebra. *Verum*, inquit ille, *perpendendum eſt, aliud eſſe problema aliqualiter reſolutum dare, quod modis variis plerumque fieri poteſt, aliud methodo elegantiſſima id ipſum efficere, analyſi breviſſima & ſimul perſpicua, ſyntheſi concinna & minime operoſa* (73).

‖ This remark of Dr Sykes was extracted from the MSS. Memoirs, to which we are ſo greatly obliged.

(73) Præfat. ad Apollon. de Sectione rationis.

[*L L*] *Apollonius's Conics, &c.*] This work was begun by Dr Gregory, who had undertaken to prepare the four firſt books for the preſs, with the comment of Eutocius in Greek and Latin, while Dr Halley was to do the reſt. But Dr Gregory dying, when he had proceeded no further than the 44th page, the whole remainder of the work fell upon Dr Halley. In the proſecution of it, he was obliged to peruſe ſeveral Arabic manuſcripts in the Bodleian library, particularly a verſion of Apollonius into that language, made by Thebit Ben Corah, but reviſed (about 450 years before 1710) by Naſir Eddin, two of the moſt famous Mathematicians of the Eaſt. He ſometimes alſo conſulted another Arabic manuſcript in the ſame library, by Abdolmelech Schizazita a Perſian, five hundred years ago, and brought out of the Eaſt by Chriſtianus Ravius, who had given a barbarous tranſlation of it. But that which he found of the greateſt uſe to him was the famous manuſcript of Golius, purchaſed of Golius's heirs by Dr Narciſſus Marſh, Primate of Ireland, who readily communicated it to him for the public benefit. From this he in many places not only corrected his own verſion, but alſo ſupplied the deficiencies in the Greek text. This manuſcript was likewiſe Thebit Ben Corah's verſion, but firſt corrected by Beni Moſes, and afterwards reviſed by Mohammed Ebn Al Hafan Taſæus, who began his corrections Auguſt 16, 1247, and finiſhed them March 9, 1248. The ſcholia were written by Achmed Ebn Ali Abülfarai Mohammed, ſurnamed Ebno Ibawwab of Bagdad, who finiſhed that part in October 1263, the whole being compleated on the 30th of March 1303, at Maraga, a city on the confines of Media and Aſſyria. This valuable manuſcript contains the firſt ſeven books of the Conics of Apollonius; but in the margin of the laſt page is written to the following effect. At the end of the copy from which this is tranſcribed, it is written, *That the eighth part of this book was not tranſlated into Arabic, becauſe it was wanting in the Greek copies* (74). Our author's attempt to reſtore this part, was a difficulty which perhaps nobody beſides himſelf would have thought of encountering. But that was neither ſufficient to diſcourage his induſtry, nor yet to baffle his ingenuity. He had here again the *lemmata* of Pappus ſtill extant to aſſiſt him. Theſe helped to ſhew the connection between the ſeventh book and the eighth, and by that help he entirely ſupplied it. In this performance the elegant taſte and manner of Apollonius are ſo perfectly copied, that the beſt judges have agreed, the whole eight books, as publiſhed by our author, may fairly be eſteemed to be the work of the ſame Grecian maſter.

(74) Præfat in Apollon. Conic.

[*M M*] *He*

(*lll*) This is not yet printed. MS. Memoirs.

(*lll*) [*MM*]. In the midſt of all this buſineſs came out the *Miſcellanea Curioſa*, containing beſides others, ſeveral of his pieces, and the whole printed under his direction in 1708, in three volumes, 8vo [*NN*]. In 1713, on the 13th of November, he ſucceeded Dr [afterwards Sir] Hans Sloane in the poſt of Secretary to the Royal-Society (*mmm*). As perfecting the theory of the moon's motion was always uppermoſt in his thoughts, ſo he had never omitted to give all the hours he could ſpare to that ſubject (*nnn*) from other employments, to which the care of his family called him. In the year 1715, he had nearly compleated this theory with regard to the ſyzigies or conjunctions. By this means he not only predicted within a very few minutes the central eclipſe of the ſun which happened that year, but drew a map likewiſe, wherein the extent of the moon's ſhadow was repreſented to a wonderful degree of exactneſs, as was verified by the event [*OO*]. The

(*mmm*) Ibid.

(*nnn*) In the year 1732, he mentions ſeveral obſervations made before by him in this deſign in ſeveral parts of his life. Phil. Tranſ. No. 421.

[*MM*] *He prepared for the preſs an edition of Menelaus's Spherics.*] There is in hiſtory the following account of this antient author. That he was by birth a Mileſian, that he made obſervations of the fixed ſtars at Rhodes, and alſo at Rome, and found the præceſſion of the equinox, or the firſt ſtar of aries, to be 6°. 12′. that he flouriſhed almoſt a whole century before Ptolemy, who compared his own obſervations with thoſe of Menelaus; who wrote ſix books *De Subtenſis vel Chordis*, beſides the three of *Sphærics*. That from the third book of this laſt treatiſe, which contains many acute demonſtrations concerning the proportion of ſines, ſeveral things were borrowed by Ptolemy, and inſerted in the firſt book of his Μεγαλη Συνταξις. But that the Sphærics of Menelaus, coming afterwards into the hands of Teibitius, were obſerved by him to be incorrect and defective, and that thereupon he reviſed and corrected the work; and by ſupplying the demonſtrations where they were wanting, brought the whole into much better order than it had appeared in before (75). Merſennus, from a MS. of this piece, has given in his Synopſis an extract of the propoſitions contained therein; and I have now lying before me a book printed in 8vo. compleat, only that there is neither preface nor title-page; but the running title is *Menelai Alexandrini Sphæricorum, libri tres.* The appellation of *Alexandrinus* muſt be a miſtake, if the above account, that Menelaus, the author of the Sphærics, was a Mileſian, may be depended on. However, as is already obſerved, the book is compleat, with the ſupplements of Teibitius entire, and inſerted in their proper places. Blancanus * mentions Menelaus of Alexandria, an excellent Geometrician likewiſe, who flouriſhed in the fourth century, and who gave ſome demonſtrations upon the 25th propoſition of the firſt book of Euclid's Elements, which are extant in Proclus †. Upon the whole, it will be eaſily underſtood, that the deſign of the preſent remark is, to furniſh ſome matter for forming a probable conjecture concerning the motives which might induce Dr Halley (whoſe regard for Ptolemy's works is ſeen on all occaſions) to think of publiſhing the Sphærics of Menelaus.

(75) See *Clarorum Mathematicorum Chronologia*, &c. p. 50. a P. Blancano. Bononiæ, 1615. 4to. Item *Univerſæ Geometriæ mixtæque Mathematicæ Synopſis, &c. ſtudio & opera* F. M. Merſenni M. Pariſ. 1644. 4to. p. 204. & *Maurolici Siculi Sphæricorum, lib.* I. *in præfatione.* Ibid. p. 230.

* *In Chronologia*, &c. ubi ſupra, p. 52.

† Dr Gregory tells us, that one Menelaus made obſervations of the fixed ſtars at Rome, in the firſt year of the reign of the Emperor Trajan. Greg. Aſtron. lib. ii. prop. 39.

[*NN*] *Miſcellanea Curioſa, &c.*] Among other pieces of our author contained in this collection, we find, in the ſecond volume, his *Compendious and eaſy Method for conſtructing the Logarithms, exemplified and demonſtrated from the nature of numbers, without any regard to the hyperbola, with a ſpeedy method for finding the number from the logarithm given.* In this diſcourſe, which is publiſhed in the Philoſophical Tranſactions, No. 216. he rejects the old definition of logarithms, *numerorum proportionalium æquidifferentes comites*, ſubſtituting a new one, wherein he calls them *numeri rationum exponentes*, conſidering ratio as a *quantitas ſui generis*, beginning from the ratio of equality, or 1 to 1 = 0: and theſe *rationes* he ſuppoſes to be meaſured by the number of *ratiunculæ* contained in each. Now theſe *ratiunculæ* are to be underſtood as in a continued ſcale of proportionals, infinite in number, between the two terms of the ratio, which infinite number of mean proportionals, is to that infinite number of the like and equal *ratiunculæ* between any other two terms, as the logarithm of the one ratio is to the logarithm of the other. Thus if there be ſuppoſed between 1 and 10 an infinite ſcale of mean proportionals, whoſe number is 100,000, &c. *in infinitum*, then between 1 and 2 there ſhall be 30,102, &c. and between 1 and 3 there will be 47,712, &c. of them, which numbers therefore are the logarithms of the *rationes* of 1 to 10, 1 to 2, and 1 to 3, and not ſo properly to be called the logarithms of 10, 2, and 3. But if, inſtead of ſuppoſing the logarithms compoſed of a number of equal *ratiunculæ* proportional to each ratio, we ſhall take the ratio of unity to any number to conſiſt always of the ſame infinite number of *ratiunculæ*, their magnitude in this caſe will be as their number in the former. Wherefore if between unity and any number propoſed there be any infinity of mean proportionals, the infinitely little augment or decrement of the firſt of thoſe means from unity will be a *ratiuncula*, that is the momentum or fluxion of the ratio of unity to the ſame number; and ſeeing that in theſe continual proportionals all the *ratiunculæ* are equal, their ſum, or the whole ratio, will be as the ſaid momentum is directly, that is the logarithm of each ratio will be as the fluxion thereof. Wherefore if the root of any infinite power be extracted out of any number, the differentiola of the ſaid roots from unity ſhall be as the logarithm of that number, and thence the logarithms are produced by extracting the root of an infinite power by Sir Iſaac Newton's binomial theorem. Now though it cannot be denied that the logarithms are calculated with a *moſt* ſurprizing eaſe and expedition by this method, which was likewiſe the firſt attempt to explain the conſtruction of logarithms without having recourſe to Geometry, yet the infinitely little augment or decrement of the firſt mean proportional, in an infinity of ſuch means, is inveloped ſo much in infinity, that it has been thought obſcure and almoſt unintelligible, at leaſt to conceive the idea clearly, is ſaid to put an ordinary imagination to the ſtrain; and on that account it is highly cenſured and condemned as too viſionary by Mr Stone (76), who for this reaſon prefers the former method made uſe of by Sir Iſaac Newton, of making uſe of the hyperbola in explaining the logarithms. But on the other hand, ſeveral of the beſt Algebraiſts have highly extolled this performance of our author as admirably neat and elegant (77); and 'tis certain that without taking in the conſideration of infinity, we can have no notion of logarithms; ſo that upon the whole, there ſeems to be no juſt reaſon for robbing him of any part of his merit in being the firſt inventor of a method of demonſtrating the nature and conſtruction of logarithms without the help of the hyperbola, eſpecially ſince this being a matter purely arithmetical, is not, as he well obſerves, ſo properly demonſtrated from the principles of Geometry (78). Another piece of Mr Halley's, inſerted in the *Miſcellanea Curioſa*, and which we ought not to omit mentioning here, is his *Analogy of the Logarithmic Tangents to the meridian line demonſtrated*, written in 1696 †, ſince it contains a much eaſier method than had been given before, for calculating a table of meridional parts, of ſuch neceſſary uſe in the art of Navigation.

(78) The ſubſtance of this piece, and not ill performed, has been lately inſerted in an appendix to a treatiſe of Navigation, intitled *Navigatio Britannica*, &c. by Iſaac Barrow. Lond. 1751. 8vo.

† Phil. Tranſ. No. 219. for Jan. and Feb. 1695-6.

[*OO*] *As was verified by the event.*] Though it be certain from the principles of Aſtronomy, that there happens neceſſarily a central eclipſe of the ſun in ſome part or other of the globe, about 28 times in each period of 18 years, and that of theſe no leſs than 8 do paſs over the parallel of London, 3 of which 8 are total with continuance; yet from the great variety of the elements whereof eclipſes conſiſt, it had ſo happened before that time, that ſince the 20th of March 1140, there had not been a total eclipſe of the ſun at London, though the ſhadow had paſſed ſeveral times over other parts of Great Britain. Mr Halley therefore thought proper not to neglect this opportunity of getting the the dimenſions of this ſhadow aſcertained. To this purpoſe he cauſed the abovementioned ſmall map to be diſperſed all over England, with a requeſt to the Curious to obſerve what they could about the eclipſe, and more eſpecially the exact time of continuance of total darkneſs, as this required no other inſtrument than a pendulum clock, and being determinable to the utmoſt exactneſs, by reaſon of the momentaneous occultation and emergence of the luminous edge of the ſun, whoſe leaſt part makes day. The pains he took did not

The Aſtronomer Royal as well as Mr Whiſton gave out a ſcheme and calculation of this eclipſe, which proved to be nothing near ſo exact as that of our author. This was therefore a very conſpicuous inſtance of his ſuperior abilities at leaſt in that article of Aſtronomy. His merit in that ſcience became from this juncture univerſally acknowledged, ſo as to be above the reach of envy or party oppoſition. Several other inſtances of this merit appeared alſo in the ſubſequent years [*P P*], ſo that upon the death of Mr Flamſtead in 1719, Dr Halley was appointed to ſucceed him (*ooo*) by his late Majeſty King George the Firſt. Thus fixed at Greenwich, he now at length ſaw himſelf in poſſeſſion, not only of ſuch advantages in reſpect to his fortune as ſatisfied his moderation, but alſo of thoſe opportunities with regard to his fame, which had all along been the principal view of his life. His moſt ardent wiſh was to bring the theory of the moon's motion, at leaſt into ſo great a forwardneſs, as ſhould be a ſufficient incitement to others to finiſh his ſcheme of that which he had conſtantly to this time looked on as the only practicable method of finding the longitude at ſea. Here he was not only provided with the beſt conveniencies for that purpoſe, but had the honour of his royal maſter's expreſs commands to apply himſelf particularly to that ſubject (*ppp*), and at the ſame time he was put into a capacity of proſecuting it uninterruptedly (which had not been hitherto his fortune), by having a handſome competency for the ſupport of his family (*qqq*). Nor did he fail to anſwer the moſt ſanguine expectations of his friends. For though he entered at Greenwich into a houſe where nothing was left but bare walls (*rrr*), yet he immediately fixed a tranſit inſtrument upon the meridian, and fell to his darling employment with that aſſiduity which was a very diſtinguiſhing part of his character. He was now in the ſixty-fourth year of his age, a time of life when Cicero ſaid of himſelf in the words of Plautus, '*Mihi quidem ætas acta ferme eſt*, *Life is almoſt over with me* (*sss*),' and yet Dr Halley attended his teleſcope without any aſſiſtance for eighteen years afterwards. In all which period he ſcarce loſt a meridian view of the moon, whether by day or by night, as often as the heavens would permit (*ttt*). That he might have no avocation from this work, he reſigned the poſt of Secretary to the Royal Society in 1721 (*uuu*), and the next year he began to take the right aſcenſions of the moon with his tranſit inſtrument, 'till the celebrated mural arch was (*www*) erected and finiſhed at the publick expence in 1725, by which he was enabl'd to determine their longitudes from obſervations (*xxx*). Upon the acceſſion of his preſent Maj ſty to the throne, his conſort Queen Caroline thought proper to make a viſit at the Royal Obſervatory, and being greatly ſatisfied with the polite reception ſhe met with, among other things, took particular notice that our author had formerly ſerved the Crown under commiſſion of a Captain in the Navy; and ſhe was pleaſed ſhortly

(*ooo*) By the particular recommendation of the Earl of Macclesfield Lord High Chancellor, and the Earl of Sunderland ſecretary of State. Mr Mairan's Eloge, and Memoirs of W. Whiſton, p. 252. Vol. I. 2d edition.

(*ppp*) The words of his commiſſion are, *To apply himſelf with the utmoſt care and diligence to the rectifying the tables of the motions of the heavens, and the places of the fixed ſtars, in order to find out the ſo much deſired longitude at ſea, for the perfecting the art of Navigation.*

(*qqq*) Viz. In his two places, that at Oxford and this at Greenwich, and therefore we find him preſently after this laſt preferment reſigning the poſt of Secretary to the R. S. which he held before along with his Savilian Profeſſorſhip.

(*rrr*) The furniture of the Obſervatory, as well as that of the houſe, being the property of Mr Flamſtead, the whole was taken away by his executors; among the reſt was a mural arch erected at his own expence. Phil. Tranſ. No. 421.

(*sss*) See *Some Epiſtles between Brutus and Cicero*, in the 4th volume of Dr Middleton's Works in 4to. Lond. 1752. p. 381. Epiſt. 14. N. B. The genuineneſs of theſe epiſtles will be conſidered in it's proper place, viz. in the article MIDDLETON [Conyers].

(*ttt*. MS. Memoirs.

(*uuu*) He was ſucceeded therein by Dr Jurin, Nov. 17. Hiſtorical Regiſter, p. 44. for that year.

(*www*) There is a deſcription with a figure of both theſe inſtruments in Dr Smith's Optics, Vol. II.

(*xxx*) This appears from the title of this part of his lunar tables, as follows, *Lunæ meridianæ aſcenſiones reſtæ Grenovii obſervatæ a die Jan. 13, 1722. ann. Julian. ad diem Decemb. 27. ann. 1735. & eiuſdem longitudines ibidem obſervatæ a die Decemb. 5, ann. 1725. ad diem Decemb. 27, 1730. cum computo tabularum collata.*

not miſs of having their deſired effect. For the weather happening to prove generally favourable, he received from many places ſuch good accounts, that they fully anſwered all his expectations, and were ſufficient to eſtabliſh ſeveral of the elements of the calculus of eclipſes; 'So as for the future, ſays he, we may more ſe-'curely rely on our own predictions, though it muſt 'be granted, that in this our Aſtronomy has loſt no 'credit.' Our author received particular orders from the Royal Society to obſerve this eclipſe on the top of their houſe in Crane-court Fleet ſtreet, with the inſtruments belonging to the Society; theſe were a quadrant of near 30 inches radius, fixed with a teleſcopic ſight, and moved with ſcrews, ſo as to follow the ſun with great nicety. He was accompanied with ſeveral perſons of diſtinction and others, eminent for their ſkill in Aſtronomy, particularly the Earl of Abingdon and Lord Parker (afterwards Earl of Macclesfield) then Chief Juſtice of the King's Bench, obſerved along with him, having inſtruments provided for them; as alſo had Mr Monmort and the Chevalier de Louville, which laſt came from Paris expreſsly on this occaſion.

When the central eclipſe happened, February 28, 1736, Mr Maclaurin obſerved it himſelf at Edinburgh, and ſent to his friends to determine the duration of the annular appearance, that by comparing their obſervations with his own, he might trace the path of the center and the limits of that phænomenon, after the example given in 1715 by Dr Halley, to whom, ſays he, we owe the beſt deſcription of an eclipſe that Aſtronomical Hiſtory affords (79).

[*P P*] *Several inſtances of his abilities in the following years*] Among theſe are an account of Venus ſeen in the day time in 1716. This is ſelected by the writer of his eloge, as a remarkable inſtance of our author's dexterity in applying calculation to phyſico-mathematical problems ‖. This planet appeared at that time viſible to the naked eye at mid-day, and in ſtrong ſun ſhine. I ſaw it ſo myſelf more than once or twice. Mr Halley's demonſtration, ſhews that proper allowances being made for her diſtance from the earth, and the magnitude of her viſible part, ſhe can never appear ſo bright to us, as when her luminous creſcent occupies but the fourth part of her diſk †. This account was publiſhed by our author in the Philoſophical Tranſactions (80), and in the ſame paper he inſerted his invention of a new diving-bell, wherein the diver might continue at the bottom of the ſea in much greater depth than in the uſual way, as long as he pleaſed, by means of a contrivance to convey freſh air to him for reſpiration. Of this he made an experiment himſelf, being let down in company of four others from a ſhip's ſide in it, to a prodigious depth, together with a chair, table, and pen, ink, and paper. The whole being ſo ordered as to remain very ſteady, and light being conveyed into it through a ſpherical glaſs fixed at the top, he could ſee to write very well, and actually ſent meſſages up to the ſhip in writing, containing directions for moving him, &c. as he thought proper. The machine indeed is too complicated and cumberſome for the uſe of the pearl fiſhery. However, the particulars of what he ſaw and felt during the experiment, the different colours and reflections of light, filtered as it were through ſuch an immenſe quantity of water, were, as Mr Mairan obſerves (81), worthy objects of a learned curioſity, and afforded great aſſiſtance to Sir Iſaac Newton in his optics (82). And it is worth notice, that the invention, by reducing it to the compaſs of four feet, was afterwards brought into general uſe in the Baltic ſea, by Mr Trierwold, Captain of Mechanics and Military Architect to his Swediſh Majeſty at Stockholm, who declares that experience had convinced him, that no invention built upon any other principles than thoſe of this bell, can be of uſe in any conſiderable depths, nor the diver a ſingle moment ſafe, Phil. Tranſ. No. 414, for 1736. Beſides theſe two articles, he publiſhed the following in the ſame Tranſactions within the time mentioned in the text. (1.) *An account of ſeveral extraordinary meteors ſeen by himſelf.* (2.) *An account of an aurora borealis in* 1715-16. (3.) *The parallax of the ſun.* (4.) *A ſmall teleſcopic comet ſeen June* 10, 1717. (5.) *A change of latitude in ſome of the fixed ſtars.* (6.) *An account of an extraordinary meteor ſeen March* 19, 1718-19. (7.) *An account of an extraordinary aurora borealis, November* 10, 1719 (83).

(79) Phil. Tranſ. No. 447.

‖ To effect this problem, he invented a new and very uſeful theorem in Trigonometry.

† She was then within 4c°, or in the middle, between her ſhorteſt and longeſt diſtance from the ſun.

ſhortly after to obtain of his Majeſty for him a grant of his half-pay for that commiſſion, which he enjoyed during his life from that time. An offer was alſo made to him of being appointed Mathematical Preceptor to the Duke of Cumberland, but he declined that honour by reaſon of his great age, and becauſe he deemed the ordinary attendance upon that employ would be inconſiſtent with the performance of his duty at Greenwich *(yyy)*. In Auguſt 1729, he was admitted as a foreign member of the Academy of Sciences at Paris, in the room of Signor Bianchini *(zzz)*. Even from his firſt entering upon the moon's theory, conſidering well the great tedioufneſs and difficulty of that taſk, he had been always very deſirous to have others join (leſt any thing ſhould happen to himſelf) in carrying it on to a perfect completion *(aaaa)*. It was with this view that he publiſhed a propoſal in 1731 for finding the longitude at ſea within one degree or 20 leagues [*QQ*]. He had now attained the 75th year of his age. Yet he ſtuck cloſe to his mural teleſcope as abovementioned, 'till the end of the year 1739. When having compleated his third Plinian period, he there cloſed this important work. He had indeed been ſeized a year or two before with a paralytic diſorder in his right hand. This was the firſt attack he had ever felt upon his conſtitution *(bbbb)*, and though it is true it did not diſable him from carrying on his obſervations with the ſame aſſiduity as before, yet after this time he was obliged to make uſe of a friend to write down his *calculus* *(cccc)*. He came ſtill as uſual once a week, 'till within a little while before his death, to ſee his friends in town on thurſday, before the meeting of the Royal Society. This pleaſure he continued to enjoy to the laſt verge almoſt of his life, neither 'till within a few months of his death did he quite neglect his mural arch *(dddd)*. He was of a happy conſtitution, and preſerved his memory and judgment to the laſt, as he did alſo that particular chearfulneſs of ſpirit for which he was remarkable. His paralytic diſorder gradually increaſing, and thereby his ſtrength wearing, though gently, yet continually, away, he came at length to be wholly ſupported by ſuch cordials as were ordered by his Phyſician *(eeee)*, 'till being tired with theſe he aſked for a glaſs of wine, and having drank it preſently expired as he ſat in his chair without a groan, on the 14th of Jan. 1741-2, in the 86th year of his age *(ffff)*.

His

[*QQ*] *A propoſal for finding the longitude at ſea, within a degree or twenty leagues*] He had now perfected his tables for one whole period of the moon's *apogæum*, which is performed in ſomething leſs than nine years. In that compaſs of time he had obſerved the right aſcenſion of the moon at her tranſit over the meridian near 1500 times, and with an exactneſs, he was bold to ſay (they are his words) preferable to any thing done before, a number, this not leſs, than all that were made by *Tycho Brahe*, *Hevelius*, and *Flamſtead*, taken in one ſum. There being near four of his lunar obſervations for each degree of the *argumentum annuum*, or diſtance of the ſun from the *apogæum*. Long before this he had reſumed his firſt deſign in 1683, of filling his Synopſis of the defects in the lunar theory. Being encouraged therein by Mr Flamſtead's obſervations publiſhed in 1704, and alſo by Sir Iſaac Newton's theory, a ſketch of which had been firſt inſerted by Dr Gregory, in his Aſtronomiæ, &c. Elementa, publiſhed in 1702, and again in the ſecond edition of Sir Iſaac's Principia, which came out in 1713. Where the ſame theory was reviſed and amended by himſelf to that degree of exactneſs, that the reſult frequently at that time, as our author found, for many months together, rarely differed two minutes of motion from the obſervations themſelves. Dr Halley had likewiſe computed tables of this theory, which though not then publiſhed, were printed in 1721. And now to the end that the obſervations he had made ſince his coming to Greenwich, might be duly applied to rectify the defects of his former computations; he had himſelf compared with the abovementioned tables, not only his own obſervations, but alſo upwards of eight hundred of Mr Flamſtead's; who indeed as he notes, had been long enough poſſeſſed of the Royal Obſervatory, to have had a continued ſeries of obſervations for more than two periods of eighteen years, by which he had it in his power to have done all that could be expected from obſervations towards diſcovering the law of the lunar motions; but that he contented himſelf with ſparſe obſervations, leaving wide gaps between, ſo as to omit frequently whole months together, and even the whole year 1716. He further informs us as to himſelf, that he had made ſome obſervations with a calculus in 1690 and 1708, which by comparing he perceived to differ inſenſibly from what he found in the like ſituation of the ſun and apogæum in 1726 [the next ſarotic period]. Encouraged by this event, he next examined what difference might ariſe from the period of nine years wanting nine days; but the return of the ſun to the apogæum in that time, differing above four times as much from an exact revolution, as in the period of eighteen years, he could not expect, he ſays, the like agreement in that; however, having now entered upon the tenth year, he compared what he had obſerved in 1721 and 1722, with the obſervations in 1730 and 1731, and rarely found a difference of more than a ſingle minute of motion (part of which might perhaps ariſe from the ſmall uncertainty that always attends aſtronomical obſervations), but moſt commonly this difference was wholly inſenſible; ſo that by the help of what he obſerved in 1722, he preſumed he was able during the then preſent year 1731, to compute the true place of the moon with certainty, within the compaſs of the two minutes of her motion mentioned in his appendix to Street's Caroline tables.——He then obſerves, that the motion of the moon was ſo ſwift as to afford us ſcarce ever leſs than two minutes for each degree of longitude, and ſometimes two and a half. 'Twas this ſwiftneſs of the moon's motion that firſt put the Captain upon thinking to diſcover the longitude by it, ſince the appulſes or occultations by the moon might be obſerved with a ſhort teleſcope, ſuch as was manageable on ſhipboard in moderate weather. This he experienced himſelf in the remote voyages he took in 1698, and the two following years, to aſcertain the magnetic variations, where the few obſervations he had made in 1683 and 1684, proved of ſignal uſe to him in determining the longitude of his ſhip, as often as he could get ſight of a near tranſit of the moon by a known good ſtar, and thereby he frequently corrected his journal in thoſe errors which are unavoidable by the common methods in long ſea voyages (84). Mr Hadley the ſame year had printed in the Philoſophical Tranſactions, No. 420, an account of his inſtrument for taking angles by reflection, which he concludes with the following remark. 'How far an inſtrument of this kind may be of uſe at ſea, to take the diſtance of the moon's limb from the ſun or a ſtar, in order to find the ſhip's longitude, when the theory of that planet is perfected, I leave to others to determine. The Society has the ſatisfaction to know that theory to be already brought to a good degree of certainty and exactneſs, through the conſummate ſkill of a very learned member, and have great reaſon to hope it will in a little time be compleated by the continued application of ſome of their own body.' So far Mr Hadley; and it muſt be obſerved, that to encourage others to this undertaking, our author had lately publiſhed in Philoſophical Tranſactions, No. 369, his *Zodiacus Stellatus* improved, containing beſides the known ſtars, a great number of teleſcopical ſtars, whoſe poſitions were exactly aſcertained.

(84) Phil. Tranſ. No. 421.

[*R R*] *He*

His corpſe was interred near Greenwich, in the church-yard of a ſmall village called Lee, by his own requeſt, in the ſame grave where he had ſeen that of his beloved conſort laid a few years before [*R R*]. With regard to Dr Halley's character it may be obſerved, that in his perſon he was of a middle ſtature, inclining to tallneſs, of a thin habit of body, and a fair complection, and always ſpoke as well as acted with an uncommon degree of brightlineſs and vivacity. As he was a member whoſe name reflects an honour upon the Royal Academy of Sciences at Paris, Mr Mairan, a member thereof, read, according to cuſtom, the Eloge (which we have frequently quoted) of him before that Academy in 1742. Wherein after an oratorical account of the univerſality of his genius [*S S*], and the boldneſs of his philoſophical hypotheſes [*T T*], the concluſion preſents us with the following particulars relating to the character of our author's temper and manners, communicated by Mr Folkes, who ſucceeded him in the French Academy, and was then Preſident of the Royal-Society. He, Dr Halley, ſays this Eloge writer, poſſeſſed all the qualifications neceſſary to pleaſe princes who were deſirous of inſtruction, great extent of knowledge, and a conſtant preſence of mind; his anſwers were ready, and at the ſame time pertinent, judicious, polite, and ſincere. When Peter the Great, Emperor of Ruſſia, came into England, he ſent for Mr Halley, and found him equal to the great character he had heard of him. He aſked him many queſtions concerning the fleet which he intended to build, the ſciences and arts which he wiſhed to introduce into his dominions, and a thouſand other ſubjects which his unbounded curioſity ſuggeſted; he was ſo well ſatisfied with Mr Halley's anſwers, and ſo pleaſed with his converſation, that he admitted him familiarly to his table, and ranked him among the number of his friends, a term which we may venture to uſe with reſpect to a prince of his character; a prince truly great, in making no diſtinctions of men but that of their merit (*g g g g*). But Mr Halley, continues this writer, poſſeſſed ſtill more of the qualifications neceſſary to obtain him the love of his equals. In the firſt place he loved them; naturally of an ardent and glowing temper; he appeared animated in their preſence with a generous warmth, which the

(*g g g g*) See more of this under the year 1697 in an account of that Emperor's Life, by Mr Mottley, in folio, who obſerves that the Emperor then reſided in a houſe of Sir John Evelyn's, called Say's-court at Deptford.

[*R R*] *He was buried at Lee near Greenwich.*] Over the grave, which is near the fence on the eaſt ſide of the church-yard, there ſtands a handſome tomb of Portland ſtone, erected by his two ſurviving daughters, upon the face of which, is the following plain inſcription in Latin:

Sub hoc marmore
Placide requieſcit cum uxore cariſſima

Grata veneretur
Natus } *eſt. A. C.* { MDCLVI.
Mortuus } { MDCCXLI.
Hoc Saxum optimis parentibus
Sacrarunt duæ filiæ pientiſſimæ
Anno C. MDCCXLII.

Here is alſo interred Mrs Margaret Halley
Eldeſt daughter of the above Dr Halley
Who died on the 13 *of October* 1743
In the 55*th year of her age.*

Beſides this daughter (who was never married), and ſeveral other children who died in their infancy, the Doctor had a ſon who lived to man's eſtate and afterwards, but died long before his father. His other daughter is ſtill living, being married to a ſecond huſband [Mr Price], and is much eſteemed.

[*S S*] *An oratorical account of the univerſality of his genius.*] We have already produced two ſpecimens *, which our author's univerſal genius gave his euloge writer an occaſion to exert his excellent talents that way. Thoſe ſpecimens however looked no further than to Mr Halley's univerſal ſcholarſhip, and indeed were evidently deſigned for no more than leading ſteps, made uſe of to riſe by them gradually to the full completion of this part of his character. In this view, having gone thro' the ſeveral particulars of our author's life, to that of his reviewing the Emperor's ports on the gulph of Venice as an engineer, which gave room, as we have already obſerved, to inſinuate, that under *that* cover he negotiated ſome ſecret ſtate affairs between the two Crowns. Mr Mairan cloſes this part of his plan in theſe terms. '*While we thought the eulogium of an Aſtronomer, a Naturaliſt, a Scholar, and a Philoſopher, comprehended our whole ſubject; we have been inſenſibly ſurprized into the hiſtory of an excellent Mariner, an illuſtrious Traveller, an able Engineer, and almoſt a Stateſman.*'

* In remarks [*T*] and [*CC*].

[*T T*] *The boldneſs of his Philoſophical wit.*] We have already taken notice of his free manner of interpreting the Moſaic account of the Deluge in favour of his hypotheſis, which, aſcribing it to the near approach of a comet to the earth, as alſo of his extraordinary ſolution of the *Aurora Borealis*. Beſides theſe, he propoſed a method of tracing the world's age backwards to the Creation, by the repeated obſervations of many years upon the ſaltneſs of the ſea (85), which by ſome experiments of his own, he conjectures, is perpetually increaſing by the acquiſition of new ſalts extracted from the earth by the rivers, and ſo inceſſantly conveyed to the ſea. As this hypotheſis led him to a much greater age of the world than is uſually inferred from the Moſaic hiſtory, he ſuppoſes each of the ſix days of the Creation to be much longer than thoſe afterwards, and even extends every one of them to the length of a thouſand years; being of opinion, that ſuch a length is not inconſiſtent with any thing delivered by Moſes. Further. As he embraced the common opinion concerning the reality and infinitude of ſpace, he concludes the number of ſtars to be infinite upon the principal of mutual attraction, which muſt immediately unite them in one common centre, unleſs balanced every where and to infinitude (86). This opinion, 'tis well known, was long ago maintained by Lucretius, and upon account of this and ſome other bold philoſophical tenets, the Doctor's religious principles have been frequently ſuſpected, but without any juſt foundation. On the other hand, Mr Mairan, with much greater truth and candor, obſerves upon this part of our author's character [the boldneſs of his hypotheſes], that as he was not afraid to oppoſe popular opinions, conceiving and propoſing hypotheſes without the leaſt ſcruple, forming conjectures from his own obſervations and particular apprehenſion. So to this boldneſs, frequently fortunate, becauſe always directed by knowledge, we are indebted for the admirable *theory of the variations of the compaſs*, and the greater part of the other diſcoveries which have ſo much contributed to the advancement of learning and the benefit of ſociety.

[*U U*] *The*

the pleaſure alone of ſeeing them ſeemed to inſpire; he was open and punctual in his dealings, candid in his judgment, uniform and blameleſs in his manners, ſweet and affable, always ready to communicate, and diſintereſted. He opened a way to wealth by all that he effected for the improvement of Navigation: to the glory of which he has added that of having done nothing to enrich himſelf: he lived and died in that mediocrity ſo much extolled by Philoſophers, the free choice of which implies a great degree both of virtue and wiſdom. The only meer lucrative place he ever had, was that in the mint at Cheſter, which ſoon determined, and he never deſired another. He was generous, and his generoſity exerted itſelf even at the expence of a vanity from which the learned are no more exempted than other men, and which perhaps they more frequently betray. I am furniſhed, proceeds Mr Mairan, with an inſtance of this by a letter which accidentally came into my hands about ſix years ago, written by him to an author whom he knew only by reputation. Mr Halley, in this letter, with equal ſagacity and politeneſs points out an error in a very critical calculation which that author had fallen into, in treating on the turning point of a queſtion in Aſtronomy and Phyſics. It muſt not however be concealed, that Mr Halley never publiſhed that letter, although it would certainly have done him honour; but we muſt not too particularly reveal a ſecret, from concealing which he derives ſtill more. The reputation of others gave him no uneaſineſs, a reſtleſs jealouſy and anxious emulation were ſtrangers to his breaſt. He was equally ignorant of thoſe extravagant prejudices in favour of one nation, which are injurious to all others. The friend, countryman, and diſciple of Newton; he ſpoke of Des Cartes (*hhhh*) [*UU*] with reſpect; and ſucceſſor to Dr Wallis; he did juſtice to the merit of our

(*hhhh*) Beſides the ſeveral inſtances of this, mentioned below, there is a paper communicated to Mr Wotton by our author, wherein he declares, that as to Dioptrics, though ſome of the Antients mention refraction as a natural effect of tranſparent media, yet Des Cartes was the firſt who in this age diſcovered the laws of refraction, and brought dioptrics to a ſcience, Wotton's Reflections upon antient and modern Learning, chap. xxiv. p. 601. 3d ed. 1705. 8vo.

[*UU*] *The friend, countryman, and diſciple of Newton; he ſpoke of Des Cartes with reſpect.*] There are ſeveral inſtances of the truth of this remark. Among the reſt we ſhall inſert the following, as neceſſary to explain the juſt force of Mr Mairan's expreſſion. To begin with his paper *concerning the conſtruction of ſolid problems*; where making uſe of what Des Cartes had delivered upon that ſubject, he introduces it in the following words. 'Carteſius's conſtruction, which 'does very eaſily diſcover the roots of all cubic and bi-'quadratic equations where the ſecond term is want-'ing, may be ſuppoſed as known; yet ſince 'tis the 'main bottom, on which all that follows does de-'pend, that this diſſertation may not ſeem to want a 'principal part; I'll here add the rule taken out of his 'geometry, *altering ſome few things as I think for the 'better.*' Again purſuing the ſubject in a diſcourſe concerning *the number of roots in ſolid and biquadratic equations, &c.* having declared that his firſt view reached no farther than to perform ſomething ſerviceable to geometers of the ſecond rank, he proceeds in theſe terms: 'Coming to look nearer into the buſineſs 'ſays he, I found I was imprudently fallen in among 'ſome of the profound difficulties of geometry, and de-'ſtined to handle the ſame things, that formerly em-'ployed the pains of two illuſtrious men, Harriot, and 'Cartes. In which they either of them (by a like fate, 'though in a different way) committed a paralogyſm, 'perhaps the only one in all their geometrical writings '(87), as ſhall be afterwards proved.' Laſtly, *in his* geometrical diſſertation concerning the rainbow, ſpeaking of the cauſe and reaſon of the colours thereof, *he* writes thus. Theſe were things that a long while and very greatly perplexed, as well the Moderns as the Ancients, neither did they do any thing to the purpoſe therein, till the famous Monſieur Des Cartes, making uſe of the mathematical ſciences, ſhewed by ſeveral examples, that more ſtrict and cloſe methods of reaſoning might and ought to obtain, even in our management of thoſe phyſical ſpeculations. Among other things, he explained the theory of the rainbow, and having diſcovered the laws of refraction, he clearly demonſtrated, that the primary iris, &c. Mr Halley afterwards refers his reader to the 8th chapter of Cartes's book on meteors, and then remarks, that Cartes having uſed an indirect and tentative method in determining the angles of refraction, did not ſeem clearly to apprehend the eaſineſs of the problem he propoſed to himſelf; and becauſe, continues he, none that I know of ſince him has handled the ſame argument more fully; and alſo ſince, ſome have miſunderſtood what Des Cartes did, committing very great paralogyſms, I was willing to ſupply what I thought was wanting in his doctrine. Thus we ſee at the ſame time, that Dr Halley did not ſpare to do juſtice to the true merit of Des Cartes, he took care to raiſe a laſting monument to his own fame, by correcting the errors, and ſupplying the deficiences of that eminent French Philoſopher, herein treading exactly in the ſteps of his great maſter Sir Iſaac Newton. Nor was he leſs mindful to reflect back a good part of the honour derived to him in the friendſhip of that illuſtrious perſon. While Sir Iſaac was unfolding the myſteries of the mundane ſyſtem, by the help of a new geometry invented by himſelf, this diſciple extended that geometry to ſubjects altogether untouched, and perhaps unthought of by the inventor; ſeveral of theſe have been mentioned in the courſe of this memoir, to which we refer the reader; but as in applying the method of fluxions, Dr Halley has expreſſed himſelf concerning their nature, in terms which may not ſeem altogether agreeable to his great maſter's mind, it may be expected that ſome notice ſhould be taken of it in this place. It muſt indeed be acknowledged, that our author does not ſcruple to call moments by the name of indiviſibles (88), yet ſignifying at the ſame time that they are ſuch indiviſibles as have not *any* determinate magnitude. The repreſentation 'tis true ſeems harſh, at leaſt *prima facie*, and the term indiviſible, as well as the doctrine, is well known to be cautiouſly avoided by Sir Iſaac, when he teaches the nature of his fluxions. However, it cannot be denied, that the ſame harſh idea is conveyed almoſt unavoidably by his own words, while he calls his moments the evaneſcent decrements of quantities continually decreaſing, at which ſtate thoſe quantities when infinitely diminiſhed do arrive, being then, or on ſuch arrival, accurately in the ratio of their generating velocities, and are repreſented, as not differing really ſo much as modally from the limits at which thoſe velocities are taken (89). Mr Maclaurin alſo underſtands moments in reſpect to time, not to be parts, but terminations and limits of time (90), and ſurely a limit is ſtrictly indiviſible. In a ſentiment not much unlike this of our author, Mr Machin obſerves that $\dot{x}$ [the firſt moment] when conſidered as the meaſure of x, is indiviſible, though in reſpect of $\dot{x}$ [the ſecond moment] it be taken as the part, according to which the meaſure was made, and therefore be diviſible (91). In the mean time it is agreed, that theſe two properties expreſſed by the Doctor are thoſe characteriſtics which require a moſt careful attention in uſing the method of fluxions, and no body diſputes, that he has conſtantly and duly obſerved the caution, ſo that his concluſions always came out perfectly right. Thus was he an honour to his maſter's geometry; and whoever looks into the third book of the *Principia*, will preſently be convinced, that without Dr Halley's aſſiſtance, the ſyſtem of the world would have been far ſhort of that perfection, wherein it now appears. Almoſt every page preſents ſome inſtance or another of this truth. But there is one particular which the determined brevity of the illuſtrious author in that work, would not ſuffer him to ſhew in it's full proportion of merit, and which yet ſhines conſpicuouſly above the other various productions of his diſciple, and therefore muſt not be omitted here. I mean his *Synopſis of the Doctrine of Comets.* Sir Iſaac having ſhewn a method of delineating their orbits geometrically, on a ſuppoſition that they move about

(87) This remark will appear the more candid with regard to the latter, as Mr Fermat has ſhewn ſeveral miſtakes which Des Cartes fell into for want of underſtanding fully, as he ſays, the true nature of Geometry.

(88) See his Demonſtration of the Analogy of the Logarithmic Tangents, &c. and his General Propoſition, ſhewing the dimenſions of all curves of the cycloidal kind, where he not only calls, but conſiders them as indiviſibles, and declares that his demonſtration would not hold without it.

(89) See Principia Math. &c. lemma ii. and the general ſcholium.

(90) See his Treatiſe of Fluxions, Vol. I. p. 245.

(91) Phil. Tranſ. No. 447.

our antient Geometricians [*WW*]. To conclude, theſe uncommon and valuable qualifications were tempered in Mr Halley with a vein of gaiety and good humour, which neither his abſtracted ſpeculations, the infirmities of old age, nor the palſey itſelf, which ſeized him ſome years before his death, could impair: and this happy diſpoſition, the gift of nature, was the more perfect, as it was ſtill attendant upon that peace of mind, which is the nobler endowment of virtue.' Since his death, his long expected tables of the ſun and planets were publiſhed in 1752, in 4to. with this title, *Aſtronomical Tables, with Precepts both in Engliſh and Latin for computing the places of the Sun, Moon, Planets, and Comets* [*XX*].

about the ſun in a parabolic orb, and deſcribing areas taken at the center of the ſun, proportional to the times as he proved in the comet of 1680 (92). Dr Halley following the ſteps (they are his own words) of ſo great a man, attempted to bring the ſame to arithmetical calculation, and ſucceeded in the attempt. To effect this, having firſt collected all the obſervations he could meet with in all hiſtory, he thence formed a table exhibiting the aſtronomical elements of the motions in a parabolic orb of all the comets, that had then been duly obſerved. This table contains the nodes, parhelia diſtances, and courſe, of twenty-four comets, the firſt of which appeared in 1337, and the laſt in 1698 (93). In conſtructing this table, he ſpared no pains that it might come forth perfect, as a thing conſecrated to poſterity, and to laſt as long as aſtronomy itſelf, this he ſcruples not to declare; and however fond ſuch an opinion may ſeem, it has been in a large meaſure juſtified by the univerſal eſteem, which this great work (for ſo it may well be called, though lying in a very ſmall compaſs) (94) has been ſince received by the beſt aſtronomers. He declared it to be the labour of many years; and the preciſe number hath been lately determined to be eighteen, by a French author (95), who apparently reckons the whole interval between the firſt edition of the *Principia Mathematica*, &c. in 1687, to 1705, when the *Synopſis*, &c. was firſt publiſhed in the Philoſophical Tranſactions, No. 297, where he declares that opportunity of publiſhing it was taken, leaſt happening to die, the papers might be loſt, which every man, continues he, is not capable to retrieve, becauſe of the great difficulty of the calculation. The principal uſe of the table, and that which induced our author to conſtruct it is, that whenever a new comet ſhould appear, it might be known by comparing the elements, whether it be any of thoſe which have appeared before, and if ſo, we might be able to determine it's period, and the axis of it's orbit, and to predict it's return. Upon theſe principles he ventures to foretel, that the comet of 1531, was the ſame with that of 1682, and obſerving a period of 75 ½ years may be expected to return in 1757, which, if it ſhould happen, as he obſerves, will greatly confirm the truth of his table. He thinks alſo that the famous comet of 1680, was the ſame that appeared in the time of Julius Cæſar performing it's period in 575 years (96). It will no doubt ſeem a little paradoxical to ſuch as are not well acquainted with geometry, to talk of the periodical revolutions or returns of a body which is ſuppoſed to move in a parabola. For the ſake of thoſe perſons, it will not be amiſs to obſerve, that notwithſtanding our author, after his maſter, reduced the cometical orbits to a ſimple parabola, having the ſun in it's focus in common with the ellipſes deſcribed by the ordinary planets, which greatly facilitates the cometic calculus, and was agreeable to aſtronomical obſervations, yet the path or line of a comet's motion was not ſo preciſely determined by thoſe obſervations, but that it might be elliptical; however as theſe bodies do not make returns upon that ſuppoſition till after long periods of time, the ellipſes deſcribed by them muſt be very eccentrical; in which caſe, the velocity being very nearly equal to that in a parabola (97), the difference will be eaſily compenſated in determining the ſituation of the orbit. Indeed it ſeems probable that comets rather move in ſuch eccentric ellipſes for many reaſons, and particularly this, that though they appear frequently enough, yet none of them are found to move with an hyperbolic motion, or a motion ſwifter than what a comet might acquire by it's gravity toward the ſun. Upon that principle therefore, when the *Synopſis* came out again in the ſecond edition of the *Miſcellanea Curioſa*, &c. in 1727, the Doctor ſignified, that he had made ſome progreſs in calculating the elliptical orbits of the two comets abovementioned; declaring at the ſame time his reſolution to compleat it.

Accordingly we find this ineſtimable work with that addition, publiſhed with his Lunar tables, under the following title. *Synopſis Aſtronomiæ Cometicæ, qua cometarum hactenus debite obſervatarum motus in orbe parabolico debite repræſentantur. Eorumque qui annis* 1680 & 1682 *(98), fulſére poſt certas periodos redeuntium motus in orbibus ellipticis accurato calculo ſubjiciuntur.* By ſuch egregious productions as theſe, did Dr Halley tranſmit his own fame, in company with that of Sir Iſaac Newton; nor did his friendſhip degenerate into formal heartleſs expreſſions after Sir Iſaac's deceaſe. On the contrary, he thought himſelf then obliged by that tie to ſhew himſelf the guardian of his friend's fame, and in that character we find him ſeconding Sir Iſaac's defence of his Chronology, againſt ſome farther objections made by P. Souciet in 1727. This defence is inſerted in the Philoſophical Tranſactions, No. 397. The piece is ſhort, but he has unanſwerably proved the point he undertook, and no humane mind can read it without being ſenſibly touched with that warmth of a moſt generous friendſhip, which glows ardently throughout the whole. To conclude, this friend of Sir Iſaac Newton, had the happineſs of flouriſhing under ſix crowned heads (99), and received favours from each of them, ſuch as were the pure effects of his ſingular merit; which merit being as well known abroad as it is at home, what wonder is it that foreigners in viewing the tombs in Weſtminſter-Abbey, after they have ſtood a while admiring Sir Iſaac's monument, are apt ſometimes to aſk, where is that of his friend Dr Halley.

[*WW*] *He did juſtice to the merit of our ancient Geometricians.*] This writer had before taken notice, that 'the geometry of the Ancients, the ſtrictneſs of their demonſtrations, and the elegance of their conſtructions, were always held by our author in great eſtimation; and that with this turn of mind he tranſlated Apollonius's Conics, and the two books of Serenus;' and to theſe may be added his copy of Menelaus's Sphærics, and the correct edition of Ptolemy's catalogue of the fixed ſtars mentioned in theſe remarks. But the inſtance of his doing juſtice to the merit of our ancient geometricians, produced by Mr Mairan in this place, ſeems a more direct proof of what he obſerves a little before, concerning Dr Halley's freedom from thoſe extravagant prejudices in favour of one nation, which are injurious to all others. Here follows the inſtance: 'In the 'introduction to an algebraical memoir which he '[Halley] read to the Royal Society, he makes no 'difficulty to acknowledge, that Harriot, Oughtred, 'and many others, as well Engliſh as foreigners, had 'taken from Vieta, all that was valuable in what-'ever they had publiſhed on that ſubject.' It is worth obſerving alſo, that our author's reſpect is tempered with the ſame impartiality to Vieta, as we have ſhewn in the laſt remark it was to Des Cartes, and that out of this reſpect he alſo raiſed a monument to his own fame, making the tediouſneſs (which he remarks) of Vietas's method for reſolving roots of equations, a foil to ſet off the elegance of his own, as delivered in the memoir here alluded to by Mr Mairan, being his *rational and irrational formula for extracting ſuch roots without any previous reduction*. It was firſt publiſhed in the Philoſophical Tranſactions, No. 210, in the year 1694, and afterwards in an appendix to the firſt edition of Sir Iſaac Newton's *Arithmetica Univerſalis*, in 1707, 8vo, as proper to ſupply that part of the treatiſe, which was left untouched by the author (100).

[*XX*] *Tables of the ſun, moon,* &c.] This work was printed in Latin by our author in 1739, with the following title prefixed, *Edmundi Halleii Aſtronomi dum viveret Regii Tabulæ Aſtronomicæ. Accedunt de uſu tabularum præcepta.* But after his death the precepts here mentioned, not being found, were added by another hand, as were alſo a table of the mean conjunctions of the ſun and moon (101); another of refrac-

(92) In the *Principia*, toward the end of the third book.

(93) To this he has ſubjoined another table for computing the motion of comets in general in a parabolic orb, of which he gives the conſtruction and alſo the uſe in two examples.

(94) It is contained in a ſingle 8vo page.

(95) Mr Monier, in his *Theorie des Comettes*, Paris, 1743. 8vo. N. B. This author, as well as Mr Coſtard in his *Riſe and Progreſs of Aſtronomy*, 1746, 8vo, is miſtaken in ſaying that Dr Halley's *Synopſis*, &c. was inſerted in *Scarborough's Euclid*, printed at Oxford, in 1705. fol. The firſt ſpecimens of it given to the public, appeared in Dr Gregory's Aſtronomy, book v. prop. 35. and it's ſcholium, publiſhed at Oxford, in 1702. fol. and theſe ſhew it was not then perfected.

(96) Mr Machin having obſerved the path of the comet in 1737, concluded it from our author's elements in this table to be the fifth comet inſerted there, which appeared in 1556. Phil. Tranſ. No. 446.

(97) Viz. In the ſubduplicate ratio of the diſtance of the aphelium in the ellipſis to it's whole axis; that being the proportion of the *latus rectum* of the ellipſis, to that of a parabola which has the ſame diſtance in it's perihelium.

(98) The laſt mentioned gentleman, Aſtronomical Profeſſor of Greſham-college, having diſcovered a very practicable rule for finding the true anamoly from the mean in the elliptic orbits of comets, illuſtrates it by the examples of theſe two. Phil. Tranſ. No. 447.

(99) Viz. Charles II. James II. William III. Queen Anne, George I. and George II.

(100) See Mr Whiſton's account of this matter in the *Arithmetica Univerſalis*, publiſhed by him, together with the appendix, by the particular conſent, as he declares, of both the authors.

(101) Our author's tables of the eclipſes which had happened in the 223 lunations, from 1701 to 1718, with the corrections which he had made for that purpoſe, and called the Plinian Period, are omitted, both becauſe that period is leſs accurate, and beſides after a few periods becomes of little uſe.

tions; and a third of the longitude and latitude of the moſt remarkable places for ancient eclipſes and modern obſervations; the whole being reviſed by Dr Bradley, the preſent Aſtronomer Royal. In the preface it is obſerved, that our author made uſe of Mr Flamſtead's obſervations, which, though taken with great care, and faithfully entered in his book, were too few of the ſun to determine the ſolar numbers with ſufficient exactneſs, of which Dr Halley frequently complained; hence he could not determine either the ſpecies or poſition of the earth's orbit, much leſs could he diſcover any equations to the motion of the aphelia and the other ſmall equations, by which the orbit is affected, ſince theſe are not to be found out, nor their quantities determined, but by a long ſeries of the niceſt obſervations. It is likewiſe further obſerved, that neither the aberration of the light of the fixed ſtars, nor the equations to the poſition of the equinoctial points, nor that of the nutation of the earth's axis were at that time known, which equations, though ſmall, are ſufficient to produce a ſenſible appearance of error in good obſervations. That the great candour of Dr Halley is manifeſt in this, that he never intended to offer his lunar tables to the public as perfect, rather chooſing to omit ſome equations, for determining which he had not proper obſervations; and at the ſame time reſolving to publiſh what errors he ſhould find in them from his own obſervations. As to the precepts, they are very ſhort, but illuſtrated with a great number of examples for the uſe of common mariners. The method is thus: Firſt, obſerve nicely the time of an occultation, or cloſe application of a fixed ſtar to the moon, then find in the tables a correſpondent obſervation, i e. when there is the ſame mean anamoly and diſtance of the moon from the ſun, in the ſame year of her period of eighteen years and eleven days, and about the ſame time of the year; this done, the difference of the time between the two obſervations, reckoning two minutes of time to a degree, gives the diſtance of the ſhip's meridian from that of London, for which the tables are calculated. The rule ſeems to be eaſy enough for general uſe, but it has not hitherto been found, that obſervations can ordinarily be made by ſailors to the required degree of exactneſs. Our author indeed hoped, or rather wiſhed, the ſame would be brought to perfection by Mr Hadley's reflecting quadrant (102), and ſeveral obſervations were made in 1732, on board the Chatham Yatcht, by Dr Bradley and Mr Hadley, off Graveſend, and alſo near Sheerneſs, for the trial of it. But the truth is, all farther proſecution of this method for finding the longitude at ſea, was dropped ſoon after thoſe trials, being ſuperſeded by Mr Harriſon's clock, which was approved by Dr Halley himſelf, as well as others, the beſt ſkilled in theſe matters; and which as well from the curious contrivance, as alſo from a ſucceſsful trial thereof croſs the Bay of Biſcay, is univerſally allowed to promiſe much the eaſieſt and moſt accurate way of attaining this grand Quæſitum. P

(102) Mentioned in remark [QQ].

HAMMOND [HENRY], one of the moſt learned, pious, and rational, Engliſh Divines in the laſt century, was born at Chertſey in Surrey Auguſt 18 (*a*), 1605. He was the youngeſt ſon of Dr John Hammond, Phyſician to Henry Prince of Wales, who was his godfather, and gave him his own name (*b*); and, by the mother's ſide, was deſcended from Dr Alexander Nowell, Dean of St Paul's. Being yet in his long coats, which formerly were worn beyond the years of infancy, he was ſent to Eaton-ſchool; where, thro' the more than paternal care and induſtry of his father (who was an exact critic in the learned languages, eſpecially the Greek), he became a great proficient in Latin and Greek. His ſingular improvement and ſkill in the latter, was owing more particularly to the friendſhip and converſation of Mr Thomas Allen, Fellow of Eaton-college (*c*). He is alſo ſaid to have attained at ſchool a competent knowledge of the Hebrew tongue [*A*]. And was very remarkable for ſweetneſs of behaviour and uncommon piety; never engaging upon any occaſion into fights or quarrels, and often retiring into places of privacy to ſay his prayers. At the age of thirteen, anno 1618, being ripe for the univerſity, he was ſent to Magdalen-college in Oxford; of which, on July 30, 1622, he was choſen Demie (*d*), and the 11th of December following took the degree of Bachelor of Arts (*e*). June 30, 1625, he took the degree of Maſter of Arts (*f*), and on the 26th of July the ſame year was elected Fellow of his college (*g*); having been appointed before reader of the Natural Philoſophy lecture there. Some time after taking his degree, he applied himſelf to the ſtudy of Divinity [*B*]; and in 1629, being arrived to the age of twenty-four, entered into Holy Orders, as the ſtatutes of the college required. During his reſidence in the univerſity, he generally ſpent thirteen hours a day in his ſtudies, which carried him not only through the whole courſe of Philoſophy, but almoſt through all the claſſick authors; upon the more conſiderable of which he wrote notes and critical emendations, and drew up indexes for his private uſe at the beginning and end of each book (*h*). On the 28th of January, 1633-4, he proceeded Bachelor in Divinity (*i*): and ſome time before [*C*], Dr Frewen, then Preſident of his college, and one of his Majeſty's Chaplains, afterwards Archbiſhop of York, giving him the honour to ſupply one of his turns at Court; Robert Sydney Earl of Leiceſter, who happened to be one of his auditors, was ſo deeply affected with the ſermon, and thence took ſo juſt a meaſure of the preacher's merit, that

[*A*] *He is alſo ſaid to have attained at ſchool a competent knowledge of the Hebrew tongue.*] And to have even become a kind of tutor to ſeveral perſons in that language. For (as Dr Fell obſerves) 'It being then 'rarely heard of even out of grammar-ſchools, he 'grew the tutor of thoſe who began to write them-'ſelves men, but thought it no ſhame to learn of one 'whoſe knowledge ſeemed rather infuſed than ac-'quired; or in whom the learned languages might be 'thought to be the mother-tongue (1).'

(1) Fell, P. 3, 4.

[*B*] *He applied himſelf to the ſtudy of Divinity.*] Dr Fell informs us, that 'Having taken his degree [of 'Maſter of Arts] he preſently bought *a Syſtem of Divi-'nity*, with deſign to apply himſelf ſtraightway to that 'ſtudy; but, upon ſecond thoughts, he returned for a 'time to human learning: and, afterwards, when he 'reſumed his purpoſe for theology, took a quite diffe-'rent courſe of reading from the other too much uſual, 'beginning that ſcience at the upper end, as conceiving 'it moſt reaſonable to ſearch for primitive truth in the 'primitive writers [He ſhould have added, *eſpecially 'the Holy Scriptures*] and not to ſuffer his underſtand-'ing to be prepoſſeſt by the *contrived and intereſſed 'ſchemes of modern, and withal obnoxious authors* '(2).'

(2) Id. p. 7.

[*C*] *And ſome time before*] Dr Fell ſays, that 'not long after' his entring into holy orders, he took the degree of Bachelor in Divinity. And, as he places that fact before his preaching at Court, one would be apt thence to conclude, that he took that degree in the beginning of the year 1633. But by comparing Dr Fell's relation (3) with A. Wood's Faſti (4), it is evident, that Mr Hammond did not take his Bachelor of Divinity's degree till January 28, 1633-4; ſome months after he had been inducted into his living.

(3) P. 8.

(4) Col. 257.

[*D*] *Not*

that he immediately offered him the rectory of Penſhurſt in Kent, then void, and in his gift. Our author accepting of it, was inducted Auguſt 22, 1633. Thereupon he quitted the college, and went and reſided upon his cure, where he performed every branch of the miniſterial function in the moſt diligent and exemplary manner: not only by conſtant preaching [D], but alſo in daily reading the public prayers [E], adminiſtring the Sacraments [F], relieving the poor, keeping hoſpitality [G], reconciling differences amongſt neighbours, viſiting the ſick, catechiſing the youth [H], &c. (k). March 7, 1638-9, he took the degree of Doctor in Divinity (l): and in 1640 was choſen one of the members of the Convocation, called with the ſhort Parliament that began April 13 that year. Alſo, by the unſought-for favour of Dr Brian Duppa, then Biſhop of Chicheſter and afterwards of Wincheſter, he was made in 1643 Archdeacon of Chicheſter: and the ſame year named one of the Aſſembly of Divines, but never ſat amongſt them (m). In the beginning of the national troubles, he continued undiſturbed at his living (except the being now and then ſummoned before the committee of the country) 'till the middle of July 1643. But joining then in the fruitleſs attempt made at Tunbridge in favour of the King, he was forced to retire in diſguiſe to his old tutor Dr Buckner, to whom he came about the 25th of July, early in the morning. In this retirement he continued quietly about three weeks, 'till an alarm was brought, that ſtrict enquiry was made after Dr Hammond, and a hundred pounds reward promiſed to the perſon that ſhould produce him. Thereupon he found it neceſſary to remove; and, by the perſwaſion of Dr Oliver, newly choſen Preſident of Magdalen-college, who had abſconded with him, they jointly withdrew to Oxford [I]. Having procured an apartment in his old college, he ſought that peace in his retirement and ſtudy which was no where elſe to be found; taking no other diverſion than what the giving encouragement and inſtruction to ingenious young ſtudents afforded him, and the ſatisfaction which he received from the converſation of learned men (n). In the

[D] *Not only by conſtant preaching.*] His preaching was not *at the ordinary rate of the times*, an unpremeditated, undigeſted effuſion of ſhallow and crude conceptions; but a rational and juſt diſcourſe. His method was, after every ſermon to reſolve upon the enſuing ſubject; and that being done, to purſue the courſe of ſtudy which he was then in hand with, reſerving the cloſe of the week for the proviſion of the next Lord's-day. Whereby not only a conſtant progreſs was made in knowledge, but materials unawares gained for the immediate future work (5).

(5) Fell, p. 11, 12.

[E] *But alſo in daily reading the public prayers.*] Namely in his own church: and that, not only upon ſundays, and feſtivals and their eves, as alſo on wedneſdays and fridays, according to the rubrick; but every day in the week, and twice on ſaturdays and holy-day eves. And at thoſe devotions he took order, that his family ſhould give diligent attendance (6).—— Even when deprived of his living, he did not intermit ſo neceſſary a duty, as that of prayer. For, in the ten laſt years of his life, his certain perpetual returns of prayer exceeded David's ſeven times a day. As ſoon as he was ready, which was uſually early, he prayed in his chamber with his ſervant, in a peculiar form compoſed for that purpoſe. After this he retired to his own more ſecret devotions in his cloſet. Betwixt ten and eleven in the morning he had a ſolemn interceſſion in reference to the national calamities: to this, after a little diſtance, ſucceeded the morning office of the Church, which he particularly deſired to perform in his own perſon, and would by no means accept the eaſe of having it read by any other. In the afternoon he had another hour of private prayer, which on ſundays he enlarged, and ſo religiouſly obſerved, that if any neceſſary buſineſs or charity had diverted him at the uſual time, he ſpent the ſupper-time therein. About five of the clock, the ſolemn private prayers for the nation, and the evening ſervice of the Church returned. At bed time his private prayers cloſed the day: and after all even the night was not without its office, the 51ſt Pſalm being his midnight entertainment (7).

(6) Ibid. p. 12, 13.

(7) Ibid. p. 115—117.

[F] *Adminiſtring the Sacraments.*] The adminiſtration of the holy communion in particular, he reduced to an imitation, though a diſtant one, of primitive frequency, to once a month; and therewith its ancient inſeparable attendant, the Offertory: wherein his inſtruction and example ſo far prevailed, that there was thenceforth little need of ever making any poor-rate in his pariſh. Nay 'tis reported, that in a ſhort time a ſtock was raiſed to be always ready for putting out children apprentices. And, after that, there yet remained a ſurplus, for the aſſiſtance of the neighbouring pariſhes (8).

(8) Ibid. p. 13, 14.

[G] *Relieving the poor, keeping hoſpitality.*] For the relief of the poor, he conſtantly ſet apart a weekly allowance of money, over and above the tenth part of all he received, and the daily alms given at his door. To which muſt be added, his ſelling of corn to his poor neighbours under the market-price; which though, as he ſaid, he had reaſon to do, in that it ſaved him the charge of carriage, yet was it no ſmall benefit to poor labourers, who, beſides the abatement of price, and forbearance of payment ſometimes, ſaved thereby a day's work.——As he was thus liberal to the neceſſitous, ſo was he no leſs hoſpitable to thoſe of better quality; eſpecially on Sundays, which ſeldom paſſed without ſome of his neighbours at his table; he well knowing how much the application at the table inforced the doctrines of the pulpit, and how neceſſary the endearing of his perſon was to the recommending his inſtructions.—— In every inſtance he was kind and obliging to his pariſhioners; not only in compounding with them for their tithes, but alſo in receding even ſometimes from his right. For inſtance; having ſet the tithe of a large meadow, and upon agreement received part of the money at the beginning of the year; it happening that the crop was afterwards ſpoiled by a flood, when the tenant came to make the laſt payment, he not only refuſed it, but returned the former ſum, ſaying to the poor man, *God forbid I ſhould take the tenth where you have not the nine parts.* By theſe and the like means he came to be univerſally beloved in his pariſh: ſo that when he was driven away, and his books plundered, one of his neighbours bought them in his behalf, and preſerved them for him till the end of the war (9).

(9) Fell, p. 14—19.

[H] *Catechiſing the youth.*] His cuſtom was, during the warmer ſeaſon of the year, to ſpend an hour before evening prayer in catechiſing; at which the parents, and older ſort of people uſed to be preſent, and from whence (as he was wont to ſay) they reaped more benefit than from his ſermons.——And that no imaginable aſſiſtance might be wanting, he provided an able ſchool maſter in the pariſh, whom he continued during the whole time of his abode there (10).

(10) Id. p. 20—22.

[I] *They jointly withdrew to Oxford.*] Dr Hammond was forced to withdraw, chiefly through the malice of one who wanted to get into his good living. He made much difficulty to conſent to go to Oxford, thinking that too public a place; and, what he more conſidered, too far from his cure, whither he had hopes, (when the preſent fury was allayed) to return again: and, for that purpoſe, had wrote to ſuch friends of his as were in power, to uſe their intereſt for procuring his ſafety. But his letters meeting with a cold reception, and the company of his friend on one hand, and the appearance of deſerting him on the other, charming him to it, he was at laſt perſuaded: ſo encompaſſing Hamſhire, they came with ſome difficulty to Oxford (11).

(11) Fell, p. 26—32.

[K] *And*

the number of these was Dr Christopher Potter, Provost of Queen's college, with whom he had a particular intimacy, and who prevailed upon him to publish his Practical Catechism in 1644 [K]. The same year, and the following, he put out several useful pieces adapted to the times [L]. In December 1644, he attended, as chaplain, the Duke of Richmond, and Earl of Southampton, who were sent to London by King Charles the First, with terms of peace and accommodation to the Parliament (o). And when a treaty was appointed at Uxbridge, he appeared there as one of the Divines on the King's side; in which station, he not only laboured to undeceive those seduced persons whom he had opportunity to converse with: but also managed, greatly to his honour, a dispute with Richard Vines [M], one of the Presbyterian ministers sent by the Parliament (p). A few days after the breaking of this treaty, a Canonry of Christ-church in Oxford becoming void by the death of Dr William Strode, King Charles bestowed it, about March 15, 1644-5, on Dr Hammond (q); and the university chose him also their public Orator [N] His Majesty coming to reside in that city, appointed him moreover one of his chaplains in ordinary. But these new employments did not divert him from his beloved studies, nor hinder him from publishing several books, adapted chiefly to the increasing mischiefs of the times (r) [O]. His attendance as chaplain was superseded by the surrender of Oxford, and the King's captivity in the Scots camp, and at Holdenby: but, when his Majesty came into the army's power, he was permitted to attend him again, in his several confinements

(r) Fell, p. 44, 45.

[K] *And who prevailed upon him to publish his Practical Catechism*] It was published at their joint charge, (as the reader may see in Dr Hammond's life) and without the author's name; at Oxford 1644, in 4to, and in 1645, 12mo. The bookseller printed a new impression of it in 1646, 4to. without the author's knowledge, to all appearance. For, before publication, the Doctor sent to him additions and changes, which he printed under the title of, 'Large Additions 'to the Practicall Catechisme, written by Henry 'Hammond, D D. Containing these heads, Of 'Just Dealing; Of the Creed; The Sacraments; The 'Commandments; St Basil's Prayer, &c. Together 'with the Author's Preface, and many other inser- 'tions by way of Appendix:' which were printed in 4to, as part of the IVth, and the Vth, and VIth, books of that work. This is a very neat edition.—— Though it was one of the most valuable and excellent books published at that time, yet because it did not suit the nonsense then prevailing, great objections were raised against it by fifty-two ministers within the province of London; and especially by Fr. Cheynell, the same infamous person that slandered, in the meanest manner, the memory of the most learned Mr Chillingworth (12). Dr Hammond therefore was obliged to vindicate his Catechism in the following pieces. 1. 'A view of some Exceptions to the Practicall Cate- 'chisme: from the censures affixt on them by the Mi- 'nisters of London, in a book entituled, *A Testimony* 'to the Truth of Jesus Christ, &c.' 2. 'A copy of 'some Papers past at Oxford, betwixt the Author of 'the Practicall Catechisme, and Mr Cheynell.' Lond. 1646, 4to. 3. 'Vindication of three passages in the 'practical Catechism.' Lond. 1648, 4to.——Notwithstanding all discouragements and opposition, that good book met with so kind a reception, that the 7th edition came out in 1662: and the 15th edition was published in 1715. The 2d, 3d, and 4th books are an explanation of our Saviour's sermon *on* the mount.

(12) See the article CHILLINGWORTH [WILLIAM].

[L] *The same year, and the following, he put out several useful pieces adapted to the times.*] I. 'Of resisting 'the Lawfull Magistrate under colour of Religion: 'and appendant to it, of the word Κρίμα rendered 'Damnation, Rom. 13. Also, of the Zelots among 'the Jewes; Of taking up the crosse; A vindication 'of Christ's reprehending St Peter, from the excep- 'tions of Mr Marshall.' Oxford, 1644, 4to. II. 'Of Conscience, Scandall, Will-worship, and Super- 'stition.' Oxford, 1645, 4to. III. 'Considera- 'tions of present use concerning the Danger resulting 'from the Change of our Church-government.' IV. 'A view of the new Directory, and a Vindication of 'the ancient Liturgy of the Church of England; in 'answer to the Reasons pretended in the Ordinance 'and Preface, for the abolishing the one, and establish- 'ing the other.' Oxford.

[M] *But also managed, greatly to his honour, a dispute with Richard Vines.*] At this treaty, Dr Steward and Mr Henderson were at first only admitted to dispute; but at the second meeting the other Divines were called in: which was a surprise, and designed for such, to those of the King's part, who came as chaplains and private attendants on the Lords; but was before designed and prepared by those of the Presbyterian way. And in this conflict it was the lot of Dr Hammond to have Mr Vines for his antagonist; who, instead of offering a scholastick disputation, read from a paper a long Divinity lecture, in which were interwoven several little cavils and exceptions designed for arguments. Dr Hammond perceiving this, drew out his pen and ink, and as the other was reading, took notes of what was said, and then immediately answered the several suggestions in order, being about forty. Which he did with that readiness and sufficiency, as at once gave testimony to his ability, and to the evidence of the truth he asserted. However, an impudent falsity was afterwards raised upon the Doctor, namely, That Mr Vines utterly silenced him; insomuch that he was fain to use this unheard-of stratagem to avoid his adversary's demonstration, viz. to swear *by God and the holy Angels*, that though at present a solution did not occur to him, he could answer it. But the Doctor being informed of this slander, wrote a letter in his own vindication, Jan. 22. 1655, wherein he has these words; 'I am both sure that I 'never called God and his holy Angels to witness any 'thing in my life, nor ever swore one voluntary oath 'that I know of (and sure there was then none imposed 'on *me*) and that *I* was not, at that meeting, con- 'scious to myself, of wanting ability to express my 'thoughts, or pressed with any considerable difficulty, 'or forced by any consideration to wave the answer of 'any thing objected (13).'

(13) Fell, p. 38—43.

[N] *And the university chose him their public Orator.*] In his predecessor's time, viz. in 1626, that Canonry was annexed to the office of public Orator (14); which is the reason why Mr Wood says (15), that 'By virtue of this Canonry he became Orator of 'the university.' But it has been separated again since from that office.

(14) Wood Hist. & Antiq. Univ. Oxon. Lib. ii. p. 47.

[O] *Nor hinder him from publishing several books, adapted chiefly to the increasing mischiefs of the times.*] Namely, V. 'Of Sinnes of Weakness, Wilfulness, 'And appendant to it, A paraphrasticall Explication 'of two difficult Texts, Heb. vi. 1, 2, 3, 4, 5, 6, '7, 8. and Heb. x. 26, 27, 28, 29, 30, 31.' Oxford, 1646. 4to. VI. 'Of a late or a death-bed Repent- 'ance.' Oxford, 1646. 4to. VII. 'Of Idolatry.' Oxford, 1646. 4to. VIII. 'A View of some Excep- 'tions which have beene made by a Romanist, to the 'Lord Viscount Falkland's Discourse of the Infallibi- 'litie of the Church of Rome. Together with the 'Discourse itselfe of Infallibilitie prefixt to it' 1646. 4to. IX. 'Of the Power of the Keyes: or, of binding 'and loosing.' Lond. 1647. 4to. X. 'Of fraternal 'Admonition and Correption.' Lond. 1647. 4to. XI. 'The Christian's Obligation to Peace and Charity. 'Delivered in an Advent-Sermon at Carisbrooke-castle, 'an. 1647. And now published with IX. Sermons 'more.' Lond. 1649. 4to. They are dedicated to the King; who had been 'pleased to call, for about 'twelve weeks' before, for the first sermon; as the learned author says in his dedication, which is dated Sept. 16, 1648.

(15) Athenæ, ut supra.

[P] *When*

confinements and removes of Woburn, Caveſham, Hampton-court, and the Iſle of Wight; at which laſt place he continued 'till Chriſtmas 1647, the time that all his Majeſty's ſervants were put away from him (s). Deprived of this his deſired employment, he returned again to Oxford; where being choſen Sub-dean of Chriſt-Church (an office to which belongs much of the ſcholaſtic government of that college), he undertook the entire management of all affairs; and diſcharged it with great abilities and admirable diligence, 'till March 30, 1648, when he was forcibly turned out by the parliamentary viſitors (t) [P]. Inſtead of being commanded immediately to quit Oxford, as others were, a Committee of Parliament voted him and Dr Sheldon to be priſoners in that place, where they continued in reſtraint for about ten weeks. During this confinement, he begin his excellent Paraphraſe and Annotations on the New Teſtament [Q]. Some intention there was of removing him and his fellow-priſoner to Wallingford-caſtle [R]. But, by the interpoſition of his brother-in-law Sir John Temple, he had leave to be removed to Clapham in Bedfordſhire, the houſe in which his friend Sir Philip Warwick lived. The tryal of King Charles drawing on, and our author being in no other capacity to interpoſe than by writing, drew up an addreſs to the General and Council of Officers, and tranſmitted it to them [S]. His grief for the death of his royal maſter was extreme; but, after having indulged it a while, he reſumed his ſtudies, and publiſhed ſeveral pieces (u) [T]. And the rigour of his reſtraint being taken off in the beginning of the year 1649, he removed to Weſtwood in Worceſterſhire, the ſeat of the loyal Sir John Packington, from whom he

(u) Fell, p. 52—57.

* [P] *When he was forcibly turned out by the parliamentary viſitors.*] The accuſations laid againſt him were; His refuſing to ſubmit to the viſitors power; His being concerned in drawing up the reaſons which were preſented to the Convocation againſt the authority of that viſitation; and, His refuſing to publiſh the viſitors orders for the expulſion of ſeveral of the members of Chriſt-church (16).

(16) Wood Hiſt. & Antiq. Univ. Oxon. Lib. I. p. 394, 397, 398.

[Q] *His Paraphraſe and Annotations on the New Teſtament.*] The ground-work of this excellent book was this: Having written in Latin two large volumes, in 4to of the way of interpreting the New-Teſtament, with reference to the *cuſtoms* of the Jews, and of the firſt Heretics in the Chriſtian Church, and alſo of the Heathens, eſpecially in the Grecian games; above all, the importance of the Helleniſtical dialect, into which he had made the exacteſt ſearch (by which means in a manner he happened to take in all the difficulties of that ſacred book): he began to conſider that it might be more uſeful to the Engliſh reader, who was to be his immediate care, to write in our vulgar language, and ſet every obſervation in its natural order, according to the direction of the text. And having ſome years before collated ſeveral Greek copies of the New Teſtament; obſerved the variation of our Engliſh from the original; and made an entire tranſlation of the whole for his private uſe; being thus prepared, he caſt his work into that form in which it now appears (17). It firſt came out in 1653. He publiſhed, in 1656, *A Review* of it *with ſome Additions and Alterations*, Lond. 8vo. And in 1698, Mr John Le Clerc put out a Latin tranſlation of this work, namely of the Paraphraſe and Annotations, (with the text of the vulgate) wherein he hath intermixed many of his own animadverſions, explaining thoſe points upon which Dr Hammond had but ſlightly touched; and corrected many of his miſtakes. He frequently criticizes upon the Doctor's ſentiments, and examines his quotations by the originals; whereby he has diſcovered a great many typographical errors, eſpecially in numbers, and not a few of the Doctor's miſtakes in quoting upon the credit of others. Sometimes he blames him, for giving a particular ſenſe to certain Greek words, contrary to the common uſe of thoſe words in Greek authors, wherein he thinks the Doctor was not very converſant, and that he learned his Greek rather in ſtudying the Fathers to know their ſentiments, than to obtain an exact ſkill in the language. He blames him alſo, (and indeed he is juſtly blameable) for meeting ſo often with the Gnoſtics; thinking that the writers of the New Teſtament allude to them oftner than they do; and even wreſting ſome texts to favour that hypotheſis.—But the Doctor ſhewed his good ſenſe, judgment, and honeſty, in following the immortal Grotius, eſpecially in his commentaries on the Epiſtle to the Romans.

(17) Fell, p. 58.

[R] *Some intention there was of removing him and his fellow-priſoner to Wallingford-caſtle.*] But Colonel Evelyn, the Governor of that caſtle (though a man of as oppoſite principles to church and church-men as any in thoſe rebellious times) wholly declined the employment; ſolemnly proteſting, that if they came to him, they ſhould be entertained as friends, and not as priſoners.—During their confinement at Oxford, the King deſired that they ſhould attend him at the treaty in the Iſle of Wight. But this reaſonable requeſt was not granted; under pretence, that they were priſoners. And, probably, the gaining that, was the cauſe why they were ſo; as Dr Fell obſerves (18).

(18) See Fell, p. 53, 54.

[S] *Drew up an addreſs to the General, and Council of Officers.*] Which he publiſhed under this title, XII. 'To the right honourable the Lord Fairfax, 'and his Councell of Warre; the humble Addreſſe of 'Henry Hammond.' Lond. 1649, 4to. XIII. Shortly after he put out a vindication of the ſame, intituled. 'A Vindication of Dr Hammond's Addreſſe, '&c. from the Exceptions of *Eutactus Philodemius*, in 'two particulars; concerning the Power ſuppoſed in 'the Jew, over his own Freedome; the no-power 'over a man's own life. Together with a brief Reply 'to Mr John Goodwin's Υπερασπικα as far as con-'cerns Dr Hammond' Lond. 1650, 4to. The perſon who aſſumed the name of *Eutactus Philodemius*, was the author of *The Original and End of civil Government*

[T] *And publiſhed ſeveral pieces.*] Particularly, XIV. '*Of the Reaſonableneſs of Chriſtian Religion.*' Lond. 1650, 12mo, printed ſince at the end of his Practical Catechiſm. He publiſhed alſo an anſwer to David Blondell's objections, concerning the Valentinian Hereſy, and Epiſcopal, and Chorepiſcopal power, occaſioned by Archbiſhop Uſher's edition of Ignatius's Epiſtles. This anſwer was in Latin, and intituled, XV. *Diſſertationes quatuor, quibus Epiſcopatûs jura ex S. Scripturis & primæva Antiquitate aſſtruuntur, contra ſententiam D. Blondelli, & aliorum.* To which is prefixed, *Diſſertatio de Antichriſto, de myſterio Iniquitatis, de Diotrephe, & de Gnoſticis ſub Apoſtolorum ævo ſe prodentibus.* Lond. 1651, 4to. In purſuance of the ſame argument, he publiſhed the two following tracts in Engliſh. XVI. 'A Vindication 'of the Diſſertations concerning Epiſcopacie, from 'the Anſwers or Exceptions offered againſt them by 'the London Miniſters, in their *Jus Divinum Mini-'ſterii Evangelici.*' And, XVII. 'An Anſwer to 'the Animadverſions on the Diſſertations touching Ig-'natius's Epiſtles, and the Epiſcopacie in them aſ-'ſerted.' Lond. 1654, 4to.—In the former of theſe, namely in the *Vindication of the Diſſertations*, &c. from page 125 to 137, he vindicates himſelf againſt ſome detractors, who affirmed, that in his annotations on the New Teſtament, he had ſtolen a great deal from Grotius. To which he adds, 'A digreſſion 'concerning ſome jealouſies ſpread of Hugo Grotius:' whom his enemies had repreſented as a Socinian, a Papiſt, and what not.—In further vindication of that excellent writer, he publiſhed, XVIII 'A Defence 'of the learned Hugo Grotius, &c.' Lond. 1655, 4to. XIX. 'A ſecond Defence of the learned Hugo Gro-'tius, or a vindication of the Digreſſion concerning him 'from ſome freſh Exceptions.' Lond. 1655, 4to. And, XX. 'A continuation of the Defence of Hugo 'Grotius, in an Anſwer to the Review of his Annota-'tions on the New Teſtament.' Lond. 1657, 4to.

he had received a kind invitation. Here he ſpent the remainder of his days. In 1651, when King Charles the Second came into thoſe parts, he waited upon him, and received a letter from his own hand, of great importance, to ſatisfy his loyal ſubjects concerning his adherence to the Religion of the Church of England. His Majeſty's defeat, and the ſubſequent perſecution that fell upon the generous maſter of the family in which he was entertained, greatly diſconcerted his mind. But his grief was much alleviated by the King's deliverance and wonderful eſcape (*w*). And, as ſoon as he could compoſe his thoughts, he purſued his ſtudies with amazing diligence. For in 1653 he publiſhed his great work on the New Teſtament; and after that went on applying antidotes to the diſtempers of the Church and State, and oppoſing thoſe monſtrous, ill-grounded, and abſurd tenets, which were daily broached under the name of Religion: particularly thoſe of the Anabaptiſts, and other Enthuſiaſts [*U*]. Popery, which alſo was lifting up its head, through the uſurper's connivance or encouragement, and by taking advantage of our unhappy troubles and diviſions, received due correction from his maſterly hand [*W*]. And, though the loſs of all his preferments had in a great meaſure deprived him of the means of exerting his favourite virtue of Charity [*X*], yet he exerciſed it to the utmoſt of his power, eſpecially towards the loyal exiles [*Y*]. Alſo he formed at the ſame time this generous deſign, namely, to preſerve the future being of the Church of England, which was in danger of being utterly deſtroyed by the cruel interdict of January 1655 (*x*) [*Z*]. But theſe deſigns did not divert him from his further endeavours to improve and benefit the world by his learning: ſince he undertook a Paraphraſe and Commentary on all the books of the Old Teſtament; of which he publiſhed the Pſalms, and went through a third part of

(*w*) Fell, p. 64, 65, 66.

(*x*) Fell, p. 73, 73, 76, 78.

[*U*] *Particularly thoſe of the Anabaptiſts and other Enthuſiaſts.*] Of this kind were, XXI. 'A Letter of 'Reſolution to ſix Queries of preſent uſe in the Church 'of England, viz. 1. Of the way of reſolving Controverſies, which are not clearly ſtated and reſolved 'in the Scriptures. 2. Of marrying the wife's ſiſter. '3. Of Polygamy and Divorces. 4. Of the baptiſm 'of infants. 5. Of impoſition of hands for ordination. '6. Of the obſervation of Chriſtmas-day, and other 'Feſtivals of the Church.' Lond. 1653, 8vo. XXII. 'An Account of Mr Cawdry's *triplex diatribe*, con'cerning Superſtition, Wil-worſhip, and Chriſtmaſs-'feſtivall.' Lond. 1654, 4to. XXIII. 'Of Funda'mentals in a notion referring to practice.' Lond. 1654, 12mo. XXIV. 'The Baptiſing of Infants re'viewed and defended from the Exceptions of Mr 'Tombes, in the three laſt chapters of his book enti'tuled *Anti-pædo-baptiſm*.' Lond. 1655, 4to. XXV. 'The degrees of ardency in Chriſt's Prayer, reconciled 'with his fullneſs of habitual Grace, in reply to the 'author of a book entit. *A mixture of Scholaſtical 'Divinity, &c. by Henry Jeanes.*' Lond. 1656, 4to. XXVI. 'The grounds of Uniformity from 1 Cor. xiv. '40, vindicated from Mr Henry Jeanes's Exceptions 'in one paſſage in the View of the Directory.' Lond. 1657, 4to.

[*W*] *Popery—alſo———received due correction from his maſterly hand.*] For, (beſides his two pieces againſt the Romaniſts mentioned above under note [*O*] No. 7, 8.) he publiſhed againſt them, XXVII. 'An 'Appendix, or Anſwer, to what was returned by the 'Apologiſt.' Lond. 1650, 4to. That Apologiſt was the author of, '*A Treatiſe apologetical touching the 'infallibility of the Church Catholic, &c.*' in anſwer to Lord Falkland. XXVIII. 'Of Schiſm: or, a De'fence of the Church of England, againſt the Ex'ceptions of the Romaniſts.' Lond. 1653, 12mo. [John Serjeant put out an anſwer to it.] XXIX. 'A 'Reply to the Catholick Gentleman's Anſwer to the 'moſt materiall parts of the booke of Schiſme. Where'to is annexed, An Account of H. T. his Appendix 'to his Manual of Controverſies, concerning the 'Abbot of Bangor's Anſwer to Auguſtine,' Lond. 1654, 4to. XXX. 'The Diſarmer's Dexterities ex'amined. In a ſecond defence of the Treatiſe of 'Schiſme.' Lond. 1656, 4to. XXXI. '*Paræneſis*, &c. 'A diſcourſe of Hereſy in defence of our Church a'gainſt the Romaniſt.' Lond. 1656, 8vo. XXXII. 'Reply to ſome paſſages of the Reviewer, in his late 'Book of Schiſme, concerning his charge of Corrup'tions in the primitive Church, and ſome other par'ticulars.' Lond. 1657, 4to. XXXIII. 'The 'Diſpatcher diſpatched: Or, an Examination of the 'Romaniſts rejoynder to the Replies of D. H. being a 'third Defence of the Treatiſe of Schiſme, wherein is 'inſerted a view of their poſſeſſion and oral Tradition 'in the way of M. White.' Lond. 1659, 4to. [This is moſt particularly levelled againſt D. Holden, T. White, and Richworth or Ruſhworth.] XXXIV. 'Ἀπὸ ἀλληθείαν, or a Brief Account of one Suggeſtion 'of the Romaniſt againſt the Diſpatcher diſpatched.' Lond. 1660, 4to.

[*X*] *And, though the loſs of all his preferments had in a great meaſure deprived him of the means of exerting his favourite virtue of Charity.*] At the time of his flight from Penſhurſt, his whole fortune was barely three hundred pounds. But, by the ſale of a leaſe left him for his portion from his father, and the aſſiſtance of his Canonry of Chriſt-church, he raiſed it to near a thouſand, notwithſtanding all his laviſh charities. The only other way of income he had, was the buying of leaſes for years, and the printing of his books; from the latter of which, when all charges were deducted, very little came into his pocket. And yet he grew rich in ſpight of all his liberality, as Dr Fell expreſſes it, being worth at the time of his death about 1500 l. (19)

(19) Fell, p. 144—148.

[*Y*] *Yet he exerciſed it to the utmoſt of his power, eſpecially towards the loyal exiles.*] The reader may ſee an account of his great and very numerous charities, (too many to come within the compaſs of this note) in his life written by Dr Fell (20): and, among the reſt, his remittances to the Royal exiles, though it was declared high-treaſon. The perſon intruſted with theſe was diſcovered to Oliver Cromwell, who notwithſtanding let the Doctor eſcape without puniſhment (21).

(20) From p. 136 to 165.

(21) Fell, p. 77, 78.

[*Z*] *Which was in danger of being utterly deſtroyed by the cruel interdict of January* 1655.] This interdict, or declaration, injoyned, that after the firſt day of January 1655, no perſons ſhould keep in their houſes or families, as chaplains or ſchool-maſters for the education of their children, any ſequeſtered or ejected Miniſter, Fellow of a College, or School-maſter; nor permit any of their children to be taught by ſuch. And that no perſon who had been ſequeſtered, or ejected out of any benefice, college, or ſchool, ſhould from and after the ſaid firſt day of January, keep any ſchool either public or private:——nor preach in any public place, or at any private meeting of any other perſons than thoſe of his own family; nor adminiſter baptiſm, or the Lord's Supper, or marry any perſons, or uſe the book of Common-Prayer, or the forms of prayer therein contained (22). As the ancient flock of clergymen were by this edict in a manner rendered uſeleſs, and the Church was at beſt but a ſet of ancient perſons haſtening to their graves, who muſt in a few years be waſted; Dr Hammond projected, by penſions to hopeful perſons in our two Univerſities, to maintain a ſeminary of youth trained up in piety and learning upon the ſober principles and old eſtabliſhment of the Church of England: giving in charge to thoſe whom he employed in this affair, 'carefully to ſeek out ſuch as 'were pioufly inclined, and to prefer that qualification 'before unſanctified good parts,' adding this as a certain maxim, 'That exemplary virtue muſt reſtore the 'Church (23).'

(23) Fell, p. 6, 77.

[*AA*] Of

of the book of Proverbs [*A A*]. His want of health only hindered him from proceeding further. For, that ſtrength of body, which before had attended his indefatigable mind, beginning to fail him about the year 1654, he was ſeized by thoſe four tormenting diſtempers, each of which hath been judged a competent tryal of human patience, namely, the ſtone, the gout, the colick, and the cramp; the laſt of which was as painful as any of the other (*y*). But the ſtone put an end to his valuable life. For, while King Charles the Second was deſigning him for the biſhopric of Worceſter, and he was preparing to go to London, whither he had been invited by the moſt eminent divines, he was ſeized with a ſharp fit of the ſtone [*B B*] on the 4th of April, of which he died the 25th of the ſame month, in the 55th year of his age. The next day he was decently buried in the neighbouring church of Hampton-Lovet, with the office and rites of the Church of England; his body, in token of reſpect, being borne to the grave by clergymen (*z*). Dr Hammond was a very handſome man; his *ſtature* being of juſt height, and all proportionate dimenſions; his *complexion* clear and florid; his *eye* quick [*C C*] and ſprightly; and his *face* carried dignity and attractives in it, being ſcarce ever clouded with a frown, or ſo much as darkened by reſervedneſs. His conſtitution was ſtrong; patient of cold [*D D*], and of the greateſt labour, and ſevereſt hardſhips. As to the faculties of his mind; his judgment was ſound, clear, and diſcerning; his invention fruitful, nay inexhauſtible, whence proceeded his great facility in compoſing [*E E*], and that copiouſneſs, or rather in ſome reſpects blameable exuberance, which appears in his writings [*F F*]. His memory was a ſign of his good judgment, that is, it was ſerviceable but not officious; faithful to things and buſineſs, but unwillingly retaining the contexture and punctualities of words. With regard to his moral conduct, he was moſt exemplary for charity [*G G*], temperance [*H H*], chaſtity, and all ſocial virtues [*I I*]. He was likewiſe a man of uncommon diligence and

(*y*) Fell, p. 71, 83.

(*z*) Fell, p. 209—236.

[*A A*] *Of which he publiſhed the Pſalms, and went through a third part of the book of Proverbs.*] He publiſhed, XXXIV his 'Paraphraſe and Annotations 'on the book of Pſalms.' Lond. 1659, fol. And XXXV. The 'Paraphraſe and Annotations on the ten 'firſt Chapters of the Proverbs,' which he lived to finiſh, were publiſhed after his deceaſe. Lond. 1683, fol.

[*B B*] *He was ſeized with a ſharp fit of the ſtone.*] Namely, on the 4th of April; with thoſe ſymptoms that are uſual in ſuch caſes; which yet upon the voidance of a ſtone ceaſed for that time. However, on the 8th of the ſame month it returned again with greater violence: and, though after two days the pain decreaſed, the ſuppreſſion of urine yet continued, with frequent vomitings, and a diſtention of the whole body, and likewiſe ſhortneſs of breath upon every little motion. At length, it turned to a violent bleeding at the noſe, which put an end to his life (24).

(24) Fell, p. 213, 214, 225, 231.

[*C C*] *His eye quick.*] His ſight was quick to an unuſual degree; inſomuch that if by chance he ſaw a knot of men, a flock of ſheep, or herd of cattle, being engaged in diſcourſe, and not at all thinking of it, he would involuntarily caſt up their number, which others after long delays could hardly reckon. His ear alſo was accurate and tuned to his harmonious ſoul, ſo that having never learned to ſing by book or ſtudy, he would exactly perform his part of many things to a harpſicon or theorbo; and frequently did ſo in his more vigorous years after the toyl and labour of the day, and before the remaining ſtudies of the night (25).

(25) Fell, p. 87, 88.

[*D D*] *Patient of cold.*] Inſomuch that for the moſt part of his life, in the fierceſt cold, he took no other advantage of a fire, than to look upon it, at a diſtance (26).

(26) Fell, p. 87.

[*E E*] *Whence proceeded his great facility in compoſing.*] He diſpatched his writings with incredible ſwiftneſs, uſually compoſing faſter than his amanuenſis, though a very dextrous perſon, could tranſcribe after him. His *conſiderations of preſent uſe concerning Epiſcopacy* were drawn up after ten of the clock at night in a friend's chamber, who profeſſed, that ſitting by all the while, he remembered not that he took off pen from paper till he had done; and the very next morning, it being fully approved by the Biſhop of Saliſbury [Dr Duppa] he ſent it to the preſs (27): to which work he could have no premeditation or ſecond thoughts, he being that very night after ſupper employed by the ſaid Biſhop on that taſk. So likewiſe he began his tract of *Scandal* at eleven at night, and finiſhed it before he went to bed. Nor was this a peculiar or extraordinary thing with him, but moſt cuſtomary; five ſheets having, amidſt his other diverſions, been ſundry times his one day's work; adding to it ſo much of the night as he frequently borrowed from ſleep and ſupper [28].

(27) They made 24 pages in 4to. printed cloſe and ſmall.

(28) Fell, p. 90, 91, 92.

[*F F*] *And that copiouſneſs, or rather in ſome reſpects blameable exuberance, which appears in his writings.*] This defect is acknowledged by the writer of his life, the learned Dr Fell, who calls it, 'The beſt kind of defect; the tide and torrent of his matter being not eaſily confined by periods; whereby his ſtyle, though round and comprehenſive, was incumbred ſometimes by *Parentheſes*, and became difficult to vulgar underſtandings: but (adds he) by the uſe of writing, and his deſire to accommodate himſelf to all capacities, he in his latter years maſtered that defect: ſo as to deſerve from King Charles I. this character and teſtimony, 'That he was the moſt natural orator he ever heard (29).' This fault was plainly owing to his overhaſtineſs in compoſing, and the not allowing himſelf time to arrange his thoughts in neat, ſhort, and clear periods; a method indeed not very common in his time, and chiefly brought in after the Reſtoration.

(29) Id. p. 97.

[*G G*] *He was moſt exemplary for charity.*] As Dr Fell expreſſes it (30), 'Miſery and want, wherever he met with them, ſufficiently endeared the object. His alms was as exuberant as his love; and in calamities, he never was a ſtranger to the exigence, whatever he might be to the man that ſuffered.' To this beneficent diſpoſition he devoted the tenth of all his income; wherein he was ſo ſtrictly punctual, that commonly the firſt thing he did was to compute and ſeparate the poor man's ſhare. To this he added every week five ſhillings. Over and above which, he compleated the devotions of his weekly faſt, by adding twenty ſhillings to the poor man's heap.' For inſtances of his charity, ſee his life by Dr Fell (31).

(30) P. 138, 135.

(31) P. 157, &c.

[*H H*] *Temperance.*] His diet was of the plaineſt meats. Sauces he ſcarce ever taſted of, but often expreſſed his wonder, 'How rational creatures ſhould eat 'for any thing but health, ſince he that did eat or 'drink that which might cauſe a fit of the ſtone or 'gout, though a year after, unmanned himſelf, and 'acted as a beaſt.' Therefore, in the time of his full health, he ſeldom did eat or drink more than once in 24 hours, and ſome fruit towards night; and two days in every week, and in Lent and Ember-week three days, he eat but once in thirty-ſix. His temperance in ſleep reſembled that of his meats, midnight being the uſual time of his going to reſt, and four or five, very rarely ſix, the hour of his riſing (32).

(32) Fell, p. 106, 107, 110.

[*I I*] *And all ſocial virtues.*] He was, in particular, a paſſionate lover of friendſhip; which, in his opinion, was the next ſacred thing unto religion. Therefore he reflected with compaſſion on the ignorance of thoſe, who were ſtrangers to it, ſaying that 'ſuch muſt lead a pitiful inſipid herb-john-like life.' Upon this ground, he uſed induſtriouſly to recommend and propagate friendſhip; and profeſſed, that 'he had no 'ſuch way of enjoying any thing as by reflexion from 'the perſon he loved: ſo that his friend's being happy,

'was

and induſtry, abhorring ſloth and idleneſs (*a*) [*K K*]. And, to conclude his character with what A. Wood and Biſhop Burnet have ſaid of him; 'Great were his natural 'abilities, greater his acquired; and in the whole circle of arts he was moſt accurate. 'He was alſo eloquent in the tongues, exact in antient and modern writers, well verſed 'in Philoſophy, and better in Philology, moſt learned in School-Divinity, and a great 'maſter in Church-Antiquity (*b*).' 'His death, ſaith Biſhop Burnet (*c*), was an un- 'ſpeakable loſs to the Church. For, as he was a man of great learning, and of moſt 'eminent merit, he having been the perſon that during the bad times had maintained 'the cauſe of the Church in a very ſingular manner; ſo he was a very moderate man in 'his temper, though with a high principle, and probably he would have fallen into healing 'counſels. He was alſo much ſet on reforming abuſes, and for raiſing in the clergy a 'due ſenſe of the obligations they lay under.' Beſides his ſeveral pieces abovementioned, ſome were publiſhed after his deceaſe [*L L*]: and his *amanuenſis*, the learned Mr William Fulman, collected them together into four volumes folio in 1684.

(*a*) Fell, p. 111, 112, &c.

(*b*) Wood Ath. ut ſupra, col. 246.

(*c*) Hiſt. of his own Time, edit. 1724. p. 177.

'was the readieſt way to make him ſo.' The principal thing he contracted for in friendſhip, was a free uſe of *mutual admonition*; and he uſed to ſay, that he 'delighted to *be loved, not reverenced* (33).'

(33) Id. p. 122, 123, 125, 133.

[*K K*] *He was likewiſe a man of uncommon diligence and induſtry.*] He not only avoided, but bore a perfect hate, and ſeemed to have a forcible antipathy to idleneſs, and ſcarcely recommended any thing in his advices with that concern and vigour, as, *to be furniſhed always with ſomewhat to do.* This he propoſed as the beſt expedient for innocence and pleaſure; aſſuring, that 'No burthen is more heavy, or temptation more 'dangerous, than to have time lye on ones hand; the 'idle man's brain being not only (as he worded it) 'the devil's ſhop, but his kingdom too, a model of, 'and appendage to, hell, a place given up to torment 'and miſchief.' Beſides thoſe portions of time which the neceſſities of nature and of civil life extorted from him, there was not a minute of the day which he left vacant. When he walked abroad, which he did not ſo much to recreate himſelf as to obey the preſcriptions of his phyſician, he never failed to take a book with him, and read all the while: and in his chamber alſo he had one lay conſtantly open, out of which his ſervant read to him while he was dreſſing and undreſſing; by which one piece of huſbandry, in a ſhort time he diſpatched ſeveral conſiderable volumes (34). The following obſervations of the learned author of his life, are further proofs of his very great induſtry. 'He that ſhall conſider his laborious way, immerſt in almoſt infinite quotations, to which the turning over books and conſulting ſeveral editions was abſolutely needful; his obligation to read not only claſſick authors, but the more recent abortions of the preſs, wherein he proved frequently concerned; his peruſal of the writings of his friends and ſtrangers, deſigned for the preſs; his reviews of his own works, and correcting them with his own hand ſheet by ſheet as they were printed, which he did to all his later tracts; his receptions of viſits, whether of civility, or for reſolution of conſcience, or information in points of difficulty, which were numerous and great devourers of his time; his agency for men of quality, providing them ſchoolmaſters for their children, and chaplains in their houſes, in which affair he had ſet up a kind of office; his general correſpondencies by letter, whereof ſome coſt him 10, others 20, 30, 40, nay 60 ſheets of paper, and ever took up two days of the week entirely; the time exhauſted by his ſickneſſes; his conſtant preaching, and inſtructing the family where he was; and, amidſt all, his ſure returns of prayer: all theſe, were ſufficient proofs of a moſt uncommon diligence (35).

(37) This account is partly taken from the books themſelves, and partly from A. Wood's Athenæ.

C

HAMPDEN [JOHN], Eſq; of Hamden in Buckinghamſhire, frequently diſtinguiſhed by the appellation of Patriot Hampden, was a gentleman of a fair eſtate and good extraction*, and couſin-german to Oliver Cromwell [*A*]. He was born in London in the year 1594, and at the age of fifteen ſent from ſchool to Oxford in 1609, where he was admitted a Commoner of Magdalen-college; but leaving the univerſity without any degree, he removed to the Inns of Court, where he made a conſiderable progreſs in the ſtudy of the Law (*a*). With this, the ordinary education of a gentleman, he went to reſide upon his eſtate at Hamden; ſetting out at firſt in the jovial way ſuitable to his years. In that diſpoſition he indulged to himſelf all the freedom in ſports and exerciſes and company which were uſed by men of the moſt jolly converſation. In the ſecond parliament of King Charles the Firſt he obtained a ſeat in the Houſe of Commons [*B*], and having alſo a place

(2) Clarendon's Hiſt. of the Rebellion, &c. Vol. III. p. 60. firſt edit. 1704. fol.

[*A*] *Couſin to Oliver Cromwell.*] His father John Hampden, Eſq: married Elizabeth, ſecond daughter of Sir Henry Cromwell, of Hinchinbroke in Huntingdonſhire, Grandfather to the Protector, who 'tis ſaid, was adviſed by this kinſman while alive (1), and always adored his memory after his death (2).

[*B*] *This Parliament met at Weſtminſter, Feb.* 4, 1625-6.] So that Mr Hampden was then turned of thirty, a proper age as has been ſometimes remarked, for putting off the man of pleaſure, and taking up the man of buſineſs; the ſeeds of that ambition (without which perſons of the higheſt rank and faireſt opportunities, ſink into ſome degree of diſvalue) naturally ſpringing up in all hopeful minds about that age. To this purpoſe Mr Whitlocke obſerves, that it was Mr Hampden's *affection to public liberty and applauſe*

in

place there in the two ſucceeding parliaments, he quitted his pleaſures, and turned his mind to public buſineſs; wherein ſiding with the party againſt the Court, he took up a reſerved and preciſe behaviour, living with extraordinary ſobriety and ſtrictneſs; but ſtill preſerved the natural cheerfulneſs and affability of his temper (*b*). It ſeems to be about this time that, changing alſo his condition, he married Sarah, ſecond daughter of Thomas Foley, Eſq; great-grand-father to the firſt Lord Foley, and widow of Eſſex Knightley, Eſq; [*C*] of Faweſley in Northamptonſhire (*c*). Hitherto Mr Hampden made no remarkable figure in the public. For though he concurred in the proſecution againſt the Duke of Buckingham, and ſuffered among many others for refuſing to comply with the loan (*d*) in 1626; yet his name is not among thoſe who were pricked for Sheriffs, in order to prevent their election in the enſuing parliament; nor was he any of thoſe who were committed to the Tower in 1628 for a riotous proceeding in the Houſe of Commons, while the Proteſtation was read, that *whoever ſhould bring in innovations in religion, &c. ſhould be accounted enemies to the kingdom.* But in the year 1636 he became univerſally known, by a ſolemn tryal at the King's-Bench, on his refuſal to pay the ſhip-money [*D*]. He behaved with ſingular temper and modeſty in this ſuit, and obtained more advantage and credit by loſing it, than the King did of ſervice by gaining it (*e*) [*E*]. From this time he ſoon grew to be one of the moſt popular men in the nation (*f*), and a principal leading member in the Long Parliament (*g*): ſo that his actions and conduct became the ſubject of general hiſtory, to which therefore we refer the reader (*h*) [*F*]; and ſhall only (as falling more

in his country, which [drawing him into action] *expoſed him to many difficulties and troubles* (3).

(3) Memorials of the Engliſh affairs, p. 70. Lond. 1732. fol.

[*C*] *He married Mr Knightly's widow.*] A certain author writes, that, 'Mr Hampden being a perſon of 'antimonarchical principles, he did not only ride for 'ſeveral years, before the grand rebellion broke out, 'into Scotland, to keep conſults with the covenanting brethren there, but kept his circuits to ſeveral 'puritannical houſes in England, particularly to that 'of Knightley in Northamptonſhire, and alſo to that 'of Lord Say, at Broughton near Banbury in Oxfordſhire, where there was a room and a paſſage thereto, 'which his Lordſhip's ſervants were prohibited to 'come near, when the company met.' The ſame author alſo relates, 'that the party having in theſe and 'other places their council-chambers and chief ſpeakers; whatever embrioes were conceived in the 'country, were afterwards ſhaped in Gray's Inn-lane 'near London; where, continues he, the undertakers for the Iſle of Providence did meet, brought 'them to paſs, and put them out to nurſe in London '(4).' We ſhould not have cited an author, whoſe reputation is notoriouſly murdered by his own virulency, and has lain long rotten in the grave of oblivion; but only as ſome facts are there found, which are not improbable from other circumſtances, in relation to the particular company with whom Mr Hampden joined after he left the jovial courſe, and which alſo are of uſe to confirm and illuſtrate a remark on this change of his life, made by Lord Clarendon, whoſe words are, that, '*he retired to a more reſerved 'and melancholy ſociety.*' For which change in his manners, his Lordſhip proceeds to give this as a proof. 'That though they who converſed nearly with him, 'found him growing into a diſlike of the eccleſiaſtical 'government of the Church; yet moſt believed it 'rather a diſlike of ſome churchmen, and of ſome introducements of theirs, which he apprehended might 'diſquiet the public peace (5).' That is (as is evident from his Lordſhip's character of Mr Hampden) that the bottom of his heart was carefully concealed, even from thoſe who converſed nearly with him.

(5) Hiſt. of the Rebellion, &c. Vol. I. p. 205. firſt edit. in fol.

[*D*] *He became famous by his trial for refuſing to pay the ſhip-money.*] The particulars of this tranſaction are too well known to be inlarged upon here; it will be more agreeable to the deſign of this undertaking, to enquire by what means Mr Hampden came to obtain a trial, which had been refuſed to ſeveral others. For inſtance, Mr Richard Chambers, a merchant in London, on his refuſal to pay this tax, was impriſoned in the King's bench; and though upon bringing his *habeas corpus*, he was admitted to bail, yet the judge [Berkeley] abſolutely refuſed in June 1636 to let the legality of the tax be argued (6). A petition was alſo offered about the ſame time by the city of London, complaining of it's illegality, but the trial was ſtill avoided, and other means made uſe of to perſuade the city to a compliance (7). We are likewiſe aſſured by the noble hiſtorian, that, 'Lord Say did as abſolutely 'refuſe the payment of ſhip-money as Mr Hampden, 'though the latter by the choice of the King's counſel 'had brought his cauſe to be firſt heard and argued, 'with which judgment it was intended the whole right 'of that matter ſhould be concluded, and all other 'caſes over-ruled. Yet the Lord Say, continues the 'Earl, would not acquieſce, but preſſed to have 'his own caſe argued, and was ſollicitous in perſon 'with all the Judges, both privately at their chambers, and publickly in the courts of Weſtminſter, and 'indeed was very grievous to them (8).' The noble author has not given his opinion what might be the reaſon of this preference ſhewn to Mr Hampden, but perhaps it may be found clearly enough in one part of the character given of him by his Lordſhip, that he was a man of the greateſt addreſs and inſinuation to bring any thing to paſs which he deſired, of any man of that time; and that a great part of this addreſs conſiſted in his ſingular modeſty, humility, and ſubmiſſion. This conjecture ſeems to be confirmed by another paſſage in the ſame hiſtory, where his Lordſhip giving an account of the debates on the grievance of ſhip-money, at the beginning of the ſhort Parliament in April 1640, obſerves, that Herbert the Sollicitor-General, while he was ſpeaking in commendation of the King's candour in that affair, took occaſion *to ſtroke and commend Mr Hampden, who ſat under him, for his great temper and modeſty in the proſecution of that ſuit* (9).

[*E*] *Obtained more advantage and credit by loſing it, &c.*] 'Tis this ſingle tranſaction of his life, which firſt procured him the title mentioned in the text, of Patriot Hampden, and his memory has been very lately embalmed afreſh for it, in an elegant Poem (10), intituled, *An Elegy written in a Country Churchyard*, where the author preſents him in the moſt intereſting view, as follows.

(10) Written by Mr Gray. The ninth edition of it was printed in 1754.

'*Perhaps in this neglected ſpot is laid,*
'*Some heart once pregnant with celeſtial fire;*
'*Hands that the rod of empire might have ſway'd,*
'*Or wak'd to extaſy the living lyre.*
* * * * * * * *
'*Some* village Hampden, *that with dauntleſs breaſt*
'*The little tyrant of his fields withſtood,*
'*Some mute inglorious* Milton, *here may reſt;*
'*Some* Cromwell, *guiltleſs of his country's blood.*'

[*F*] *We refer to the general hiſtories.*] In the note to theſe words, Lord Clarendon is diſtinguiſhed above the reſt, as the author who has given us many more particulars of Mr Hampden's life, than are to be found in any of his cotemporary writers, and thoſe too made much more intereſting by a finely animated ſtile. His Lordſhip was indeed moſt ſenſibly touched by the effects of Mr Hampden's addreſs, eſpecially in the caſe of his darling Lord Falkland; and has not only ſet forth his antagoniſt's merits and demerits, with regard to the public, by particular inſtances, in the courſe of his life, but brought the whole together into one view, in a general character of him after his death. The

more properly under the design of this work) take notice of some few particulars concerning him, which have been either unfairly and partially represented, or else left altogether untouched by others [*G*]. After he had, by the advantage of some peculiar and extraordinary talents [*H*], held the chief direction of his party in the House of Commons against the

noble author's singular talent at drawing characters is universally acknowledged. Whence this is the most entertaining part of his history to all readers, and principally useful to young students in this science. In which view the character of Mr Hampden deserves particular notice, it being easy to make an extract of the several facts as they lie in the history, which are the proper foundation for an attempt to form the character, and by comparing this, when done, to that of his Lordship, the difference is seen at once, and easily noted for improvement.

[*G*] *Particulars partially represented or untouched.*] The fact suggested above to be partially represented, is to be found under our author's article in the General Dictionary, in the remark [*B*], to these words, *Before this trial* [of the Earl of Strafford] (11), *there was said to be a proposal for restoring the Earl to his former favour and honour, on condition that his Majesty would promote Mr Hampden, to be Tutor to the Prince, and other eminent oppofers of the Court, to the most considerable posts.* In support of this, only Mr Whitlocke is cited (12), without mentioning Lord Clarendon's account of this matter, or so much as referring to it, which at least might fairly be expected. For though indeed with regard to Mr Hampden, the difference between the two accounts is not material, yet in respect to the King there is an essential difference. For instance, Mr Whitlocke concludes his account with this reflection. '*But whether upon the King's alteration of* '*his mind, or by what other means is uncertain, these* '*things were not effected; and the great men baffled* '*thereby, became the more incensed and violent against* '*the Earl, joining with the Scots Commissioners, who* '*were implacable against him.*' Here the reader is put into the road of assigning the worst cause for this change of his Majesty's mind, especially when he considers how often he was afterwards charged by these persons with breach of promise. But all just grounds for such an injurious insinuation are taken away by the following account, which Lord Clarendon gives of this transaction (13). 'From the time, says he, that there 'was no more fear of the Archbishop, nor the Lord 'Deputy of Ireland, nor of any particular men, who 'were like to succeed them in favour, all who had 'been active in the Court, or in any service for the 'King being totally dispirited, and most of them to 'be disposed to any ill offices against him. The great 'patriots thought they might be able to do their coun'try better service, if they got the places and prefer'ments of the Court for themselves, and so prevent 'the evil counsels which had been used to spring from 'thence; for which purpose they had a fast friend in 'the Marquis of Hamilton, who could put such an 'affair into agitation, &c.' His Lordship afterwards mentions the particular persons to be promoted, the same with Mr Whitlocke, only Mr Hampden is omitted here, being taken notice of presently, and proceeds. 'Thus far the intrigue for preferments was 'entirely complied with, and it is great pity it was not 'fully executed, that so the King might have had 'some able men to have advised and assisted him, '*which probably these very men would have done, after* '*they had been so thoroughly engaged*; whereas the 'King had none left about him in any immediate trust 'in business (for I speak not of the Duke of Richmond, 'and some very few men more about his person, who 'always behaved themselves honourably) who did not 'either betray, or sink under the weight or reproach of 'it.——But the Earl of Bedford was resolved, that he 'would not enter into the Treasury, 'till the revenue 'was in some degree settled; at least, the bill for 'tonnage and poundage passed, with all decent cir'cumstances, and for life; which both he and Mr 'Pym did very heartily labour to effect, and had in 'their thoughts many good expedients by which they 'intended to raise the revenue of the Crown, and none 'of them were very sollicitous to take their prefer'ments, before other accommodations were provided 'for some of the rest of their chief companions, who 'would be neither so well pleased with their so hasty 'advancement before them, nor so submissive in it 'after, to follow their dictates. Hampden was a man 'they could not leave unprovided for, and therefore 'there were several designs, and very far driven, for 'the satisfaction and promotion of him, and Essex, 'Kimbolton, and others; though not so fully con'cluded as those abovementioned. For the King's 'great end was by these compliances to save the life of 'the Earl of Strafford, and to preserve the Church 'from ruin; for no-body thought the Archbishop in 'danger of his life: and there were few of the persons 'mentioned before, who thought their preferments 'would do them much good, if the Earl was suffered 'to live: but in that of the Church, the major part 'even of those persons would have been willing to have 'satisfied the King, the rather, because they had no 'reason to think the two houses, or indeed either of 'them, could have been induced to have pursued the 'contrary. And so the continued and enraged vio'lence in the prosecution of the Earl of Strafford, 'made the King well contented (as other reasons pre'vailed with other persons) that the putting these pro'motions in practice, should be for a time suspended.' By this account the noble author seems to be well aware how much, and how unjustly his Majesty either had been or would be censured in this proceeding, and therefore thought it necessary to shew the world clearly, that it was not indeed to much the King's fault as it was his misfortune to have the scheme of the promotions frustrated.

The particulars hinted above as untouched by any of the historians, relate first to the report about the City of London in the beginning of 1643, that the Earl of Essex was to resign his post of General, and to be succeeded therein by Mr Hampden (14), and the truth of the report seems probable enough. His first resolution to make no peace with the King, as well as the great influence and authority he had in the army, and his personal courage, both sufficiently manifested in the action of Chalgrove-Field, mentioned in the text, suit very well with such a design. But the same action shews, that his courage was not sufficiently tempered; he was hot and rash, and the fatal consequence of that rashness, to which he fell a sacrifice, clearly demonstrates him not so fit for a General's command. Another remark which has escaped all the writers who mention him, respects the consequence of his loss to the Parliament. Lord Clarendon indeed touches upon that consequence to both sides in general, as follows. '*But that which would have been looked upon as a con*'*siderable recompence for a defeat, could not but be* '*thought a great addition to the victory, which was* '*the death of Mr Hampden, to as great a consternation* '*of all that party, as if their whole army had been de*'*feated or cut off* (15).' The greatness of the consternation is strongly marked in these words, but the particular effects of that consternation are not produced. However, when a little below, in the same history, we read of Sir Will. Waller's defeat at Roundway Down near the Devizes in Wiltshire on one side, and of the Queen's safe arrival at Oxford with the forces from France on the other side, and both these events attributed to the Earl of Essex, who suffered a strong party of horse to march out of that garrison, by which means the destruction of the former was effected; and gave no kind of hindrance to her Majesty's march into it; *but spent his time between Tame and Ailsbury about ten miles from Oxford, without any action after that skirmish in which* (they are his Lordship's words) *Mr Hampden was slain* (16). Surely it will be thought no injury to the noble author, if we presume his intention in these last words was to suggest, that this change, which brought a better face upon the King's affairs, than they had appeared with since the beginning of the war, was owing at least in some measure, to that consternation into which the Earl of Essex's army was thrown by Mr Hampden's death, and which had rendered the whole corps discreet, or if you will dispirited.

[*H*] *Some peculiar and extraordinary talents.*] What these are may be fully seen in his character drawn by Lord Clarendon in the History of the Rebellion, &c (17), to which therefore we send the reader for the reason mentioned in the text, and shall spend this remark agreeable to the plan of the proceeding, in taking notice

(11) Mr Hampden was of the committee to prepare the charge and manage the evidence against the Earl.

the King, he took up arms in the ſame cauſe, and was one of the firſt who opened the war by an action (though without ſucceſs) at a place called Brill, a garriſon of the King's upon the edge of Buckinghamſhire (*i*), about five miles from Oxford. He took the command of a regiment of foot under the Earl of Eſſex, and had he lived, would probably have been ſoon raiſed to the poſt of a General (*k*). Always behaving with a military bravery in the Field, equal to the civil intrepidity which he had ſhewn in the Houſe. But whatever views either himſelf or his friends for him had of any kind, they were all cut off by a mortal wound, which he received in a ſkirmiſh with Prince Rupert at Chalgrove-field in Oxfordſhire (*l*); of which we have the following uncontеſted account. '*It was confeſſed*, ſays Lord Clarendon, *by the priſoners that were taken that day, and acknowledged by all, that upon the alarm that morning after their quarters were beaten up, Mr Hampden was exceeding ſollicitous to draw forces together to purſue the enemy, and being a Colonel of foot, put himſelf as a volunteer among thoſe horſe who were firſt ready; and that when the Prince made a ſtand, all the officers were of opinion to ſtay 'till their body came up; and he alone (being ſecond to none but the General himſelf in the obſervance and application of all men) perſwaded and prevailed with them to advance* (*m*).' He was ſhot into the ſhoulder with a brace of bullets, which broke the bone, on the 18th of June 1643; and after ſuffering much pain and miſery, he died thereof on the 24th of that month (*n*), greatly lamented by the Parliament [*I*], who ordered the ſum of 5000 pounds to be paid to his aſſignees, out of the exciſe in courſe, the moiety of the receipts of Goldſmith's-hall, and the King's revenue (*o*). He was interred in the church of Great Hamden, where, by his will, he directed a ſtone to be laid over his grave, with the figures of himſelf, his wife, and ten children engraven upon it (*p*) [*K*]. Mr Wood has given him a place among the Oxford writers, and tells us of ſeveral ſpeeches printed under his name, but deſcribes only one which now lies before me, and is entitled, *A diſcreet and learned Speech ſpoken in the Parliament, on Wedneſday the 4th of January*, 1641, *by Mr* Hampden *Burgeſs of* Buckingham (*q*), *concerning the accuſation of high-treaſon preferred by His Majeſty againſt himſelf*, Lord Kimbolton, Sir Arthur Haſlerig, Mr Pym, Mr Stroud, and Mr Hollis, *worthy members of the Houſe of Commons. Therein ſhortly declaring the difference between a good ſubject and a bad*

notice of a paſſage in that character, which has been we apprehend a little unfairly, though artfully, repreſented by a late author. The paſſage is that famous one which concludes the character, that *he* [Mr Hampden] *had a head to contrive, a tongue to perſuade, and a hand to execute any miſchief*. In an account of this gentleman lately publiſhed, the author having cited the words, takes this opportunity to obſerve, that notwithſtanding what has been aſſerted to the contrary, the hiſtory, where they are found, is faithfully printed from the original manuſcript, which he had ſeen; and every body elſe ſees the reflection caſt upon his Lordſhip in this artful inſinuation (18). Suppoſe it to be what Cicero calls *Verbum Ardens*, yet even then, in the opinion of that orator and critic, it brings it's own excuſe. But the preſent caſe admits ſtill of a further plea in his Lordſhip's behalf. 'Tis generally allowed, that the beſt way to come at the true ſenſe of ſcripture, is to interpret it by itſelf; if this rule had been obſerved here, no injury had been done to his Lordſhip's memory, as is evident from the following paſſage in the ſame hiſtory (19), where the noble author having mentioned Mr Hampden as one of the committee that attended the King in his journey to Scotland, takes occaſion to give him this character. '*The latter* [Hampden] hath been mentioned before as a man 'of great underſtanding and parts, and of great ſaga-'city in diſcerning men's natures and manners, and 'he muſt upon all occaſions ſtill be mentioned, as 'a perſon of great dexterity and abilities, *and equal* '*to any truſt or management*, good or bad, *which he* '*was inclined to undertake*.'

(19) P. 235. Vol. I.

[*I*] *Greatly lamented by the Parliament*.] Mr Wood (20), in his uſual vein, having told us, 'that ſoon after his death, Mr Richard Baxter did tranſlate the ſoul of him and of John Pym into heaven, in his *Saint's everlaſting reſt*, and that others of his opinion made elegies on him, declaring to the world his great worth and loſs, proceeds to inform us, that *he was the very perſon who adviſed his kinſman*, Oliver Cromwell (afterwards Lord Protector) *to oppoſe the juſtice and honour of his Majeſty's cauſe, with an affected zeal of conſcience and pure religion*, as the ſaid Cromwell did ſeveral times confeſs to his friends and relations. Whatever may be thought of this ſtory, taken apparently from the ſcandalous chronicle, we have a much better authority for aſſerting, that theſe two were boſom friends, and were actuated with the ſame ſpirit of hypocriſy, and for the ſame ends, though wearing contrary faces. Cromwell's roughneſs and unpoliſhedneſs, which in the beginning of the [Long] Parliament he affected, contrary to the ſmoothneſs and complaiſance which his kinſman and boſom friend Hampden practiſed towards all men, being equally neceſſary, and alike employed, to nurſe in it's infant ſtate their jointly determined purpoſe (21).

(21) Hiſt. of the Rebellion, p. 80. Vol. III. ubi ſupra.

[*K*] *His wife and ten children*.] His wife has been already taken notice of in the text. Of his children, one daughter, Mary, was married to Sir John Hobart, ſon of Sir Miles Hobart, who in 1628, was impriſoned for locking the door of the Houſe of Commons, while the famous Proteſtation above mentioned was read (22). Colonel Hammond, Governor of the Iſle of Wight, who had the cuſtody of the King there, married another of Mr Hampden's daughters by the advice of Oliver Cromwell (23). Mr Hampden's eldeſt ſon Richard (for we have found no account of any other) as well as his grandſon John, made a figure in Parliament, and in the public, from the Reſtoration to the reign of Queen Anne, as may be ſeen in the General Hiſtory of England (24), to which therefore, for the reaſon already mentioned, we refer the reader, and ſhall only take notice of two particulars which are not in that hiſtory. The firſt is, That Richard when young, was choſen one of the five Knights for Buckinghamſhire, to ſerve in the Parliament called Sept. 17, 1656, by the Protector, who alſo about the ſame time created him a Lord, to ſit in the upper or *other* houſe (25). The other particular not mentioned in the General Hiſtory of England, relates to the grandſon John Hampden, Eſq; who being confined two years * in the ſame priſon with Mr Sam. Johnſon, author (among other things) of a piece intitled, *The Abrogation of King James II.* gave an account of that performance to the Ducheſs of Mazarine, wherein he recounts the ſeveral pleas advanced by the clergy, to reconcile their compliance with the Revolution to the doctrine of paſſive obedience and non-reſiſtance, which they had maintained in an unlimited ſenſe in the preceding reign; he reduces theſe pleas in defence of King William's right, to four, (1.) The right of conqueſt. (2.) That of Providence. (3.) That of poſſeſſion. And (4.) That of the vacancy of the throne by King James's abdication. This account is prefixed to an edition of Mr Johnſon's works, by the editor, who obſerves, *That every body muſt own Mr Hampden to have been as able a judge of that ſubject, as any man in England before or ſince* (26).

[*L*] *A*

bad, and referring his own tryal to the judgment of that honourable aſſembly [*L*]. Lond. 1641. 4to.

[*L*] *A ſpeech in the Houſe of Commons—referring his trial to that honourable aſſembly.*] As this is the only ſpecimen we have of his talent this way (27), it muſt not be omitted here, though it is printed in the General Dictionary.

(27) Mr Wood refers to the Earl of Strafford's tryal, where he was one of the managers of the Houſe of Commons for more of his ſpeeches; and we find him indeed frequently ſpeaking in the interlocutory parts of that tryal, but never making any thing like what is uſually underſtood by A SPEECH.

Mr SPEAKER,

'*It is a true ſaying of the wiſe man,* That all things happen alike to all men, *as well to the good man as to the bad. There is no ſtate or condition whatſoever, either of proſperity or adverſity, but all men are ſharers in the ſame. No man can be diſcerned truly by the outward appearance, whether he be a good ſubject either to his God, his Prince, or his Country, until he be tried by the touchſtone of loyalty, Give me leave, I beſeech you, to parallel the lives of either ſort, that we may in ſome meaſure diſtern truth from falſhood. And in ſpeaking I ſhall ſimilize their lives. (1.) In religion towards God. (2.) In loyalty and due ſubjection to their ſovereign, in their affection towards the ſafety of their country. 1. Concerning religion; the beſt means to diſcern between the true and falſe religion is, by ſearching the ſacred writings of the old and new Teſtament, which is of itſelf pure, indited by the ſpirit of God, and written by holy men unſpotted in their lives and converſations; and by this ſacred word, we may prove whether our religion be of God or no; and by looking in this glaſs, we may diſcern whether we are in the right way or no. And looking into the ſame, I find by this truth of God, that there is but one God, one Chriſt, one Faith, one Religion, which is the goſpel of Chriſt, and the doctrine of the prophets and apoſtles. In theſe two Teſtaments are contained all things neceſſary to ſalvation. If that our religion doth hang upon this doctrine, and no other ſecondary means, then it is true; to which comes neareſt the Proteſtant religion, which we profeſs, as I really and verily believe; and conſequently that religion, which joineth with the doctrine of Chriſt and his apoſtles, the traditions and inventions of men, prayers to the Virgin Mary, angels, ſaints, that are uſed in the exerciſe of their religion, ſtrange and ſuperſtitious worſhipping, cringing, bowing, creeping to the altar, uſing pictures, dirges, and ſuch like, cannot be true, but erroneous, nay deviliſh; and all that is maintained in the Church of Rome, as neceſſary as the ſcripture to ſalvation, therefore is a falſe and erroneous Church both in doctrine and diſcipline; and all other ſects and ſchiſms that lean not* only *on the ſcriptures, though never ſo contrary to the Church of Rome, is a falſe worſhiping of God, and not true religion. And thus much concerning religion, to diſcern the truth and falſehood thereof. I come now, Mr Speaker, to the ſecond thing intimated unto you, which was to diſcern in a ſtate between good ſubjects and bad, by their loyalty and due ſubjection to their lawful ſovereign; in which I ſhall, under favour, obſerve two things. (1.) Lawful ſubjection to a King in his own perſon, and the commands, edicts, and proclamations of the Prince and his Privy-Council. 2. Lawful obedience to the laws, ſtatutes, and ordinances made, enacted by by the King and the Lords, with the free conſent of his great Council of State aſſembled in Parliament. For the firſt to deny a willing and due obedience to a lawful ſovereign and his Privy-Council (for as Camden truly ſaith,* The command of the Lords, Privy-Counſellors, and the edicts of the Prince are all one, for they are inſeparable, the one never without the other) *either to defend his royal perſon and kingdoms againſt the enemies of the ſame either publick or private; or to defend the antient privileges and prerogatives of the King pertaining and belonging of right to his Royal Crown and the maintenance of his honour and dignity; or to defend and maintain true religion eſtabliſhed in the land according to the truth of God; is one ſign of an evil and bad ſubject. Secondly, to yield obedience to the commands of a King, if againſt the true religion, againſt the antient and fundamental laws of the land, is another ſign of an ill ſubject. Thirdly, to reſiſt the lawful power of the King; to raiſe inſurrection againſt the King, admit him adverſe in his religion; to conſpire againſt his ſacred perſon, or any ways to rebel, though commanding things againſt our conſcience in exerciſing religion, or againſt the rights and privileges of the ſubject; is an abſolute ſign of a diſaffected and traiterous ſubject. And now having given the ſigns of diſcerning evil and diſloyal ſubjects, I ſhall only give you in a word or two the ſigns of diſcerning which are loyal and good ſubjects, only by turning theſe three ſigns already ſhown on the contrary ſide. 1. He that willingly and chearfully endeavoureth himſelf to obey his ſovereign's commands for the defence of his own perſon and kingdoms, for the defence of true religion, for the defence of the laws of his country, is a loyal and good ſubject. 2. To deny obedience to a King commanding any thing againſt God's true worſhip and religion, againſt the ancient and fundamental laws of the land; in endeavouring to perform the ſame, is a good ſubject. 3. Not to reſiſt the lawful and royal power of the King; not to raiſe ſedition or inſurrection againſt his perſon, nor to ſet diviſion between the King and his good ſubjects by rebellion, although commanding things againſt conſcience in the exerciſe of religion, or againſt the rights and privileges of the ſubject; but patiently for the ſame to undergo his Prince's diſpleaſure, whether it be to his impriſonment, confiſcation of goods, baniſhment, or any other puniſhment whatſoever, without murmuring, grudging, or reviling againſt his ſovereign or his proceedings; but ſubmitting willingly and chearfully himſelf, and his cauſe to Almighty God, is the only ſign of an obedient and loyal ſubject. I come now to the ſecond means to know the difference between a good ſubject and a bad, by their obedience to the laws, ſtatutes, and ordinances made by the King, with the whole conſent of his Parliament. And in this I obſerve a two-fold ſubjection; in the particular members thereof diſſenting from the general votes of the whole Parliament; and ſecondly, the whole ſtate of the kingdom in a full Parliament. Firſt, I confeſs, if any particular member of Parliament, although his judgment and vote be contrary, do not willingly ſubmit to the reſt, he is an ill ſubject to the King and country. Secondly, to reſiſt the ordinance of the whole ſtate of the kingdom, either by ſtirring up a diſlike in the hearts of his Majeſty's ſubjects of the proceedings of the Parliament; to endeavour by levying of arms to compel the King and Parliament to make ſuch laws as ſeem beſt to them; to deny the power, authority, and privileges of Parliament; to caſt aſperſions upon the ſame; to procure the untimely diſſolution and breaking off the Parliament, before all things be ſettled by the ſame for the ſafety and tranquillity both of King and ſtate; is an apparent ſign of a traiterous and diſloyal ſubject againſt his King and country. And thus having troubled your patience in ſhewing the difference, between true Proteſtants and falſe, between loyal ſubjects and traitors, in a ſtate or kingdom; and the means how to diſcern them: I humbly deſire my actions may be compared with either, both as I am a ſubject, a Proteſtant, and a native in this country; and as I am a member of this preſent and happy Parliament. And as I ſhall be found guilty upon theſe articles exhibited againſt myſelf and the other gentlemen, either a bad or a good ſubject to my gracious ſovereign and native country, to receive ſuch ſentence upon the ſame, as by this honourable Houſe ſhall be conceived to agree with law and juſtice.'*

P

HARRINGTON [JAMES], an eminent political writer in the XVIIth century, was the eldeſt ſon of Sir Sapcote Harrington, by Jane the daughter of Sir William Samuel of Upton in Northamptonſhire (*a*). Though his immediate predeceſſors were not ennobled, his family was one of the moſt honourable in England. It had long flouriſhed in Rutlandſhire; and, as the hiſtorian of that county obſerves, had, when he wrote, produced eight dukes, three marquiſes, ſeventy earls, twenty-ſeven viſcounts, and thirty-ſix barons; of which number ſixteen were Knights of the Garter (*b*). He was born at Upton the firſt Friday of January, 1611 (*c*). In his very infancy there appeared promiſing indications of his future ability and attainments. He had an early propenſity to learning; with a ſerioufneſs of temper, and gravity of behaviour, ſo much beyond what is commonly ſeen in children, that, inſtead of needing reſtraint or correction, he rather impreſſed on his parents and teachers an awe of him: and yet, when grown to manhood, he diſcovered not the leaſt ſourneſs or auſterity of diſpoſition; but, on the contrary, was remarkably facetious and witty (*d*). When he had made a ſufficient progreſs in the rudiments of learning, he was, ſome time in 1629, entered a Fellow-Commoner of Trinity-college in Oxford, where he had the happineſs of being placed under the tuition of the famous William Chillingworth (*e*), who had been admitted a Fellow thereof on the 10th of June in the preceding year (*f*). Here he made a conſiderable proficiency in the literature then in vogue, and taught in thoſe ſeminaries; and more particularly applied himſelf to the learning of ſeveral foreign languages; for the underſtanding of which, as he was determined to ſee the world, he prudently foreſaw an occaſion. He had not been above three years at his ſtudies, when his father died, leaving him under age (*g*). Though the oppreſſive Court of Wards was in being, yet the tenure of his eſtate impowering him to chuſe his own guardian, he pitched on the Lady Samuel, his maternal grandmother, a woman of diſtinguiſhed prudence and virtue. From her and the reſt of his governors he obtained a permiſſion of quitting the univerſity, before he was of ſtanding requiſite for a degree, and of travelling abroad (*h*). His firſt ſtep was into Holland, in thoſe days the principal ſchool of martial diſcipline; and (what ſtill rendered it more agreeable to him) a country ſo wonderfully flouriſhing, under the auſpices of liberty, in commerce, ſtrength, and grandure, as excited the envy or admiration of all Europe. Now, we may ſuppoſe, it was, that he began to make government the main ſubject of his meditations; for he uſed to ſay frequently afterwards to his acquaintance, that, before he left England, he knew not the true nature of monarchy, anarchy, ariſtocracy, oligarchy, and the like. On his coming into the Netherlands he entered a volunteer, and ſo continued ſome months, in Lord Craven's regiment; during which, being much at the Hague, he had an opportunity of adding greatly to the accompliſhments both of his mind and perſon, by frequenting the courts of the Prince of Orange and the Queen of Bohemia, both of which were then reſident in that beautiful village. Mr Harrington had qualities that ſoon recommended him to the notice of the latter of theſe excellent perſons, and ſhe accordingly received him very graciouſly. She was indeed influenced in her conſideration of him by a two fold motive, viz. on the ſcore of his own merit, and in regard of his uncle John Lord Harrington, who had formerly been her governor. The Elector alſo courted him into his ſervice. He attended his Highneſs in a viſit he paid the King of Denmark at Copenhagen, whither he went to try if he could engage that monarch in his intereſt; he waited upon him likewiſe ſome years in his chamber, and was intruſted by him with the affairs of the Palatinate ſo far as they were tranſacted at the Britiſh Court (*i*). Returning from Denmark to Holland, Mr Harrington ſtayed there but a ſhort time. No one could reliſh the charms of that Republic more exquiſitely; but nothing could extinguiſh the thirſt he had of viſiting other nations; and therefore, taking Flanders in his way, he ſet out on a tour through part of Germany, France, and Italy. While he was at Rome, the Pope performed the ceremony of conſecrating wax-lights on Candlemas-day. When his Holineſs had ſanctified theſe torches, they were diſtributed among the people, who ſought for them very eagerly. Mr Harrington was deſirous of one of them; but, as it was not to be obtained without kiſſing the Pontiff's toe, he declined the ſacred bauble. His companions were not ſo ſqueamiſh; they gained them by a mean ſubmiſſion. When they came home to England, they had the folly to complain of his ſtiffneſs to the King; who telling him he might have complied with the practice, as a reſpect only to a temporal prince, he very politely replied, That ſince he had the honour of kiſſing his Majeſty's hand, he thought it beneath him to kiſs any other prince's foot (*k*). Venice he admired beyond all the other Latian ſtates; eſteeming it's conſtitution the beſt in the world, immutable by any external or internal cauſes. Here he cultivated an acquaintance with men of letters, or otherwiſe of character, by whoſe friendſhip he could reap any benefit; and enriched his library with a collection of all the valuable books to be found there in the Italian tongue, eſpecially relating to Politics (*l*). He came back to his native country in all points greatly improved, and qualified to ſerve and adorn it. He was heartily welcomed by many, and received moſt joyfully by his own family, the ordering of which was now an object of his deepeſt concern [*A*]. At the commencement of the civil

[*A*] *An object of his deepeſt concern.*] His brother William, as Mr Toland informs us (1), he bred to be a merchant, in which calling he became a conſiderable man; he was a good architect, and was ſo much noticed for his ingenious contrivances, that he was received a Fellow of the Royal Society. He took all the care of a parent in the education of his ſiſters, and would himſelf make large diſcourſes to them concern-

(1) Life of Harrington, p. 15.

civil war, in 1642, he was manifeſtly inclined on the Parliament's ſide [*B*]; and endeavoured to procure a ſeat in the Houſe; but in this he was diſappointed (*m*). His inclination to ſtudy kept him from ſeeking after public employments; ſo that we have nothing more concerning him 'till January 1646; when, out of curioſity, accompanying the Commiſſioners appointed by the Parliament to go to the King at Newcaſtle, to treat of peace, and bring him nearer to London, he was by ſome of theſe Commiſſioners named to wait on his Majeſty, as a perſon known to him before, and engaged in no party or faction. The King approved the propoſal, and Harrington entered on the ſtation of a domeſtic. However, he would never preſume to come into the royal preſence, except in public, 'till he was particularly commanded by the King; and that he and Thomas Herbert (created a Baronet after the Reſtoration) were made Grooms of his Bed-Chamber at Holmby, in the month of May, 1647, on the diſmiſſion of ſome of his old ſervants. The Commiſſioners were ordered by the Parliament to recommend thoſe two gentlemen for that poſt; and the King having taken notice that they had followed the Court ſince his coming from Newcaſtle, and being ſatisfied with what he himſelf had obſerved, and with the report he had received concerning them from others, as to their ſobriety and good education, he received them very willingly in that capacity. Mr Harrington performed the duties of his office with untainted fidelity to his Sovereign, without doing any thing inconſiſtent with the welfare of his country; and he thereupon became very acceptable to the King. His Majeſty perceiving him to be a learned ingenious man, loved his company, and choſe rather to converſe with him than with the reſt about him (*n*). They talked of books and foreign countries with mutual pleaſure; but Government was Mr Harrington's favourite topic; the King often diſcourſed with him thereon, but was always manifeſtly chagrined when he entered on the ſubject of a Commonwealth [*C*]. Theſe frequent familiar intercourſes gradually rectified the miſtaken notion Mr Harrington, as well as many other honeſt men, had formerly conceived of his Majeſty, for want of a nearer acquaintance with him, and through the wicked miſrepreſentations of a faction, who ſerved their own villainous ends by lies and ſcandal (*o*). Mr Harrington's growing eſteem of the King, and compaſſionate concern on account of his diſtreſsful circumſtances, induced him to ſollicit his friends in Parliament to have matters accommodated to the contentment both of Prince and People. During the treaty in the Iſle of Wight, he frequently warned the divines of his acquaintance, to take heed how far they preſſed the King to inſiſt upon any thing, which, however it conduced to their dignity, was no eſſential point of religion; and that ſuch matters, driven too far, would infallibly ruin all the endeavours uſed for a peace (*p*). Soon after the breaking off this treaty, he was turned out of the King's ſervice, by thoſe who had then forcibly aſſumed the diſpoſal of his ſacred perſon. He incurred the diſpleaſure of theſe ſons of violence in the following manner. His Majeſty being carried away from Holmby, to the head quarters of the army, from thence conveyed by ſlow journeys to Hampton-court, next deluded into the Iſle of Wight (where he treated with the Commiſſioners of Parliament for peace), and from Newport, there, hurried away, by Lieutenant-Colonel Ralph Cobber, to Hurſt-caſtle in Hampſhire

(*m*) Wood, ubi ſupra.

ing the reverence that was due to Almighty God; the benevolence they were obliged to ſhew all mankind; how they ought to furniſh their minds with knowledge by reading of uſeful books, and to ſhew the goodneſs of their diſpoſition by a conſtant practice of virtue: in a word, he taught them the true rules of humanity and decency, always inculcating to them that good manners did not ſo much conſiſt in a faſhionable carriage (which yet ought not to be neglected), as in becoming words and actions, an obliging addreſs, and a modeſt behaviour. He treated his mother-in-law, as if ſhe were his own, and made no diſtinction between her children and the reſt of his brothers and ſiſters.

[*B*] *Inclined on the Parliament's ſide.*] There were many truly honeſt and judicious men, at that juncture, who were of the ſame principles, and had the ſame views as our author. The adminiſtration, during the courſe of Charles the Firſt's reign, to that time, was ſo far from unblameable, that it abounded with errors, and was chargeable with very grievous encroachments on the rights of the people. The King himſelf had an upright heart, but he had been miſled and ill-biaſſed; he had not been inſpired with a juſt idea of the Britiſh Conſtitution, and could hardly be induced to think his ſubjects properties exempt from the ſtretch of his prerogative: he fancied this to be ſomewhat conferred on him by Heaven; not a delegation from the people, to be limited by, and exerciſed only for, their intereſts. It was to maintain theſe, and reſcue them from unwarrantable infractions, that thoſe brave patriots, who made a majority of the long Parliament, firſt entered into that diſpute with the Crown, which proceeded to ſuch an unjuſtifiable length, and had ſo lamentable an iſſue. They foreſaw not the tragical cataſtrope. It was not againſt his Majeſty's perſon or legal government they unſheathed the ſword; but againſt that exorbitance of power, which was raiſed to an intolerable height, and which my Lord Clarendon, an unexceptionable loyaliſt, has fairly deſcribed. Mr Harrington was one of this claſs, and not to be reckoned among thoſe firebrands, who were unhappily mixed with the genuine friends of liberty, at laſt got the better of them, as well as of their ſovereign, and reduced all to ruin.

[*C*] *When he entered on the ſubject of a Commonwealth, &c.*] Toland, on this occaſion, makes the following reflection: 'Here I know not which moſt 'to commend; the King for truſting a man of repub-'lican principles, or Harrington for owning his princi-'ples while he ſerved a King (z).' But, in truth, there ſeems little to commend or wonder at on either ſide in this caſe. The King, we may ſuppoſe, confided no farther in Harrington, than as the leaſt exceptionable of thoſe, whom, in that deplorable ſituation, he was conſtrained to receive, as attendants, at the pleaſure of the Parliament, who were then his maſters. Nor did it diſcover any extraordinary greatneſs of ſoul in Harrington, to talk to a captive prince (for ſuch the King really then was) in ſo diſagreeable a ſtrain. It would have been more noble in him to have ſhunned the diſguſtful topic at that ſeaſon; and more prudent in his Majeſty to have betrayed no reſentment of it. The one would hardly have preſumed to act the part of an advocate for a Commonwealth, a few years before, at Whitehall, when the King was in the ſplendor of his dignity; nor would the other have ſuffered it, without inflicting ſeverer tokens of his diſpleaſure.

(z) Life of Harrington, p. 16.

[*D*] To

Hampſhire [*D*], on November 30, 1648; it happened that Harrington, who in all theſe changes accompanied his Majeſty, did one morning fall into converſation with the governor of that caſtle, and ſome other officers of the Parliament forces, concerning the late negotiations at Newport, wherein he magnified the King's wiſdom in his arguments with the Commiſſioners upon the propoſitions for peace; alledged the ſatisfactorineſs of his conceſſions; and the probability of an happy iſſue of that affair, if this force in removing him to Hurſt-caſtle had not intervened, and made an unhappy rupture; enlarging alſo upon his Majeſty's learned diſputes with Mr Richard Vines, and other Preſbyterian Miniſters, on the points of eccleſiaſtical government and diſcipline. This diſcourſe, however true in itſelf, was, in that unlucky ſeaſon, undeniably, inconſiſtent with prudence: and this was his Majeſty's own ſentiment of it; who, inſtead of reaping any benefit thereby, had the mortification, on the ſcore thereof, to be deprived of the moſt valued of his ſervants; and ſo had reaſon for blaming the good man's indiſcretion, though he could not but entertain a grateful ſenſe of his zeal and affection. In ſhort, the perſons to whom he had thus talked, whoſe conviction was what he aimed at, without any deſign of offending them, withdrew, greatly incenſed; and, after conſulting a little among themſelves, returned, and let him know they were diſſatisfied with what he had ſaid. He deſired them to inſtance wherein, and would have explained and juſtified his meaning. But they, interrupting, told him in plain terms, they could not ſuffer his attendance on the King any longer. Accordingly he was ſecluded his preſence; and there is no ſure ground to think he ſaw him any more [*E*], 'till that fatal day when he was brought to the ſcaffold, where Mr Harrington

[*D*] *To Hurſt-caſtle in Hampſhire.*] The King's circumſtances here were truly miſerable: abſolutely in the power of a ſet of men inured to ſlaughter; haunted by the diſmal apprehenſions of their inſolent cruelty; no friend or ſervant of his own at hand, to comfort or defend him, except Herbert, of his bedchamber, and he weak and diſpirited by an aguiſh diſorder. An incident relative to this matter, and which in ſome ſort ſhews the wretchedneſs of his Majeſty's condition, is told by Wood (3). 'About three days before he 'was moved to Windſor, at midnight, there was an 'unuſual noiſe in the ſaid Hurſt caſtle, that awakened 'him out of his ſleep; and he was in ſome marvel to 'hear the draw-bridge let down at that unſeaſonable 'hour, and ſome horſemen enter, who being alighted, 'the reſt of the night was in deep ſilence. The King 'being deſirous to know the matter, he rung his ſilver 'bell long before break of day, (which, with both 'his watches, he uſually laid upon a ſtool near the 'wax lamp that was ſet near them in a large ſilver 'baſon) upon which call, Herbert opened the bed-'chamber door to know his Majeſty's pleaſure. The 'King told him he would riſe; and as he was making 'ready, he aſked him if he heard a noiſe that was 'made about midnight. Herbert anſwered he did, 'as alſo the falling of the draw-bridge, but he being 'ſhut up in the back-ſtair room next to the bed-'chamber, and the door, by the Governor's order, 'being bolted without, he neither could nor would, 'without his Majeſty's order, adventure out at ſuch a 'time of night. The King then bid him go and learn 'what the matter was, which he did accordingly, and 'knocking at the back ſtair door, the ſoldiers unbolted 'it without; ſo that entering into the next room he 'happily found Capt. Reynolds there alone by a fire, 'and, after ſome diſcourſe, he enquired of him who 'they were that came ſo very late into the caſtle laſt 'night, and their errand. The Captain in a joking 'way bad him be wary in carrying news to the King, 'for he was among ſupercilious ſuperintendants, 'and his comrade was ſerved for an example. Her-'bert thanked him for his friendly caution, and at 'length got out of him who the commander was that 'came ſo late into the caſtle, but would not diſcover 'what his buſineſs was. Whereupon he returned to 'his Majeſty, and told him it was Major Thomas 'Harriſon that came ſo late into the caſtle. *Are you 'ſure it was Major Harriſon*, ſaid the King? *May it 'pleaſe your Majeſty* (ſaid Herbert) *Captain Reynolds 'told me ſo.*' The King then making a little pauſe, 'ſaid, *Then I believe it; but did you ſee Major Harri-'ſon? No*, Sir, ſaid Herbert, Then the King ſaid, '*Would not Captain Reynolds tell you what the Major's 'buſineſs is?* Herbert then replied, that *he did what he 'could to be informed, but that all he could then learn 'from the Captain was, that the occaſion of Harriſon's 'coming would be known ſuddenly.* The King ſaid no 'more, but bad him wait in the next room; and forth-'with his Majeſty went to his prayers. In leſs than an 'hour the King opened his bed-chamber door, and 'beckoned to Herbert to come in and make him 'ready. Herbert was in ſome conſternation to ſee his 'Majeſty ſo much diſcompoſed, and wept: which the 'King obſerving, aſked him the meaning of it; Her-'bert replied, *Becauſe I perceive your Majeſty ſo much 'concerned at the news I brought.* The King ſaid there-'upon, *I am not afraid; but do you not know that this 'is the man (Harriſon) who intendeth to aſſaſſinate me; 'as by letter I was informed during the late treaty? 'to my knowledge I never ſaw the Major, though I 'have often heard of him, nor ever did him injury. The 'commiſſioners indeed hearing of it, repreſented it from 'Newport to the Houſe of Lords: what ſatisfaction he 'gave them I cannot tell; this I can, that I truſt 'in God, who is my helper; I would not be ſurpriſed, 'but this is a place fit for ſuch a purpoſe. Herbert, I 'truſt to your care; go again, and make farther in-'quiry into this buſineſs.* Immediately afterwards 'Herbert went out, and finding an opportunity of 'ſpeaking in private with Captain Reynolds (who 'being a gentleman well educated, and at all eſſays 'ready to expreſs civility towards the King, with 'whom he moſt times walked upon a long narrow paſ-'ſage of ſtony ground joining to the caſtle, and was 'always courteous to his ſervants) he told him the 'Major's buſineſs was to remove the King thence to 'Windſor-caſtle, within three days at fartheſt. Her-'bert believing the King would be pleaſed with the 'exchange, by leaving the worſt to enjoy the beſt 'caſtle in England, returned to his Majeſty with a 'mirthful countenance, little imagining, God knows, 'the ſad conſequence; but as ſoon as the King heard 'Windſor named he ſeemed to rejoice at it.' *It was* on a window of Hurſt-caſtle that this diſconſolate prince wrote the following line of Ovid;

Qui decumbit humi non habet unde cadet.

He was conveyed hence to Windſor in his own coach, Harriſon ſitting therein with him, all the way, covered.

[*E*] *No ſure ground to think he ſaw him any more.*] Neither Wood nor Toland expreſs themſelves intelligibly concerning this circumſtance; but they ſeem to contradict one another. Wood ſays, 'I think he '(Harrington) was never admitted again when the 'King was afterwards conveyed to Windſor, and ſo to 'St James's (4),' which is not ſenſe. Toland, after ſaying, he was forcibly turned out of the King's ſervice, adds, 'As they were taking the King to Wind-'ſor, he begged admittance to the boot of the coach, 'that he might bid his maſter farewel, which being 'granted, and he preparing to kneel, the King took 'him by the hand, and pulled him into him; he was 'for three or four days permitted to ſtay; but becauſe 'he would not take an oath againſt aſſiſting or conceal-'ing the King's eſcape, he was not only diſcharged 'from his office, but alſo for ſome time detained in 'cuſtody, till Major General Ireton obtained his li-'berty. He afterwards found means to ſee the King 'at St James's (5).'——*He was for three or four days permitted*

Harrington was with him, and where, or a little before, he received a token of his Majeſty's affection (*q*). The King's execution affected him extremely. He often ſaid, nothing ever went nearer him, and that his grief on the ſcore of it was ſo great, he had thereby contracted a diſeaſe; ever after, even while Oliver reigned, ſpeaking of that unfortunate prince with the greateſt zeal and paſſion imaginable (*r*). After this ſhocking event he was more recluſe than ordinary; keeping for the moſt part in his library. His friends attributed this for a good while to melancholy and diſcontent, and took all opportunities of perſwading him to a more agreeable ſort of life. At length, to convince them of their miſtake, and rid himſelf of their importunity, he ſhewed them the real cauſe of his retirement, and how he was therein employed, by laying before them a copy of his *Oceana* [*F*], which he had been then writing: telling them withal, that ever ſince he began to examine things ſeriouſly, he had principally addicted himſelf to the ſtudy of civil government, as being of the higheſt importance to the peace and felicity of mankind; and that he ſucceeded, at leaſt, to his own ſatisfaction; being now convinced that no government is of ſo accidental or arbitrary an inſtitution as people are wont to imagine; there being in ſocieties natural cauſes producing their neceſſary effects, as well as in the earth or the air (*s*). It was with difficulty that he produced this curious piece to the world. After he had effectuated the conception of ſo elaborate a ſyſtem, it had like to have been ſtifled in the birth. Some of Oliver's courtiers hearing of it, and that it was in the preſs, ſet all their emiſſaries at work in ſearch of it. In ſhort, they found, they ſeized, and carried it to Whitehall. All the author's ſollicitations were inſufficient for the recovery of it. At laſt, his memory ſuggeſted an happy expedient. He recollected, that Oliver's favourite daughter, Lady Claypole, acted the part of a princeſs very naturally, obliging all perſons with her civility, and frequently interceding for the miſerable. To her, therefore, he determined to apply; and he ſucceeded to the very utmoſt of his wiſhes. This, however, was, perhaps, owing to an unforeſeen and comical incident [*G*].

(*q*) Wood, ut ſupra, col. 589.

(*r*) Idem.

(*s*) Toland, ut ſupra, p. 17.

Be

permitted to ſtay.—To ſtay where? or, in what character? —No-body can gather from this paſſage —*He was diſcharged from his office.*—He was in no office. He had, by Toland's own account, been diſcharged from his office a while before. The circumſtance indeed is in itſelf of little moment; but I take notice of it, to inſtance what obſcure and inaccurate writers Wood and Toland are.

[*F*] *A copy of his Oceana*] This is a kind of political romance, in imitation of Plato's atlantic ſtory, where by Oceana Harrington intends England; exhibiting a plan of republican government, which he would have had erected here, in caſe theſe kingdoms had formed themſelves into a genuine Commonwealth, inſtead of that ſpurious monſter which aſſumed the venerable name during Oliver's uſurpation. The book, according to Toland's analyſis of it (6), conſiſts of preliminaries divided into two parts, and a third ſection called the Council of Legiſlators; then follows the Commonwealth; and laſtly comes the concluſion or corollary.

(6) Toland, ut ſupra, p. 21.

The preliminary diſcourſes contain the principles, generation, and effects of all governments, whether monarchical, ariſtocratical, or popular; and their ſeveral corruptions, as tyranny, oligarchy, and anarchy, with all the good or bad mixtures that naturally reſult from them.

The firſt part of the preliminaries particularly treats of antient prudence, or that kind of government which generally prevailed in the world 'till the time of Julius Cæſar. None can conſult a ſurer oracle, that would conceive rightly of foreign or domeſtic empire; the balance of land or money; arms or contracts; magiſtrates and judicatures; agrarian laws; elections by the ballot; rotation of officers, and the like.

The ſecond part of the preliminaries treats of modern prudence, or that which has chiefly obtained ſince the expiration of the Roman liberty; eſpecially the Gothic conſtitution. Here we may acquire a clear idea of the Engliſh government, under the Romans, Saxons, Danes, and Normans, till the foundations of it were ſubverted under Charles I. and here we may learn to underſtand the antient feuds and tenures, the origin and degrees of our nobility, with the inferior orders of the populace: What was meant, under the Saxons, by Ealdorman or Earl; King's Thane; middle Thane or Vavaſors; their Shire Moots, Sheriffs and Viſcounts; their Halymoots, Weidengemoots, &c. Here alſo we ſee what the Baronage of the Normans was; ſome being of that rank by their poſſeſſions, others by writ, or by patent. In the latter part of this diſcourſe, the author diſplays the natural cauſes of the diſſolution of the Norman monarchy under Charles the Firſt, and the generation of the Commonwealth, or rather anarchy, that ſucceeded.

Next follows the Council of Legiſlators. Harrington deſigning to offer the world a moſt perfect ſyſtem of government, ſtudied all the ancient and modern politicians, that he might imitate what was excellent, and avoid or rectify whatever he found inconvenient in their ſeveral ſyſtems. To this end therefore he introduces nine legiſlators, under fictitious names, perfectly acquainted with the different ſtates they are appointed to repreſent. The province of the firſt is that of the Jews; of the ſecond, Athens; of the third, Sparta; of the fourth, Carthage; of the fifth, the Archæans, Ætolians, and Lycians; of the ſixth, Rome; of the ſeventh, Venice; of the eighth, Switzerland; of the ninth Holland. Of the excellencies of all theſe, and the fruits of his own wiſe invention, he framed the model of his Oceana.

The method he obſerves in that work, is, to lay down his laws or orders in ſo many poſitive propoſitions, ſubjoining to each an explanatory diſcourſe; and, if occaſion requires, adding a ſpeech, ſuppoſed to be delivered by the archon, or ſome of the legiſlators. In the corollary, or, concluſion, he ſhews how the laſt hand was put to his Commonwealth. His ſyſtem comprehends not only the form of a ſenate and aſſemblies of the people, the manner of waging war and governing in peace, but, moreover, the diſcipline of a national religion, and the ſecurity of a liberty of conſcience; a form of government for Scotland, Ireland, and the other provinces of the Republic; governments for London and Weſtminſter, proportionably to which the other corporations of the nation are to be faſhioned; directions for the promoting of trade; laws for regulating academies; with admirable rules for the educating of youth, as well to the wars or the ſea, to manufactures or huſbandry, as to law, phyſic, or divinity, and, chiefly, to the breeding and figure of accompliſhed gentlemen; excellent orders for reforming the ſtage; the number, choice, duty, and ſalaries, of the officers of ſtate, of the revenue, and the like; with an eſtimate of the ordinary annual expence of the whole community.

[*G*] *Owing to an unforeſeen and comical incident.*] Toland relates (7), that Harrington having thought fit to make his application to Lady Claypole, though ſhe was an abſolute ſtranger to him, being led into her antichamber, he ſent in his name, with his humble requeſt that ſhe would admit him into her preſence. While he attended, ſome of her women coming into the room, were followed by her little daughter, about three years old, who ſtaid behind them. He entertained the child ſo divertingly, that ſhe ſuffered him to take her up in his arms 'till her mother came; whereupon, he ſtepping towards her, and ſetting the child down at her feet, ſaid, Madam, 'tis well you are come at this nick

(7) Toland, ubi ſupra, p. 19.

of

Be that as it will, his copy was reſtored, and he was ſuffered to proceed in the printing of it. As ſoon as it appeared in the world, it was greedily bought up, and became the general ſubject of converſation (*t*). Several undertook a refutation of it, to whom Harrington replied [*H*]. Many were deſirous of an epitome of it; and indeed it might very well bear one. Mr Harrington was not uſed to ſay too little upon any matter; he was rather apt to encumber or obſcure his ſubject by an exuberance of expreſſion. His ſcheme, when reduced to a narrower compaſs, would become more perſpicuous, and eaſier in the purchaſe, and ſo be of greater utility. In compliance therefore with a general importunity, he printed an abridgment of it in the year 1649, calling it *The Art of Lawgiving*, in three books. The firſt, which treats of the *Foundation and Superſtructures of all kinds of Government*, is an abſtract of his preliminaries to the *Oceana*: and the third book, ſhewing *A Model of Popular Government, fitted to the preſent State or Balance of this Nation*, is an exact compendium of the *Oceana* itſelf, with ſhort diſcourſes explaining the propoſitions. The ſecond book, between theſe two, is *A full Account of the Commonwealth of Iſrael, with all the Variations it underwent.* To the *Art of Lawgiving* is annexed a ſmall diſſertation, or *A Word concerning a Houſe of Peers* (*u*). Harrington not only endeavoured to propagate his republican notions by writing, but for the more effectually advancing a cauſe, of which he was enthuſiaſtically enamoured, he formed a ſociety of gentlemen, agreeing with him in principles, who met nightly at Miles's coffee-houſe in the New-Palace-yard Weſtminſter, and were called the *Rota* (*w*). The room where they aſſembled was open to all, and many came out of curioſity, and probably for the ſake of prating or diſputing; for it ſeems as if ſtrangers and occaſional viſitants had that liberty. The diſcourſes here were political, tending to inſtil a diſlike of Monarchy, and by diſplaying the advantages of a Commonwealth, to create a fondneſs in the people of that ſort of government. Wood is very particular in his account of this aſſociation, or gang as he terms it (*x*) [*I*]. After the Reſtoration Mr Harrington lived rather more privately than he had done

(*t*) Toland, ut ſupra, p. 26.

(*u*) Ibid.

(*w*) Ut ſupra, p. 28. Wood, ut ſupra, col. 591.

(*x*) Ut ſupra.

of time, or I had certainly ſtolen this pretty little lady. Stolen her, replied the mother! pray, what to do with her? for ſhe is yet too young to become your miſtreſs. Madam, ſaid he, though her charms aſſure her of a more conſiderable conqueſt, yet I muſt confeſs it is not love, but revenge, that prompted me to commit this theft. Lord, anſwered the Lady again, what injury have I done you, that you ſhould ſteal my child? none at all, replied he, but that you might be induced to prevail with your father to do me juſtice, by reſtoring my child that he has ſtolen But ſhe urging it was impoſſible, becauſe her father had children enough of his own; he told her, at laſt, it was the iſſue of his brain, which was miſrepreſented to the Protector, and taken out of the preſs by his order. She immediately promiſed to procure it for him, if it contained nothing prejudicial to her father's government; and he aſſuring her it was only a kind of political romance, ſo far from any treaſon againſt her father, that he hoped ſhe would acquaint him he deſigned to dedicate it to him; and promiſing that ſhe herſelf ſhould be preſented with one of the firſt copies; the Lady was ſatisfied, and ſo well pleaſed with his manner of addreſs, that he had his book ſpeedily reſtored to him.

[*H*] *Several undertook a refutation of it, to whom Harrington replied.*] The firſt of theſe was Dr Henry Ferne, afterwards Biſhop of Cheſter. Harrington publiſhed the whole controverſy between them in the year 1656, under the title of *Pian Piano, or, An Intercourſe between Henry Ferne, Doctor in Divinity, and James Harrington, Eſq; upon occaſion of the Doctor's Cenſure of the Commonwealth of Oceana* (8). The next that appeared againſt it, was Matthew Wren, eldeſt ſon to the Biſhop of Ely. His book was intitled *Conſiderations*, and confined to the firſt part of the preliminaries only. Mr Harrington anſwered in the firſt book of his Prerogative of Popular Government, where he explains and vindicates his aſſertions. He treats his adverſary with a good deal of contempt, and it was thought he had the better of him by much (9). In the courſe of this debate with Wren, he has diſcuſſed ſeveral curious and intereſting points: as, whether a Commonwealth be rightly defined to be a government of laws, and not of men; and monarchy to be a government of ſome men, or a few men, and not of laws?—Whether the balance of dominion in land be the natural cauſe of empire?—Whether the decrees of the Roman Senate, or, *Senatus Conſulta*, had the power of laws?——Whether the Ten Commandments, propoſed by God or Moſes, were voted and paſſed into laws by the people of Iſrael?——Whether a Commonwealth, coming up to the perfection of the kind, comes not up to the perfection of government? that is, whether the beſt Commonwealth be not the beſt government?——Whether monarchy, coming up to the perfection of the kind, comes not ſhort of the perfection of government, and has not ſome flaw in it? that is, whether the beſt monarchy be not the worſt government.———Whether any Commonwealth, that was not firſt broken or divided by itſelf, was ever conquered by any monarch? where he ſhews that none ever were; and that the greateſt monarchies have been broken by very ſmall commonwealths, &c. &c (10).

(8) Toland, ubi ſupra, p. 24.

(9) Ibid.

(10) Ibid.

It was chiefly againſt the Oceana that Richard Baxter wrote his Holy Commonwealth. But Mr Harrington had ſo contemptuous an opinion of this piece, that he vouchſafed it no other anſwer but half a ſheet of cant and ridicule (11). Wren, not ſatisfied with Harrington's anſwer to his Conſiderations, immediately publiſhed a vindication of them, under the title of Monarchy Aſſerted (12). This was penned in a very abuſive ſtrain, with little force of argument. In both theſe reſpects Harrington was even with him in his reply.

(11) Ibid. p. 26.

(12) Ibid.

Something alſo paſſed between Dr Stubbe and Harrington, relative to Oceana; but it was ſo trifling as not to deſerve any farther mention.

[*I*] *Wood is very particular in his account of this aſſociation.*] 'They had a balloting box, and 'balloted how things ſhould be carried, by way 'of Tentamens; which not being uſed or known 'in England before for this purpoſe, the room 'every evening was very full. Beſides Harrington and Henry Nevill, who were the prime men of 'this club, were Cyriack Skinner, a Mercer's ſon of 'London, an ingenious young gentleman, and ſcholar 'to John Milton, which Skinner ſometimes held the 'chair; Major John Wildman, Charles Wolſeley of 'Staffordſhire, Roger Coke, author of the Detection 'of the four laſt reigns, William Poultney, afterwards 'a Knight, who ſometimes held the chair; John 'Hoſkyns, John Aubrey, Maximilian Pettie of Tetſ'worth in Oxfordſhire, a very able man in theſe mat'ters, and who had more than once turned the coun'cil board of Oliver Cromwell, Michael Mallet, Phi'lip Carteret of the Iſle of Guernſey, Francis Cradock 'a Merchant, Henry Ford, Major Venner, Thomas 'Marriett of Warwickſhire, Henry Croone a Phyſi'cian, Edward Bagſhaw of Chriſt-church, and ſome'times Robert Wood of Lincoln-college, and James 'Arderne, then or ſoon after a divine, with many 'others beſides antagoniſts and auditors of note. Dr 'William Petty was a rota-man, and would ſometimes 'trouble Harrington in his club; and one Stafford, a 'gentleman of Northamptonſhire, who uſed to be an 'auditor, did with his gang come among them one 'evening very mellow from the tavern, and did much 'affront the Junto, and tore their orders and minutes.

done during the uſurpation; demeaning himſelf peaceably, as became a man of no party. He was viſited however by many of different ranks and denominations; ſome with a malevolent deſign as ſpies, others with nobler intentions, either to improve by his inſtructive converſation, or to put him on the compoſing of ſomething which might direct to a thorough ſettlement of the kingdom. Among theſe was an eminent Royaliſt, who prevailed with him to draw up ſome inſtructions for the King's ſervice, whereby he might be enabled to govern with ſatisfaction to the people and ſafety to himſelf. This being performed, and ſigned with his own name, his friend, after ſhewing it to ſeveral of the courtiers, found, as he might eaſily have foreſeen, they did not approve a ſcheme that was not favourable to their purpoſes. On this, the author himſelf delivered it to a great miniſter about the King, in order to it's being offered his Majeſty. The acceptation it there found may be imagined from the uſage, we are going to mention, which he met with ſhortly after. About this time he was buſy in reducing his politics to ſhort and eaſy aphoriſms, digeſted into a natural order, and ſuited to vulgar capacities. Of this he made no ſecret, and freely communicated his papers to any of his acquaintance. It muſt be confeſſed there was too little prudence in this behaviour. He ſhould have known, a work of this nature could not fail (if divulged) of rendering him obnoxious to a monarch, who had his principles in the utmoſt deteſtation, and whoſe meaſures were the reverſe of them. Accordingly, while he was putting the laſt hand to this ſyſtem, he was, by an order from the King, on the 28th of December, 1661 (y), ſeized by Sir William Poultney (a quondam brother of the Rota) and others, and committed to the Tower of London for treaſonable deſigns and practices. He had the written ſheets of his Aphoriſms lying before him on the table, when the aforeſaid perſons entered his chamber; and underſtanding they intended to carry them to the Council, he begged they would permit him to ſtitch them together, which was granted, and ſo they were removed with ſome other papers to Whitehall (x). He himſelf was inſtantly hurried to the Tower, without being allowed to take leave of any one, and ſecreted from the ſpeech or ſight of any of his friends. His ſiſters were hereupon inconſolable. One of them, who had formerly experienced the King's favour, threw herſelf at his feet, beſeeching him to compaſſionate her brother, who, through a great miſtake, was fallen under his Majeſty's diſpleaſure; for as ſhe was ſure that none of his ſubjects exceeded him in loyalty, ſo his Majeſty might ſee he was not the man they deſigned, ſince the warrant was for Sir James Harrington, whereas her brother was never honoured with ſuch a title by his Majeſty's anceſtors, and he would not have accepted it from Oliver. To this artful plea the King as politely anſwered, That though they might be miſtaken in his title, he doubted he might be found more guilty of the crimes alledged againſt him, than he wiſhed any brother of her's to be. Then ſhe petitioned he might be examined before his Majeſty, or brought to a ſpeedy tryal. Not one of her requeſts was gratified. Shortly after, Lord Lauderdale, who was ſomewhat a-kin to him, Sir George Carteret, and Sir Edward Walker, were ſent to examine him in the Tower, about a plot, which they ſaid he had contrived againſt his Majeſty's perſon and government (y). At the hearing of this he was greatly revived: for, 'till then, though he might know he was not engaged in any conſpiracy againſt the King, ſince his Reſtoration, he could not be inſenſible how virulently, nay even traiterouſly, he had abuſed his character, as well as his royal progenitors, before that period [K]; and

(y) Wood dates this incident November 26.

(x) Toland, ut ſupra, p. 30.

(y) Ibid. p. 31.

' The ſoldiers, who commonly were there as auditors ' and ſpectators, would have kicked them down ſtairs, ' but Harrington's moderation and perſuaſion hindred ' them (13).' The plan of government theſe meetings were intended to recommend, was conformable to Harrington's Oceana. The ſupreme authority of the nation was to be in a ſenate, a third part of which ſhould rote out by ballot every year; ſo that every ninth year the ſaid ſenate would be wholly altered. No magiſtrate was to continue in office above three years, and all to be choſen by ballot. This doctrine was very taking; and the more, as there ſcarcely appeared at that time a poſſibility of the King's return. However, the greateſt of the parliament men hated it, as being againſt their power. Eight or ten were for it, of which number Henry Nevil was one, who propoſed it to the Houſe, and made it out to the members thereof, that, except they embraced that way of government, they ſhould be ruined. This club laſted till about the 21ſt of February, 1659, when the ſecluded members being reſtored by General Monke, all their ſchemes vaniſhed (14).

(13) Wood, ut ſupra, col. 591.

(14) Idem.

[K] *He had abuſed his character, as well as his royal progenitors, before that period.*] Nothing can be viler than the picture he has drawn of Mary Queen of Scots: he even outſcandalizes Buchanan (15). He has painted her ſon, James the Firſt, alſo, in the moſt odious colours; ſuggeſting at the ſame time, that he was not born of the Queen, but was a ſuppoſitious impoſtor, and, of courſe, had no right to the Crowns he inherited (16). His portrait of Charles the Firſt is an abominable figure (17). Beſides ſeveral other bad things, and one moſt horrible, even parricide, he ſays of him, ' Never was man ſo reſolute and obſtinate in a ' tyranny.——He was one of the moſt conſummate in ' the arts of tyranny that ever was. And it could be ' no other than God's hand that arreſted him in the ' height of his deſigns and greatneſs, and cut off him ' and his family (18).' Charles the Second was in Scotland when this libel was publiſhed, ſo defamatory of him and his anceſtors; which circumſtance I mention, that the enſuing paſſages may be more intelligible to the reader. He went thither at the earneſt requeſt of that people, who profeſſed the higheſt loyalty and affection. How they uſed him there is known to every one. His ſituation was truly miſerable; rather an object of pitty, than to be envyed. They treated him liker a ſlave than a ſovereign. But, inſtead of commiſerating the unhappy Prince, or blaming the brutality and ſottiſhneſs of his mock ſubjects, Harrington predicts the vengeance of God on them, for receiving him at all, unleſs (as he odly ſays) the Engliſh army prevented the Deities inflicting it. He repreſents him, there, with that nation, as a Log among his Frogs, ſuffering them to play about him; then adds, ' Yet God will ' ſuffer him (if the Engliſh army prevents not) to turn ' Stork and devour them, while their cries ſhall not be ' heard, as thoſe that (in ſpight of the warning of Pro- ' vidence, and the light of their own reaſons, for their ' own corrupt intereſt and greedy ambition) brought ' thoſe miſeries upon themſelves (19).' And he cloſes The Grounds and Reaſons of Monarchy (a magazine of this and abundantly more ſlander) with the following paragraph: ' Our ſcene is again in Scotland, which ' has accepted Charles the Firſt's ſon, whom, for di- ' ſtinction ſake, we will be content to call Charles the ' Second,

(15) Works of Harrington collected by Toland, Lond. 1737. fol. p. 28.

(18) Idem, p. 32.

(19) Idem, p. 15.

and therefore might well fear the weight of his vengeance, whenever an occaſion preſented of inflicting it. But now he perceived his accuſation was not of that, but of a more recent crime, whereof he was not guilty, he fancied he ſhould eaſily clear himſelf, and be ſpeedily releaſed. However, though, according to that account of his examination which he tranſmitted to his ſiſters, he made a plauſible defence, and even ſeems to have in ſome meaſure inclined Lauderdale and the reſt to believe him innocent; and though a committee of Lords and Commons, after ſeveral ſittings, could make nothing of this imaginary plot [*L*], and never ſo much as named him in all their reports (*z*), he remained a cloſe priſoner. His ſiſters in the mean time being impatient to know his condition, after ſeveral petitions, at length obtained an order of Council to admit them into the Tower; where they found him barbarouſly uſed by the Lieutenant, whom they ſoftened into more humanity by a preſent of fifty pounds, under the notion of fees. By them he delivered a petition to the King; not only aſſerting his innocence, but commending his own behaviour in the late times, 'When he had oppoſed the uſurper in ſuch a manner, as was judged, 'even by the Royaliſts themſelves, to be very much to his diſadvantage.' Wherefore he begged the favour of a public tryal, or a more eaſy confinement (*a*). Other ſupplications were made in his behalf, but all to no purpoſe. Finding no relief from this quarter, he turned his eyes toward the Parliament, and framed a petition, repreſenting to that illuſtrious body the hardſhips he had undergone, 'by lying a cloſe priſoner in the 'Tower for five months, on a bare ſuſpicion of ſome diſaffection to the government; 'which in all his examinations did not in the leaſt appear; that he hoped in that time 'ſo to have cleared his innocence by a public tryal, as to deſerve his liberty; and that 'becauſe he underſtood theſe matters were in ſome meaſure before their Houſe, he 'would not preſume, without firſt making his application to them, to ſue for his 'freedom by other legal means.' But ſo much was that Houſe then under the awe and influence of the Court, that his ſiſter could get none of the members to deliver this petition, or to give her any encouragement. Several, on the other hand, diſſwaded her from any application at all, leſt, inſtead of procuring her brother any benefit thereby, ſhe haſtened his deſtruction: whereas, if ſhe continued patient under his ſufferings, he might be ſafe in his reſtraint (*b*). Theſe methods failing, he adviſed his ſiſter to move for an *habeas corpus*. She did ſo. It was at firſt abſolutely denied. It was afterwards granted, and duly ſerved; but the effect of it baſely defeated by a moſt arbitrary and cruel proceeding: for when he and his friends juſtly expected, that, in conſequence of this writ, he ſhould have been preſently brought to a legal tryal, or enlarged, his warder came one day to his ſiſters at Weſtminſter, and informed them, that, between one and two o'clock that morning, their brother was put on board a ſhip, to be tranſported he knew not whither, without any time given him, either to ſee his friends, or to make proviſion of money, linnen, or other neceſſaries (*c*). His relations were under the deepeſt concern on account of this ſtrange incident. They made all the enquiry they could poſſibly after him, at the Tower, and at the Secretary's office, but all to no purpoſe. They could get no intelligence

(*b*) Ibid, p. 36.

(*c*) Idem.

'Second. Certainly theſe people were ſtrangely blind 'as to God's judgment perpetually poured out upon a 'family; or elſe wonderfully addicted to their own 'intereſt, to admit the ſpray of ſuch a ſtock; one that 'has ſo little to commend him, and ſo great improba-'bility to further their deſigns and happineſs; a 'popiſh education, if not religion too, however for 'the preſent he may ſeem to diſſemble it; France, 'the Jeſuits, and his mother, good means of ſuch an 'improvement; the dangerous maxims of his father, 'beſides the revenge he owes his death, of which he 'will never totally acquit the Scots; his hate to the 'whole nation; his ſenſe of Montroſe's death; his 'backwardneſs to come to them 'till all other means 'failed (both his foreign begged aſſiſtance, his propo-'ſitions to the Pope, and commiſſions to Montroſe) 'and, laſtly, his late running away to his old friends 'in the North: ſo that any may ſee his preſent com-'pliance to be but hiſtrionical and forced, and that as 'ſoon as he has led them into the ſnare, and got power 'into his own hands, ſo as that he may appear once 'more bare-faced, he will be a ſcourge upon them for 'their groſs hypocriſy, and leave them a ſad inſtance 'to all nations, how dangerous it is to eſpouſe ſuch an 'intereſt,' againſt which God with ſo viſible and ſevere 'a hand does fight, carried on by and for the ſupport 'of a tyrannizing nobility and clergy, and wherein the 'poor people are blindly led on—and made inſtrumen-'tal with their own eſtates and blood towards inſlaving 'and ruining themſelves (20).' Whatever ground there might be for this invective, there can be none for ſuppoſing the writer of it a true friend or ſubject of Charles the Second: nor can we conceive with what face his ſiſter could plead for that Prince's compaſſion towards him, under that character; or in the leaſt wonder at the diſmal apprehenſions he entertained in the beginning of his impriſonment, while he was unacquainted with the real occaſion of it.

(20) Idem, p. 32.

[*L*] *Could make nothing of this imaginary plot.*] The account Chancellor Hide gave of it, at a conference of the Lords and Commons, was, 'That one and thirty 'perſons were the chief managers of it; that they met 'in Bow-ſtreet Covent garden, in St Martins-le-grand, 'at the Mill-bank, and in other places; and that they 'were of ſeven different parties or intereſts, as, three 'for the Commonwealth, three for the long Parlia-'ment, three for the city, three for the purchaſers, 'three for the diſbanded army, three for the indepen-'dents, and three for the fifth-monarchy men. That their 'firſt conſideration was how to agree on the choice of 'Parliament-men againſt the inſuing ſeſſion; and that 'a ſpecial care ought to be had about members for the 'city of London, as a precedent for the reſt of the 'kingdom to follow, whereupon they nominated the 'four members after choſen, and then ſitting in Parlia-'ment. Their next care was to frame a petition to the 'Parliament for a preaching miniſtry, and liberty of 'conſcience. Then they were to divide and ſub-divide 'themſelves into ſeveral councils and committees, for 'the better carrying on their buſineſs by themſelves or 'their agents and accomplices all over the kingdom. 'In theſe meetings Harrington was ſaid to be often in 'the chair; that they had taken an oath of ſecrecy, 'and concerted meaſures for levying men and money.' The Chancellor added, that though he had certain information of the times and places of their meetings, and particularly thoſe of Harrington and Wildman, they were nevertheleſs ſo fixed in their nefarious deſign, that none of thoſe they had taken would confeſs any thing, not ſo much as that they had ſeen or ſpoken to one another at thoſe times or places (21).

(21) Life of Harrington, by Toland, p. 35.

[*M*] *Was*

telligence of him any where. They were a fortnight labouring under this painful anxiety, uncertain of his condition, and dreading his fate; when they received a note from his own hand on board one of the King's ships, then lying under Hurſt-caſtle, informing them he believed he was bound for Plymouth. About a month after, he ſent them word, by another letter, that he was landed on a fort of rock oppoſite to Plymouth, called St Nicholas's iſland; from whence he frequently afterwards wrote to them (*d*). His cloſe reſtraint here, where the water was very bad, and he had ſcarcely room enough to move in, quickly impaired his health. This occaſioned a petition for his being removed to Plymouth, which was complied with, on his brother and uncle obliging themſelves in a bond of five thouſand pounds, for his ſafe impriſonment. Here he had the liberty of walking on the hoe, and was exceedingly well treated by the Deputy-Governor of the fort, Sir John Skelton. At this place he unfortunately became acquainted with one Dr Dunſtan, who adviſed him to take a preparation of Guaiacum in coffee, as a certain cure for the ſcurvy, with which he was then troubled. He drank of this liquor in great quantities, morning and evening; which, it is like, had a very pernicious effect, for he ſoon grew delirious. His ſiſters having notice of this from his landlady, one of them applied to the Earl of Bath, then Chief Governor of Plymouth, and informed him of his priſoner's ſad condition (*e*). This noble lord hereupon repreſenting his caſe to the King, and interceding for his removal to London, where he might have the advice of able Phyſicians, his Majeſty granted a warrant for his releaſe, ſince nothing appeared againſt him, ſupported by any credible evidence or preſumption (*f*). The next day Lady Aſhton, with another of his ſiſters, ſet out for Plymouth, where they found him in a miſerable ſtate; his underſtanding quite impaired, and his body waſted to a ſkeleton. A rumour among the people of the town, that he had taken ſome drink which would make any one mad in a month; the ſurlineſs of the doctor, and ſome expreſſions that dropped from a maid, who was put to attend him againſt his will, made ſeveral ſuſpect he had foul play, leſt he ſhould write any more *Oceanas* (*g*). It was near a month before he was able to bear the journey to London in a coach. Here (after paſſing a time at Aſhted in Surry, to drink the Epſom waters, from which he received no benefit) he was put wholly under the care of Dr Prujean, who with all his art could afford him little help for the weakneſs of his body, and none at all for the diſorder of his mind. He would diſcourſe of other things as rationally as any man; but when his own diſtemper was touched on, he would fancy and utter ſtrange things about the operation of his animal ſpirits, which tranſpired from him, he ſaid, in the ſhape of birds, flies, bees, or the like. He talked ſo much of good and evil ſpirits, that he even terrified thoſe about him. But he was wont to argue ſo ſtrenuouſly, that theſe chimeras were not the iſſues of a diſordered imagination, that his Doctor, as we are told, was often put to his ſhifts for an anſwer [*M*]. He would on ſuch occaſions compare himſelf to Democritus, who, for his admirable diſcoveries in Anatomy, was reckoned diſtracted by his fellow-citizens (*b*). In this crazy condition he married the daughter of Sir Marmaduke Dorrel of Buckinghamſhire; a very agreeable woman, and celebrated wit, whoſe perſon and converſation he always admired, and who had been long intimate with his family. He had made his addreſſes to this lady in his younger days; but ſhe was then in the height of her charms, and did not make thoſe returns of affection he deſired. And now ſhe thought fit to accept him, having probably been diſappointed of greater expectations, it preſently appeared the match was not ſo diſintereſted on her ſide as ſhe pretended. Some intimations of this in her conduct occaſioned a difference between them, ſoon after their nuptials; however, a reconciliation quickly enſued, and he treated her with great generoſity and reſpect during the remainder of his life. Towards his latter end he was ſubject to the gout, and enjoyed little eaſe, but drooping and languiſhing a good while, he was at laſt ſeized with a palſy, and died at Weſtminſter, the eleventh of September, 1677, leaving his eſtate to his brother's children, and lies buried in St Margaret's church, on the ſouth ſide of the altar, next the grave of Sir Walter Ralegh (*i*). Mr Harrington was a man of genius and learning, but he can hardly be deemed a fine writer. He is redundant in reſpect of his matter, too verboſe, and his ſtile not only exuberant, but diſfigured with uncouth terms and phraſes. However, a ſkilful and patient reader may collect a very valuable ſtock of political knowledge out of his writings. We ſhall give a liſt of them below [*N*].

[*M*] *Was often put to his ſhifts for an anſwer.*] There muſt ſurely have been ſome flaw in the Doctor's own underſtanding, or he would never have ſtudied any reply to the ravings of a lunatic: for ſuch Mr Harrington was certainly in this inſtance. Nor can one otherwiſe than ſmile at the grave apology which Mr Toland offers in behalf of theſe whimſies; which he owns indeed puzzled him for a while, 'till he at length happened on a ſolution, that, in his judgment, frees them from all imputation of madneſs. 'This he found in a paper written by Harrington himſelf, and communicated, after his death, to Mr Toland; whereby it appeared, 'That the ſaid Harrington's pretended viſions of angels and devils were nothing elſe but 'good or bad animal ſpirits, and that his flies and 'bees were only ſimilitudes whereby he uſed to expreſs 'the various figures and forms of thoſe particles (22).' Mr Toland, it ſeems, on the reading of this piece, was perfectly amazed at the diſcovery of ſo mighty a ſecret; and it had ſuch an influence on him, that he could never after, as he tells us, be convinced of Harrington's being delirious in this particular. And to ſatisfy the learned in the point, who are all, as he imagines, concerned therein, he has preſented them with the diſcourſe itſelf, at the concluſion of the author's life (23).'

HARRIOT [THOMAS], the firſt inventor of the way of notation ſince univerſally uſed in Algebra (*a*), was born and bred at Oxford (*b*); and having completed his Bachelor of Arts degree in Lent 1579 (*c*), being then about 19 years of age, he had ſo remarkably diſtinguiſhed himſelf by his ſkill in Mathematics, as to be recommended ſoon after to Sir Walter Ralegh as a proper Preceptor for him in thoſe ſciences. Accordingly that gentleman became his firſt patron, and took him into his family, with the allowance of an annual penſion (*d*). This was the firſt reward of his merit, and there are ſeveral inſtances which undeniably evince that his patron found him worthy of his eſteem and confidence. For in the firſt place, after he had, in purſuance of his purpoſe, made a ſufficient diſcovery of the country now called Virginia, in 1584, he ſent our author, with the colony, under Sir Richard Greenvile, the following year, as a perſon every way qualified to open the way for ſettling it (*e*). From their firſt arrival there, in June 1585, Mr Harriot applied himſelf to the buſineſs with all the diligence which the occaſion required (*f*); and upon their return home, after a full year's ſtay, by reaſon of ſome unforeſeen accidents, without having made ſuch a progreſs towards the ſettlement as was expected [*A*], he was employed by Sir Walter to draw up and publiſh a topography of the country, in order to keep up the ſpirit of the undertaking [*B*]. This piece was publiſhed in 1588 in 4to (*g*); and it was

(*a*) See below in remark [*H*].

(*b*) See the inſcription upon his monument in remark [*F*].

(*c*) He took this degree Feb. 12. and completed it the following Lent. Wood's Faſti, Vol. I. col. 118. & Ath. Ox. ibid. col. 459. where he tells us, Mr Harriot was entered of St Mary-Hall, and bred under two ſucceeding Principals there, both ſtrict Diſciplinarians.

(*d*) Idem ibid. col. 460.

(*e*) In the liſt of the perſons who ſtaid a year in Virginia, our author is ranked among the *gentlemen*, and his name put in the ſecond place next to the Admiral Amada, who firſt diſcovered the country. See an account of the particularities of the employments of the Engliſhmen left in Virginia, &c. in 1585. Hakluyt's Voyages, &c. Vol. III. p. 255. Lond. 1660. fol.

(*f*) See Sir Richard Grinvile's Voyage for Sir W. Ralegh in 1585. Ibid. p. 251. In the concluſion, where he ſays, he had drawn up a chronicle of all the remarkable occurrences of the ſeveral colonies, from the firſt diſcovery of Virginia in 1584 to that time, which he then intended to publiſh, but did not, being probably prevented by the accounts of others.

(*g*) It is ſubſcribed February 1587. in the

(3) Account of the Particularities, &c. part ii. at the end.

[*A*] *Some unforeſeen accidents obliged them to return without ſucceſs.*] Mr (afterwards Sir) Ralph Lane, who on the departure of Sir Richard Greenvile, was left by him Deputy Governour of the colony, thought himſelf obliged to leave the country on account of the weakneſs of his company, as well as their ſmall number; the loſs of their bark, which with all their proviſions was carried away by a ſtorm, and their diſappointment in their expected ſupply, which though promiſed by Sir Richard Greenvile, to be with them undoubtedly before Eaſter, yet was not then [in June] come, nor likely to come that year (1). And to theſe reaſons may be added what Mr Harriot writes concerning the temper and qualities of ſome of the inferior members of this colony (2), that either through ignorance of the nature of ſuch an undertaking, or malice and ill-will to their maſters, or elſe through lazineſs and an accuſtomed delicacy of life (which probably reduced them to that weak condition mentioned by the Deputy Governour) they were either grown weary of, or not well affected to, the enterprize. For theſe reaſons it was thought proper not to loſe the opportunity of returning in the Fleet with Sir Francis Drake, who happened to touch there in his way home *. Accordingly they ſet ſail on the 19th of June 1586, and arrived at Portſmouth the 27th of July following (3).

[*B*] *He drew up a topography of the country, to keep up the ſpirit of the undertaking.*] It is intitled, *A Brief and true Report of the New Found Land of Virginia: Of the Commodities there found and to be raiſed, as well merchantible as others. Written by Thomas Harriot, Servant to Sir Walter Ralegh, a Member of the Colony, and there employed in diſcovering it a twelve month.* From this treatiſe we have already in the preceding remark taken notice of the ill-will which had begun to take root in ſome of the inferior ſort of the colony before their departure; this was apparently nothing elſe but the ſimple effect, as is ordinarily ſeen, of diſappointment †; and there being no poſſible way of removing that cauſe for the preſent, the diſtemper grew to a head in the paſſage, and ſoon after their arrival in England broke out in various diſparaging miſrepreſentations of the country, in order to involve the ruin of the whole deſign in their particular diſappointment. Every body knows how many difficulties inſeparably attend an attempt to ſettle a new colony abroad, as well as the general diſpoſition of the people at home to believe the worſt reports which they hear about it. 'Twas to prevent the miſchief of ſuch falſe and ſlanderous reports, that our author, as he declares (4), was prompted to draw up and publiſh the preſent treatiſe, which therefore is called by him very appoſitely,

† In not finding gold and ſilver ſo ſoon as they looked for.

(4) In the introduction, addreſſed to the adventurers, favourers, and well-willers, of the enterprize for the inhabiting and planting of Virginia.

was probably either this or the following year, that his patron introduced him to the knowledge of Henry Percy Earl of Northumberland, who being pleaſed with his affability and peaceable temper, and convinced of his profound learning, gave him a penſion of one hundred and twenty pounds a year, and afterwards kept a handſome table for him, and ſome other of his mathematical friends [*C*], in the Tower, where his Lordſhip was impriſoned in 1606 for life, diverting the melancholy of his confinement in the daily ſociety of men of learning and ingenuity. Sir Walter Ralegh being alſo in the Tower at the ſame time, frequently joined in the company (*b*), enjoying the ſweets of friendſhip in a free and unreſerved declaration of ſentiment upon points of literature with his preceptor [*D*], who always retained a moſt grateful ſenſe of his patron's favours. It was in this ſentiment that he firſt introduced Captain Keymis to him [*E*], whoſe information afterwards of a gold

(*b*) Wood, where laſt cited.

appoſitely, *A true Report* of the New Found Land, &c. and to gain credit to his report, he ſignifies not only that he had been in the diſcovery, but was eſpecially employed in dealing with the natural inhabitants, and had therefore ſeen and known more than the ordinary ſort. In further confirmation of the truth of his report, there is prefixed a preface by Mr Lane, the Deputy-Governour abovementioned; wherein he ſtakes his own credit for the ſaid truth, atteſting that the author of the treatiſe, was a man no leſs for his honeſty, than for his learning commendable.

[*C*] *Kept a table for him and ſome of his mathematical friends.*] Theſe friends were Walter Warner and Robert Hughes. He alſo allowed to each of theſe a penſion, but of leſs value than that of Mr Harriot, as indeed their merit was leſs (5). They were the Earl's conſtant companions while he was detained in the Tower, and were uſually called the Earl of Northumberland's Three Mags (6). Of Mr Warner, we ſhall have occaſion to ſpeak further in the ſequel; the other, Mr Hughes, is well known by his treatiſe of the globes, the firſt edition of which was printed in Latin in 1593, 8vo. with this title, *Tractatus de globis & eorum uſu; accomodatus iis qui Londini editi ſunt.* Mr Hughes was alſo tutor to the Earl of Northumberland's ſon, Algernoon Percy, while he was at Chriſt-church-college in Oxford (7). We are told that the Earl retained an acquaintance of Mr Hughes's in his ſervice, the famous Nicholas Hill (8), author of a piece intitled, *Philoſophia Epicurea, Democritana, Theophraſtica, propoſita ſimpliciter non edocta*, Pariſ. 1601, 8vo. of which Ben Johnſon has theſe lines (9):

(5) Wallifii Opera, Vol. II. in præfatione.

(6) Wood's Ath. Ox. col. 460. Vol. I. To theſe the Earl afterwards added Nath. Torperley, who had been amanuenſis to the famous Vieta in France. Ibid. col. 566.

(7) Ath. Ox. col. 572. Vol. I.

(8) Idem ibid. col. 365.

(9) In his epigrams, No. 134.

Thoſe atomi ridiculous, whereof old Democrite, and
Hill Nicholis,
One ſaid, the other ſwore, the world conſiſts.

The witty Ben might probably be prompted to introduce Hill Nicholis into this epigram, on account of the following pleaſant ſtory concerning him. That when he was ſecretary to Edward, the poetical and prodigal Earl of Oxford, among other accounts he brought in this. *Item, for making a man*, 10*l.* 0*s.* 0*d.* and being required by the Earl to explain it, he ſaid he had merely out of charity given that ſum to a poor perſon who had frequently told him, that *ten pounds would make him a man* (10).

(10) Wood, where laſt cited.

[*D*] *A free converſation upon points of learning with his preceptor.*] Mr Wood, from whom this account is collected, will needs have our author to be a deiſt, and ſuggeſts, that when theſe converſations turned upon religion, the infinity of matter and of the world, and other points, contrary to the accounts in the Bible, were maintained by him. But it has been already ſuggeſted (11), that this imputation is charged upon him without any authority, and alſo is very inconſiſtent with Mr Harriot's behaviour. In his employment to convert the natives of Virginia to the Chriſtian religion, when explaining to them the contents of the Bible, he declared, 'That therein was ſet forth the true and only 'God and his mighty works; that it contained the true 'doctrine of ſalvation through Chriſt, with many par-'ticularities of miracles and chief points of religion, 'as I was able, ſays he, then to utter, and thought fit 'for the time.' However at the ſame time we find him prudently cautioning them againſt running into any ſuperſtitious veneration of the ſaid book, when he ſaw them embrace and kiſs it, and ſtroke over all their bodies with it, obſerving to them that the book materially and of itſelf was not of ſuch virtue as he thought they conceived, but only the doctrine therein contained. In reality, the whole diſcourſe of our author with thoſe heathens, is dictated by a true ſpirit of piety, as well as good ſenſe; and that he continued ſteady in the ſame principles of religion to his death, appears both from the inſcription upon his monument, where he is declared to be, *Dei Trinitatis cultor piiſſimus*, and alſo from a remark in a poem on the appearance of the comet in 1618, addreſſed to Sir Tho. Aiſbury, by Dr Richard Corbet, ſucceſſively Biſhop of Oxford and Norwich, where he writes thus,

(11) In the General Dictionary, under our author's article.

Now for the peace of God and men adviſe,
Thou that haſt where withal to make us wiſe,
Thine own rich ſtudies, and deep Harriot's mine,
In which there is no droſs, but all refine (12).

(12) Corbet's Poems, p. 56. Lond. 1672. 8vo.

As this poem appear to be wrote particularly upon the opinion at that time in general vogue, that comets were certain fore-runners of ſome impendent judgment from the Deity. The Biſhop therein ſeems to allude to a remarkable paſſage in the diſcourſe about religion to the natives of Virginia juſt mentioned, wherein Mr Harriot, ſpeaking of the extraordinary ſucceſs in their military engagements againſt thoſe idolators, which became more effectual by a general ſickneſs wherewith they were ſeized, thereupon makes this remark. Some of them ſaid, 'It was the eſpecial work of God for our 'ſakes, as we ourſelves, continues he, have cauſe in 'ſome ſort to think no leſs, whatever ſome do, or 'may imagine to the contrary, eſpecially ſome aſtrolo-'gers knowing of the eclipſe of the ſun, which we ſaw 'the ſame year before in our voyage thitherward, 'which in the time appeared very terrible; and alſo of 'a comet which begun to appear but a few days be-'fore the beginning of the ſaid ſickneſs; *but to exclude 'them from being the eſpecial cauſes of ſo eſpecial an ac-'cident, there are further reaſons than I think fit at 'preſent to be alledged.*' Hence it appears that Mr Harriot's religion and piety were kept by his good ſenſe within the bounds of reaſon, and if in the free converſation between him and his patron, ſome ſuperſtitious and groundleſs conceits, too ſtiffly maintained by the divines of thoſe times, were handſomely rallied, that was a further proof of the good ſenſe of both; Though turned by Mr Wood into an occaſion of aſperſing both as deiſts (13).

(13) Sir Walter Ralegh's character is vindicated alſo by an appeal to ſeveral parts of his *Hiſtory of the World*. See his Life by Mr Oldys, p. 71.

[*E*] *He introduced Captain Keymis to Sir Walter.*] This is inſerted upon the authority of Mr Wood *, who has ranked him among the number of our author's mathematical friends, of which the following Latin poem written by Captain Keymis, and prefixed to the account of his ſecond voyage to Guiana in 1596, is an illuſtrious proof. It contains a deſcription of that country, and runs thus:

* Ath. Ox. Vol. I. col. 433.

Ad Thomam Hariotum, Matheſeos et Univerſæ, Philoſophiæ peritiſſimum. De Guiana Carmen.
Datum Anno 1595.

Montibus eſt Regia, quaſi muris, obſita multis,
Circumſepit aquis quos Raleeana ſuis.
Intus habet largos Guaïna receſſus,
Hoſtili geſtans libera colla jugo.
Hiſpanus clivis illis ſudavit, et alſit,
Septem annos novies: nec tamen invaluit.
Numen & omen ineſt numeris: fatale ſit illi,
Et nobis, virtus ſit recidiva, precor.
Gualtero *patefacta via eſt duce & auſpice* Ralegh
Menſe uno: ô factum hoc nomine quo celebrem?
Nocte dieque, datis velis, remiſque laborans,
Exegit ſummæ dexteritatis opus.
Scilicet expenſis magnis non ille pepercit,
Communi natus conſuluiſſe bono.

Providus

gold mine in Guaiana (*i*), as 'tis ſaid, was made uſe of by Sir Walter to procure his releaſe from the Tower. The attempt conſequent thereupon proved indeed fatally ruinous to both theſe friends of Mr Harriot by different ways, though from the ſame cauſe. But the death of Sir Walter particularly brought an indelible infamy upon the royal author of it. 'Neither did his friend, the ſubject of the preſent article, long ſurvive it. For being ſeized with a cancer in his lip, he put himſelf under the care of Dr Alexander Rhead (*k*); but that cruelly painful incurable malady (*l*) put an end to his life, July 2, 1621. He died in Sion-college, where he had reſided ſeveral years for the ſake of his ſtudies; whence his corpſe was carried with great funeral ſolemnity to St Chriſtopher's church, and interred there, a monument being erected to his memory by his noble executors, Robert Sidney Viſcount Liſle, and Sir Thomas Ayleſbury, with an inſcription (*m*) which is inſerted below [*F*]. Our author left ſeveral poſthumous pieces (*n*), none of which have been printed (*o*) except the following in folio, whereof the title-page is thus drawn up, *Artis Analyticæ praxis ad æquationes algebraicas nova expedita, & generali methodo reſolvendas; e Poſthumis Thomæ Harrioti, Philoſophi ac Mathematici celeberrimi ſchediaſmatis ſumma fide & diligentia deſcriptis, & Illuſtriſſimo Domino Henrico Perceio Northumbricæ Comiti, qui hæc primo ſub patronatus munificentiæ ſuæ auſpiciis ad proprios uſus & lucubrata in communem Mathematicorum utilitatem denuo reviſenda deſcribenda & publicanda mandavit, meritiſſimi honoris ergo nuncupatus.* Lond. 1631 [*G*]. This work contains ſo many excellently uſeful improvements

(*i*) See General Hiſtory of Great-Britain, or the Life and Reign of King James I. Lond. 1653. p. 112. and Howel's Letters, &c. let. 43. p. 95. edit. 1650.

(*k*) See Dr Rhead's Works, Treatiſe 2. of Ulcers, Lect. 26. Lond. 1650. where the doctor alſo obſerves, that Harriot and his three friends beforementioned were main aimed by the noble Earl of Northumberland while in the Tower, whom he ſtiles the Mæcænas of learning and all learned men.

(*l*) Mr Oldys, ubi ſupra, imagines, this cancer might be occaſioned by holding frequently mathematical inſtruments of braſs in his mouth. But he ſeems to forget that Mr Harriot's ſtudies lay more in the ſpeculation than in the practice of that art.

(*m*) Ath. Ox. Vol. I. col. 460.

(*n*) See remark [*G*].

(*o*) One intitled *Ephemeris Chirometrica* is preſerved in Sion-college library.

Providus excubuit ſimili diſcrimine Joſeph,
Sic fratres fratrem deſeruere ſuum.
Fama coloratam deſignet ſi bona veſtem,
Veſtis ſciſſa malis ſic fuit illa modis.
Mira leges, aureſque animumque tuum arrige, tellus
Hæc aurum et gemma, graminis inſtar, habet.
Ver ibi perpetuum eſt: ibi prodiga terra quotannis
Luxuriat, ſola fertilitate nocens.

(15) Stowe's Survey of London, Vol. I. book ii. p. 123. edit. 1725.

[*G*] *Artis analyticæ praxis, &c.*] This book was publiſhed by Mr Warner (though without mentioning his name) (16), concerning which Mr Wood gives the following account (17). That, 'the ſum of it coming 'to the hands of Sir Thomas Ailſbury, Mr Warner 'undertook to perfect and publiſh it, on condition 'that Algernoon, eldeſt ſon of Henry Earl of Nor-'thumberland would, after his father's deceaſe, con-'tinue his penſion to him during his life. This being 'obtained by the intereſt of Sir Thomas Ailſbury (18), 'Warner took a great deal of pains in it, and at length 'publiſhed in that ſort as we ſee it now extant.' The obvious inference from this account is, that the manuſcript being left imperfect by the author, theſe defects were ſupplied by the editor, which however is ſo far wide of the truth, that beſides no notice being taken by the latter, of his having made any ſuch ſupplies, it is certain that one remarkable hiatus in the manuſcript was left by him unſupplied in the printed copy, and was afterwards obſerved and filled up by Dr Wallis in his hiſtory of Algebra. All that Mr Warner added, was a preface and an epilogue, in both which he has indeed ſhewn himſelf to be a friend worthy of Mr Harriot, the ſtile in both being perſpicuous and elegant, and the matter cloſe and pertinent. With regard to the *preface*, in order to give the reader an exact and comprehenſive view of Mr Harriot's true merit in this piece, he lays before him an account of the ſtate of the analytick art in the ſeveral ſtages from it's origin and invention by the Ancients, to it's reſtitution by Vieta. In executing this general plan, he proceeds to obſerve, particularly, 'That in the buſineſs of inveſtigation, 'the Ancients generally made uſe of the analytic art, 'though nothing thereof appeared upon the face of the 'problem as it ſtood in their works, the conſtruction 'being ſynthetical, which was conſequently demon-'ſtrated geometrically; but that this method was ex-'tended univerſally no farther than to quadratic equa-'tions, or to the *loci plani*, for when the analytical ſo-'lution terminated in the formula of the higher orders, 'as cubics, biquadratics, &c. they had recourſe to the '*loci ſolidi*, or the conic ſections; and where that failed, 'to the *loci*, which they called *linear*, that is, to me-'chanic curves, ſuch as the helix, conchoid, quadra-'trix, &c. but that this laſt method was only a neceſ-'ſary ſupplement to their defective art; theſe mecha-'nical conſtructions being by the nature of them inca-'pable of geometrical demonſtrations. In this ſtate 'the analytic art or power in ſolving problems, ſtuck 'among the Grecians, nor were any improvements 'made therein by the Arabs, who did nothing more 'than give to the art the name of Algebra from their 'own language. Here it ſtood 'till Cardan and Tarta-'glia, Italians, building upon a certain geometrical 'foundation, endeavoured to advance it to the ſolu-'tion of cubic equations demonſtratively, and this 'they performed in ſome conditional caſes accurately, 'but by a very perplexed form in binomial roots: 'and even ſo, this baſis of the ſolution is not general 'and abſolute. Which being obſerved by Stevinus, 'he proceeded a ſtep further, and exhibited, (1.) A 'method of ſolution for ſuch cubic equations as were 'reſolvable by their original nature and condition, 'that is, ſuch whoſe ſolutions may be drawn from the 'ſuppoſed foundation. (2.) He reduced and reſolved 'thoſe forms of cubic equations which are reducible by 'their condition to the primary ones. (3.) He re-'ſolves ſuch biquadratics after they are reduced to 'thoſe primary cubics to which they are reducible. 'All the reſt unconditionated, as well cubics as biqua-'dratics (which is a great part of the whole) being, 'by a tacit excluſion, condemned as irreſolvable, to 'the great detriment of the art. This was the pro-'greſs, and theſe the boundaries of the Italian inven-'tion, limited, continues Mr Warner, not ſo much 'by our ignorance, as by the nature of the thing. At 'laſt appeared *Vieta*, that great analytical archi-'tect, who after many fruitleſs trials and reſearches in 'the geometrical way, turned himſelf at length to the 'arithmetical

(16) Wallis's Hiſtory of Algebra, edit. 1685. fol. in the preface.

(17) Ath. Ox. Vol. I. col. 461.

(18) That gentleman alſo gave Mr Warner an annual penſion, though ſmaller than that which he had from the Earl of Northumberland. Idem ibid.

ments in Algebra, entirely his own inventions, that he is deſervedly ranked among thoſe illuſtrious authors who are an honour to our country; which requires the more notice, as we were for many years robbed of that honour by the management of Des Cartes, who plumed himſelf with theſe Engliſh feathers ſo artfully, that they were generally eſteemed abroad to be the genuine growth of France [*H*].

' arithmetical courſe, and thereby happily invented ' both the *logiſtes ſpecioſa*, and *exegeſis numeroſa*, ' which by the nature of it comprehending the ſolution ' of all equations, of all orders and forms by a general ' uniform and invariable method, ſo that the ſolution ' of problems being finally compleated by the reſolu- ' tion of equations, he marked it by the magnificent ' name of that univerſal problem, *nullum non problema ' ſolvere.*' Mr Warner concludes the preface, with ſhewing the improvements which were made in Vieta's method by Mr Harriot, the particulars of which will be ſeen in the next remark.

In the *epilogue*, the editor declares, that he had publiſhed this work of his friend as a *prodromus* to ſeveral others, all built upon the ſame method of logiſtic ſpecies by the ſame author; which he had in his hands, and intended to give to the public; but none of theſe were ever printed, and are now probably long ſince loſt. As to Mr Warner, we are informed (19), that he was born at Leiceſterſhire, and was a good philoſopher as well as a mathematician, that he invented a table of logarithms, different from that of Briggs (20). That beſides this he wrote a *treatiſe upon coin and coinage*, and firſt communicated the ſecret of the circulation of the blood to Dr Harvey, an account whereof will be ſeen in his article, and that he died in 1640.

(19) By Mr Wood, ibid.

(20) See more of this in the article of PELL [JOHN]

[*H*] *Mr Harriot's inventions were borrowed by Des Cartes.*] After what is ſaid of theſe inventions above, the curious reader will naturally expect to ſee ſome account of them here, and his curioſity will be fully gratified with the following liſt of them given firſt by Dr Wallis. Mr Harriot greatly improves the art, ſays he, (1) *In producing ſmall letters inſtead of capitals to define his ſpecies, as taking up leſs room, eſpecially when they come to be frequently repeated.* (2.) *His waving the terms of quadratic, cubic, ſurſolid, &c. in the deſignation of them, which he performs very naturally by the bare number of their dimenſions as aa, aaa, aaaa, which when they come to be numerous, are conveniently expreſſed by numeral figures* *, *which is alſo ſometimes uſed by others.* (3.) *His putting the whole equation to one ſide, making it equal to nothing; and, which was the end why he did it,* (4.) *Shewing thence the true original of higher equations from a compoſition of lateral or more ſimple equations*, which is the great key, that opens the moſt abſtruſe myſteries in algebra, and which I think we owe purely to him. And, conſequently thereupon, (5.) *Determining the number of roots (affirmative, negative, or imaginary) in every equation, viz. ſo many as are the dimenſions of it's higheſt term.* (6.) *Diſcovering the genuine conſtruction of the abſolutely known quantity*, or homogeneum comparationis, *as Vieta calls it, viz. by a continual multiplication of all the roots.* (7.) *As alſo the conſtitution of all the coëfficients, viz. of what and how many numbers each coëfficient doth conſiſt, and by what multiplication of roots into one another each member is made.* (8.) *Reſolving by diviſion an equation ſo compounded into thoſe ſimple equations, of which by multiplication it is made up.* (9.) *Determining (by comparing common equations with his canonicals) how many roots of each equation are real (and not merely imaginary) and how many of theſe are affirmative, and how many negative.* (10.) *Reducing conditional equations to more ſimple forms by ſuppoſition of certain qualities, or reſpective proportions in their ſeveral roots among themſelves, whereby ſome of their places become vacant, or ſo and ſo qualified, and (conſequently).* (11.) *A diſcovery of thoſe qualities and proportions in the roots, from ſuch want of, or qualifications of the coëfficients as ariſe from thence.* (12.) *Turning at once by changing the ſigns of even places, all the affirmative roots into negative, & è contra.* (13.) *Multiplying and dividing the roots of any equation yet unknown, in any proportion at pleaſure. And,* (14.) *Thereby freeing the coefficients of any equation from fractions and ſurds.* (15.) *Increaſing or diminiſhing the value of ſuch unknown roots, by the addition or ſubduction of any quantity aſſigned. And ſo,* (16.) *By this means (if there be occaſion) making ſome or all of the negative roots to become affirmative or vice verſa. And,* (17) *Taking away (by the ſame means) one or more of the intermediate terms in any equation, and thereby reducing the equation to fewer terms.* (18.) *Taking away in particular, the ſecond term in any equation, by increaſing or diminiſhing the value of the root by an aliquot part of the coëfficient, denominated by ſuch number as is that of the dimenſions of the higheſt term.* (19.) *Reducing thereby all affected quadratic equations to ſimple quadratic.* (20.) *Reducing in like manner all affected cubic equations to two forms very convenient for further reduction.* (21.) *Reducing farther the ſame affected cubic equations to ſimple cubics, as far as they are capable of being reduced into ſpecies.* (22.) *Diſcovering thoſe cubic equations, which are not capable of explication in ſpecies (according to ſuch ways of notation as are yet received) without imagining the ſquare root of a negative quantity, with the demonſtration of that incapacity.* (23.) *Shewing notwithſtanding that theſe ſame equations have real roots, and not merely imaginary.* (24.) *A peculiar way, and very expedient, of reducing affected quadratic equations, to ſimple quadratics, by completing the ſquare.* (25.) *An improvement of the* exegeſis numeroſa, *that is, the numeral ſolution or extraction of roots of affected equations, firſt introduced by* Vieta. All theſe, continues the Doctor, *are either explicitly delivered by him, or are obvious to remark upon the bare inſpection of what he delivers, and moſt of them are properly his own diſcoveries, as far as I can yet find, though in ſome few of them Vieta had gone before him. To this ſtate had Harriot advanced algebra, in that his poſthumous work, written long before; for he died in* 1621, *but publiſhed in* 1631. In running over theſe improvements of Harriot, the Doctor remarks thoſe (and they were the greateſt part of them) which he obſerves were borrowed by Des Cartes, and inſerted in the firſt edition of his Geometry, publiſhed by himſelf in 1637. Whence upon the whole, the Doctor concludes with the following remark in juſtice to Mr Harriot. ' That, *pure algebra, as it ſimply conſiders the* ' *computation and management of proportion, abſtract* ' *from the conſideration of any particular ſubject, none* ' *before him* [Harriot] *had ſo accurately delivered by a* ' *genuine deduction from it's true principles, and what* ' *Des Cartes (who hath borrowed his algebra from him,* ' *and others ſince him) has added to it, are built upon* ' *thoſe foundations which he had laid* (21.)' While this was in the preſs, the Doctor received the following account from Dr John Pell, to whom it was related by Sir Charles Cavendiſh, (only brother to William, then Earl, and afterwards Duke of Newcaſtle,) a perſon of honour, well ſkilled in the mathematics. He diſcourſing at Paris with Monſ. Roberval, an eminent French mathematician concerning that piece of Des Cartes then lately publiſhed. ' *I admire*, ſaith Roberval, *that no-* ' *tion in Des Cartes, of putting over the whole equation* ' *to one ſide, making it equal to nothing* (22); *and how* ' *he lighted upon it. The reaſon why you admire it,* ' ſays Sir Charles, *is becauſe you are a Frenchman; for* ' *if you were an Engliſhman, you would not admire it.* ' *Why ſo?* ſaith Mr Roberval. *Becauſe*, ſaith Sir ' Charles, *we in England know where he had it, name-* ' *ly from Harriot's Algebra. What book is that?* ' ſaith Monſieur Roberval, *I never ſaw it. Next time* ' *you come to my chambers*, ſays Sir Charles, *I will ſhew* ' *it you.* Which a while after he did, and upon peruſal of it, Monſieur Roberval exclaimed with admiration. *Il l'a veu! Il l'a veu!* i. e. *He had ſeen it,* ' *he had ſeen it*, finding all *that* in Harriot, which he had before admired in Des Cartes, and not doubting ' but that Des Cartes had it from thence (23).' Upon this, Dr Wallis, in the preface to his hiſtory of Algebra, ſcruples not to aſſert that Mr Harriot in his Artis Analyticæ Praxis, &c. ' *Had taught (in a manner) all* ' *that, which hath ſince paſſed for* the Carteſian method ' of Algebra, *there being ſcarce any thing of pure Alge-* ' *bra in Des Cartes, which was not before in Harriot,* ' *from whom Des Cartes ſeems to have taken what he* ' *hath that is purely Algebra, but without naming him.*' So bold an attack upon Des Cartes, made a great noiſe both in France and Holland, where it had always paſſed current for truth, that he was the undoubted genuine inventor of what was called the Carteſian Algebra.

* 'Tis no injuſtice to Sir Iſaac Newton to ſay that ſome of his improvements in Algebra are raiſed out of this way of notation.

(21) The doctor had before expreſſed the ſame things in the following words, *Without which* (foundation of Harriot) *the whole ſuperſtructure of Des Cartes (I doubt) had never been.* Hiſt. of Algebra, c. 30.

(22) This is the third improvement by Harriot beforementioned.

(23) Wallis's Hiſtory of Algebra, c. 53. edit. 1685.

Algebra (24). And this book of Dr Wallis coming to the hands of Mr Baillet, that gentleman in his *Abridgment of the life of Des Cartes*, endeavoured to vindicate him in the following manner. 'First, He obſerves that both Roberval and a certain Jeſuit, had objected the conformity of Des Cartes's Algebra, to that of Harriot, in order to prejudice Cartes's reputation, which he was informed of by a letter from Carcavi, but thought ſo unworthy a treatment from ſuch a friend as Mr Roberval, did not deſerve any anſwer (25). 2. Mr Baillet declares, that the matter was decided in favour of Des Cartes by Hudden, in a letter inſerted in Carteſius's Geometry; as alſo by Schooten, in his notes upon that treatiſe, and by Mr Preſtet, in the preface to the ſecond edition of his *Mathematical Elements* (26).' This attempt of Mr Baillet in defence of Des Cartes, being publiſhed in 1693, was peruſed by Dr Wallis, who took the opportunity of returning an anſwer to it in ſome additions to the preface of his Hiſtory of Algebra in Latin in folio, the following year (27). Where he obſerves, firſt, 'That Des Cartes's behaviour, as repreſented by Mr Baillet, amounts to a confeſſion of the charge. He was informed by a letter from Carcavi, that Roberval had objected the conformity of his method with that of Harriot But what ſays he to this, does he deny the fact that he had made uſe of Harriot's inventions? No. What then? *Il n'y eut que l'indignite de la conduite de Roberval qui empecha M. Des Cartes de repondre ſur ce point.* That is, ſays the Doctor, If I conſtrue it right, he took it heinouſly that it ſhould be imputed to him by Roberval, that he had made uſe of Harriot's inventions, but did not deny the thing, rather choſe to make no anſwer to it.' Carcavi, it ſeems, as a friend to Des Cartes, had declared to him very explicitly what had happened. His letter is dated at Paris, September 24th, 1649, where he writes thus. 'Monſieur Roberval *aſſures me, what I would not mention to you, but that it concerns your intereſt to know it, that he could reproach you with what an anonymous author, who wrote a ſmall tract in Algebra (ſome believe him to be a Jeſuit) objects to you*, that in the formation of equations, you only copy what was publiſhed in the year 1631, by an Engliſhman, whoſe name was Harriot, and who is very little known to us here, at leaſt to me (28).' In anſwer to the ſecond part of Mr Baillet's apology, Dr Wallis produces the words of Hudden, which are, '*Regulam hanc de æquatione biquadratica in duas quadraticas reſolvenda quam Dom. Des Cartes, p.* 79, 80, 81, *ſuæ geometriæ deſcripſit, meo, inquit, judicio non veriſimile videtur ipſum ex ullis aliis authoribus, ut nonnulli opinantur, deſumpſiſſe.* i. e. It does not ſeem probable in my opinion, that Des Cartes borrowed the rule, which he gives in the 79, 80, 81 pages of his Geometry for reſolving biquadratic equations into two quadratics, from any other authors, as ſome imagine. Schooten likewiſe makes the ſame remark. *Hem*, cries Wallis, *macrum teſtimonium!* a ſlender evidence this! Hudden thought, that for one ſingle rule, Carteſius was obliged to no body. But what ſays he of the reſt, which he has in common with Harriot, not a ſyllable, *ne γρῦ quidem*. Why am not I alſo ſummoned on the ſame ſide, who throughout the whole 55th chap. of my Algebra, contend that this very rule was not taken from Harriot, nor in Harriot's book, but (as far as I ſaw) was Carteſius's own invention.' As to Mr Preſtet, 'tis true he ſpeaks indeed more directly and poſitively, and does not ſtick to charge the Doctor with being inſtigated herein by an envious principle againſt the glory of the French nation in reſpect of mathematical learning; proteſting that his accuſation of Des Cartes, was raiſed upon idle conjectures alone, unſupported by any kind of proof, and conſequently deſerved not the leaſt credit. His words as related by Dr Wallis, are, '*Invenio ibidem [in præfatione ad elementa ſua mathematica] Dom. Preſtet male habere, quod ego in Algebra mea Anglice edita an.* 1685, *Harrioto noſtro aſſuerum (prout res eſt) eorum plurima puram Algebram ſpectantia, quæ in Carteſii geometria comparent; quodque id (ut ait) vanis conjecturis fecerim, præque invidia et æmulatione Gallicæ gloriæ in rebus mathematicis*, quodque ita renovatum iverim (prout ille loquitur) ridiculam illam accuſationem (29), *cui, cum ego abſque ulla probatione id dixerim, non vult eſſe credendum.*' But what this teſtimony contains of ſubſtance, was ſo notoriouſly falſe, that to wipe it away, the Doctor had nothing more to do than to appeal as he does to the ſeveral facts upon which his charge was grounded: and as to the confident air with which Mr Preſtet pronounces his aſſertion. It may be obſerved, that ſuch a face is frequently aſſumed, to ſupply the want of veracity. To conclude, In further confirmation of his point, the Doctor takes notice that Mr Baillet acknowledges Des Cartes's being in England in this very year 1631, when Mr Harriot's book was printed, and that he came to conſult our famous mathematicians (30). Whence it is more than probable, that he muſt then have heard of the book at leaſt, and have been alſo informed of the nature of it, and upon that account, if we ſhould ſuppoſe, which is more than can be made probable, that it was not finiſhed at the preſs, and publiſhed before his departure: yet it would be doing him an injury to imagine, he had not the curioſity to procure it afterwards.

(24) See Sir Samuel Moreland's Letter from Utrecht, dated January 8, 1688; and Dr Wallis's Anſwer, dated July 4, 1692, to Mr Preſtet, a French author, both inſerted in Wall's's Hiſtory of Algebra, &c. cap. 53. edit. 1694.

(26) Idem ibid. p. 490, 491.

(27) It makes the ſecond volume of his Works, in 3 vols in Latin, 1694. folio.

(28) Lettres de Monſ. Des Cartes, let. lxxviii. Tom. III. p. 457. Paris, 1667. 4to.

(29) This expreſſion, that Dr Wallis was going to repeat that ridiculous accuſation of Des Cartes, ſhews, that Mr Preſtet had heard of the doctor's deſign to publiſh his own works.

(30) La vie de Des Cartes, &c. ubi ſupra, p. 229, 230. where he alſo obſerves, that Des Cartes then made ſome magnetical experiments at London, and in the neighbouring parts, and learned from us the change of the variation of the needle.

P

HARSNET [SAMUEL], a learned writer in the laſt century, ſucceſſively Biſhop of Chicheſter and Norwich, and Archbiſhop of York. He was born in the pariſh of St Botolph, in the town of Colcheſter in Eſſex, and baptized June 20, 1561 (*a*) [*A*]. Moſt probably, he received his firſt education in the free-ſchool of his native place. However, September 8, 1576, he was admitted into King's-college in Cambridge: from whence he removed to Pembroke-hall, of which he became ſcholar, and was elected Fellow of the ſame, November 27, 1583 (*b*). He took the degree of Bachelor of Arts in 1580, and that of Maſter in 1584 (*c*). About three years after, being offered the maſterſhip of the free-ſchool in Colcheſter, he accepted of it [*B*], and was elected in March 1586-7 (*d*). But, after a ſhort tryal of little more than a year and a half, chuſing rather to follow his ſtudies at Cambridge, than the painful trade of teaching; he quitted the ſchool [*C*] in November,

(*a*) From his Will, and the Regiſter of St Botolph's.

(*b*) J. Le Neve's Lives of the Proteſtant Biſhops, Vol. I. Part ii. p. 128.

(*c*) From the Univerſity Regiſters.

(*d*) Hiſt. of Colcheſter, by P. M. book ii. p. 17, 18. and book iii. p. 14.

[*A*] *And baptized June 20, 1561.*] The day of his birth is not mentioned any where: but that he was baptized June 20, 1561, appears from the regiſter of St Botolph's, where he is entered under the name of 'Samuel Haſnothe, ſon of ——— Haſnoth;' for ſo is the ſurname incorrectly written, being ſet down as it was vulgarly ſounded. The Harſnet, or Halſnothe, family was very numerous in Colcheſter in the ſixteenth century; many of that name being frequently mentioned in the Town-Records: but it is now quite extinct. Our learned author's father was named William, and a Baker (1).

(1) Hiſt. of Colcheſter, by P. M. fol. 1748. book ii. p. 17, 18.

[*B*] *He accepted of it.*] The teſtimonial given him by his college, upon that occaſion, was in theſe words. 'Our comendations remembred, &c. Wheras we late-lye received letters from you touchinge Mr Harſnet 'fellow of our colledge: we thoughte good in tyme 'convenient to make aunſwer to the ſame. Thes 'therfore may certifye you concerning thoſe pointes 'you requeſted of us, namelie his ſufficiencye to teache 'in the Latin and Greek tongues as well proaſe as 'verſe, with his honeſt behavioure and converſation; 'that we do knowe and promiſe in his behalfe, that 'he is very meet, able, and ſufficient to performe 'thoſe duties, as alſoe of a good name, and honeſt 'converſation amonge us. In ſignification whereof, 'We the Præſident and Fellowes of the Colledge have 'ſeverallie ſubſcribed our names to thes our letters, and 'ſo with our hartie commendations we wiſhe you fare 'well. From Pembrook hall this thirde of May 1586.' Subſcribed by Henry Farr, Lancel. Andrewes,—and fifteen more of the fellows (2).

(2) From the original.

[*C*] *He quitted the ſchool.*] When he had determined to leave it, he writ the following letter to the then bailiffs of the town, who were the electors. 'Right worſhipfull, my bounden duetie remembred, 'I give you all moſte humble thanks for your godlie 'lovinge kindneſſe and curteſie, which I have re-'ceived

November 1588, and retired to Pembroke-hall (e), where he applied himſelf to Divinity, with great diligence and ſucceſs. But he was well initiated in that moſt uſeful ſcience, even before his accepting of the ſchool, as appears by a learned and very rational ſermon, preached by him at Paul's-Croſs, October, 27, 1584 [D]. He was one of the Proctors of his Univerſity in 1592 (f). About five years after, he became Chaplain to Dr Richard Bancroft Biſhop of London (g), by whoſe favour he obtained ſucceſſively numerous and conſiderable preferments. For, he had, of his gift, the Rectory of St Margaret Fiſh-ſtreet, London, which he reſigned in 1604 (h). On the 14th of June, 1597, he was inſtituted by him to the Vicarage of Chigwell in Eſſex, but reſigned it in 1605 (i). Auguſt 5, 1598, he was collated to the Prebend of Mapeſbury in St Paul's cathedral: and January 17, 1602, to the Archdeaconry of Eſſex; all in the Biſhop's diſpoſal (k). The 16th

'ceived from you all. It hath pleaſed God, whoſe 'pleaſure is good, to chaung the thoughts of my harte, 'and to diſpoſe of my purpoſes, beſides my purpoſe, 'unto the ſtudye of divinitye: pardonne me tight 'worſhipfull, if I crave your pardonne and your prayer 'bothe, that it may be to his glorie, and the good of 'his Churche. Nowe mine earneſt ſuite unto your 'W. is that it may pleaſe you to remember the pro-'miſe which with one conſent you made unto me at 'my firſte entrance, namelie to accept at myne hands 'a twelve monthes warninge, for which time, I be-'ſeeche you to admitte uppon triall, the man alreadie 'commended unto you Mr Sadlingtonne.'——*After giving a character of whom, he goes on thus.*——'This 'my ſuyte I truſte is reaſonable, and I knowe you are 'my good frendes, which I deſire no further than I 'am a frend unto your towne, and unto my poor 'ſchollers whom I favor from your harte, and thus I 'ſhall be bound to praye alwaies unto God, that it may 'pleaſe him to be preſent in the middeſt of your meet-'ings and conſultations for the good of that Chriſtian 'people committed to your chardge. Your W. ſer-'vant to command S. Harſnet. From Pembrook-hall 'the 28 October (3).'

(3) From the original.

[D] *Sermon preached by him at St Paul's-croſs, Oct. 27, 1584.*] We cannot learn with any certainty, whether this ſermon was publiſhed the ſame year, or ſoon after, it was preached; or, whether it firſt appeared in print in 1658, at the end of three of Dr Stewart's ſermons. The text is Ezek. xxxiii. 11. and the deſign of this excellent diſcourſe, is, to ſhew the unreaſonableneſs and abſurdity of the cruel doctrine of unconditionate predeſtination; as appears by the following extracts, with which we ſhall oblige the reader; the book being now grown very ſcarce.——'There 'is a conceit in the world (ſays he)—*That God ſhould 'deſign many thouſands of ſouls to hell before they were, 'not in eye to their faults, but to his own abſolute will 'and power, and to get him glory in their damnation.* 'This opinion is grown huge and monſtrous (like a 'Goliah) and men do ſhake and tremble at it; yet 'never a man reacheth to David's ſling to caſt it down. 'In the name of the Lord of Hoſts, we will encounter 'it: for it hath reviled, not the hoſt of the living 'God, but the Lord of hoſts. 1. It is directly oppo-'ſite to this text of holy ſcripture, and ſo turns the 'truth of God into a lye. For whereas God in this 'text doth ſay and ſwear, that he doth not delight in 'the death of man; this opinion ſaith, that not one or 'two, but millions of men ſhould fry in hell; and 'that he made them for no other purpoſe, than to be 'the children of death and hell; and that, for no 'other cauſe but his mere pleaſure's ſake, and ſo ſays, 'that God did not only ſay, but ſwear to a lye; for the 'oath ſhould have run thus: *As I live* (ſaith the Lord) *I 'do delight in the death of man.* 2. It doth (not by conſequence, but) directly make God the author of ſin. 'For, if God, without eye to ſin, did deſign men to 'hell, then did he ſay and ſet down, that he ſhould 'ſin: for without ſin he cannot come to hell. And 'indeed, doth not this opinion ſay, that the Almighty 'God, in the eye of his counſel, did not only ſee, but 'ſay, that Adam ſhould fall, and ſo order and decree, 'and ſet down his fall, that it was no more poſſible for 'him not to fall, than it was poſſible for him not to 'eat? and of that which God doth order, ſet down, 'and decree, (I truſt) he is the author.——3. It takes 'away from Adam (in his ſtate of innocency) all free-'dom of will, and liberty not to ſin. For had he had 'freedom to have altered God's deſignment, Adam's 'liberty had been above the deſignment of God. And 'here I remember a little witty ſolution is made; 'that is, if we reſpect Adam's will, he had power to 'ſin, or not to ſin; but if God's decree, he could not 'but ſin. This is a ſilly ſolution: and indeed, it is 'as much, as if you ſhould take a ſound ſtrong man '(that hath power to walk and to lie ſtill) and bind 'him hand and foot (as they do in Bedlam) and lay 'him down; and then bid him riſe up and walk, or 'elſe you will ſtir him up with a whip; and he tell 'you that there be chains upon him, ſo that he is not 'able to ſtir; and you tell him again, that that is no 'excuſe, for if he look upon his health, his ſtrength, 'his legs, he hath power to walk or to lie ſtill; but if 'upon his chains, indeed, in that reſpect he is not able 'to walk: I truſt, he that ſhould whip that man for 'not walking, were well worthy to be whipped himſelf.——And therefore, if God ſet it down for a decree, that Adam ſhould fall, Adam had no more liberty not to fall, than the man in the chains had liberty to walk.——4. As God doth abhor a heart 'and a heart, and his ſoul deteſteth a double-minded 'man; ſo himſelf cannot have a mind and a mind, a 'face (like Janus) to look two ways. Yet, this opinion maketh in God two wills, the one flat oppoſite to the other: an hidden will, by which he appointed, and willed that Adam ſhould ſin; and an 'open will, by which he forbad him to ſin. His 'open will ſaid to Adam in paradiſe, Adam *thou ſhalt 'not eat of the tree of good and evil*: his hidden will 'ſaid, *Thou ſhalt eat*; nay more, I myſelf cannot 'keep thee from eating, for my decree from eternity 'is paſſed; thou ſhalt eat, that thou mayeſt drown all 'thy poſterity in ſin, and that I may drench them (as 'I have deſigned) in the bottomleſs pit of hell.——— '8. The poets had a device of their old god Saturn, 'that he eat up his children as ſoon as they were 'born, for fear leſt ſome of them ſhould diſpoſſeſs him 'of heaven. Pharaoh King of Egypt had (almoſt) the 'ſame plea; for he made away all the young Hebrew 'males, leſt they ſhould multiply too faſt: Herod, for 'fear our Saviour Chriſt ſhould ſupplant him in his 'kingdom, cauſed all the young children in Galilee to 'be ſlain: thoſe had all ſome colour for their barba-'rous cruelty. But, if any of thoſe had made a law, 'deſigning young children to torments before they had 'been born; and for no other cauſe and purpoſe, but 'his own abſolute will, the heavens in courſe would 'have called for revenge. It is the law of nations, *'No man innocent ſhall be condemned*; of reaſon, not 'to hate where we are not hurt; of nature, to like and 'love our own brood. Θεογενεις ἐσμεν (ſaith the 'Holy Ghoſt) we are God's kindred; he cannot hate 'us when we are innocent, when we are nothing, 'when we are not. Now, touching God's glory '(which is to us all as dear as our life) this opinion 'hath told us a very inglorious and ſhameful tale: for 'it ſaith, The almighty God would have many ſouls 'go to hell; and that they may come thither, they 'muſt ſin, that ſo he may have juſt cauſe to condemn 'them. Who doth not ſmile at the Grecians conceit, 'that gave their god a glorious title for killing of flies? 'God's glory in puniſhing ariſeth from his juſtice in 'revenging of ſin: and for that it tells (as I ſaid) a 'very ſad and unpleaſant tale: for who could digeſt 'it, to hear a prince ſay after this manner? I will be-'get me a ſon that I may kill him, that I may ſo get 'me a name: and that I may have ſome colour to 'kill him, I will beget him without both his feet; 'and when he is grown up, having no feet, I will 'command him to walk on pain of death: and when 'he breaketh my commandment, I will put him to 'death. O beloved, theſe glorious fancies, imagina-'tions and ſhews, are far from the nature of our gra-'cious, mercifull, and glorious God.'—

[E] *Was*

16th of April, 1604, he received inſtitution to the Rectory of Shenfield in the ſaid county; being preſented to it by Sir Thomas Lucas of Colcheſter (*l*). And the year following, upon the reſignation of Biſhop Andrews, was choſen Maſter of Pembroke-hall; which place he held 'till 1616 (*m*) [*E*]. He ſerved the honourable office of Vice-Chancellor of the univerſity of Cambridge in 1605, and again in 1614; and in 1605 was created Doctor in Divinity (*n*). But, to go on with his other eccleſiaſtical preferments; May 16, 1606, he was admitted to the Vicarage of Hutton in Eſſex (*o*); which, though but ſmall, he accepted, undoubtedly on account of its nearneſs to Shenfield. However, he reſigned it in 1609, as he did alſo his Prebend of Mapeſbury, and Archdeaconry of Eſſex (*p*). Whereupon Dr Bancroft, then Archbiſhop of Canterbury, to whom he continued Chaplain, gave him, September 28, the Rectory of Styſtead in Eſſex (*q*). As he had ſucceeded Dr Lancelot Andrews in the Maſterſhip of Pembroke-hall, ſo did he alſo ſucceed him in the See of Chicheſter. For, upon that learned Prelate's tranſlation to Ely, our author being nominated Biſhop of Chicheſter in his room, was elected November 13, confirmed December 2, and conſecrated the day following, by Archbiſhop Bancroft, who had undoubtedly a great hand in his promotion (*r*). He was allowed to hold with his Biſhopric the Rectory of Styſtead in commendam, 'till the year 1619, when he was tranſlated to Norwich [*F*], upon the death of Dr John Overall (*s*). We find, that he was one of thoſe divines, who had the ill luck of not being in the good graces of the troubleſome Puritans of his time. For, in the laſt Parliament of King James the Firſt, the Commons, at a conference, accuſed him of ſeveral miſdemeanours [*G*]. This accuſation, however, was no

(*s*) J. Le Neve's Faſti, p. 212.

[*E*] *Was choſen Maſter of Pembroke-hall; which place he held till* 1616.] Mr J. Le Neve ſays (4), That, in that year, 'Pembroke-hall petitioned the 'King againſt him, to whom they exhibited their 'grievances in fifty-ſeven articles. They wrote alſo 'to Dr Andrews, Biſhop of Ely, the Earl of Suffolk, 'Chancellor of the Univerſity, the Lord Hay, Sir 'Thomas Lake, Sir George Villiers, and others, de'ſiring their aſſiſtance in this affair. Some of the 'crimes in the articles objected againſt him were ſo 'ſcandalous, and the proof ſo evident, that the Biſhop 'thought beſt to retire, and ſo he did, reſigning the 'maſterſhip in June this year.'—Mr Le Neve adds, that, notwithſtanding 'all decent endeavours, he could 'not obtain a copy of thoſe articles.' And, therefore, what they were, we cannot judge. They might be, for preſſing too rigorouſly the obſervance of the new ceremonies, as they were then called: or, perhaps, for hurting the college revenues.

(4) Lives of the Biſhops, &c. as above, p. 130, 131.

[*F*] *When he was tranſlated to Norwich*] His *congé d'eſlire* was dated June 1, and he was elected June 16, obtained the royal aſſent July 20, was confirmed Aug. 28, and had reſtitution of the temporalities, Sept. 22, 1619 (5).

(5) Continuation of Rymer's Acta Regia by Sanderſon, Vol. XVII. p. 163, 176, 180.

[*G*] *Accuſed him of ſeveral miſdemeanors.*] What the ſubſtance of the accuſation, and of his miſdemeanors, was, will beſt appear by the following extract from the Journals of the Houſe of Commons (6), 17 May 1624. 'The Committee met at Sir Edward 'Cooke's chamber to examine and conſider of the 'heads of the charge, to be preſented againſt the Bi'ſhop of Norwich. — 19 May, Sir Edw. Cooke re'ports from the Lords about the Biſhop of Norwich. '—Have related the whole charge to the Lords, con'ſiſting of ſix heads. 1. Putting down of preaching. '2. Setting up of images. 3. Praying to the eaſt. '4. Puniſhing ſome, for coming to hear their own 'miniſter, after evening prayer, catechiſe, and ſing 'pſalms. 5. Extorting of undue fees. 6. Not re'giſtering inſtitutions and inductions.'———*From the Lords*, 'Anſwer was, that they would take ſuch order 'herein, as ſhould appertain to juſtice, and our ſatiſ'faction.'——But this being ſet forth more at large in the Parliamentary Hiſtory, we ſhall give the following extract of it.

(6) Vol. I. p. 789, 790.

'May 8, 1624. The Commons deſired a conference with the Lords, touching ſome accuſation againſt the Lord Biſhop of Norwich, unto which his Lordſhip has not yet been heard †. The 14th of the ſame month, the Biſhop beſought the Lords to remember the aboveſaid meſſage from the Commons, and to appoint a time for hearing his accuſation. The 19th, after a conference with the Commons, the Archbiſhop of Canterbury reported the charge againſt the Biſhop, exhibited by the citizens of Norwich; which conſiſted of theſe ſix articles. 1. That he inhibited or diſheartened preachers on the Sabbath-day in the forenoon. 2. That images were ſet up in the churches, and one of the Holy Ghoſt fluttering over the font; that a marble tomb was pulled down, and images ſet up in its room, and the Biſhop bleſſed them that did it. 3. That he puniſhed thoſe who prayed not towards the eaſt. 4. That he puniſhed a miniſter for catechiſing his family, and ſinging of Pſalms. 5. That he uſed extortion many ways. 6. That he did not enter inſtitutions, to the prejudice of patrons.—The Biſhop anſwered theſe articles diſtinctly, after having made the following previous obſervations. He proteſted he was no way guilty of the firſt part of his accuſation; if he were, then he was unworthy to bear the name of a Clergyman. He ſhewed the unworthineſs of ſuch as ſhould diſhearten preachers from preaching the word of God. That whilſt he was Vicar and Parſon, he preached every Sabbath in the morning, and catechized in the afternoon; and that he continued the like preaching whilſt he was Biſhop of Chicheſter: that in Norwich he never miſſed the public place, and ever preached there againſt Popery.—As touching preaching and non-reſidence, he had been reckoned more than half a Puritan; he left the Archbiſhop of Canterbury's ſervice that he might go to his cure. He wondered why he ſhould be thought a Papiſt; he thought it might be owing to his diſputations, and his ſermons at Paul's-Croſs, on Predeſtination negative, unadviſedly preached by him for which he was checked by Archbiſhop Whitgift, and commanded to preach no more of it; and he never did, though Dr Abbot, late Biſhop of Sarum, hath ſince declared in print that which he then preached to be no Popery. That Popery is a fire that will never be quiet: he hath preached a thouſand ſermons, and nothing of Popery can be imputed to him out of any of them. That there were divers obſtacles to keep him from Popery: four of which he mentions; namely The uſurpations of the Pope of Rome; their religion dyed in blood; their juggling and feigned miracles, of which he had writ a book againſt them; and their equivocations. He concluded, with acknowledging the Church of England to come neareſt to the primitive; and that we fetch not our reformation from Wickliff, Huſs, and Luther, of latter times, but from the firſt 400 years next after Chriſt.

† Parliamentary Hiſtory of England, Vol. VI. p. 255.

Then he proceeds to anſwer the ſeveral articles of his accuſation. As to the firſt, he confeſſed, that ſix or ſeven of the abler ſort of miniſters in Norwich uſed to expound, in their own churches, before the ſermon began in the cathedral church; and many reſorted from other places to theſe expoſitions, and in the afternoon to their ſermons. The preachers themſelves found fault with this, being willing to be rid of the pains, for they were to preach in the afternoon and on the week days, and ſhewed him many diſorders therein; as the cutting off part of the prayers, or beginning them too early; and they beſought his Lordſhip to remedy it, becauſe they, being ſtipendiary men, were loth to do it, for fear, belike, to loſe their ſtipends: whereupon he ſent for them by an officer, and willed them to omit theſe expoſitions in the forenoon; and yet he had ſince taken order for the erecting of three ſermons in the moſt remote parts of the city from the cathedral

no hindrance to his further advancement. For, upon the death of Dr Monteigne, he was tranſlated, in his room, to the Archbiſhopric of York [*H*]; being elected November 26, 1628, and confirmed the 23d of January following (*t*). November 10, 1629, he was ſworn of the Privy-Council (*u*) He enjoyed his Archiepiſcopal dignity but a little while: For, he died at Morton-in-the-marſh in Glouceſterſhire, the 25th of May 1631 (*w*), on his return from Bath to his manor of Southwell in Nottinghamſhire (*x*): and was buried in Chigwell-church in Eſſex, according to the direction he had given in his will (*y*) [*I*]. A year or two before his deceaſe, he had founded and endowed a free-ſchool in that pariſh, wherein are to be two maſters, one to teach Latin and Greek, and the other writing and cyphering; and alſo ſome alms-houſes (*z*). By his will, he gave his library to the corporation of Colcheſter, for the uſe of the clergy there; and legacies to ſeveral places [*K*]. Beſides his Sermon abovementioned, he had a controverſy with one John Darrell about the caſting out of devils, of which an account is given in the note [*L*]. He was one

cathedral church; and he had alſo erected many lectures in ſeveral places of the country. 2. As touching the images in a church: what was done, was done without his knowledge; it was meant by St Peter's church. He never ſaw that church 'till one evening as he came by: when going in, and perceiving the pariſhioners had beſtowed very great coſt, and not ſeeing or knowing of any image at all ſet up there, he ſaid, 'God's bleſſing on their hearts that had beſtowed ſuch 'coſt on God's houſe.' 3. As touching prayers to the eaſt: he never enjoined it, nor heard of it 'till now. 4. The miniſter he puniſhed, with doing of penance, was ſent to him by the Juſtices of the Peace, and had formerly been convicted of ſimony and conventicling, and of infecting the pariſh with ſtrange opinions. 5. His Lordſhip abſolutely denied that he impoſed any fees, and affirmed that he had not any of thoſe fees which were complained of; only the fees for inſtitution, which he took as his predeceſſors did. 6. His Lordſhip affirmed, that he had regiſtred all the inſtitutions *.—Upon the whole therefore, the ſum of theſe accuſations was no other, than the common clamours of the Puritans of thoſe times. Now, at this day, when the world can reflect coolly upon ſuch matters, we cannot, on the one hand, wonder enough at the weakneſs and preſumption of thoſe men, who preſſed too earneſtly ſuch points; when they were quite diſagreeable, and gave ſo great offence to the generality of the nation. And, on the other hand, how great was the obſtinacy, ill-behaviour, and I may truly ſay, diſhoneſty, of the Puritans; to raiſe vehement outcries about ſuch trifles; and to treat thoſe who ſtood for them as Papiſts, or popiſhly affected, when they were in the main as ſound Proteſtants as themſelves their accuſers, and better ſons of the Church of England! We ought therefore to look down with pity upon the contentions of both ſides about ſuch inſignificant matters. Unworthy they certainly were of the cognizance of Parliament: but what would not ſuch a ſour ill-tempered man as Sir E. Coke, then in diſgrace, not do, to be revenged of the Court; which favoured Dr Harſnet, and other divines of his perſuaſion?—To which muſt be added, that, for ſome of the articles above ſet down, particularly for the laſt, the doctor was not accountable. For the regiſtering of inſtitutions and inductions belongs to the Regiſter of each dioceſe, not to the Biſhop.

* Parliamentary Hiſtory, as above, p. 311, 312, &c.

[*H*] *He was tranſlated to the Archbiſhopric of York.*] This high dignity was procured him by Thomas Earl of Arundel, who had a great eſteem for him, and had committed his younger ſon to him for education (7).

(7) J. Le Neve's Lives of the Biſhops, &c. p. 132.

[*I*] *According to the direction he had given in his will.*] Namely, in the following words, 'My body 'I will to be buried within the pariſh church of Chig-'well without pomp or ſolemnity, at the foot of Tho-'mazine late my beloved wife, having only a marble-'ſtone laid upon my grave, with a plate of braſs mol-'ten into the ſtone an inch thick, having the effigies 'of a Biſhop ſtamped upon it, with his mitre and cro-'zier-ſtaff, but the braſs to be ſo rivetted and faſtened 'clear through the ſtone, as ſacrilegious hands may 'not rend off the one, without breaking the other. 'And I will that this inſcription be engraven round 'about the braſs: *Hic jacet* Samuel Harſnet, *quondam Vi-'carius hujus eccleſiæ; primò indignus Epiſcopus* Ciceſtren-'ſis, *dein indignior* Norwicenſ. *demum indigniſſimus Ar-'chiepiſcopus* Eboracenſ.' Which was accordingly performed with theſe additional words, *Qui obiit 25 die Maii, A. D.* 1631. *Quod ipſiſſimum Epitaphium ex abundanti humilitate ſibi poni curavit teſtamento Reverendiſſimus Præſul* (8).

(8) Survey of the Cathedrals of York, &c. by Br. Willis, Eſq; Vol. I. p. 55.

[*K*] *And legacies to ſeveral places.*] The words of his will are, 'I bequeath to twelve poor widows of 'Chigwell, who ſhall attend my hearſe from my houſe 'at Chigwell unto my burial, twelve black gowns.— 'Ten pounds for a ſober civil banquet for as many of 'the pariſhioners as ſhall pleaſe to accompany my body 'to the earth.—To the Prebendaries of Southwell 50l. 'to furniſh their Communion table with plate.—To 'the building of the poor-houſe at Cawood, in caſe I 'live not to finiſh the ſame myſelf, 100l. together 'with the bricks, timber, and ſtone, that I have pro-'vided for the ſame.—To the poor of St Botolph's in 'Colcheſter, where I was born, 10l.—of Shenfield in 'Eſſex 10l.—of Stiſted in Eſſex 10l.—To the poor 'priſoners in the King's-Bench 20l.—in Ludgate 20l. '—in the White Lion in Southwark 20l.'—Beſides legacies to his ſervants. He left no iſſue. Therefore his nephew Samuel Harſnet was his ſole executor.

[*L*] *He had a controverſy with one John Darrell about the caſting out of devils.*] Take an account of this Darrell, and his practices, in the words of the induſtrious Mr Strype (9). 'When the open practices 'of the Puritans for ſettling the new diſcipline would 'not prevail, there was a more ſecret method made uſe 'of by ſome of their miniſters, of doing ſomething 'that looked little leſs than miraculous; namely, The 'caſting out devils from perſons pretending to be poſ-'ſeſſed by them: that ſo the amazed multitude, hav-'ing a great veneration for theſe exorciſers of devils by 'the power of their prayers and faſtings, might the 'more readily and awfully ſubmit to their opinions 'and ways. (Which likewiſe was a practice borrowed 'from the Papiſts, to make their prieſts revered, and 'to confirm the laity in their ſuperſtitions) (10).' One of them was John Darrell, B. A who about the year 1586, at the age of three or four and twenty, before he was a miniſter, did take upon him to caſt out firſt *one* devil, and afterwards (upon a pretended repoſſeſſion) *eight* devils, out of a maid near ſeventeen years old in Derbyſhire, named Katherine Wright. The hiſtory of this feat he himſelf writ, and gave one copy of it to the Lady Bowes. From that time 'till the 28th of March, 1596, the ſaid Mr Darrell (now become one of the miniſters at Nottingham) was out of work; notwithſtanding he omitted few occaſions to intimate what he had done about Kath. Wright: beſides the printing of his book. But in the year 1596, his glory enlarged itſelf, when it was pretended that he caſt a devil out of one Thomas Darling, a boy in Burton, aged about 14 years; of which an account was publiſhed by one Mr Deniſon, after it had been ſeen and allowed by Mr Darrell and Mr Hilderſham. Upon the fame of this mighty exploit, Darrell was ſent for into Lancaſhire, by one Mr Starkie; and on the 17th of March 1596-7, he diſpoſſeſſed, in the ſaid Mr Starkie's houſe, ſeven perſons at one clap; viz John Starkie, Anne Starkie, Margaret Hardman, Elianor Hardman, Ellen Holland, Margaret Byrom, and Jane Aſhton: [which laſt falling into the hands of certain ſeminary prieſts, was carried by them up and down the country, and by her cunning counterfeiting of fits, got her craft-maſters no ſmall gain and credit.] Thoſe nine perſons abovementioned coſt Mr Darrell but little trouble; for he diſpatched them in two or three days. But one William Somers of Nottingham, ſuppoſed to be poſſeſſed, and whom he took in hand in November 1597, ſtuck in his fingers almoſt five months: however, he conquered the devil

(9) Life of Abp Whitgift, p. 492. and his Annals of the Reformation, Vol. III. p. 432.

(10) What follows is taken from S. Harſnet's Diſcovery, p. 1, &c.

one of the beſt and cleareſt writers in his time; and the firſt, according to Mr Fuller (a), who uſed the expreſſion of Conformable Puritans, to denote thoſe who conformed out of policy, and yet diſſented in their judgments.

(a) Church Hiſtory, book xi. p. 144.

devil at laſt. But Somers, after having counterfeited himſelf to be poſſeſſed, diſpoſſeſſed, and repoſſeſſed, and held on that courſe ſucceſſively, for the ſpace of about three months; he did at the laſt, being got out of Mr Darrell's hands, confeſs and avow, that all he had done that while was but diſſembled, and as he had been trained and inſtructed by Mr Darrel: ſhewing to the Mayor and Aldermen of Nottingham, how he had acted all his former fits. Whereupon Darrell being called before the High Commiſſion-Court at Lambeth, was condemned for a counterfeit; and he, with George More a miniſter and his confederate, depoſed from the miniſtry, and both committed cloſe priſoners.—To expoſe this wicked and ſenſeleſs impoſture, our learned author Mr Harſnet, who was then Chaplain to Biſhop Bancroft, publiſhed, I. 'A *Diſcovery of the fraudulent practiſes of John Darrel Batcheler of Artes, in his proceedings concerning the pretended poſſeſſion and diſpoſſeſſion of* William Somers *at* Nottingham: *of* Thomas Darling *the boy of* Burton *at* Caldwall: *and of* Katherine Wright *at* Mansfield *and* Whittington: *and of his dealings with one* Mary Couper *at* Nottingham, *detecting in ſome ſort the deceitful trade in theſe latter dayes of caſting out devils.* Lond. 1599. 4to. A paſſionate anſwer to which was publiſhed by Mr Darrell, under this title, 'A Detection of that ſinful, ſhamful, lying, and ridiculous Diſcours, of Samuel Harſhnet. Entituled: A Diſcoverie of the fraudulent Practiſes of John Darrell. Wherein is manifeſtly and apparantly ſhewed in the eyes of the world Not only the unlikelihoode, but the flate impoſſibilitie of the pretended counterfayting of William Somers, Thomas Darling Kath. Wright, and Mary Couper, togeather with the other 7 in Lancaſhire, and the ſuppoſed teaching of them by one John Darrell.' 4to. 1600. The ſame year, Mr Darrell publiſhed alſo, 'A true Narration of the ſtrange and grevous Vexation by the Devil, of 7 perſons in Lancaſhire, and William Somers of Nottingham. Wherein the doctrine of Poſſeſſion and Diſpoſſeſſion of Demoniakes out of the word of God is particularly applyed unto Somers, and the reſt of the perſons controverted: togeather with the uſe we are to make of theſe workes of God. By John Darrell Miniſter of the word of God.' 4to. Both viſibly printed abroad.—During his impriſonment, he publiſhed likewiſe, 'An Apology or Defence of the poſſeſſion of William Somers, &c. Wherein this work of God is cleared from the evil name of counterfeiting. And therupon alſo it is ſhewn, that in theſe days men may be poſſeſſed with devils; and that being ſo, by prayer and faſting the unclean ſpirit may be caſt out. (11)'—His confederate George More ſeconded him, in, 'A true Diſcourſe concerning the certaine poſſeſſion and diſpoſſeſſion of 7 perſons in one familie in Lancaſhire, which alſo may ſerve as part of an Anſwere to a fayned and falſe *Diſcoverie* which ſpeaketh very much evill, as well of this, as of the reſt of thoſe great and mightie workes of God, which be of the like excellent nature.' 1600. 8vo.—Mr D. Neal, in whoſe eyes a Puritan is always innocent, has endeavoured to defend, at leaſt to palliate, theſe extraordinary proceedings; by ſaying, 'One would think here was a plot of ſome cunning, 'deſigning men, to conjure the people into the belief 'of the diſcipline; but all vaniſhes in the peculiar 'principles of *A weak* and (as Mr Strype confeſſes) honeſt *man*, whoſe name was Darrel, &c. (12).' [N. B. Mr Strype's words are (13),—*This weak but honeſt man (ſhall I call him?)*—Which is doubting, not confeſſing.] Had Mr Neal given himſelf the trouble to peruſe Darrell's writings, he would have found, that he was not the *one and only man* concerned in this affair. For there were no leſs than *ſixteen preachers*, (as wiſe as himſelf) after an exerciſe at Aſhby-de-la-Zouch, that adviſed and preſſed him to go to Mr Starchy's, when he was ſent for (14). Several miniſters alſo were concerned in the diſpoſſeſſing of Somers (15). Conſult, moreover, Mr George More's Diſcourſe—The affair of the Surey Demoniack in the laſt century, may be called the ſecond part of Mr Darrell's pranks (16). II. Beſides the Diſcovery of Darrell's fraudulent practices, Dr Harſnet writ, '*A Declaration of egregious Popiſh Impoſtures, to withdraw the Hearts of her Majeſty's Subjects from their Allegiance, &c. under the pretence of caſting out Devils, practiſed by* Edmonds, *alias* Weſton, *a Jeſuit.*' Lond. 1603. 4to.

(11) In theſe pieces Mr Darrell plainly appears to have been a man of a weak head, or a very bad heart.

(16) The *Surey Demoniack* in Lancaſhire, was publiſhed in 1695, and the Anſwer to it by Zach. Taylor, in 1697. 4to.

HARVEY [WILLIAM], an eminent Phyſician, who firſt diſcovered the circulation of the blood; was eldeſt ſon of Thomas Harvey, Gentleman (a), of Folkſtone in Kent, where he was born April 2, 1578. At ten years of age he was put to the grammar-ſchool at Canterbury, and thence at fourteen removed to Gonvil and Caius-college in Cambridge, in the view of breeding him to Phyſic. Having ſpent five years there in the ſtudy of his art, he went at the age of nineteen, for further improvement, through France and Germany to Padua (b) in Italy; and having purſued his ſtudies under the beſt maſters, particularly the famous Hieron. Fabricius ab Aquapendente (c) [A], for five years more, he was created Doctor of Phyſic and Chirurgery in that univerſity in 1602. Soon after this he returned to England; and taking his Doctor of Phyſic's degree at Cambridge, he went to London, entered upon the practice of his profeſſion there, and married (d) [B]. In

(a) His mother's name was Joan Halke. Wood's Faſti, Vol. II. col. 6.

(b) He went alſo occaſionally to Venice. *Exercitat. de Generatione Animalium, Exercitat.* 46.

(d) Wood, ubi ſupra; and Goodall's Hiſtorical Account of the proceedings of the College of Phyſicians in London againſt Empirics, &c. in the dedication. Lond. 1684. 4to.

[A] *He was inſtructed by Fabricius ab Aquapendente.*] Beſides Fabricius, Mr Wood mentions (1), our author's ſtudying at Padua under two other maſters, Euſtacius Radius, and Joh. Tho. Minodaus, which indeed is not at all improbable; but Fabricius was the perſon whoſe lectures he ſeems to have attended the moſt diligently, as being moſt agreeable to him. 'Tis certain he had a particular regard for this maſter, whom he often quotes, and in terms of the higheſt reſpect (2), and even declares that he was the more willing to publiſh his book *de motus cordis*, &c. becauſe this maſter who had learnedly and accurately delineated in a particular treatiſe, almoſt all the parts of animals, had left the heart alone untouched (3).

[B] *And married.*] We have not met with any account either of the name or family of his lady, but whoever ſhe was, it ſeems the Doctor had no iſſue by her (4); and 'twas probably for want of children to employ her time and care, that ſhe became very fond of, and amuſed herſelf often with an excellent talking parrot, whoſe extraordinary fate furniſhed her huſband with the firſt experiment in ſupport of his doctrine, that the female bird has a power of conceiving perfect eggs (5) without the help of the male. The following account of this event is inſerted in the Doctor's own words, as a ſample of his elegant Latin ſtile. 'Imo 'vero uſque adeo libidinoſe interdum aves ſunt, ut ſi dor-'ſum earum manu ſolum leviter tangas, ſtatim procum-'bant, orificiumque uterinum nudent et exporrigant: 'quod ſi blande digito demulſeris, vago murmure ala-'rumque geſticulatione gratam Veneris dulcedinem expri-'munt. Quinetiam famellas ova inde concipere, et 'Ariſtoteles auctor eſt, & ipſemet in turdo, merula, 'aliiſque expertus ſum: idque olim primum fortuito, 'neque damno didici. Pſittacum nempe inſignem doc-'teque garrulum, uxor mea diu in deliciis habuit. 'Erat is adeo familiaris, ut quocunque vellet, libere 'per ædes vagaretur; abſentem dominam inquireret; 'inventæ hilari voce ablandiretur; vocanti etiam re-'ſponderet; advolaret; veſtemque roſtro pedibuſque 'viciſſim comprehendens, ad ſummum humerum ſcan-'deret; indeque per brachium deſcendens ſuper 'manum ſemper ſe ſiſteret. Juſſus loqui aut cantare 'etiam noctu & in tenebris morem geſſit. Sæpe ludi-'bundus

(1) In his Faſti, Vol. II. col. 6.
(2) Particularly in the preface to his *Exercit. de Gener. Animal.* he profeſſes to follow Ariſtotle among the Antients and Fabricius among the Moderns: *illum tanquam ducem; hunc ut præmonſtratorem.*
(3) *De Motu Cordis*, &c. Exercit. 1. cap. 1.
(4) The inſcription upon his monument in the church of Hemſted in Hartfordſhire, concludes in theſe terms, *Quum totum circuit Microcoſmum, Medicinæ Doctor & Medicorum Imperator obdormivit.*

(5) His words are, *ova* undique perfecta licet ſubventanea, & ob defectum maris infœcunda. *De Generatione Animalium Exercit.* v.

In 1604 he was admitted candidate of the College of Phyſicians, and three years after elected Fellow. In 1615 he was choſen Lecturer of the Anatomy and Surgery Lecture, founded by Dr Richard Caldwal *; and he began his firſt courſe of Lectures in Anatomy in April the following year, when he firſt opened his famous diſcovery of the circulation of the blood, which he continued to explain in his ſubſequent lectures, and a few years afterwards [C] finiſhed his treatiſe upon that ſubject. It was probably about this time that he became Phyſician to King James I. and that he was continued in the ſame character by K. Charles I. from the beginning of his reign [D]. Dec. 3, 1627, he was appointed one of the Elects of the College of Phyſicians †, and his *Exercitatio Anatomica de motu cordis & ſanguinis*

* Idem ibid.

† From the College Regiſter.

' bundus et laſcivus ſedentis gremium adibat; ubi ' caput ſibi attractari dorſumque demulceri geſtiebat, ' & blando ſtrepitu ſummam animi lætitiam teſtabatur. ' Ego hæc omnia ab uſitata pridem familiaritate & ' obſequio proficiſci interpretabar; marem enim ſum ' arbitratus ob loquelæ & cantus eximiam præſtantiam. ' Quippe inter aves fœmellæ raro cantillare, aut voce ' invicem provocare ſolent: ſed mares ſolum ſuavi ' vocis modulamine fœmellas delinire, & ad veneris ' obſequium pellicere, animadvertimus.' The Doctor then cites Ariſtotle and Virgil to confirm this obſervation, and proceeds thus. ' Non diu autem poſt blandas ' has contrectationes pſittacus, qui multos jam annos ' ſanus vixerat, ægrotavit, crebriſque tandem convul- ' ſionibus obortis, in dominæ ſuæ gremio, ubi toties ' luſerat, animam, plurimum deſideratus, expiravit. ' *Diſſecto itaque cadavere (ut mortis cauſam inquirerem)* ' *ovum fere perfectum in utero reperio; ſed ob defectum* ' *maris corruptum quamadmodum aviculis in caveis reclu-* ' *ſis ſæpe accidit, quæ maris conſortium deſiderant* (6).'

(6) Ibid.

[C] *He firſt opened the diſcovery of the circulation of the blood, and drew up his treatiſe upon that ſubject a few years afterwards.*] That he then firſt opened this diſcovery appears from the original manuſcript of theſe lectures, which is preſerved in the valuable Muſæum of the late Sir Hans Sloane, purchaſed by the Parliament. It is intitled, *Prælectiones Anatom. Univerſal. per me Gulielmum Harveium, Medicum Londinenſem, Anato. & Chirurg. Profeſſorem, An. Dom.* 1616. *Anno ætatis* 37. *Prælect. Apr.* 16, 17, 18. That he continued to explain the circulation in the ſubſequent lectures, is evident from the dedication of his book (7) upon this ſubject, which begins thus. ' *Meam de mo-* ' *tu & uſu cordis & circuitu ſanguinis ſententiam, excel-* ' *lentiſſ. D. D. antea ſæpius in prælectionibus meis ani-* ' *tomicis aperui novam, ſed jam per novem & amplius* ' *annos multis ocularibus demonſtrationibus in conſpectu* ' *veſtro confirmatam, &c.——Hoc libello in lucem pro-* ' *duximus.*' *My new opinion concerning the motion and uſe of the heart, and the circulation of the blood, which was frequently declared before in my anatomical lectures, being now confirmed by ocular demonſtration before the college for more than nine years, I have thought fit to publiſh to the world in the following treatiſe.* The ſame dedication furniſhes the proof in part, that this treatiſe was finiſhed not many years after the reading of his firſt anatomical lectures in 1616. For there he expreſsly declares, that it had been finiſhed ſome years before [1628]. *Libellum hanc per aliquot abhinc retro annos perfectum.* But we are able to determine the time of our author's writing this treatiſe, ſomething nearer the truth by what follows. Johannes Leonicenus having aſſerted that Father Paul, author of the *Hiſtory of the Council of Trent*, diſcovered the circulation of the blood, as well as the valves of the veins, obſerves, that he durſt not make that diſcovery public for fear of expoſing himſelf to trouble, ſince he was already ſuſpected, and there wanted only ſuch a paradox to transform him into a heretic in a country where the Inquiſition prevails. For this reaſon he truſted the ſecret to Aquapendente alone, who being cautious of rendering himſelf obnoxious to the rage of a great many perſons, who would treat ſuch a notion as a capital offence againſt the Ancients, never opened the ſecret intruſted to him by Father Paul to any, but men of whom he had not the leaſt ſuſpicion; and waited till that father's death before he would ſuffer his treatiſe of the valves of the veins to be preſented to the Republic of Venice. But becauſe in that country the ſlighteſt novelties are apt to terrify the minds of of people, this treatiſe was repoſited privately in the library of St Mark. But as Aquapendente had diſcovered the ſecret to a curious young Engliſh gentleman, whoſe name was Harvey, and who ſtudied under him at Padua; and at the ſame time Father Paul made the ſame diſcovery in confidence to the Engliſhmen upon their return home, being in a country of freedom publiſhed it, and having confirmed it by a variety of experiments, claimed the whole honour to themſelves (8). From the ſame ſtory, the diſcovery of the circulation of the blood was aſcribed alſo to Father Paul, by Charles Fracaſſati, in his preliminary epiſtle to Malpighi, and by John Wæleus, in his firſt epiſtle to Bartholine. Theſe attempts to deprive our countryman of the honour juſtly due to him for making that diſcovery, being obſerved by his intimate friend Dr George Ent, he to confute theſe pretences remarks, that Dr Harvey had long before related to him the occaſion of this ſtory, which was as follows. The Venetian embaſſador upon his return home, having been preſented by the Doctor with his book concerning the circulation of the blood, lent it to read to Father Paul, who tranſcribed a great many things out of it, in order that he might remember them; theſe tranſcripts after his death came into the hands of his executors, gave occaſion to ſeveral perſons to imagine that he was the author of thoſe tranſcripts. And Dr Harvey had letters from Fra. Fulgentio, Father Paul's moſt intimate friend, which ſet the affair in a clear light (9). From the whole, it appears that Dr Harvey's book muſt have been finiſhed ſome time before the year 1623, ſince Father Paul died January the 14th in that year (10). Perhaps we ſhall not be far wide of the truth, in fixing it to the year 1618 or 1619; that is nine years before it was publiſhed, which, upon reviewing what has been ſaid of it, ſeems not altogether improbable to be ſuggeſted by him in the words already cited from the beginning of his dedication.

(7) To Dr Argent the Preſident, and the reſt of the College of Phyſicians in London. There is another dedication to the King.

(10) Vita del Padre Paolo, a Fra. Fulgentio.

[D] *It is probable about this time he became phyſician to King James I. and was in the ſame poſt under King Charles I from the beginning of his reign.*] That he was phyſician to the firſt of theſe crowned heads all agree, but as to the year, no time is fixed by any author when he was called to that honour, they are all ſilent. This defect then can only (if at all) be ſupplied by circumſtances, and what circumſtance bids fairer to ground a probability upon, than that of his finiſhing his treatiſe of the circulation of the blood, and preſenting the copy of it in manuſcript to the Venetian embaſſador upon his return home. Before that time the Doctor had ſcarcely attained his fortieth year, and was too young a practitioner to be eminent enough for ſuch a diſtinction; but his diſcovery of the circulation of the blood, ſufficiently demonſtrated by experiments, and drawn up in an elegant Latin ſtile, into a compleat treatiſe, muſt unavoidably bring him into the eye of the Court, and entitled him to the honour of the King's Archiater, and that the ſame honour was continued to him in the ſucceeding reign, ſeems evident from the following paſſage in his book *De Generatione Animalium, &c.* where he takes notice, that King Charles's uſing the exerciſe of flag or buck hunting almoſt every week in each ſeaſon after he came to man's eſtate, gave him [the Doctor] abundant opportunities of diſſecting what number he pleaſed of both the ſexes of theſe animals. ' *Sereniſſimo Regi Carolo, quam primum exceſſit ex ephe-* ' *bis, mos erat, animi a curis gravioribus laxandi fri-* ' *mandæque valetudinis gratia, ſingulis fere ſeptimanis* ' *feras venari; præcipue cervos & damas; cujus generis* ' *nemo in orbe princeps plures vel in ſaltibus ſylviſque* ' *errantes, vel intra ſepta ac vivaria concluſos in hunc* ' *finem aluit. Tribus quidem æſtivis menſibus mares jam* ' *obeſos, eſuique jucundos, autumno vero & hyeme pari* ' *temporis ſpatio fœmellas venabatur. Hinc mihi (quo* ' *tempore fœminæ libidinantur mareſque admittunt, conci-* ' *piunt, & utero novellos fœtus gerunt) eas diſſecandi* ' *quotidie facta eſt copia; parteſque omnes, præſertim* ' *genitales intueri atque obſervare quoties vellem libere* ' *licuit* (11).'

(11) *Exercitationes de Generatione Animalium*, Exercitat. lxiv. N. B. His Majeſty's frequent hunting furniſhed the doctor with ſo many opportunities of diſſecting theſe animals, that he has made nature's proceſs in their generation the ſubject of this and the 6 following Exercitations, the whole being ſuperſcribed with this title, *Hiſtoria Generationis Cervarum & Damarum, cæu reliquarum viviparorum exemplar, ponitur a faſtigio ratio redditur.*

[E] *His*

guinis in animalibus, was printed the following year at Francfort in 4to [*E*]. This piece being

[*E*] *His Exercitatio Anatomica de motu Cordis & Sanguinis circuitu.*] The beſt account of the nature of Dr Harvey's diſcovery, is ſeen in the following recapitulation of it by himſelf, which will be ſo much the more ſatisfactory, as it was drawn up expreſsly with a view of clearing it from the various miſrepreſentations which he had obſerved to have been given of it by others (12). 'Becauſe, ſays he, I ſee men doubtful of the circulation, and ſome men oppoſe ſuch things which underſtand them not aright as I intended them.' I ſhall briefly rehearſe, out of my book of the motion of the heart and blood, what I did there intend. The blood which is contained in the veins (as in it's own hold) there where it is moſt abundant (viz. in the vena cava) near the baſis of the heart, and the right auricle growing hot by degrees from it's own internal heat; and being attenuated, it ſwells and riſes like leaven, whence that auricle being firſt dilated, and afterwards contracting itſelf by it's pulſific faculty, ſtraitways drives it out into the right ventricle of the heart, which being filled in it's ſyſtole, and thereby conſequently freeing itſelf from that blood which is driven into it, as the valvulæ bicuſpides hinders it's regreſs that way, it impels the ſame blood into the *vena arteriosa*, where the paſſage is open and diſtends it. Whence not being able to return againſt the *valvulæ ſigmoides*, it finds through the lungs (which are extended, amplified, and reſtricted, both by inſpiration and expiration) a paſſage to the arteria venoſa, and from thence into the left auricle, which performing it's office with a motion the ſame, and in the ſame order to that of the right auricles, impels the ſame blood into the left ventricle, as the right auricle drove it into the right ventricle, whence the left ventricle, in like manner and at the ſame time with the right (the paſſage back to the left auricle being ſtopt by the valves) forces it into the trunk of the aorta, and conſequently into all the branches of that artery, ſo that the arteries being filled with the ſudden impulſe, and not able ſo ſuddenly to diſburthen themſelves, are diſtended, impelled, and ſuffer a diaſtole. Whence, ſince the ſame motion is reiterated continually and inceſſantly, I collect, that the arteries, both in the lungs and in the whole body, by ſo many ſtrokes and impulſions of the heart, would be ſo diſtended and ſtuffed with blood, that either the impulſion muſt entirely ceaſe, or elſe the arteries muſt burſt, or be dilated ſo much as to contain the whole maſs of blood exhauſted from the veins, unleſs they were unloaded by an efflux of the blood ſomewhere. The ſame reaſoning holds likewiſe with regard to the ventricles of the heart, which being filled and ſtuffed in like manner with blood, would at laſt be diſtended and deſtitute of all motion, unleſs the arteries ſomewhere diſburthened themſelves. This conſequence of mine is demonſtratively true, and ſo lows of neceſſity, if the premiſes be true, but the truth or falſehood of theſe muſt be had from our ſenſes, and not from any received ways of reaſoning; not from the operation of the mind, but from ocular teſtimony. I affirm likewiſe of the blood in the veins, that it does always and every where run out of the leſſer into the greater, and haſtens from all parts towards the heart; whence I collect, that the whole impelled quantity of blood which the arteries receive from the veins, returns and flows back thither from whence it was firſt driven, and in this manner the blood moves in a circuit in a flux and reflux from the heart by impulſion, the force of which carries it into all the fibres of the arteries, and that being abſorpt and exhauſted thence from all parts into the veins, it afterwards returns by a continual flux through them to the heart. Our ſenſes teach us theſe truths, and neceſſary deductions drawn from things obvious to ſenſe leave no room for a doubt. Upon the whole, this is what I endeavoured to declare and make manifeſt by obſervations and experiments, and I choſe to prove it not by reaſoning from cauſes and probable principles, but to eſtabliſh it by the greater authority of ſenſe and experience in an anatomical way.' This account is inſerted at length for the ſake of the following remarks. (1.) It is obſervable, that our author here has expreſſed himſelf very cautiouſly in general terms only, concerning the paſſage (abſorption or exhauſtion) of the blood from the extremities of the arteries to the veins. This caution appears to be the genuine effect both of his modeſty and fidelity. In his firſt exercitation (13), he had expreſſed it, that the blood paſſes from the arteries into the veins, either immediately by anaſtomoſis, or immediately through the poroſities of the fleſh, or both ways. He had declared before (14), that no man had then ſaid any thing right concerning the *anaſtomoſis*, where it is, how it is, or for what cauſe; I am at preſent upon that inquiry; and what was the reſult of this inquiry, we find in his third *Exercitation* *, where he openly declares his opinion againſt that way of communication or connection of the arteries to the veins, and diſputed the reality of them with Riolanus upon his grand principle, that neither he himſelf, nor any body elſe, could ſhew their exiſtence anatomically; however, his modeſty and good ſenſe appears in this, that he does not pretend poſitively to defend the queſtion, but rather recommends it as a proper ſubject for further enquiries. (2.) We find the Doctor in this laſt reviſal of his hypotheſis, maintaining as he had done at firſt, the ſynchronal motions of the two auricles and the two ventricles of the heart, aſſerting that the paſſage from the ventricles through the arteries and veins of the lungs, and thoſe of the reſt of the body into the auricles, is cauſed wholly by the impulſe of the ventricles of the heart, without any help from the arteries, and performed in the ſame time with the paſſage from the auricles into the ventricles, and this order, he ſays, is even perceptible to the ſenſe in touching the heart; and for a further ſupport of this doctrine he maintains, that the arteries have no proper pulſific faculty, and therefore their diaſtole being intirely occaſioned by the impulſe of the blood from the heart, when free from that impulſe they collapſe, and that no time intercedes between the conſtriction of the heart and the dilatation of the arteries, not even of thoſe that are furtheſt diſtant from it, but theſe two motions are ſimultaneous * †, whence the two auricles beat together, and alternately to the two ventricles, which alſo beat together. This opinion of the office of the arteries in carrying on the circulation, not being approved by Dr Frank Nicholls, Phyſician to his preſent Majeſty, and formerly Profeſſor of Anatomy at Oxford. That gentleman aſcribing, with other anatomiſts, a ſyſtole and diaſtole to the two arteries, equal in their effects to the ſyſtole and diaſtole of the auricles and ventricles of the heart, in conſequence thereof, ſuppoſes the circulation not to be performed without ſix diſtinct ſteps or impulſes; whence it follows, contrary to our author's doctrine, that the two auricles, the two ventricles, and the two arteries, are relaxed and contracted alternately, i. e. the ſyſtole and diaſtole of the *right* auricle, the *pulmonary artery*, and the left ventricle are ſynchronous to each other, and alternate to the ſyſtole and diaſtole of the right ventricle, the left auricle, and the aorta, which conſequently are ſynchronous alſo among themſelves. In ſupport of this opinion, the Doctor maintains that the coats of the arteries, though not muſcular, are elaſtic, and therefore muſt have in themſelves a contractive force, or pulſific faculty. He thinks his opinion is likewiſe confirmed from the following conſequences of it, which ſeem neceſſary for carrying on the circulation. *Firſt* he obſerves, that the whole heart, and ſo much of the two great arteries as is included within the *pericardium* taken together, as alſo the two auricles taken together, and the two ventricles taken together, and likewiſe both the auricles and both the ventricles taken together, will by this means always make up an equal bulk, and fill an equal ſpace in every ſtep and ſtate of the circulation, and *thereby that motion and friction, which he conceives* muſt attend Dr Harvey's theſis, and would greatly diſturb the œconomy, will be avoided. In the ſame view, another conſequence favouring this latter poſition is, that the *canalis arteriosus*, and the *foramen ovale*, will thereby be found to produce a circulation, in which the inferior artery beats alternately to the ſuperior artery, and the blood of the *inferior cava*, will wholly and ſolely paſs through the *foramen ovale* into the left auricle, and the blood of the *ſuperior cava*, will wholly and ſolely paſs through the right auricle and the right ventricle into the pulmonary artery, to be diſtributed partly into the pulmonic branches, and partly through the *canalis arteriosus* into the *aorta* inferior, and thereby the circulation will be carried on in ſuch a manner as is peculiarly neceſſary to the fœtus, which does not breathe; and upon theſe principles likewiſe, the alteration of thoſe paſſages becomes the neceſſary conſequence

* Exercitat. de Motu Cordis, cap. iii. & Exercitat. iii. in parte prima.

* Our author's words are *fiant ſimul*.

† Though this poſition is conſtantly maintained by him, yet he accounts for the dilatation of the great arteries, from their not being able to eject or diſcharge themſelves of the blood ſo ſuddenly [*tam ſubito*] as it is impelled into them by the heart. *Exercitat. iii.*

being attacked in different views by several authors [F], and particularly by Jo Riolanus, a celebrated

consequence of that protrusion of the heart, and stretch of the *canalis arteriosus*, which immediately follows upon the first respiration of the infant *. The Doctor thinks that the truth of his position, as grounded upon this reasoning, is clearly more than probable, and if he has not been able, by reason of the almost insuperable difficulty thereof, to make such anatomical experiments in this case as come up perfectly to the point, and can safely be relied on, in order to establish it upon that sure foundation: so neither does he apprehend, that the opinion of Dr Harvey in this particular, notwithstanding it's universal reception, can be fairly said from any experiments produced by himself or by others for him, to have a just claim to such an establishment. Upon the whole, it is now a long time since Dr Nicholls has laid aside all researches of this kind, and he hopes it will not now be expected that he should resume them. He acknowledges there are many things in the circulation not yet satisfactorily explained, and therefore he would recommend the further inquiry into the true manner thereof, as a proper subject to employ the industry of every studious anatomist.

* N. B. The reader will take notice, that we have inserted purely what was communicated by Dr Nicholls, without interposing our own opinion. Indeed we do not see the grounds for objecting the want of these consequential advantages to Dr Harvey's thesis.

[F] *His discovery was attacked by authors in different views.*] The Doctor's adversaries on this occasion may be divided into two parties, by whom he was attacked on different sides and by very different arguments, though probably both were urged thereto by the same principle of envy. Of these, one party denied the truth of his discovery, while the other party acknowledging that, gave away the honour of it from him to his predecessors in anatomy. The first he answered himself, as far as they deserved an answer, an account of which will be the subject of the next remark. But of the other he was more regardless, either not being apprehensive of any danger to his fame from that quarter, or else (which we may judge from his writings, was indeed the case) he was more sollicitous to shew the important use of the discovery, since it was made, to the practice of physic, than anxious about his right of being the first discoverer; and this is confirmed by his conduct already mentioned, in respect to Fracassati and Walæus, who had ascribed the discovery to Father Paul Servita the Venetian. He contented himself, we see, with relating to his friends in private discourse, the grounds of that mistake, by which it appeared that Servita had the discovery from himself (15). He had, 'tis true, in the proem to his book, demonstrated his own right consequentially, in demonstrating, that whatever had been said by any author before him concerning the motion and use of the heart and arteries, was either absurd, incongruous, obscure, or impossible; and in the same view we find him at the entrance upon his treatise, very aptly applying the following words of the poet to himself.

(15) See remark [C].

> *Nunquam quisquam ita bene subducta ratione ad vitam fuit,*
> *Quin res ætas usus aliquid apportet novi,*
> *Aliquid admoneat, ut quæ te scire credas, nescias,*
> *Et, quæ tibi putaris prima, in experiunda repudies* (16).

(16) Terence.

But this, though sufficient as it was for the satisfaction of all such as would give themselves leave to consider the matter thoroughly and impartially, yet did not prove sufficient to secure his fame from the attacks of several persons besides those already mentioned. For instance, Mr Wood tells us, that Dr Morley, Bishop of Winchester, and Dr John Pell, used to say, that Warner, mentioned in a preceding article (17), made it appear in a manuscript of his composition, that the blood in a body circulates; which he communicating to Harvey, the Doctor took his first hint thence concerning that matter, who afterwards published it as the first inventor (18). But this is too imperfect a story to deserve any notice. Honoratus Faber likewise made some pretensions to the first discovery, which are confuted by his own account, as is shewn by Borelli, who on this occasion handsomely exposes Faber's vanity (well known in the mathematical republic) as follows. *Cum vero sit omnino incredibile & impossibile hominem nobilem, religiosum & pium* [Harvæum *sc.*] *ea, quæ vera non sunt, asserere voluisse, nil aliud in ejus* [*Fabri*] *excusationem dicendum restat, nisi quod, cum ingenio velocissimo præditus sit, a celeritate ipsa qua aliena legit, & propria scribit, multoties decipiatur. Quod alias ei contigisse non erit supervacaneum ostendere, ut inde pateat solenne ei esse authores alicujus rominis furti insimulare, hac solummodo de causa, quia cursim & ostitanter eorum opera legit, si enim patienter & debita attentione dignatus fuisset legere ea, quæ spatio 38 annorum edita fuerant, & vulgatissima per universam Europam erant, procul dubio non scripsisset, anno 1666, Lib. primo de Homine, Prop. 2. de circulationem sanguinis invenisse & docuisse ab anno 1638, antequam* Gulielmi Harveii, Exercitatio Anatomica de motu Cordis *prodiret* (19), *quam pariter multa Fabri inventa in suis exercitationibus inseruisse asserunt: omnes enim sciunt* Harveium, *An. Dom.* 1624, *Francofurti, typis Guat. Fitzeri, suam exercitationem primum edidisse; scilicet decem annos antequam Cl. Faber sanguinis circulationem docuisset* (20). These were feeble attacks and easily repelled. But others went further, Vander Linden, publishing an edition of Hippocrates in Holland, about 1664, took a great deal of pains therein to prove, that Hippocrates knew the circulation of the blood, and that Dr Harvey only revived it; and many years afterwards Mr Bayle, in his Dictionary (21), very confidently asserts, that 'it would be robbing Cæsalpinus of 'a very great honour, to pass over in silence that he 'knew the circulation of the blood, the proofs of which, 'says he, are so clear, that they cannot be eluded by 'any evasion.' These proofs are two passage from two pieces of that author, one of which is cited at length (22), and the other referred to in a marginal note (23). However, we have the satisfaction to observe, that these and other injuries and insults offered to Dr Harvey's memory, have been clearly wiped away by some of his countrymen, and as it is done by no body that I know of so pertinently and so much to the mind of Dr Harvey, as by Dr Freind, we shall lay his account of the matter before the reader, and the rather, because the true merit of this most important discovery is there set in the most conspicuous light, and expressed also in that genteel, proper, and easy language, which distinguishes the gentleman united to the scholar. The Doctor traces the subject as high as to the end of the fourth century, when Nemesius, Bishop of Edessa, wrote a treatise *concerning the nature of man*, which being published at Oxford in 1671, 8vo. the editor had therein contended, that the circulation of the blood, an invention, says the Doctor, the most considerable that ever was made in physic, and which the last century so much bragged of, was known to *Nemesius*, and described by him in very plain and significant terms, which are these. *For the motion of the pulse takes it's rise from the heart, and chiefly from the left ventricle of it: the artery is with great vehemence dilated and contracted by a sort of constant harmony and order; while it is dilated, it draws the thinner part of the blood from the next veins, the exhalation or vapour of which blood is made the element for the vital spirits; but while it contracts, it exhales whatsoever fumes it has through the whole body and by secret passages; so that the heart throws out whatever is fuliginous, through the mouth and the nose by expiration* † 'Upon this single slender proof, continues the Doctor, does he [the Oxford editor] attribute this great discovery of the circulation to Nemesius; and those who have insisted that it was known both to Hippocrates and Galen, have full as good arguments on their side. I shall only say this, that from this very description, and from what the same author says of the liver in the same chapter, that it ministers nourishment to the body by the veins, one may demonstrably infer, that Nemesius had no idea of the manner in which the circulation of the blood is performed, 'I shall not enter into a dispute upon this head, but 'shall now content myself with observing, that the 'true circulation was not at all rightly understood by 'a much later writer, and that a very elegant and accurate one, Columbus; who, as he was an excellent 'anatomist, about one hundred and fifty years ago 'with the nicest exactness explained not only the structure, but the use too of every part belonging to the 'heart, except a little mistake about some of the vessels; and does in as clear a manner as words could 'express shew, how by the contraction and dilatation 'of the heart, and mechanism of the vessels, the blood 'circulates through the lungs from the cava to the 'aorta into body, as he says himself, having either 'observed

a celebrated Anatomiſt (*e*); the Doctor afterwards * publiſhed two Exercitations more in defence of his doctrine, under the title of *Exercitationes Anatomicæ duæ de circulatione ſanguinis, ad J. Riolanum J. Filium* [G]. December 30, 1629, he reſigned the place of Treaſurer

* See rem [K].

(*e*) In the inſcription to theſe Exercitations, he is ſtiled, *The moſt experienced Phyſician in the univerſity of Paris, the Prince of Diſſectors of bodies, King's Profeſſor and Dean of Anatomy and Botany, and Archiater to the Queen-Mother of Lewis* XIII. See alſo Douglas's *Specimen Bibl. Anat.* ubi ſupra, p 161. Item, p. 204.

obſerved this, or written any thing of it) and from thence into all the parts of the body. *In his language* (as to the ſenſe, much indeed the ſame with what we find in Servetus a contemporary writer, though much more fully explained) *the lungs are for generating vital ſpirits, and this he deſcribes in the following expreſſion* *. *The wind-pipe draws the air into all parts of the lungs, the lungs mix this air with the blood, which comes from the right ventricle of the heart by the pulmonary artery; the blood, by this continual motion of the fluid, is agitated, attenuated, and mingled with the air, which air itſelf by this colliſion and rarefaction is ſo prepared, that both the blood and air, mixed together, are taken in by the branches of the pulmonary vein, and through it's trunk conveyed to the left ventricle of the heart; and the air conveyed hither, is wholly mixed and attenuated, that there is little more left to do for the heart; therefore after a little further labour here, which gives as it were the laſt hand to the vital ſpirits, there remains nothing, unleſs that the heart, by the help of the aorta, ſhould throw and diſtribute the blood into all the parts of the body.* This is literally the ſenſe of this inquiſitive anatomiſt, and we ſee how exactly conſonant to the truth his doctrine is, only he ſtopt ſhort here, and does not at all explain how the blood flows from the arteries to the veins; nay it is evident from what he ſays, in ſeveral places, of theſe veſſels, that he did not in the leaſt comprehend any communication between them. For beſides that he aſſigns the carrying of the vital ſpirits only to the arteries; in another diſcourſe he tells us, that the veins convey the blood from the liver to all parts of the body. And in this point chiefly, that is the intercourſe between the arteries and the veins, is his doctrine of the circulation deficient; however little it has been underſtood by thoſe, who have wrote for or againſt Harvey. Cæſalpinus indeed drops the word *Anaſtomoſis* † (copying perhaps from Servetus, whoſe word it is ‖) by which he ſuppoſes the native heat may paſs from the arteries to the veins, but this in the time of ſleep only; and from the ſentence immediately following it is plain, that he had no notion of the circular progreſs of the blood, for he makes it only move like an *euripus*, the very word he uſes, a ſort of undulating motion from one extremity of the veſſel to the other, which is indeed the very idea Hippocrates himſelf had of the motion of the blood. And Aquapendente in direct terms deſcribes the blood as circulating by way of flux and reflux in the arteries. Were we indeed to reaſon from what theſe writers ſay concerning the circulation of the blood, both through the heart and through the lungs into the aorta, the concluſion muſt demonſtrably be, that the blood which goes into the aorta, muſt return back into the cava; elſe how could the conſtant current which by their own account runs through the heart and lungs be maintained (24). But it is alſo demonſtrable, that they did not perceive this conſequence which naturally and neceſſarily flows from their own principles. Neither is this ſo much to be wondered at, for Columbus and Cæſalpinus might as well go ſo far and no farther, as that Aquapendente could diſcover and deſcribe the valves of the veins, and yet be at the ſame time ignorant of the true uſe of them ‡, as it is very plain he was from his own deſcription of them.' Whence the Doctor concludes with giving the honour of this invention to Harvey, as follows. 'As this great diſcovery was intirely owing to our countryman, ſo he has explained it with all the clearneſs imaginable; and though much has been written upon that ſubject, I may venture to ſay, his own book is the ſhorteſt, the plaineſt, and the moſt convincing of any, as we may be ſatisfied, if we look into the many apologies written in defence of the circulation, or have the patience to read the tedious uninſtructive treatiſe of Raymund Vieuſſens *de ſanguine & corde* (25).'

(25) Freind's Hiſtory of Phyſic, Vol. I. p. 227. & ſeq. Lond. 1725. 2 vols, 8vo.

[G] *Exercitationes de circulatione ſanguinis, &c.*] In 1639, there came out in quarto, from the preſs at Leyden in Holland, a piece intituled, *Gulielmi Harvæi Angli, Medici Regii, & in Londinenſi Medicorum Collegio Profeſſoris Anatomicæ, de Motu Cordis & Sanguinis in Animalibus Anatomica Exercitatio, cum Refutationibus Æmilii Pariſani Romani Philoſophi ac Medici Veneti. Et Jacobi Primroſii in Londinenſi Collegio Doctoris Medici.* In anſwer to the firſt of theſe, it was that Sir George Ent publiſhed his *Apologia pro circulatione Sanguinis contra Æmilium Pariſanum*, already mentioned. But this was doing him more honour than either of them, or any other of his antagoniſts deſerved, in the opinion of Dr Freind, who in that view makes the following remark. '*Sed ut fere invidia premitur quicquid eminet, quique omnibus antecellit multos habet ut plurimum inimicos, fuerunt futiles quidam homunculi, ignari perinde atque invidi, qui divinis illius laboribus obtrectarent. Quos quidem ille, qua fuit animi conſtantia, contemptui habuiſſet, niſi amplius quid & enucleatius de iiſdem rebus a ſe dici poſſe putaſſet* (26).' How agreeable this remark was to the mind of our author, appears from the following paſſage in his third Exercitation, where ſpeaking of the ſame opponents, though without naming any of them, he expreſſes himſelf in theſe terms. 'Viteratores, momos, ſcriptoreſque convitiorum labe ſordidos, ut nunquam legendos mecum ſtatui, (a quibus nihil ſolidum aut præter maledicta egregium ſperandum) ita multo minus reſponſione dignos judicavi. Utantur ſuo malo genio, vix unquam benevolos lectores habituros puto; neque (quod præſtantiſſimum & maxime optandum) ſapientiam donat Deus optimus improbis; pergant maledicendo, donec ipſos (ſi non pudet) pigeat, vel denique tædeat.—In libello *de cordis & ſanguinis motu in animalibus*, illa tantum exhibui ex multis aliis obſervationibus meis, quibus aut errores redargui, aut veritatem ſatis ſtabilitam iri arbitrabar; plurima alia diſſectionis ope ſenſu perceptibilia, tanquam redundantia & inutilia dereliqui; quorum quædam in gratiam ſtudioſorum, qui illa efflagitant, paucis verbis nunc addam (27). On the other hand it muſt be obſerved, that the Doctor treats Riolanus, an antagoniſt of a different claſs, with all poſſible reſpect, thanks him for the preſent of his *Enchiridion*, which he calls a learned, polite, and ſuccinct treatiſe, and declares that he had never received any thing more elegant; and as Riolanus had therein aſſented to a great part of his doctrine concerning the circulation, and ſeemed only drawn to oppoſe the reſt out of a veneration for the Ancients, and for Fernelius, who had been his maſter, more than from any perſuaſion of his own mind, the Doctor congratulates himſelf on the occaſion, *Gratulor, inquit ille, mihi ob ſententiam qua circulationem exornaſti* (28). It muſt be obſerved, that Riolanus having in the time of the troubles of France, attended his miſtreſs Mary de Medicis, Queen-Mother of Lewis the Thirteenth into England, had then frequently diſcourſed with Dr Harvey about his diſcovery of the circulation. Againſt which, though he was not ſatisfied with the Doctor's arguments, he made no objection at that time, becauſe (if we may believe his own account of the matter) being then in a ſtate of baniſhment, he thought it not ſuitable to ſpeak his doubts freely *. His opinion, as it is contained in his *Enchiridion Anatomicum & Pathologicum*, to which the ſecond Exercitation of Dr Harvey *de circulo ſanguinis* † is an anſwer, was, that the circulation went no farther than the larger veſſels, being abſorpt in their extremities for the nouriſhment of the parts. Dr Freind likewiſe in the ſame ſpirit with Dr Harvey having obſerved, that this doctrine of the circulation, though proved beyond all doubt in a demonſtrative way, met with great oppoſition, and that the inventor of it was obliged to bear the attacks of numberleſs adverſaries, who generally in their anſwers had more a ſpirit of contradiction than any force of reaſoning, proceeds thus, 'The learned Gaſſendus acted very differently, and behaved with that ingenuity which became a ſcholar, and though he had very ſtrenuouſly denied the circulation, and the communication of the chyle with the blood, yet at laſt was convinced of his error by Pecquet, the diſcoverer of the receptacle of the chyle, and the tracer of the thoracic duct in a human body; and as ſoon as he was convinced, he expreſſed great joy, that, dying as he was, he had come to the knowledge of theſe two important diſcoveries. Adding, that he looked upon theſe two truths, which prove one another, as the two poles, upon which for the future all phyſic ought to turn (29).'

(*g*) See the dedication of his Exercitationes de Generatione Animalium.

[*H*] *He attended the King to Scotland in* 1633.] This is collected from the following paſſage in his Exercitationes de generatione, which ſhews that he had been in Scotland, and there ſeems to be no time in the courſe of his life ſo likely to fix the journey thither, as the occaſion here mentioned *. The paſſage exhibits a moſt pictureſque view of the Baſſe, a rock or ſmall iſland ſo called in that country. ' *In Scotiæ inſulis orientalibus deſertis tanta omnis fere generis avium marinarum copia reperitur, ut ſi quæ a fide dignis accepi retulero; vereor ne fabulas majores narrare videar, quam quas authores varii de anſeribus Scoticis, ex arborum quarundam fructibus (quos nunquam viderunt) in mare delabentibus, prognatis tradiderunt.* Quæ ipſemet vidi, bona fide ediſſeram.

' Eſt inſula parva, Scoti Baſſe nominant, (ex hac una, lector, noſce omnes) non procul a littore in alto mari ſita, abrupto & confragoſo clivo editiſſima, (verius ſaxum ingens ſive ſcopulum dixeris) haud amplius mille paſſuum circuitu amplitudo ejus clauditur. Hujus inſulæ ſuperficies (menſibus Majo & Junio) nidis, ovis, pulliſque propemodum tota inſtrata eſt; adeo ut vix uſpiam, præ eorum copia, pedem libere ponere liceat: tantaque ſupervolitantium turba, ut (nubium inſtar) ſolem cœlumque auferant; tantuſque vociferantium clangor & ſtrepitus, ut prope alloquentes vix audias. Si ſubjectum mare inde (tanquam ex edita turri & altiſſimo præcipitio) deſpexeris, idem quoquoverſum infinitis diverſorum generum avibus natantibus prædæque inhiantibus opertum videas; quemadmodum verno tempore ſtagna alicubi ranis refertiſſima cernuntur, & aprici colles monteſque acclives frequentiſſimis ovium caprarumque gregibus obſeſſi eminus ſpectantur. Si circumnavigando eminentem clivum ſuſpicere libuerit, videas in ſingulis prærupti loci crepidinibus & receſſibus avium cujuſlibet generis & magnitudinis ordines innumerabiles; plures ſane quam illuni nocte & ſereno cœlo ſtellæ conſpiciuntur; ſi advolantes avolanteſque eminus adſpexeris, apum profecto ingens examen credas. Haud facile dixerim quantus reditus quotannis ex plumis & nidorum (foco utilium) reliquiis, ovorumque coctorum commercio poſſeſſori accedat; adeo, quod ipſe mihi narravit, fidem exſuperat. Hoc unum, quod ad propoſitum noſtrum propius ſpectat, potiſſimum mihi memorabile videtur, eſtque præfatæ multitudinis clarum indicium. Tota hæc inſula adventantibus candido nitore micat, clivique tanquam ex albiſſima creta, fulgent; ſaxi tamen nativus color obſcurus & niger eſt. Inſulam albam & ſplendentem reddit cruſta ei adhærens albiſſima, friabilis, ejuſdemque cum ovi cortice conſiſtentiæ, coloris, & naturæ: adeo omnia ejus latera integumento duro, teſtaque friabili ſuperinducta, trulliſſata ſunt. Pars ima quam reciproca maris unda quotidie abluit, nativo ſuo colore conſpicua, luculenter docet albedinem illam in ſummo fucatam eſſe, & a liquidis avium excrementis (quæ cum alvi ſæcibus eliduntur) proficiſci; quibus tanquam ovi teſta alba, dura, & friabili ſaxum obtegunt, & (accedente aëris ambientis frigore) incruſtant: eodemque modo Ariſtoteles quoque & Plinius ovi teſtam fieri voluerunt. Harum avium nullæ iſtius loci inquilini ſunt, ſed pariendi cauſa advenæ, per aliquot duntaxat ſeptimanas ibidem, tanquam in diverſorio, morantur. Tamen alba illa cruſta, adeo ſolida, firma, & profunda adhæret, ut genuinam illius ſoli naturam crederes (30).'

* It is probable that he alſo attended the King thither in 1639.

(30) *De Generatione Animalium*, Exercitat. xi.

[*I*] *He had merited of his Majeſty the wardenſhip of Merton-college.*] This merit did not only conſiſt in his conſtant and diligent attendance upon the King, for whom he takes all occaſions of expreſſing the moſt profound reſpect, and to whoſe cauſe he faithfully adhered; he had alſo another and more particular claim to this bounty. Notwithſtanding he had both leave, and an expreſs order from the Parliament, to attend his Majeſty upon his leaving Whitehall, yet his houſe in London was in his abſence plundered of all the furniture, and his Adverſaria, with a great number of anatomical obſervations, eſpecially relating to the generation of inſects, were taken away; a loſs which he laments ſeveral years afterwards, as it muſt needs touch him moſt ſenſibly, in the following pathetic words, ' *Atque hæc dum agimus, ignoſcant mihi niviæ animæ, ſi (ſummarum injuriarum memor) levem gemitum effudero. Doloris mihi hæc cauſa eſt: cum inter nuperos noſtros tumultus, & bella piuſquam civilia, ſereniſſimum Regem (itque non ſolum Senatus permiſſione ſed & juſſu) ſequor; rapaces quædam manus non modo ædium mearum ſupellectilem omnem expilarunt, ſed etiam ſque mihi cauſa gravior querimoniæ) Adverſaria mea multorum annorum laboribus parta, e muſæo meo ſummaverunt. Quo factum eſt, ut obſervationes plurimæ (preſertim de generatione inſectorum) cum reipublicæ literariæ (a ſin dicere) detrimento perierint* (31).' We have obſerved in another place (32), that Mr John Greaves, who was then Fellow of Merton college, had a ſhare in this promotion of Dr Harvey to the wardenſhip, in which he ſucceeded Dr Nathaniel Brent, who, as Wood obſerves, though he had received the honour of knighthood from his Majeſty, at Woodſtock, in 1629; yet ſided with the Preſbyterians afterwards, became a frequent witneſs againſt Archbiſhop Laud, and left his college when the King garriſoned Oxford (33). It may alſo be obſerved, that Dr Harvey very probably rendered himſelf more acceptable to the King by his courtly addreſs, wherein he was no ordinary adept, as is evident from the genteel and prudent caution with which the account of his being plundered is expreſſed; and that he was a very univerſal ſcholar, appears by the ſeveral parts of his writings. But we are told alſo, that he was particularly well ſkilled in the hiſtory and politicks of both the ancient and modern times; and that upon *that* account he is introduced under the title of the Phyſician, in the dialogue called Plato Redivivus, written by Mr Henry Nevil (34).

(31) Id. Exercitat. lxviii. ad finem.

(32) In the article of GREAVES [JOHN].

(33) Ath. Ox. Vol. II. col. 161.

(34) Account of the Life and Writings of Mr Moyle, prefixed to his Poſthumous Works, 1723.

[*K*] *Exercitationes Anatomicæ de Generatione Animalium* *, *&c.*] The Doctor had given the public ſome expectation of ſeeing this work, and alſo raiſed it's curioſity thereto, in his treatiſe *De Circulatione Sanguinis* (35); where ſpeaking of the opinion of Ariſtotle, who maintained the heart to be the principle of attraction, and the generation of the blood and ſpirits, he ſays, If I may ſpeak freely, I do not think that theſe things are ſo, as they are commonly believed; for there are many things which perſwade me to that opinion, whereof I will take notice in the generation of the parts of animals, which do not properly belong to this place; but it may be things more wonderful than theſe, and ſuch as will give more light to Natural Philoſophy, ſhall ſoon be publiſhed by me. ' *Aperte ſi loquar, hæc ita eſſe (ut vulgo recepta ſunt) non opinor: multa enim ſunt, quæ me in aliam ſententiam ire ſuadent in generatione partium obſervanda, quæ hic recitare non expedit; ſed propediem forſan miraculoſiora, majoremque lucem naturali philoſophiæ allatura, a me in publicum dabuntur* ‖.' But notwithſtanding this promiſe, we find he was with-held ſome time from performing it, by the oppoſition and trouble which his firſt work had brought upon him; and it was at laſt owing to the perſwaſions of Sir George Ent that he conſented to the publication †.

* The whole title is, *Exercitationes de Generatione Animalium, quibus accedunt quædam de partu: de membranis ac humoribus uteri: & de conceptione.* There have been ſeveral editions of it, and it has been alſo tranſlated into Engliſh. The laſt edition in Latin, both of this and the *Exercitat. de Cordis Motu*, was printed at Leyden in 1737. 4to.

(35) Exercitat. ii. ad Riolanum, p. 274. edit. Rotterdam, 1661. 12mo.

‖ This being printed at Cambridge, and alſo at Rotterdam in 1649, 12mo. ſhews that our author's promiſe was performed ſooner than the account of it given by the editor in his dedication, and tranſcribed by Dr Goodall, ubi ſupra, would induce one to believe.

† See the dedication.

We have the following account of this work by Dr Goodall. After the anatomy of the parts ſerving for generation

of Dr George Ent (*b*), who dedicated it to the Preſident and College of Phyſicians. In 1654, on Michaelmas-day, Dr Harvey was choſen Preſident of the college in his abſence, and apparently without his knowledge; but coming thither the day after, he acknowledged his great obligation to the electors, for chuſing him into a place of the ſame honour and dignity, as if he had been elected to be *Medicorum omnium apud Anglos Princeps*; but that his age and weakneſs were ſo great, that he could not diſcharge the duty incumbent upon that great office: and therefore requeſted them to chuſe their learned Preſident Dr Prujean, who had been highly ſerviceable to the college in his former diſcreet and prudent government (*i*). And as he had no children, he made the college heirs to his paternal eſtate, for which purpoſe, he ſettled that eſtate, which lay in Kent, upon the college, on the 28th of July following (*k*). He had three years before built them a combination room, a library, and a muſæum; and in 1656 he brought the deeds of his eſtate, and preſented them to the college; at which time he was preſent at the firſt feaſt inſtituted by himſelf [*L*], to be continued annually, together with a commemoration ſpeech in Latin, to be ſpoken on the 18th of October, in honour of the benefactors to the college; having appointed a handſome ſtipend for the orator *, and alſo for the keeper of the library and muſæum, which ſtill are called by his name. For the ſupply of which, and alſo for keeping the college-buildings in repair, the annual produce of his eſtate, which amounted to fifty-ſix pounds, was appropriated by him (*l*). Having thus compleated theſe munificent benefactions upon the verge of his eightieth year, he reſigned his Lecturer's place (*m*); and gave way to fate in June 1657 (*n*). His body wrapped in lead was carried to Hempſted in Hartfordſhaire, and interred in a vault in that church, where there is a monument erected to his memory (*o*); and not long afterwards, a character of him was drawn up, and engraved on a copper plate, which was put under his picture at the college [*M*]. It appears from ſeveral paſſages in the two books which were printed by him, that he had materials for ſeveral

(*b*) Ibid.

(*i*) Goodall, ubi ſupra.

(*k*) From the college Regiſter.

* See remark [*M*].

(*m*) He was ſucceeded therein by Sir Charles Scarborough. *Goodall*, ibid.

(*n*) On the third day, according to the inſcription upon his monument, which may be ſeen in the Gen. Dict. with which agrees the inſcription under his picture in the college. But Mr Wood, in Faſti, Vol. II. col. 6. ſays, June 30. as does alſo the author of the Lives of ſeveral Illuſtrious Perſons, &c. in 1743. fol. in the article of Dr HARVEY. But Peck, in *Deſiderata Curioſa*, Vol. II. ch. xv. p. 29. fixes it on June 22.

(*o*) Wood, where laſt cited.

generation in the hen, our author acquaints us with the formation and growth of the egg, and then with the ſeveral parts whereof it conſiſts. This done, he proceeds to give an account how the chick is formed, which he obſerved by a daily inſpection of the eggs during the time of incubation; and was the firſt who diſcovered, that the original of the chick was from the *cicatricula*. He then gives an account in what order the ſeveral parts appear, and confutes a multitude of errors delivered by former writers; proving that the *punctum ſaliens* is the heart; that the blood is not formed by the liver, becauſe it's *parenchyma* is formed after, and of, the blood, and grows to the blood-veſſels; nor yet by the heart, becauſe *that* is not in being 'till ſome time after the blood. He ſhews that all the *viſcera*, at their firſt formation, appear white; that the veins are the firſt conſpicuous foundation, as it were, of the whole body; that the diviſion of the parts into ſpermatical and ſanguineous is ridiculous, ſince all come from the ſame original. He delivereth an account of the parts ſerving for generation in a deer, and how the fœtus is formed; he acquaints us that nothing is to be found *in utero* for a conſiderable time after coition; and how analogous conception is to an egg; and that it is ſome time *in utero* before it is affixed to it. He takes notice of ſeveral memorable things concerning the generation of other animals, both oviparous and viviparous. In ſpeaking of the formation of the human *fœtus*, he delivers ſeveral curious obſervations made on abortions of ſeveral ages; as alſo inſtances of ſuperfœtation, hermaphrodites, of a *fœtus* found in *tuba uteri*, &c. When he treats *de partu*, he gives very curious and memorable inſtances to ſhew how the *fœtus* conduces to it's own birth. Beſides theſe, there are ſeveral remarkable obſervations occaſionally interſperſed through the whole book; as *de partu difficili, de gravidatione falſa, de ulcere uteri, de uteri procidentia*, &c. as alſo *de uteri membranis, humoribus, placenta, de conceptione, de calido innato, de humido primigenio*, &c. and of his cure of a *ſarcocele*, of that bigneſs, that none durſt undertake the cure, either by cutting or otherwiſe; which he happily performed by tying the artery, and thereby depriving it of nouriſhment; by which means it was afterwards eaſily extirpated. To this account of Dr Goodall we ſhall add, that in this book our author brings the following remarkable inſtance to confirm his doctrine of the circulation. A young nobleman of the Montgomery family having the misfortune to break the ribs of his left ſide, was perfectly cured, and ſo as to be reſtored to his former health; but, however, not without a large aperture remaining in his breaſt, through which, upon removing a thin plate of metal, which he uſually wore upon it, the cone of his heart was laid immediately open to the ſight. By which means the doctor laying his finger to the wriſt, could perceive that the ſyſtole of the heart was exactly ſynchronous with the diaſtole of the artery ‖. Whence it follows (though he does not indeed make the inference here, having done it before in his former book) that the diaſtole of the right auricle is immediately ſubſequent to the ſyſtole of the left ventricle, And, as by parity of reaſon, the diaſtole of the left auricle is immediately ſubſequent to the ſyſtole of the right ventricle. The concluſion becomes unavoidable, that the two auricles are relaxed and contracted together, and alternately to the relaxation and contraction of the two ventricles, which are in theſe alſo ſynchronous to each other, according to the opinion conſtantly maintained by Dr Harvey ‡.

‖ *De Generatione Animalium*, Exercitatio liii.

‡ This poſition is the main difficulty that attends his theſis of the manner in which the circulation is performed; ſince it ſuppoſes the blood to paſs from the ventricles through the whole length of the arteries, and by the veins into the auricles, as ſuddenly as it paſſes from the auricles immediately into the ventricles.

[*L*] *He was preſent at the firſt feaſt and annual ſpeech inſtituted by himſelf.*] The reader will be pleaſed with the following account of this matter in the elegant words of Dr Freind. Having ſpoken of Dr Harvey's writings, he proceeds thus. '*At parum fuit Harvæo donare Collegium ſcriptis, niſi ædes ipſas locupletaret ornaretque, niſi cœnaculum & muſæum conderet, niſi bibliothecam ſuo ſumptu inſtrueret, niſi demum exemplo pluſquam Attalico & prope inaudito, ipſe alacer pleno in ſodalium conſeſſu, & ut admodum ſenex cum adeſſet ſponte ſua ſe exueret patrimonio, ad nos ut pertineret illa, ipſo vivente, hæreditas. Omitto minora inſtrumenta Chirurgiæ, Profeſſorem uſibus, deſtinata. Convivium menſtruis Cenſorum comitiis inſtructum: licet, cum in beneficiis æſtimandis id præcipue attendi debeat, quo ea quiſque animo, ſtudio, atque voluntate fecerit, etiam leviſſima munuſcula utcunque parum habeant gloriæ atque ſplendoris, tamen neque gratia ſua carent neque dignitate. Illud vero præterire nefas eſſe arbitror, epulum hoc hodiernum, & nunc tandem, uti auguror, futurum prout eſſe debuit annuum,* (36) *non magnifice magis quam prudenter fuiſſe inſtitutum. Videre videor qua vultus hilaritate, qua animi lætitia munificentiſſimus ille ſenex ſuo interfuerit convivæ convivio: quam fauſta omnia de hoc ſodalitio ominatus ſit, cum ſenſerit id, quod in omni ſocietate maxime valet, ſe eſſe confecutum, ut hac convictus ſermonumque liberalium jucunditate recreati, ad vitæ morumque comitatem, ad concordiam atque amicitiam traheremur. Hunc ipſum in finem, & fortaſſe etiam ut epulo ſuo aliquid condimenti accederet, annuum & honeſtis præmiis ornatum oratorem conſtituit, qui virorum de nobis noſtriſque rebus optima merentium res geſtas memoraret. Quorſum enim hoc? niſi ut animis noſtris eorum, qui in hoc nos curriculo præceſſere, fama gloriaque accenſi, ad omnem ſcientiæ laudem, ad omnia humanitatis officia provocentur* (37).

(36) By reaſon of ſome diſorder in the college finances, this ſpeech was diſcontinued for many years, but revived in 1719, when the firſt ſpeech was ſpoken by Dr Pellet, afterwards Preſident of the college.

(37) Oratio Anniverſaria, &c. a Johanne Freind, M. D. Oct. 18. 1720.

[*M*] *A character upon a copper plate under his picture.*] This character, containing ſeveral particulars of his life, not to be found elſe where, is thought proper to be inſerted here as follows.

* The orator's premium is ten pounds.

‡ It has been ſaid by the late Dr Mead and others, that upon the total loſs of his ſight he drank a draught of opium, and expired ſoon after it.

[N] *A practice of phyſic conformable to his theſis of circulation.*] This piece is particularly taken notice of by Dr Freind (38), who obſerving that the deſign was a noble one, recommends it to the Faculty, as highly deſerving to be finiſhed, and for an encouragement to the undertaking, has given a ſpecimen of ſuch a work. Here follow his words: From this doctrine of our great countryman, many improvements even in the cure of diſtempers might be made. He had thought of compoſing ſuch a work himſelf, to ſhew the advantage of his doctrine in relation to practice, but was prevented by ſickneſs and death. The deſign of the architect was very noble, and I wiſh ſome of his ſucceſſors might finiſh it. At preſent I will hit only at two or three particulars, which will convince us of what uſe a perfect notion of the circulation may be to us, if rightly applied in the practical part of our profeſſion. The Doctor produces four inſtances, of which the firſt is the practice now univerſally uſed of tying up the arteries in amputations, which he obſerves, though invented by Parey (39), before the diſcovery of the circulation; yet for want of it's proper eſtabliſhment from that diſcovery, was but little uſed even in France (40); leſs ſtill, if at all, in Germany (41); and in Holland utterly rejected (42); for a long ſeries of years: nay, was but of late revived, or rather introduced among ourſelves by a conviction of it's reaſonableneſs, from a right underſtanding of the circulation. The next inſtance likewiſe regards amputations; wherein, when the trunk of the artery is cut off, this doctrine explains how the courſe of the blood is univerſally preſerved, a problem which the Doctor obſerves, can never be ſolved upon any other principles than thoſe of the circulation, and is ſo far from being an objection, as ſome ignorant writers make it, againſt this doctrine, that it is one, and not the leaſt demonſtrative, proof of it. For a third inſtance he obſerves, that this doctrine at firſt ſight ſhews, the true method of treating an aneuriſm which ariſes upon a puncture, viz. not to uſe compreſſion, but after proper ligatures to divide the veſſel, and tie the artery both above and below the puncture; a practice which though followed by our ſurgeons, yet that of other nations is very defective in this point. The Doctor concludes with the inſtance of the doctrine of revulſion, upon which there was for almoſt two centuries, as warm a diſpute as ever was in phyſic, whether in a pleuriſy a vein ſhould be opened on the ſame or the oppoſite ſide; neither was this point underſtood by the Ancients, whatever ſome ignorant zealots for them would pretend; but the whole affair was entirely ſettled by the circulation; which alſo, as to bleeding in general, quite confounded and ſuperſeded all thoſe rules, which had been before with ſo much pains laid down, as to opening in particular caſes this or that vein: and though the ignorant part of the Faculty have loſt a good pretence of driving on this way a trade in phyſic, and of making a myſtery, where there is none: Thoſe ſurely who underſtand their profeſſion muſt acknowledge, that they have this advantage at leaſt from the circulation, of knowing exactly how indifferent it often is, which vein is made choice of, or if there be any preference, of judging without any heſitation, which vein to chuſe.

aliisque curationibus præter vulgi sententiam & methodum feliciter peractis. (11.) *De nutritionis modo.* (12.) *Historia multorum animalium, præsertim insectorum ab inconspicuis præ exiguitate principiis (p), & seminibus quasi atomis in aëre volitantibus, a ventis huc usque sparsis ac disseminatis, ortorum.* (13.) *Anatomia Medica ad Medicinæ usum maxime accomodata, ubi ex multis dissectionibus corporum ægrotorum gravissimis & miris affectionibus confectorum; quomodo & qualiter partes interiores in situ, magnitudine, constitutione, figura, substantia, & reliquis accedentibus sensibilibus a naturali forma & apparentia permutentur, & quam variis modis & miris afficiantur, enarrare susciperet.* As to our author's character, it is a little unaccountable, that in the elogium of him, under his picture at the College of Physicians, no notice is taken either of his piety in regard to religion, nor of his modesty and prudent caution in philosophizing; for both which he was eminently and most amiably distinguished. It has been observed, that he lived to see his doctrine of the circulation universally received, and was the only person that ever had that happiness (*q*). And nothing perhaps contributed so much to effect it as these two marks of his character. We have seen (*r*) the first applied to that purpose by an eminent Italian author not a great many years after his death [*O*], and of the latter an instance has been already produced *. But it would not be doing him justice to omit another most remarkable one, wherein both these excellent qualities are seen together, and by that means each reflect a lustre upon the other. We shall therefore insert it below [*P*].

(*p*) We have already related how the materials for this piece were lost, in remark [*I*].

(*q*) Hobbs, in præfat. ad Element. Philos. sect. 1. de corpore.

(*r*) In remark [*F*].

* In remark [*E*].

[*O*] *Of the first we have already given an instance.*] Besides that of the *anastomoses*, there is another equally remarkable in the same Exercitation iii. referring to his treatise *De motu Cordis*. It respects the existence and action of the *calidum innatum*, which he makes to be the principle and cause of the *diastole* of the heart and arteries, moved thereto, as he professes, by the authority and reasoning of Aristotle, which is produced by him: yet notwithstanding the profound veneration he constantly pays to that master, not being sufficiently convinced of this principle by experimental proofs, he concludes in these terms. 'After this manner do I believe that the native heat, or the *calidum innatum*, as being the common instrument of all operations, is also the first efficient cause of the pulse. This however I do not confidently and assuredly aver, but propound it as a thesis, and should be glad to hear what may be objected to it by men of learning and probity, without scurrilous language, calumnies, or reproaches; and I should be exceedingly pleased if any such persons would undertake the matter. '*Atque hoc modo autumo calorem* '*nativum sive calidum innatum, ut omnium operationum* '*commune instrumentum, sic pulsus quoque efficiens primum esse. Hoc non adhuc constanter assevero, sed tantum pro thesi propono. Quid in contrarium objiciatur a* '*viris doctis & probis, sine verborum scurrilitate, con-*'*vitiis, vel contumeliis, scire libenter velim, & si quis* '*hanc rem susceperit, pergratum mihi fecerit* (43).'

(43) Exercitat. iii. *de circulatione sanguinis, ad Riolanum*, p. 277. Rotterd. an. 1661. 12mo.

[*P*] *We shall insert it below.*] It is in his book *de generatione animalium*, where speaking of the efficient cause of animals, he maintains against Sennertus, that whether the generation of the *pullus* be effected wholly by the male, or that the female has also her share in it; whether it be produced by the virtue of the seed or of the egg; yet none of these are any thing more than the instrumental and not the primary efficient cause of the animal, as is evident from the art, intellect, and providence, which shews itself conspicuously in every part and state of the production. In proceeding, he examines that opinion which ascribes this business to the sun as the principal cause, and having shewn in what sense it may be allowed, that *Sol & homo generent hominem*, he expresses himself thus. '*Ideoque vere vigent vernantque* '*omnia; appropinquante sc. sole, (qui communis pater* '*est & genitor; vel saltem summi creatoris in genera-*'*tione immediatum & universale instrumentum) non solum* '*plantæ sed etiam animalia, nec minus illa quæ sponte* '*proveniunt, quam quæ maris fœminæque mutua opera* '*progenerantur. Tanquam adveniente nobili hoc astro,* '*de cœlo delaberetur* Alma Venus, Cupidinis chari-'*tumque choro stipata, cunctaque viventia blando amo-*'*ris æstro ad perennitatem sui exstimularet. Vel (ut* '*est in fabulis) quasi eo tempore,* Saturni *genitalia in* '*mare projecta spumam excitarent, undeque nasceretur* 'Aphrodite. Nempe in generatione, animalium, su-'perat (ut poëta ait) *tener omnibus humor*, spumant 'turgentque semine genitalia.' In the next place he refutes the opinion, that the vegetative soul is the primary efficient cause of the animal, wherein observing that this doctrine, when applied to the generation of man, makes the vegetative faculty to be more excellent, and a more express image of the Deity than the rational soul, he describes the difference between instinct and intellect, and shews that man's part in generation is merely the effect of an instinctive impulse, and not the work of his intellect, the utmost power of which is excelled by the skill and providential contrivance seen in the animal produced by generation, as much as the art of nature exceeds the nature of art. '*Ideoque, pergit* '*ille, ad artificialia qui respiciunt, haud æqui rerum* '*naturalium æstimatores habendi sunt. Siquidem* '*potius vice versa sumpto a natura exemplari de rebus* '*artefactis judicandum est. Artes enim omnes imita-*'*tione quadam naturæ comparatæ sunt, nostraque ratio* '*sive intellectus, ab intellectu divino in operibus suis* '*agente profluxit. Qui cum habitu perfecto in nobis* '*exiftit, quasi altera anima adventitia & acquisita,* '*summi ac divinissimi agentis imaginem suscipiens, ope-*'*rationes sive effectus similes produxit.*' He then concludes the whole remark with the following most pious strain. '*Quapropter rem recte pieque (mea quidem sen-*'*tentia) reputaverit; qui rerum omnium generationes* '*ab eodem illo æterno atque omnipotente numine deduxerit,* '*a cujus nutu rerum ipsarum universitas dependet. Nec* '*magnopere litigandum censeo, quo nomine primum hoc* '*agens compellandum aut venerandum veniat (cui nomen* '*omne venerabile debetur), sive* Deus, *sive* Natura natu-'rans, *sive* Anima mundi *appellatur, id enim omnes in-*'*telligunt, quod cunctarum rerum principium sit, & finis,* '*quod æternum & omnipotens existat, omniumque autor &* '*creator, per varias generationum vicissitudines, cadu-*'*cas res mortalium conservet, ac perpetuet; quod ubi-*'*que præsens singulis rerum naturalium operibus non* '*minus adsit quam toti universo; quod numine suo, sive* '*providentia, arte, ac mente divina, cuncta animalia* '*procreet.*' Whence taking occasion to run over all the various ways of generation in different creatures, rational, animal, or vegetable, he closes all in the following words. '*Omnia vero corpora naturalia summi* '*ejus numinis & opera sunt, & instrumenta; suntque* '*hæc vel naturalia solum, ut calor, spiritus, aëris,* '*putredinisve tepor, &c. vel simul etiam animata:* '*quippe animalium quoque vel motu, vel facultate, vel* '*anima, aliquo modo utitur ad perfectionem Universi, &* '*animalium procreationem* (44).

(44) *De Generatione Animalium*, Exercit. L.

HAWKINS [Sir JOHN], an able ſeaman, an excellent officer, and one of the moſt celebrated commanders of the Engliſh fleet in the glorious reign of Queen Elizabeth, the mother of her ſubjects, the terror of their enemies, and the foundreſs of our navy. He deſcended from a good family in Devonſhire, diſtinguiſhed both by merit and fortune. His grandfather was John Hawkins, Eſq; of Taviſtock, who married Joan, the daughter of William Amidas in the county of Cornwall, Eſq; His father was William Hawkins, Eſq; a gentleman of a good eſtate; ſome part of which he had acquired by his great induſtry, admired prudence, and ſingular good fortune at ſea; which raiſed him a very high and juſt reputation in the reign of Henry the Eighth, with whom he ſtood in much perſonal favour, for bringing over a Brazilian Prince (*a*) to viſit him, which, with ſome other curious particulars relating to this worthy perſon, the reader will find farther explained in the notes (*b*) [*A*]. His mother was Joan Trelawney, daughter of William Trelawney of the county of Cornwall, Eſq; This worthy perſon was their ſecond ſon, born at Plymouth (*c*), but in what year cannot with certainty be known; however, from circumſtances we may gather it could not be well later than 1520. He was from his youth addicted to Navigation, and the ſtudy of the Mathematics, as indeed were all his family, and began very early to put his ſkill in practice, by making ſeveral voyages to Spain, Portugal, and the Canaries, which were in thoſe days extraordinary undertakings, and muſt have given him much more experience than almoſt any of his contemporaries (*d*). Of theſe voyages we have no particular account; but being undertaken with the conſent and the lights he drew from them, aſſiſted by his father's obſervations, he came early into the world with a great reputation, and was employed by Queen Elizabeth as an officer of conſideration at ſea, when ſome of thoſe, who were afterwards chief commanders in her reign, were but boys, who joyfully ſerved under, and learned the ſkill by which they roſe from him [*B*]. In the ſpring of the year 1562, he formed the deſign of the firſt famous

(*d*) Stowe's Annals, p. 807.

[*A*] *Will find farther explained in the notes.*] The dawn of our Engliſh commerce was, in the preceding reign, when with the commiſſion, and at the expence of Henry the Seventh, Sir John Cabot endeavoured to outdo Columbus, and to reach the Eaſt-Indies by a north-weſt courſe: this bold attempt, though it did not prove ſucceſsful, yet excited that ſpirit of diſcovery, which has produced ſo many and ſo great effects (1). Amongſt thoſe who entered early into this glorious career, Captain William Hawkins gained no ſmall reputation; he had already a competent fortune, when he formed the deſign of viſiting the coaſt of Braſil, and of trading with the natives, notwithſtanding the ſtrange accounts publiſhed of them by the Portugueſe (2). He was owner and commander of a veſſel, called the Paul of Plymouth, of the burthen of two hundred and fifty tons, which was in thoſe days ſtiled a tall and goodly ſhip; as indeed it well might, ſince there were very few merchantmen in England of ſo large a ſize at that juncture (3). In the year 1530, he carried his ſcheme into execution, whether on his own bottom, or with the aſſiſtance of his neighbours, does not appear. He ſailed firſt to the port of Seſtos, on the coaſt of Guinea; where, for a cargo of ſmall price that he carried out, he purchaſed from the negroes elephants teeth, and other commodities, which he judged might be acceptable in the country to which he was next bound. He proceeded accordingly with this cargo to the coaſt of Brazil, where he dealt only with thoſe whom the Portugueſe reputed ſavages, and whom he regarded in the light of a free people. He dealt with them in a manner ſo full of juſtice, candour, and beneficence, as to gain their confidence entirely; and yet the profits of his voyage were very conſiderable, more ſo, perhaps, than if he had ſhewn a rapacious appetite for gain (4). He liked their manner of dealing ſo well, that he made a ſecond voyage thither in 1532, and was received with the ſame cordial kindneſs as at firſt. The gentleneſs of his behaviour, and the charms of his converſation, had ſuch an effect upon the mind of a Brazilian Prince, that he offered to go over with him to England, in caſe he would leave one of his men as a hoſtage for his ſafety with the Brazilians (5). The propoſal was readily accepted, and one Martin Cockeram of Plymouth, by his own conſent, ſtayed behind. On the arrival of this Weſt-Indian Prince, he was carried up to London to ſalute the King, at that time Henry VIII. who received him very kindly, and examined him very attentively at Whitehall, where the ſtrangeneſs of his figure invited a great concourſe of all ranks to behold him. He was a tall, well limbed man, but in his cheeks there were many little holes, in which ſmall bones were placed, that ſtuck out about an inch from the ſkin; and in the hollow of his under-lip, there was a larger hole, in which was placed a precious ſtone as big as a pea. Theſe, it ſeems, were ornaments ſuited to his high dignity in his own country; but which, in the eyes of King Harry's courtiers, looked not a little odd (6). However, that monarch treated him with much condeſcention; and, after he had remained here near a year, Captain Hawkins, in order punctually to fulfil his promiſe, embarked with him again at Plymouth; but in his paſſage home, he was ſeized with a diſtemper of which he died. This troubled Captain Hawkins extremely, from an apprehenſion of what might befal the man he had left behind. But he was ſoon eaſed of theſe fears, for the ſavages relied entirely upon his word; and not only traded with him as before, but ſet Martin Cockeram at full liberty, who, on his return home, obtained a little office in the town of Plymouth, probably by the interpoſition of Captain Hawkins, where he lived and died (7). This commerce between the Brazils and England ſubſiſted many years afterwards at Southampton, and in proceſs of time ſome Engliſhmen went thither and ſettled (8). Amongſt theſe was Mr John Whitehall, who in a letter to a friend of his, dated June 26, 1578, acquainted him that there were many rich mines of gold in that country (9); and theſe, as we learn from ſubſequent accounts, the Spaniards, who by this time were become maſters of Portugal, and of the colonies belonging to that crown, prevented from being wrought; which is a fact we thought very proper to mention here, becauſe it is far from being commonly known, notwithſtanding we now ſhare ſo largely in their produce.

[*B*] *By which they roſe from him.*] The reaſon of our giving this note, is to mention a cuſtom that Captain Hawkins, and very probably other commanders in thoſe times, had of carrying young gentlemen with them, in quality of volunteers, in order to inſtruct and give them proper notions of the ſea ſervice. We have a clear and diſtinct proof of this, in a liſt at the end of Captain Hawkins's ſecond voyage to the Weſt-Indies, bearing this title, *The Names of certain Gentlemen that were in this Voyage*, viz Mr John Cheſter, Sir William Cheſter's ſon, who was afterwards a Captain in the royal navy; Mr Anthony Parkhurſt, who was afterwards an eminent man at Briſtol, and a great adventurer in different parts of the world; Mr Fitzwilliam, Mr Thomas Woorley, Mr Edward Lacy, Mr John Sparke, jun. who wrote the narrative of that voyage, with ſeveral others (10). We might, if we had the like liſts of thoſe he carried out in his other voyages, render this account very curious and compleat; but ſince theſe are wanting, it ſhall ſuffice to ſay, that under him were bred the famous Sir Francis Drake, and his brethren, Captain William Hawkins, our Hero's own brother, and Sir Richard Hawkins, his ſon, than whom

(10) Purchas's Pilgrim, Vol. IV. p. 1179. Relation of General Hawkins's Second Voyage, &c. by J. Sparke.

famous voyage he made, which was highly advantageous to himſelf and moſt of his proprietors, but much more ſo in conſequences of it to his country (e). In ſeveral trips to the Canaries, where, by his tenderneſs and humanity, he had made himſelf very much beloved, he acquired a knowledge of the ſlave trade, and of the mighty profit, which, even in thoſe days, reſulted from the ſale of negroes in the Weſt Indies. After the moſt mature conſideration, therefore, he reſolved to attempt ſomewhat in this way, and to raiſe a ſubſcription for this purpoſe amongſt his friends, the greateſt traders at that time in the city of London, in hopes of opening a new trade, firſt to Guinea, for ſlaves, and then to Hiſpaniola, St John de Porto rico, and other Spaniſh iſlands, for ſugars, hides, ſilver, &c. Upon his ample and clear repreſentation of this important ſcheme, Sir Lionel Ducket, Sir Thomas Lodge, Sir William Winter, Mr Bromfield, and Mr Gunſon, whoſe daughter Mr Hawkins had married, readily accepted his propoſal, and joined together in the undertaking (f). At their expence a little ſquadron was prepared, compoſed of the following ſhips. The Solomon, of the burthen of one hundred and twenty tons, in which Mr Hawkins himſelf ſailed; the Swallow, of one hundred tons, commanded by Captain Thomas Hampton; and a bark of forty tons, called the Jonas; on board of all which there were about one hundred men. With theſe veſſels he ſailed from the coaſt of England, in the month of October, 1562; and, in his courſe, firſt touched at Teneriffe; thence he proceeded to the coaſt of Guinea, where, having by money, and, where that failed, by the ſword, acquired three hundred negro ſlaves, he ſailed directly to Hiſpaniola; and making there a large profit of his European and African cargoes, at three different ports in that iſland, he returned ſafe into England in the month of September, 1563 (g) [C]. The next year, with the like views, he made another voyage, but with a greater force, himſelf in the Jeſus of Lubeck, a ſhip of ſeven hundred tons, accompanied by the Solomon, and two barks, the Tyger and the Swallow. He ſailed from Plymouth the eighteenth of October, 1564, proceeded to the coaſt of Guinea, and thence to the Spaniſh Weſt Indies; where, in ſeveral different places, he forced a trade much to his profit; and after viſiting the coaſts of Jamaica and Cuba, where for want of right inſtruction he miſſed the port of the Havanna, came home through the Gulph of Florida, arriving at Padſtowe in Cornwall on the twentieth of September, 1565; having loſt, notwithſtanding many untoward accidents and frequent ſkirmiſhes, no more than twenty perſons in the whole voyage, and bringing with him a large cargo of very rich commodities (b) [D]. His

whom there were never braver men, nor better officers, in the ſervice of the Engliſh Crown (11). The worthy pupils of perſons diſtinguiſhed in any profeſſion, are a kind of political offspring, which they bring forth to the public, and is the utmoſt effort of that benevolent virtue which prompts them to purſue the welfare of ſociety, not only beyond their own, but to the utmoſt limits of time.

(11) Purchas's Pilgrims, Vol. IV. p. 1179. Riſdon's Deſcription of Devonſhire, p. 262, 263. Stowe's Survey.

[C] *In the month of September* 1563.] At this juncture there was an appearance of perfect amity between the Crowns of England and Spain, notwithſtanding which, the latter was ſo exceedingly tender of her poſſeſſions in the New World, as it was then commonly called, that they conſidered the appearance of any ſtrange veſſel in thoſe ſeas as an act of hoſtility, and treated whoever commanded ſuch a ſhip, not as an interloper, but as a pirate (12). Yet with all theſe precautions, we muſt not imagine that the Spaniards, even in theſe early times, could preſerve the monopoly of this lucrative commerce unimpeached; for it appears, that ſome years before this, that is, almoſt as ſoon as the Spaniards were eſtabliſhed there, Engliſh merchants found means to trade there under the names of their Spaniſh correſpondents; and for the better carrying on of this clandeſtine commerce, had their ſecret agents in Spain, which was the more practicable, ſince for many years there was a cloſe conjunction of intereſts, and a very great intercourſe between the two nations (13). All this, without doubt, was well known to Captain John Hawkins, but as he was already a very expert ſeaman, and had frequently viſited the Canaries, he thought this method of trading injurious to his profeſſion as well as detrimental to the nation; and therefore having gained the beſt information poſſible, of the proper method of carrying on ſuch a traffick as he deſired from England to the Weſt-Indies directly, and being alſo well aſſured that this attempt would not be diſagreeable to the ſubjects, how diſtaſteful ſoever it might be to the Crown of Spain; he ſettled his project with great ſagacity, and executed it afterwards with equal prudence. We ſhall apprehend this more clearly, if we reflect that his attempt was very ſingular, his return very ſpeedy, and his voyage in all reſpects perfectly ſucceſsful (14). In reſpect to the ſingularity of his attempt, it was not only without precedent, ſo that he had no rule by which to ſquare his conduct but his own judgment; it was alſo perilous in every ſtep, for he went without commiſſion, expoſed to the reſentment of the moſt vindictive power in Europe; and though the chief part of his cargo was to be provided, and all the tranſactions in this commerce to be ſupported by arms, yet his force was very inconſiderable, his three veſſels making in the whole but two hundred and ſixty tons, and the number of his men ſcarce one hundred (15). He ſailed firſt to the coaſt of Guinea, where though it is darkly expreſſed in the ſhort relation we have of this voyage, yet it is very certain that if he purchaſed ſome, he took by force the beſt part of the three hundred negroes which he carried to the Weſt-Indies, where he viſited three ſeveral ports, opened a trade by terror as well as perſuaſion at each of them, and yet anchored again at Plymouth within the year (16). But ſtill he made no more haſte than good ſpeed. He brought home his own three ſhips fully laden with hides, ginger, ſugar, and other Weſt-India commodities, beſides a good quantity of pearl, which then ſold at a high price; yet this was not all, for having got more in America than he could tranſport to Europe, he freighted two veſſels that he met with in thoſe parts with the coarſeſt of his goods for Spain, where they came likewiſe to a good market (17); ſo that viewing it in every light, this voyage of his was amazingly proſperous.

[D] *Of very rich commodities.*] We have a very copious relation of this voyage, from whence it is but reaſonable that we ſhould extract a few paſſages relative to the perſonal hiſtory of this great man; becauſe, as we ſhall plainly prove hereafter, *he left his* great actions to be celebrated by others, and how brave ſoever in his perſon, was not only modeſt, but even baſhful with his pen. On the twentieth of November, the day after they left the iſland of Teneriffe, the pinnace of his own ſhip the Jeſus, overſet by her ſide, by the careleſſneſs of two men that were in her. As they had a briſk gale before this accident was diſcerned, and the ſhip could put about, ſhe was driven half a league to the leeward, ſo that being out of ſight, the pinnace and the men were given for loſt, as they muſt have been, but for the Providence of God, and the ſkill and tenderneſs of their captain, who being upon deck, and having well marked which way the pinnace drove by the ſun, he ordered out his great boat with four and twenty ſtout

His ſkill and ſucceſs had now moſt deſervedly raiſed him to ſuch a reputation, that Mr Harvey, then Clarencieux King at Arms, granted him by patent for his creſt, a demi Moor in his proper colour, bound with a cord (*i*). In the beginning of the year 1567, he ſailed to the relief of the French Proteſtants; and returning home in the ſummer, began immediately to make the neceſſary preparations for his third voyage to the Weſt Indies; which with vaſt expectations, grounded on his former ſucceſs, he ſome time afterwards performed. At his return from France, while he waited the Queen's orders with his ſquadron at Catwater, there happened an event, which, though it has ſlipped the obſervation of moſt of our hiſtorians, is yet worthy of being recorded with all it's circumſtances. The Spaniſh fleet of near fifty ſail paſſing between the iſland and the main, bound to Flanders, without lowering their topſails or taking in their flags, Captain Hawkins ordered a ſhot to be made at the Admiral's flag; but that not having the deſired effect, he directed a ſecond, which pierced it through and through; and upon this the Spaniards took in both topſails and flags, and came to an anchor. The General then ſent one of his principal officers in a boat to expoſtulate the matter, and to know the reaſon of ſuch proceeding. Captain Hawkins would not let *him* come aboard, or ſo much as receive his meſſage in perſon; but upon it's being reported to him by an officer, he ſent him word by the ſame perſon to tell his General, that as he had entered the Queen's port, and neglected to pay that reverence which was due to her Majeſty, more eſpecially as her ſhips were there, and having ſo numerous a fleet, it could not but create ſuſpicion of ſome ill deſign; for which cauſe he required him to depart the port in twelve hours, upon pain of being conſidered and treated as an enemy. The Spaniſh General having received this meſſage, came in the ſame boat, and deſired to ſpeak with the Engliſh commander, which at firſt was refuſed; but, upon his preſſing it a ſecond time, was admitted. When they met, the Spaniard aſked Captain Hawkins if there was war between Spain and England? he anſwered, no, but that it was not impoſſible this proceeding might be thought ſufficient cauſe for a war; that he meant to diſpatch an expreſs immediately to the Queen and Council, with an account of what had paſſed, and that in the mean time he might depart. The Spaniſh General pretended that he could not comprehend wherein he had given offence, deſiring to be made ſenſible of his fault. Captain Hawkins aſked him, if an Engliſh fleet came into a Spaniſh port, where any of his Catholic Majeſty's ſhips were, and pretended to keep their topſails up and their flags flying, whether they would not immediately fire upon and drive them out? The Spaniard owned they would, confeſſed his fault, offered to pay any penalty, and deſired that no diſpute between them might injure that harmony which ſubſiſted between their princes. As this was preciſely what Captain Hawkins deſired, he after a little difficulty agreed to paſs things over, and then, as good friends, they feaſted each other both on board and aſhore (*k*). The Spaniſh fleet proceeded, as ſoon as the wind was fair, for the coaſt of Flanders, and Captain Hawkins went on with his preparations for his intended undertaking. Our gallant ſeaman made this, as he did his former voyage, in the great ſhip, called the Jeſus of Lubeck, accompanied by the *Minion* and four other ſhips (*l*). He ſailed with theſe from Plymouth, October the ſecond, 1567. At firſt they met with ſuch ſtorms, that they had thoughts of returning home; but the weather growing better, and the wind becoming fair, he continued his courſe to the Canaries, thence to the coaſt of Guinea; and having there, by purchaſe and force, procured about five hundred ſlaves, proceeded to the coaſts of Spaniſh America to ſell his negroes. The Governor of Rio de la Hacha refuſing to trade, Hawkins landed and took the town, in which there ſeems to have been ſome colluſion; for after this they traded together in a friendly manner, 'till moſt of the negroes were ſold or exchanged. Thence he ſailed to Carthagena, where he diſpoſed of the reſt; but in returning home, being ſurprized by moſt violent ſtorms on the coaſt of Florida, he was forced to ſteer for the haven of St John de Ulloa in the bottom of the bay of Mexico. He entered this port on Tueſday the fifteenth of September, 1568, when the Spaniards came on board, ſuppoſing his ſquadron to have come from Spain, and were exceedingly intimidated when they diſcovered their miſtake. Captain Hawkins treated them very civilly, aſſuring them that all he came for was proviſions; neither did he attack twelve merchant ſhips that were in the port, the cargoes of which were worth upwards of two hundred thouſand pounds, but contented himſelf with ſeizing two perſons of diſtinction, whom

(*i*) Prince, in the page before cited, tells us, he took this from the original patent.

(*k*) Sir Richard Hawkins's Obſervations in his Voyage into the South-Seas, p. 21, 22.

ſtout fellows, directing them on which point to row to windward, and contrary to all expectations they recovered the two poor fellows, who were ſitting upon the keel of their veſſel driving at the mercy of the wind and waves (18). On the coaſt of Africa, things went not always as he would have them, once in particular, the taking of ten negro ſlaves coſt him the captain of one of his ſhips and ſix of the ſtouteſt of his crew, beſides twenty-ſeven more that were wounded; yet his countenance remained unclouded, and though he was naturally a man of compaſſion, he made very light of his loſs, that others might not take it to heart (19). In his return, upon the coaſt of Newfoundland, being in great want of proviſion, he took from two French fiſhing veſſels as much as might ſerve him home, which being done with civility, the Frenchmen did not grudge; but when the captain paid them for it in ready money, contrary to the practice of thoſe times, when at ſea, the ſtrongeſt of every nation made no ſcruple of ſupplying themſelves at free coſt, they were exceedingly ſurprized (20). This voyage, though not without it's croſſes and ſome loſs too, was upon the whole very profitable, and he who dealt juſtly even with ſtrangers, being no leſs punctual to his proprietors, they were with good reaſon highly ſatisfied with his ſecond expedition, in which it is doubtful whether he had the concurrence of the Crown or not, but more probable that he had, ſince the Jeſus of Lubeck was the Queen's ſhip (21).

[E] *Solemnly*

whom he kept as hoſtages until the return of an expreſs, which was ſent to Mexico with an account of his demands (*m*). The next day the Spaniſh fleet appeared in ſight, which unlooked for event gave Captain Hawkins great uneaſineſs; for if he kept them out, he was ſenſible they muſt be inevitably loſt, with all they had on board, amounting to near two millions ſterling (*n*); an act, which, conſidering there was no war declared againſt Spain, he was afraid Queen Elizabeth his Sovereign would never pardon. On the other hand, he could not but ſuſpect, the port being narrow, and the town populous, the Spaniards would not fail, if once they were ſuffered to come in, to attempt ſome treachery. At length, however, endeavouring out of two evils to chooſe the leaſt, he determined to admit the fleet, provided the new Viceroy of Mexico, who was on board it, would undertake that the Engliſh ſhould have victuals for their money, that hoſtages ſhould be given on both ſides, and that the iſland, with eleven pieces of braſs cannon therein, ſhould be put into the hands of his people while they ſtaid. Upon his making theſe demands, the Viceroy ſeemed at firſt diſpleaſed; yet in a ſhort time after he conſented to them, and, at a perſonal but public conference with Captain Hawkins, ſolemnly promiſed to perform them (*o*) [*E*]. Theſe negotiations over, which took up three days, all things being concluded, the fleet entered the port on Monday the nineteenth day of September, with the uſual ſalutations, and two days more were employed to range the ſhips of each nation by themſelves, the officers and ſailors on both ſides proſſing towards each other a great deal of friendſhip. But the Spaniards intended nothing leſs; for they had by this time muſtered a thouſand men on ſhore, and deſigned, on Thurſday the twenty-third at dinner time, to make a general attack on the Engliſh on every ſide. On the day appointed, in the morning, the Engliſh perceived the Spaniards ſhifting their ammunition from ſhip to ſhip, and pointing their ordnance towards them; they likewiſe obſerved much greater numbers of men paſſing to the ſhips from land, in boats of all ſizes, than the buſineſs on board the ſhips required; which, with other circumſtances, giving very ſtrong grounds of ſuſpicion, Captain Hawkins ſent to the Viceroy to know the meaning of all theſe preparations; upon which, the Viceroy ſent orders that every thing ſhould be removed which might give the Engliſh umbrage, with a promiſe, on the faith of a Viceroy, to be their defence againſt any clandeſtine or inſidious attempts of the Spaniards (*p*). However, the Captain not being ſatisfied with this anſwer, becauſe he ſuſpected that a great number of men were hidden in a ſhip of nine hundred tons, which was moored next the Minion, ſent Robert Barret, the Maſter of the Jeſus, who perfectly underſtood Spaniſh, to know peremptorily from the Viceroy whether it was ſo or not, and whether any provocation had been given. The Viceroy, finding he could conceal his mean and treacherous deſign no longer, detained the Maſter, ordered him into irons, and directed the trumpet to ſound a charge; on which the Spaniards, who waited only for that ſignal, ſet upon the Engliſh on all ſides [*F*]. Thoſe who were upon the iſland being ſtruck with fear

[*E*] *Solemnly promiſed to perform them.*] We have beſides that relation of this voyage which was written by Captain Hawkins himſelf, two other accounts, one by Miles Philips a private ſailor (22), and the other by Job Hortop who was a gunner on board the Admiral's ſhip (23); from theſe we learn many particulars worthy of notice, which Captain Hawkins did not think it became him to commit to paper, or at leaſt to make publick, from whence we may be able to illuſtrate many paſſages to the reader's ſatisfaction. It appears that of the ſquadron he commanded, two were the Queen's ſhip, the Jeſus of Lubeck, and the Minion, commanded by Captain John Hampton; but for the other four, which were the William and John, Captain Bolton; the Judith, Captain Francis Drake, the Angel, and the Swallow, the names of thoſe captains are not remembred, were fitted out by Capt Hawkins at his own expence (24). The William and John, was loſt in a ſtorm upon the coaſt of Guinea. In their paſſage from Carthagena, they took a ſmall ſhip, on board which were ſome friars, and one Don Auguſtin de Villa Nueva, a man of parts, and who had formerly made a figure, but was fallen into general odium of his own nation for betraying ſome Indian lords, who by his means loſt their lives. This man, as he was very capable, gave Captain Hawkins many informations, who treated him therefore with great kindneſs and reſpect (25). Upon his arrival in the port of St John de Ulloa, Captain Hawkins ſet all his priſoners at liberty, without taking or ſuffering any thing to be taken from them; and though he might have ſeized ſome perſons of the firſt diſtinction, who, as is ſaid in the text, came on board his veſſel by miſtake, yet he detained only two, viz. Don Lorenzo de Alva, and Don Pedro de Revera, by way of hoſtages, ſending at the ſame time a meſſage to the Viceroy of Mexico, ſignifying that he was driven into that port by ſtreſs of weather, that he meant not any injury to the ſubjects of the Crown of Spain, and that as ſoon as his veſſels were refitted, and he had a reaſonable ſupply of proviſions, towards which he deſired his Excellency's aſſiſtance, he would immediately put to ſea again (26). Before he received any anſwer to this meſſage, the Spaniſh fleet conſiſting of thirteen ſail of large ſhips, with Don Martin Henriquez the new Viceroy, arrived; as ſoon as that Lord had intelligence that the Engliſh were in the haven, he ſent in a pinnace with a flag of truce and an officer on board, to know whoſe ſhips they were General Hawkins, for ſo he was ſtiled during the expedition, told the officer, *They were the Queen of* England's *ſhips which came in for victuals for their money; adding, if your General will come in, I will go on one ſide of the port, and he may ſail in on the other.* To this the Spaniard replied, *That his maſter was a Viceroy, and had a thouſand men,* to which Hawkins replied, *I repreſent my* Queen's *perſon, and am a* Viceroy *as well as he, and that if he had a thouſand men, his powder and ſhot would take the better place* (27) This meſſage, together with his propoſitions being carried to the Viceroy, after ſome diſpute, produced a civil anſwer, importing that he had heard a good character of his proceedings towards his Catholic Majeſty's ſubjects, and the conditions of the agreement being reduced to writing, was on both ſides ſigned and ſealed, and ſix hoſtages given, but with this difference, that Hawkins ſent gentlemen, and the Viceroy ſix mean perſons finely dreſſed, which was quickly diſcovered, and gave the Engliſh General the firſt ſuſpicion of what afterwards followed (28), in direct breach of the Spaniſh Viceroy's promiſe and faith

[*F*] *Set upon the Engliſh on all ſides.*] Theſe facts are confirmed by the other two relations, but with many additional circumſtances. It ſeems that General Hawkins was at dinner when the trumpet ſounded, and his falſe friend Don Auguſtine de Villa Nueva with him, who on that ſignal had undertaken to diſpatch him, and had for that purpoſe a dagger in his ſleeve, which was perceived before he could lay his hand upon it by one John Chamberlaine, at the very inſtant the trumpet ſounded; upon which the General ordered him to be carried

(22) The title of this treatiſe at large is, 'A Diſcourſe written by one Miles Philips, Engliſhman, one of the company put on ſhore northward of Panuco in the Weſt-Indies, by M. John Hawkins, 1568. containing many ſpecial things of that country, and of the Spaniſh Government, but eſpecially of their cruelty as uſed to our Engliſhmen, and, amongſt the reſt, to himſelf, for the ſpace of fifteen or ſixteen years together, until, by good and happy meanes, he was delivered from their bloody hands, and returned into his own country, anno 1582.'

fear at this ſudden alarm, fled, thinking to recover their ſhips; but the Spaniards entering in great numbers on the iſland in ſeveral places at once, which they might do without boats, the ſhips lying cloſe to the ſhore; ſlew them all without mercy, except a very few, who eſcaped on board the Jeſus with much difficulty, and under the greateſt terror poſſible (*q*). The great ſhip, wherein three hundred men were concealed, immediately fell on board the Minion; but the officers in her ſetting all hands to work the moment their ſuſpicions commenced, had in that ſhort ſpace, which was but half an hour, weighed all her anchors. Having thus gotten clear, and avoided the firſt brunt of the great ſhip, the latter clapped the Jeſus aboard, which was at the ſame time attacked by two other ſhips. However, thoſe on board her, with much ado, and the loſs of many men, drove them off 'till ſhe cut her cable, and got clear alſo (*r*). As ſoon as the Jeſus and the Minion were got two ſhips length from the Spaniſh fleet, they began the fight with them in a manner that teſtified the ardour of their reſentment, which was ſo furious, that, in the ſpace of a ſingle hour, the Admiral of the Spaniſh fleet and another ſhip were ſuppoſed to be ſunk, and their Vice-Admiral burned, ſo that now they had little to fear from the enemy's ſhips; yet they ſuffered exceedingly from the ordnance on the iſland, which ſunk their ſmall ſhips, and tore all the maſts and rigging of the Jeſus in ſuch a manner, that there was no longer the leaſt hopes of bringing her off (*s*). This being the caſe, they determined to place her as a defence to the Minion 'till night, and then taking out of her what victuals and other neceſſaries they could, to leave her behind. But preſently after, perceiving two large ſhips, fired by the Spaniards, bearing down directly upon them, the men aboard the Minion, in great conſternation, without conſent of either the Captain or Maſter, ſet ſail, and made ſail from the Jeſus in ſuch haſte, that Captain Hawkins had ſcarce time to get from on board her. As for the men, moſt of them followed in a ſmall boat; the reſt were left to the mercy of the Spaniards, *Which*, ſays the Captain in his Narrative, *I doubt was very little* (*t*). Out of the whole ſquadron, the Minion and the Judith were the only two Engliſh ſhips that eſcaped; and in the night, the Judith, which was a bark of no more than fifty tons, ſeparated herſelf from the Minion, on board which was Captain Hawkins (*u*) and the beſt part of his men. In this diſtreſs, having little to eat, leſs water, in unknown ſeas, and many of his people wounded, he continued 'till the eighth of October, and then entered a creek in the Bay of Mexico, in order to obtain, either from Spaniards or ſavages, and on any terms whatever, ſo low had hunger reduced them, ſome refreſhment. This was about the mouth of the river Tampico, in the latitude of twenty three degrees thirty minutes north; where his company dividing on their own motion, and the better to prevent immediate ſtarving, one hundred deſired to be ſet on ſhore (*w*) [G]; and the reſt, who were about the ſame number,

carried priſoner into the ſteward's room, and then mounting upon deck, he ſaw the Spaniards iſſue out of their hulk and board the Minion which lay cloſe to them (29) At this he cried with a loud voice, 'God and St George fall upon thoſe traitors and reſcue 'the Minion, I truſt in God the day ſhall be ours '(30).' His men immediately leaped out of the Jeſus of Lubeck into the Minion, drove out the Spaniards, and by a ſhot which went through the Spaniſh Vice-Admiral, and is thought to have taken it's paſſage through the powder room, blew three hundred men who were in that ſhip into the air. They alſo ſet the Spaniſh Admiral on fire, which continued burning half an hour. On the other hand, all the Engliſh in the iſland were cut off except three, of whom Job Hortop was one, and they eſcaped by ſwimming. They likewiſe ſunk the Angel and took the Swallow; as for the Jeſus of Lubeck, her foremaſt was cut aſunder by a chain ſhot; there were five ſhot through her mainmaſt, and her hull was ſo pierced in different places that it was not poſſible to bring her away, yet they did not deſert her till the Spaniards in deſpair ſet fire to two of their own ſhips, and ſent them down upon her and upon the Minion, when the crew of the laſt mentioned ſhip, without the conſent of their Captain or Maſter, cut their cables and put out to ſea in ſuch haſte, that General Hawkins had ſcarce time to get on board, nor could have done it, if with all their haſte they had not ſtood in again to receive him (31). There happened about this time a paſſage which does General Hawkins great honour, and which as it is preſerved by Hortop ſhall appear in that honeſt man's own plain language. 'The Minion was forced to ſet ſail and ſtand off from 'us, and come to an anchor without ſhot of the iſland. 'Our General couragiouſly cheered up his ſoldiers 'and gunners, and called to Samuel his page for 'a cup of beer, who brought it him in a ſilver cup, 'and he drinking to all men, willed the gunners to 'ſtand by their ordnance luſtily like men. He had 'no ſooner ſet the cup out of his hand, but a demy 'culverin ſhot ſtroke away the cup and a cooper's plane 'that ſtood by the main maſt, and ran out on the other 'ſide of the ſhip which nothing diſmayed our General, for he ceaſed not to encourage us, ſaying, Fear 'nothing, for God who hath preſerved me from this 'ſhot, will alſo deliver us from theſe traitors and villains Then Captain Bland meaning to have turned 'out of the port, had his main maſt ſtruck over board 'with a chain ſhot that came from the ſhore, wherefore he anchored, fired his ſhip, took his pinnace 'with all his men and came aboard the Jeſus of Lubeck to our General, who ſaid unto him, that he 'thought he would not have run away from him; he 'anſwered, That he was not minded to have run 'away from him, but his intent was to have turned up 'and to have laid the weathermoſt ſhip of the Spaniſh 'fleet aboard, and fired his ſhip, in hope therewith to 'have ſet on fire the Spaniſh fleet; he ſaid, if he had 'done ſo, he had done well With this night came 'on. Our General commanded the Minion for ſafeguard of her maſts, to be brought under the Jeſus of 'Lubeck's lee: he willed Mr Francis Drake to come 'in with the Judith, and to lay the Minion aboard to 'take in men and other things needful, and to go out, 'and ſo he did (32).' Upon the whole, this action continued from noon till night, in which ſpace the Spaniards, beſides their Admiral and Vice-Admiral both diſabled, loſt four ſhips that were ſunk or burnt, and five-hundred and forty men out of fifteen hundred, as the Engliſh priſoners were afterwards informed by an authentic account that was tranſmitted to Mexico (33).

[G] *Deſired to be put on ſhore.*] In the relation given by Captain Hawkins, he ſays in very expreſs terms, that after they had been a fortnight at ſea and were reduced to the utmoſt extremity, when they landed once more in the bay of Mexico, in hopes of finding or taking ſome ſubſiſtance from either Indians or Spaniards; the people perceiving this alſo to be vain, and that there was no inhabited country near them, were deſirous of travelling as well as they could in ſearch of relief, upon which at their own requeſt he divided them, ſuffering thoſe to take that method who thought

ber, reſolving at all events to endeavour at leaſt to get home. Accordingly, on the ſixteenth of the ſame month, they weighed and ſtood through the Gulph of Florida, making all the ſail they were able for Europe. In their paſſage, after enduring innumerable and incredible hardſhips, when they drew near home, they were forced to put into Ponte Vedra, near the famous town of Vigo in Spain; where the people of the country coming to know their weakneſs, thought by treachery to ſeize them a ſecond time; but they ſailed inſtantly to Vigo, which, as we obſerved, is not far off. They there met with ſome Engliſh ſhips, the Maſters of which chearfully ſent them twelve freſh men; ſo that, departing on the twentieth of January, 1568, they arrived in Mount's Bay in Cornwall the twenty fifth of the ſame month (x) [H]. In honour of his famous action at Rio de

(x) Hakluyt's Voyages, Vol. II. p. 525. Camden. Annal. Eliz p. 158. Stowe's Annals, p. 807.

thought it the leaſt evil of the two, and uſing all the means in his power to encourage the reſt (34). Yet thoſe who envied his reputation, gave out reports of another kind, which could never have been ſo effectually refuted, if Job Hortop, who was one of thoſe left behind, had not given us a large account of the matter, which certainly puts it beyond all doubt, his words are theſe (35). 'When the wind came off 'ſhore, we ſet ſail and went out in deſpite of the 'Spaniards and their ſhot, where we anchored with 'two anchors under the iſland, the wind being norther-'ly, which was wonderful dangerous, and we feared 'every hour to be driven with the lee ſhore. In the 'end, when the wind came larger we weighed anchor 'and ſet ſail ſeeking the river Panuco for water, where-'of we had very little, and victuals were ſo ſcarce that 'we were driven to eat hides, cats, rats, parrots, 'monkeys, and dogs; wherefore our General was 'forced to divide his company into two parts, for 'there was a mutiny among them for want of victuals, 'and ſome ſaid that they had rather be on the ſhore 'to ſhift for themſelves amongſt the enemies, than to 'ſtarve on ſhip-board. He aſked them who would go 'on ſhore and who would tarry on ſhip board, thoſe 'that would go on ſhore he willed to go on foremaſt, 'and thoſe that would tarry, on baſtmaſt. Fourſcore 'and ſixteen of us were willing to depart. Our Gene-'ral gave unto every one of us ſix yards of Rouen 'cloth, and money to them that demanded it. When 'we were landed he came unto us very friendly, imbrac-'ing every one of us; he was greatly grieved that he 'was forced to leave us behind him; he counſelled us 'to ſerve God and to love one another, and thus cour-'teouſly he gave us a ſorrowful farewel, and promiſed, 'if God ſent him ſafe home, he would do what he 'could that ſo many of us as lived, ſhould by ſome 'means be brought into England, and ſo he did. 'Since my return into England, I have heard that 'many miſliked that he left us ſo behind him and 'brought away negroes, but the reaſon is this, for 'them he might have had victuals or any other thing 'needful, if by foul weather he had been driven upon 'the iſlands, which for gold or ſilver he could not have 'had.' This fact is ſomewhat differently related by Philips (36), who was alſo one of thoſe who went on ſhore, he tells us (which indeed is natural enough) that the General firſt ſet aſide ſuch perſons as it was neceſſary ſhould remain with him for the ſafety of the ſhip, and then made the diviſion; but he adds, that when it was made, ſome who deſired to be left on ſhore repented, and would willingly have ſtaid, but then it was too late. He alſo complains that they were hardly uſed at the time they were put on ſhore, but aſcribes this entirely to Captain Hampton of the Minion, and two other perſons whom he names; and agrees with Hortop, as to the great ſorrow and kind expreſſions of the General at parting. After all, Captain Hawkins was very near ſharing the ſame fate himſelf, for landing the next day with fifty men, that they might make the more diſpatch in filling their water, the weather became of a ſudden ſo tempeſtuous, that for the ſpace of three whole days it was impoſſible for them to get on board, while the other moiety of the crew who were in the ſhip, expected every moment to be driven on ſhore or to founder at ſea.

(34) Hakluyt's Voyages, Vol. II. p. 525.

(35) Job Hortop's Relation, p 491.

(36) Miles Philips's Diſcourſe, cap. iii.

[H] *Arrived in Mount's bay in Cornwall the twenty fifth of the ſame month.*] As to the hardſhips endured in this unfortunate expedition, they cannot be more ſtrongly or exactly pictured than in the following lines with which Captain Hawkins concludes his own relation. 'If all the miſeries and troubleſome affairs, 'ſays he, of this ſorrowful voyage, ſhould be perfectly 'and thoroughly written, there ſhould need a painful 'man with his pen, and as great a time as he had, 'that wrote the lives and deaths of the *Martyrs* (37).' *His* ſon obſerves, that the great loſs incurred by this unfortunate expedition, fell very heavy upon his father and reduced his fortune very much (38). The reader may probably deſire to know what became of the poor men who were ſet on ſhore in the bay of Mexico, and of this therefore we will give him a ſuccinct relation. The Indians they firſt met with fell upon and killed eight without the leaſt provocation; however on their ſubmiſſion, and finding they were not Spaniards, they did them no farther miſchief, but directed them to the port of Tampico. The Engliſh then divided, part of them marched northward, and part of them weſtward; David Ingram, who was with the former, with two of his companions, Richard Brown and Richard Twide, after marching quite croſs the continent of North America, arrived in that country which is now called Nova Scotia, and returned to Europe in a French ſhip in 1569 (39). As for thoſe who marched weſtward, they fell into the hands of the Spaniards who ſent them priſoners to *Mexico*, and after ſome time, were put out to live with the inhabitants as ſervants. Upon the eſtabliſhment of the Inquiſition in the Indies, they were again ſeized, deprived of all they had acquired by their labour, put into dungeons, and in the year 1575, ſixty-five of them were ſentenced to ſeveral cruel puniſhments, beſides three that were burnt. Miles Philips, after enduring intolerable hardſhips both there and in Spain, found means to get home into England in 1582 (40). Job Hortop ſuffered likewiſe many years wretchedneſs in America, and was then ſent to Europe with ſeveral of his countrymen on board the Spaniſh fleet; where notwithſtanding they ſaved that whole fleet from deſtruction, they were very cruelly treated. Upon their arrival in Spain, they fell again into the hands of the Inquiſition, who ordered Robert Barret and John Gilbert to be burnt, as they were; Job Hortop and John Bone were ſentenced to impriſonment for ten years, the former however continued in that confinement no leſs than twelve, when with much difficulty he was ſet at liberty, and at length found means to eſcape and to return to England in 1590, after having endured inexpreſſible miſery for twenty-three years (41). It is obſerved by Mr Camden, that the report of the ill uſage of Captain Hawkins and thoſe who ſerved under him, without any provocation on his ſide, occaſioned a great clamour upon his return, and that many warm people would have puſhed things to a rupture, if the Queen's prudence, and the ſituation of things at that time in Scotland had not prevented it (42). The ſame author obſerves, that whatever the Spaniards might apprehend, the treaties of peace between the Crown of England and the Emperor Charles the Fifth, gave the ſubjects of the former a right to trade in all parts of the dominions of the latter, without any exception or reſtriction whatever. It ſeems that this voyage, notwithſtanding, had a farther ſanction, of which none of our Hiſtorians have taken the leaſt notice. For when the Spaniſh ambaſſador charged Sir Walter Ralegh, after his return, with intending to act againſt the Crown of Spain, and mentioned the great force with which he went out as a proof of it, becauſe if planting or working his mine had been his ſole buſineſs, he might have done either without any moleſtation, and conſequently needed no ſuch military ſtrength. Sir Walter replied in theſe words (43): 'If ſir John Hawkins in his former journey to St John 'de Luz, notwithſtanding he had leave of the Spaniſh 'King to trade in all parts of the Indies, having the 'plate fleet in his power, did not take out of it one 'ounce of ſilver, but kept his faith and promiſe in all 'places, yet was ſet upon by Don Henrico de Martinez, whom he ſuffered to ſave himſelf from periſhing 'to enter the port upon Martinez's faith, and inter-

'changeably

de la Hacha, and to preſerve the memory of his other noble atchievements in America, Mr Cook, then Clarencieux, added to his arms, on an eſcutcheon of pretence, Or, an Eſcallop between two Palmers, Sable; and this patent for his augmentation is ſtill extant (*y*) [*I*]. As our hero was now inclined to remain ſome time at home, to ſee what turn affairs would take, and when a favourable opportunity would offer, to make the Spaniards ſenſible of their injuſtice, it gave the Queen and her Miniſtry an opportunity, and ſuch they never let ſlip, of turning his great ſkill and experience more immediately to the public ſervice. With this view, as well as to make known her Majeſty's approbation of his paſt ſervices, he was appointed Treaſurer of the Navy in 1573 (*z*). A poſt, in thoſe days, not only of conſiderable honour and profit, but of great truſt likewiſe; the Treaſurer or Comptroller of the Navy having uſually the command of any ſquadron fitted out for ſcouring the narrow ſeas; and, in a great meaſure, the direction of what might be ſtiled the œconomy of the Navy, with regard to building, repairing, equipping, victualling, and manning, the veſſels in the Queen's ſervice (*a*). An office, therefore, not only fit for, but in truth only fit, for a ſeaman; and, in the diſcharge of which, Captain Hawkins gave the higheſt proofs of his capacity and integrity, as is univerſally confeſſed by thoſe who have touched upon this curious point, and acquainted poſterity with the gradual progreſs of our naval power, the ſource and the ſupport of our dominion at ſea, the boundleſs ſeat, while that remains ſuperior, of BRITISH EMPIRE [*K*]. The very

'changeably pledges delivered, and had the Jeſus of 'Lubeck, a ſhip of her Majeſty of a thouſand tons 'burnt, his men ſlain which he left on land, loſt his 'ordnance and all his treaſure which he had gotten by 'trading What reaſon had I to go unarmed upon the 'ambaſſador's promiſe?' The reader will obſerve, that Sir Walter calls this *the former*, in contradiſtinction to his laſt hoſtile expedition in 1593, and inſtead of Martin de Henriques, calls the Viceroy Don Henrico de Martinez, which was his true name.

[*I*] *And his patent for this augmentation is ſtill extant.*] The Greeks and Romans had various ways of exciting men to virtue by perſonal marks of honour. The northern nations went farther, and by eſtabliſhing coat armour, gave a ſtronger impulſe to noble actions, by tranſmitting the honour of them to the poſterity of him by whom they were atchieved. On the ſame principle was built their additions of honour, which have been long in uſe and practiſed in other nations as well as ours. Thus the Catholick King Ferdinand, honoured Sir Henry Guilford with a canton of Granada, for his ſervice in that war againſt the Moors (44). In like manner Sir Henry St George, Norroy King of Arms, had a canton of the arms of Sweden beſtowed upon him by the monarch of that kingdom, when he went thither in embaſſy (45). In the reign of Queen Elizabeth, this, as all other honours, was but ſparingly conferred, and only upon perſons that were highly worthy As for inſtance, when Dr Matthew Parker was elected Archbiſhop of Canterbury, Sir Gilbert Dethick, Garter Principal King of Arms, added to his paternal coat *on a cheveron* Argent, *three Eſtoiles* Gules, the patent for which bears date November 28, 1559 (46). We have in another place mentioned an honour of the like ſort afforded to Sir Francis Drake (47), and with reſpect to Sir John Hawkins, who ſurely was not his inferior in any thing, ſave ſucceſs, we find his arms blazoned at large in a catalogue of the gentry of Devonſhire, from the patents mentioned in the text, in theſe times. *He bears* Sable *on a point wavee, a Lion paſſant*, Or; *in chief three Beſants*; *On a Canton*, Or; *a Scallop between two Palmers Staves*, Sable. Creſt. *Upon his Helm a Wreath*, Argent *and* Azure, *a Demy Moor in his proper colour, bound and captive, with amulets on his arms and ears*, Or; *mantelled* Gules, *doubled* Argent (48). Theſe rewards, though highly honourable and extremely grateful to the ſubject, were however very cheap to the Crown, which perhaps may be the reaſon that they have gradually grown into leſs eſteem, in conſequence of real and profitable being confounded, and our entertaining a notion that theſe are a kind of airy diſtinctions which few underſtand and fewer affect; but is this reaſoning ſolid or ſuperficial? to ſpeak with propriety, that reward only is real which is laſting; now pecuniary gratifications are ſeldom ſo, penſions ceaſe in time, and even eſtates moulder away; but ſo long as a man's poſterity remains, theſe rewards remain annexed thereto. But it will be ſaid, that they loſe their value, and being founded only in opinion, are ſubject to alter therewith. It may be ſo, it would be bearing too hard on the preſent age to ſay it is ſo; but what if it was, this would prove nothing, becauſe it proves too much; for the rewards of virtue, can never be ſo contrived as to ſubſiſt in times when all ſentiments of virtue are worn out. With our anceſtors theſe honours laſted long, and who knows, whatever we may think of them now, that the ſame regard then paid to them, may revive in the minds of our poſterity, which is the rather to be wiſhed; ſince without principles of honour and public ſpirit, there is no hopes of ſeeing ſuch men as theſe. The deſire of other rewards may tempt men to ſell, but it is the ambition of honeſt fame only, that can inſpire the human heart, with a contempt of all danger and difficulties, to ſerve, preſerve, or to enrich their country.

[*K*] *Of Britiſh Empire*] We have in the valuable and judicious writings of Sir William Monſon, a very clear and diſtinct account of what was eſteemed the duty of the Treaſurer of the Navy (49) in thoſe days, which is too long to be inſerted here, and this is the leſs neceſſary, ſince the ſubſtance of it is expreſſed in the text. Sir William thought this office might be well diſcharged either by a merchant or a mariner, but ſurely much better by one who was both, which was really the caſe of Captain Hawkins, who was a very conſiderable trader, as well as a very experienced officer. He kept therefore the accounts of the navy in exact order, took care that the men ſhould be punctually paid, and that the Queen ſhould be ſerved in her docks and yards, her magazines and ſtorehouſes, and in whatever elſe fell under his direction or his inſpection, as well, and upon as moderate terms, as the nature of the ſervice would allow. We are aſſured that he invented falſe nettings in the very beginning of the Queen's reign, which he cauſed to be introduced into the fleet, and was highly approved and commended. He was alſo the author of chain-pumps which were of excellent uſe; and beſides theſe, he brought in many other of his inventions from time to time, and was moſt indefatigable in labouring to bring all things as near as might be to perfection (50). It was he, in conjunction with Sir Francis Drake, that contrived and eſtabliſhed that uſeful and honourable fund, which is called the Cheſt at Chatham (51), a convincing proof, if there had been none beſides, that he had a clear head and an upright heart; the former no leſs qualified to ſupply the means, than the latter was ready to contrive how to do good to the ſeamen, and defend them from thoſe inconveniences by which before his days they had been grievouſly diſtreſſed. Sir William Monſon obſerves, that it was neceſſary for a Treaſurer of the Navy to reſide ſometimes at London, that he might ſollicit upon the ſpot, the neceſſary iſſues from the Exchequer, and ſometimes at Deptford, that he might have an eye to the manner in which they were laid out, and truſt as little as poſſible to the reports of others (52). Whether Sir William drew this remark from the practice of Captain Hawkins we cannot determine, but it is certain that this was his practice; and amongſt the papers of the Lord Treaſurer Burleigh, there were many papers and memorials, which ſhewed with how great exactneſs he executed every branch of his office. But that we may add a fuller, and at the ſame time a more inſtructive evidence of

very next year after he had obtained this preferment, he was very near being murdered as he went to Court, to pay his duty to the Queen, by an hair-brained Enthuſiaſt, who was ſo far from having received any injury or provocation from him, that in reality he knew not his perſon, but took him for Mr Vice-Chamberlain Hatton, to whom his party had an implacable reſentment. However, Captain Hawkins's danger was not at all the leſs, ſince, without any injury, this furious bigot attacked him; nor was it without ſome difficulty that he defended himſelf, after receiving one dangerous wound, and ſeized this incenſed aſſaſſin (*b*). When Queen Elizabeth heard of the fact, and the danger both Hatton and Hawkins were in, ſhe was on the point of cauſing the delinquent to be put to death without delay (*c*) [*L*]. We muſt not ſuppoſe that this great man, who had acquired ſo high reputation at ſea, was by one unlucky voyage diſguſted with his profeſſion; for this was ſo far from being the caſe, that he continued to hazard a conſiderable part of that fortune, which he ſtill poſſeſſed, on that element, where a great part of it was acquired. Neither did he miſs any occaſion of expreſſing his zeal to ſerve his country againſt the Spaniard, offering, as ſoon as aſked, his aſſiſtance towards fitting out a fleet for the ſervice of Don Antonio, who was driven from the throne of Portugal by Philip the Second, and was fled for refuge into England; but at that time the ſcheme was laid aſide by the advice of the Lord Treaſurer (*d*). Some years after, anno Domini 1583, this deſign was revived; when

of his punctuality and œconomy, let us from the collections of another great officer in the Navy (53); exhibit the ſtate and expence thereof in the days of the one, and of the other, that is within the ſpace of a century or thereabouts.

(53) From the valuable Collections of Samuel Pepys, Eſq; Secretary to the Admiralty.

The different ſtates of the ROYAL NAVY.	In the reign of Queen Elizabeth.	In the year 1695.
I. The number of ſhips and veſſels of the burthen of fifty tuns and upwards	But 40 ſhips.	Above 200 ſhips.
II. The general tunnage of the whole	Beneath 23,600 tons.	Above 112,400 tons.
III. The number of men required for manning the ſame	Below 7,800 men.	Above 45,900 men.
IV. The medium of the annual charge during five years of Peace	Beneath 15,500 pounds.	Above 400,000 pounds.
five years of War	Beneath 96,400 pounds.	Above 1,620,000 pounds.

[*L*] *To be put to death without delay.*] This fact, as it made a great noiſe at the time, is very ſingular in itſelf, and cauſed a great reſentment in the Queen againſt the Puritans, deſerves to be particularly related, becauſe we find it confuſedly ſet forth by ſome, and totally omitted by other, Church Hiſtorians. The perſon who attempted this bloody fact was Mr Peter Birchet, or Burchet, of the Middle Temple; and the cauſe and manner of his attempting it was this (54). On the morning of Wedneſday October 11, 1573, he called upon another gentleman to go with him to Mr Samſon's lecture at Whittington-college, after his return from which he was heard to ſay, ſtanding by himſelf, ſhall I do it? What, ſhall I do it? Why then I will do it; upon which he went to his chambers, as it is ſuppoſed, to fetch his dagger. While he was in this tranſport of mind, he moſt unfortunately ſaw Captain Hawkins and Captain Winter coming up Middle-Temple lane, in order to go into Fleet-ſtreet. He followed them as faſt as he could, overtook them in the Strand, and ſuddenly ſtabbed Captain Hawkins with his dagger; who preſently ſeized him, and, not without much reſiſtance, diſarmed him. Birchet expreſſed no kind of ſorrow for what he had done, 'till he heard it was Captain Hawkins, and not Hatton, whom he had wounded; and then all his concern was about his miſtake. The Queen, when ſhe heard it, was exceedingly provoked; and being informed by the Earl of Leiceſter, that her ſiſter, in the time of Wiat's inſurrection, had cauſed ſome perſons to be executed by martial law; ſhe reſolved to follow that precedent, and ordered a commiſſion for that purpoſe to be drawn up (55). At the perſwaſion, however, of ſome of her Council, and of the Lord Treaſurer Burleigh particularly, ſhe was induced to alter her intention, and to leave this man to a tryal in the ordinary method of the law. However, on the twenty-ſeventh of October, according to my author, this queſtion was propounded to Mr Birchet, and his anſwer demanded to it in writing (56).

(56) Inter MSS. Borghleian.

'Whether a private man, being perſwaded in his own conceit that one is a wilful Papiſt, and hinders the glory of God ſo much as in him lies, may of his own authority, in the fervency of his zeal, kill the ſame perſon? And whether the ſame act is to be warranted by the Word of God or no? Item, Whether if you had killed Mr Hatton, being perſwaded of your own opinion that your conceit had been true, you thought the ſame act to be lawful, and that you would not repent the ſame deed.'

To this Caſe Birchet gave this anſwer.

'In my ſimple judgment, being no Divine, a private man being perſwaded in his own conceit, by ſuch preſumptions and proofs as I have had of Hatton, that (ſuch) one as he (as I have thought) is a wilful Papiſt, and hindreth the glory of God ſo much as in him lieth. Though he may not of his own authority, in the fervency of his zeal, kill the ſame; yet being ſo perſwaded in conſcience by ſuch preſumptions and aſſured perſwaſions, as he may be and I was, that thereby he ſhould be ſuch an inſtrument as Joab was, to take away ſuch a Saba, as Reg. cap. xx. or an Ahad to Eglon or Phineas, for the preſervation of David his royal prince, the wealth of his country, eſpecially for the glory of God, as I was, I think, at this time, he may do it, and to be warranted by the word of God. I being perſwaded, as before, if I had killed him, the act had been lawful by God's law, if not by man's law, and I would not have repented me of the ſame deed?

'Subſcribed by me, Pet. Byrchet, 27 Oct. 1573.'

As this opinion of his was plainly heretical, he had ſeveral of the learned clergy ſent to him, by whoſe arguments he ſeemed to be convinced, and pretended that he would abjure his hereſy; but when preſſed thereto, put it off from time to time, remaining ſtill a priſoner in the Tower, where at length he beat out his keeper's brains with a billet, for which fact he was condemned, and executed on the twelfth of November following (57). The Queen deſired that he might be very cloſely examined the night before, and the very morning of his execution, Whether he had any accomplices? Whether he had been taught theſe principles by others, or took them up himſelf? And whether he had made any body privy to his deſign of killing Mr Hatton? To all which it is probable he gave little or no anſwer, ſince Camden informs us that he died ſurlily and ſilently (58). One thing is remarkable, that his right hand was cut off before his execution, and nailed to the gallows; the reaſon of which muſt have been, that the Tower being a royal palace, this was added to his ſentence for ſhedding blood therein (59).

when it was plain the war with Spain, which had hitherto been covertly carried on; would quickly break out, and be attended with hoſtile attempts upon the Queen's dominions. Captain Hawkins not only diſcovered the ſame readineſs as before, but gave his advice how the intended expedition might be beſt undertaken (e) [M]. The next great action of this worthy ſeaman was, his ſervice under the Lord High-Admiral, in 1588, againſt the Spaniſh Armada, wherein he acted as Rear-Admiral on board her Majeſty's ſhip the Victory, and had as large a ſhare in the danger and of the honour of that day as any man in the fleet, for which he deſervedly received, from the hands of the Lord High-Admiral, the honour of knighthood (f); and in the purſuit of the flying Spaniards he did extraordinary ſervice, inſomuch, that on his return from the fleet he was particularly commended by the Queen (g) [N]. In 1590, he was ſent, in conjunction with Sir Martin Forbiſher, each

[M] *Might be beſt undertaken.*] This propoſition was firſt made in the year 1581, and the matter propoſed was, that Queen Elizabeth ſhould aſſiſt Don Antonio, who had been once King of Portugal, and ſtill pretended a right to that kingdom, in his war againſt the King of Spain, and it was ſurmiſed that this might be done without affording any pretence for his Catholic Majeſty to break with Queen Elizabeth; becauſe, in the month of Auguſt preceding, King Antonio was in poſſeſſion of Tercera, and therefore the Queen might well preſume him to be King of Portugal, and allow any of her ſubjects to aſſiſt him in maintaining his poſſeſſion; as alſo becauſe there was no league between the Crown of England and the Crown of Spain, reſpecting the dominions of Portugal, as belonging to the latter. Thoſe who principally encouraged this undertaking, where Secretary Walſingham, Sir Francis Drake, Captain Hawkins, and others; and Don Antonio had put a jewel of great value into the Queen's hands, who was to lend him five thouſand pounds towards this expedition. But the Treaſurer's objection was, that however ſatisfactory theſe reaſons might ſeem to be in England, there was good cauſe to doubt whether they would be reliſhed by the King of Spain; who, if he judged it, as he well might, a mark of enmity towards him in the Queen, he might revenge it in the ſame way, by aſſiſting the rebels in Ireland, or ſtir up the King of Scots to be an ill neighbour; for which he judged this expedition, at that juncture, to be inexpedient; but added, that if it was not undertaken, Don Antonio ought to have his jewel again, or money advanced thereon, to purchaſe ſhips and ammunition, with which he might do what he would (60). About three years after, the Treaſurer, of his own accord, conſulted Captain Hawkins, as to the propereſt method for annoying the Crown of Spain with the leaſt expence; for, it ſeems, he had then loſt thoſe ſcruples with which his mind was troubled before, finding his Catholic Majeſty, out of innate malice to the Queen, had done all that he apprehended he might have been provoked to do, by giving any aſſiſtance to Don Antonio. Upon this the Treaſurer of the Navy ſent him a new ſcheme for the execution of the old project, which is too long to be inſerted here; and with it a letter, ſome paragraphs of which we will tranſcribe, for this gentleman's honour, and the reader's ſatisfaction. In this letter he ſays (61), 'Surely, 'my very good Lord, if I ſhould only conſider and look 'for mine own life, my quietneſs and commodity, 'then truly mine own nature and diſpoſition doth pre'fer peace before all things. But when I conſider 'whereunto we are born: not for ourſelves, but for 'the defence of the Church of God, our Prince, and 'our Country, I do then think how this moſt happy 'government might, with good Providence, prevent 'the conſpiracies of our enemies. That he nothing 'at all doubted of our ability in wealth; for that he 'was perſuaded that *the ſubſtance* of this realm was 'trebled: adding, God be glorified for it. Neither 'did he think there wanted proviſions, carefully pro'vided, of ſhipping, ordnance, powder, armour, and 'munition: ſo as the people were exerciſed, by ſome 'means, in the courſe of war. For he read, that 'when Mahomet, the Turk, took the famous city 'Conſtantinople, digging up in the foundations and 'bottoms of the houſes, he found ſuch infinite trea'ſure, as the ſaid Mahomet, condemning their 'wretchedneſs, wondered how that city could have 'been overcome, or taken, if they had in time pro'vided men of war and furniture for their defence, 'as they were very able. So, ſaid he, there wanted 'no ability in us, if we were not taken unprovided, 'and upon a ſudden. And that this was the only 'cauſe that had moved him to ſay his mind frankly in 'this matter, and to ſet down thoſe notes incloſed, 'praying the Almighty God, who directeth the hearts 'of all governors, either to the good and benefit of 'the people, for their relief and deliverance, or elſe 'doth alter and hinder their underſtanding, to the 'puniſhment and ruin of the people, for their ſins and 'offences. Humbly beſeeching his good Lordſhip to 'bear with his preſumption, in dealing with matters ſo 'high, and to judge of them by his great wiſdom and 'experience, how they might, in his Lordſhip's judg'ment, be worthy the conſideration, and ſo humbly 'taking his leave from Deptford, the 20th of July, '1584.' The principal points in his great project were theſe (62), That Don Antonio of Portugal ſhould grant his commiſſions to ſuch as were willing to cruize upon the Spaniards at their own expence, and ſhould receive an allowance from them of between five and ten per cent. on all prizes, which concern of his ſhould be managed by an agent; that her Majeſty ſhould likewiſe appoint a perſon to take cognizance of thoſe who entered into his Portugueſe Majeſty's ſervice, and ſhould allow them ſome port in the Weſt of England, where they might equip, victual, refit, and vend their prizes, upon which her Majeſty ſhould likewiſe receive between five and ten per cent; that no veſſels ſhould go to ſea with the King's commiſſion, 'till they had given ſecurity to the Queen to make none but lawful prizes; and that commiſſioners ſhould be appointed to examine all ſhips taken, and to condemn them before expoſed to ſale; and that any convicted of piracy ſhould be left to martial law. Theſe conditions granted, he thought that the beſt merchants in London would be ready to adventure, that the merchants and owners in the Weſt would enter deeply into this ſcheme, that the Dutch would contribute to it, that the French Proteſtants would be eager to come in for a ſhare, that the Portugueſe at Brazil and Guinea would be continually revolting, that her Majeſty, without any expence, would by this means have a number of able ſeamen, ready upon any emergency; that his Catholic Majeſty would have no pretence to aſcribe this ſolely to the Engliſh, ſince there would be Scots, Flemings, French, Germans, and other nations, on board theſe ſhips; and that, in a ſmall ſpace of time, he would find his coaſts ſo watched, the trade and fiſhing of his ſubjects ſo diſturbed, and the intercourſe between different parts of his dominions ſo interrupted, that he would be glad to treat more ſincerely with her Majeſty than he had done, and to ſubmit to reaſonable terms, in order to engage her Majeſty to remove this ſcourge from him. Captain Hawkins was an adventurer likewiſe in the famous expedition on his behalf ſome years after, by which he was no gainer.

(60) Amongſt the Burghleian MSS. there are many curious memorials on this ſubject.

(61) Strype's Annals, Vol. III. p. 211, 212.

(62) Inter MSS. Burghl.

[N] *He was particularly commended by the Queen.*] The Spaniſh invaſion obliged the Queen to call moſt of her ſea officers to ſervice; and amongſt them, it appears from Sir William Monſon's liſt of the Queen's fleet, that Captain Hawkins, in her Majeſty's ſhip the Victory, was Rear-Admiral in this expedition. When the fleet came to be divided into ſquadrons, he was intruſted with the command of the third, the High-Admiral of England and Sir Francis Drake having the two firſt, and Sir Martin Forbiſher the fourth (63). He did his duty punctually, as his manner was, without exceeding his orders, for which he had the Lord-Admiral's and the Queen's thanks. It was owing to him that the fleet was kept at ſea long enough to meet with that of Spain; for even the ſagacious Secretary Walſingham was perſwaded, that the Spaniards had put off their deſign, and wrote expreſsly ſo to the Admiral, with orders to lay up the large ſhips to prevent expence. Sir William Monſon obſerves very juſtly, that

(63) Stowe's Annals, p. 744.

each having a ſquadron of five men of war, to infeſt the coaſts of Spain, and to intercept, if poſſible, the Plate Fleet. At firſt his Catholic Majeſty thought of oppoſing theſe famous commanders, with a ſuperior fleet of twenty ſail, under the command of Don Alonzo de Baſſan; but, upon more mature deliberation, he abandoned this deſign, directed his ſhips to keep cloſe in port, and ſent inſtructions into the Indies, that the fleet, inſtead of returning, ſhould winter there (*b*). Sir John Hawkins and his colleagues ſpent ſeven months in this ſtation, without performing any thing of note, or ſo much as taking of a ſingle ſhip. They afterwards attempted the iſland of Fayal, which had ſubmitted the year before to the Earl of Cumberland; but the citadel being refortified, and the inhabitants well furniſhed with artillery and ammunition, Sir John and his colleague, after due deliberation, and ſome tryal made, thought fit to retreat (*i*). It muſt be owned, in the eye of the world, or voice of the common people, that ſmall reputation was gained by the Admirals in this expedition, and yet they loſt no credit at Court, that is, with the Queen their ſovereign and her wiſe Miniſters, by whom the iſſue of the buſineſs was better underſtood (*k*). By compelling the Spaniſh navy to fly into fortified ports, they deſtroyed their reputation throughout all Europe as a maritime power; and the wintering of their Plate ſhips in the Indies, proved ſo great a detriment to the merchants of Spain, that many broke in Seville and other places; beſides, the worm, as is uſual, and indeed unavoidable, in thoſe ſeas, entering their ſhips, it was ſo great a weakening to their veſſels, that the damage could not be repaired in many years (*l*). Thus, though no immediate profit to the nation, or even apparent victory over their enemy, accrued, the end of this expedition was fully anſwered, and the State gained a very conſiderable though not ſignal or ſtrik ingadvantage, by leſſening their fame in Europe, and in the Indies grievouſly diſtreſſing the Spaniards [O]. The war ſtill continuing, and it being evident that nothing galled the enemy ſo much as the loſſes they met with in America, a propoſition was made to the Queen by Sir John Hawkins and Sir Francis Drake, who at home and abroad were very juſtly eſteemed the moſt fortunate and the moſt experienced ſeamen in her kingdom, for undertaking a more effectual expedition into thoſe parts for diſturbing and weakning

(*b*) Sir William Monſon's Naval Tracts, p. 177, 178. Sir Richard Hawkins's Obſervations in a Voyage to the South Seas, p. 9, 10. Purchas's Pilgrims, Vol. IV. p. 1676.

(*i*) Sir W. Monſon's Naval Tracts, p. 178.

(*l*) Linſchotten's Voyages, chap. xix.

that if the Engliſh could have attacked again, or purſued them farther, they muſt either have been deſtroyed or ſurrendered; that this was hindered for want of proviſions is no leſs true; but that this proceeded from any fault in the Queen's officers, as he ſuggeſts, may very well be doubted (64), ſince it is very clear, that the fleet had been out beyond the appointed time, and that when they put to ſea from Plymouth to follow the Spaniards, it was in ſuch haſte, that they could not ſtay for any proviſions; and for the ſame reaſon no ſquadron was ſent to the coaſt of Ireland, which had been otherwiſe a very right meaſure. Theſe remarks are neceſſary, to prevent the reader's concluding, from what is let fall by ſome haſty writers, that this ſignal victory was not improved to ſuch a degree as it might have been; for though Sir William Monſon points out theſe omiſſions, yet he freely acknowledges that they did not proceed from want of judgment or want of foreſight, but from a want of ability. But if we were deficient in ſome reſpects, more eſpecially, as has been before obſerved, in point of intelligence, the Spaniards were guilty of far greater and more fatal errors; and this, not from neceſſity, but from preſumption; and this in direct breach of the Catholic King's orders, which, if they had been obeyed, though we cannot pretend to ſay what would have happened, yet this is evident and certain, that they muſt have happened otherwiſe than they did. The King's orders were, that they ſhould keep on the French coaſt as far as Calais (65); with which, if their commanders had complied, they had ſuffered no interruption from the Engliſh fleet, but might have landed their army by that time the Admiral could have had intelligence of what they were doing, and had been able to get out of Plymouth. It is one thing not to do all that might be done, becauſe means are wanting; and quite another, from a ſelf ſufficient deſire of doing more than is expected, to break through orders, and, by ſo doing, run into the way of danger, that might have been eſcaped; if theſe obſervations took riſe only from conjecture or obſcure authorities, they had been better omitted; but being founded in facts, the truth of which cannot be controverted, they ought to be recorded for the uſe of thoſe who may hereafter find themſelves in like circumſtances.

(64) Sir William Monſon's Naval Tracts, p. 171.

(65) Strype's Annals, Sir W. Monſon's Naval Tracts, Diſcourſe on the Defeat of the Armada, &c.

[O] *Grievouſly diſtreſſing the Spaniards.*] There is not the leaſt notice taken of this expedition by Camden, which very probably aroſe from it's producing no ſignal advantages; and yet to ſuch as look cloſely into the ſtate of things, it will appear an event of as great conſequence, as any mentioned in his Annals during the compaſs of that year. It ſhews how much things were changed in a very ſmall ſpace of time, that is, in eighteen months at the moſt; within which ſhort period, the Crown of Spain, from being the moſt formidable maritime power in Europe, was ſunk ſo low, as to be obliged to act entirely on the defenſive, and to rely rather upon fortifying it's coaſts than upon it's fleets, which is the moſt apparent ſign of weakneſs that a maritime ſtate can diſcover (66). We may farther diſcern to how great a degree the ſpirit of Philip the Second was humbled, when he thought it imprudent to truſt a fleet of twenty ſail, under the command of an experienced officer, againſt an Engliſh ſquadron of ten ſhips, of not half the ſtrength of his own. The reaſon was, that he knew the conſequence of their being beaten, and was ſenſible that it bore no proportion to the advantage that might have ariſen, from their giving a check to this ſmall force of the Queen's. Yet after all, it was owing to an accident that this expedition was not attended with more auſpicious ſucceſs, as the ſon of this great man has ſhewn, who was himſelf a captain in his father's ſquadron (67). 'In the fleet 'of her Majeſty, ſays he, under the charge of my fa'ther Sir John Hawkins, anno 1590, upon the coaſt 'of Spain, the Vice-Admiral being a head one morn'ing where his place was to be a ſtern, loſt us the 'taking of eight men of war, loaden with munition, 'victuals, and proviſions, for the ſupply of the ſoldiers 'in Britain; and although they were ſeven or eight 'leagues from the ſhore when our Vice-Admiral began 'to fight with them, yet for all that, the reſt of our 'fleet were ſome four, ſome five, and ſome more di'ſtant from them, when we began to give chaſe, the 'Spaniards recovered into the harbour of Monge, be'fore our Admiral could come up to give directions; 'yet well beaten, with loſs of above two hundred men, 'as they themſelves confeſſed to me after. And 'doubtleſs if the wind had not overblown, and that to 'follow them I was forced to ſhut all my lower ports, 'the ſhip I undertook had never endured to come 'to the port; but being double fly-boats, and 'all good ſailors, they bare for their lives, and we 'what we could to follow and fetch them up.' This would have been a moſt acceptable ſervice at that juncture if it could have been performed; and the diſappointment therefore was the greater, which happening from ſuch an accident, confirms the obſervation made in the foregoing note, viz. that breach of orders or diſcipline, is of all errors the leaſt excuſable in it's nature, and the moſt fatal in it's effects.

(66) Sir Walter Raleigh's Diſcourſe of a War with Spain.

(67) Sir Richard Hawkins's Obſervations in his Voyage to the South Sea, p. 19.

weakning the Crown of Spain, than had been hitherto made through the whole courſe of the war; and, at the ſame time, they offered to be at a great part of the expence of this extraordinary undertaking themſelves, and to engage their friends to bear a conſiderable proportion of the reſt (*m*). There were, excluſive of the love of glory and zeal for the public ſervice, ſeveral ſecret motives which induced our Admiral, though then far advanced in years, to hazard his fortune, his reputation, and his perſon, in this dangerous ſervice; amongſt which this was not the laſt or the leaſt, that his ſon Richard, who was afterwards Sir Richard Hawkins, was at this very time a priſoner in the hands of the Spaniards; and ſome hope there was, that, in the courſe of ſuch an enterprize, an opportunity might offer for procuring his freedom either by ranſom or exchange (*n*). The Queen readily gave ear to this motion, and furniſhed on her part a ſtout ſquadron of men of war, on board one of which, the Garland, Sir John Hawkins embarked (*o*). Their whole force conſiſted of twenty-ſeven ſhips and barks, and in theſe there were about two thouſand five hundred men. Of all the enterprizes throughout the whole Spaniſh war, in which every year produced an expedition, there was none of which ſo great hope was conceived as of this, and yet none met with leſs ſucceſs (*p*) [*P*]. The fleet was detained for ſome time after it was ready on the Engliſh coaſt by the arts of the Spaniards; who, having intelligence of it's ſtrength, and of the ends for which it was intended, conceived that the only means by which it might moſt probably be diſappointed, was by procuring ſome delay; in order to which, they gave out that they were ready themſelves to invade England, and to render this the more probable, they actually ſent four gallies to make a deſcent on Cornwall (*q*). By theſe ſteps they carried their point; for the Queen and the nation being exceedingly, and not without reaſon, alarmed, it was by no means held proper to ſend ſo great a number of ſtout ſhips on ſo long a voyage at ſo critical a juncture. At laſt this ſtorm blowing over, the fleet ſailed from Plymouth on the twenty-eighth of Auguſt, in order to execute their grand deſign of burning Nombre de Dios; marching thence by land to Panama, and there ſeizing the treaſure which they knew was arrived in that ſmall town, as the manner then was and ſtill is, from Peru (*r*). A few days before their departure, the Queen ſent them advice that the Plate fleet was ſafely arrived in Spain, excepting only one galleon, which, having loſt a maſt, had been obliged to return to Porto Rico; the taking of this veſſel ſhe recommended to them as a thing very practicable, and which could prove no great hindrance to their other affair. When they were at ſea, the Generals in a very ſhort time differed, as is uſual in conjunct expeditions. Sir John Hawkins was for executing immediately what the Queen had commanded, and to think of no new ſervice; whereas Sir Francis Drake, perſwaded by Sir Thomas Baſkervile, inclined to go firſt to the Canaries, in which he prevailed (*s*) [*Q*]. But the attempt

[*P*] *And yet none met with leſs ſucceſs*] If we yield an implicit credit to Camden, we ſhould conceive this expedition to have proceeded purely from the Queen's commands, and to be intended only to fetch the rich ſhip which the Spaniards had been obliged to leave at Porto Rico (68); but a little reflection will ſhew us, that to fit out ſuch a fleet under ſuch officers, for no more important purpoſe, was not at all agreeable to the wiſe proceedings of that reign. But take it in it's true light, and this enterprize will appear equally ſuitable to the prudence of that victorious Princeſs, and correſponding with the high reputation which all theſe officers had gained. It was an undertaking, which if it had been attended with ſucceſs, of which alſo there was the higheſt probability, it had given a mortal blow to the Spaniards in the Indies, and put into our power that important iſthmus that had rendered us as formidable to our enemies as they were to the Indians. It was the glory of this exploit that invited Drake, the hopes of obtaining his ſon's releaſe engaged Sir John Hawkins, to quit an honourable eaſe at home for difficulties and dangers abroad, when his years might well have excuſed him; and Sir Thomas Baſkerville had an ambition of being the firſt Engliſh Governor in the Weſt Indies; for whatever place they had taken had been left to his charge (69). The beſt part of the expences of this ſquadron was borne by the Generals themſelves, their friends, and ſuch as put a confidence in them; and the Queen had likewiſe a part: but it is eaſy to diſcern that the profit could not be equally divided; for though private perſons received no benefit from the miſchiefs done to others, yet theſe are a real profit to the Crown; ſo that whatever became of the reſt of the proprietors, the Queen was morally certain of gaining, as ſhe really did; and we need not therefore wonder that great pains were taken to magnify this project while it was in preparation, that the number and ſpirit of adventurers might be increaſed (70).

[*Q*] *In which he prevailed.*] We have all the reaſon in the world to believe, that in the contrivance of the plan, and in the proviſions made for executing it, Sir John Hawkins and Sir Francis Drake agreed perfectly well, otherwiſe one of them had very probably relinquiſhed the voyage, but as ſoon as they were at ſea diſtruſts and diſputes began. Sir Francis Drake and Sir Thomas Baſkerville being much of a temper, both warm, both aſpiring, and both haſty in their language, agreed pretty well; and treated Sir John Hawkins, who was ſlower in reſolving, and leſs ſanguine in his expectations, in ſuch a manner, that his chagrin, that began ſoon after they weighed anchor, ended only with his life It is unanimouſly agreed, that the project of attacking the Grand Canary was formed by Sir Thomas Baſkerville, conſented to by Sir Francis Drake, and oppoſed by Sir John Hawkins. In favour of this attempt it was urged, that being maſters of the iſland, they might have excellent refreſhment; that the inhabitants were rich, and would pay largely to preſerve their city from burning; and that it would give them reputation, aſtoniſh the Spaniards, and occaſion great joy at home. Sir John Hawkins ſaid, that, conſidering the ſmall time they had been out, there was no ſuch need of refreſhments; that, to ſucceed in this incidental enterprize, they muſt hazard their whole fleet and army; and that, at all events, it would be loſing time which could never be recovered. When Sir Francis and Sir Thomas found this, they were for putting it to the vote; and not being ſure to ſucceed therein, Sir Francis Drake declared he would undertake the exploit with ſuch as would follow him, and the reſt might go with Sir John Hawkins; yet, finding himſelf too weak upon this diviſion, he ſpoke of it with ſuch tenderneſs and paſſion, that Sir John Hawkins yielded againſt his own ſentiment, that he might not ſeem to deſert him. What followed juſtified all that Sir John had ſaid; for though they found the Spaniards ſo well fortified that the army could not land, yet of thoſe who ventured aſhore in ſeveral places for refreſhment, there were many killed, and Captain Grimſtone among the reſt (71).

(71) Camden. Annal. Eliz. p. 700. Purchas's Pilgrims, Vol. IV. p. 1184.

attempt they made of reducing the largeſt of thoſe iſlands proved as diſhonourable as it was unſucceſsful. And then they ſailed for Dominica, where, in ſpite of all Sir John Hawkins could ſuggeſt to quicken them, they ſpent too much time in refreſhing and ſetting up their pinnaces (*t*). In the mean time the Spaniards had ſent five ſtout frigates to bring away the galleon from Porto Rico, having exact intelligence of the departure, as well as force, of our ſquadron, and alſo of the intention of the Engliſh Admirals to attempt that place (*u*). On the thirtieth of October Sir John Hawkins weighed from Dominica, and, in the evening of the ſame day, the Francis, a bark of about thirty-five tons, and the ſternmoſt of Sir John's ſhips, fell in with the five ſail of Spaniſh frigates beforementioned, and was taken; the conſequences of which being foreſeen by Sir John, it threw him into a grievous fit of ſickneſs, of which, or rather of a broken heart, he died on the twenty-firſt of November, 1595 (*w*) [*R*], when they were in ſight of the iſland of Porto Rico; and not, as Sir William Monſon ſuggeſts, of chagrin, on the miſcarriage in attempting the capital city of that iſland (*x*), which, in truth, was an event he never lived to ſee. His death made a great impreſſion upon thoſe whom he commanded, as well for the affection they bore him, as from a perſwaſion that the miſcarriages which he foreſaw and foretold would be juſtified by the event, as in truth they were; the grief for which conquered ſome time after the great mind of Sir Francis Drake, which had been 'till then invincible (*y*). At home the loſs of theſe two great officers was exceedingly regretted; neither did this concern eaſily blow over, but was mentioned many years after as a public calamity. As to his perſon, Sir John Hawkins was eſteemed graceful in his youth, and of a very grave and reverend aſpect when advanced in years. He was well verſed in mathematical learning for thoſe times, and underſtood every branch of maritime affairs thoroughly and to the bottom. He was a man of as much perſonal courage as that age produced, and had a preſence of mind that ſet him above fear, and which enabled him frequently to deliver himſelf and others out of the reach even of the moſt imminent dangers (*z*). He had a wonderful ſagacity, which, as it enabled him to make a right judgment of events long before they happened, ſo it taught him to be very cautious in his expreſſions, and hindered him from diſcloſing himſelf fully, that he might not diſcourage ſuch as confided entirely in his ſenſe of things. He formed his plans very judiciouſly, and executed them and the orders he received with the utmoſt punctuality, as far as lay in his power. He was ſubmiſſive to his ſuperiors, and courteous to his inferiors; extremely affable to his ſeamen, and remarkably beloved by them (*a*). With all theſe great qualities he had an intermixture of failings; and theſe, after his deceaſe, were ſet in a pretty ſtrong light, by ſuch as found it eaſy to cenſure men, whom it would have been very difficult to imitate [*S*]. As to

(*a*) Camden, Hakluyt, Purchas.

[*R*] *He died on the twenty-firſt of November*, 1595.] Sir Francis Drake came to an anchor between Dominica and Guadalupe, with part of the fleet, before Sir John Hawkins, with the reſt, arrived, which was the thirtieth of October, 1595 (72). The ſame day the Francis was taken, and the Delight brought Sir John the news, who, from that moment, never held up his head; not for the loſs of his bark, which was far from being conſiderable, but becauſe he underſtood that five Spaniſh frigates were gone to Porto Rico, which he foreſaw would add ſo much ſtrength to the Spaniards, as might enable them to preſerve their treaſure, and diſappoint their attempt upon that iſland; in the ſame manner they had been already forced to leave the Canaries, and all this in conſequence of their ſlighting his advice, and loſing time, which, if they had not done, they muſt have ſucceeded. All this gave him ſuch a proſpect of the remaining part of the voyage, as fairly broke his heart, to the great ſorrow, as one who had a command in the voyage affirms, of many in the fleet; and, as ſoon as the breath was out of his body, Sir Thomas Baſkerville came to take the command on board the Garland (73). Mr Camden makes his death to have happened the ſame day that Sir Nicholas Clifford and Mr Brown were killed (74); but in that he is miſled by the ſea journals, in which the day is reckoned from noon to noon; but the truth is, that Sir John Hawkins died on the twelfth of November about midnight, and the gentlemen beforementioned received the wounds, of which they died, by a cannon ſhot, which went through Sir Francis Drake's cabin while he and they were at ſupper, on the thirteenth of November (75). But Sir William Monſon is much more miſtaken, and yet he repeats it twice, when he places the death of this great man after the attempt upon Porto Rico. On that occaſion, however, he informs us, that, tho' Sir Francis Drake and Sir Thomas Baſkerville miſcarried in 1595 (76), yet the place was without difficulty taken by the Earl of Cumberland, with a ſquadron fitted out at his own expence in 1598; and he ſhews the reaſon of this, which was, that the crew of the five Spaniſh veſſels gave the garriſon a ſuperior ſtrength at that time; whence it is evident, that, if the Engliſh fleet had ſailed directly to Porto Rico, as Sir John Hawkins adviſed, they had done their buſineſs before the Spaniards arrived. Several of theſe circumſtances may perhaps appear trivial to ſome, or at leaſt too minute; but if truth be of any conſequence, or if we would ever know how things really happened, and what the ſources were of ſucceſs or ill fortune, in great enterprizes, this is the only method.

[*S*] *Whom it would have been very difficult to imitate.*] We have, in the Reverend Mr Hakluyt's Collection, a clear and conciſe narrative of the facts, which happened in this expedition (77); but, in Mr Sam. Purchas's larger work, there is a very curious paper of Remarks written by ſome perſon who had a command in the expedition, which contains abundance of particulars, not to be met with any where elſe. In the ſame place we have the following letter (78), whether written by the ſame, or another hand, we cannot, at this diſtance of time, determine; and to which we give a place here, rather to gratify the reader's curioſity than to inform his judgment, for certainly many things are ſaid therein with more acrimony than accuracy; but take it as it is.

(78) Purchas's Pilgrims, Vol. IV. p. 1185.

'SIR,

'I have, according to your requeſt and my own 'plainneſs, ſent you here the compariſon between 'thoſe two commanders, Sir Francis Drake and Sir 'John Hawkins. They were both much given to 'travel in their youth and age, attempting many ho'nourable voyages alike; as that of Sir John Hawkins 'to Guinea, to the iſles of America, to St John de 'Ulloa. So likewiſe Sir Francis Drake, after many 'diſcoveries of the Weſt-Indies and other parts, was 'the firſt Engliſhman that did ever compaſs the world; 'wherein, as alſo in his deep judgment in ſea cauſes, 'he did far exceed, not Sir John Hawkins alone, but 'all others whomſoever. In their own natures and 'diſpoſition they did as much differ as in the managing 'matters of the wars. Sir Francis being of a lively 'ſpirit, reſolute, quick, and ſufficiently valiant. The 'other, ſlow, jealous, and hardly brought to reſolu'tion. In Council, Sir John Hawkins did often differ

to his family affairs we know but very little of them, except that he had two wives; and by the firſt a ſon, of whom the reader will have a further account. To conclude, in ſpite of all the objections that have been made, and which are deduced chiefly from his misfortunes, we have made it evident from facts, that he was one of the principal ſupports of the Engliſh navy, in a reign when it's glory was very conſpicuous, in conſequence of which he received as many teſtimonies of honour, favour, and reward, as any man of his rank (*b*). His merit was not only underſtood at Court by the Queen and her Miniſters, but by the country alſo; for Sir John Hawkins was ſo popular a man, that he was twice elected Burgeſs for Plymouth, the firſt time with Sir Humphrey Gilbert, and the ſecond with Edmund Tremaine, Eſq; he was likewiſe a third time in Parliament for ſome other borough (*c*). We may add that he was a pious man likewiſe, as appears by his erecting an hoſpital at Chatham for the relief of poor and diſeaſed ſailors. We will end this account with the remark of one who knew him well, and was an unexceptionable judge of the character he deſerved, the celebrated Sir Walter Ralegh (*d*), who ſays, 'That, notwithſtanding the 'diſappointments and diſtreſſes they met with in their laſt voyage, Sir FRANCIS DRAKE, 'Sir JOHN HAWKINS, and Sir THOMAS BASKERVILLE, were men for their expe'rience and valour as eminent as England ever had [*T*].

(*b*) Stowe, Holinſhed, Monſon.

(*c*) Willis's Notitia Parliament. Vol. II. p. 295.

(*d*) Apology for his Voyage to Guaiana, p. 2.

'from the judgment of others, ſeeming thereby to 'know more in doubtful things than he would utter. 'Sir Francis was a willing hearer of every man's opi'nion, but commonly a follower of his own; he never 'attempted any action wherein he was an abſolute 'commander, but he performed the ſame with great 'reputation, and did eaſily diſpatch great matters. 'Contrariwiſe, Sir John Hawkins did only give the 'bare attempt of things, for the moſt part without any 'fortune or good ſucceſs therein. Sir John Hawkins 'did naturally hate the land-ſoldier, and though he 'were very popular, yet he affected more the common 'ſort than his equals. Sir Francis, contrarily, did 'much love the land ſoldier, and greatly advanced 'good parts whereſoever he found them. He was alſo 'affable to all men, and of eaſy acceſs. They were 'both of many virtues, and agreeing in ſome. As 'patience in enduring labours and hardneſs, obſerva'tion and memory of things paſt, and great diſcretion 'in ſudden dangers, in which neither of them was 'much diſtempered; and in ſome other virtues they 'differed. Sir John Hawkins had in him mercy and 'aptneſs to forgive, and true of word. Sir Francis, 'hard in reconciliation, and conſtancy in friendſhip; 'he was, withal, ſevere and courteous, magnanimous 'and liberal. They were both faulty in ambition, 'but more the one than the other. For in Sir Francis 'was an inſatiable deſire of honour, indeed beyond 'reaſon. He was infinite in promiſes, and more tem'perate in adverſity than in better fortune. He had 'alſo other imperfections; as aptneſs to anger, and 'bitterneſs in diſgracing, and too much pleaſed with 'open flattery. Sir John Hawkins had in him malice 'with diſſimulation, rudeneſs in behaviour, and was 'paſſing ſparing, indeed miſerable. They were both 'happy alike in being great commanders, but not of 'equal ſucceſs; and grew great and famous by one 'means, riſing through their own virtues and the for'tune of the ſea. There was no compariſon to be 'made between their well-deſerving and good parts, 'for therein Sir Francis Drake did far exceed. This 'is all I have obſerved in the voyages wherein I have 'ſerved with them.

'R. M.'

[*T*] *As eminent as England ever had.*] This commendation from ſo knowing a man, might well juſtify the pains and vindicate the praiſes we have beſtowed upon this great ſeaman; but perhaps it may contribute to the reader's ſatisfaction, if we inform him briefly of the ſentiments which the moſt competent judges have entertained of his ſuperior merit. It is not only in this place, but in many other parts of his writings, that Sir Walter Ralegh mentions him with admiration, as one of the greateſt men, in an age more fruitful of great men than almoſt any that our hiſtory can boaſt, and this too without any qualifications or exceptions, which is not the caſe in reſpect to another great commander, whom, though on the whole he admired, yet in many things he diſapproved (79). The judicious Lord Bacon ſpeaks of him with reverence, and aſcribes the miſcarriage of his laſt voyage entirely to the miſunderſtanding that happened between him and Sir Francis Drake (80); for otherwiſe he concludes, that their valour and abilities muſt have been fatal to the Spaniards. Sir William Monſon, another of his contemporaries, acknowledges Drake, Hawkins, and Frobiſher, for the three greateſt ſeamen in England (81); and, which perhaps does him no leſs honour, in deſcribing the abuſes that had crept into the navy in the reign of King James, he hints, that they were too many to enumerate, and then proceeds thus (82). 'I will now 'apply myſelf to redreſs theſe encroaching dangers 'and corrupt dealings, and bring it to the ſtate of 'Hawkins's and Burroughs's time, who were perfect 'and honeſt men in their places; the one Treaſurer, 'the other Compſroller.' The ingenious Dr Fuller laments the manner of his death, which he ſuppoſes to proceed from the grief of ſeeing his advice contemned (83). If we deſcend again to later times, let us hear what that impartial and incomparable judge of merit, Mr Evelyn, delivers upon this head (84). 'I go on to 'enquire (but without much ſatisfaction I confeſs) what 'medals were ſtamped from the reign and revolutions 'of our Seventh and Eighth Henries time to almoſt 'this age of ours? Had ſuch actions and events hap'pened among the reſt of the poliſhed world, we 'ſhould not be now to ſeek for the heads of Sir Fran'cis Drake, Cavendiſh, Hawkins, Frobiſher, Green'vil, Fenton, Willougby, and the reſt of the Argo'nauts; and ſurely they that firſt circled this globe of 'earth and ſea (in whoſe entrails ſo much gold and ſil'ver, and all other metals are contained) might at 'leaſt be thought worthy the honour of a copper me'dal, which yet I no where find.' After this citation, the judicious peruſer will certainly hold us right, in ſupplying the want of a medal, by tranſmitting to poſterity theſe ample memoirs of Sir John Hawkins.

E

HAWKINS [Sir RICHARD], the ſon of Sir John Hawkins, and himſelf a very experienced and gallant officer in the Royal Navy (*a*). He was born at Plymouth, but in what year it is impoſſible, at this diſtance of time, to ſpeak with any degree of certainty. We may collect, from his own writings, that he was by the firſt venter, though he ſpeaks of his mother-in-law, not only in terms of the greateſt decency, but alſo with great commendation (*b*). We are as much in the dark as to the place and manner of his education; but there can be no doubt, his father's character and his own merit conſidered, that he had all proper care employed in bringing him up, and that a ſufficient time was allowed for his acquiring a due tincture of letters. It is, however, no leſs probable, that he betook himſelf very early to the ſea ſervice; and, having ſo many ſhining examples in his own family, followed it with equal vigilance and ſpirit (*c*). He was alſo of a remarkably grave

(*a*) Prince's Worthies of Devon, p. 391.

(*b*) Hawkins's Obſervations in his Voyage to the South-Sea, p. 2.

(*c*) Prince's Worthies of Devon p. 391.

grave turn, and very much given to reflect on the principal events that happened in his own life-time at ſea, to ſift out their cauſes the beſt he could, and to connect theſe with their conſequences, that by ſuch lights he might regulate his own conduct, and to ſupply, by this method, the want of experience, which is the greateſt impediment, generally ſpeaking, to the advancement of youth. He ſucceeded perfectly well in his plan; for we find, that in the year 1582, when, as himſelf aſſures us, he was but a very young man, he had the command of a veſſel, which was Vice-Admiral of a ſmall ſquadron, commanded by his uncle, William Hawkins, Eſq; of Plymouth, which ſeems to have been employed in a private expedition to the Weſt-Indies, upon much the ſame ſcheme in which Captain John Hawkins went thither, when he was ſo treacherouſly uſed by the Spaniards. Upon this occaſion our young ſeaman gave a very extraordinary inſtance of integrity and intrepidity, which without doubt raiſed his character highly, and contributed not a little to his preferment when he came home (*d*) [*A*]. In the ever memorable year 1588, he was a Captain of one of the Queen's ſhips, called the Swallow (*e*), which ſuffered the moſt of any in the defeat of the Spaniſh Armada, and that by a fire-arrow, which being hid in the ſail, burnt a hole in her beak head, which was not diſcovered 'till the arrow fell out, and, floating by the ſhip's ſide, gave them the firſt ſuſpicion of what had happened (*f*). He remarked many things in this glorious action, of which we have little or no account any where elſe; but it is very remarkable, that in relating them, he takes occaſion to do juſtice to the characters of others, without ſaying any thing of what he performed himſelf; though it is highly probable, that, as his ſhip ſuffered moſt, he was not the leaſt active in procuring and purſuing that important victory, his obſervations upon which give us an equal idea of his modeſty and penetration [*B*]. When his father went with Sir Martin Frobiſher to the coaſts of Spain in 1590, he commanded her Majeſty's ſhip the Crane, of the burthen of two hundred tons, was very active in purſuing the Spaniſh ſquadron (*g*), that was employed in carrying relief to their forces in Britanny, and in cruizing near the Azores; where,

(*d*) Hawkins's Obſervations in his Voyage to the South-Sea, p. 86.

(*e*) Monſon's Naval Tracts, p. 172.

(*f*) Hawkins's Obſervations in his Voyage to the South-Sea, p. 51.

(*g*) Monſon's Naval Tracts, p. 177.

[*A*] *And contributed not a little to his preferment when he came home.*] Amongſt the veſſels that compoſed this private ſquadron, there was one called the bark Bonner, which, while they were cruizing off the weſt end of the iſland of Porto Rico, became ſomewhat leaky; upon which the Captain complained, alledging that his ſhip was in ſuch a condition, as made it impoſſible for him to proceed in her to England (1). This, as is uſual in ſuch caſes, being brought before their Council, was decided according to the Captain's deſire, and a reſolution taken, that her ſtores and proviſions being removed, and the men diſpoſed of in the other ſhips, the hull ſhould be either ſunk or burned. Our young Captain, who had been ſilent 'till judgment was given, interpoſed to prevent execution. He had a notion that the Captain was deſirous of getting into a ſhip that ſailed better; and that being under the power of this prejudice, he repreſented the ſtate of his ſhip to be worſe than it really was. He therefore expoſtulated the matter with his uncle, ſuggeſting to him, that as they had gained nothing hitherto for the proprietors, it was ſo much the more requiſite to be careful of the principal; and added farther, that if he was ſo pleaſed, he would collect out of his own and the reſt of the ſhips a ſufficient number of men to go home with him in that bark, which ſhould be ſtiled the Vice Admiral inſtead of his own veſſel, upon condition, however, that if they navigated the bark ſafely home, the crew ſhould have one fourth part of the clear value of the bark Bonner by way of ſalvage. His uncle propoſed, that the principal officers ſhould with him go on board the ſhip in queſtion, and that there the point ſhould be determined. But the Captain of the bark no ſooner heard this propoſal, than he gave for anſwer, that if any man could carry her to England, he could with the crew that was in her; which he accordingly did, without any riſk at all in his paſſage. The ſhip, after this, was continually employed for nine years together, and might have been ſo longer; but that being laid up in a careleſs manner, ſhe grew rotten. His uncle, upon this occaſion, thanked him heartily for his good will; and the proprietors, no doubt, were very well pleaſed with this headineſs and conduct in a young man, by which ſo much money as this bark was worth was ſaved in their pockets. He adds, in relating this ſtory, that this was an artifice often practiſed, and by which many a ſhip was condemned and deſtroyed, though in a very ſerviceable condition.

(1) Hawkins's Obſervations on his Voyage into the South-Seas, p. 86, 87. Purchas's Pilgrims, Vol. IV. p. 1389.

[*B*] *Which give us an equal idea of his modeſty and penetration.*] It appears from an authentic liſt of the Royal Navy in that reign, that the Swallow was a ſhip of three hundred and thirty tons, and that carried one hundred and ſixty men. The juſtice he does to the noble perſon who commanded the Engliſh fleet, can never be ſo well repreſented as in his own words (2). 'Fabius Maximus, the famous Roman, ſays he, 'endured the attribute of Coward, with many other 'infamies, rather than he would hazard the ſafety of 'of his country by raſh and incertain provocations. 'In which reſpect, no leſs worthy of perpetual memo'ry, was the prudent policy and government of our 'Engliſh navy in anno 1588, by the worthy Earl 'of Nottingham, Lord High-Admiral of England, 'who in like caſe, with mature and experimented 'knowledge, patiently withſtood the inſtigations of 'many couragious and noble Captains, who would 'have perſwaded him to have laid them aboard; but 'well he foreſaw that the enemy had an army aboard, 'he none; that they exceeded him in number of ſhip'ping, and thoſe greater in bulk, ſtronger built, and 'higher moulded; ſo that they, who with ſuch ad'vantage fought from above, might eaſily diſtreſs all 'oppoſition below, the ſlaughter, peradventure, pro'ving more fatal than the victory profitable; by being 'overthrown he might have hazarded the kingdom, 'whereas, by the conqueſt (at moſt) he could have 'boaſted of nothing but glory and an enemy defeated. 'But by ſufferance, he always advantaged himſelf of 'wind and tide, which was the freedom of our coun'try and ſecurity of our navy, with the deſtruction of 'theirs, which in the eye of the ignorant (who judge 'all things by the external appearance) ſeemed invin'cible, but truly conſidered, was much inferior to 'others in all things of ſubſtance, as the event proved; 'for we ſunk, ſpoiled, and took of them, many, and 'they diminiſhed of ours but one ſmall pinnace, nor 'any man of name, ſave only Captain Cocke, who 'died with honour amidſt his company.' It appears from hence, that Camden was right as to the name of the only Engliſh officer who loſt his life in this engagement; and though an eminent writer expreſſes much concern that his Chriſtian name is not recoverable (3), yet we can direct the reader to a little piece, in which it is ſaid that his name was Captain William Cockes (4). It is a remark of our author's, and therein he is ſingular, that fire-ſhips were not invented by the Engliſh, but copied from the Spaniards, who firſt employed them againſt his father, Sir John Hawkins, in the bay of Mexico; and the ſame practice was repeated upon their armada; for which purpoſe ſix or ſeven veſſels were prepared, and of theſe, two belonged to Captain Richard Hawkins himſelf (5), upon whoſe authority, therefore, in this matter we may the more ſafely depend. Indeed the thing ſpeaks for itſelf, ſince the account of his father's voyage, and therein of this attempt of the Spaniards to burn his veſſels, was actually made public before this invaſion in 1588.

(4) Diſcourſe concerning the Spaniſh Fleet inviding England in the year 1588, and overthrown by her Majeſty's Navy under the conduct of Lord Charles Howard, High-Admiral of England, written in Italian, and tranſlated into Engliſh. Lond. 1590. In this piece we are told that he commanded the Violette, a little pinnace belonging to Sir William Winter.

(5) Obſervations of Sir Richard Hawkins on his Voyage into the South-Seas, p. 51.

[C] *And*

where, though they were not ſo happy as to take a ſingle ſhip, yet we are aſſured by a foreign writer of great veracity, who was at that time in the iſland, that they gave ſo much interruption to the trade, and occaſioned ſuch diſtraction to the Spaniſh ſettlements, that the people openly curſed the miniſters who had embarked the Crown of Spain in a war with England (*n*). In this voyage, which was of ſome continuance, though of no great action, Captain Richard Hawkins had an opportunity of adding largely to that ſtock of uſeful knowledge, which he took every occaſion to collect, and which he methodized and digeſted at his leiſure (*i*) [C]. At his return, he began to think in earneſt of a voyage which he had meditated ſome time before, and for which he had cauſed a new ſhip to be built, of the burthen of between three and four hundred tons; to which his mother-in-law, lady Hawkins, having given, for what reaſon he could never learn, the name of the Repentance, it diſtaſted him ſo much, that he ſold her to his father. But the ſhip having been employed in the Queen's ſervice with great good fortune, and Queen Elizabeth, as ſhe lay at Deptford, rowing round her in her barge, and having new named her the Dainty, our young hero was reconciled to his ſhip, repurchaſed her from his father, and reſumed his firſt intention of making in her a grand voyage for diſcovery (*k*). The ſcheme of this expedition, which was digeſted by the advice of Sir John Hawkins, and had the approbation of the Queen and her Privy Council, was of great extent; for he propoſed no leſs than viſiting the iſlands of Japan, as well as the Moluccas and Phillippines, taking in his courſe through the Streights of Magellân, and intending probably to return by the Cape of Good Hope (*l*). The univerſal eſteem which his father had acquired, and the great reſpect borne to himſelf, induced all who were in power to give him whatever aſſiſtance he could either deſire or expect; and the Lord High-Admiral, Sir Robert Cecil, and Sir Walter Ralegh, and many other perſons of rank, promiſed to pay him a viſit on board his ſhip in the river; which, however, was prevented by the foulneſs of the ſeaſon; and the wind coming fair, he judged it improper to loſe opportunity for the ſake of ceremony, and therefore directed the Dainty to fall down to Graveſend, April 8, 1593 (*m*). In her paſſage ſhe narrowly eſcaped ſhipwreck, through the negligence of leaving her ports open. This miſchief eſcaped, they proſecuted their voyage to Plymouth, where his ſmall ſquadron was to be formed, and entered that harbour on the twenty-ſixth of the ſame month. The other two veſſels were likewiſe his own, and but ſmall; the one called the Hawk, and the other a pinnace, which he named the Fancy (*n*). It was towards the cloſe of the mouth of May, before he could, with the aſſiſtance of his friends, and eſpecially of his wife's father, get every thing in order to put to ſea; and, at the very time he was ready to weigh the anchor, he was very near ſeeing an end of all his hopes. His three ſhips riding in the Sound, were ſurprized by a ſudden ſtorm; the Dainty ſprung her main-maſt, and the Fancy, driving on the rocks, went to the bottom before his eyes, who was on ſhore, a ſad ſpectator of this new misfortune (*o*). But, notwithſtanding this ſecond diſcouraging accident, he, with infinite induſtry and no ſmall expence, put all things to rights again in the ſpace of ten days; and, though the tender intreaties of his wife had once brought him to heſitate, yet, as he ſays very emphatically himſelf, conſidering how many eyes there were upon his ball, and having himſelf opened it, he reſolved to dance on, though he ſhould only hop at laſt (*p*). Accordingly, June the twelfth, 1593, about three in the afternoon, he left Plymouth Sound, and before the end of the month arrived at the Madeiras; on the third of July he paſſed the Canaries, and ſoon after the iſlands of Cape de Verde, without any remarkable accidents; but, upon approaching the coaſts of Brazil, the ſcurvy began to prevail amongſt the ſhip's crew, and gave Sir Richard Hawkins an opportunity of examining into, and making as juſt reflections upon, that terrible diſeaſe, as are perhaps any where extant [D]. This obliged him to think of putting into a port of Brazil

[C] *And which he methodized and digeſted at his leiſure.*] According to his account, they were becalmed a great part of the time, when he took notice, that the ſea, for want of motion, became full of ſeveral ſorts of jellies (6), reſembling ſerpents, adders, and ſnakes, ſome green, ſome black, ſome yellow, and ſome ſpeckled, of a yard and a half and two yards long; which, ſays he, if I had not ſeen I could have hardly believed, appealing for the truth of what he related to the companies of thoſe ſhips which compoſed that ſquadron; adding, that they found it difficult to draw up ſo much as a bucket, without having ſome of this corruption mixed with the water; and to this malignancy of the air and ſeaſon he attributes that ſickneſs which invaded all their ſhips except his own, and proved fatal to many. A circumſtance indeed very wonderful, and which, if it had not been related of his own knowledge, would ſcarce have been credible. As it ſtands, it is an evident proof, that if the Providence of God did not prevent it, the waters of the ſea would very ſoon become naturally as loathſome, as thoſe of the river Nile were once rendered by miracle.

(6) Purchas's Pilgrims, Vol. IV. p. 1373.

[D] *As are perhaps any where extant.*] In the ſentiment of our author, the ſea ſcurvy is a kind of dropſy, which he remarks, is apt enough to invade ſeamen in all places when they have been a long time on board, but has a kind of peculiar malignancy a little to the ſouth of the Equator, as appeared by infecting the whole crew in a few days (7). The chief ſymptoms he obſerved, were want of appetite, with a great drought, ſwelling in all parts of the body, but more eſpecially in the gums and legs. But above all, what he ſtiles a loathſome lazineſs, and a perpetual inclination to reſt and ſleep, though the patient was convinced that nothing could do him more hurt. The cauſes he aſſigns are various, firſt, the alteration of the climate, which conſequently produces no ſmall change in the conſtitution; next, bad nouriſhment, there being a certain degree of corruption in all ſalt meats, which is rather kept from proceeding than altogether prevented by the pickle; and laſtly, a bad diſpoſition in the air, ariſing from the calms that are common in thoſe parts, whence come a ſtagnation and a putridneſs in all fluids; upon theſe principles he accounts for the prevalence of this diſeaſe amongſt Engliſh ſeamen, more than thoſe of any other nation; becauſe, coming out of a temperate climate, being uſed to eat plentifully of wholeſome proviſions and enjoying a pure air, they are attacked at once by thoſe contrarieties that are moſt likely to debilitate the ſtomach, and to diſturb the whole

(7) Obſervations in his Voyage to the South-Sea, ſect. xvi.

Brazil for refreſhment; and having written a letter in Latin to the governor, informing him that his was an Engliſh ſhip bound to the Eaſt-Indies, and driven thither by contrary winds, deſired leave to purchaſe refreſhments for money, ſending a piece of crimſon velvet, ſome fine holland, and other curioſities as a preſent (*q*). The governor was ſlow in ſending an anſwer, ſevere in it's ſenſe, but civil in it's expreſſion. He told Captain Hawkins, that there being at that time a war between the two crowns, the ſtrictneſs of his inſtructions put it out of his power to grant his requeſt; but in regard to the polite manner in which he made it, he granted him three days time to depart; and before the anſwer came, having had a ſupply of oranges and other fruits, he reſolved to weigh with the firſt fair wind, as he did, and proceeded to the iſlands of St Anne, in the latitude of twenty degrees thirty minutes ſouth, where his whole ſquadron arrived ſafe on the fifth of November (*r*). There he cauſed all the proviſions to be taken out of the Hawk, and burnt her; and on the tenth of December ſailed for Cape Frio, with only ſix men ſick; and having taken in water and refreſhments there, and in the adjacent iſlands, ſailed again on the eighteenth of December for the Streights of Magellan; and, in his paſſage thither, made prize of a Portugueſe ſhip, but as it belonged to an old knight, who was going Governor to Angola, and who, after many years ſervice, had veſted his all in that ſhip and cargo, he contented himſelf with diſarming fifty ſoldiers that were on board, and ſuffered him to depart without any loſs (*s*). In the height of the river of Plate, and at the diſtance of about fifty leagues from land, they had a little blowing weather, which, though it expoſed them to no great danger, yet afforded an opportunity to Robert Tharlton, who commanded the Fancy, to perſwade thoſe who were on board that pinnace to deſert their General in the Dainty, and to return home; which baſe action was the ruin of this expedition (*t*) [*E*]. Sailing along the coaſt of Pentagonia, in the latitude of forty-eight degrees, he gave names to ſeveral places, and beſtowed on that whole country, which appeared to him very fair and promiſing, and ſituated in a very temperate climate, the title of *Hawkins's Maiden-Land*; becauſe, as he ſays, it was diſcovered at his expence, and in the reign of a maiden Queen. On the tenth of February they had the Streights of Magellan open, in the latitude of fifty-two degrees fifteen minutes; and paſſing through them, came into the South-Sea, March 29, 1594 (*u*). His deſcription of his paſſage is one of the beſt and plaineſt that is any where extant, and, like the reſt of his work, full of ingenious

whole frame of the body. He thinks that boiling meat in ſea water, being often wet with it, and eating mouldy bread, increaſe all the ſymptoms and heighten the infection. He therefore preſcribes as the beſt remedies, keeping the ſhip as clean as poſſible, ſprinkling it with vinegar, ſmoaking it with tar (8), feeding as little as poſſible upon ſalt meats, and more eſpecially upon ſalt fiſh, and being very cleanly, waſhing and ſhifting as often as poſſible. He mentions it as a great ſecret, and which himſelf had practiſed with much ſucceſs, to keep the men in action as much as poſſible, by making them exerciſe their arms, move things from place to place, and when they have any leiſure, to ſpend it in feats of agility, or in diverſions that keep their limbs in motion. At the changing of every watch, he recommends the giving of every man a bit of bread and a draught of wine and water mixed. He likewiſe praiſes Dr Stephens's water, and a few drops of oil of vitriol diſſolved in a convenient quantity of water. But beyond all other helps, the ſuffering the men to land as often as poſſible, and to procure for them oranges, lemons, and other acid fruits (9). After having given us theſe remarks and many more, he concludes with wiſhing, that ſome able phyſician would make this diſeaſe his ſtudy, that the true cauſes of it might be better known, and ſtill more effectual remedies found out, which, ſays he, would be a work meritorious in the ſight of God and man, and moſt beneficial to the people of this country, ſince in the ſpace that he had uſed the ſea, which might be about twenty years, he had known above ten thouſand men die of this diſeaſe.

(9) See a large account given of this diſtemper in Lord Anſon's Voyage round the World.

[*E*] *Which baſe action was the ruin of this expedition.*] The Captain of this veſſel, Robert Tharlton, had in a former voyage, and in the ſelf-ſame place, deſerted the famous Captain Thomas Cavendiſh, by which he ruined his voyage and broke his heart. Our author aſſures us, that all the miſfortunes and diſtreſs he afterwards ſuffered was owing to this accident, for if the Fancy had continued with him, he need not have ſhewn himſelf at all upon the coaſt of Peru, he might have availed himſelf of the proviſions, medicines, and refreſhments, that were on board that pinnace; and though he acknowledges that the men on board were but few, yet he inſiſts upon it, that even with thoſe few men, if they had been with him, he could have taken the Spaniſh Vice-Admiral, and have cleared himſelf in that engagement where he was made priſoner (10). He then proceeds to facts, that ought to appear in his own words (11). 'Theſe deſertions and eſcapes, 'ſays he, are, generally ſpeaking, only to pilfer and 'ſteal, as well by taking of ſome prize when they are 'alone and without command to hinder or order their 'bad proceedings, as to appropriate that which is in their 'intruſted ſhip, caſting the fault, if they be called to ac'count, upon ſome poor and unknown mariners, whom 'they ſuffer with a little pillage to abſent themſelves, 'the more cunningly to colour their greateſt diſorders 'and robberies. For doubtleſs, Robert Tharlton in 'the Fancy, if he would, might have come unto us 'with great facility, becauſe within ſixteen hours the 'ſtorm ceaſed and the wind came fair, which brought 'us to the Straits, and endured many days after with 'us at north-eaſt. This was good for them, though 'naught for us: if he had periſhed, any maſt or yard 'ſprung, any leak, wanted victuals or inſtruments for 'finding us, or had had any other impediment of im'portance, he might have had ſome colour to cloak 'his lewdneſs: but his maſts and yards being ſound, his 'ſhip ſtaunch, and loaden with victuals for two years 'at the leaſt, and having order from place to place 'where to find us, his intention is eaſily ſeen to be bad, 'and his fault ſuch as worthily deſerved to be made 'exemplary unto others. Which he manifeſted at his 'return by his manner of proceeding, making a ſpoil of 'the prize he took in the way homewards, as alſo of 'that which was in the ſhip, putting it into a port fit 'for his purpoſe, where he might have time and com'modity to do what he would.' He looks upon this breach of duty and honour, to be the peculiar ſcandal of the Engliſh nation; becauſe, ſays he, thoſe who are injured, either dying through grief, or falling into extreme poverty, are ſeldom able to proſecute ſuch offences, which procured impunity tempts others to follow a bad example; whereas in Spain, the King's Attorney-General takes notice of all ſuch offences of courſe, and upon his ſuit they are ſo ſeverely puniſhed, that diſcipline is no where ſo well obſerved as among the Spaniards, and to this, and this only, he attributes all their ſucceſs; in all other things, ſays he, we are at leaſt their equals, in many, much their ſuperiors, but much inferior to them in this; not that the Spaniards are more docible or leſs inclined to mutiny, but becauſe juſtice halts with us, and walked with ſo quick a pace amongſt them, as ever to overtake the offender, which in a very ſhort time took away the offence.

(11) Obſervations in his Voyage to the South-Sea, p. 68.

nious and inſtructive reflections. He obſerves, that notwithſtanding the received opinion at that time, the Streights are certainly navigable through the whole year; but he adds, that the true ſeaſon for paſſing is in the months of November, December, and January, when the wind is ſteady and favourable; whereas it is very inconſtant, as in all narrow ſeas, during the other months of the year (*w*). On the 19th of April, which that year was Eaſter-Eve, they anchored under the iſland of Mocha, where they ran a very great riſk of ſuffering by the Arawcans, a nation of Indians, equally famous for the ſubtlety of their heads, and for their proweſs of their hands, notwithſtanding all the precautions that could be taken to guard againſt them. Proceeding from thence along the coaſts of Chili, they were welcomed into that which is ſtiled the Pacific Ocean, by a ſtorm that laſted ten days. This was ſucceeded by very warm diſputes amongſt themſelves (*x*). Captain Hawkins was for continuing his voyage quietly, and without making any prizes, 'till they were above Callao, which is the port of Lima; becauſe then they might be ſure of keeping what they got, as the Spaniards could hardly fit out a ſquadron ſtrong enough to take them in thoſe ſeas, and would never judge it either reaſonable or practicable to purſue them in their great run to the Philippines. On the other hand, the mariners, who knew they had a right to make prizes, and who believed, in that country, every ſhip that went to ſea was laden with gold, were againſt loſing any time, and for taking every thing that they could take. The Captain finding that it was in vain to reaſon, and that ſelf-intereſt, though miſunderſtood, governed, to a man, every one on board his ſhip but himſelf, was forced, contrary to his own ſentiments, to comply with this notion (*y*). In conſequence of this, they took a few days after four ſhips, in the harbour of Valparifo, and very ſoon after a fifth, out of which they were extremely well ſupplied with proviſions, but with very little gold; and even the ranſoms that they obtained were not very conſiderable. But, as ſmall as this treaſure proved, it was more than enough to raiſe diſputes; for the ſeamen immediately demanded their third, which was due to them by contract. The Captain by no means diſputed this, but took great pains to ſhew them the folly of their demand, and the bad effects with which it muſt be attended in regard to themſelves, ſince it could only ſerve them to game with, and to create quarrels; to which, though at firſt both angry and obſtinate, they at length yielded their aſſent, and were willing, that whatever gold or ſilver they took ſhould be put into a cheſt with three locks, of which the Captain was to have one key, the Maſter a ſecond, and a perſon choſen by the ſhip's crew a third, and that no diviſion ſhould be made 'till they came to England (*z*). Arriving in the height of Ariquipa, they found that intelligence had been given to Don Garcias Hurtado de Mendoça, Viceroy of Peru, of their entrance into the South-Seas; who thereupon fitted out a ſquadron of ſix armed veſſels to fight and take them. At this time Captain Hawkins had with him in the Dainty, and a little Indian prize which they had fitted up as a pinnace, ſeventy-five men and boys; with which inconſiderable force, ſuch was the ſpirit of thoſe times, he braved the whole Spaniſh ſtrength in the South-Seas. About the middle of May, the Spaniſh ſquadron, under the command of Don Beltrian de Caſtro, came in ſight of them near Cavite; the Engliſh being then to windward, and the breeze ſpringing up about nine in the morning, they ſtood out to ſea, and the Spaniards with them (*a*). As the wind ſtrengthened and the ſea began to ſwell, the Spaniſh Admiral ſnapped his main-maſt, the Vice-Admiral ſplit her main-ſail, and the Rear-Admiral cracked her main-yard, which threw them into great confuſion, and gave the Engliſh an opportunity to eſcape as they did; the ſailors being by this time convinced that Captain Hawkins was in the right, and willing enough, when they had wooded and watered, to proceed to the Eaſt-Indies with what little they had got, though they did take ſome trifling prizes afterwards (*b*). As for the Spaniſh ſquadron, upon it's return to Lima all on board it were ſo laughed at and contemned, for not being able to deal with a ſingle ſhip, much inferior in force to any one of theirs, that the Admiral petitioned to put to ſea again, with ſuch a force as could be ſooneſt got together; and this being no more than two ſhips and a pinnace, he put the ſtouteſt of his men into them, and ſailed, without loſing time, to find thoſe who had before eſcaped him (*c*). If Captain Hawkins could have perſwaded his men to have been ſteady even to their own reſolution, this might have been rendered impracticable; but they were ſtill ſo bent upon chaſing every thing they ſaw, that on the tenth of June they came to an anchor in the bay of Atacames; from whence they were on the point of ſailing again on the twentieth in the morning, when they deſcried the Spaniſh ſquadron, whom Captain Hawkins preſently knew for what they really were; but his men, miſtaken and obſtinate as uſual, would have it to be the Peru fleet bound for Panama, laden with treaſure, which they already ſhared in imagination (*d*). It was not long, however, before they were convinced by facts, and ſo a very unequal diſpute began between a veſſel that had been many months at ſea, with a very poor defenceleſs pinnace, againſt three clean well armed ſhips, two of them of ſuperior force, and, in all three, thirteen hundred men, eſteemed the beſt in that country. In ſpite of all theſe diſadvantages, the Engliſh defended themſelves gallantly for two whole days and a great part of a third; nor did they ſurrender at laſt, 'till Captain Hawkins was diſabled, and forced to quit the deck, when, beſides thoſe killed in the action, they had forty wounded men, and their ſhip in a ſinking condition (*e*) [*F*]. As ſoon as the ſhip

[*F*] *And their ſhip in a ſinking condition.*] The ſhips were no ſooner engaged, than Captain Hawkins perceived how much he had been miſtaken in his gunner, who promiſed what great things he would do againſt an enemy,

ſhip was in the hands of the Spaniards, the General ſent for Captain Hawkins on board his own veſſel, where he received him courteouſly, and with tears in his eyes; treated him with the utmoſt tenderneſs, and aſſured him, that the terms which had been granted at the time his veſſel ſtruck ſhould be punctually performed (*f*). As this gentleman was brother to the Conde de Lemos, had ſerved many years in Flanders, and appeared in all his actions a man of ſtrict honour as well as great magnificence, Captain Hawkins, who began now to recover (as by a wonderful Providence all the wounded men did) reſumed his ſpirits, and, as occaſion offered, entered into a free converſation with that noble perſon and his officers; by which he informed his own judgment and theirs, exploded many pernicious prejudices which they had taken up, and by this means not only did himſelf great ſervice, but diſpoſed them likewiſe to treat other Engliſhmen better (*g*) [G]. On the ninth

(*f*) Hawkins's Obſervations in his Voyage to the South-Sea, p. 155.

(*g*) Purchas's Pilgrims, Vol. IV. p. 1413.

enemy, and now loſt all ſenſe and ſpirit (12) By his careleſſneſs or treachery, two hundred fire-balls, which were all they had, took wet and were ſpoiled; cartridges were wanting within an hour, and his behaviour was ſo very bad that Captain Hawkins and the Maſter of the ſhip were forced to ſupply his place. On the other ſide, the gunner in the Spaniſh Admiral was an Engliſhman, who alſo promiſed to do mighty things, either from a ſpirit of rancour or of flattery, but his arrogance was ſoon humbled by a ſhot, which in the beginning of the action took off his head. In the evening they were boarded by the Vice-Admiral, from whom they cleared themſelves, killing a great number of the enemy, and might have taken the veſſel if they could have ſpared men to have boarded her. This compelled the Spaniards to alter their manner of fighting, and to rely upon their artillery. In theſe boardings the Engliſh ſuffered ſome loſs, and their commander much more, ſince the Maſter of the ſhip had one of his eyes, his noſe, and half his face ſhot away, and one Mr Henry Courton was killed, who were the two principal perſons he relied on. Captain Hawkins himſelf alſo had ſix wounds, of which two were very dangerous, one in the neck, the other through the arm a little beneath the ſhoulder. He was therefore obliged to appoint a Captain under him, to whom the Spaniards having propoſed good quarters, it occaſioned a debate, in which Captain Hawkins, by a warm and eloquent ſpeech, prevailed upon the crew to reject them. They endured a great cannonading all the night and the next day, in which they were very near diſabling the Vice-Admiral, and if they had proſecuted their advantage, they might poſſibly have diſengaged themſelves, but by ſhewing too great earneſtneſs to eſcape, they loſt the opportunity of eſcaping. The third day in the afternoon, which was June the twenty-ſecond (13), 1594, more of their ſails being torn, their maſts ſpoiled, their pumps rent, with eight foot water in their hold, very few men without wounds, and thoſe ſo much fatigued they could ſcarce ſtand; the laſt propoſal was made, to which the Captain aſſented, though without Captain Hawkins's full concurrence. When he knew how things ſtood, he ſent Juan Gomez de Pineda, a Spaniſh pilot then his priſoner, to the General, to demand his word of honour for their fair uſage, and a pledge for it's being punctually kept (14). 'In the midſt of this 'treaty, ſays he, the Vice-Admiral not knowing of 'what had paſt, diſcharged her two chace pieces at us, 'and hurt our Captain very ſore in the thigh, and 'maimed one of our Maſter's mates called Hugh 'Maires in one of his arms, but after knowing us to 'be rendered, he ſuccoured us: and we ſatisfying 'them that we could not hoiſt out our boat nor ſtrike 'our ſails; the Admiral laid us aboard, but before 'any man entered, John Gomez went unto the Gene'ral, who received him with great courteſy, and aſked 'him what he required; to which he made anſwer, 'my demand was, that in the King's name he ſhould 'give us his faith and promiſe to give us our lives, to 'keep the laws of fair war and quarter, and to ſend 'us preſently into our country, and in confirmation 'hereof that I required ſome pledge; whereunto the 'General made anſwer, that in the King's Majeſty's 'name his maſter, he received us a buena querra, and 'ſwore by God Almighty, and by the habit of Alcan'tara (whereof he had received knighthood, and in 'token whereof he wore on his breaſt a green croſs, 'which is the enſign of that order) that he would give 'us our lives with good entreaty, and ſend us as ſpeedi'ly as he could into our own country, in confirmation 'whereof he took off his glove and ſent it to me as a 'pledge. With this meſſage John Gomez returned, 'and the Spaniards entered and took poſſeſſion of our 'ſhip.'

(14) Obſervations on his Voyage into the South-Seas, p. 155, 156.

[G] *To treat other Engliſhmen better.*] The Spaniſh officers made a practice of diſputing roundly and freely in Captain Hawkins's preſence the nature of his caſe; ſome ſaid they were Lutherans, and therefore no faith was to be kept with them; others, that they were brave fellows, and deſerved to be well treated; ſome, that they were corſairs, and ſo not entituled to the rights of war; and others again, that this muſt depend upon the good pleaſure of the Viceroy of Peru, from whom the General had his commiſſion. Captain Hawkins, without meddling with the main point, took the liberty of touching now and then upon acceſſaries. He obſerved, that as to their being hereticks, they knew it before their promiſe was made, ſo that the true queſtion was, whether a Spaniſh General ſhould give his word when he meant not to keep it; as to their being corſairs or pirates, he proved to them, that this was a vulgar miſtake, for that pirates were ſuch as took veſſels by force in a time of full peace, or that acted without a commiſſion from the government of that ſtate to which they belonged, whereas the facts were notorious to them, both as to the war between Spain and England, and as to their acting under Queen Elizabeth's commiſſion, the laſt error indeed he allowed to be more excuſable, becauſe the Crown of Spain never licenſed private ſhips of war (15). In conſequence of ſeveral diſcourſes of this kind, the Spaniſh General one day at his table, demanded what his ſentiments were upon the main queſtion, or in other words, what he apprehended himſelf entituled to from the general promiſe of fair quarter; this as far as he was able, he laboured to decline, but when he found this would not be admitted, and that moſt of thoſe who were preſent, joined with their General in deſiring him to ſpeak freely, he delivered himſelf thus (16). 'Sir, under 'the capitulation of Buena Querra (or fair wars) I have 'ever underſtood, and ſo it hath ever been obſerved 'in theſe, as alſo in former times, that preſervation of 'life and good entreaty of the priſoner have been com'prehended; and further, by no means to be urged 'to any thing contrary to his conſcience as touching his 'religion, nor to be ſeduced or menaced for the alle'giance due to his Prince and Country, but rather to 'ranſom him for his months pay. And this is that 'which I have known practiſed in our times in gene'ral amongſt all civil and noble nations But the En'gliſh have enlarged it one point more towards the 'Spaniards, rendered a Buena Querra in theſe wars, 'have ever delivered them which have been taken, 'upon ſuch compoſitions without ranſom; but the co'vetouſneſs of our age hath brought in many abuſes, 'and excluded the principal officers from partaking of 'the benefit of this privilege, in leaving them to the 'diſcretion of the victor, being many times poorer than 'the common ſoldiers, their qualities conſidered, 'whereby they are commonly put to more than the 'ordinary ranſom, and not being able of themſelves to 'accompliſh it, are forgotten of their Princes, and 'ſometimes ſuffer long impriſonment, which they ſhould 'not. With this Don Beltran ſaid. This ambiguity 'you have well reſolved; and like a worthy gentle'man, and with great courteſy and liberality, added, let 'not the laſt point trouble you: but be of good com'fort, for I here give you my word anew, that your 'ranſom (if any ſhall be thought due) ſhall be but a 'couple of greyhounds for me, and other two for my 'brother the Conde de Lemos; and this I ſwear to 'you by the habit of Alcantara. Provided always that 'the King my maſter leave you to my diſpoſe, as of 'right you belong unto me.'

(16) Obſervations on his Voyage into the South-Seas, p. 162, 163.

[H] *He*

ninth of July they arrived in the haven of Panama, where the night following they ſaw the whole town as if it had been in a light fire, the houſes, galleries, and churches, being filled with candles, and the Spaniſh ſhips correſponded with their friends on ſhore, in public teſtimonies of joy for this ſignal victory; for ſo it appeared to them, ſince, from the time that Magellan firſt opened the Streights which bear his name, Captain Hawkins was, in their account, the ſixth man that had paſſed them, and of theſe he was the third Engliſhman (*b*). While they remained here, the Spaniſh General diſpatched expreſſes, as well to the Viceroy of New Spain, who had likewiſe fitted out a fleet againſt this potent enemy, as to the Viceroy of Peru, under whom he acted; and by theſe expreſſes Captain Hawkins alſo was permitted to ſend letters to his father and ſome other friends, as alſo to the Queen, which the General aſſured him ſhould be forwarded to Europe (*i*). Upon this occaſion, whether from openneſs of heart or any concealed view is uncertain, Don Beltran ſhewed him a letter from the King to the Viceroy, in which there was a diſtinct account of his own little ſquadron, and the names of the veſſels, their burthen, pieces of artillery, and number of men, as exact as it was poſſible; *You may judge from hence*, added the General, when he ſhewed it him, *what friends the King my maſter has in England, and what ſpeedy and uſeful intelligence they give him* (*k*). Before they returned to Lima, it was found neceſſary to ground and trim the Engliſh ſhip which they had taken; and this being performed, the General, his Captains, and ſome religious men, went on board, and with great ſolemnity beſtowed a third name upon this veſſel, which was now called the Viſitation, becauſe ſhe was ſurrendered to them on that feaſt which they ſtile the Viſitation of the Bleſſed Virgin. He ſpent upwards of two years in Peru and the adjacent provinces, after which he was ſent to Panama, and from thence on board a galleon, of the burthen of five hundred tons, with the reſt of a fleet that was then returning into Europe (*l*). In his paſſage, he was once very near being killed or ſet at liberty; for this fleet came to the Tercera iſlands in the month of September, 1597, preciſely at the time that the Engliſh fleet was there; and in entering the harbour, the galleon, on board of which Captain Hawkins was, had twelve perſons grievouſly hurt by ſplinters, occaſioned by a ſhot from the Engliſh Admiral, though the ſhot itſelf did no execution at all (*m*). When he had remained there ſome time, he was at laſt ſent to Seville [*H*], in which famous city he was alſo ſome time confined, and then tranſferred to Madrid; where his cauſe, which was before litigated in the Indies, was again brought into debate. The point was, whether Don Beltran de Caſtro, who had promiſed him life and liberty in the name of the King of Spain his maſter, had any authority to make that promiſe, ſince he did not derive his power from the King, but from the Viceroy of Peru. In the whole courſe of this debate, the Spaniſh General ſaid and did every thing that could make for his priſoner's advantage, avowed his promiſe in the cleareſt terms, and employed all his friends in ſolliciting that it might be made good to Captain Hawkins (*n*). The true reaſon that this affair was drawn into ſuch a length, was to deter others, by his example, from making expeditions into the South-Seas. When in the end it came before the Privy-Council, the Count de Miranda, who was then Preſident, gave it as his opinion, that the promiſe of a Spaniſh General in the King's name ought to be punctually kept; for otherwiſe no veſſel would ever ſurrender, ſince in ſuch junctures it was impoſſible for them to know whoſe authority the General had (*o*). The deciſion of the Council being thus in his favour, he was ſet at liberty and returned to England. We know nothing farther of the fortunes of Sir Richard Hawkins, excepting that he died in a very ſingular manner; for, as he attended the Privy-Council on ſome particular occaſion, he was ſeized with an apoplectic fit, of which he expired in 1622 (*p*). His book was at that time in the preſs, and probably finiſhed; ſince the Dedication to Charles Prince of Wales, afterwards King Charles the Firſt, was prefixed thereto by himſelf; from which it appears, that the unhappy iſſue of his voyage to the South-Seas, his long confinement, and the diſaſters which naturally attended it, brought him into great diſtreſs (*q*). This work of his was ſoon after publiſhed by a friend, and was received with that approbation which it ſo well deſerved [*I*].

(*q*) His own words are, *Having brought on me nothing but loſs and miſery.*

[*H*] *He was at laſt ſent to Seville.*] Whatever conceit Sir Richard Hawkins might have of the unluckineſs of his ſhip, he ſeems to have been not at all more fortunate in any other; for, as he very narrowly eſcaped being killed at the Tercera's by an Engliſh cannon ſhot; ſo in the river of Seville, he was in very great danger, from a diſpute between two Spaniſh officers about a point of honour (17). His Catholic Majeſty had ſent eight new ſhips under a General, who was a man of great quality, to fetch the galleons from thoſe iſlands; and having paſſed the bar of St Lucar, the ſhips laden with treaſure were moored in the midſt of the river, and their eſcorte, on the ſide near the ſhore, in ſuch a manner, that one of the Admiral's cables overlaid the only one the galleon, in which Captain Hawkins came home, had left; by reaſon of which, the great current of ebb and a freſh wind cauſed the Admiral's anchors to give way, which likewiſe brought up that of the galleon; ſo that both ſhips began to drive, and were in the utmoſt peril of running foul one of the other. In this untoward ſituation, the General ſtanding in his gallery, gave no orders at all, becauſe he judged it beneath him to veer out a cable firſt; but the Captain of the galleon, who was a man of leſs ceremony, crying out, that upon his honour he had not another cable, that there were two millions of ſilver on board his veſſel, and that he proteſted againſt the General for any damage that might happen either to his Catholic Majeſty or to the trade, that great man was pleaſed to iſſue the neceſſary orders, by which both ſhips, though not without ſome difficulty, were preſerved; whereas, by weighing his anchor at firſt, all peril might have been prevented. What is ſtill more ſurprizing than this accident, our author aſſures us, the General was a very experienced officer, to which he attributes his condeſcending ſo far as he did; for if he had been a freſh-water Admiral, it is more than probable, the deciding this point of honour had coſt the King of Spain two millions in ſilver, and two ſhips into the bargain.

(17) Ibid. p. 140, 141.

[*I*] *Which it ſo well deſerved.*] The modeſt title of this treatiſe runs in theſe words:

The

The Obſervations of Sir Richard Hawkins, Knight, in his Voyage into the South-Sea, *Anno Dom.* 1593. Lond. 1622. *folio.*

The various particulars, which we have extracted from this venerable work, will give the reader ſome notion of the numerous matters of fact, that, from a laudable zeal for the honour of his country, and out of a generous benevolence to mankind, he preſerved from oblivion in that treatiſe (18). Theſe citations will likewiſe ſhew his manner of writing and his ſtile, which for thoſe times were elegant and perſpicuous; in ours, probably, they will be thought to have contracted the ruſt of antiquity; which if, as the critics allow, rather heightens the value of medals, as it is an evidence of their being genuine; it is not eaſy to diſcern why it ſhould leſſen the value of hiſtory. But be that as it will, we thought it our duty to erect the beſt monument we could for a man of ſo much probity and public ſpirit, of whom, and of his father, a learned Antiquary of their own country (19) has given a juſt encomium in this obſervation; *That had* fortune *been as propitious to them both, as their* virtue, valour, *and* knowledge, *were* eminent, *they might have equalled the choiceſt* worthies *of any age.* We might have had ſtill farther and better evidence of this from his own pen, if he had been ſpared by Providence life and leiſure to have written, as he intended, the ſecond part of his Obſervations; in which he propoſed to have ſhewn, what happened to him and his companions during their ſtay in Peru and in the Terra Firma, which muſt have been very entertaining and inſtructive, as he was not only a very curious enquirer, but a perſon alſo of great ſagacity and much general knowledge. He meant alſo to have related his adventures in the iſland of Tercera, and in the cities of Seville and Madrid; ſo that we have good reaſon to believe the ſecond part would not have been in any degree inferior to the firſt; and like that, no doubt, would have ſupplied us with a multitude of intereſting particulars, which are not to be met with elſewhere, and which, through the ſudden death of Sir Richard Hawkins, muſt remain in perpetual oblivion. This is a circumſtance ſo diſagreeable to all lovers of true hiſtory and authentic information, that there is reaſon to hope it will inſpire them with a generous inclination to prevent, as far as in them lies, every misfortune of that kind, by encouraging ſuch as have reaped no other profit, either from the troubles of an active life or a laborious purſuit of learning, than a ſuperior ſtock of practical knowledge, to give it in time to the world, and not ſuffer a private ſhipwreck to become, as in this and in many other caſes has often fallen out, an irreparable loſs to the Public. E

(18) See the particulars extracted from him, in our Naval Hiſtories, Voyages, &c.

(19) Weſtcot's View of Devon, in Plymouth, MS.

HEARNE [THOMAS], an indefatigable collector and editor of books and manuſcripts, was the ſon of George Hearne, Pariſh-Clerk of White-Waltham in Berkſhire, by Edith, daughter of Thomas Wiſe of Shotteſbrooke in the ſaid county. He was born at Littlefield-green, in the above Pariſh, 1680. His father, beſide the employment of his clerkſhip, kept a writing-ſchool in the vicarage-houſe, being permitted by the miniſter ſo to do, and to live there, on condition of his teaching ten boys annually, without any other reward. Here he retained his ſon Thomas under his own tuition until he was thirteen years of age: when Francis Cherry of Shotteſbrooke, Eſq; took him from thence under his patronage, and put him to the free ſchool of Bray in Berks, in order to his attaining the Greek and Latin tongues. In this place he diſtinguiſhed himſelf by his ſobriety and extraordinary application, and made an anſwerable proficiency in letters; which was ſo agreeable to his generous benefactor, that he thereupon reſolved, in conformity with the advice of his deareſt friend, the famous Mr Dodwell, to adopt the youth into his family, and provide for him as his own. This he accordingly did, about Eaſter 1695. Mr Cherry having thus taken him home, regarded him in the character of his child, and every day nurtured him in religion as well as claſſic learning; when at home hearing him read, and engaging Mr Dodwell, when he himſelf was abſent, to officiate as Preceptor: both, in their turns, explaining to him the difficulties that occurred in his exerciſes, and illuſtrating the ſubjects of them with uſeful and entertaining reflections. The pains of theſe benevolent inſtructors were not thrown away on their diſciple; he grew apace in literature, and ſoon became acquainted with the Greek and Roman Hiſtorians. Mr Cherry was pleaſed with cultivating a genius ſo ſuſceptible of improvement, and determined to beſtow on him an academical education. To this end he had him entered a Batler of Edmund-hall in Oxford, December the 4th, 1695, where he was matriculated the day following. Immediately after he returned to Mr Cherry's, from whence he went daily again to Bray ſchool, 'till Eaſter term, 1696, when this good man, in perſon, carried him to Oxford, and fully ſettled him at the aboveſaid Hall, with a proviſion of every thing requiſite to his maintenance. That foundation was governed by Dr Mill, who had under him, as Vice-Preſident, White Kennet, afterwards Biſhop of Peterborough, then one of the moſt eſteemed tutors in the univerſity, and at the ſame time Vicar of Shotteſbrooke, to which cure he had been preſented by Mr Cherry. To the ſpecial overſight and tutelage of this gentleman was our Thomas committed, and for Mr Cherry's ſake, their common patron, and for the lad's own, was he treated with all poſſible care, and with a parental tenderneſs. Happily for him, both the head of his college and the deputy were votaries of Antiquity, and young Hearne had a natural and even violent propenſity that way. Somewhat of the kind was conſpicuous in him whilſt a very boy: when he was obſerved to be continually plodding over the old tumuli of his own pariſh church-yard, almoſt as ſoon as he was maſter of the Engliſh alphabet (*a*). This diſpoſition, joined with his unwearied induſtry, rendered him a favourite with theſe his ſuperiors. Dr Mill was then about an Appendix to his Greek Teſtament, and finding him to be well verſed in manuſcripts, he got him to examine ſeveral he had occaſion to make uſe of in that work. When he was of three years ſtanding, he went to Eaton, at this learned gentleman's requeſt, to collate a manuſcript of Tatian and Athenagoras belonging to that college. The copy of the variations he had noted, written by his own hand, is in the Bodleian library, and was uſed by Mr Worth in his edition of Tatian, and by Mr De Chaire in that of Athenagoras, though neither of theſe editors had candour enough to acknowledge the obligation. He was likewiſe very aſſiſtant to the celebrated Dr Grabe, then reſident in Edmund-hall, for whom he compared many manuſcripts, and made conſiderable collections. In Act term, 1699, he took the degree of

(*a*) A Vindication of thoſe who take the oath of allegiance. Printed in the year 1721. Preface, p. 5.

of Bachelor of Arts, and determined in the ſchools the Lent following. Being now qualified to enter on the ſacred function, his friends turned their thoughts towards a proviſion for him in that way. Dr Bray was then intruſted by the Biſhop of London with the care of providing Miſſionaries for our weſtern colonies in America; he was deſirous of engaging Mr Hearne to enter upon that apoſtolical office; and, through the mediation of White Kennet, made him very advantageous propoſals, if he would croſs the Atlantic Ocean. But the converting a miſerable crew of ſavages was not the moſt eligible employment in the opinion of Mr Hearne. He was ſo pleaſed with Oxford, on account of the many valuable acquaintance he had contracted there; ſo addicted to the ſtudy of Engliſh Antiquities, for which hardly any place afforded equal opportunities; and ſo enamoured of that eneſtimable treaſure of literature which he enjoyed in it's Public Library, that he was deaf to their ſollicitations. That noble repoſitory of erudition might be deemed his habitation, for he almoſt dwelt therein. It had the richeſt furniture in his eye, and what he could appropriate to his own uſe, without depriving or offending others. He was ſo noted for the length and frequency of his viſits, that Dr Hudſon, ſoon after he was choſen Keeper thereof, took him for a Coadjutor; having firſt aſked and obtained the conſent of the Curators. In this ſtation he behaved, not only unexceptionably, but very much to the benefit of his truſt. In 1703, on the third of July, he took the degree of Maſter of Arts (*b*). Upon the death of Mr Emanuel Pritchard, Janitor of the Public Library, that place was conferred on him. About this time, alſo, he was offered two chaplainſhips, ſucceſſively, of Corpus-Chriſti and All-Souls colleges, by the reſpective heads of thoſe houſes; but, as he could not hold either of them with the office of Janitor, which he was unwilling to relinquiſh, he declined thoſe intended favours. In 1712, he became ſecond Library-Keeper of the Bodleian library, on the deceaſe of Mr Crabb. On the 19th of January, 1714-15, he was elected Archetypographus of the Univerſity, and Eſquire-Beadle of the Civil-Law (*c*). This we find him acknowledging to be an honour, which he took the firſt 'opportunity of mentioning to the world, on purpoſe that his gratitude might be made known 'to poſterity. And notwithſtanding he was conſcious to himſelf, that the univerſity favours were conferred on one who every way undeſerved them, in reſpect of learning and 'other requiſite qualifications; yet ſtill he had very good reaſon for accepting them, upon 'this account amongſt others, as they ſeaſonably aſſiſted and relieved one of their mem'bers, that had for many years led an obſcure and retired life, and was at that time 'reduced to a neceſſitous condition, through the great expence he had been at in carrying 'on many public deſigns (*d*).' This poſt he held, together with that of Under-Librarian, 'till the 8th of November following; but then finding they were not tenable together, he reſigned the beadleſhip, and, very ſoon after, the other place alſo, by reaſon of the oaths, which he could not conſcientiouſly comply with: though he had formerly endeavoured to perſwade others to a ſubmiſſion [*A*]. He continued a nonjuror to the laſt, much at the expence

(*b*) Ibid. p. 12.

(*c*) Ibid. p. 13.

(*d*) Ibid. p. 14. Leland. Collect. Vol. I. p. 56.

[*A*] *Endeavoured to perſuade others to a ſubmiſſion.*] There is imputed to him, *A Vindication of the Oath of Allegiance*, &c. ſaid to be written in the twenty-ſecond year of his age (1); whether merely for the declaring his ſentiments at that time in relation thereunto, or for the reconciling his patron, Mr Cherry, to the taking of it, cannot be reſolved. In 1731 this was printed, by an anonymous editor, who prefixed to it a preface, containing a ſatirical account of the author. The piece itſelf is ſo wretched a compoſition, in all reſpects, as to be a real curioſity. It did not prevail on the gentleman to whom it was addreſſed: he perſiſted a ſteady Nonjuror to the end of his life. It is plain, however, that when Mr Hearne compiled it, he was of opinion, 'a King might forfeit 'the allegiance of his ſubjects, when he broke his oath 'by tyrannizing upon, and depriving them of their 'Liberties; and that, in ſuch a caſe, the common 'good of the nation required either his depoſition, or, 'at leaſt, that a reſtraint ſhould be put on him ſome 'other way: thoſe who had ſworn to him being now 'diſcharged from their obligation.' This, he tells Mr Cherry, he had ſhewn, in a former letter, by a detail of the occurrences between King Henry the VIth and Edward the IVth (2). But underſtanding, what he then offered had not the expected effect, he preſumed, in this, to proſecute the ſame thing farther, by giving an hiſtorical account of what paſſed in relation to Maud the Empreſs, and Stephen Earl of Blois, as to the fitting on the throne; and ſhewing, 'That thoſe 'who took an oath to Stephen, as to their ſovereign 'Lord, notwithſtanding they had before ſworne allegiance to her the Empreſſe, thought themſelves, yea 'even were, looſed from their obligation to her, be'cauſe the common good of the nation ſo required it (3). '——That the *common good* did require a ſubmiſſion to 'Stephen, none can deny, if they conſider, Firſt, That 'Maud was then in France, when Stephen was in 'England, and that thereby opportunity was offered 'to Stephen of doing an extraordinary miſchief to the 'land, provided he were not received; and that more 'eſpecially, becauſe his brother was (as ſaid) Biſhop of 'Wincheſter. Secondly, If they conſider that the 'priviledges of the Clergy had been infringed; and 'therefore that they required ſuch a Sovereign as would 'maintain them to the utmoſt of his abilities; as Ste'phen promiſed, and did in a great meaſure perform '(4).' To inforce theſe weighty reaſons (as he undoubted thought them) Mr Hearne adds, 'Not one of 'our Nonjurors can be ſo bold as to affirm, that the 'whole nation was ſo wicked in thoſe days as to perjure 'themſelves, without any reſpect to the reaſonableneſs of 'what they did. For certain it is, that they knew very 'well that the *prime* end of an oath is to be preferred to 'one which is *inferior*. The *prime* end of an oath is *'The good of the perſons concerned in it*; and the *inferior* one, *The aſcertaining ſomething to him to whom 'performed. Therefore whatſoever the intention of the 'perſons was, how ſtrict ſoever the expreſſions may be, 'if the keeping the oath be really inconſiſtent with the 'welfare of a people, in ſubverting the fundamental 'laws which ſupport it, I do not ſee how ſuch an oath 'continues to oblige: For, there is no relation of man'kind one to another, but there is ſome good, antecedent, 'which is the juſt meaſure of that obligation they ſtand 'in to each other.* So that, ſince the *common good* of 'the nation, namely, the preſervation of it's rights and 'priviledges, &c. required a ſubmiſſion to Stephen, the 'nobles, &c. might really think themſelves, yea and 'even were, ſolved from their antecedent oaths to the 'Empreſs (5). But farther yet, The *common good* of 'the nation was ſo much reſpected in this ſubmiſſion to 'Stephen, that his wearing the Crown during his life, 'and then the reverſion of it to Henry the Second, 'was confirmed by Parliament: *which will in ſome 'meaſure confute thoſe, who affirm the Parliament hath 'nothing to do in matters of this nature* (6). I will not tire the reader with any more quotations, but there

expence of his worldly intereſt; for, on that ſcore, he rejected ſome preferments, that would have been of conſiderable emolument, and very agreeable to his inclinations (*e*). He died on the tenth of June, 1735, aged fifty-five years, and was buried in the yard of St Peter's in the Eaſt at Oxford; where there is a tomb erected over his remains, with an inſcription thereon of his own compoſing, wherein he ſtiles himſelf Maſter of Arts, who ſtudied and preſerved antiquities; to which character he has ſubjoined two paſſages of the Old Teſtament, viz. Deut. xxxii. 7. and Job viii. 8, 9, 10. He had with great parſimony ſaved about thirteen hundred pounds in caſh, which his relations, who were poor, found among the books and papers in his chamber, after his death. A liſt of the books he *publiſhed* (for he was rather an editor than an author) may be acceptable to the curious. We ſhall enumerate them as briefly as poſſible [*B*].

(*e*) Theſe circumſtances are warranted by a Memoir of Mr Hearne penned by himſelf, and which, together with his other manuſcripts, he bequeathed to the late Rev. Dr William Bedford.

there are in the book, from which the foregoing are taken, ſome other paſſages, that evidently prove Mr Hearne to have been, at the time he wrote it, firmly of opinion, that it was the duty of the people of England to ſwear and bear true allegiance to thoſe who were placed on the Britiſh throne after the expulſion of James the Second.

[*B*] *We ſhall enumerate them as briefly as poſſible.*] They are I. Reliquiæ Bodleianæ: *or ſome genuine Remains of Sir Thomas Bodley, &c.* London, 1703, in 8vo. II. *Plinii Epiſtolæ & Panegyricus, &c.* Oxford, 1703, in 8vo. III. *Eutropii Breviarium Hiſtoriæ Romanæ. &c.* Oxford, 1703, in 8vo. IV. Doctor Hiſtoricus: *A ſhort Syſtem of, or an Introduction to, the Study of Univerſal Hiſtory*, 2 vols 8vo. They did not come out together; a ſecond edition of the firſt was publiſhed at London, 1705. It was printed again in 1714 and 1724, without the author's knowledge. The ſecond volume came out at Oxford, 1704, and was printed three times afterwards at London. Mr Hearne was not ſolely concerned in this work. Some of the parts of it (viz. the two firſt books in the 2d, 3d, and 4th editions) were written by another hand; ſo was the preface. V. *M. Juniani Juſtini Hiſtoriarum ex Trogo Pompeio Libri* XLIV. Oxford, 1705, in 8vo. VI. *Titi Livii Patavini Hiſtoriarum ab urbe condita Libri qui ſuperſunt, &c.* Oxford, 1708, in ſix volumes, 8vo. VII. *A Letter, containing an Account of ſome Antiquities between Windſor and Oxford, &c.* Printed in 1708, in the Monthly Miſcellany, or Memoirs for the Curious; and re-printed at the end of the fifth volume of Leland's Itinerary. VIII. *The Life of Ælfred the Great by Sir John Spelman Publiſhed from the original MS. in the Bodleian Library, &c.* Oxford, 1710, in 8vo. IX. *The Itinerary of John Leland the Antiquary, intermixed with divers curious diſcourſes, written by the editor and others. In IX Volumes, 8vo.* Oxford, 1710, 1711, 1712. As there were but 108 copies of this edition printed off on ordinary paper, and 12 on a finer, it ſoon became very ſcarce; and ſold, at length, for a guinea a volume, though ſmall ones. A new edition was printed at Oxford in 1744 and 1745. X. *Henrici Dodwelli de Parmâ Equeſtri Woodwardiana Diſſertatio, &c.* Oxford, 1713, in 8vo XI. *Johannis Lelandi Antiquarii de Rebus Britannicis Collectanea*, Oxford, 1715, in ſix volumes, 8vo. Beſides the foregoing, we may aſcribe to Mr Hearne that letter, whereof ſomewhat is ſaid in note [*A*], the title of which is, *A Vindication of thoſe who take the Oath of Allegiance to his preſent Majeſty from prejudice, injuſtice, and diſloyalty, charged upon them by ſuch as are againſt it. Wherein is evidently ſhewed, that the common Good of a Nation is what is primarily and principally reſpected in an Oath, and therefore when the Oath is inconſiſtent with that, the perſons who have taken it are abſolved from it.* This epiſtle is addreſſed to Mr Cherry; from whom it came (with many other MSS.) expreſsly by will to the Bodleian Library. It is dated from Edmund Hall in Oxford, June 11, 1700, though not publiſhed till 1731, when it was ſurreptitiouſly printed. Mr Hearne made the index to Sir *Roger L'Eſtrange's Tranſlation of Joſephus into Engliſh*, London, 1702, in folio: three indexes to *Cyrilli Hieroſolymitani Opera*, Oxford, 1703, in folio: an index to the four parts of Dr *Edwards's Preſervative againſt Socinianiſm*, Oxford, 1704, in 4to: and that to the *Lord Clarendon's Hiſtory of the Rebellion*, Oxford, 1704, in folio. He deſigned to have alſo printed, from an ancient MS. in the Harleyan Library, *Joannis Beveri, Monachi Weſtmonaſterienſis, Chronicon a Bruti primi Regis introitu in hanc Inſulam uſque ad annum Domini* 1306. To which was to be added from an old MS. in the ſame library, *Joannis Merylinch, Monachi Glaſtonienſis, Rerum (in Anglia ſpeciatim ac Hibernia) ſub novem primis annis Joannis XXII Pontificis Romani, geſtarum. Deſcriptio.* In two volumes, 8vo. But death defeated this intention. Mr Hearne was an editor of a very peculiar caſt. He ſcarcely ever publiſhed an old writer, without intermixing with, or adding to, him, a parcel of papers, which had little relation, or perhaps none at all, to the principal ſubject. Theſe odd farragoes are generally introduced by long and elaborate prefaces, ſome in Latin, others in Engliſh, as miſcellaneous as their following collections: an

an account is therein uſually given of the author ſet forth; where he was found, or how Mr Hearne came by him: with a variety of incidental matters, ſuch as came into his head while his pen was a-going. The capriciouſneſs of the man's genius, and the oddity of his taſte, are in all this ſufficiently conſpicuous; however, though his compoſitions are ſo irregular, there is a kind of readers, to whom they will, notwithſtanding, afford an agreeable entertainment. I

HERBERT [ARTHUR], afterwards created Baron of Torbay, and Earl of Torrington; a very gallant ſeaman, and for ſome time in the direction of the Admiralty in the reign of King William. He was very nobly deſcended, as may be perceived from the following ſuccinct account of his genealogy. Sir Richard Herbert, brother to William Earl of Pembroke, remarkable for his ſtature and ſtrength, in which he excelled moſt men of that age, being taken priſoner at the battle of Danet-Moor, with the Earl his brother, by the adherents of the Duke of Clarence and Earl of Warwick, then in rebellion againſt Edward the Fourth, was, with his ſaid brother, beheaded in the eighth year of that monarch's reign (a). This noble perſon, by Margaret, daughter to Thomas ap Griffith ap Nicholas, had iſſue three ſons; Sir William Herbert of Colebrooke, Knight; Richard Herbert of the Caſtle of Montgomery, Eſq; and Thomas Herbert of St Pere (b). Sir Richard Herbert, the ſecond ſon, had iſſue, by Anne his wife, daughter to Sir David ap Ennion ap Leuelling Vaughan, Edward Herbert Eſq; who eſpouſed Elizabeth, daughter of Edward Price of Newton, Eſq; by whom he had three ſons and five daughters (c). His eldeſt ſon, Richard, was the father of Edward, the firſt Baron of Chirbury (d). Matthew, the ſecond ſon, was the anceſtor of the preſent Earl of Powis (e); and Charles Herbert of Aſton, in the county of Montgomery, Eſq; was the father of Edward, afterwards Sir Edward Herbert of London, Knight; firſt Sollicitor, then Attorney General, to King Charles the Firſt, and afterwards intruſted with the Great Seal of England, by the title of Lord-Keeper at Paris, by King Charles the Second, when in exile; and held the title, though not the Seals, to the time of his demiſe in 1657 (f) [A]. This Sir Edward Herbert, by Margaret his wife, left iſſue three ſons. Arthur, of whom we are to treat; Edward and Charles (g). Arthur the eldeſt, though he had a ſmall eſtate, entered

[A] *To the time of his deceaſe in* 1657.] There has been hitherto ſo little notice taken of this gentleman, though he made ſo great a figure in his life, and had the honour to bear at his death the title of Lord-Keeper of the Great Seal, that we have choſen to preſerve ſome circumſtances relating to him in a note, to avoid the imputation of having treated him with like neglect. He was very eminent in his profeſſion, as a Lawyer, when King Charles the Firſt aſcended the throne; and being choſen a Member of the Houſe of Commons, ſhewed himſelf a great advocate for the liberty of the people, as well as againſt the enormous power of the Duke of Buckingham; who, by monopolizing the royal favour, ingroſſing many great offices in his own hands, and making all who refuſed to concur in ſupporting his power, feel the weight of his diſpleaſure, rendered government diſtaſteful to the ſubject, and made thoſe, who with reaſon had no kindneſs for him, inadvertently enemies to their Prince. On theſe principles, in the year 1626, he managed the three firſt articles of the impeachment (1) againſt the ſaid Duke, on the behalf of the Houſe of Commons, and continued in the ſame courſe during the two next years (2), 'till the deceaſe of Buckingham; but then believing that matters were carried too far, he altered his conduct, and in proceſs of time became Sollicitor General, and had a good intereſt at Court (3). In the Parliament that aſſembled April 13, 1640, he ſat for the borough of Old Sarum in the county of Wilts; and, as the Noble Hiſtorian obſerves, vindicated his maſter's meaſures with great force of reaſoning and much eloquence of ſpeech; for, as he obſerves, no man ſpoke with greater addreſs (4). But it ſeems he was impoſed upon by Sir Henry Vane, then Secretary of State and Treaſurer of the Houſhold, who demanded twelve ſubſidies in the name of the Crown, as an equivalent for ſhip-money; and at the ſame time declared, that the King would not permit any alteration in the matter or in the manner of the grant, which occaſioned the diſſolution of that Parliament on the 5th of May (5). This is commonly aſcribed to malice in Sir Henry Vane, but it is fit that point ſhould be explained. Several members knowing that this Parliament was called by the advice and interpoſition of the Earl of Strafford, had mentioned him with great reſpect; ſo that the Secretary ſaw if any good came of this aſſembly, it would be aſcribed to the Earl; which, being that Earl's enemy, he was inclined to prevent (6). On the meeting of the Long-Parliament, the Sollicitor grew weary of his employment, from an apprehenſion of the ſtorms with which he muſt have been continually ſurrounded in the Houſe of Commons, and therefore very willingly accepted of the poſt of Attorney-General, on the promotion of Sir John Banks to the ſeat of Chief-Juſtice of the Common Pleas. In order to underſtand this, we muſt remember, that in thoſe days, though the Sollicitor was permitted to ſit in the Houſe of Commons, yet the Attorney-General was not, as having a writ to aſſiſt, and a ſeat aſſigned him, in the Houſe of Lords (7). However right his policy might be, Sir Edward Herbert quickly found, that, in times of general confuſion, there is no ſuch thing as a place of ſafety. The King commanded him, in virtue of his office, to accuſe the Lord Kimbolton (8), and five other members of the Houſe of Commons, in the Houſe of Lords of high-treaſon; which he did: and though the King by letter took the whole of this upon himſelf, and declared that his Attorney only obeyed his orders, and did not either adviſe the accuſation, or frame the articles on which it was founded, yet the Houſe of Commons impeached him; and though he defended (9) himſelf ſo ably, as to eſcape all the votes of *cenſure* that were propoſed by the popular party againſt him, and ſo ſeemed upon the whole to be acquitted (10), yet the Houſe thought fit afterwards ſo far to gratify the reſentment of the Commons, as to paſs a kind of ſentence upon him, that diſabled him from holding any other office than that which he poſſeſſed, and likewiſe committed him to the Fleet (11). He continued to adhere ſteadily to his maſter under all his misfortunes, for which the Parliament put him into the liſt of thoſe who were to expect no mercy, in the very laſt treaty they had with the King (12). After his Majeſty's deceaſe he retired abroad, and attached himſelf particularly to the Duke of York, who had a very high value and eſteem for him, which naturally induced him to have a great regard and a ſincere affection for his family. On the demiſe of Sir Richard Lane, King Charles the Second delivered the Great Seal to him at Paris, with the title of Lord-Keeper (13). But his Lordſhip having the misfortune to differ with the Chancellor of the Exchequer, who ſtood very high in the King's favour, his Majeſty reſumed the Seal into his own keeping, though Sir Edward Herbert retained the title to the time of his death (14), as we have ſaid in the text; in which we have been the more particular, becauſe, though we draw theſe facts from the work of the Noble Hiſtorian himſelf, yet it ſo fell out, that after the Reſtoration, his name is entirely omitted in the liſts of Chancellors and Keepers, for which it is not very eaſy to aſſign a reaſon.

[B] To

entered into the ſea-ſervice; in which he quickly diſtinguiſhed himſelf ſo much, that in the firſt Dutch war after the Reſtoration, he was, though a very young man, promoted to the command of a ſhip by his Royal Highneſs the Duke of York; and, among other inſtances of remarkable bravery, there is ſtill remaining a diſtinct account of his fighting a Dutch ſhip in the bay of Cadiz, which did equal honour to himſelf and the Engliſh navy (*b*) [*B*]. He continued, from this time, in the Streights for about ſix weeks, 'till he had advice that Rear-Admiral Kempthorne was ſailed with his ſquadron for the Streights mouth, where he took care to join him with a ſmall fleet of ſixteen or ſeventeen merchantmen under his convoy, in order to proceed with the Rear-Admiral to England. They met with nothing extraordinary in their paſſage 'till about the middle of the month of May, when being off the iſland of Portland, the Pembroke ran foul of the Fairfax in the night, and ſunk at once; but Captain Herbert and moſt of his crew were happily ſaved, there being none loſt in the veſſel but a few ſick men, who were not able to help themſelves, and whom the ſuddenneſs of the accident, and the confuſion every body was in, hinderèd being aſſiſted by others (*i*). After this narrow eſcape, Captain Herbert went on board one of the ſhips of the ſame ſquadron, and arrived ſafely at Portſmouth. It was not long before he had another ſhip given him; and, both in that and in the ſecond Dutch war, he behaved upon all occaſions with great ſpirit and reſolution, receiving ſeveral wounds, and, as we ſhall ſee in due time, loſing the ſight of one of his eyes in his country's ſervice; all which conſidered, it muſt ſeem very ſtrange, that when he fell afterwards under misfortunes, his courage ſhould be diſputed (*k*). In one of the laſt ſea fights in the ſecond Dutch war, he had the command of the Cambridge, a third rate, in which Sir Fretchville Hollis had been killed in the battle of Solebay; and as Captain Herbert ſucceeded in his command, he was very near ſucceeding alſo to the ſame diſaſter; being deſperately wounded in the action, and his ſhip ſo diſabled, that together with the Reſolution, which was in as bad a condition, ſhe was by Prince Rupert ſent home to refit (*l*). In the year 1674, Captain Herbert having then alſo the command of the Cambridge, came up with ſix ſail of French ſhips near the Neſs; two of theſe were of fifty guns, one a frigate of twenty-ſix guns, and three fire-ſhips. As they did not lower their topſails, our gallant officer fired at them; on which the French, being to windward, came nearer. The Captain called from the Cambridge, to know why they did not ſtrike; to which he received for anſwer, that they would ſtrike to nobody. Captain Herbert, thereupon, fired a ſingle gun, and then a broadſide; which they anſwered with another; and, having the wind, bore away. At his return, Captain Herbert informed King Charles the Second of this inſult offered to his Flag; for which his Majeſty demanded ſatisfaction from Lewis XIV. who immediately ſent over the Commodore, Captain Pannetier, to aſk the King's pardon (*m*) in very ſubmiſſive terms; which he did, and ſo the matter ended. In 1678 he ſerved in the Mediterranean, having the command of the Rupert, a third rate; having with him the Mary, a third rate alſo, commanded by Sir Roger Strickland; and on the third of April came up with an Algerine ſhip, pierced for fifty-four, but actually carrying forty guns and five hundred men. The Rupert, being a prime ſailor, reached her firſt and engaged her; but being commanded by an old Turk, he behaved very gallantly, and did not ſurrender 'till Sir Roger Strickland came up, having loſt three hundred men, and, before he ſtruck, threw all his arms overboard. In the Rupert, all the officers, to the Boatſwain's mate, with nineteen private men, were killed; Captain Herbert and forty more wounded, the Captain, more eſpecially, by the blowing up of ſome cartridges in his face; and here, perhaps, it was that he loſt his eye; however, the prize was carried into Cadiz (*n*). On his return home, he was very graciouſly received by the King his maſter; and as a reward for his ſervices, was appointed Rear-Admiral of the Blue (*o*); being at this time conſidered as a perſon as likely to riſe as any in the royal navy. An occaſion ſoon after offered, which fully juſtified this opinion; for it being found neceſſary to ſend a ſupply of troops and military ſtores to Tangier, then in our hands, as alſo a ſquadron to curb the inſolence of the Algerines,

[*B*] *To himſelf and the Engliſh nation.*] The reader will find a very plain and artleſs account of this matter, in the following letter, dated from Cadiz, in March 1667 (15). 'Captain Herbert in the Pembroke is now in this port, being newly returned from a freſh diſpute with a Zealand man of war, of thirty-four guns, and one hundred and eighty men, with whom he fought ſome days before in ſight of that bay, from two in the afternoon, 'till the night put an end to that day's work. All that night the Pembroke frigate carrying out a light for the Zealander, and the next morning being to the windward, fired a gun, and bore up to re-engage her; but the Zealander being the nimbler ſailor, bore away once or twice before the wind, declining any farther diſpute, which the frigate perceiving, and fearing to be put to leeward of the port, by a fruitleſs purſuit, the wind then blowing a ſtrong Levant, came again for the bay, which the Zealander wanted not the confidence to boaſt of as a mark of his victory. Since this, the frigate being put a-ſhore to waſh and tallow, the Zealander made ſeveral challenges, but went out again to ſea before the frigate could get ready. Yeſterday morning the Zealander coming in, the frigate being ready went out to meet him, and paſſed five times upon him within piſtol-ſhot, until the Zealander, finding the ſervice too hot, bore in for the bay, purſued for a long time by the frigate, which being unable to overtake him, fired her chaſe-gun and ſtood out again to ſea, the Zealander anſwering her challenge with a friendly ſalute of three guns to leeward, but yet thought it convenient to put into the bay, where he triumphantly fired all his guns, leaving the Pembroke at ſea in vain attending him 'till the next morning. The captain of the Zealander afterwards came a-ſhore, endeavouring to perſuade the people that his main-maſt was diſabled, and that he wanted ſhot for his guns. In this diſpute the frigate had ſeven men killed, and five hurt, but none mortally, and her fore-maſt ſomewhat diſabled, but will ſpeedily be refitted and made ſerviceable.'

(15) Remarkable paſſages in the Life of Lord Torrington.

Algerines, who, notwithſtanding the treaties that had been concluded but a few years before, began again to diſturb our commerce (*p*), it was reſolved that the command of this armament ſhould be given to Admiral Herbert, who was accordingly inſtructed to contribute as much as poſſible to the raiſing the ſiege of Tangier; and when that was done, to uſe his beſt endeavours to bring the Algerines to a ſubmiſſion, and to a new treaty, upon better and more explicit terms, than thoſe contained in that they had lately broken, which they pretended to explain in ſuch a manner as to juſtify their piracies. In 1682, Rear-Admiral Herbert ſailed into the Mediterranean, with a ſtrong ſquadron, and a conſiderable number of tenders and ſtore-ſhips, which arrived very ſafe under his convoy at Tangier. He found that fortreſs not a little ſtraitened by the Moors, by whom it was ſo cloſely blocked up, that nothing could enter it by land. Admiral Herbert not only relieved the garriſon, by the ſeaſonable ſupply that he brought of proviſions and military ſtores, but reſolved alſo to reſtore his countrymen to liberty as well as plenty, by compelling the enemy to raiſe the blockade. He landed, with this view, as many ſeamen out of the fleet as he could poſſibly ſpare; formed them into a battalion; and, by attacking the Moors on one ſide, while the garriſon made a briſk ſally, and drove them from moſt of their poſts on the other, obliged them to leave the neighbourhood of the place, and to retire further within land. He executed the other part of his charge, with reſpect to the Algerines, with equal ſpirit and ſucceſs; deſtroyed ſome of their ſhips, and diſpoſed things in ſuch a manner, to diſturb and diſtreſs that ſtate by ſea, as obliged the Dey to ſummon a divan, in which it was reſolved to enter into an immediate negotiation with the Engliſh Admiral (*q*). The terms were very ſpeedily ſettled, without any of thoſe ambiguities, which left them pretences for breaking their treaties when they pleaſed; and the buſineſs of his expedition being happily over, he returned home ſafe, with the ſquadron under his command, towards the latter end of the ſame year, and had the pleaſure to find his conduct as an officer and negotiator equally approved [*C*]. As a reward of theſe ſervices, he was promoted to the rank of Vice-Admiral (*r*); and, as a ſtill ſtronger proof of the confidence repoſed in him by his royal maſter, we find his name inſerted in the commiſſion, granted April 17, 1684 (*s*), for executing the office of Lord High-Admiral; viz. Daniel Earl of Nottingham; Sir Humphry Winch, Baronet; Sir Thomas Meeres, Knight; Sir Edward Hales, Baronet; Henry Saville, Eſq; Sir John Chicheley, Knight; Arthur Herbert, Eſq; John Lord Vaughan. On the King's demiſe, when great changes were expected, and many of the firſt people at Court and of the nation were diffident as to their condition, and apprehenſive of what might follow, he was not diſturbed with theſe fears. The favours he had received from the Duke of York, gave him room to expect farther preferments, upon the acceſſion of that prince to the throne; nor was he deceived in his expectations, ſince, in the beginning of the new reign, he was made Vice-Admiral of England and Maſter of the Robes (*t*), there being at that time no man of his rank, who was more heartily attached either to the government or to the perſon of that prince. But when the ſcheme for repealing the teſt-act came under conſideration, and King James thought fit to cloſet ſuch of his officers in the army and fleet as had ſeats in the Houſe of Commons, it quickly appeared that Vice-Admiral Herbert was none of thoſe complying ſpirits, who, for the ſake of private profit, would ſacrifice the intereſt of the public (*u*). His brother, the Lord Chief-Juſtice Herbert, had expoſed himſelf to public odium, by giving judgment in his court in favour of the King's diſpenſing power, upon an action brought againſt Sir Edward Hales, who had accepted an employment without qualifying himſelf for it, by taking the oaths the law required; and, though this ſeemed in ſome meaſure to have done all that the King wanted, he ſtill perſiſted in his deſign of having the teſt-act repealed; which, amongſt other extraordinary conſequences, produced the diſgrace of Vice-Admiral Herbert (*w*), who to that hour had never done any thing to diſoblige the King, or had perceived the leaſt coldneſs in his Majeſty towards him. We may from hence conclude, that the part he acted aroſe from a principle of conſcience, though his private life was none

[*C*] *Equally approved.*] This treaty of peace was concluded on the 10th of April 1682 (*16*), according to the Chriſtian æra, and on the 11th of the moon of April, in the year of the Hegira 1093, on the behalf of Charles the Second, King of Great-Britain, by Arthur Herbert, Eſq; who is therein ſtiled Admiral of his Majeſty's fleet in the Mediterranean, and the Baſhaw Dey, Aga, and Governors of the famous city of Algier in Barbary. It contains in the whole twenty-one articles, and is ſo full, ſo clear, and ſo circumſtantial in every one of them, that it is very eaſy to perceive the humble frame of mind in which thoſe corſairs were at the time they concluded it. For in this treaty there is no one conceſſion made to theſe people, except that of ſending on board to ſee the paſſport; and with reſpect to this, it is ſtipulated that no more than two perſons ſhall have right to go on board any Engliſh veſſel; and upon producing a paſſport from the Engliſh Admiralty, they are to be permitted to continue their voyage without any moleſtation or viſitation whatever; and all paſſengers, money, commodities, merchandizes, and moveables, let them belong to whom they will, are to remain ſafe and untouched. There is a farther proviſion, that for fifteen months after ſigning the treaty, if any veſſel ſhould not be furniſhed with a paſſport from the Admiralty, yet if the major part of the crew appear to be Engliſh, they were to have the benefit of this treaty as much as if they had a paſſport. There is beſides the treaty a ſeparate article, dated the 5th of March, in the year of our Lord 1682, but in the Hegira 1094, which plainly ſhews that the former date was according to our ſtile, and that it was 1683 with other nations, and by this ſeparate article the form of the paſſport is regulated. This treaty continued in force, and was very punctually executed, during the remainder of the reign of Charles the ſecond, and alſo during that of James the ſecond; for there is likewiſe a form of that Monarch's paſſports, who took the Admiralty into his own hands, and therefore it concludes, Given under our ſeal manual, and under the ſeal of our Admiraly, and is ſubſcribed James R. and lower, By the command of his Majeſty, Samuel Pepys, who was Secretary of the Admiralty, and the ſole Miniſter in that department during King James's reign.

(16) Corps Diplomatique, Vol. VII. Part ii. p. 20, 21, 22.

[*D*] *From*

none of the moſt regular; for it will be found upon a ſtrict examination, that, as the advantages of a moral conduct, even in this life, will influence ſome men, who have very unſettled notions in reſpect to religion; ſo there are others, who, though in many inſtances miſled by their paſſions, yet retain ſuch a ſenſe of religion, as never to queſtion the truth of it: and that this was Vice-Admiral Herbert's caſe, the reader will learn, from a Right Reverend Hiſtorian, in the notes [*D*]. The ſmall appearance there was of his being able to live with honour, or even with ſafety, at home, and his inclination to follow many perſons of great reputation, who at that juncture choſe to retire abroad, induced him to withdraw to Holland (*x*), whither he was either accompanied, or quickly followed, by his brother Colonel Charles Herbert, and by his couſin Henry Herbert, Eſq; whom King William afterwards created Lord Herbert of Chirbury. Upon his arrival at the Hague, the Vice-Admiral was exceedingly well received, and not long after taken into the ſervice of the States, which was a very prudent, and, in it's conſequences, beneficial ſtep; numbers of Engliſh ſeamen following, and entering, for his ſake, into the Dutch ſervice (*y*); which convinced the States, that things were come to a criſis in England, and that the King had loſt the affections of his ſubjects to a ſtrange degree, when the ſeamen, who of all others had ſhewed themſelves moſt hearty in his cauſe, began to forſake him. At the Prince of Orange's court, Vice-Admiral Herbert was very ſincerely welcomed; he was known to be a man of great weight and experience, one that perfectly underſtood the ſtate of the Engliſh fleet, and the temper and characters of the officers who commanded it (*z*). His firm and ſteady diſpoſition, and the ſtate that he kept up in the midſt of his misfortunes, made an impreſſion upon the Dutch ſtateſmen, and even upon the Prince of Orange himſelf; though a celebrated Hiſtorian informs us, this was ſuch an impreſſion, as in the main did not turn much to his advantage [*E*]. It ſeems to put it beyond all queſtion,

(*y*) Sir John Reresby's Memoirs, p. 266.

(*z*) Impartial Account of ſome remarkable paſſages, &c.

[*D*] *From a Right Reverend Hiſtorian in the notes.*] It is generally believed, that when a perſon of diſtinguiſhed underſtanding acts in any point of importance in direct oppoſition to his intereſt, he muſt be influenced by paſſion, prejudice, or principle. It is pretty clear that Admiral Herbert's intereſt, to ſay nothing of duty and gratitude, bound him to the King his maſter. Paſſion or prejudice would have lain the ſame way, for his ruling paſſion was ambition; his education and his practice had given him a habit of loyalty, if, therefore, upon his maſter's propoſing to him, which was a ſpontaneous act in him, and which Herbert could not either foreſee or avoid, as the title of his favour, a meaſure repugnant to the dictates of his conſcience, to what in candour and juſtice can we aſcribe his rejecting that propoſal, but to principle? Biſhop Burnet having cenſured the Admiral's brother, Sir Edward, for promoting the King's deſigns in Weſtminſter-Hall, proceeds to give us an account of the Admiral's conduct in the following words. 'So 'little regard had the Chief-Juſtice's neareſt friends to 'his opinion in this particular, that his brother, Ad'miral Herbert, being preſſed by the King to promiſe 'that he would vote the repeal of the Teſt, anſwered 'the King very plainly, that he could not do it either 'in honour or conſcience. The King ſaid, he knew 'he was a man of honour, but the reſt of his life did 'not look like a man that had great regard to con'ſcience. He anſwered boldly, he had his faults, but 'they were ſuch, that other people, who talked more 'of conſcience, were guilty of the like. He was, 'indeed, a man abandoned to luxury and vice; but 'though he was poor and had much to loſe, having 'places to the value of four thouſand pounds a year, 'he choſe to loſe them all rather than comply. This 'made much noiſe; for, as he had great reputation 'for his conduct in ſea affairs, ſo he had been moſt 'paſſionately zealous in the King's ſervice from his 'firſt ſetting out to that day. It appeared by this, 'that no paſt ſervice would be conſidered, if men were 'not reſolved to comply in every thing (17). The reader will obſerve that our remarks, previous to this citation, are ſupported by the citation itſelf, which very clearly prove on which ſide Admiral Herbert's intereſt lay, that to this time he had been always warm in the King's ſervice, and that the general ſentiment of the court and the world at this time was, if Herbert's ſervices could not ſave him, there was no man who could place any dependance on his merit. On the whole, perhaps, it will appear, that this gentleman was one of thoſe who thought he had a right to judge for himſelf; and if he did, he muſt naturally think that he ought eſpecially to exert this right in matters of importance. When therefore he had laid things together in his own mind, and had from thence formed an opinion, he purſued it with that warmth, or, as our prelate ſtiles it, zeal, which was the effect of his temper; and this reflection, candidly purſued, will afford us the true key of his whole conduct.

(17) Hiſtory of his own times, Vol. I. p. 671.

[*E*] *Turn much to his advantage.*] Here again we muſt have recourſe to the Biſhop of Sarum's Hiſtory, where we ſhall find Vice-Admiral Herbert placed in a very different point of light, from that in which we have already ſeen him in the ſame Hiſtory. 'Admiral 'Herbert, ſays his Lordſhip (18), came over to Hol'land, and was received with a particular regard to 'his pride and ill humour; for he was, upon every oc'caſion, ſo ſullen and peeviſh, that it was plain he ſet 'a high value on himſelf, and expected the ſame of 'all others. He had got his accounts paſſed, in which 'he complained that the King had uſed him not only 'hardly, but unjuſtly. He was a man delivered up to 'pride and luxury, yet he had a good underſtanding, 'and he had gained ſo great a reputation by his ſteady 'behaviour in England, that the Prince underſtood, 'that it was expected he ſhould uſe him as he himſelf 'ſhould deſire, in which it was not very eaſy to him 'to conſtrain himſelf ſo far as that required. The 'managing him was in a great meaſure put on me; 'and it was no eaſy thing. It made me often reflect 'on the Providence of God, that makes ſome men inſtruments in great things, to which they themſelves 'have no ſort of affection or diſpoſition; for his private quarrel with the Lord Dartmouth, who he 'thought had more of the King's confidence than he 'himſelf had, was believed the root of all the ſullen'neſs he fell under towards the King, and of all the 'firmneſs that grew out of that.' It muſt appear more wonderful than any thing obſerved by our Hiſtorian, if this was the real character of the man, that the States-General and the Prince of Orange ſhould give him the title of Lieutenant-General-Admiral, and intruſt him with the (19) ſupreme command of their fleet; it is true, our author ſays, that this was not very eaſy to the States, or to the Prince himſelf, who thought it an abſurd thing. But why did they do it then? Nothing leſs, ſays he, would content Herbert (20). If this was ſo, we have ſome reaſon to believe that the States and the Prince of Orange had a very high opinion of his talents or of his intereſt, in taking ſo extraordinary a ſtep, merely becauſe he would not be content without it. But it is more probable that he was put at the head of the fleet, becauſe there were many reaſons that made him the propereſt man for that command; ſuch as the nature of the deſign itſelf; his intereſt among the officers of the Engliſh Navy, his perfect acquaintance with our coaſts, his being moſt likely to engage the Governors of Sea-Port towns to come into the Prince; and, above all, the neceſſity they were under of having ſome Engliſhman in a high poſt, to prevent the people from conſidering this as a hoſtile invaſion. Now if we view this matter in theſe lights, it

(18) Hiſtory of his own times, Vol. I. p. 762.

(19) Le Clerc Hiſtoire des Provinces Unies, Tom. III. p. 409. Mercure Hiſtorique & Politique, Tom. V. p. 1236.

(20) Hiſtory of his own times, Vol. I. p. 764.

queſtion, that it was the great capacity, known ſkill, and long experience, of this gentleman, that placed him in the committee appointed to prepare every thing requiſite for the embarkation of the Dutch forces; that is, to take up ſeven hundred tranſports, and to diſpoſe on board them the requiſite military and naval ſtores, as well as proviſion for a great army, and this in a ſhort ſpace of time, and with vaſt ſecrecy; theſe commiſſioners were, Bentinck Dykvelt Van Hulſt and Herbert (*a*). In the ſpace of two months, theſe commiſſioners actually executed this arduous commiſſion; which ſeems to demonſtrate, not only their great vigilance and dexterity, but alſo the moſt perfect harmony; for if there had been any diſputes amongſt them, the ſervice could not either have been effected or concealed. After ſuch an inſtance of his capacity and indefatigable care, they might well expect that the reſt of his conduct would be of a piece. But what ſeems farther to explain the real intention of the States and the Prince of Orange in truſting Vice-Admiral Herbert, though a ſtranger, with ſo high a command, was, the publiſhing his letter to the commanders of the Engliſh fleet (*b*), at the very ſame time with the Prince of Orange's Declaration; for if they had not placed very ſtrong hopes in that, without queſtion it had never been publiſhed at all; and, if they had ſuch hopes, this alone will ſufficiently account for the giving him the chief command under the Prince of Orange, to whom, by the nature of his commiſſion, he was Lieutenant-General by ſea. Neither were theſe hopes of influencing the Engliſh ſeamen ſlightly grounded, ſince the pamphlets wrote in thoſe times univerſally agree, that the ſeamen had a very general and warm averſion to Popery, diſliked and deſpiſed ſuch of their officers as had embraced that religion, and were very prone in their cups to drink Admiral Herbert's health; ſo that theſe were very ſtrong indications of their ill will on one ſide, and their good will on the other [*F*]. In conſequence of private intelligence received, and in compliance with the preſſing inſtances of ſome about the Prince, he ſtood over towards the Engliſh coaſt with the Dutch fleet, in order to try whether any advantage could be taken of that of the King's, which was not yet formed, and to give an opportunity to the Engliſh captains to come over, in caſe any amongſt them were ſo inclined; but the weather proving very bad, he was obliged to return without ſucceſs (*c*) in either reſpect; after which, all his endeavours were bent to finiſh the preparations for the great expedition. When every thing was ready, the troops were embarked with ſo much ſpeed and ſecrecy, that no advices could be given in England that could be of any uſe; but notwithſtanding this care, the fleet was obliged to return. They ſailed on the 19th of October, 1688, and they put back into port on the 22d (*d*). This was a great diſappointment; and, without doubt, had things been managed by a prince of leſs firmneſs, or by an admiral of leſs experience, their expedition had been loſt. It is reported, that Admiral Herbert adviſed putting off the buſineſs to that late ſeaſon of the year, becauſe he judged that the winds would be more favourable, that the King's fleet would be leſs able to act, and that, when the enterprize was ſo long delayed, it would be concluded in England to be given over. His Serene Highneſs came into this propoſition

(*a*) Burnet's Hiſtory of his own times, Vol. I. p. 781.

(*b*) Kennet's Hiſtory of England, Vol. III. p. 525. Impartial Account of ſome remarkable paſſages, &c.

(*c*) Burnet's Hiſtory of his own times, Vol. I. p. 779.

it is no difficult thing to ſee, that of all the Engliſh who were about his Royal Highneſs, Vice-Admiral Herbert was in every reſpect the fitteſt man to be intruſted with that command, and therefore, if nothing elſe would content him, it might not proceed from pride, from ambition, or ill humour, but from his making a right judgment of things, and knowing that nothing could contribute ſo much to the ſucceſs of the enterprize; yet of the two, it is infinitely more probable that he did not inſiſt upon this himſelf, but that the States and the Prince of Orange conferred the command upon him, as a thing which they ſaw to be very expedient, or rather abſolutely neceſſary (21).

(21) Hiſtory of the Revolution, p. 135.

[*F*] *And their good will on the other.*] It is however true, that this letter had not the effect that was expected from it, or rather had not ſuch an effect ſo ſoon as it was expected; but as the letter itſelf is curious, and as it is not commonly to be met with, unleſs in a French tranſlation, it may not be diſagreeable to the reader here; and there is the more reaſon to inſert it, becauſe nothing can have a cloſer relation to this noble perſon's memoirs, ſince it muſt be allowed to have been the moſt remarkable, and moſt important paper, that ever fell from his pen, and was conceived in the following words.

To all Commanders of Ships and Seamen in his Majeſty's Fleet.

GENTLEMEN,

'I have little to add to what his Highneſs has expreſſed in general terms, beſides laying before you 'the dangerous way you are at preſent in, where ruin 'or infamy muſt inevitably attend you, if you do not 'join with the Prince in the common cauſe for the 'defence of your religion and liberties; for ſhould it 'pleaſe God, for the ſins of the Engliſh nation, to ſuffer your arms to prevail, to what end can your victory ſerve you, but to enſlave you deeper, and 'overthrow the true religion, in which you have lived 'and your fathers died, of which I beg you, as a friend, 'to conſider the conſequences, and to reflect on the 'blot and infamy it will bring on you, not only now, 'but in all after ages, that by your means the Proteſtant Religion was deſtroyed, and your country deprived of it's ancient liberties; and if it pleaſes God 'to bleſs the Prince's endeavours with ſucceſs, as I do 'not doubt but he will, conſider then what their condition will be that oppoſe him in this ſo good a deſign, where the greateſt favour they can hope for, is 'their being ſuffered to end their days in miſery and 'want, deteſted and deſpiſed by all good men. It is 'therefore for theſe, and for many other reaſons too 'long to inſert here, that I, as a true Engliſhman and 'your friend, exhort you to join your arms to the 'Prince for the defence of the common cauſe, the 'Proteſtant Religion, and the liberties of your country. 'It is what I am well aſſured the major and beſt part 'of the army, as well as the nation, will do, ſo ſoon 'as convenience is offered. Prevent them in ſo good 'an action while it is in your power, and make it appear, that as the kingdom has always depended on 'the navy for it's defence, ſo you will yet go further, 'by making it, as much as in you lies, the protection 'of her religion and liberties, and then you may aſſure 'yourſelves of all marks of favour and honour ſuitable 'to the merits of ſo glorious an action. After this I 'ought not to add ſo inconſiderable a thing, as that it 'will for ever engage me to be, in a moſt particular 'manner,

Your faithful friend and humble ſervant,

Aboard the Leyden in the Goree. AR. HERBERT.

[*G*] *At*

propoſition for the reaſons before aſſigned, and for one as weighty as any of them, which was more immediately known to, and more fully comprehended by, himſelf; and this was, that the ſeaſon of the year for a campaign being over, the French were not like to make any attempts, and conſequently the States-General ran little or no hazard, by their troops being thus employed at this juncture (*e*). It is on all ſides acknowledged, that it was owing to reaſons ſuggeſted by Admiral Herbert (*f*), that the Prince of Orange laid aſide his intention of ſailing northward to the Humber, which muſt have been attended with great inconveniences, as no fleet could lie long with ſafety on that coaſt; but it is not certain whether he gave the advice, which, however, was followed, of publiſhing in all the Dutch Gazettes, that the fleet had been very roughly handled by the ſtorm, that abundance of horſes had been thrown overboard, that many perſons of diſtinction, and particularly Dr Burnet, were caſt away and drowned; which had the effect that was expected from it (*g*), of perſwading ſuch as were not in the ſecret, that the expedition was totally overthrown, or that it muſt be poſtponed for ſome months at leaſt. It is very certain, that this unexpected check made many people mighty uneaſy, and occaſioned ſome very extraordinary propoſals to the Prince. Amongſt the reſt, one was, that Admiral Herbert (*h*), with a ſtout ſquadron, ſhould proceed to the Engliſh coaſt, and fight the King's fleet, to which he was not at all averſe; but the weather rendered it impracticable. The Prince of Orange, however, never altered his intention in the leaſt; but having given the neceſſary orders for repairing the ſhips and refreſhing the troops, which was ſoon done, the fleet ſailed again upon the firſt of November, and arrived ſpeedily and ſafely on the Engliſh coaſt; where, by the ſkill and care of Admiral Herbert, the troops were very ſoon landed (*i*), and by his intelligence with ſeveral perſons of diſtinction in the neighbourhood, amply ſupplied with proviſions and other neceſſaries. In a very few days after, the good effects of the Admiral's letter appeared, by the coming in of ſeveral ſhips; the firſt of which was the Newcaſtle, lying at Plymouth, under the command of Captain Churchill (*k*); and the way being once broke, the ſeamen declared in general for the Prince; from all which it fully appeared, how much the ſucceſs of this great affair was owing to the valour, vigilance, and prudence, of this noble perſon. When King James was obliged to retire into France, the Admiral's brother, Sir Edward Herbert (*l*), went with, or very ſoon followed him, and adhered, with great ſteadineſs, to what he took to be his duty as long as he lived [*G*]. As for the Admiral, and his younger brother Charles,

(*k*) Remarkable Paſſages in the Life of Arthur Earl of Torrington.

(*l*) Hiſtory of King James's Eccleſiaſtical Commiſſion, p. 74.

[*G*] *As long as he lived.*] This gentleman, the younger brother of the Earl of Torrington, was born in the year 1646, and received the firſt principles of a learned education in Wincheſter-School, from whence he was elected to New College in Oxford, in 1667 (22). He took the degree of Bachelor of Arts, April 21, 1669 (23). He was then removed to the Middle-Temple, became a Barriſter at Law, and very eminent in his Profeſſion; and having the countenance of his Royal Highneſs the Duke of York, was appointed Attorney General in Ireland (24). In February 1683, he was knighted. In 1685, when Sir George Jefferys was made Lord Chief Juſtice of the King's Bench, he ſucceeded him as Chief Juſtice of Cheſter (25), and ſoon after became Attorney-General to the Duke of York. Upon the 16th of October, in the ſame year, he ſucceeded the ſame perſon, Lord Jefferys, as Chief Juſtice of the King's-Bench, and was ſworn of the King's moſt Honourable Privy Council (26). In this high office he gave great offence in the deciſion of the famous cauſe between the King and Sir Edward Hales, which was an information brought on purpoſe to eſtabliſh the Diſpenſing Power by Law, and this Sir Edward did, by the judgment he pronounced. In this however it is to be preſumed he acted according to his conſcience, and the ſenſe he had of the law as it then ſtood; for, like his brother, he was very ſteady in his ſentiments, and would not either diſſemble himſelf, or ſuffer others to diſſemble for him, as appeared by his diſavowing opinions given in his name by Sir Francis Withins in open court. But it appeared ſtill more clearly, when the Court attempted, from the letter of an old ſtatute in the reign of Edward the ſixth, to keep the army in awe by the help of the civil power; for whereas that law enacts, That it ſhall be felony without benefit of Clergy, for any ſoldier taking pay in the King's ſervice, in his wars beyond the ſeas, upon the ſea, or in Scotland, to deſert; it was propoſed, to extend this law to the ſtanding army in England by conſtruction. The not ſeeing this in the light deſired, proved equally fatal to two great men in the law, Sir John Holt, then Recorder of London, afterwards Chief Juſtice of the King's-Bench, and Sir Edward Herbert, who was then ſo, and who was removed, April 22, 1687, to the Common Pleas (27). He was ſucceeded in the King's Bench by Sir Robert Wright, who hanged a poor ſoldier upon that old law, and thereby kept the army from deſerting, 'till they were able to do it with impunity. As for Sir Edward Herbert, he continued Chief Juſtice of the Common Pleas as long as his maſter did upon the Throne; and when he thought fit to retire into France, Sir Edward followed his fortunes, returned with him into Ireland, was excepted in King William's pardon, and was always conſidered as a perſon zealouſly attached to that Prince, though at the ſame time no man was a firmer Proteſtant (28). The tempers and the conduct of the two brothers were much alike, and ſeem to have been very innocently fatal to each other; for the enemies of the Earl of Torrington inſinuated that he was a very unfit man to be truſted by King William, whoſe brother had King James's broad ſeal in his keeping; and the like objections were made at St Germains to Sir Edward Herbert, as far as we can judge from circumſtances, and in ſuch caſes circumſtances are far from being the worſt evidence, without the leaſt foundation on either ſide. By degrees both loſt their credit with their reſpective maſters, and there are ſome who affirm, that Sir Edward Herbert loſt his liberty alſo. He was certainly a very free ſpeaker, which gave his enemies great advantages. Mr Skelton, who was Comptroller of King James's Houſhold, and Sir William Sharpe, charged him with ſpeaking diſreſpectful words of King James, and in particular with ſaying, That his violent temper would ruin himſelf and all who followed him. Sir Edward acknowledged the words, and ſaid they were ſpoken in Ireland, in reference to the act of ſettlement; explained his meaning ſo clearly, and vindicated his intention ſo fully, that his maſter diſmiſſed it as a frivolous complaint (29). But being afterwards charged with carrying on a correſpondence in England, he was put under confinement, which broke his ſpirit extremely. All the correſpondence he held, was with his brother, who relieved him frequently and generouſly; though ſome ſay, that declining it at laſt, poverty, and the ſenſe of ill uſage, finiſhed his days, in the ſame place and in the ſame manner with his father, by breaking his heart (30). He deceaſed in November 1698, bearing the title of Lord Chancellor (31); but it does not appear that he left any iſſue by Mrs Fox, a lady of great merit, and who, like a dutiful wife, ſhared alike in his proſperity and in his misfortunes.

Charles, they were equally zealous for the Revolution; and ſo was their couſin Herbert, afterwards created Lord Chirbury (*m*), who is ſaid to have determined the controverted point, as to the Princeſs of Orange's being aſſociated with her huſband in the government; ſo that it ſeems theſe Herberts, though they took different political roads, were equally warm and zealous, whatever road they took. As ſoon as the new government was ſettled, King William, by a commiſſion dated March 8, 1688, appointed the following commiſſioners for executing the office of Lord High-Admiral; viz. Arthur Herbert, Eſq; John Earl of Carbery; Sir Michael Wharton; Sir Thomas Lee, Baronet; Sir John Chicheley, Knight; Sir John Lowther of Whitehaven, Baronet; and William Sacheverell, Eſq; but the laſt declinined accepting that poſt, declaring, that, as he underſtood nothing of maritime affairs, he could not accept the ſalary with a ſafe conſcience (*n*). As for the command of the fleet, that was intruſted with Admiral Herbert (*o*) from the beginning; and he had likewiſe, though ſome time before, the honour of bringing over the new Queen, who arrived on the twelfth of February, and accepted the regal dignity, with her conſort, the thirteenth (*p*). He was named alſo, with the Earls of Nottingham and Carbery, one of the Plenipotentiaries (*q*) for concluding a new treaty with the States; but it does not appear that he acted under this commiſſion. At the entrance of the month of April, 1689, he ſailed for Cork, with a ſquadron of twelve men of war; but, upon information that King James was ſome time before landed at Kingſale, he ſailed directly for Breſt, in hopes of intercepting the ſquadron that had eſcorted him thither. Being diſappointed in this, and having gradually reinforced his fleet, he proceeded again to the coaſt of Ireland, and, in the latter end of the month of April, diſcovered forty-four ſail of French ſhips, ſteering, as he apprehended, for Kingſale. The next day he heard they were gone into Baltimore; but, upon his arrival before that place, finding it falſe, he ſtood for Cape Clear; and getting ſight of the enemy, chaſed them into Bantry Bay, at the mouth of which they anchored that night. The Engliſh fleet conſiſted of twenty-one ſail in all, of which eight were third rates, ten fourth rates, one fifth rate, and two tenders. On the other hand, the French had twenty-four ſail of large ſhips; that is, fifteen third and nine fourth rates, with ſix fire-ſhips, and four merchant-men laden with ſtores, with a conſiderable ſum of money on board the men of war; which, as ſoon as they ſaw the Engliſh colours, they put on board the fire ſhips, and, for greater ſecurity, ſent them with the merchant-men up the bay. The Engliſh had certainly the wind, and might therefore have avoided fighting if they had ſo pleaſed; but this was by no means agreeable to Admiral Herbert's temper; he therefore endeavoured all he could to get into the bay, that he might come to a cloſe engagement; but the French ſaved him the labour, by bearing down upon him in three diviſions, about ten in the morning, on the firſt of May. The firſt diviſion conſiſted of eight ſhips, under the command of Mr Gaberet; the ſecond, of the like force, was commanded by Admiral Chateau-Renault; the third, which was alſo of eight ſhips, had for it's commander Mr Forant. The fight was pretty warm for about two hours, but then ſlackened, becauſe a great part of the Engliſh fleet could not come up. Yet they continued firing on both ſides 'till about five in the afternoon, Admiral Herbert keeping out all the time to ſea, becauſe he found the diſpute very unequal, and that there was no other way by which he could poſſibly gain the wind, and thereby an opportunity of bringing his whole fleet to engage. But about the hour beforementioned, the French fleet ſtood into the bay, which put an end to the fight (*r*). The Engliſh writers aſcribe this, either to want of courage, or to the Admiral's being reſtrained by his orders. But the French inform us, that he retired, in order to take care of the ſhips under his convoy; and that, after they had entirely debarked the ſupply they had brought, he diſpoſed every thing, in order to put to ſea the next morning, which he did. In this action, the French had one ſhip, the Diamond, ſet on fire, and two others ſo much damaged, that they were forced to draw out of the line. The Engliſh loſt Captain Aylmer (*s*), who commanded the Portland, on whoſe widow the King ſettled a penſion of one hundred pounds per annum; ninety-four ſeamen killed, and two hundred wounded; ſo that the French had but little reaſon to paint, in ſuch ſtrong colours as they did, the ſmall advantage they had in this action. As to the perſonal behaviour of Admiral Herbert in this action, it was altogether unexceptionable. He was in the hotteſt of the ſervice himſelf, had ſeveral of the largeſt of the enemy's ſhips upon him at a time, notwithſtanding which, he continued to expoſe himſelf, to encourage the ſeamen ſword in hand upon the quarter-deck, and to do all that lay in his power to continue the engagement; inſomuch, that many thought that if the reſt of the officers had done their duty as well

Sir Edward Herbert publiſhed a very ſuccinct apology for his own conduct in that point, which was moſt liable to objection; and this produced two anſwers, one from William Atwood, Eſq; Barriſter at Law, the other from Sir Robert Atkins, Knt. of the Bath, who had been one of the Juſtices of the Court of Common Pleas; the title of our author's performance was,

I. A ſhort Account of the Authorities in Law, upon which Judgement was given in Sir Edward Hales his Caſe. London, 1689. 4to.

Mr Atwood's piece was intitled,

II. The Lord Chief Juſtice Herbert's Account examined, wherein it is ſhewn, that thoſe Authorities in Law, whereby he would excuſe his Judgment in Sir Edward Hales his Caſe, are very unfairly cited, and as ill applied. London, 1689. 4to.

Sir Robert Atkins called his,

III. An Enquiry into the Power of diſpenſing with penal Statutes, together with ſome Animadverſions upon a Book written by Sir Edward Herbert, &c. intitled, A ſhort Account, &c.

well as he, they had given a better account of the French than they did. For which ſome officers were called to a Court-Martial, and broke; ſo much was the Admiral a lover of diſcipline (*t*). On the 15th of May, when the King dined on board his ſhip, he was pleaſed to expreſs great ſatisfaction in *his* conduct, and declared *his intention of creating* him a peer, as he afterwards did, viz. by letters patent, bearing date on the 29th of the ſame month, by the title of Baron Herbert of Torbay, and Earl of Torrington (*u*). The Houſe of Commons (*w*) alſo were pleaſed to give him thanks, for the ſervice he had done the nation, in taking the firſt opportunity to fight *the French in Bantry-Bay* [*H*]. At this time one would have imagined, that no man could well have ſtood in a fairer point of light, after an action in which he had no ſucceſs to boaſt. But it ſpeedily appeared, that either his conduct at the Admiralty-Board was diſliked, or his new honours envied; this he quickly perceived, which induced him to retire from that board (*x*); and the King thereupon, January 20, 1689, appointed a new Board of Admiralty, conſiſting of Thomas Earl of Pembroke and Montgomery; John Earl of Carbery; Sir Thomas Lee, Baronet; Sir John Lowther of Whitehaven, Baronet; and Sir John Chicheley, Knt (*y*). It was reported at this time, and perhaps not without foundation, that the Earl of Torrington was inclined to quit the ſervice alſo; but if he had any ſuch intentions, he was prevailed upon to lay them aſide, and to take the command of the combined fleets the next ſummer. Lewis the Fourteenth was then in the zenith of his power; and the great point he had in view was, to eſtabliſh the reputation of his naval force; in order to which, he propoſed to have a fleet at ſea, ſufficient, not only to reſiſt, but to attack that of the maritime powers; and in order to effect this, his miniſters exerted themſelves to the utmoſt. On the other hand, our affairs were far from being in the beſt poſture; party ſpirit ran high in the nation, and the adminiſtration was not thoroughly united. Admiral Ruſſel was ſent into the Mediterranean, to eſcort the young Queen of Spain (*z*); and had orders to block up the Toulon ſquadron, which was not in his power. Another ſquadron

[*H*] *To fight the French in Bantry-Bay.*] The reader will without doubt be pleaſed to ſee this matter ſet in the moſt authentic light, from the journal of the Houſe, in which it appears, that Arthur Herbert, Eſq; then Burgeſs for the town of Plymouth, in the county of Devon, being in his place, had their thanks, in conſequence of an order made the Saturday before, which are thus entered.

Martis 21°. die Maii primo Willielmo & Mariæ.

Mr Speaker gave Admiral Herbert the thanks of the Houſe, according to their order of Saturday laſt, to the effect as followeth, viz (32)

(32) Hiſtory of the Proceedings of the Houſe of Commons, Vol. II. p. 313, 314.

'Admiral HERBERT,

'This Houſe hath taken notice of the great ſervice 'you have performed in engaging the French fleet; 'they do look upon it as one of the braveſt actions 'done in this laſt age, and expect it will raiſe the re-'putation of the Engliſh valour to it's ancient glory. 'I do therefore, by the command of this Houſe, re-'turn you their hearty thanks for this ſervice, and 'deſire you that you will communicate the like 'thanks, in their name, to the officers and ſeamen 'that ſerved under your command; and to let them know 'that this Houſe will have a particular regard of their 'merits, and take care, as much as in them lies, to 'give them all due encouragement.'

Whereupon Admiral Herbert ſpake to the effect as followeth.

SIR,

'I am in ſome confuſion at this great and unexpected 'honour, and the more, becauſe I want words to ex-'preſs my ſenſe of it. The beſt return that I think 'myſelf capable of making, is, to aſſure this Honoura-'ble Houſe, that with my utmoſt hazard I will en-'deavour, by my future actions, to deſerve it; and 'will not fail to obey their commands, in acquainting 'the officers and ſeamen who were with me of the 'favourable acceptation by this Houſe of their ſervice. 'And ſince the Houſe have ſo favourable an opinion 'of their actions, I would beg their leave to make an 'humble motion, and I think it is a thing becoming 'the greatneſs of this nation, and indeed has been the 'care of almoſt all nations that have any commerce at 'ſea, that it is to aſſign ſome place and revenue for the 'ſupport of ſuch as are maimed in the ſervice and 'defence of their country. There is no ſufficient pro-'viſion made at preſent in this kingdom, and indeed it 'is too great a charge for the Crown. I therefore 'humbly move it may be ordered by this Houſe, that 'an act may paſs, that they may have a ſupport and 'ſubſiſtence after they have, by wounds, been made 'uncapable of farther ſervice.

'Reſolved, That the Houſe will take care to make 'a proviſion for ſuch ſeamen as are or ſhall be 'wounded in their Majeſties ſervice; and for the 'wives and children of ſuch as are, or ſhall be ſlain 'therein: and that a committee be appointed to con-'ſider how the ſame may be done.

'And it is referred to Admiral Herbert, Mr Hales, 'Mr Boſcawen, Mr Aſhburnham, Sir William Wil-'liams, Mr Garway, Mr Elwel, Lord Cooke, Mr 'Holles, Mr Papillon, Mr Gwyn, Lord Falkland, 'Lord Sherrard, Mr Bickerſtaff, Mr Henry Herbert, 'Mr Edward Ruſſel Mr Bromley, Mr Thomas Foley, 'Sir Duncan Colcheſter, Mr Leveſon Gower, Mr P. 'Foley, Sir Henry Capel, Sir Chriſtopher Muſgrave, 'Mr Sacheverell, Mr Cooke, and Sir Thomas 'Littleton.'

We have an account with ſome remarks upon *this* buſineſs of Bantry-Bay, by the Biſhop of Sarum, which we will add in his own words 'Our operations 'on the ſea were not very proſperous. Herbert was 'ſent with a fleet to cut off the communication be-'tween France and Ireland. The French had ſent 'over a fleet with a great tranſport of ſtores and am-'munition. They had landed their loading, and were 'returning back. As they came out of Bantry-Bay, 'Herbert engaged them. The wind was againſt him, 'ſo that it was not poſſible for the greateſt part of the 'fleet to come up and enter into action, and ſo thoſe 'who engaged were forced to retire with ſome diſ-'advantage. But the French did not purſue him. 'He came back to Portſmouth, in order to refit ſome 'of his ſhips, and went out again, and lay before Breſt 'till the end of the ſummer. But the French fleet 'did not come out any more all that ſummer; ſo that 'ours lay ſome months at ſea to no purpoſe. But if 'we loſt few of our ſeamen in the engagement, we 'loſt a great many by reaſon of the bad victualling '(33).' There is all the reaſon in the world to believe, that the Reverend Prelate is miſtaken in his account, ſince it agrees with none of thoſe that were publiſhed at the time; for whereas theſe all (34) ſay, that Admiral Herbert followed the French, and engaged them as they went into the bay; the Biſhop ſays juſt the reverſe, that he engaged them as they came out. As to what regarded the victualling, Lord Torrington gave up thoſe who were guilty to the juſtice of the Houſe of Commons; and finding *this* created ill blood, he thought fit to quit his ſeat at the Admiralty-Board, in which he did not perhaps act quite ſo prudently, as he ſtill choſe to continue in the ſervice.

(33) Hiſtory of his own times, Vol. II. p. 20, 21.

(34) Burchet's Naval Hiſtory, p. 416.

ſquadron was employed, under Sir Cloudeſly Shovell, in eſcorting King William to Ireland. In this ſituation, the Earl of Torrington proceeded to the Downs, in order to take upon him the command of the ſhips that were left. The Dutch alſo were exceeding ſlow in their motions, ſo that the enemy had all the advantage they could well deſire, and were out at ſea by the middle of June, with three ſquadrons, each conſiſting of three diviſions, and compoſing, in the whole, ſeventy-eight men of war, and twenty-two fire-ſhips. With this force they arrived, on the twentieth of that month (*a*), off the Lizard. The next day they took ſome Engliſh fiſhing-boats, whom they ſoon after let go; and it was from the men on board theſe fiſhing-boats, that it was firſt known the French fleet was upon our coaſts. The Earl of Torrington was at St Helens (*b*), waiting for Admiral Ruſſell's ſquadron, and the reſt of the ſhips that were to join him, when from Weymouth he received this news, the certainty of which he could not doubt; which intelligence muſt have greatly ſurprized him, ſince we are aſſured he ſo little expected it, that he had ſent no cruizers to the weſtward. He put to ſea, however, with ſuch ſhips as he had, and ſtood to the ſouth-eaſt on Midſummer-day, leaving his orders, that all the Engliſh and Dutch ſhips which could have notice ſhould follow him. This ſhews how much he was confuſed, and how little expectation he had of a ſpeedy engagement; and indeed it was impoſſible that he ſhould have framed any proper ſcheme of action, when he had no certain account of the ſtrength of the French. In the evening, he was joined by ſeveral ſhips, and the next morning he found himſelf within ſight of the enemy. The French landed, and made ſome priſoners on ſhore, and by them ſent a letter from Sir William Jennings, an officer in the navy, who had followed the fortunes of King James, and ſerved as third Captain on board the Admiral, promiſing pardon to all ſuch captains as would now join them and adhere to that prince (*c*). The next day, our Admiral received another reinforcement of ſeven Dutch men of war, under the command of Admiral Evertzen; however, the fleets continued looking upon each other for ſeveral days. It is certain, that the Earl of Torrington did not think himſelf ſtrong enough to venture an engagement (*d*), and, in all probability, the reſt of the Admirals, viz. Sir John Aſhby, Vice-Admiral of the Red; Edward Ruſſell, Eſq; Admiral of the Blue; Ralph Delaval, Eſq; Vice-Admiral of the ſame ſquadron; and George Rooke, Eſq; Rear-Admiral of the Red, were of the like opinion. Beſides, he waited for Sir Cloudeſly Shovell, Rear-Admiral of the Blue, who was to have joined him with the Plymouth ſquadron, and ſome other ſhips. His whole ſtrength conſiſted of about thirty-four men of war of ſeveral ſizes, and the three Dutch Admirals had under their command twenty-two large ſhips. We need not wonder, therefore, that ſeeing himſelf out numbered by above twenty ſail, he was not willing to riſk his own honour and the nation's ſafety upon ſuch unequal terms. But the Queen, who was then Regent, having been informed that her father's adherents intended a general inſurrection; and that, if the French fleet continued longer on the coaſt, this would certainly take effect, by advice of the Privy-Council, ſent him orders to fight at all events (*e*), in order to force the French fleet to withdraw. In obedience to this order, as ſoon as it was light, on the 30th of June, the Admiral gave a ſignal for drawing into a line, and bore down upon the enemy, while they were under ſail, by a wind, with their heads to the northward. The ſignal for battle was made about eight, when the French braced their headſails to their maſts, in order to lay by. The engagement began about nine, when the Dutch ſquadron, which made the van of the united fleets, fell in with the van of the French, and put them into ſome diſorder. About half an hour after, our blue ſquadron engaged their rear very warmly; but the red, commanded by the Earl of Torrington in perſon, which made the center of our fleet, could not come up 'till about ten; and this occaſioned a great opening between them and the Dutch. The French, making uſe of this advantage, ſurrounded the latter; who defended themſelves very gallantly, though they ſuffered extremely from ſo unequal a diſpute. The Admiral, ſeeing their diſtreſs, endeavoured to relieve them; and, while they dropped their anchors, the only method they had left to preſerve themſelves, he drove, with his own ſhip and ſeveral others, between them and the enemy; and, in that ſituation, anchored about five in the afternoon, when it grew calm; but, perceiving how much the Dutch had ſuffered, and how little probability there was of regaining any thing by renewing the fight, he weighed about nine at night, and retired eaſtward with the tide of flood (*f*). The next day it was reſolved in a Council of War, held in the afternoon, to endeavour to preſerve the fleet by retreating, and rather to deſtroy the diſabled ſhips, if they ſhould be preſſed by the enemy, than to hazard another engagement, by endeavouring to protect them. This reſolution was executed with as much ſucceſs as could be expected, which, however, was chiefly owing to want of experience in the French Admirals; for, by not anchoring when the Engliſh did, they were driven to a great diſtance; and, by purſuing in a line of battle, inſtead of leaving every ſhip at liberty to do her utmoſt, they could never recover what they loſt by their firſt miſtake. But notwithſtanding all this, they continued their purſuit as far as Rye-Bay, and forced one of our men of war of ſeventy guns, called the Anne, which had loſt all her maſts on ſhore near Winchelſea, they ſent in two ſhips to burn her, which the Captain prevented, by ſetting fire to her himſelf. The body of the French fleet ſtood in and out of the bays of Bourne and Pemſey in Suſſex, while about fourteen of their ſhips anchored near the ſhore. Some of theſe attempted to burn a Dutch ſhip of ſixty-four guns, which at low water lay dry; but her commander

defended

defended her ſo briſkly every high water, that they were at length forced to deſiſt, and the Captain carried her ſafe into Holland (*g*). Our loſs in this unlucky affair, if we except reputation, was not ſo great as might have been expected; not above two ſhips, two ſea captains, two captains of marines; and three hundred and fifty private men. The Dutch were much more unfortunate, becauſe more thoroughly engaged. Beſides three ſhips ſunk in the fight, they were obliged to ſet fire to three more, that were ſtranded on the coaſt of Suſſex; in all, ſix ſhips of the line. They loſt likewiſe abundance of gallant officers, particularly their Rear-Admirals, Dick and Brakel, and Captain Nordel, with a great number of inferior officers and ſeamen (*b*). Our fleet retreated towards the river of Thames; and the Earl of Torrington, going on ſhore, left the command to Sir John Aſhby; but firſt gave orders to Captain Monck of the Phœnix, together with four other fifth rates and four fireſhips, to anchor above the narrow of the middle grounds, and to appoint two of the frigates to ride, one at the buoy of the ſpits, the other at the lower end of the middle, and to take away the buoys (*i*), and immediately retreat if the enemy approached; or, if they preſſed yet farther on him, he was ordered, in like manner, to take away the buoys near him, and to do what ſervice he could againſt them with the fireſhips; but ſtill to retire, and make the proper ſignals in ſuch caſes [*l*]. As ſoon as the Earl

[*l*] *And make the proper ſignals in ſuch caſes.*] In order to ſee this affair in every light of which it is capable, we ſhall produce in this note, thoſe accounts that bear hardeſt upon the Earl of Torrington; and in the firſt place, that of Biſhop Burnet, who relates the thing thus (35). 'On the day before the battle 'of the Boyne, the two fleets came to a great engage-'ment at ſea. The ſquadron that lay at Plymouth 'could not come up to join the great fleet, the wind 'being contrary; ſo that it was under debate what 'was fitteſt to be done. The Earl of Torrington 'thought he was not ſtrong enough, and adviſed his 'coming in, 'till ſome more ſhips that were fitting out 'ſhould be ready. Some began to call his courage in 'queſtion, and imputed this to fear. They thought 'this would too much exalt our enemies and diſcourage 'our allies, if we left the French to triumph at ſea, 'and to be the maſters of our coaſt and trade; for our 'merchants richeſt ſhips were coming home, ſo that 'the leaving them in ſuch a ſuperiority, would be both 'very unbecoming and very miſchievous to us. The 'Queen ordered Ruſſel to adviſe both with the Navy 'Board, and with all that underſtood ſea affairs; and 'upon a view of the ſtrength of both fleets, they were 'of opinion, that though the French were ſuperior in 'number, yet our fleet was ſo equal in ſtrength to 'them, that it was reaſonable to ſend orders to our 'Admiral to venture on an engagement: yet the or-'ders were not ſo poſitive, but that a great deal was 'left to a Council. The two fleets engaged near 'Beachy in Suſſex. The Dutch led the van, and to 'ſhew their courage they advanced too far out of the 'line, and fought in the beginning with ſome advan-'tage, the French plying before them; and our blue 'ſquadron engaged bravely: but the Earl of Tor-'rington kept in his line, and continued to fight at a 'diſtance. The French ſeeing the Dutch came out ſo 'far before the line, fell on them furiouſly both in 'front and flank, which the Earl of Torrington neg-'lected for ſome time, and when he endeavoured to 'come a little nearer, the calm was ſuch, that he could 'not come up. The Dutch ſuffered much, and their 'whole fleet had periſhed, if their Admiral Calem-'bourg had not ordered them to drop their anchors 'while their ſails were all up. This was not obſerved 'by the French, ſo they were carried by the tide, 'while the others lay ſtill; and thus, in a few mi-'nutes, the Dutch were out of danger. They loſt 'many men, and ſunk ſome of their ſhips which had 'ſuffered the moſt, that they might not fall into the 'enemies hands. It was now neceſſary to order the 'fleet to come in with all poſſible haſte. Both the 'Dutch and the blue ſquadron complained much of 'the Earl of Torrington, and it was a general opi-'nion, that if the whole fleet had come up to a cloſe 'fight, we muſt have beat the French; and, conſider-'ing how far they were from Breſt, and that our ſqua-'dron at Plymouth lay between them and home, a 'victory might have had great conſequences. Our 'fleet was now in a bad condition, and broken into 'factions; and if the French had not loſt the night's 'tide, but had followed us cloſe, they might have de-'ſtroyed many of our ſhips. Both the Admirals were 'almoſt equally blamed, ours for not fighting, and the 'French for not purſuing his victory.' We will next give the extract of Rear-Admiral Evertzen's letter to the States (36). 'The 4th of this month we joined 'the Engliſh and Dutch fleets, riding near the Iſle of 'Wight with three men of war; there he underſtood 'that the French fleet had been deſcried riding in ſe-'veral places, to the number of eighty two men of 'war, great and ſmall; thereupon it was reſolved 'that they ſhould weigh anchor, with a reſolution to 'find them out and obſerve their motions. Before 'the arrival of Admiral Evertzen, it was agreed be-'tween the two nations, that the Hollanders ſhould 'have the vanguard, which was in appearance to do 'them honour, but at the bottom to conceal Tor-'rington's deſigns. After they had been under ſail 'about two or three hours, they were obliged by fogs 'and bad weather to come to an anchor, but ſoon after 'they perceived the French fleet to bear up towards 'them with the wind at eaſt. Immediately they 'weighed anchor, and endeavoured to gain the wea-'ther-gage, which they did with ſuch ſucceſs, that 'Torrington gave the ſignal for the firſt ſquadron to 'engage, but the French thought fit to retire. The '6th, 7th, 8th, and 9th, the two fleets were always in 'view of each other; but in regard the French fleet 'was much the ſtronger, both for number and bigneſs 'of ſhips, it was judged moſt proper not to fight in 'the open ſea; and Torrington did his part ſo well, 'that he avoided engaging 'till he was come off 'Beachy-Head, which was favourable for his purpoſe, 'and there it was that he received the Queen's orders 'not to delay engaging, if the wind and the weather 'would permit, which was the reaſon that upon the '10th by day-break we went to ſeek the enemy, who 'expected us in order of battle: and ſo by nine 'o'clock the engagement began, between the blue 'ſquadron of the French and the vanguard of the 'Dutch, and both ſides fired deſperately for three 'hours together, 'till the French ſquadron, not liking 'their entertainment, bore away with all the tack they 'could make; but about one there happened a calm, 'which not only prevented the Hollanders purſuit, 'but put them into a little diſorder; upon which the 'French, whom the ſame calm hindered from getting 'away, were conſtrained to begin the fight again, 'which laſted 'till five o'clock in the evening with an 'incredible fury. As for what concerns the Engliſh 'moſt certainly, unleſs it were ſome few veſſels that 'fought againſt Torrington's order, the reſt did no-'thing at all; ſo that the main body of the French 'fell into the rear of the Dutch fleet: and having 'fought from morning 'till evening, and defended 'themſelves ſo long againſt ſuch a prodigious number 'of the enemy that aſſailed them on every ſide, they 'were ſo battered, that hardly three were capable of 'making any defence, which conſtrained them to 'make their way through the French fleet, and bear 'away for the coaſt of England, between Beachy and 'Ferley. Admirals Brakel, Jean Dick, and Captain 'Nordel were ſlain. The Friezland, having loſt all 'her maſts, and not to be towed off by reaſon of the 'calm, was taken towards the end of the fight. 'Admiral Evertzen gave this teſtimony of all the 'Dutch officers and ſoldiers, that there was not one 'that did not exactly perform his duty. In ſhort, it 'has not been heard, that ever twenty-two ſhips 'fought

(35) Hiſtory of his own times, Vol. II. p. 52, 53.

(36) Mercure Hiſtorique & Politique, Tom. IX. p. 80.

Earl of Torrington came to town, he was examined before the Council, where he juſtified himſelf with great preſence of mind; he ſaid, there were two things to be principally conſidered, the loſs that had been ſuſtained in the fight, and the motives which had induced him to retreat. The firſt, he alledged, was owing to the ill grounded contempt the Engliſh and Dutch officers had of the behaviour of the French at ſea; and, as to the latter, he affirmed that he had acted according to the rules of prudence, by which he had ſaved the fleet; and that he had much rather his reputation ſhould ſuffer for a time, than his country undergo a loſs, which ſhe might never be able to repair. The Council, however, thought proper to commit his Lordſhip cloſe priſoner to the Tower (*k*); and, that they might ſtill the clamours of the crowd, and give ſome ſatisfaction to the Dutch, they directed a committee to repair to Sheerneſs, in order to make a thorough enquiry into the real cauſes of this diſaſter [*K*]. The King, upon his return from Ireland, expreſſed great concern about this affair; the honour of the nation was in ſome meaſure affected; the common cry was very ſtrong againſt the Earl; and the Queen had engaged her promiſe to the Dutch, that his conduct ſhould undergo a ſtrict examination (*l*). On the other hand, the Earl had been very inſtrumental in the Revolution, had great alliances among the nobility, and had found the means of perſwading many, that, inſtead of being called to an account for any real errors in his conduct, he was in danger of being ſacrificed to the reſentment of foreigners, merely for preſerving the Engliſh fleet. The great difficulty, as to the developing this perplexed buſineſs, lay in the manner of bringing him to a tryal. The King was reſolved it ſhould be by a Court-Martial; the friends of the Earl maintained, that he ought to be tried by his Peers. A doubt was likewiſe ſtarted as to the power of the Lords of the Admiralty; for though it was allowed that the Lord High-Admiral of England might have iſſued a commiſſion for trying him, yet it was queſtioned whether any ſuch authority was lodged in the Commiſſioners of the Admiralty or not; and,

(*k*) Burnet's Hiſtory of his own times, Vol. II. p. 53. Kennet's Hiſtory of England, Vol. III. p. 603. Burchet's Naval Hiſtory, p. 428.

(*l*) Life of King William III. p. 276.

'fought ſo long againſt eighty-two, of which ſeven-'teen carried no leſs than from eighty to an hundred 'guns.' The reader may obſerve, that both theſe writers agree the Earl of Torrington was in his judgment againſt fighting; that in this, other great officers of the fleet concurred; that while he acted according to his and their notions, he did all that could be expected, and might probably have continued on the defenſive 'till properly reinforced; that the Secretary's letter, in the name of the Queen, determined, or rather obliged him to fight; the Prelate ſays, that it was conditional, but the Dutch Admiral that it was poſitive. Biſhop Burnet gives the honour of ſaving the fleet to the Dutch Admiral Calembourg, of which however Evertzen ſays not one word; and Burchet, upon good authority, aſcribes it to the Earl of Torrington; according to the Engliſh Biſhop, part of our fleet behaved well; according to the Dutch Admiral, nobody did any thing but themſelves; and the wonder was, how twenty-two ſhips could ſuſtain the fire of upwards of fourſcore, many of theſe carrying a prodigious weight of metal. If this had been the caſe, how came the officers of the blue ſquadron to complain ſo much; how came the Engliſh to loſe ſome ſhips, and to have ſeveral very ill treated? But, ſays the Engliſh Prelate, if the whole fleet had come to a cloſe fight, we ſhould have had a victory attended with ſuch circumſtances, as muſt have been followed by great conſequences. This is the judgment of a Clergyman at a diſtance; the Earl of Torrington, a great ſeaman upon the ſpot, thought otherwiſe; and that the French might have gained a greater victory than they did, which in it's conſequences might have been deciſive againſt the maritime powers; ſo that, in his judgment, the greateſt ſervice that could then be done, was to ſave the fleet, and wait a proper ſeaſon for repairing this diſaſter, which was effectually done at La Hogue. The impartial reader will decide, as to the probability of theſe relations, and as to the propriety of our reflections.

[*K*] *Of this diſaſter.*] At this diſtance of time, there can no reaſons ſubſiſt, which ought to prevent our examining an affair of this importance to the bottom. The commiſſioners (37) appointed to go from ſhip to ſhip, were the Duke of Devonſhire and the Earl of Pembroke, who were charged to make the ſtricteſt enquiries, and this certainly was very proper; but before the reſult of ſuch examinations could be known, there were ſome very ſtrong ſteps taken, for the Earl of Nottingham wrote a letter to Lord Durſley, then at the Hague, in expreſs terms; 'that the Dutch ſqua-'dron, had behaved with ſo much bravery, that if my 'Lord Torrington had done his duty, we ſhould in 'all appearance have obtained a compleat victory.' This letter was publiſhed in Dutch in the Courant, to gratify the populace of that nation, the paſſage beforementioned, inſerted in their French (38) Hiſtorical Memoirs, in order to circulate this as a fact through all Europe. It appears likewiſe, that our miniſters (39) at all foreign courts, had informations of the like kind given them. But what was ſtill more, the Queen ſent over Mr Harbord (40) to the States-General, to let them know how much ſhe was concerned at the misfortune which had befallen their ſquadron in the late engagement, and at their not having been ſeconded as they ought to have been, which matter her Majeſty had directed to be examined into, in order to recompenſe thoſe who had done their duty, and to puniſh ſuch as ſhould be found to have deſerved it. That her Majeſty had given orders for refitting the Dutch ſhips that were diſabled at her own charge, and commanded that all poſſible care ſhould be taken of the ſick and wounded ſeamen, and that rewards ſhould be given to the widows of thoſe that were killed, behaving themſelves bravely in the fight, to encourage others to do well for the future. The King in his ſpeech to the Parliament on the 2d of October, has this paſſage (41). 'I can-'not conclude, without taking notice alſo how much 'the honour of the Nation has been expoſed by the 'ill conduct of my fleet in the laſt ſummer's engage-'ment againſt the French; and I think myſelf ſo much 'concerned to ſee it vindicated, that I cannot reſt ſa-'tiſfied 'till an example has been made of ſuch as ſhall 'be found faulty upon their examination and trial, 'which was not practicable while the whole fleet was 'abroad, but is now put into the proper way of being 'done as ſoon as may be.' Thus it appears plainly, that the Court concluded the Earl of Torrington guilty of miſmanagement at leaſt, if not of ſome greater crime, and by publiſhing their ſentiments, had thrown him into a ſtrange ſituation, conſidering that he was ſtill to be brought to a trial; for if without proceeding to that, he had been deprived of his commiſſion and diſgraced; many plauſible things might have been ſaid, upon political principles, and all circumſtances conſidered, it might have been looked upon as a meaſure, which the then conjuncture of affairs rendered neceſſary. But a trial was a thing of another nature, in which as a ſubject and as a Peer of England, he was entitled to ſtrict juſtice, and was to be heard in his own defence, before he could be condemned. There were many who thought this ſhould be done by impeachment, in caſe he was charged with high-treaſon or treachery. But thoſe who proſecuted him, were inclined to a more general charge of miſmanagement and miſbehaviour, and were therefore for bringing this cauſe to another tribunal, which was that of a Court-Martial, notwithſtanding that to this likewiſe, there lay great exceptions, as it was a thing unprecedented, and for various other reaſons, which will appear more fully in the next note.

and, though ſome great Lawyers gave their opinion in the affirmative, yet it was judged expedient, to ſettle ſo important a point by authority of Parliament. In order, therefore, to obviate this difficulty, a new law (*m*) was made, declarative of the power of the Commiſſioners of the Admiralty; and, immediately after the paſſing of this, theſe Commiſſioners, who, in virtue of letters patent, dated June 5, 1690, were, Thomas Earl of Pembroke and Montgomery; John Earl of Carbery; Sir Thomas Lee, Baronet; Sir John Lowther, Baronet; Edward Ruſſell, Eſq; Sir Richard Onſlow, Baronet; and Henry Prieſtman (*n*), Eſq; iſſued a commiſſion for this purpoſe, though many of the nobility had declared their diſlike of that law, and expreſſed their reaſons with great force in a proteſt (*o*) [*L*]. At the time this Law paſſed, the Earl of Torrington was in the Tower, and much indiſpoſed, but was immediately removed into the cuſtody of the Marſhal of the Admiralty; where he had not continued long, before he brought his caſe into the Houſe of Commons, where he was extremely anxious that it ſhould be placed in a true light. This was done, by a Member's acquainting the Houſe, that this noble Peer was deſirous of being heard at their bar, in reſpect to the matter for which he was in cuſtody. Upon this, an order was made for his Lordſhip's being brought thither the next day; the Serjeant at Arms was directed to ſerve the Marſhal of the Admiralty with a copy of it, which he did accordingly; and November the twelfth, the Houſe being informed that his Lordſhip was in the lobby, directed him to be brought in by the Serjeant with the mace, to a chair ſet for him within the bar, on the left hand of the Houſe as he came in; and having ſat down thereon for ſome time covered, and the mace being laid upon the table, his Lordſhip roſe, and ſtood at the back of the chair uncovered (*p*), and was heard before the Houſe; after which his Lordſhip withdrew, the mace attending him. This is all we meet with in the Journal; but a writer of thoſe times aſſures us, that his Lordſhip found himſelf ſo much embarraſſed in the preſence of that aſſembly, as not to be able to expreſs himſelf as he intended; upon which he acquainted the Commons, that, being accuſtomed rather to act than to ſpeak, he found himſelf at a loſs for words, and therefore deſired to make uſe of his papers, which was allowed him. He then took notice how early he had entered into his country's ſervice, how many years he had ſpent therein, and of his having loſt much blood, as well as his having been deprived of his eye, in their quarrel. He proceeded next to the loſs he had ſuſtained, for ſupporting the Proteſtant religion, and the laws and liberties of England, under King James the Second. Laſt of all, he ſpoke of the engagement with the French fleet off Beachy Head; in reſpect to which, he excuſed his not fighting, from the want of intelligence, want of ammunition, ſhortneſs of wind, inequality of numbers, and, in ſupport of what he ſaid, produced ſome letters: but all this was of little or no uſe to his Lordſhip (*q*); the Houſe remitted him to that tryal, for which the late act had made way, and of which the higheſt expectations were raiſed at home and abroad. The King alſo gave directions for haſtening it, being reſolved not to embark for Holland 'till it was all over. Accordingly, Saturday the ſixth of December, 1690, his Lordſhip went down to Sheerneſs in his yatcht, the Court-Martial ſitting there on board the Kent. On Monday December 8, Sir Ralph Delaval being in the chair (*r*) as Preſident, the commiſſion was opened and read, and other preliminaries adjuſted; after which, the court adjourned to Wedneſday the tenth. The charge againſt the Earl was, that, in the late naval engagement off Beachy-Head, he had, through treachery or cowardice, miſbehaved in his office, drawn diſhonour on the Engliſh nation, and ſacrificed our good allies the Dutch. His Lordſhip defended himſelf with great clearneſs of reaſon, and with extraordinary compoſure of mind. He obſerved, that, in

[*L*] *In a proteſt.*] The bill for veſting the ſame power in the Commiſſioners of the Admiralty, as had been hitherto placed by law in the Lord-High-Admiral, was read in the Houſe of Peers for the third time, October 30, 1690, when, the leave of the Houſe being previouſly obtained, ſeventeen Peers entered their proteſt for the following reaſons (42).

(42) The Hiſtory and Proceedings of the Houſe of Lords, Vol. I. p. 405, 406.

First, Becauſe this bill gives a power to Commiſſioners of the Admiralty to execute a juriſdiction, which by the Act of 13 Car. II. entitled, An act for eſtabliſhing articles and orders for the regulating and better government of his Majeſty's navy, ſhips of war, and forces by ſea, we conceive they had not; whereby the Earl of Torrington may come to be tried for his life, for facts committed ſeveral months before this power was given or deſired. We think it reaſonable, that every man ſhould be tried by that law that was known to be in force when the crime was committed.

Secondly, It is by virtue of the ſaid act of 13 Car. II. that the Earl of Torrington was judged by this houſe, not to have the privilege of a Peer of this realm, for any offences committed againſt the ſaid act; and there is no other law as we conceive, by which the ſaid Earl could have been debarred from enjoying the privilege of a Peer of this realm; which act making no mention of Commiſſioners of the Admiralty, but of a Lord-High-Admiral only, by whoſe authority all the powers given by that act are to be exerciſed, and without whoſe conſent ſingly, no ſentence of death can be executed. We think it of dangerous conſequence to expound a law of this capital nature, otherwiſe than the literal words do import; and as we conceive it without precedent to paſs even explanatory laws, much leſs ſuch as have a retroſpect in them in caſes of life and death; ſo we think it not at all neceſſary to make ſuch a precedent at this time, there being an undoubted legal way already eſtabliſhed to bring this Earl to a trial by a Lord-High-Admiral.

Thirdly, The Judges having unanimouſly declared, that the law marine was no where particularized in their books, whereby the power or juriſdiction of the Lord-High-Admiral may be aſcertained; ſo that the practice is all that we know of it; we conceive it unprecedented and of dangerous conſequence, that the juriſdiction exerciſed by the Lord-High-Admiral, ſhould by a law be declared to be in the Commiſſioners of the Admiralty, whereby an unknown and therefore unlimited power may be eſtabliſhed in them.

in the ſeveral Councils of War held before the fight, not only himſelf, but all the Admirals in the fleet, were againſt engaging. He took notice of the Queen's order, which obliged them to fight againſt their own opinion, and without any probability of ſucceſs. He remarked the inequality of the confederate and French fleets, the former conſiſting but of fifty-ſix, and the latter having eighty-two, ſhips which were actually engaged. He aſſerted, that the Dutch were deſtroyed by their own raſhneſs, and that, if he had ſuſtained them in the manner they expected, the whole confederate fleet muſt have been ſurrounded, as they were; and, as ſome reflections had been thrown out, of his having a pique to the Dutch, to gratify which he had given them up, he not only juſtified himſelf very warmly on that point, but concluded his defence with ſaying, that his conduct had ſaved an Engliſh fleet, and that he hoped an Engliſh Court-Martial would not ſacrifice him to Dutch paſſion, prejudice, and reſentment. After a full hearing, and ſtrict examination of all that had been advanced on both ſides, his Lordſhip was unanimouſly acquitted (*s*); and though ſome writers of our own as well as of another nation, have taken great liberties with this judgment of the Court-Martial, yet, on the whole, there ſeems to be no juſt ground, either for cenſuring them, or fixing any imputation on the character of that noble perſon. It is true, the day after his acquittal, the King took away his commiſſion (*t*), and he was thence forward laid aſide, which might be a very right ſtep in politics, as it tended to ſatisfy our allies, and gave his Majeſty an opportunity of employing a more fortunate officer; but, when we allow this, in juſtification of the King and his miniſters, we muſt in juſtice to this nobleman declare, that there are no ſufficient grounds in any of the accounts that are ſtill extant, to leave a ſtain upon his memory to poſterity [*M*]. This will appear the more reaſonable, if we conſider the whole

[*M*] *Upon his memory to poſterity.*] The object which thoſe have in view, who are actors in theſe great affairs, is to carry their point; the buſineſs of thoſe who record them, is to come at the truth, and to repreſent it fairly whenever they can come at it. The crimes firſt imputed to the Earl of Torrington, were clearly treaſon and treachery. If he had been guilty of theſe, he ought to have been and he might have been impeached. In a very little time however theſe charges were dropped, even by thoſe who brought them, and in their ſtead were ſubſtituted want of courage and pique to the Dutch (43). In reſpect to theſe however, his enemies felt themſelves early in ſuch want of proof, that they declared to all the world, that they ſhould hold themſelves obliged to Death, if he would rid them and his lordſhip of all perplexity, by removing him while he lay in the Tower (44). Theſe certainly were no very ſtrong preſumptions of his Lordſhip's guilt. The powers lodged in the Lords Commiſſioners of the Admiralty were ſuch, that they might pick out of all the Captains in England, whom they pleaſed to be his judges; and ſurely nothing but the force of innocence could enable a man to defend himſelf before ſuch a Judicature. The Preſident Sir Ralph Delaval, had been himſelf in the action, and was Vice-Admiral of the blue ſquadron, which was ſuppoſed to have ſuffered almoſt as much as the Dutch (45); ſo that if any credit be due to appearances, one would think the unanimous acquittal of the Earl of Torrington, could proceed from nothing but a conviction, that he was proſecuted without any foundation (46). But the hiſtorian of his own times thought otherwiſe. After giving the hiſtory of the ſeſſions of Parliament of 1690, the reverend prelate proceeds thus (47). 'There 'were no important debates in the Houſe of Lords. 'The Earl of Torrington's buſineſs held them long. 'The form of his commitment was judged to be illegal, and the martial-law, to which by the ſtatute 'all who ſerved in the fleet were ſubject, being lodged 'in the Lord-High-Admiral, it was doubted whether 'the Admiralty being now in commiſſion that power 'was lodged with the Commiſſioners. The Judges 'were of opinion that it was: yet ſince the power of 'life and death was too ſacred a thing to paſs only by 'a conſtruction of law, it was thought the ſafeſt courſe 'to paſs an act, declaring, that the powers of a Lord-'High-Admiral did reſt in the Commiſſioners. The 'ſecret enemies of the Government who intended to 'embroil matters, moved that the Earl of Torrington 'ſhould be impeached in Parliament; proceedings in 'that way being always ſlow, incidents were alſo apt 'to fall in that might create diſputes between the two 'Houſes, which did ſometimes end in a rupture: but 'the King was apprehenſive of that, and though he 'was much incenſed againſt that Lord, and had rea-'ſon to believe that a council of war would treat him 'very favourably, yet he choſe rather to let it go ſo, 'than to diſorder his affairs. The Commiſſioners of 'the Admiralty named a court to try him, who did it 'with ſo groſs a partiality, that it reflected much on 'the juſtice of the nation; ſo that if it had not been 'for the great intereſt the King had in the States, it 'might have occaſioned a breach of the alliance be-'tween them and us. He came off ſafe as to his perſon and eſtate, but much loaded in his reputation; 'ſome charging him with want of courage, while 'others imputed his ill conduct to a haughty ſullenneſs 'of temper, that made him, ſince orders were ſent 'him contrary to the advice he had given, to reſolve indeed to obey them and fight, but in ſuch a 'manner as ſhould caſt the blame on all thoſe who had 'ſent him the orders, and give them cauſe to repent 'it.' Such were the ſentiments of B ſhop Burnet, let us compare them with thoſe of the Dutch news writer, who was known to be under the protection and influence of the States. His narrative runs thus (48). 'At length, 'the charge againſt the late Admiral the Earl of Tor-'rington was brought to a trial, on board the Kent 'frigate at Chatham, the 19th of the laſt month. 'There were high diſputes for ſome time, and ſome 'officers that accuſed him, reproached him loudly with 'cowardice and treachery. This however did not 'hinder his judges to declare him innocent, whether 'they thought him ſo indeed, or whether ſwayed by 'particular intereſt, is left for others to determine. 'The Earl, as ſoon as he was acquitted, gave orders 'to ſome of the Captains, as a mark of his retaining 'his authority, and then returned in triumph up the 'Thames, carrying the Admiral's flag on his yatch; 'the judges having declared, that his commiſſion was 'in force 'till the King took away his patent. Many 'people were much ſurprized at this judgment, and 'even his Majeſty himſelf ſeemed to be aſtoniſhed. 'The next day he ſent for this Earl's commiſſion, and at 'the ſame time diſmiſſed him from his command of 'one of the marine regiments. He deſired to have the 'honour to kiſs the King's hand, and to have laid his 'commiſſion at his royal feet, but that was refuſed 'him. However, upon the 26th, he went to the 'Houſe of Lords, and took his ſeat among the Peers, 'but the greateſt part of the members looked upon him 'but with an indifferent eye. He is therefore prepar-'ing to retire to his houſe in the country. A reſolution 'alſo has been taken, to give no employment to any of 'his judges, which confirms the opinion of thoſe who 'thought that they did not obſerve the ſtrictneſs of 'law. Upwards of forty ſea officers have been remov-'ed, ſome, becauſe they are ſuſpected not to have 'done their duty in the laſt engagement; ſome being 'thought too much devoted to the Lord Torrington's 'intereſts; and others for different reaſons. Mr Ruſ-'ſel is made Admiral of the Red ſquadron; Sir John 'Aſhby, Vice-Admiral, and Captain Rook, Rear-'Admiral; Captain Killigrew of the Blue; Sir Ralph 'Delaval,

whole tenour of his Lordſhip's conduct after this heavy misfortune, and in which it does not appear that he was at all prejudiced or diverted from his former principles by reſentment. On the contrary, during the very next ſeſſion of Parliament, he acted preciſely in the ſame manner as when he was in power, though he never afterwards courted any adminiſtration. He had the misfortune to loſe his youngeſt brother, Colonel Charles Herbert, who was killed at the battle of Aghrim in Ireland, on Sunday July 12, 1691, after having paſſed a bog up to the middle, at the head of his regiment, and forcing the Iriſh to quit the hedges they had occupied beyond it. But puſhing them briſkly to their main body, he was unluckily taken priſoner; and the enemy perceiving that he was like to be reſcued, they, to prevent it, barbarouſly put him to death. The honours of this noble Peer were entailed on him and his heirs male, and his dying immaturely, and without being ever married, made this loſs ſo much the greater. In 1692, Admiral Ruſſell was charged with not making ſo much uſe as he might have done of the glorious victory at la Hogue, which he poſitively affirmed was owing to the looſe intelligence and ill judged orders that were ſent him by the Earl of Nottingham, then Secretary of State. The Houſe of Commons were ſo well ſatisfied with this, that they thanked him over and over. But the courtiers in the Houſe of Lords ſupported the Earl of Nottingham; and the King having

' Delaval Vice, and Sir Cloudeſley Shovel, Rear-Admiral of the ſame ſquadron.'

We have now reported this affair, as ſtated on all ſides, that the reader may be the better able to judge of it, and without attempting to biaſs his opinion, we ſhall likewiſe ſpeak our own. The courage of the Earl of Torrington had never been called in queſtion, theſe memoirs that we have collected, ſhew that it ought not. There is however ſomething farther that deſerves to be mentioned upon this occaſion, which was his behaviour the year before in attacking the French ſquadron, though ſuperior to himſelf, in Bantry-Bay. King William ſaw this in it's true light, and ſpoke of it like a great Prince and a wiſe Captain (49), ' That ' ſuch inſtances of courage were neceſſary at the begin- ' ning of a war, but might be fatal in the courſe of it.' This was a leſſon to the Earl of Torrington, who in this attack had a mind to ſee whether in action, the French ſhips were as formidable as in their appearance, and having found they were, he very probably reſolved not to fight again but upon equal terms. His abilities were never queſtioned, he knew the ſtate of the fleet he commanded this ſummer, he found it aſſembled ſlowly, he felt the want of intelligence, he underſtood better than any body the ſuperiority of the enemy, which did not diſpoſe him to fighting, more eſpecially as he expected to be joined by the Portſmouth ſquadron, and except a little confuſion, did not foreſee any great impreſſion the French could make upon our coaſts. The reſt of the Admirals, Dutch as well as Engliſh, who ſhould have been, and very probably were, the beſt judges of theſe matters, thought as he did, concurred in the expediency of declining an engagement in ſuch circumſtances, and in doing this, which was all that was fit to be done, Admiral Evertzen himſelf admits, that the Earl acted very ably. But the Earl of Nottingham, then Secretary of State (50), alarmed by the general conſternation which the appearance of the French fleet had occaſioned, ſent him the Queen's orders to fight, which he could not but obey; and yet, unleſs he could have commanded fortune and the winds, ſhould not be entirely anſwerable for the conſequences. The French Fleet was in all reſpects ſuperior, by at leaſt a fourth; the Dutch behaved gallantly, and are ſaid to have made ſome impreſſion, but it does not appear that any of the enemies ſhips were diſabled; ſo that after their misfortune, the Engliſh were ſtill left to conteſt with the whole French fleet. If the Earl did not come up time enough to ſupport the Dutch, he alledged that this was owing to their eagerneſs and the ſinking of the wind; and that this really was ſo, appeared by his expoſing himſelf extremely for their preſervation. It is on all hands allowed, that he acted with great prudence and preſence of mind in making the retreat, which by the way is incompatible with every article of the charge; and diſcharges him alike from treaſon, treachery, and cowardice (51) But after all it may be ſaid, the fault lay ſome where. No doubt it did. But might it not as well lie in an overbearing Secretary, who would undertake the direction of all things, whether he underſtood them or not? was it not this Secretary who ſupported the clamour againſt the Admiral, who wrote the letter to Lord Durſley, who dictated the meſſage to Mr Harbord, who prejudiced the King and Queen againſt Torrington, and who two years after did the ſame with regard to Admiral Ruſſel (52)? Things being conſidered in this light, the judgment of the Court Martial might be agreeable to truth and reaſon, though being contrary to their expectations it might be ill received at Court. But that the members of it were never employed afterwards is a glaring falſhood, ſince Sir Ralph Delaval, who was Preſident of the Court Martial, was one of the joint Admirals of the fleet the very next year (53); and as to the great intereſt of the Earl of Torrington in the Engliſh navy, the reader will be pleaſed to conſider how that is to be reconciled to the character that is given him, of being one of the haughtieſt and moſt intractable men living. However, impartial hiſtorians of all parties have done him juſtice, and it is particularly to the honour of Mr le Clerc, that he has treated this affair with all the candour imaginable (54), and without ſuffering himſelf to be carried away by the calumny of thoſe times, whether Du ch or Engliſh. It would have been as well, if Mr Bruzen de la Martiniere had obſerved the ſame moderation, more eſpecially as he ſeems to have been but very indifferently acquainted with facts. In order to ſupport ſo harſh a charge as this, we will produce his own account of the confederate fleet at the time of the engagement. ' The Dutch, ſays he, commanded by Admiral ' Hevertem, had the rear guard; the Engliſh, under ' the orders of Herbert, otherwiſe called the Earl of ' Torrington, were in the van, and the main body ' was compoſed of the ſhips of both nations (55).' In all this there is not one word of truth, any more than colour of decency, or propriety of diction; for it was Rear-Admiral Evertzen, who commanded the van; the Earl of Torrington was in the center, and the Engliſh blue ſquadron formed the rear, as the Engliſh French, and Dutch accounts agree (56). We need not wonder therefore that this writer ſhould ſay the Engliſh Admiral fought ill, almoſt always kept the wind, and ſeemed to engage from a point of complaiſance, and preciſely to ſuch a degree, as that it might not be ſaid that he fled. He cites (with what juſtice the reader knows) for theſe ſuggeſtions the authority of Biſhop Burnet. The French writers themſelves have treated this matter with more modeſty and juſtice, except in a ſingle inſtance, where they convert the burning a very inconſiderable village in Devonſhire with three fiſhing ſmacks, into an expedition of conſequence, in which Martiniere (57) has followed them very exactly, he ſays, that on the 5th of Auguſt, they landed under the fire of their galliſes, within half cannon ſhot of Tingmouth, that two hundred Engliſh militia abandoned an intrenchment which they were poſted to defend, upon the approach of the Count D'Eſtrees at the head of four hundred men, who made themſelves maſters of the town and port, in which they burnt four armed veſſels and eight merchantment. Before we put an end to this article it will not be amiſs to remark, that the French never had ſo great an advantage over us at ſea; that for ſix weeks they were maſters upon our coaſts, that we had hardly any regular troops in the kingdom; that the ſpirit of diviſion never reigned ſo ſtrong as at that juncture throughout the nation; and that notwithſtanding all this, and though oppoſed only by militia, the burning of Tingmouth was the ſole fruits of their victory.

having demanded the advice of both Houſes, upon the then ſtate of affairs, it was propoſed to appoint a joint commiſſion to conſider the condition of the kingdom, that, upon a ſtrict enquiry, they might concur in making a ſuitable return to the Crown. This propoſition, however, was rejected in the Houſe of Lords by a majority of twelve, againſt which the Earl of Torrington and ſeventeen other peers entered their proteſt. In this his Lordſhip may be preſumed to have acted with great impartiality, ſince Admiral Ruſſell was not looked upon as his Lordſhip's friend, and had formerly ſhewn a reluctance at leaſt, if not refuſed, to act under him. Yet the ſame influence that had prevailed againſt the Earl of Torrington, engaged the King to lay aſide Admiral Ruſſell alſo for the preſent; though the conduct of the Secretary appeared ſo exceptionable, that the King found it at laſt requiſite to remove him, and to give the Seals to the Earl of Shrewſbury the year following, when Admiral Ruſſell was alſo reſtored to the command of the fleet (*u*). As for the Earl of Torrington, it does not in the leaſt appear that he ever ſought to come again into employment, or to enter farther into the management of public buſineſs, than as the cognizance of it belonged to the Houſe of Peers, where he conſtantly attended for above twenty years after, without altering his conduct in the leaſt; which is a manifeſt proof, that he was not governed by caprice but by principle (*w*). He was always on the ſide of the Crown, and very rarely in an oppoſition to it's Miniſters; ſometimes, however, he was, and then he commonly proteſted, that the reaſons of his oppoſition might appear, and that the world might not aſcribe his diſagreement with men in power to ſpleen. In matters that related to the marine, he was generally moſt forward; and, in reſpect to them, the Houſe heard him with attention; and, upon ſuch occaſions, he ſhewed himſelf commonly a friend to ſtrict diſcipline, and a frugal management in the Navy. His Lordſhip was twice married, firſt to Anne, daughter of Mr Hadley, and the widow of Mr Pheaſant, who was near ſeventy years of age, and very rich, having eſtates in Yorkſhire, and other parts of the kingdom, to a great value. After her deceaſe, he eſpouſed Anne, daughter to Sir William Airmine, of Oſgoodby in the county of Lincoln, Baronet, who had been twice married before; firſt to Sir Thomas Woodhouſe of Kimberley, in the county of Norfolk, Baronet; and ſecondly, to Thomas, Lord Crew of Stene, in the county of Northampton; ſo that, excluſive of the moiety of her father's great eſtate, ſhe brought him two large jointures, which he enjoyed during his life (*x*). His Lordſhip deceaſed on the 13th of April, 1716, being then upwards of ſeventy (*y*). He left all his eſtate, which was very conſiderable, to the Right-Honourable Henry late Earl of Lincoln, on account of that noble perſon's ſteady adherence to his principles, and becauſe, as ſome ſay, he was diſſatisfied in his own mind, as to a vote he had given, in a matter of private property, againſt that noble peer; which is very conſiſtent with that nice ſenſe of honour, and diſintereſted ſpirit, which his Lordſhip had ſhewn upon other occaſions. Anne, Counteſs dowager of Torrington, his widow, deceaſed April 2, 1719 (*z*).

In reſpect to this title, which was often conferred and often extinct, and of which there were ſeveral dowagers of different families, which has occaſioned ſome confuſion, it may not be amiſs to ſhew, at the cloſe of this article, by whom it was borne, and how it has been beſtowed, ſince it became a title of honour, to this time. It firſt gave the title of an Earl to General George Monk, who, by letters patent, bearing date July the ſeventh, in the twelfth year of the reign of King Charles the Second, was created Baron Monk of Potheridge, Beauchamp, and Tyes, Earl of Torrington, and Duke of Albemarle In his life-time, his ſon Chriſtopher was ſtiled Earl of Torrington; and his conſort, Lady Elizabeth Cavendiſh, daughter to Henry Lord Ogle (ſucceſſively Ducheſs of Albemarle and Montague), was called Counteſs of Torrington. It was very ſoon after the deceaſe of Chriſtopher Duke of Albemarle and Earl of Torrington, that King William beſtowed the latter title upon Admiral Herbert. But this noble perſon had not been long dead, before his late Majeſty created the honourable Mr Thomas Newport, brother to the Earl of Bradford, by letters patent, bearing date the 25th of June, in the ſecond year of his reign, Baron of Torrington. He was alſo a Teller of the Exchequer, and one of his Majeſty's moſt honourable Privy-Council; but his Lordſhip died May the twenty-ſeventh, 1719, by which demiſe this title became extinct. However, his widow, who was the daughter of Francis Pierpoint of Nottingham, Eſq; and was his Lordſhip's third wife, ſurvived him, and bore the title of Lady Torrington to the year 1735, when ſhe deceaſed. After the ſignal Victory obtained over the Spaniards in the Streights of Meſſina, his ſaid late Majeſty created, by letters patent, dated September the nineteenth, in the ſeventh year of his reign, Sir George Byng, Knight and Baronet, Baron Byng of Southill in the county of Bedford, and Viſcount Torrington in the county of Devon. His Lordſhip died January 17, 1733, but his widow Margaret, daughter of James Maſter of Eaſt-Langden in the county of Kent, ſurvived to March 30, 1755. The title is now enjoyed by their grandſon by their ſecond ſon, George, Lord Viſcount Torrington, who deceaſed April 7, 1750. E

HEYLIN [PETER], an eminent Engliſh divine and writer in the XVIIth century, was the ſecond ſon of Henry Heylin, Gentleman (*a*), by Elizabeth, daughter of Francis Clampard of Wrotham in Kent (*b*). He was born at Burford in Oxfordſhire, November 29, 1600 (*c*), and in the free-ſchool of that place he acquired the principles of grammatical learning. Here likewiſe he firſt diſplayed his growing abilities, by ſome compoſitions that were thought well of at that time, and from one of his tender years; particularly a tragi-comedy on the wars and fate of Troy, with ſome other hiſtorical exerciſes (*d*). In 1613, he was, by his father, entered of Hart-hall in Oxford (*e*). Here he ſtudied under two tutors ſucceſſively, one of which was a zealous Puritan In the year following, he ſet up for a Demy's place in Magdalen-college; but being thought rather too young, and the majority of the fellows having been previouſly engaged in the intereſt of another, he loſt the election: however, in the next year he was choſen, when he gave ſufficient evidence of his having made a conſiderable progreſs in academical literature (*f*). Shortly after this, he gave a farther proof of his talent for dramatic poetry, by compoſing a tragedy in Engliſh, entitled Spurius, which had the general approbation of the ſociety to which he belonged; inſomuch, that the Preſident, Dr Langton, ordered it to be acted in his apartments (*g*); but it was not printed (*h*). On the 17th of October, 1617, he was created Bachelor of Arts (*i*). After this, 'till his taking the degree of Maſter, he, every long vacation, read coſmographical lectures in the common refectory of the college (*k*). As this was an unuſual thing, and he was very converſant in the ſubject, he gave great ſatisfaction to the auditors. The very firſt of theſe diſcourſes, which he delivered towards the end of July, 1618, was ſo well approved, that he was elected Probationer-Fellow, and Moderator of the ſenior form in the Hall; and, on July 19, 1619, was admitted Perpetual Fellow (*l*). July 1, 1620, he was made Maſter of Arts (*m*). In the year enſuing he appeared in the character of a writer, when he ſet forth his *Microcoſmus*: or, *A Deſcription of the Great World*. The chief materials of this work were the abovementioned lectures. He began the compoſing of it on the 22d of February, 1619, and finiſhed it on the 29th of April following (*n*). It was firſt publiſhed in quarto, November 7, 1621 (*o*). It was dedicated and preſented to Prince Charles, who received it and the author very graciouſly. It was univerſally liked, and ſpeedily bought up; ſo that, in 1624, it was reprinted in the ſame ſize, but with conſiderable additions, and again preſented to it's royal patron. It was ſoon after put into the hands of King James, by Dr Young Dean of Wincheſter. His Majeſty, at firſt view, ſeem'd greatly pleaſed with it; 'till, meeting with a paſſage therein, where Heylin gave precedency to the French King, and ſtiled France the more famous kingdom, he was, forſooth, ſo exceedingly offended, forgetting how much more he had degraded both himſelf and the Britiſh nation, in the eyes of all Europe, that he ordered the Lord-Keeper to ſuppreſs the book. Heylin was then at Oxford, whither Dr Young ſent him notice of this untoward circumſtance, perſwading him to repair immediately to London, and endeavour the appeaſing of his angry ſovereign. But, by the advice of his friend Lord Danvers, who knew better how to eſtimate that King's wrath, he ſtayed where he was, and only wrote back to the Doctor an apology, wherein he declared, that the error, in one of the exceptionable paſſages (*p*), was entirely the Printer's, who had put *is* inſtead of *was*; and that when he himſelf mentioned the precedency of France before England, 'beſides, that he did not ſpeak of Eng'land as it then ſtood augmented by Scotland, he took what he did ſay from Camden in 'his Remains.' James was hereby ſatisfied, and Heylin took care, on the other hand, that the whole clauſe, which gave ſo much diſguſt, ſhould be left out of all future impreſſions (*q*). This work was ſucceſſively enlarged, 'till it became a great folio [*A*]. In 1623

[*A*] *'Till it became a great folio.*] Intitled, COSMOGRAPHY, *in four Books; containing the Geography and Hiſtory of the whole World, and all the principal Kingdoms, Provinces, Seas, and the Iſles thereof.* Several editions of it, in this ſize, were printed at London, 1652, 1664, 166-, 1682: the laſt was in the year 1703; ſaid to be improved beyond all the former, with an hiſtorical continuation to that time, by Edmund Bohun, Eſquire. It was towards the expiration of the year 1648, that Heylin ſet about the enlarging of this work, which has done him more honour than all his other writings, whereof he has given ſome account in his preliminary advertiſement to the reader. He there ſays, That being, by the unhappineſs of his deſtiny, or the infelicity of the times, deprived of his preferments, and diveſted of his miniſterial function, as to it's public exerciſe, he had leiſure enough, and opportunity of ſpending more idle hours than he ever expected or deſired. Under theſe circumſtances, being willing to do ſomewhat whereby enſuing times might know how he had paſſed away thoſe vacant ſeaſons; and conſidering of ſome particulars within his power, and anſwerable to that ſmall ſtock of books which he had recruited, (his own being taken from him, and diſpoſed of, contrary unto public order) he was requeſted by ſome friends of no common quality, to review his Geography, to make it more compleat, and ſo render it more uſeful to an Engliſh reader. This motion he at firſt neglected. His deſuetude from thoſe younger ſtudies, his great want of books, the ſad complexion of the times, and the unhandſome entertainment which his endeavours for the public had lately met with, ſeeming ſufficient to diſſuade him from the undertaking.——But, afterwards, being preſſed to it by ſome Members of Parliament, and by others of great rank, but ſuch different intereſts, that he wondred how they could all center on the ſame propoſal, he thought it, at the laſt, a more Chriſtian duty, to ſatisfy the honeſt deſires of ſo many men, than to ſacrifice any longer to his own privacy and retiredneſs, to which he had intended to devote himſelf; and accordingly reſolved to venture on it. An accident which happened in the month of January, 1640, had likewiſe an influence on him in this matter. It was then his ill fortune to ſuffer under ſome miſapprehenſions which had been entertained againſt him, and to be brought before the Committee for the Courts of Juſtice, on the complaint of Mr Prynne, then newly returned from his confinement, and in great credit with the vulgar. Heard by thoſe Commiſſioners he was, with a great deal of ingenuous patience, and diſmiſſed by them without any cenſure; but moſt deſpightfully reviled and perſecuted, with

(r) Wood, ubi ſupra.

1623 he took Orders, being ordained Deacon and Prieſt by Dr Howſon, Biſhop of Oxford, at St Aldate's-church in that city (r). In 1625, he paſſed over into France, and continued abroad about ſix weeks; in which time he alſo viſited ſome of the adjacent iſlands. However he might like that country as to the ſoil and climate, he certainly entertained but a mean opinion of the people, whether as individuals, or as a nation; and has expreſſed a great contempt of them, in the relation of his journey that he publiſhed thirty years after. April 24, 1627, he anſwered, *pro forma*, upon theſe two queſtions, 1. *An Eccleſia unquam fuerit inviſibilis?* i. e. 'Whether the Church was ever inviſible?' 2. *An Eccleſia poſſit errare?* i. e. 'Whether the Church can err?' Both of theſe he determined negatively. This raiſed a mighty clamour againſt him, as a Papiſt, or, at leaſt, a favourer of Popery. And, to ſay the truth, there are ſome doctrines very friendly to that religion, which we may ſuppoſe this diſputant was not over deſirous of undermining. With regard to the firſt of theſe queries, it may be obſerved, The rigid Calviniſts of that day were for unchurching the whole Romiſh Communion, alledging, they had utterly deſtroyed Chriſtianity by their idolatrous corruptions; while Mr Heylin, and his Arminian party, were for doing the ſame good turn for all of the Calviniſtical ſtamp, as having departed from Chriſt when they left the Biſhops. The Calviniſts (denying the Church of Rome to be a true Church) when preſſed with this queſtion, *Where the Church of Chriſt was for ſeveral ages preceding the Reformation*, were uſed to have recourſe to the Berengarians

with exceſſive noiſe and violence, by ſuch as thronged about the doors of that committee, to expect the iſſue, and even in the ſtreets.——Amongſt others, he was encountered, in his paſſage from Weſtminſter to Whitehall, by a tall big gentleman, who thruſting him rudely from the wall, and looking over his ſhoulder at him, in a ſcornful manner, ſaid, in a hoarſe voice, *Geography is better than Divinity*; and ſo paſſed along. Whether his meaning was, that the Doctor was a better Geographer than Divine; or that Geography had been a ſtudy of more credit and advantage to him in the eyes of men, than Divinity was like to prove, Heylin could not determine; but ſure it is, he afterwards very often thought of it; and the thought thereof had it's effect, in drawing him to look back on thoſe younger ſtudies, in which he was reſolved to have dealt no more: and thereto, in the preface of his Microcoſm, had obliged himſelf; where he had ſolemnly declared, that the reader 'ſhould not fear any further enlargements, 'which might make him repent his (then) preſent 'markets; that it had received his laſt hand; and 'that from thenceforth he would look upon it as a 'ſtranger only.' But it was meant withal, the Doctor ſays, and expreſſed accordingly, unleſs it were for the 'amending of ſuch errors, of which, by the 'ſtrength of his own judgment, or any ingenuous in-'formation, he ſhould be convicted.' And errors he found ſo many, on this laſt peruſal, and thoſe not only verbal but material, as did not only free him from that obligation, but did oblige him to a further review thereof. For being written in an age on which the pride of youth and ſelf-opinion might have ſome predominancies, he thought it freer from miſtakes, than he, on examination, found it. And thoſe miſtakes, by running through eight editions, ſix of them without his peruſal or ſuperviſing, ſo increaſed and multiplied, that he could no longer call it his, or look upon it with any tolerable degree of patience. So that if the importunity of friends had not enforced him, in a manner, on this employment, the neceſſity of conſulting his own fame, and leaving the work fair behind him, would have perſuaded him, in the end, to do ſomewhat in it. Now, as to what the world might expect from ſo great enlargements, the Doctor ſays, his deſign, originally, was only to look over the former book, to purge it of the errors it had contracted; and not ſo much to make a new book, as correct the old. But when he had more ſeriouſly conſidered of it, he found ſufficient reaſon to change that purpoſe, to make it new both in form and matter; and to preſent it to the world with all thoſe advantages which a new book might carry with it. In the purſuance of this work, as he has taken on himſelf the parts of an Hiſtorian and Geographer, ſo he has not forgotten that he is an Engliſhman, and, which is ſomewhat more, a Churchman. As an Engliſhman, he has been mindful on all occaſions, to commit to memory the noble actions of his country, exploited both by ſea and land, in moſt parts of the world.——Though the Hiſtory and Chorography of the world be his principal buſineſs, yet he has apprehended every modeſt occaſion of recording the heroic acts of his native ſoil, and filing on the regiſters of perpetual fame, the gallantry and brave atchievements of the people of England; exemplified in their many victories and ſignal ſervices in Italy, France, Spain, Scotland, Belgium; in Paleſtine, Cyprus, Africa, and America, and indeed, where not? nor has he pretermitted their great zeal and piety, in converting to the faith ſo many of the German and Northern nations, Franconians, Thuringians, Heſſians, Saxons, Danes, Friſons; as alſo amongſt the Scots and Picts; together with thoſe of Lithuania, and the people of Norway.——And as he has been zealous to record the actions, ſo he has been as careful to aſſert the rights of the Engliſh nation, inherent perſonally in their Kings, by way of public intereſt in the ſubject alſo. Of this kind are, the true ſtating of the title of the Kings of England to the Crown of France; demonſtrating the vaſſalage of the kingdom of Scotland to the Crown of England; vouching the legal intereſt of the Engliſh nation, in right of the firſt diſcovery or primier ſeizure, to Eſtotiland, Terra Corterialis, Newfoundland, Novum Belgium, Guaiana, the countries near the Cape of Good-Hope, ſeveral of the Indian iſlands, and ſome other places, againſt all pretenders: inſinuating the precedency of the Engliſh kings before thoſe of Spain, with their ſovereignty in the Britiſh ocean. Next, as a Church-man, he has taken eſpecial notice of the antient and preſent face of Chriſtianity, in all parts of the world; the planting and government of Churches, alſo the heterodoxies and opinions of thoſe ſeveral ſects into which it doth now ſtand diſmembred. As a Geographer, he has been exact in giving every province it's peculiar bounds, in laying out their ſeveral land-marks, tracing the courſe of moſt of the principal rivers, and ſetting forth the ſituation and eſtate of the chiefeſt towns.——And herein he has taken pains in ſearching out the firſt inhabitants of each ſeveral country, as far as he could ſee by the light of letters, or go by probable conjectures in finding out the place of ſuch ancient cities as are now decayed, not eaſily viſible in their ruins; and adding to ſuch cities as are now in being (if of any antiquity) their original names.——Laſtly, as an Hiſtorian, he has traced the affairs of each ſeveral country, from the firſt inhabitants thereof, 'till theſe later times. For the better doing of which, he has taken extraordinary care, to ſettle all the firſt adventurers (after the proud attempt at Babel) in their right plantations; and that in the way of an introduction, that he might the eaſier know where he was to find them, and that he might go on with their affairs undiſturbedly. The reſt of their occurrences he has ſummed up into ſo ſhort an abſtract, as may be uſeful to the learned in the way of a remembrancer; to the leſs knowing man in the way of a tutor.—Nor has he only kept himſelf to the ſtory of kingdoms, or the greater nations, which are, or have been, of the greateſt conſideration in the ſway of the world; but looked on the eſtates of ſuch Dukes, Earls, and inferior Princes, as in their times have had the government of thoſe parts which gave title to them; whoſe actions and ſucceſſions are diſtinctly ſpecified, and all ſuch alterations noted, as have happened either in the ruin of ſuch eſtates, or the tranſlating of them from one houſe to another: until the year 1648.

Berengarians in Italy, the Waldenſes in France, the Wicliffiſts in England, and the Huſſites in Bohemia. But this way of accounting was not approved by Mr Heylin. He would not be obliged to the ſcattered conventicles (as he calls them) of theſe ſculking ſchiſmatics, for any defence of the Proteſtant Church (and conſequently of the renowned Church of England), ſeeing they themſelves could hardly be deemed Churches. By recurring to theſe ſects, that ſucceſſion of the Hierarchy, which the Church of England claims from the very Apoſtles and their immediate ſucceſſors, he judged would be utterly diſcontinued: and therefore he choſe rather to find out a viſible Church in Aſia, Ethiopia, Greece, yea Rome itſelf, as alſo in the weſtern provinces, then ſubject to the Roman Biſhop, when he was chief Patriarch: and as there were Epiſcopal Churches at all times, conſpicuouſly, in thoſe places, there was a ſufficient ground, as he thought, for his deciſion concerning the Church's *perpetual viſibility*. However, Mr Heylin was not eaſy under the charge of being popiſhly affected; for which reaſon, to clear himſelf from that imputation, he took an opportunity, preaching before the King in November following, on John iv. 20. of declaring vehemently againſt ſome of the errors and corruptions of the Romiſh Church (*s*). In the beginning of the year 1628, the Earl of Danby recommended him to the favour of Biſhop Laud, then of Bath and Wells, as a man deſerving ſome good preferment in the Church: for the power and ſplendour of which he was a moſt hearty advocate (*t*). In the latter end of this ſame year he waited on that nobleman, in quality of Chaplain, to Guernſey, of which iſland his Lordſhip was Governor. He continued there about three weeks only; and after his return wrote an account of that voyage, which was printed and publiſhed along with the relation of his former journey, abovementioned. June 13, 1629, he took the degree of Bachelor of Divinity (*u*); and, by the intereſt of his aforeſaid noble patron, was made one of the Chaplains in ordinary to his Majeſty (*x*). On Act-Sunday, 1630, he preached before the Univerſity of Oxford, at St Mary's, on Matth. xiii. 25. In his ſermon, he freely delivered his ſentiments in reſpect of an affair, which, at firſt ſight, had a ſpecious appearance of promoting the honour and emolument of the eccleſiaſtical ſtate, but was, in reality, a moſt iniquitous ſcheme, to the prejudice of the laity, and of no ſervice where it was pretended to avail. This was a feoffment, that ſome deſigning perſons had obtained, for the buying in of impropriations. Mr Heylin ſaw through the diſguiſe, and laid bare the knavery. This made a noiſe, and greatly incenſed thoſe whoſe views were thereby in danger of being diſappointed. About this time he reſigned his fellowſhip, having been married almoſt two years before to Letitia, a daughter of Thomas Highgate of Heys, Eſq; According to the ſtatutes he ſhould have quitted his fellowſhip before he altered his condion, or immediately after; and his being ſuffered to retain it ſo long, illegally, was, becauſe thoſe who would otherwiſe have obliged him to relinquiſh, were ignorant of his nuptials. They were indeed celebrated in his own college-chapel, on St Simon and Jude's day, between ten and eleven in the morning, before witneſſes enough, of both ſexes, and the wedding-dinner given in his own chamber, to which even ſome of the Fellows were invited; and yet the thing was ſo managed, that theſe gentlemen knew not it was a marriage-feaſt, but ſuppoſed it merely a friendly entertainment; the reſt of the company keeping the hymenial rites, whereat they had been juſt before, a profound ſecret. Mr Heylin's behaviour in this caſe was not quite juſtifiable; for, undoubtedly, the circumſtances thereof were intentionally ſo ordered, as to evade the laws of the ſociety, and defeat the founder's inſtitution, which to be ſure he had engaged to obſerve and maintain: he hearkened to the voice of intereſt, and not to his conſcience, in the matter. The fact is not to be queſtioned; we have the teſtimony, for it, of Wood (*y*), Barnard (*z*), and Vernon (*a*) The laſt juſtifies our reflections; he ſays of the marriage, 'It was a 'marriage clancularly, a marriage in maſquerade, a marriage incognito to the college, 'becauſe the Preſident and Fellows neither knew nor believed there was a true ſolemniza-'tion of marriage in their chapel; and though ſome of them were invited to the wedding-'dinner, they took the invitation to a merriment and not to a marriage. In truth, it 'was not clandeſtine againſt the laws of the Church and Realm, becauſe the uſual ce-'remonies and formalities of both were performed in the ſolemnization betwixt the par-'ties; but ſuch marriage was expreſsly againſt the laws and ſtatutes of the college-foun-'der, and much more for a married Fellow to keep his fellowſhip after.' In 1631, Mr Heylin publiſhed his *Hiſtory of that moſt famous Saint or Soldier of Jeſus Chriſt, St George of Cappadocia, aſſerted from the fictions of the middle ages of the Church, and oppoſition of the preſent*. To this was ſubjoined, *The Inſtitution of the moſt noble Order of St George, named the Garter, and a Catalogue of all the Knights of the Garter from the firſt Inſtitution to this preſent; as alſo of the principal Officers thereto belonging*. There were two impreſſions of theſe pieces at London, quarto, in the years 1631 and 1633. At the end of the latter edition is a review of the whole performance, conſiſting of additions and emendations. Mr Wood intimates, as if the motive of Heylin's undertaking this work, ſoon after his being appointed Chaplain to the King, was a deſire of becoming known to the great ones at Court, and conciliating their favour in order to his advancement (*b*). Be that as it will, it is certain his Majeſty accepted the work very graciouſly, when he attended him with it at Whitehall, on the ſecond of February, 1630-31, being introduced to his preſence by Dr Laud, then raiſed to the ſee of London. Soon after this, he received ſeveral tokens of this Prince's benevolence; for, in October 1631, he was preſented by him to the rectory of Hemingford in Huntingdonſhire; to a prebend of Weſtminſter, on the firſt of

November following; and ſhortly after to the rectory of Houghton, in the biſhoprick of Durham, worth nearly four hundred pounds a year (*c*). This laſt he afterwards exchanged with Dr Marſhall for the rectory of Alresford in Hampſhire; and this he did by deſire of his Majeſty, that he might be more in the neighbourhood of the Court (*d*). After waiting on the King with it, he carried his Hiſtory to all the Knights of the Garter and Perſons of Quality which happened to be then in London. He met with a genteel reception from all, but Archbiſhop Abbot and the Earl of Exeter. The former had a contemptuous opinion of the ſubject, and the latter of the author, whom he treated as a begging ſcholar; an indecence, of which that nobleman was afterwards aſhamed (*e*). The book was no ſooner publiſhed, than it was attacked by Dr Hakewill, in a diſcourſe (as Heylin ſays) *full of moſt baſe and malicious calumniations, both againſt the perſon and religion of the author* (*f*). The King being informed of this circumſtance by Laud, took part in the matter, ſo far as to command Heylin to conſider Hakewill's objections; and that he might be the better qualified for ſuch a taſk, he ſent him to ſearch the records of the Order of the Garter at Windſor. Having ſo done, he printed a ſecond edition of his Hiſtory, in 1633, wherein he endeavoured to invalidate the exceptions of his antagoniſt. This ſeems to have had ſome effect on Hakewill; for, in a ſecond edition of his *Apology or Declaration of the Power and Providence of God*, he retracted thoſe paſſages in the firſt which related to St George. However, it is plain that he was far from being entirely reconciled to Heylin's book: for though he made no formal reply to what concerned him in the ſecond impreſſion of it, he, about the ſame time, acquainted his friends what his ſentiments were thereof, in ſeveral letters; in one of which he writes thus (*g*). 'In the ſecond impreſſion of 'this book [the Hiſtory of St George], where he hath occaſion to ſpeak of the Roman 'writers, eſpecially the legendaries, he magnifies them more, and when he mentions our 'men, he vilifies them more, than he did in his firſt edition. But the matter is not 'much what he ſaith of the one or the other, the condition of the man being ſuch, that his 'word hardly paſſeth for commendation or ſlander, &c.' April 13, 1633, Mr Heylin was created Doctor of Divinity (*h*). In his Latin exerciſes for this degree he diſputed on the enſuing queſtions, I. *Whether the Church hath authority in determining controverſies of Faith?* II. *Whether the Church hath authority of interpreting the Sacred Scriptures?* III. *Whether the Church hath authority of appointing rites and ceremonies?* Of all which he maintained the affirmative. This gave freſh offence to Prideaux, and all the puritanical members of the univerſity. This orthodox divine accuſed him on the ſpot, of falſifying the doctrine of the Church, in charging the article with that ſentence, *Habet Eccleſia ritus ſive ceremonias, &c.* which was not found in the whole body of it. And, for proof thereof, he read the article out of a book there before him, beginning thus, *Non licet Eccleſiæ quicquam inſtituere quod verbo Dei ſcripto adverſetur*, &c. This book was the Harmony of Confeſſions, publiſhed at Geneva, 1612, which was indeed, in this particular, conformable to the articles, as they ſtood in the time of Edward the Sixth, 1552, wherein that ſentence was not found. Heylin, gueſſing the book by the ſize of the volume, anſwered, that however it might be there, it was otherwiſe, and as he had affirmed, in the articles agreed on by the Convocation in 1562, to which moſt of the clergy had ſubſcribed. This aſſertion of our new doctor did not ſtop the mouth of Prideaux, or quite ſatisfy others that were preſent, and of the ſame opinion with him. Whereupon, Heylin ſent immediately to a neighbouring bookſeller for a book of Articles; which being brought, he read out of it the diſputed one in Engliſh, thus, *The Church hath power to decree rites and ceremonies, and authority in controverſies of Faith*, &c. which done, he delivered the book to a by-ſtander, who deſired a ſight of the paſſage, and it was handed from one to another, 'till all were convinced by ocular demonſtration (*i*), and Prideaux, as well as his partizans, ſilenced [*B*]. This warm man, in the courſe of the diſpute, uttered ſome tenets, that gave no leſs diſguſt to Laud, Chancellor of Oxford, and to the King, whom that prelate informed of them, than Heylin's had to him. He aſſerted, *The Church was a mere chimera.—That it did not teach or determine any thing.—That controverſies had better be referred*

(*i*) Appendix to the 2d part of Heylin's Examen Hiſtoricum.

[*B*] *And Prideaux, as well as his partizans, ſilenced.*] Anthony Collins remarks on this (1), that they were ſatisfied with very little reaſon; 'for the Engliſh edi-'tion produced, which was in all probability the late 'edition ſet forth with the King's Declaration, ſeems 'very improper to determine the controverſy, when 'the queſtion related to the Latin articles. If any 'Latin copy of the articles, printed by authority, had 'been brought into the ſchools, the aſſembly muſt 'have been ſatisfied of the contrary, if they had 'judged of the authority of the clauſe by a printed 'copy of the articles.' But, after all, what is there in the Latin article, as read by Prideaux, any more than in the Engliſh one, produced by Heylin, that contradicts the poſition of this latter which gave ſo much offence. Where is the difference, in ſenſe, between *Non licet eccleſiæ quicquam inſtituere quod verbo Dei ſcripto adverſetur*; and, *The Church hath power to decree rites or ceremonies, and authority in controverſies of Faith: yet not ſo as to ordain any thing contrary to God's written word.* Here is no real, but a ſeeming diverſity only. For though the Latin is negatively, and the Engliſh affirmatively, expreſſed; yet the affirmation of the one is implied in the negation of the other: for, is it not an abſurdity to talk of limiting a power which does not exiſt? if the Church, then, had not, generally, a power of decreeing, it would be nonſenſe to ſay, ſhe might not decree contrary to God's word. The ſaying, ſhe may not ordain any thing contrary to the Scriptures, infers, ſhe may ordain any thing, relating to her province, that is conſiſtent with them.—Whether the Church always confines herſelf within due bounds, or may not ſometimes miſuſe her authority?—Whether ſhe has any authority in ſuch things at all?—Or, finally, whether there is ſuch a thing as a Church, according to Heylin's acceptation of that term? are other points: but, moſt certainly, the twentieth article of the Church of England, whether Latin or Engliſh, ſeems as favourable as need be wiſhed, to the cauſe Heylin defended.

(1) Hiſtorical and critical Eſſay on the 39 Articles, introduction, p. 28.

[*C*] *Of*

red to Univerſities than to the Church, and might be decided by the Literati there, even though Biſhops were laid aſide (*k*). Heylin afterwards found an opportunity of revenging himſelf on Prideaux [*C*], for the ill treatment he had from him, at the times of his taking the two aforeſaid degrees. In 1636 he publiſhed his *Hiſtory of the Sabbath* (*l*), which he wrote for reconciling the people to that order the King had lately iſſued, for permitting (if not enjoining) public games and diverſions on the evenings of the Lord's day. This treatiſe endeared him greatly to his Majeſty, and the leſs pious (whether lords or prelates) of the Court; but rendered him no leſs odious to thoſe of a more religious caſt throughout the kingdom. This book was twice printed in quarto, at London, in the ſpace of about a year. He now likewiſe publiſhed *A Coal from the Altar:* or, *An Anſwer to the Biſhop of Lincoln's Letter to the Vicar of Grantham, againſt placing the Communion-Table in the manner of an Altar.* The Biſhop, in 1637, replied in a piece intitled, *The Holy Table, name and thing.* In this laſt year he put out the following tracts, I. *A brief Diſcourſe, by way of Letter, touching the Form of Prayer appointed to be uſed by Preachers before their Sermons.* II. *A brief and moderate Anſwer to the ſeditious and ſcandalous Challenge of Henry Burton, in two Sermons preached by him on the fifth of November* 1636, *and in the Apology ſet before them.* III. *Antidotum Lincolnienſe:* or, *An Anſwer to a book, intitled, the Holy Table, name and thing.* Williams, Biſhop of Lincoln and Dean of Weſtminſter, having incurred the King and Laud's diſpleaſure, was now ſuſpended and impriſoned; whereupon Heylin was made Treaſurer of the Church of Weſtminſter, and was alſo preſented by the Prebendaries, his brethren, to the rectory of Iſlip near Oxford, in value about two hundred pounds a year: this he exchanged, in 1638, for that of South-Warnborough in Hampſhire; and, the ſame year, was made one of the Juſtices of the Peace for that county. In 1639 he was employed by Archbiſhop Laud to tranſlate the Scotch liturgy into Latin. On the tenth of April, 1640, he was choſen by the College of Weſtminſter their Clerk, to repreſent them in Convocation (*m*). About this time he was involved in new troubles by his old antagoniſt Biſhop Williams [*D*], and William Prynne (*n*). This was a ſeaſon when men of his principles might well be under apprehenſions. A cloud was gathered, which threatned to overwhelm all, who, like him, had diſtinguiſhed themſelves as champions for royal or eccleſiaſtical prerogative. To ſhelter him from the impending ſtorm, he retired from the metropolis, where he had long baſked in the ſhine of a Court, to his parſonage of Alreſford; but not thinking himſelf there ſufficiently ſecure, he retreated to Oxford, then garriſoned by the King, and the ſeat of his reſidence. On this the Parliament voted him a delinquent, and diſpatched an order to their committee at Portſmouth to

(*l*) Athen. Oxon, ut ſupra.

(*m*) See, for theſe particulars, Barnard's Life of Heylin, p. 172, 173, 174, 177. and Wood, Athen. Oxon. Vol. II. col. 278.

(*n*) Some Account of what he ſuffered, by means of this latter, may be ſeen in note [*A*].

[*C*] *Of revenging himſelf on Prideaux.*] This divine had delivered a lecture on the Sabbath, which was ſomewhat freer than ſuited the rigid orthodoxy of that time. However, it ſhould ſeem, the matter had then paſſed without much, if any, obſervation or cenſure But ſhortly after, when the King, by publiſhing the book of ſports on ſundays, had raiſed a violent out-cry throughout the nation againſt himſelf, his evil counſellor Laud, and all who were in the leaſt ſuſpected of doubting the divine inſtitution of that holy day, or that did not zealouſly urge even a Jew-like obſervation of it; Heylin tranſlated this lecture into Engliſh, to which he prefixed a preface, and publiſhed it in Hilary-Term, 1633 4 to the great vexation of Prideaux, who hereby ſuffered much in the eſteem and affection of the Puritans (*z*).

(*z*) Athen. Oxon. Vol. II. col. 278. Hiſt. & Antiq. Univerſ. Oxon. lib. i. p. 340.

[*D*] *By his old antagoniſt Biſhop Williams.*] The Doctor preaching at Weſtminſter-Abbey, and (oddly enough, conſidering his own temper and behaviour) exhorting Chriſtians to moderation, love, and charity among themſelves, for the preſervation of the public peace, although they differed in ſome opinions; proceeded (not very conſiſtently) to juſtify the Church in impoſing doctrines and rites, and to cenſure any oppoſition thereto, in theſe words, 'Is it not that we are 'ſo affected with our own opinions, that we condemn 'whatſoever ſhall opine the contrary; and ſo far 'wedded to our own wills, that when we have eſpouſed a quarrel, neither the love of God, nor the God 'of Love ſhall divorce us from it? inſtead of hearkening to the voice of the Church, every man hearkens 'to himſelf, and cares not if the whole miſcarry, ſo 'that himſelf may bravely carry out his own devices. 'Upon which ſtubborn height of pride what quarrels 'have been raiſed? what ſchiſms in every corner of 'this our Church? to inquire no further, ſome rather 'putting all into open tumult, than that they would 'conform to the lawful government, derived from 'Chriſt and his Apoſtles to theſe very times.' At the ſpeaking of theſe words, the Biſhop of Lincoln, ſitting in the great pew, knocked aloud with his ſtaff upon the pulpit, ſaying, *No more of that point, no more of that point, Peter.* To whom the Doctor readily anſwered, *I have a little more to ſay, my Lord, and then I have done*; which was as follows: 'Others coming 'into cloſe and dangerous factions, becauſe ſome points 'of ſpeculative divinity are otherwiſe maintained by 'ſome than they would have them; alſo regardleſs of 'the common peace, that rather than be quiet, we 'will quarrel with our bleſſed peace-maker for ſeeking 'to compoſe the differences, though to the prejudice 'of neither party. Thus do we fooliſhly divide our Saviour, and rent his ſacred body on the leaſt occaſion, rarely conceiving that a difference in a point 'of judgment muſt needs draw after it a diſjoining of 'the affections alſo, and that conclude at laſt in an 'open Schiſm. Whereas diverſity of opinions, if 'wiſely managed, would rather tend to the diſcovery 'of the truth, than the diſturbance of the Church, and 'rather whet our induſtry than excite our paſſions. It 'was St Cyprian's reſolution, not to ſuſpend any man 'from the communion of the Church, although the 'matter then debated, was, as I take it, of more 'weight than any of the points now controverted: 'which moderation if the preſent age had attained 'unto, we had not then ſo often torn the Church in 'pieces, nor by our frequent broils offered that injury 'and inhumanity to our Saviour's body, which was 'not offered to his garments.' One would think there was nothing in theſe words that could diſpleaſe a biſhop; but they occaſioned an altercation between his Lordſhip and the Doctor, in which the latter acted with an unconquerable reſolution, and, at laſt, got the better of the prelate. For when Heylin was brought before the committee, a ſecond time, as may be ſeen in note [*A*], and this matter was there alledged againſt him, it was declared by the unanimous voice of all then preſent, that there was nothing in the aforeſaid paſſage which did not become an honeſt man to ſpeak, and a good chriſtian to hear; and not only ſo, but that the Biſhop was tranſported beyond his bounds, and failed in his accuſtomed prudence.——The troubles alſo into which he was brought by Mr Prynne, who ſummoned him before the committee for the Court of Juſtice, and there accuſed him of *being one of the chief agents and contrivers of all his ſufferings*, ſoon came to an end, without any grievous conſequence.

[*E*] *There*

to ſequeſter his whole eſtate, and ſeize upon his goods. In conſequence of this ſevere decree, he was deprived of his moſt curious and valuable library; it being carried, with other his houſhold furniture, to that town. As he was thus ſtripped of his ſubſtance, and the income of his livings with-held, his condition at Oxford would have been very diſtreſſed, if the King had not appointed him to write a periodical paper, that was publiſhed weekly in that city, intitled *Mercurius Aulicus*: Which, for ſome time before, had been penned by one John Birkenhead, who, as Wood tells us, pleaſed the generality of readers with his waggeries and buffooneries, far more than his ſucceſſor did. This political performance for a while afforded him a ſubſiſtance. But, in 1645, the King's affairs becoming almoſt deſperate, and the *Mercurius Aulicus* no longer ſupported, the forlorn author quitted Oxford, and wandered from place to place, himſelf and family reduced to the utmoſt ſtraits. At Wincheſter he ſtayed for a while with his wife, &c. 'till that city was delivered up to the Parliament, when he was forced again to remove. In 1648, he went to Minſter-Lovel in Oxfordſhire, the ſeat of his elder brother, which he farmed for the ſix or ſeven following years of his nephew, Colonel Heylin, where he ſpent much of his time in writing. He now in ſome meaſure recovered the enjoyment of his temporal eſtate, for which he compounded with the Commiſſioners at Goldſmith's-hall. On his quitting the aforeſaid farm, he went to Abingdon in Berkſhire, reſiding at a manſion called Lacy's-court. Here too he employed himſelf in the compoſing of ſeveral treatiſes, which he printed. In 1657, he ſuffered afreſh in his fortune by decimation. Upon the reſtoration of Charles the Second, he was likewiſe reſtored to all his ſpiritualities. But he undoubtedly expected from that prince ſome very eminent dignity in the Church, then reeſtabliſhed, as he had heroically exerted himſelf in the behalf of it, as well as of the Crown, and endured ſo much on that account, during their ſuffering condition. However, herein he was utterly diſappointed, being never raiſed above the ſub-deanery of Weſtminſter. This was matter of great vexation to him, and of wonder to many others, who did not ſufficiently conſider the diſpoſition, figure, and qualities of the man; which, though well enough for the tool of a party, were not the propereſt recommendations to preferment, or moſt ſuitable to a ſublime ſtation. He died on the 8th of May, 1662, and was interred before his own ſtall, within the choir of the abbey, where a monument was erected to his memory (*o*). Wood and Barnard have each of them left us a character of him, but there is nothing extraordinarily engaging in the features of either [*E*]. His works are numerous, but not very valuable; we ſhall eſpecially recite the titles of thoſe that have not been mentioned in the courſe of theſe memoirs [*F*].

(*o*) See, for the foregoing particulars, Barnard's Life of Heylin, p. 202, 203, 204, 205. Wood, Athen. Oxon. Vol. II. col. 278, 279.

[*E*] *There is nothing extraordinarily engaging in the features of either.*] Wood tells us (3), that he was 'A perſon endowed with ſingular gifts, of a ſharp and 'pregnant wit, ſolid and clear judgment. In his 'younger years he was accounted an excellent poet, 'but very conceited and pragmatical; in his elder a 'better hiſtorian, a noted preacher, and a ready 'or extemporanean ſpeaker. He had a tenacious 'memory to a miracle. He was a bold and undaunted 'man among his friends and foes (though of very mean 'port and preſence) and therefore by ſome of them he 'was accounted too high and proud for his function — 'A conſtant aſſerter of the Church's right and the 'King's prerogative; a ſevere and vigorous oppoſer of 'rebels and ſchiſmatics, a deſpiſer of envy, and in 'mind not at all diſcouraged.—In ſome things too 'much a party to be an hiſtorian, and equally an ene'my to Popery and Puritaniſm.' Dr Barnard informs us (4), that, 'He was of a middle ſtature, his 'face oval, his complection florid, his hair ſhort 'and curling, his eyes quick and ſparkling, be'fore he loſt his ſight; that he had a prodigious me'mory; and that he was of great generoſity and 'charity.'

(4) Barnard, p. 258, 259.

[*F*] *That have not been mentioned in the courſe of theſe memoirs.*] I. *Theomachia*, a comedy, never printed. II. *Auguſtus*, an Eſſay, printed 1682, and ſince inſerted into his *Coſmography*. III. *An uniform Book of Articles to be uſed by all Biſhops or Archdeacons in their Viſitations*. London, 1640, quarto. IV. *De jure paritatis Epiſcoporum*, written, 1640, on occaſion of a queſtion in the Houſe of Lords, whether Biſhops ſhould be of the committee for the preparatory examinations in the cauſe of the Earl of Strafford. It is printed among his Hiſtorical and Miſcellaneous Tracts. V. *Reply to Dr Hakewill's Diſſertation touching the Sacrifice of the Euchariſt*, London, 1641, quarto. VI. *An help to Engliſh Hiſtory*, &c. London, 1641, octavo. VII. *Hiſtory of Epiſcopacy*, London, 1642, quarto. VIII. *Hiſtorical Narration of Liturgies*, &c. IX. *A Relation of Lord Hopton's Victory near Bodmin in Cornwall*, &c. X. *A brief Relation of two remarkable Occurrences in the Northern Parts, viz. The landing of the Queen in Burlington-Bay from Holland, and of the Repulſe of the Rebels at Newark*, Oxford, 1642, quarto. XI. *A View of the Proceedings in the Weſt for a Pacification*. XII. *A Letter to a Gentleman in Leiceſterſhire about the Treaty at Uxbridge, ſhewing that all the Overtures, which have been made for Peace and Accommodation, have proceeded from his Majeſty only*. XIII. *The Round-Head's Remembrances: Or a true and particular Relation of the great Defeat given to the Rebels by his Majeſty's Subjects of Cornwall*, &c. 1643. XIV. *A Relation of the Proceedings of Sir John Gell*, &c. printed 1643. XV. *The Black Croſs; ſhewing that the Londoners were the Cauſe of the preſent Rebellion*. XVI. *The Rebel's Catechiſm compoſed in an eaſy and familiar way, to let them ſee the heinouſneſs of their offence*, printed 1643, quarto. XVII. *Diſcourſe in Anſwer to the common, but groundleſs, clamour of the Papiſts, nick naming the Religion of the Church of England, by the Name of a Parliament Religion*. This piece was written in 1644, at the requeſt of a friend; but when printed next year, at Oxford, quarto, it was intitled, *Parliament Power in Laws for Religion: Or an Anſwer to that old and groundleſs Calumny*, &c. It went through other editions, with a different title from the two former. XVIII. *A brief Relation of the Death and Sufferings of the moſt reverend and renowned Prelate the Lord Archbiſhop of Canterbury, with a Copy of his Speech, and other Paſſages on the Scaffold*, &c. Oxford, 1644, quarto. XIX. *Bibliotheca Regia: Or the Royal Library*, Lond. 1649, 1650, 1659, 8vo. XX. *The Stumbling-block of Diſobedience and Rebellion, cunningly laid by Calvin in the Subject's Way, diſcovered, cenſured, and amended*, London, 1658, quarto. XXI. *The promiſed Seed*, in Engliſh verſe. XXII. *The undeceiving the People in Point of the Tythes*, &c. London, 1648, 1651. XXIII. Theologia Veterum: *The Sum of Chriſtian Theology contained in the Creed, according to the Greeks and Latins*, &c. London, 1654, 1673, Folio. XXIV. *Obſervations on the Hiſtory of the Reign of K. Charles, publiſhed by Hamon L'Eſtrange, Eſq; for the Illuſtration of the Story*, London, 1656, octavo. L'Eſtrange anſwered this, and Heylin replied in a piece intitled, XXV. Extraneus Vapulans; *Or the Obſervator reſcued from the violent but vain aſſaults of Hamon L'Eſtrange, Eſq; and the back Blows of Dr Barnard, an Iriſh Dean*, &c. XXVI. Eccleſia vindicata; *Or the Church of England juſtified*,

1. *In*

1. *In the Way and Manner of her Reformation, &c.* 2. *In officiating by a publick Liturgy.* 3. *In prescribing a set Form of Prayer to be used by Preachers before their Sermons.* 4. *In her Right and Patrimony of Tithes.* 5. *In retaining the episcopal Government, and therewithal the canonical Ordination of Priests and Deacons*, London, 1657, quarto. XXVII. Respondet Petrus; *Or the Answer of Peter Heylin, D. D to so much of Dr Barnard's Book entitled*, The Judgment of the late Primate of Ireland, &c. *as he is made a Party by the said Lord Primate in the Point of the Sabbath*, &c. London, 1658, quarto. XXVIII. *An Appendix in Answer to certain Passages in Mr* Sanderson's History of the Life and Reign of K. Charles, &c. XXIX. *Short View of the Life and Reign of K. Charles (the second Monarch of Great-Britain) from his Birth to his Burial*, London, 1658, octavo. XXX. Examen Historicum; *Or a Discovery and Examination of the Mistakes and Defects in some Modern Histories*, &c. These were, Fuller's Church History of Britain; and Sanderson's Historie of Mary Queen of Scots; and of her son K. James the VIth; of King James the First of Great-Britain; and of K. Charles the First, from his cradle to his grave. XXXI. *The Parable of the Tares, expounded and applied in ten Sermons, with three other Sermons by the same Author*, London, 1659, 1661, quarto. XXXII. Certamen Epistolare: *Or the Letter Combat, managed by Peter Heylin, D. D. with*, 1. *Mr Baxter of Kidderminster.* 2. *Dr Barnard of Gray's-Inn.* 3. *Mr Hickman of Magdalen-College, Oxon.* 4. *James Harrington, Esq*; &c. London, 1650, octavo. XXXIII. Historia Quinquarticularis: *Or a Declaration of the Judgment of the Western Churches, and more particularly of the Church of England, in the five controverted Points, reproached in these last Times by the Name of* Arminianism, &c. London, 1660, quarto. XXXIV. *A Sermon preached in the Collegiate Church of St Peter's in Westminster, on the 29th of May, 1661, on* Psalm xxvi. 21. London, 1661, quarto. XXXV. *History of the Reformation of the Church of England, from the first Preparations to it made by K. Henry VIIIth, until the legal settling and establishing of it under Q. Elizabeth*, &c. London, 1661, 1670, 1674, folio. XXXVI Cyprianus Anglicus: *Or the History of the Life and Death of William Laud, Archbishop of Canterbury*, &c. London, 1668, 1671, folio. XXXVII. Aerius Redivivus: *Or the History of the Presbyterians. Containing the Beginning, Progress, and Successes of that Sect; their oppositions to Monarchical and Episcopal Government; their Innovations in the Church; and their Imbroylments of the Kingdoms and Estates of Christendom in the Pursuit of their Designs, from the Year* 1536 *to* 1647, London, 1670, 1672, folio. XXXVIII. *Historical and Miscellaneous Tracts*, London, 1681, folio. Some of these tracts were separately published before this edition of them, and have been already mentioned in this note. Dr Heylin wrote also, *A Discourse of the African Schism*; and, in 1637, at Laud's desire, drew up, *The Judgment of Writers on those Texts of Scripture, in which the Jesuits found the Popedom and the Authority of the Roman Church*: both which pieces were intended by the Archbishop as materials towards his answer to Fisher, which was printed, 1639, in folio. I

HOBBES [THOMAS], a celebrated writer in the XVIIth century, was born at Malmesbury in Wiltshire, April 5, 1588. His father was a minister of that town, of the same name, not very remarkable for his learning, and who contented himself with reading to his congregation the Homilies set forth by authority, rather than adventure on composing discourses of his own (*a*). His mother was so frighted with the news of the Spanish fleet, then upon the English coast, that she was brought to bed of her son Thomas before her time, who, notwithstanding, was of a strong and healthy constitution. At four years of age he was taught to read, and, when he was about six years old, he began to apply himself to the learned languages (*b*). When he was in the eighth year of his age, he was put under the care of Mr Robert Latimer, then Master of the grammar-school at Malmesbury; who, having a great opinion of his parts, treated him with much kindness and indulgence, and gave him all possible assistance in his studies. In these he made so extraordinary a progress, that, before he was sent to the university, he translated the Medea of Euripides out of Greek into Latin verse (*c*). In 1603, he was entered of Mary-Magdalen-hall in Oxford, of which Dr Hussee was then Principal, who was afterwards knighted, and became Chancellor of the diocese of Salisbury, a learned man, and a true patron of letters. While at college, he was chiefly supported by an allowance from his uncle, who was Alderman of Malmesbury, the chief office in that corporation, and who at his death left him a small annuity, that he might not be obliged to desert his studies (*d*). In 1607, our author took the degree of Bachelor of Arts; the year following, by the recommendation of Mr John Wilkinson, Principal of Magdalen-hall, he was taken into the family of the Right-Honourable William Cavendish, Lord Hardwicke, soon after created Earl of Devonshire, in quality of tutor to his son William Lord Cavendish; with whom, being much of an age, he was admitted to an extraordinary degree of intimacy, so as not only to assist him in his studies, but to be his companion also in the sports of the field, to which that young lord was much inclined. By his prudent behaviour, Mr Hobbes recommended himself so effectually, both to this young nobleman and his father, that he was sent abroad with him on his travels in 1610, and made the Tour of France and Italy, which gave him an opportunity of making himself compleatly master of the languages of those countries, as well as of the politer parts of learning (*e*). Upon his return with the Lord Cavendish, finding that his stock of academical knowledge was somewhat decayed, he applied himself with such diligence to the study of the best authors of antiquity, that he arrived at a clear strong Latin stile, and acquired a perfect knowledge of the Greek tongue. These accomplishments, with a good address, made him known to persons of high rank, as well as men eminently distinguished for their parts and learning; such as the Lord-Chancellor Bacon, who admitted him to a great degree of familarity, and, it is said, made use of his pen for translating some of his excellent works into Latin. He was likewise much in the favour of that learned and accomplished nobleman, Edward, Lord Herbert of Chirbury. Another of his intimate friends was, Sir Robert Ayton, Secretary to Queen Anne consort to King James the First, one who had raised himself a high reputation, by the elegancy with which he wrote Latin verse (*f*). The celebrated Benjamin Johnson was likewise of his acquaintance, and had so great an esteem for him, that he revised the first of his works that our author made public, viz. an English translation of the History of Thucydides, undertaken from an honest and laudable desire of preventing those

disturbances he was apprehensive might arise in his own country, by shewing the fatal consequences of intestine troubles. But while he meditated this design, his noble patron, William Earl of Devonshire, departed this life in 1626; and, in 1628, the very same year that work was published, his son and successor, who was of the same Christian name, died likewise; in whose service Hobbes had lived twenty years, first in quality of his tutor, and afterwards of his secretary (g). These strokes affected him to such a degree, that he willingly accepted an offer made him of going abroad with the son of Sir Gervase Clifton, whom he accompanied into France, and stayed there some time. As he had never been any great admirer of the Logics, Physics, and Metaphysics of the schools, he thought his time might be better employed in the pursuit of the Mathematics. He began therefore with the works of Euclid, which he read with great application and extraordinary pleasure; not so much on account of the subject, for he thought the properties and relations of lines and angles, speculatively considered, was of very little consequence to the business of human life, though of very great use when reduced to practice; but his sagacity taught him to admire, in the writings of that Philosopher, the clearness of his reasoning, the connection of his arguments, and the wonderful perspicuity of his method, from whence truth appeared incontestible (b). While his hours were thus employed, he found himself sollicited to return to England, and resume his concern for the hopes of that family, to which he owed so many and so great obligations. The Countess-dowager of Devonshire, a lady more conspicuous from her virtues than her quality, desired to put the young Earl of Devonshire under his care, who was then about the age of thirteen (i). This was very suitable to Mr Hobbes's inclinations, who discharged this trust with great diligence and fidelity. He took occasion from this employment to republish his translation of Thucydides, to which he prefixed a dedication to that worthy young nobleman, in which he gives a large character of his father, and represents, in the strongest terms, the gratitude he owed to that illustrious family [A]. The same year he accompanied his pupil to

[A] *The gratitude he owed to that illustrious family.*] In the life of himself, written by Mr Hobbes in Latin verse, we are told the motive of his translating the Peloponnesian War, the same, which we have mentioned in the text; but he says nothing there of the time of it's publication. However, we find it expressly mentioned in the Latin prose life, which has also been attributed to Mr Hobbes, that he published his English translation of Thucydides in 1628 (1). He must therefore have republished it in 1634, as appears from the date of the dedication, as well as that prefixed to such of the first edition as are commonly met with; for the same book being again printed in 1676, with the title only of a second edition, is a very plain proof that the fact really stood as we have stated it. This has been always esteemed one of the best translations that we have of any Greek writer, and the author himself took care of the maps and indexes. There is one thing which must not be passed by, the learned Dr Tennison, afterwards Archbishop of Canterbury, one of the ablest, as well as one of the fairest antagonists Mr Hobbes ever met with, is clearly of opinion, that he borrowed the fundamental maxims of his politics, from the oration of Euphemus the Athenian Ambassador, which is printed in the sixth book of that history (2). At the time it was published, Mr Hobbes was esteemed a very sagacious and public spirited man, one who had nothing so much at heart as promoting the peace and prosperity of his country, by exposing the bad designs of those, who under the specious pretence of zeal for religion, and a patriot concern for liberty, meant to overturn the constitution, and to erect each the edifice of his private fortune out of, as well as upon, the public ruins (3). As to his dedication, it has been ever esteemed a most masterly composition in point of matter, as well as form, and is an excellent specimen of our author's stile, which in those days was very highly applauded, and to this hour has many admirers. We for these reasons produce it, and the reader will (though somewhat long) find nothing tedious in this elegant performance.

To the Right Honourable Sir William Cavendish, Knight of the Bath, Baron of Hardwicke, and Earl of Devonshire.

RIGHT HONOURABLE,

'I take confidence from your Lordship's goodness, in 'the very entrance of this epistle, to profess with simplicity, and according to the faith I owe my master 'now in Heaven, that it is not unto yourself, but to 'your Lordship's father, that I dedicate this my labour, such as it is. For neither am I at liberty to 'make choice of one, to whom I may present it as a 'voluntary oblation, being bound in duty to bring it 'in as an account to him, by whose indulgence I had 'both the time and ammunition to perform it: nor 'if such obligation were removed, know I any to 'whom I ought to dedicate it rather. For by the experience of many years I had the honour to serve 'him, I know this, there was not any who more really, and less for glory's sake, favoured those that 'studied the liberal arts, liberally, than my Lord your 'father did; nor in whose house a man should less 'need the University than in his. For his own study, 'it was bestowed for the most part, in that kind of 'learning which best deserveth the pains and hours of 'great persons, history and civil knowledge; and directed not to the ostentation of his reading, but to 'the government of his life and the public good. For 'he so read, that the learning he took in by study, by 'judgment he digested, and converted into wisdom and 'ability to benefit his country: to which also he applied himself with zeal, but such as took no fire, 'either from faction or ambition. And as he was a 'most able man for soundness of advice, and clear expression of himself in matters of difficulty and consequence, both in public and in private; so also was he 'one whom no man was able either to draw, or justle 'out of the straight path of justice. Of which virtue, 'I know not whether he deserved more by his severity 'in imposing it (as he did to his last breath) on himself, or by his magnanimity in not exacting it to him 'self from others. No man better discerned of [illegible] 'and therefore was he constant in his friendship 'cause he regarded not the fortune nor adherence, 'but the men, with whom also he conversed with an 'openness of heart, that had no other guard than his 'own integrity, and that Nil Conscire. To his equals 'he carried himself equally, and to his inferiors familiarly, but maintaining his respect fully and only with 'the native splendour of his worth. In sum, he was one 'in whom might plainly be perceived, that honour and 'honesty are but the same thing in the different degrees of persons. To him therefore, and to the memory of his worth, be consecrated this, though unworthy, offering. And now, imitating in this civil 'worship, the religious worship of the Gentiles, who, 'when they dedicated any thing to their Gods, brought 'and presented the same to their images; I bring and 'present, this gift of mine, The History of Thucydides, translated into English, with much more diligence than elegance, to your Lordship, who are the 'image of your father; for never was a man more exactly copied out than he in you, and who have in 'you the seeds of his virtues already springing up: 'Humbly intreating your Lordship to esteem it amongst the goods that descend upon you, and in your 'due

to Paris, where he applied his vacant hours to Natural Philoſophy, and more eſpecially to the underſtanding of mechaniſm, and the cauſes of animal motion. Upon theſe ſubjects he conferred with Father Marin Merſenne, a man of extenſive learning, and of unblemiſhed probity, who entertained a literary correſpondence through all Europe (*k*). From Paris Mr Hobbes attended his pupil into Italy, where, at Piſa, he became known to that great Aſtronomer Galileo Galilei, who communicated to him his notions very freely; and after having ſeen whatever was remarkable in that country, he, in 1637, returned with his patron into England (*l*). His attachment to that noble perſon retained him in the family, where he had already ſpent ſo great a part of his life; and his long reſidence in the noble palace at Chatſworth, had afforded him an opportunity of exerciſing his inclination to Latin poetry, in celebrating the wonders of the Peak [*B*]; which poem of

(*k*) Vita Thomæ Hobbes, p. 4. Vitæ Hobbianæ Auctarium, p. 46, 47. Wood's Athen. Oxon. Vol. II. col. 641.

(*l*) Thomæ Hobbes Malmeſburienſis Vita. Vitæ Hobbianæ Auctarium, p. 47.

'due time to read it. I could recommend the author 'unto you, not impertinently, for, that he had in his 'veins the blood of Kings; but I chooſe rather to re'commend him for his writings, as having in them 'profitable inſtructions for noblemen, and ſuch as may 'come to have the managing of great and weighty ac'tions. For I may confidently ſay, that notwithſtand'ing the excellent, both examples and precepts of 'heroic virtue you have at home, this book will con'fer not a little to your inſtitution; eſpecially when 'you come to the years to frame your life by your 'own obſervation. For in hiſtory, actions of honour 'and diſhonour do appear plainly and diſtinctly, which 'are which; but in the preſent age they are ſo di'guiſed, that few there be, and thoſe very careful, that 'be not groſsly miſtaken in them. But this (I doubt not) 'is ſuperfluouſly ſpoken by me to your Lordſhip: there'fore I end with this prayer, That it will pleaſe God 'to give you virtues ſuitable to the fair dwelling he 'hath prepared for them, and the happineſs that ſuch 'virtues lead unto, both in and after this world.

'Your Lordſhip's

'moſt humble ſervant,

Anno Dom. 1634.

THO. HOBBES.'

[*B*] *The wonders of the Peak.*] Our author in this poem, which is inſcribed to the Right Honourable William Earl of Devonſhire, in heroic verſe, deſcribes the wonders of the Peak in Derbyſhire, and as the firſt of theſe is the palace of Chatſworth, he takes occaſion from thence to celebrate the Cavendiſh family, and that famous Counteſs of Shrewſbury, to whoſe prudence and oeconomy ſo many noble families ſtood ſo much obliged, and from whom the three Earls of Devonſhire, Newcaſtle, and Kingſton were deſcended. Theſe of all Mr Hobbes's poetical performances have been eſteemed the beſt verſes, which however deſerve not any extraordinary commendation. We are ſomewhat at a loſs for a reaſon, but the fact is very certain, that their author himſelf undervalued them much in the latter part of his life, which was not a little contrary to his character, as he manifeſted upon every other occaſion a ſufficient eſteem for his own writings. It is not altogether improbable, that having delivered ſome things in them as a poet, which did not perfectly agree with the ſentiments he afterwards maintained as a philoſopher, he had a mind to let the world ſee he could deſpiſe even his own Performances, when convinced there was any thing in them erroneous, which notwithſtanding was an unneceſſary nicety, ſince no candid critic would ever object matters thus delivered, againſt the notions laid down by the author in another character; where, from the nature of his ſubject, he muſt be ſuppoſed to have a ſtrict regard to truth, whereas fiction is allowed to be not only requiſite, but eſſential to poetry. We will likewiſe give the reader a citation from theſe, as a ſpecimen of our author's talent in poetry, which in his own time was highly admired, the rather becauſe we have been favoured with a tranſlation, which though it be very cloſe, is far from being ſo literal or ſo bald as thoſe that have been hitherto publiſhed, and will of conſequence afford the Engliſh reader a better idea of our author's work, than he could hitherto any where acquire.

De Mirabilibus Pecci,
Carmen
Thomæ Hobbes, Malmeſburienſis.

Alpibus Angliacis, ubi Pecci nomine, ſurgit,
Derbenſis regio, montes ad ſidera tollens,
Fœcundaſque rigans, non uno flumine, valles,
Stat Chatſworth præclara domus, tum mole ſuperba,
Tum domino, magnis, celerem Deroentis ad undam.
Miranti ſimilis portam prætерfluit amnis;
Hic tacitus, ſaxis, infra ſupraque, ſonorus
At mons terga domus rapidis defendit ab *Euris*;
Oſtendens longe exertis juga conſita ſaxis,
Præſectoque die, producens tempora ſomni.
Summovet a tergo rupes gratiſſimus hortus,
Pinguis odoratis ubi *tellus floribus* halat;
Arbor ubi in mediis ſylvis ſibi *libera viſæ*,
Dat fructus injuſſa ſuos; ubi *frondea* tecta
Arboreis præbent invito *frigora* ſole
Porticibus, potiora tuæ (*Maro*) tegmine *fagi*;
Ars ubi (diſſimulans *artem*) ſimulavit (*ineptos*
Conſocians *ferro lapides, guttaque* pereſos)
Informes ſcopulos; & *frigida* fontibus antra.
Libera nativis veniens a rupibus unda
Accedit poſitis, patrio captiva metallo;
Et tellure latens, duplicem jaculatur in orbem
Juſſa, ſuum laticem, per mille foramina cœca,
Et ſcopulum complexa tenacibus undique venis,
Juſſa fugat miſſo ſubeuntes deſuper imbre.
Hinc avecta creat ſublimem marmore fontem,
Atque ingreſſa domum Promos conſerva Cocoſque
Adjuvat; in mediis ſurgitque penatibus, alto
Infudens nitidam manibus de marmore lympham.
Et quamvis tubulis tantum effluat illa quaternis,
Non tam Calliroë pulchre fluit Enneacrune.
Rejecto paulum fluvio, ſeſe ingerit horti
Angulus alterius, tecta alta a fronte videntis.
Diſpoſita hic gemino collucent ordine ſtagna,
Immerſum tremulis undis quatientia ſolem,
Queis magno numero ſalit, & laſcivus innerrat
Non intellecto concluſus carcere piſcis.
Quam juvat, hic, quoties piſcatrix candida prædam
Abjicit illectam, morem obſervare puellis
Innatum, captare viros, & ſpernere captos!
Quam libet in mediis mirari fluctibus, alto
Aggere ſuſpenſos hortos! quæ Cæſare moles
Digna Cavendiſiâ certe eſt in gente, puſillum
Fœmineumque opus. At quota pars ea laudis Elizæ
Salopicæ? quæ multa, & magna palatia ſtruxit;
Magnas divitias; magnamque bonamque paravit
Famam; quæ magnos ſibi conciliavit amicos,
Ornavitque humiles; multam, magnamque reliquit
Prolem, qua *regio* late nunc uſque beatur.
Quam dulce eſt, inter, circumque nitentia ſtagna
Inſternente vias, æſtivâ ſemper, arena,
Diſcipulum memet naturæ tradere rerum;
Aut Domino exiguum meditari carmine Munus,
Et multum Muſis, deſcribere rura, rogatis.
Commodiore loco non uſquam habitare, nec uſquam

Candidiore

of his, though written ſome years before, was not made public 'till about this time. The troubles in Scotland now grew high; and, as popular diſcontent is always contagious, began to ſpread ſouthward, and to threaten the utter ſubverſion of the peace of the whole iſland. As few foreſaw this earlier, and none apprehended it more than Mr Hobbes, he thought it might contribute to the public tranquillity, if he bent his thoughts to politics, and compoſed an antidote againſt thoſe peſtilential opinions which began to prevail. It was this that engaged him to commit to paper certain principles, out of which he firſt compoſed

Candidiore frui Muſæ cenſentur amico.
Hinc, ad tecta, ſolo ſurgente, aſcenditur, Extra,
Auguſta aſpectu, ſublimia, Regia; & intra,
Commoda, culta, capacia, ſplendida, ditia tecta.
At tu marmoreis quæ ſint deſcripta figuris
Ficta Poetarum, priſcorum aut facta virorum,
Ne cures duro nec certans marmore gypſum.
Ingenuos nec cupias numerare miniſtros;
Sed Dominum mea Muſa, colas, cui gente vetuſta
Orto, dat titulos Devonia, Derbia Curas.
Acrem judicio; conſtantem pectore; lautum;
Utentemque opibus, luxu ſine, & inter amicos.
Ille Chori veſtri ſummum decus; ille benigna
Otia dat Muſis; ſed & illi Muſa diſerto
Ore loqui atque animo ſecernere turpia honeſtis.
Tum Dominam ſpectes, altâ de gente Bruſorum
Magnanimo proavos ſpirantem pectore Reges.
Amborumque vide Sobolem, imprimiſque Puellam
Dignam, qua caleat Superi, binoſque Puellos
Angelicos, caſti communia pignora lecti.
Hos tu mireris, ſobolemque & utrumque parentem;
Cætera quæ referes miracula, ſunto minoris.
Alti cenſenter ſeptem miracula Pecci.

In Engliſh thus.

Where the fam'd PEAK, our Engliſh ALPS aſcend,
And DERBY's mountains to the ſkies extend;
Where ſilver ſtreams, enrich the fruitful ſoil,
Fair CHATSWORTH ſtands, inimitable pile!
Great of itſelf, and from it's maſter great,
Near DERWENT's rapid tide,—ſtruck with it's ſtate
Silent the waters ſlide;
Tho' from above, with reſtleſs rage they pour,
Impetuous down, and at a diſtance roar.
Behind, a mountain ſhades it from the Eaſt,
And day excluding, favours lengthen'd reſt.
Beyond the rocks, a beauteous garden lies,
Where fragrant flowers, in lovely order riſe;
And as in native woods, unprun'd appear,
Luxuriant trees, that fruit ſpontaneous bear,
Whoſe ſpreading boughs, no noon-tide rays invade,
But rival MARO even thy *Beechen* ſhade.
Art, but like nature dreſs'd, joins iron and ſtone,
So that for rugged rocks they here are ſhewn,
And there, if Phœbus hurts th' aching ſight,
A gelid grotto hides you from the light.
Free from the crag, the ſilver ſtream deſcends,
Which it's own country metal, quickly bends
Thro' double circles, o'er the ſtony maze,
The winding pipes, the fetter'd rill conveys,
'Till from on high, by this coercive power,
At will deſcends, in drops, the mimic ſhower.
From thence, a ſpacious marble fount receives
It's tide and to domeſtic uſes gives,
Falling in chryſtal ſtreams, for ev'ry rite,
That might of old, the houſhold gods delight,
From four fair ducts, it pours it's chryſtal tide,
Calliroe's ſtream, from nine ſcarce more ſupply'd,
Tho' by Athenian artiſts, taught to glide.
Such labours o'er theſe waters are convey'd,
Where from the palace, other front ſurvey'd,
Another garden lies.
Here thro' a double row of fiſh-ponds ſtrays,
And back reflects the ſun's inſulting rays;
The ſcaly ſhoals in wanton motions rove,
Unconſcious of reſtraint in which they move.
Pleas'd we behold, the female fiſher take,
The finny prey, and but for pleaſure's ſake,
Rejecting ſoon, their captives in the lake.
Innate in women's breaſts, ſuch paſſions riſe,
Fond to ſubdue, what fickly they deſpiſe.
How ſweet the ſight! how pleaſing is the theme
A penſile garden, riſing o'er the ſtream.
CESARIAN works! yet in the CAN'DISH line
A woman form'd and finiſh'd this deſign.
SALOP's ELIZA! by whoſe wond'rous thought,
More ſtately palaces, with ſkill were wrought,
Wealth ſhe attain'd, by prudence all approv'd,
The higheſt courting, whom the pooreſt lov'd;
Sprung from herſelf, a num'rous line expand,
Which then adorn'd, and ſtill adorn our land;
How pleaſant 'midſt theſe ſilver pools to ſtray,
Attentive nature's labours to ſurvey
In this ſweet place?—Or frame ſome trifling ſong
Like this, that may to it's great Lord belong;
For ſure to ſing, no ſcene could more invite,
No Lord than him more worthy to delight.
See how without, the dome affects the eye,
Auguſtly fair, firm, beautiful, and high!
Commodious, pleaſant, ſplendid, and, in fine,
Capacious, neat, and elegant within.
I mind not ancient tales in marble wrought,
The ſculptor imaging the poets thought,
Nor ſtop to number all the faithful band
Of ſervants, who in decent order ſtand,
Intent to ſing their Lord.
Of an illuſtrious line, the noble heir,
Him Devon title gives, and Derby care,
Of judgment piercing, firm, and conſtant mind,
Courteous to all, to thoſe about him kind;
Free, not profuſe, yet often he unbends,
And treats, tho' not luxuriouſly, his friends;
His favours oft the Muſes voice inſpire,
Himſelf no ſtranger in the Muſes choir;
Returning thus, their juſt reſpect he pays,
Who flattery well diſtinguiſhes from praiſe:
His conſort next with due regard produce,
Whoſe charms confeſs the royal blood of BRUCE.
Now view their progeny—a lovely maid,
Whoſe heavenly eyes might heavenly breaſts invade,
Two youths of form divine, to virtue bred,
The lovely pledges of their nuptial bed,
Theſe could my verſe in proper colours dreſs,
With eaſe my following ſubjects I'd expreſs;
And tho' the labours long, alert and gay,
The ſeven ſtrange wonders of the PEAK diſplay,
Wonders indeed! which of themſelves might pleaſe,
Yet hardly wonders—if compar'd with Theſe.

compoſed his book *De Cive*, and which at length grew up into that ſyſtem he ſtiled his *Leviathan*. The ſhort ſcope of his diſcourſe was no more than this, That ſecurity can be only enjoyed where there is peace, that peace cannot be maintained without dominion, that dominion cannot be ſupported without arms, that arms will prove but a weak defence, if not put into one hand, and even then, that they will ſcarce reſtrain ſuch as ſhall be prompted to diſcord, by the fear of an evil greater than death itſelf (*m*). Not long after the meeting of the Long-Parliament, November 3, 1640, when all things fell into confuſion here, he withdrew, for the ſake of living in quiet, to Paris, where he aſſociated with thoſe learned men, who, under the protection of the famous Cardinal de Richelieu, ſought to promote every kind of uſeful knowledge. He had not been long there, when, by the good offices of his friend Father Merſenne, he became known to the celebrated Renatus Des Cartes, and held a correſpondence with him upon ſeveral mathematical ſubjects, as appears from the letters of Mr Hobbes, which are publiſhed in that author's works (*n*). But when this great man printed afterwards his meditations, wherein he attempted to eſtabliſh points of the higheſt conſequence from innate ideas; Mr Hobbes, as well as ſome other judicious men, took the liberty of diſſenting from his opinion. Amongſt theſe was the celebrated Peter Gaſſendi, the King's Profeſſor in Mathematics, a man juſtly eſteemed for his extenſive knowledge, and for his communicative diſpoſition, as well as for his reviving the Philoſophy of Epicurus; with whom Mr Hobbes entered into a ſtrict friendſhip, which ſuffered no interruption 'till the death of the former (*o*). In 1642, our author printed a few copies of his famous book *De Cive*; which, in proportion as it became known, raiſed him many opponents, who charged him with inſtilling dangerous principles [C]. In 1645, he embarked in a mathematical controverſy about the quadrature (*p*).

[C] *With inſtilling dangerous principles.*] The title of this extraordinary work, by which our author became conſpicuous abroad, ran in Latin thus, *Elementa Philoſophica* de Cive. *Auctore Thom. Hobbes, Malmeſburienſis.* In the Engliſh tranſlation, the title was more diffuſe, being conceived in the following terms, viz. 'Philoſophical Rudiments concerning Government and 'Society: or a Diſſertation concerning Man in his ſe-'veral Habitudes and Reſpects as the Member of a 'Society, firſt ſecular, and then ſacred: Containing 'the Elements of Civil Polity in the Agreement which 'it hath both with natural and divine Laws; in which 'is demonſtrated, both what the Origin of Juſtice is, 'and wherein the Chriſtian Religion doth conſiſt, to-'gether with the natural Limits and Qualifications both 'of Regimen and Subjection.' This work is alſo dedicated to William Earl of Devonſhire, and in the dedication, he apologizes both for the method and the deſign of his treatiſe, opening thereby a true and fair account of the manner in which he was led to theſe inquiries; which, as it will afford the reader an opportunity of entering into the character of the man, we will exhibit to his view. After ſhewing what vaſt advantages, have been derived to the world, from that ſkill and certainty with which mathematicians have handled their ſcience, and how much greater benefits might have reſulted from morality, if it had been as judiciouſly treated; he affirms, that the want of this ariſes from the writers on that ſubject taking various and improper methods; 'For, ſays he, we may not, as in a 'circle, begin the handling of a ſcience from what 'point we pleaſe. There is a certain clue of reaſon, 'whoſe beginning is in the dark, but by the benefit of 'whoſe conduct, we are led as it were by the hand 'into the cleareſt light; ſo that the principal of tracta-'tion is to be taken from that darkneſs, and then the 'light to be carried thither for the irradiating it's 'doubts. As often therefore as any writer doth either 'weakly forſake that clue, or wilfully cut it aſunder, 'he deſcribes the footſteps, not of his progreſs in 'ſcience, but of his wanderings from it. And upon 'this it was, that when I applied my thoughts to the 'inveſtigation of natural *juſtice*, I was preſently adver-'tiſed from the very word *juſtice*, which ſignifies a 'ſteady will of giving every one his own; that my firſt 'enquiry was to be, from whence it proceeded that 'any man ſhould call any thing rather his own than 'another man's. And when I found that this proceed-'ed not from nature, but conſent; for what nature at 'firſt laid forth in common, men did afterwards diſtri-'bute into ſeveral impropriations. I was conducted 'from thence to another enquiry, namely; to what 'end, and upon what impulſives, when all was equally 'every man's in common, men did rather think it 'fitting, that every man ſhould have his incloſure; and 'I found the reaſon was, that from a community of 'goods, there muſt needs ariſe contention whoſe en-'joyment ſhould be greater, and from that contention 'all kind of calamities muſt unavoidably enſue, which 'by the inſtinct of nature every man is taught to ſhun. 'Having therefore thus arrived at two maxims of hu-'man nature, the one ariſing from the concupiſcible 'part, which deſires to appropriate to itſelf the uſe of 'thoſe things in which all others have a joint intereſt; 'the other proceeding from the rational, which 'teaches every man to fly a contra-natural diſſolution, 'as the greateſt miſchief that can arrive to nature, 'which principles being laid down, I ſeem from 'them to have demonſtrated, by a moſt evident con-'nection in this little work of mine, firſt the abſolute 'neceſſity of leagues and contracts, and thence the ru-'diments both of moral and of civil prudence. That 'appendage, which is added, concerning the regimen 'of God, hath been done with this intent, that the 'dictates of God Almighty in the law of nature, might 'not ſeem repugnant to the written law revealed to us 'in his word. I have alſo been very wary in the 'whole tenor of my diſcourſe, not to meddle with the 'civil laws of any particular nation whatſoever; that is 'to ſay, I have avoided coming on a ſhore which the 'times have ſo infeſted both with ſhelves and tempeſts. 'At what expence of time and induſtry I have been in 'this ſcrutiny after truth I am not ignorant, but to 'what purpoſe I know not. For being partial judges 'of ourſelves we lay a partial eſtimate upon our own 'productions. I therefore offer up this book to your 'Lordſhip's not favour but cenſure; firſt, as having 'found by many experiments, that it is not the credit 'of the author, nor the newneſs of the work, nor yet 'the ornament of the ſtile, but only the weight of rea-'ſon which recommends any opinion to your Lordſhip's 'favour and approbation If it fortune to pleaſe, that 'is to ſay, if it be ſound, if it be uſeful, if it be not 'vulgar, I humbly offer it to your Lordſhip as both 'my glory and my protection. But if in any thing I 'have erred, your Lordſhip will yet accept it as a te-'ſtimony of my gratitude; for that the means of 'ſtudy, which I enjoyed by your Lordſhip's goodneſs, 'I have employed to the procurement of your Lord-'ſhip's favour. The God of Heaven crown your 'Lordſhip with length of days in this earthly ſtation, 'and in the heavenly Jeruſalem with a crown of glory.' Immediately after the appearance of this book, the famous Mr Des Cartes gave this judgment upon it in one of his letters (4). 'I am of opinion, that the au-'thor of the book De Cive, is the ſame perſon who 'wrote the third objections againſt my meditations. I 'think him a much greater maſter of Morality than of 'Metaphyſics or Natural Philoſophy, though I can by 'no means approve of his principles or maxims, which 'are very bad and extremely dangerous, becauſe they 'ſuppoſe all men to be wicked, or give them occaſion 'to be ſo. His whole deſign is to write in favour of 'monarchy, which might be done to more advantage 'than he has done, upon maxims more virtuous and 'ſolid. He has wrote likewiſe very much to the diſ-'advantage

(4) Epiſt. Ren. Cartes, Tom. III. p. 104.

ture of the circle; in which, though many of the greateſt men in Europe were likewiſe engaged, yet none of them gained higher reputation by their writings than our author (*q*). Amongſt many other worthy perſons, who upon the ſhipwreck of the royal cauſe retired for ſafety into France, was Sir Charles Cavendiſh, brother to the loyal Duke of Newcaſtle; and this gentleman, who was diſtinguiſhed by his perfect acquaintance with every branch of mathematical ſcience, proved a conſtant friend, and to the utmoſt of his power a kind patron, to our author; whoſe fame for that kind of learning was now ſo well eſtabliſhed, that, in 1647, he was recommended to inſtruct Charles Prince of Wales, afterwards King Charles the Second (*r*). His care in the diſcharge of this office gained him the eſteem of that prince in a very great degree (*s*); and though he afterwards withdrew his public favour towards Mr Hobbes, on account of thoſe writings which will be hereafter mentioned; yet he always retained a ſenſe of the ſervices he had rendered him, of which he afforded him various marks after he was reſtored to his dominions, and, it is reported, had his picture always hanging in his cloſet (*t*). This year alſo came out a ſecond and more compleat edition of his book *De Cive*, which was neatly printed in Holland by the care of Dr Sorbiere, who alſo made a tranſlation of it into French. To his edition of the original, there are prefixed two Latin letters to the editor in commendation of the book, one written by Mr Gaſſendi, and the other by Father Merſenne, which, however, could not reconcile the world in general to the notions contained in that piece (*u*). While his time was thus employed at Paris, Mr Hobbes was attacked by a violent fit of ſickneſs, which brought him very low, inſomuch, that many of his friends began to deſpair of his recovery. Amongſt thoſe who viſited him in ſo weak a condition, was his old acquaintance Father Merſenne beforementioned, who taking this for a favourable occaſion, began, after a few general complements of condolence, to mention the power of the Roman Church to forgive ſins. But Mr Hobbes immediately replied, Father, all theſe matters I have debated with myſelf long ago, ſuch kind of diſputes would be troubleſome to me now, you can entertain me on ſubjects more agreeable, When did you ſee Mr Gaſſendi? His viſitant, eaſily underſtanding his meaning, troubled him no farther, but ſuffered the converſation to turn, as Mr Hobbes deſired, upon general topics. Yet ſome days afterwards, when Dr John Coſins, afterwards Biſhop of Durham, came and propoſed to pray with him, he very readily accepted the propoſal, provided he uſed the offices appointed by the Church of England; and alſo received the Sacrament from his hands (*w*). By degrees, however, he recovered his health, and his former robuſt conſtitution. In 1650, he wrote an anſwer to a long letter, written to him by Sir William D'Avenant, who had ſubmitted his poem, called *Gondibert*, to his peruſal; which anſwer of his, together with Sir William's letter, was prefixed to that poem, when it was publiſhed, but did not anſwer the intention of defending this performance from the fury of the critics, who, notwithſtanding Mr Hobbes's approbation, cenſured it very ſeverely (*x*) [*D*]. The ſame year

'advantage of the Church, and of the Roman Catho-
'lic religion; ſo that if he is not particularly ſupported
'by ſome powerful intereſt, I do not ſee how he can
'eſcape having his book cenſured.' Our author Hobbes foreſaw and obviated his firſt objection in his preface, in which he ſays, that to ſuppoſe all mankind wicked, is a falſe deduction from his principles, which only incline us to act towards mankind as if we actually ſuppoſed them wicked, becauſe it is impoſſible to diſtinguiſh who are, and who are not ſo. Whence he infers that his caution is well founded, and yet his premiſes do not afford room for any ſuch concluſion. The learned Herman Conringius (5) cenſures our author in pretty rough terms, for boaſting that though phyſics were a new ſcience, yet civil philoſophy was ſtill newer, ſince it could not be ſtiled older than his own book De Cive. Whereas, ſays that great man, there is nothing good in that work of his, which was not always known. But the celebrated Samuel Puffendorff, ſpeaks another language (6). 'Thomas Hobbes,
'ſays he, in thoſe parts of his works which regard civil
'ſcience, has many excellent things, and no-body
'who is well verſed in ſtudies of this nature, can deny
'that he has looked ſo cloſely into the principles of
'human and civil ſociety, that there are very *few who*
'wrote before him upon theſe ſubjects, to whom he
'does not deſerve to be preferred. Nay, even where
'he has gone out of the way, he ſuggeſts nevertheleſs
'things to our conſideration, which otherwiſe would
'very probably never have entered into any man's
'head.' The ſame *worthy* and judicious perſon, in his preface to another work, has theſe words (7): 'Neither are we a little indebted to Thomas Hobbes,
'whoſe hypotheſis, in his book De Cive, though it ſa-
'vours ſomewhat of prophaneneſs, yet in other reſpects
'is *certainly* ſenſible and ſound.' Thus we ſee, that even thoſe who were offended with ſome of his notions, which we are alſo very far from approving, were nevertheleſs perſwaded that he was a great man, and had entered more deeply into this ſubject than ſome of his harſheſt cenſurers could perhaps conceive.

(5) De Civil. Prudent. cap. xiv.

(7) Præfat. in Element. Juriſp. Univerſal.

[*D*] *Cenſured it very ſeverely.*] We have in another place given a large account of this poem, and of our author's judgment upon it, which had not that weight with the world that he expected; his client's poem being ſeverely and almoſt unanimouſly condemned by the critics, and even to this day that judgment remains unreverſed. But as we ſometimes admire the eloquence of an advocate who defends a cauſe that is none of the beſt, and applaud apologies that are well written in the defence of characters that remain nevertheleſs as odious as before; ſo in the preſent caſe, whatever becomes of the merit of the cauſe, what our author has offered upon the ſubject, will with all candid perſons, do him great honour. He read a long poem, and wrote his ſentiments upon it in a week (8); and yet, whoever peruſes them will find his labour not thrown away, but on the contrary, will be ſurprized to diſcover ſo much ſtrength of judgment, ſuch an acute penetration, ſo large a fund of ſolid and ſubſtantial learning ſo ſuddenly drawn together, and compreſſed into ſo narrow a compaſs. In order to juſtify this character of his performance, we will produce a ſingle paſſage as a ſample, by which the reader may ſafely judge of the whole ſingular piece, and at the ſame time conceive a notion of that perſpicuity, and of that ſtrong and correct ſtile, for which, even by the beſt judges, this writer was generally admired (9). 'Time and education, ſays he,
'begets experience; experience begets memory, me-
'mory begets judgment and fancy, judgment begets
'the ſtrength and ſtructure, and fancy begets the orna-
'ments of a poem. The Ancients therefore fabled not
'abſurdly in making Memory the mother of the Muſes.
'For memory is the world (though not really, yet ſo as
'in a looking-glaſs) in which the judgment, the ſeve-
'rer ſifter, buſieth herſelf in a grave and rigid examination of all the parts of nature, and in regiſtring by
'letters their order, cauſes, uſes, differences, and re-
'ſemblances,

(8) Compare the dates of the letters as they ſtand before the Gondibert in the firſt edition.

(9) From the author's anſwer to Sir William Davenant's preface prefixed to the Gondibert.

year was publiſhed at London, a ſmall treatiſe of our author's, entituled *Human Nature*; which was much eſteemed by ſome, who expreſſed afterwards a bad opinion of Mr Hobbes [*E*]. Another larger treatiſe of his, entitled *De Corpore Politico*: or, Of the Elements of the Law, made likewiſe it's appearance the ſame year. All this time he had been digeſting, with great care and pains, his religious, political, and moral principles, into a compleat ſyſtem, which he entitled *Leviathan*, and which was printed in Engliſh at London in that and the year following. He cauſed a copy of the *Leviathan*, very fairly written on vellum, to be preſented to King Charles the Second. But after that monarch was informed of the bad opinion entertained by the Engliſh Divines of this performance, who conſidered it in a very diſadvantageous light, and as abounding with doctrines equally irreconcilable to true religion, and the principles of civil government, he is ſaid to have withdrawn his countenance from the author, and to have reſtrained him by a meſſage, delivered by the Marquis of Ormond, from coming into his preſence, which was the higheſt puniſhment then in his power (*y*) [*F*]. It has been very confidently ſuggeſted, that his principal view in compoſing

(*y*) Mercur. Politic. No. 84.

'ſemblances, whereby the Fancy, when any work of 'art is to be performed, finds her materials at hand 'and prepared for uſe, and needs no more than a ſwift 'motion over them, that what ſhe wants and is there 'to be had, may not lie too long uneſpied. So that 'when ſhe ſeemeth to fly from one Indies to the other, 'and from heaven to earth, and to penetrate into the 'hardeſt matter and obſcureſt places, into the future, 'and into herſelf, and all this in a point of time; the 'voyage is not very great, herſelf being all ſhe ſeeks, 'and her wonderful celerity conſiſteth not ſo much in 'motion, as in copious imagery diſcreetly ordered, and 'perfectly regiſtred in the memory, which moſt men 'under the name of philoſophy have a glympſe of, and 'and is pretended to by many that groſsly miſtaking 'her embrace Contention in her place. But ſo far 'forth, as the fancy of man has traced the ways of true 'philoſophy, ſo far it hath produced very marvellous 'effects to the benefit of mankind. All that is beautiful or defenſible in building, or marvellous in en'gines, and inſtruments of motion, whatſoever com'modity men receive from the obſervations of the hea'vens, from the deſcription of the earth, from the ac'count of time, from walking on the ſeas, and what'ſoever diſtinguiſheth the civility of Europe from the 'barbarity of the American ſavages, is the workman'ſhip of fancy, but guided by the precepts of true 'philoſophy. But where theſe precepts fail, as they 'have hitherto failed in the doctrine of moral virtue, 'there the architect (fancy muſt take the philoſopher's 'part upon herſelf. He therefore that undertakes an 'heroic poem (which is to exhibit a venerable and 'amiable image of heroic virtue) muſt not only be the 'poet to place and correct, but alſo the philoſopher 'to furniſh and ſquare his matter; that is, to make both 'body and ſoul, colour and ſhadow of his poem, out 'of his own ſtore: which how well you have per'formed, I am now conſidering.'

[*E*] *A bad opinion of Mr Hobbes.*] This performance, which makes fewer than one hundred and ſeventy pages in a ſmall duodecimo, is dedicated to William Earl of Devonſhire, Governor to the Prince of Wales, and is ſaid to have been compoſed by his Lordſhip's commands, out of materials delivered and approved by the Earl, in many familiar and private converſations This dedication is dated May 9th, 1640. But beſides this dedication, there ſtands before the firſt and ſecond editions of this ſmall treatiſe (10), the following advertiſement, which is worthy of being well conſidered.

(10) This ſecond impreſſion is printed at London for Thomas Newcomb, and for Francis Beaumont at Oxford, anno Domini 1651.

'READER,

'It was thought good to let you know that Mr 'Hobbes hath written a body of philoſophy, upon 'ſuch principles, and in ſuch order, as are uſed by 'men converſant in demonſtration; this he hath di'ſtinguiſhed into three parts, De Corpore, De Ho'mine, De Cive, each of the conſequents beginning 'at the end of the antecedent, and inſiſting thereupon, 'as the latter books of Euclid upon the former. The 'laſt of theſe he hath already publiſhed in Latin be'yond the ſeas; the ſecond is this now preſented; and 'if theſe two receive juſtice in the world, there is 'hopes we may obtain the firſt. He whoſe care it is 'and labour to ſatisfy the judgment and reaſon of 'mankind, will condeſcend ſo far, we hope, to ſatisfy 'the deſire of thoſe learned men whom theſe ſhall 'either have found or made, which cannot be until 'they ſhall analytically have followed the grand phæ'nomena of ſtates and kingdoms, through the paſſions 'of particular men, into the elemental principles of 'natural and corporeal motions. The former work was 'publiſhed by the author, and ſo is out of danger, this 'by a friend with leave from him, and to ſecure this, you 'are intreated to conſider the relation wherein it ſtands, 'eſpecially to the book De Cive. It was thought a 'part of religion, not to make any change without the 'author's advice, which could not ſuddenly be ob'tained, and ſo it comes forth innocently, ſuppoſing 'nothing to have happened ſince the dedication of it, 'which if it ſeems a ſoleciſm to ſome, it may to others 'give a ſatisfaction, in calling to mind thoſe times and 'opportunities to which we are indebted for thoſe ad'mirable compoſitions.

'F. B.'

Theſe initial letters were intended to ſtand for Francis Beaumount, the bookſeller at Oxford, for whom the treatiſe was printed; but it may be preſumed, that few readers believed it was of his writing. A certain author tells us plainly (11), that it was written for him by Dr Seth Ward, afterwards Biſhop of Saliſbury, who became within the ſpace of a few years one of our author's bittereſt enemies; though it plainly appears from the foregoing advertiſement, that he had read and conſidered the whole ſcope of his philoſophy before that difference began. The only inference we draw from hence is, that at this time the clergy, who knew the aim of Mr Hobbes's ſyſtem as well as they ever could, did not apprehend any tendency therein to impiety, which the author always diſavowed, but freely acknowledged it was his judgment, that the eccleſiaſtical ſhould be dependent on the civil power, in point of order and diſcipline; and that religion ſhould diſpoſe men to love one another, and not be made the ſource of heart-burnings, ſeditions, and diſturbances, as it had been for ſo many years; and while the ſectaries continued triumphant and could be alone affected by it, this doctrine was thought innocent enough, and it's author a very wiſe man. A ſtronger proof of this cannot be deſired, than the moſt elegant copy of Latin verſes prefixed to it by the then reverend Ralph Bathurſt, Maſter of Arts, then of Trinity-college, afterwards the celebrated Dr Bathurſt, Dean of Bath, and one of the worthieſt men his time affords. With regard to the remaining tract which was to compleat the body of his philoſophy, his book De Corpore Politico, it came abroad without any dedication, having only an anonymous advertiſement to the reader, purporting this was the piece promiſed by the advertiſement prefixed to the tract on Human Nature. This was received no leſs favourably than the reſt both at home and abroad, inſomuch that we are aſſured, that being preſented to and read by the very learned Peter Gaſſendi (12), a very few months before his death, he firſt kiſſed it, and then delivered his opinion of it in theſe words. 'This 'treatiſe is indeed ſmall in bulk, but in my judgment 'it is the very marrow of ſcience.'

[*F*] *Then in his power.*] The title of this work which made ſo great a noiſe in the world was, LEVIATHAN: *or the Matter, Form, and Power of a Commonwealth, Eccleſiaſtical and Civil. Written by* Thomas Hobbes, *London* 1651, *folio*. In his introduction he obſerves, that nature is the art by which God made the world; which, ſays he, man has ſometimes imitated in making a kind of artificial animal. Such in his opinion, may a watch be eſteemed; for, ſays he, what is the heart, but the ſpring; the nerves, but ſo many ſtrings; and the joints, but as many wheels? The art of man, adds he, has gone yet further, and attempted no leſs, than

(x) Lord Clarendon's Brief View and Survey of Mr Hobbes's Leviathan, p. 7, 8.

compoſing this work, was to open a paſſage for his ſafe return into England, by exhibiting the only ſyſtem of policy that either could juſtify or ſupport the government of Oliver Cromwell (z); and in this he is ſaid ſo far to have ſucceeded, as to have had ſome overtures

(13) Introduction to the Leviathan, p. 1.

than making the reſemblance of the moſt perfect work of nature, which is man (13). 'For by art is created, 'that great *Leviathan* called a *Commonwealth* or *State* '(in Latin *Civitas*) which is but an artificial man, 'though of greater ſtature and ſtrength, than the na- 'tural, for whoſe protection and defence, it was in- 'tended, and in which the ſovereignty is an artificial 'ſoul, as giving life and motion to the whole body, 'the magiſtrates, and other officers of judicature and exe- 'cution, artificial joints; reward and puniſhment (*by* 'which, faſtened to the ſeat of the ſovereignty, every 'joint and member is moved to perform it's duty) 'are the nerves that do the ſame in the body natural; 'the wealth and riches of all the particular members, 'are the ſtrength (*Salus Populi*) the people's ſafety; 'it's buſineſs, counſellors; by whom all things needful 'for it to know, are ſuggeſted to it, are the memory; 'equity and laws, an artificial reaſon and will; 'concord, health; ſedition, ſickneſs; and civil war, 'death. Laſtly, the pacts and covenants, by which 'the parts of this body politic were at firſt made, ſet 'together, and united, reſembled that fiat, or the '*Let us make Man*, pronounced by GOD in the *Crea*- '*tion*.' Thus perhaps the true meaning and ſcope of his performance is as fully explained, and as clearly expreſſed as our own, or perhaps any other language would permit. One ſees plainly, that the ſame ſentiments inſpired our author in this, as in his former performances; he was ſcandalized at the vicious lives of many pretended Enthuſiaſts, and he was frighted at the miſchiefs which they brought upon mankind, by the great influence they had on their deluded followers. His great end therefore was to diveſt them of an ill-grounded power, of which *he* thought they made likewiſe a very bad uſe, and to put all authority into the *hands* of men, who were to act from clearer principles and more intelligible motives. That he carried his notions in this reſpect too far, no reaſonable man or true chriſtian can doubt, but that he meant any private advantage to himſelf, beyond what he deſired to procure for the reſt of mankind, ſeems very far from being ſo clear a caſe; and that he doubted himſelf of the reception that this work of his would meet with on either ſide of the water, is abundantly evident from his dedication to Mr Francis Godolphin, the brother of the celebrated Mr Sidney Godolphin, to whom the author was well known, and by whom he had been very much obliged. This dedication, which is very ſhort, it is for many reaſons neceſſary the candid reader ſhould peruſe, and therefore we place it here.

HONOURED SIR,

'Your moſt worthy brother, *Mr Sidney* Godolphin, 'when he lived, was pleaſed to think my ſtudies ſome- 'thing, and otherwiſe to oblige me, as you know, 'with real teſtimonies of his good opinion, great in 'themſelves, and the greater for the worthineſs of his 'perſon. For there is not any virtue that diſpoſeth a 'man either to the ſervice of GOD, or the ſervice of 'his country, to civil ſociety or private friendſhip, that 'did not manifeſtly appear in his converſation, not as 'acquired by neceſſity, or affected upon occaſion, but 'inherent and ſhining in a generous conſtitution of his 'nature. Therefore, in honour and gratitude to him, 'and with devotion to yourſelf, I humbly dedicate 'unto you, this my Diſcourſe of Commonwealth. I 'know not how the world will receive it, nor how it 'may reflect on thoſe that ſhall ſeem to favour it. For 'in a way beſet with thoſe that contend on one ſide for 'too great liberty, and on the other ſide for too much 'authority, 'tis hard to think between the points of 'both unwounded. But yet methinks, the endeavour 'to advance the civil power, ſhould not be by the 'civil power condemned, nor private men by repre- 'hending it, declare that power too great. Beſides, 'I ſpeak not of the men, but (in the abſtract) of the 'ſeat of power, like to thoſe ſimple and unpartial 'creatures *in the* Roman Capitol, that with their noiſe 'defended thoſe within it, not becauſe they were there 'offending none, I think, but thoſe without, or ſuch 'within (if there were any ſuch) as favour them. That 'which perhaps may moſt offend, are certain texts of 'Holy Scripture alledged by me to other purpoſe 'than ordinarily they uſe to be by others. But I have 'done it with due ſubmiſſion, and alſo in order to my 'ſubject neceſſarily, for they are the outworks of the 'enemy, from whence they impugn the civil power. 'If notwithſtanding this, you find my labour generally 'decryed, you may be pleaſed to excuſe yourſelf and 'ſay, I am a man that love my own opinion, and think 'all true I ſay; that I honoured your brother, 'and honour you, and have preſumed on *that* to aſ- 'ſume the title (without your knowledge) of being 'as *I am*,

'SIR,

'Your moſt humble, and moſt

Paris, April $\frac{14}{24}$, 1651. 'obedient ſervant,

'THO. HOBBES.'

It is very poſſible, and indeed it is highly probable, that our author in the framing this work might have his return to England in view, but that he had any notion of fortifying and ſecuring the government that then ſubſiſted in this country, much more that he had any malicious intentions againſt his royal pupil, will not appear very likely to thoſe who either examine ſtrictly into his conduct, or look very cloſely into his book (14). Such as ſuggeſt the contrary, begin with laying down a falſe fact, which is, that Oliver Cromwell was then at the head of the government, and if this had been ſo, what they ſay would have been plauſible at leaſt, though not certain. However, there was abundantly enough in the Leviathan to oblige, and conſequently to juſtify, King Charles in doing as he did, if we conſider where he was, how ſupported, and by whom attended. But that his majeſty was full as well inſtructed as to the real intentions of Mr Hobbes, as any other man could pretend to be, may fairly be preſumed from the preſent that the author made him of it upon vellum; which if it had been directly written to ſubvert his title, to fix the power that then prevailed at home, and prevent the return of that Prince, and the reſtitution of the ancient free government in theſe kingdoms, would not have been more extraordinary than impudent. It might therefore be with ſome other view, and what that view was, and with how much propriety at leaſt in his own judgment, may be perhaps collected from this concluſion of his ſecond part.

(14) Conſiderations on the Reputation, Loyalty, Manners, and Religion, of Thomas Hobbes, p. 25.

'Thus far concerning the conſtitution, nature, and 'right of ſovereigns, and concerning the duty of ſub- 'jects, derived from the principles of natural reaſon. 'And now conſidering how different this doctrine is 'from the practice of the greateſt part of the world, 'eſpecially of theſe weſtern parts, that have received 'their moral learning from Rome and Athens, and 'how much depth of moral philoſophy is required in 'them that have the adminiſtration of the ſovereign 'power, I am at the point of believing this my la- 'bour as uſeleſs as the Commonwealth of Plato; for he 'alſo is of opinion, that it is impoſſible for the diſor- 'ders of ſtate and change of government by civil war, 'ever to be taken away 'till ſovereigns be philoſophers. 'But when I conſider again, that the ſcience of natu- 'ral juſtice, is the only ſcience neceſſary for ſovereigns 'and their principal miniſters, and that they need not 'be charged with the ſciences mathematical (as by 'Plato they are) further than by good laws to encou- 'rage men to the ſtudy of them, and that neither 'Plato nor any other philoſopher hitherto hath put into 'order, and ſufficiently or probably proved all the 'theorems of moral doctrine, that men may learn 'thereby, both how to govern and how to obey. I re- 'cover ſome hope, that one time or other this writing 'of mine may fall into the hands of a ſovereign, who 'will conſider it himſelf (for it is ſhort, and I think 'clear) without the help of any intereſted or envious 'interpreter, and by the exerciſe of entire ſovereignty 'in protecting the public teaching of it, convert this 'truth of ſpeculation into the utility of practice.'

overtures made him, to enter into the ſervice of the Protector in quality of his Secretary (a). The great Earl of Clarendon, once his very particular friend, and never his perſonal enemy, has given the world an account of ſome circumſtances, which attended the writing and publication of this book, from his own knowledge, which are very curious [G]. Whatever

(a) Dowell's Leviathan Heretical, Oxon. 1683. 12mo. p. 137.

[G] *Which are very curious.*] This great man wrote, during his baniſhment in 1670, a book againſt Mr Hobbes, which was printed ſix years afterwards at Oxford, with this title, *A brief View of the dangerous and pernicious Errors to* Church *and* State, *in Mr* Hobbes's *Book entituled,* LEVIATHAN (15). In the introduction, the Earl obſerves, 'That Mr Hobbes's *Leviathan* contains in it good learning of all kinds, politely extracted, and very wittily and cunningly digeſted, in a very commendable and in a vigorous and pleaſant ſtile;' and that Mr Hobbes, 'was a man of excellent parts, of great wit, ſome reading, and ſomewhat more thinking. One who has ſpent many years in foreign parts and obſervations, underſtands the learned as well as modern languages, hath long had the reputation of a great philoſopher and mathematician, and in his age hath had converſation with very many worthy and extraordinary men; to which it may be, if he had been more indulgent in the more vigorous part of his life, it might have had greater influence upon the temper of his mind; whereas age ſeldom ſubmits to thoſe queſtions, enquiries, and contradictions, which the laws and liberty of converſation require. And it hath been always a lamentation among Mr Hobbes's friends, that he ſpent too much time in thinking, and too little in exerciſing thoſe thoughts, in the company of other men of the ſame, or of as good faculties; for want whereof, his natural conſtitution, with age, contracted ſuch a moroſity, that doubting and contradicting men were never grateful to him. In a word, Mr Hobbes is one of the moſt ancient acquaintance I have in the world, and of whom I have always had a great eſteem, as a man, who beſides his eminent parts of learning and knowledge, hath been always looked upon as a man of probity, and a life free from ſcandal.' The Earl informs us, that when Prince Charles, afterwards King Charles the Second, went firſt to Paris from the Iſle of Jerſey, and the Lords Capel and Hopton continued with him at Jerſey, he heard ſhortly after, that Mr Hobbes, who was then at Paris, had printed his book *De Cive* there. The Earl, then Sir Edward Hyde, wrote to Dr Earl, who was then the Prince's chaplain and tutor, to remember him kindly to Mr Hobbes, with whom he was well acquainted, and to deſire him to ſend him that book, by the ſame token that Mr Sidney Godolphin, who had been killed in the civil wars, had left him a legacy of two hundred pounds. The book was immediately ſent to Sir Edward by Mr Hobbes, with a deſire that he would tell him, whether he was ſure that there was ſuch a legacy, or how he might receive it. Sir Edward ſent Mr Hobbes word, that he might depend upon it, and believed that if he found a way ſecretly to demand it of Mr Francis Godolphin, brother of Mr Sidney Godolphin, *who had told* Sir Edward he would pay it. This information was the motive to the dedication of *the Leviathan* to Mr Francis Godolphin, whom Mr Hobbes had never ſeen. When Sir Edward went ſome few years after from Holland with King Charles II. to Paris, Mr Hobbes viſited him, and told him that Mr Godolphin had confeſſed the legacy, and had paid one hundred pounds, and promiſed to pay the other, for all which he thanked him, and ſaid he owed it to him, for he had otherwiſe never known of it. When Sir Edward returned from Spain, by Paris, Mr Hobbes frequently came to him, and told him that his book, which he would call *Leviathan*, was printing in England, and that he received every week a ſheet to correct, of which, he ſhewed him one or two ſheets, and thought it would be finiſhed in little more than a month; and alſo communicated to him, the epiſtle to Mr Godolphin which he intended to prefix to it, and concluded that he knew, when Sir Edward read his book he would not like it; and therefore mentioned ſome particulars, upon which Sir Edward aſked him, why he would publiſh ſuch doctrine, to which, after a diſcourſe between jeſt and earneſt, upon the ſubject, he ſaid (16); *The truth is, I have a mind to go home.* 'Within a ſhort time after, I came, ſays *the Earl*, 'into Flanders, which was not much more than a month, from the time that Mr Hobbes had conferred with me, *Leviathan* was ſent to me from London, which I read with much appetite and impatience. Yet I had ſcarce finiſhed it, when Sir Charles Cavendiſh (the noble brother of the Duke of Newcaſtle, who was then at Antwerp, a gentleman of all the accompliſhments of mind, that he wanted of body, being in all other reſpects a wonderful perſon) ſhewed me a letter he had then received from Mr Hobbes, in which he deſired he would let him know freely what my opinion was of his book; upon which I wiſhed he would tell him, that I could not enough wonder, that a man who had ſo great a reverence for civil government, that he reſolved all wiſdom and religion itſelf into a ſimple obedience and ſubmiſſion to it, ſhould publiſh a book, for which by the conſtitution of any government now eſtabliſhed in Europe, whether monarchical or democratical, the author muſt be puniſhed in the higheſt degree, and with the moſt ſevere penalties. With which anſwer, which Sir Charles ſent to him, he was not pleaſed, and found afterwards, when I returned to the King to Paris, that I very much cenſured his book, which he had preſented engroſſed in vellum, in a marvellous fair hand to the King, and likewiſe found my judgment ſo far confirmed, that a few days before I came thither, he was compelled ſecretly to flie out of Paris, the Juſtice having endeavoured to apprehend him, and ſoon after eſcaped into England, where he never received any diſturbance. After the King's return, he came frequently to the Court, where he had too many diſciples, and once viſited me. I received him very kindly, and invited him to ſee me often, but he heard from ſo many hands that I had no good opinion of his book, that he came to me only that one time, and methinks I am in a degree indebted to him, to let him know ſome reaſons, why I look with ſo much prejudice upon his book, which hath gotten him ſo much credit and eſtimation with ſome other men.' The Earl afterwards obſerves, 'That the review and concluſion of *the Leviathan*, is only an abridgment and contracting the moſt contagious poiſon that runs through the book into a leſs veſſel or volume, leſt they who ſhould not take the pains to read the book, or reading it, may by inadvertency and inconſiſtency not be hurt enough by it, may here in leſs room, and more nakedly, ſwallow his choiceſt doctrine at one morſel, and is in truth a fly addreſs to Cromwell, that being then out of the kingdom, and ſo being neither conquered nor his ſubject, he might by his return ſubmit to his government, and be bound to obey it: which being uncompelled by any neceſſity or want, but having as much to ſuſtain him abroad, as he had to live upon at home, could not but proceed from a ſincere heart, and uncorrupted. This review and concluſion he made ſhort enough, to hope that Cromwell himſelf might read it, where he ſhould not only receive the pawn of his new ſubjects allegiance, by declaring his own obligations and obedience, but by publiſhing ſuch doctrine, as being diligently infuſed, by ſuch a maſter, in the myſtery of government, might ſecure the people of the kingdom (over whom he had no right to command) to acquieſce and ſubmit to his brutal power (17).' The latter part of this charge, though very poſitively aſſerted by many others, as well as this noble Peer, cannot certainly be made out, unleſs Mr Hobbes was a prophet, as well as a politician; for Cromwell, was then no more than General of the forces, and if there had been any evident ſign of his becoming maſter of the government, it is more than probable, ſome of the eagle-eyed people of that age would have diſcerned it, as ſoon as Mr Hobbes (18). But it is eaſy to find the meaning of a paſſage, or rather to apply it, when events have pointed the preſumed occaſion. Yet at the juncture *the Leviathan* was publiſhed, no mortal could imagine that it was a complement to General Cromwell, though it is very poſſible that from the doctrine contained in it, the author had he been ſo inclined (which it does not appear he ever was) might have afterwards found his account, in paying his court

(16) Ibid. p. 7.

(17) Ibid. p. 317.

(18) Conſiderations on the Reputation, Loyalty, &c. of Th. Hobbes, p. 18, 19.

Whatever his motives might be to the writing his Leviathan, certain it is, that, not long after it's publication, he returned to England, partly, as he himſelf affirmed, from his apprehenſions of the conſequences that might follow, from the offence taken againſt him by the Popiſh clergy, and partly on account of an indiſpoſition in his ſtomach, from which, by the uſe of proper medicines, he perfectly recovered (*b*). But it does by no means appear, that he ſought for any favour from the hands of thoſe then in power, beyond that of living in quiet. And finding the Church of England ſubverted, and the churches filled with thoſe who made no uſe of any liturgy, and whoſe ſermons, in his opinion, were often blaſphemous, he omitted, for three months, communicating with any body of Chriſtians; but being afterwards carried to a congregation, where the ſervice of the Church of England was with great privacy uſed, he joined in communion with them, and continued to reſort thither (*c*). This, and his conduct in his ſickneſs, he afterwards urged as a proof that he was no Atheiſt; but, on the contrary, a Chriſtian, and ſincerely attached to that Church in which he was educated (*d*) [*H*]. After his coming over into his own country,

to the Protector. But notwithſtanding things of this ſort were no doubt carried to the King's ear, yet they did not make ſuch an impreſſion upon him, as upon his miniſters, in complaiſance to whom, though he forbid our author his preſence, yet he could not help declaring at the ſame time, *that he did not believe* Mr Hobbes *intended him any hurt* (19). We have ſhewn in the former note that he had good reaſon to be of this opinion, and yet it muſt be allowed, that *the Leviathan* was in two reſpects a noxious book, or rather an obnoxious book. *In the* firſt place, it ſet the impiety, ſuperſtition, and tyranny of the Papiſts, in the ſtrongeſt light poſſible; and in the next, it evidently diſpoſed men's minds (by furniſhing a plauſible apology for their conduct) to ſubmit and to live quietly, under the power whatever it was that prevailed in England. By this, the author provoked the Romiſh clergy, whom, tho' he had not been a timorous man, he might have good reaſon to fear, and diſguſted the high Royaliſts, that is ſuch as were proſcribed, and could not go home; ſo that he had the ſtrongeſt motive that could be to leave France, and, after the King's meſſage, ſcarce any means left to ſtay.

(19) Ibid. p. 28.

[*H*] *In which he was educated.*] At the time that our author ſent abroad his Leviathan, there was a kind of ſtate news paper circulated here, written by one Marchmont Needham, from which it plainly appears, that from the moment Hobbes's book was publiſhed, it was ill received at King Charles's Court, though at the ſame time not at all diſpleaſing on this ſide the water (20). 'The author, ſays this writer, ſent one of his books 'when he had publiſhed it, as a preſent to the King 'of Scots, which he accepted, *in* regard he had been 'his tutor in the mathematics; but being afterwards 'informed by ſome of his Prieſts, that that book did 'not only contain many principles of Atheiſm and 'groſs impiety (for ſo they call every thing that 'ſquares not with the clergy intereſt) but alſo ſuch 'that were prejudicial to the Church, and reflected 'dangerouſly upon the Majeſty of ſovereign Princes; 'therefore when Mr Hobbes came to make a tender of 'his ſervice to him in perſon, he was rejected, and 'word brought him by the Marquis of Ormond, that 'the King would not admit him, and withal told him 'the reaſon. By which means Mr Hobbes declines in 'credit with his friends there of the Royal ſtamp.' One of Mr Hobbes's antagoniſts aſſerted in his lifetime, as is ſaid in the text, that *the Leviathan* was ſo acceptable to Cromwell, that he made him an offer of being his Secretary (21). If this was true, it does indeed prove, that the Government then ſubſiſting in England were well ſatisfied with Mr Hobbes's notions; but it does at the ſame time alſo prove, that he was not ſatisfied with their authority, and that though he thought it conſiſtent with his principles, to live peaceably under their protection, yet he did not care, by accepting preferment, to acknowledge, that either the Parliament, or the Protector, had made a legal acquiſition of power. This ſhews his attachment to the State. He affirms himſelf, that he was not at all leſs ſteady in his principles as to the Church. He found upon his coming over, a public profeſſion of religion, and preaching and praying in abundance, yet for three months he declined going to any public place of worſhip; but being informed by a friend, that a clergyman of the eſtabliſhed Church, ventured to officiate every Sunday, and to read the ſervice preſcribed by the Common Prayer, he went, though it was a mile diſtant from the place of his reſidence, conſtantly to hear it ſo read by him, and received the Sacrament from his hands (22). In one of his works written by way of dialogue againſt Dr Bramhall, Biſhop of Derry, afterwards Primate of Ireland, he puts his Lordſhip's ſtate of the caſe from *the Leviathan*, and then his anſwer to it in theſe words (23).

JOHN DERRY,

'His fifth concluſion may be, that the ſharpeſt and 'moſt ſucceſsful ſword in any war whatſoever, doth 'give ſovereign power and authority to him that hath it, 'to approve or reject all ſorts of theological doctrines 'concerning the kingdom of God, not according to their 'truth or falſehood, but according to that influence 'which they have upon political affairs.' Hear him, *But becauſe this doctrine will appear to moſt men a* novelty, *I do but propound it, maintaining nothing in this or any other* paradox *of* religion, *but attending the end of that* diſpute *of the* ſword *concerning the authority (not yet amongſt my countrymen decided) by which all ſorts of* doctrine *are to be approved or rejected, &c. For the points of* doctrine *concerning the* kingdom *of* God, *have ſo great influence upon the* kingdom *of* man, *as not to be determined, but by them that under* God *have the ſovereign power,*

——— Careat ſucceſſibus opto
Quiſquis ab eventu, facta notanda putat.

'Let him evermore want ſucceſs, who thinketh actions are to be judged by their events. This doctrine 'may be plauſible to thoſe who deſire to fiſh *in* troubled waters. But it is juſtly hated by thoſe which 'are in authority, and all thoſe who are lovers of 'peace and tranquillity. The laſt part of this concluſion ſmelleth rankly of Jeroboam; Now ſhall the kingdom return to the houſe of David, if *this* people go 'up to do ſacrifice in the houſe of the Lord at Jeruſalem: whereupon the King took counſel, and made 'two calves of gold, and ſaid unto them, It is too 'much for you to go up to Jeruſalem, behold thy 'Gods, O Iſrael, which brought thee out of the 'land of Egypt. But by the juſt diſpoſition of Almighty God, this policy turned to a ſin, and was 'the utter deſtruction of Jeroboam and his family. It 'is not good jeſting with edge-tools, nor playing with 'holy things. Where men make their greateſt faſtneſs, many times they find moſt danger.'

THOMAS HOBBES,

'His Lordſhip either had a ſtrange *conſcience*, or 'underſtood not *Engliſh*. Being at Paris when there 'was no Biſhop nor Church in England, and every 'man writ what he pleaſed; I reſolved when it ſhould 'pleaſe God to reſtore the authority eccleſiaſtical, to 'ſubmit to that authority, in whatſoever it ſhould determine. This his Lordſhip conſtrues for a tempo'rizing and too much indifferency in religion, and 'ſays further, that the laſt part of my words do ſmell 'of *Jeroboam*. To the contrary, I ſay my words were 'modeſt, and ſuch as in duty I ought to uſe. And 'I profeſs ſtill, that whatſoever the *Church of England* '(the *Church*, I ſay, not every *Doctor*) ſhall forbid me 'to ſay, in matter of faith, I ſhall abſtain from ſaying 'it, excepting this point, *That* Jeſus Chriſt *the* Son 'of God *died for my ſins*. As for other doctrines, I 'think it unlawful, if the *Church* define them, for any 'Member of the *Church* to contradict them.' Theſe ſentiments of Mr Hobbes were certainly very conſiſtent with

country, he paſſed the ſummer commonly at Chatſworth, the Earl of Devonſhire's ſeat in Derbyſhire, and ſome of his winters in town, where he had, for his intimate friends, ſeveral of the greateſt men of that or of any age; ſuch as, Dr William Harvey, the great light and reſtorer of Phyſic; John Selden, Eſq; that prodigy of learning; Sir John Vaughan, afterwards Chief-Juſtice of the Common-Pleas; Abraham Cowley, no leſs diſtinguiſhed by the innocency of his life than the elegance of his writings; and Sir Charles Scarborough, afterwards the King's Phyſician, a man famous for mathematical learning, his exquiſite ſkill in Phyſic, and for his open, generous, and communicative temper (*e*). In 1654, Mr Hobbes publiſhed his Letter upon Liberty and Neceſſity, which occaſioned a long controverſy between him and Dr Bramhall, Biſhop of Londonderry, afterwards Lord-Primate of Ireland. About this time, likewiſe, began the controverſy with Dr Wallis of Oxford, which laſted as long as our author lived, and in which he had the misfortune to have all the Mathematicians againſt him (*f*). It is indeed ſaid, that our author came too late to this kind of ſtudy, for a man who would excel in it; and that though for a time he maintained his credit, while he was content to proceed in the ſame track with others, and to reaſon in the accuſtomed manner, from the eſtabliſhed principles of the ſcience; yet when he began to digreſs into new paths, and ſet up for a reformer, inventor, and improver of Geometry, he loſt himſelf extremely (*g*). But, notwithſtanding theſe debates took up much of his time, he publiſhed ſeveral philoſophical treatiſes in Latin, in compliance with the promiſes which he had formerly given, and in which he made it his rule to be very punctual. Such were his occupations 'till the year 1660, when, upon the King's reſtoration, he came up to London; where, being at Saliſbury-houſe with his patron, when the King paſſed by in his coach, he accidentally ſaw him, and ſent for him, gave him his hand to kiſs, and enquired kindly after his health and circumſtances. Some time after this, his Majeſty directed that eminent Limner, Mr Samuel Cooper, to go to him and draw his picture (*h*). He likewiſe afforded our author another private audience, ſpoke to him very kindly, aſſured him of his protection, and ſettled a penſion upon him of one hundred pounds a year out of his privy-purſe; which laſt circumſtance is very particularly mentioned by himſelf, in his account of his own life in Latin verſe (*i*) [*I*]. Yet this

with his practice, ſo that ſuch as reproached him with diſreſpect for the Chriſtian Religion, Impiety, and Atheiſm, could do it no otherwiſe than from their own interpretation of his writings, which was very different or rather oppoſite to the ſenſe in which he declared he meant them, and for the proof of his ſincerity appealed to his practice, and in reſpect to this, even his noble antagoniſt, as in the former note appears, had not a word to ſay.

[*I*] *In Latin verſe.*] In theſe metrical memorials relating to himſelf, for one can hardly call them with any propriety a poem, he gives a very particular account of his eſtate, and of the changes it underwent, as we have mentioned in the text. He likewiſe intimates in theſe, as well as in his proſe memoirs, and in other parts of his works, that he knew well enough who they were that repreſented him, or at leaſt his writings, in a diſadvantageous light to the King. Of him however he profeſſes he never had any juſt reaſon to complain, nor even for liſtening to theſe repreſentations, and in conſequence of them, forbidding him his preſence and his Court. The reaſon he renders is this *.

* Thomæ Hobbes Vita, p. 9.

——Nam tunc adoleſcens
Credidit ille, quibus credidit ante Pater.

He then a youth, believ'd it was but juſt,
To truſt in thoſe, who had his father's truſt.

We find that his ſentiments in this reſpect were very well founded, for his noble antagoniſt, in that admirable dedication of his to the King, clearly and candidly avows what our author only ſuggeſts. 'I have often, 'ſays he, heretofore when I had liberty for that pre'ſumption, adverti'ſed your Majeſty of the wickedneſs 'of very many of the principles upon which that whole 'book is ſupported, and was not without ſome hope 'of prevailing with your Majeſty, to give yourſelf the 'leiſure and the trouble to peruſe and examine ſome 'parts of it, in confidence, than they would no 'ſooner be read than deteſted by you: whereas the 'frequent reciting of looſe and diſjointed ſentences and 'bold inferences, for the novelty and pleaſantneſs of 'the expreſſions, the reputation of the gentleman 'for parts and learning, with his confidence in converſa'tion, and eſpecially the humour and inclination of the 'time to all kind of paradoxes, have too much pre'vailed with many of great wit and faculties, without 'reading the context or obſervation of the conſequences, 'to believe his propoſitions to be more innocent or 'leſs miſchievous, than upon a more deliberate peru'ſal they will find them to be, and the love of his 'perſon and company, have rendered the iniquity of 'his principles leſs diſcernable.' There is no doubt that theſe were this noble perſon's real ſentiments, or that they were thoſe alſo of many others; but at the ſame time there were others of the King's friends, who thought that Mr Hobbes's book might do his Majeſty very effectual ſervice, by giving many of his exiled ſubjects an opportunity of going home and of getting into the poſſeſſion of their eſtates again, by ſubmitting to a compoſition, which they conſidered as giving a part to retrieve the whole. It was alſo apprehended, that thoſe who returned, would not be leſs the King's ſubjects, or leſs likely to ſerve him from that circumſtance, and that perhaps this book might likewiſe open the eyes of the people, and ſhew them upon what principles their new government ſtood. Taken in this light, however dangerous the principles laid down in the Leviathan might be, they could not be dangerous to the King, more eſpecially when the author was publickly diſgraced by him for publiſhing them. That this was really the caſe, and that Mr Hobbes had ſome reaſon to take it amiſs, to have any malice imputed to him againſt the King or his government, may appear in his apology to that Prince, publiſhed within two years after his Reſtoration (24). 'I will not break the cuſtom of 'joining to my offering a prayer, and it is, that your 'Majeſty will be pleaſed to pardon this following ſhort 'apology for my Leviathan, not that I rely upon 'apologies, but upon your Majeſty's moſt gracious 'general pardon. That which is in it of theology, 'contrary to the general current of divines, is not put 'there as my opinion, but propounded with ſubmiſſion 'to thoſe that have the power eccleſiaſtical. I did 'never after, either in writing or diſcourſe, maintain 'it. There is nothing in it againſt epiſcopacy. I 'cannot therefore imagine what reaſon any epiſcopal 'man can have to ſpeak of me, as I hear ſome of them 'do, as of an Atheiſt, or man of no religion, unleſs it 'be for making the authority of the Church depend 'wholly upon the regal power, which I hope your 'Majeſty will think is neither Atheiſm nor Hereſy. 'But what had I to do to meddle with matters of that 'nature, ſeeing religion is not philoſophy but law? it 'was written in a time, when the pretence of Chriſt's 'kingdom was made uſe of for the moſt horrid actions 'that can be imagined, and it was in juſt indignation 'of

(24) Prefixed to ſeven Philoſophical problems, and two propoſitions in Geometry, A. D. 1662.

this did not render him intirely ſafe; for, in 1666, his book of the *Leviathan*, and his treatiſe *De Cive*, were cenſured by Parliament, which alarmed him very much; as did alſo the bringing in of a bill in the houſe of Commons, to puniſh Atheiſm and Profaneneſs. It is thought, that, upon this occaſion, he compoſed his Hiſtorical Narration of Hereſy, and the puniſhment thereof, or rather detached it from his Leviathan, and added to it ſome freſh remarks, with a view of demonſtrating that he could not be legally guilty of Hereſy, in writing or publiſhing that book, becauſe the High-Commiſſion-Court was the only judicature in England that could declare what was Hereſy; and that court being aboliſhed at the beginning of the troubles, and not reſtored afterwards, whatever was contained in his book, written in the interim, could never, in a legal ſenſe, be adjudged Hereſy (*k*) [*K*]. When this ſtorm was a little blown over, he began to think of procuring a beautiful

(*k*) See the note [*K*].

' of that, that I deſired to ſee the bottom of that doc-
' trine of the kingdom of Chriſt, which divers mini-
' ſters then preached for a pretence to their rebellion,
' which may reaſonably extenuate though not excuſe
' the writing of it. There is therefore no ground for
' ſo great a calumny in my writings, there is no ſign of
' it in my life, and for my religion, when I was at the
' point of death at St Germains, the Biſhop of Dur-
' ham can bear witneſs of it, if he be aſked. There-
' fore I moſt humbly beſeech your ſacred Majeſty, not
' to believe ſo ill of me, upon reports that proceed
' often (and may do ſo now) from the diſpleaſure which
' commonly ariſeth from difference in opinion; nor to
' think the worſe of me, *if ſnatching up all the weapons*
' *to fight againſt your enemies, I lighted upon one that*
' *had a double edge.*' It muſt be allowed, that how truly or juſtly ſoever this was certainly very elegantly ſaid, and that both the logic and rhetoric therein, has more the air of the Court than of the Cloiſter. Indeed from the hour he left Oxford, Mr Hobbes ſpent his time chiefly amongſt perſons of great quality and diſtinction, from whoſe converſation no doubt, he borrowed much of that vivacity and facility, and perhaps alſo of that conciſeneſs and perſpicuity for which his writings were then admired; and that they were admired at Court, and not publickly diſapproved by the King, was what chiefly kept up the old man's ſpirits, and enabled him to employ his pen at an age when other men are ſometimes paſt reading.

[*K*] *Be adjudged Hereſy.*] Amongſt all the pieces that fell from our author's pen, which were not a few, we may with great truth aſſert, there is none in which he ſhewed more ingenuity, learning, or addreſs, than in this. To ſay the truth, there was nothing imported him ſo much in the circumſtances he then ſtood, as to ſet this matter in a clear light, or at leaſt in ſuch a light as might intereſt moſt of his readers in his cauſe, by ſhewing the poſſibility of it's becoming their own; and ſetting up at the ſame time ſuch a defence of his own conduct, as might ſecure him againſt any proceedings, which were not founded on a law *ex poſt facto*; which he knew, for their own ſakes, the Commons, would never be brought to paſs. The method he took was this; he began with explaining the term *Hereſy*, which he obſerved was a Greek word, ſignifying the taking of any thing, and which came to be particularly applied to the taking of an opinion. When Philoſophy was freely taught in Greece, there aroſe ſeveral wiſe and great men, who laboured to explain the general ſyſtem of things in very different manners. As for inſtance, Pythagoras, Plato, Ariſtotle, Epicurus, and Zeno. The doctrine that each of theſe taught was ſtiled his *Hereſy*; and, in proceſs of time, as each of theſe different opinions came to be embraced by many, the followers of them were ſtiled *Sects*, from the Latin *à ſequendo*; and this is his notions of Hereſy and Sects while confined to Philoſophy. But when the Chriſtian Religion began generally to prevail, it was embraced by Philoſophers of all kinds, who quickly began to conciliate and explain ſcriptures themſelves according to their former notions; and their ſentiments being embraced by others, this introduced Hereſies and Sects into the Church. As this was productive of many and manifeſt inconveniences, and gave great ſcandal to unbelievers, the remedy applied was, to convene the Paſtors of the Church, who examined any new opinion as ſoon as it was broached; and if it appeared to them falſe, they ſummoned the author to retract it, which if he would not do they ſhut him out from their communion; the members of which conſidered him from thence forward as a heathen, branding him with the name of *Heretic*, as one perſiſting in his own private opinion, againſt the common ſenſe of the Church: hence aroſe the terms *Catholic* and *Heretic*, as relatives; and the latter grew a name of reproach and diſgrace. He obſerves next, that the preſerving the catholic faith made way for councils and creeds; in the former of which it was ſettled, and by the latter of which it was declared. In the firſt four general councils, the peace of the Church was the principal object, which ſoon after was changed for the power of the Church As the authority of the Biſhop of Rome, under a variety of titles, grew up, there was no doctrine which tended to the power eccleſiaſtical, or to the reverence of the clergy, the contradiction whereof was, not by one council or another, made hereſy, and puniſhed arbitrarily by the emperors with baniſhment or death. And at laſt, kings themſelves, and commonwealths, unleſs they purged their dominions of heretics, were excommunicated, interdicted, and their ſubjects let looſe upon them by the Pope; inſomuch, as to an ingenuous and ſerious Chriſtian, there was nothing ſo dangerous as to enquire concerning his own ſalvation of the Holy Scripture; the careleſs cold Chriſtian was ſafe, and the ſkilful hypocrite a ſaint. The Pope, now poſſeſſed of the power of the Church, declaring what were Hereſies, kings and other ſtates made ſuch laws, as they thought proper for the extirpation of them; the firſt that was made here was in the fifth of Richard the Second, againſt the Lollards, or followers of John Wicliffe; by which law, Sheriffs and ſome others were to have commiſſions to apprehend ſuch, as the prelates certified to be preachers of Hereſy, and their abettors; and them to hold in ſtrong priſon 'till they juſtified themſelves, according to the law of the Holy Church. Richard the Second being depoſed, Henry the Fourth, who in aſpiring to the Crown ſtood in need of the biſhops good will, in the ſecond year of his reign, gave his aſſent to a law, by which every Ordinary might convene before him and impriſon any perſon ſuſpected of Hereſy; and, if he remained obſtinate, he was to be burnt before the people. His ſon and ſucceſſor, Henry the Fifth, went farther; and, in the ſecond year of his reign, conſented to a law, declaring, that the intent of the Lollards was to ſubvert the Chriſtian Faith, the Law of God, the Church, and the Realm; and that a heretic convict ſhould forfeit all his fee-ſimple, lands, goods, and chattels, and be burned beſides. Henry the Eighth, in the twenty-fifth year of his reign, enacted, that a heretic convict ſhould abjure his Hereſies; and if he refuſed ſo to do, or relapſed, then to be burned in an open place for example-ſake. This was after he had aboliſhed papal power; which ſhewed, that his intention was not to alter religion, but to recover his own eccleſiaſtical authority. This, and all other laws againſt hereſy, were repealed in the time of Edward the Sixth. Under the reign of Queen Mary, her father's ſtatute was revived. Queen Elizabeth, in the fifth year of her reign, repealed all the eccleſiaſtical laws made by her ſiſter, and all former laws concerning the puniſhment of heretics. By the ſame ſtatute it was enacted, that the Queen, by her letters patent, conſtitute the Biſhops, and others her Commiſſioners for executing eccleſiaſtical authority, to whom the power was attributed of declaring Hereſy; but then they were reſtrained to ſuch as had been declared ſo by one of the firſt four general councils. This was the origin of the High-Commiſſion, which, upon the application of Parliament, King Charles paſſed a law to aboliſh (25).

(25) An Hiſtorical Narration concerning Hereſy, and the Puniſhment thereof, p. 25, 26.

' But, ſays our author, though the High-Commiſſion
' were taken away, yet the Parliament having other
' ends beſides the ſetting up of the Preſbyterate, pur-
' ſued the rebellion, and put down both Epiſcopacy
' and Monarchy, erecting a power, by them called the
' Commonwealth, by others the Rump; which men
' obeyed, not out of duty, but for fear; nor was there

any

a beautiful edition of ſuch of his works, as were either written by himſelf, or tranſlated into the Latin tongue, to be publiſhed in his life-time; and finding this to be a thing impracticable in England, he cauſed it to be undertaken abroad; where they were made public in 4to. in 1668, from the preſs of John Bleau (*l*). In 1669, he was viſited by Coſmo De Medicis, then Prince, afterwards Duke, of Tuſcany, who gave him ample marks of his eſteem and reſpect; and having received his picture, and a compleat collection of his writings, cauſed them to be repoſited, the former amongſt his curioſities, the latter in his celebrated library at Florence (*m*). The like viſits he received from foreign ambaſſadors, and other ſtrangers of diſtinction, who were curious to ſee a perſon, whoſe ſingular opinions and numerous writings had made ſo much noiſe over all Europe; which not only gratified the old man's paſſion for applauſe, which was his greateſt foible, but really raiſed his reputation; inſomuch, that ſome young men at the univerſities began to ſtudy his Philoſophy with great application, and embraced, with the paſſion natural to that ſeaſon of life, all his opinions (*n*). Amongſt theſe, there was one Daniel Scargill, Bachelor of Arts, and Fellow of Corpus-Chriſti-college in Cambridge, who undertook to defend ſome poſitions extracted from the Leviathan, which drew upon him a very ſevere academical proſecution, that ended in impriſonment, depriving him of his degree, removing him from his fellowſhip, and expelling him the univerſity (*o*). The man himſelf afterwards publiſhed a very full recantation, in which he acknowledged himſelf to have been drawn into the groſſeſt errors and impieties, by the ſtudy of our author's writings. This engaged him to write a vindication in reference to this matter, as he had often done upon other occaſions; which, notwithſtanding, was never publiſhed, but ſhewn only to a few intimate friends (*p*). In 1670, there was committed to the preſs in Latin, the Hiſtory and Antiquities of Oxford, by Mr Wood, or, as he ſtiled himſelf, Anthony à Wood; which was written by the author in Engliſh, but tranſlated and publiſhed at the expence of Dr Fell, Biſhop of Oxford, who cauſed ſome conſiderable alterations to be made, as well as many things to be left out, in the account given of our author and his writings (*q*). Upon this, Anthony à Wood, in juſtification of himſelf, acquainted him with the whole of that tranſaction, pointing out the ſeveral alterations and omiſſions; and our author, in a Latin letter, dated April 20, 1674, addreſſed to Mr Wood, publiſhed all this to the world, with very warm and bitter complaints againſt Dr John Fell. To this, that great man vouchſafed to publiſh a reply; in which he aſſerted, that the article contained in Mr Wood's Engliſh book was not compoſed by himſelf, but was tranſmitted to him, either by our author, or by his great friend and diſciple John Aubrey, Eſq; juſtifying likewiſe his corrections and omiſſions, in as ſtrong terms as thoſe which had been made uſe of by Mr Hobbes in his charge; and this vindication of himſelf he cauſed to be annexed to the Hiſtory and Antiquities of Oxford (*r*) [*L*]. In 1672, the Philoſopher of Malmeſbury wrote his life in Latin verſe, when, as he obſerves, he had compleated his eighty-fourth year; in which, whatever may be thought of the poetry, there is certainly a great deal of ſpirit, and, it may be, of vanity alſo (*s*). He mentions at the cloſe of it, that when he retired to France, his whole ſtock was five hundred pounds; as alſo the addition made to it,

(*s*) Thomæ Hobbeſii Vita, authore ſeipſo, Lond. 1679. 4to. Vitæ Hobbianæ Auctarium, p. 162. Publiſhed in Engliſh verſe, Lond. 1680. fol.

‘ any human laws left in force, to reſtrain any man ‘ from preaching or writing any doctrine concerning ‘ religion that he pleaſed; and, in this heat of the ‘ war, it was impoſſible to diſturb the peace of the ‘ State, which then was none. And in this time it ‘ was, that a book called *Leviathan* was written, in ‘ defence of the King's power, temporal and ſpiritual, ‘ without any word againſt Epiſcopacy, or againſt any ‘ Biſhop, or againſt the public doctrine of the Church. ‘ It pleaſed God, about twelve years after the uſurpa‘tion of this Rump, to reſtore His Moſt Gracious Ma‘jeſty, that now is, to his father's throne; and pre‘ſently his Majeſty reſtored the *Biſhops*, and pardoned ‘ the Preſbyterians; but then both the one and the ‘ other accuſed in Parliament this book of Hereſy, ‘ when neither the Biſhops before the war had declared ‘ what was Hereſy; when if they had, it had been ‘ made void, by the putting down of the High-Com‘miſſion, at the importunity of the Preſbyterians: ſo ‘ fierce are men for the moſt part in diſpute, where ‘ either their learning or power is debated, that they ‘ never think of the laws, but, as ſoon as they are of‘fended, they cry out *crucifige*, forgetting what St ‘ Paul ſaith, even in caſe of obſtinate holding of an er‘ror, 2 Tim. ii. 24, 25. *The ſervant of the* Lord ‘ *muſt not ſtrive; but be gentle unto all men, apt to* ‘ *teach, patient, in meekneſs inſtructing thoſe that op‘poſe; if* God *peradventure may give them repentance* ‘ *to the acknowledging of the truth.* Of which coun‘ſel, ſuch fierceneſs as hath appeared in the diſputa‘tion of divines, down from before the Council of ‘ Nice to this preſent time, is a violation.

[*L*] *To the Hiſtory and Antiquities of Oxford.*] In the Engliſh work of Anthony Wood, who was an honeſt and very ſincere man, though ſometimes a little rude, in the catalogue he gives us of our author's treatiſes, he mentions this letter to himſelf, and then adds (26): ‘ It was written to Mr Wood, upon his ‘ complaint made to Mr Hobbes, of ſeveral deletions ‘ and additions made in and to his life and character, ‘ which he had written of him in that book, by the ‘ publiſher (Dr John Fell) of the ſaid Hiſtory and Anti‘quities, to the great diſhonour and diſparagement of ‘ the ſaid Mr Hobbes. Whereupon, when that hi‘ſtory was finiſhed, came out a ſcurrilous anſwer to ‘ the ſaid epiſtle, written by Dr Fell, which is at the ‘ end of that hiſtory.’ The reader will obſerve, that in this paſſage, Mr Wood contradicts what is alledged by Dr Fell, that the article of Mr Hobbes was written by himſelf, or his friend Mr Aubrey, and ſent to Mr Wood, whereas he who muſt know this beſt, affirms that it was of his own writing. There is certainly, as we have obſerved in the text, great ſpirit in Mr Hobbes's letter, and not leſs in Dr Fell's reply (27); the former, after all his complaints, declares himſelf ſatisfied, that his own fame at home and abroad ſtood beyond the reach of envy, and that though he held it his right to expoſe the ill uſage he met with, yet this did not proceed in the leaſt, from an apprehenſion that injuries of this kind could affect his reputation. On the other hand, the reply of the Dean is not at all leſs angry, and a great deal more rude, he ſtiles him *the moſt vain and waſpiſh animal of* Malmeſbury, treats his political performances as wicked and dangerous, and his mathematical writings as idle and ridiculous. He from thence infers, that as the editor of the work, in which this favourable character of Mr Hobbes was to appear, he had a right to expunge whatever was forced or falſe, in order to reſtrain it within the bounds of hiſtorical truth.

(27) Vitæ Hobbianæ Auctarium, p. 129—147.

it, by the legacy of two hundred pounds from Sidney Godolphin, Esq; a man, whom virtue, loyalty, and learning, equally commended to the reverence of posterity. He takes notice likewise of an annuity granted him of fourscore pounds a year, by his patron the Earl of Devonshire, and the annual pension given him by the King of one hundred pounds; which provision, he declares, exceeded his wants, and adds very pleasantly, that by computing his effects in French sols or Spanish marvedies, he could persuade himself that Crœsus or Crassus were not at all richer men than he (t) [M]. In 1674, he published in English verse four books of Homer's Odyssey, which were very well received by the public; and this excited in him a resolution of translating, not only the Odyssey but the Iliad. The same year, in the month of July, he took his leave of London, and went to spend the remainder of his days in Derbyshire, but without the least abatement of his natural spirit and vivacity; which, together with his parts, he preserved 'till within a very few days of his death (u). In 1675, he sent abroad his English version of the Iliad and Odyssey, with a short discourse prefixed; which were in those days generally esteemed, though they have been censured by a modern poet and an excellent judge [N], as if they were

(u) Vitæ Hobbianæ Auctarium, p. 150. Wood's Athen. Oxon. Vol. II. col. 647.

[M] *Richer men than he.*] It may without any danger of a breach of truth be asserted, that never any man had a higher opinion of himself than Mr Hobbes; nor is there indeed scarce any treatise of his, in which he does not tell us as much; and this not with any apology, or as if it were a foible, but as a point of fact, of which he neither was or ought to be ashamed. Nay, what was yet much stronger, when he was reproached with this by his antagonists, he was so far from prevaricating or denying it, that he avowed and justified it; and yet with such an air of pleasantry and good humour, that sometimes he had his reader on his side, which, considering the point he defends, perhaps never happened to any but himself and Montaigne. See how fairly he has stated the case between himself and Dr Wallis (28), who thought he had convicted him of this crime, or folly at least, of talking loudly and impertinently in his own praise.

(28) Considerations on the Reputation, Loyalty, &c. of T. Hobbes, p. 56, 57.

'To the rest of your (Dr Wallis's) calumnies the 'answers will be short, and such as you might easily 'have foreseen; and first, for his (that is T. Hobbes) 'boasting of his learning, it is well summed up by 'you in these words. *'Twas a motion made by one '(whom I will not name) that some idle person should 'read over all his books, and collecting together his ar-'rogant and supercilious speeches, applauding himself 'and despising all other men, set them forth in one 'synopsis, with this title,* Hobbius de se. *What a 'pretty piece of pageantry this would make, I shall leave 'to your own thoughts?'*

'Thus say you: now says Mr Hobbes, or I for him. 'Let your idle person do it, and set down no more 'than he has written (as high praises as they be) I'll 'promise you he shall acknowledge them under his 'hand, and be commended for it, and you scorned. 'A certain Roman Senator having propounded some-'thing in the assembly of the people, which they mis-'liking made a noise at, boldly bad them hold their 'peace, and told them he knew better what was good 'for the Commonwealth than all they: and his words 'are transmitted to us as an argument of his virtue, so 'much do truth and vanity alter the complexion of self-'praise. Besides, you can have very little skill in mo-'rality, that cannot see the justice of commending a 'man's self, as well as of any thing else in his own de-'fence: and it was want of prudence in you, to con-'strain him to a thing that would so much displease 'you. That part of his self-praise which most offends 'you, is in the end of his Leviathan in these words: 'Therefore I think it may be profitably printed, and 'more profitably taught in the Universities, in case 'they also think so, to whom the judgment of the same 'belongeth. Let any man consider the truth of it: 'Where did those ministers learn their seditious doc-'trine, and to preach it, but there? where therefore 'should preachers learn to teach loyalty but there? 'and if your principles produced civil war, must not 'the contrary principles, which are his, produce 'peace. And consequently his book, as far as it 'handles civil doctrine, deserves to be taught there. 'But when can this be done? when you shall have no 'longer an army ready to maintain the evil doctrine 'wherewith you have infected the people. By a ready 'army, I mean arms and money, and men enough, 'though not yet in pay, and put under officers, yet 'gathered together in one place or city, to be put un-'der officers armed and payed, on any sudden occa-'sion, such as are the people of a great and populous 'town. Every great city is as a standing army, which, 'if it be not under the Sovereign's command, the peo-'ple are miserable; if they be, they may be taught 'their duties in the universities safely and easily, and 'be happy. I never read of any Christian King that 'was a tyrant, though the best of Kings have been 'called so.'

In the two lives written by himself of himself, he speaks exactly in the same language, and with the same air of easy assurance. In the prose life, which was the later written of the two, speaking in the third person, he describes himself thus. 'In familiar conversation 'he was easy and pleasant, except to such as came to 'dispute with him about what he had already publish-'ed concerning the right of sovereignty in civil and 'ecclesiastical causes. For in respect to these, he dis-'puted sometimes a little more vehemently perhaps 'than was necessary. He was naturally very open, and 'amongst his adversaries, who were many, and some 'of them very potent, it was rather owing to his inno-'cence than his skill that he remained safe. As no 'man understood justice better, so none practised it 'more strictly. Neither was this at all strange, as he 'was very careless about money, and the narrowness 'of his fortune considered, he was beyond measure be-'neficent, but through the kindness of his patrons, and 'of the best and most humane of Princes, Charles the 'Second, the old man lived very comfortably.' At the close of his life in verse, in the same singular and not unpleasing manner, he sings of himself thus (29).

(20) Thomæ Hobbes Vita, p. 15.

Nam mea vita meis non est incongrua scriptis:
Justitiam doceo, justitiamque colo.
Improbus esse potest nemo qui non sit avarus,
Nec pulchrum quisquam fecit avarus opus.
Octoginta ego jam complevi & quatuor annos:
Penè acta est vitæ fabula longa meæ.

In English thus.

Nor to my writings is my life untrue,
Justice I teach, and justice I pursue.
The root of wickedness is lust of gain,
Good works from misers men expect in vain.
Years having seen compleat, fourscore and four,
The farce of life, with me, will soon be o'er.

(30) Ibid. Londi 4to. 1679. p. 14.

Octoginta annos complevi jam quatuorque,
Et prope stans dictat Mors mihi, Ne metue.

In English thus:

For having past, my four and fourscor'th year,
Death beckons now, and bids me nothing fear.

[N] *By a modern poet and an excellent judge.*] As good an opinion as our author had of himself, he resolved to make a trial of the public's taste in respect to his poetry, so much the more necessary as he now wrote in English, and was of course to have both the learned and the unlearned for his judges. His specimen consisted of the ninth, tenth, eleventh, and twelfth books of the Odyssey. How it succeeded, we learn from

were equally below the reputation of Hobbes and of the Grecian bard. In 1676, he cauſed his diſpute with Dr Benjamin Laney, Biſhop of Ely, concerning *Liberty* and *Neceſſity*, to be printed; for he loved not only to ſhew that he was living, by the exerciſe of his pen; but alſo to make the world take notice of it by annual publications (*w*). In 1678, appeared his *Decameron Phyſiologicum*: or, *Ten Dialogues of Natural Philoſophy*; about the ſame time he reviſed and put the laſt hand to a work formerly publiſhed, though without his name, the Art of Rhetoric, collected from Ariſtotle and Ramus; to which he added a book, compoſed ſome years before at the requeſt of a perſon of great diſtinction, entituled, A *Dialogue* between a *Philoſopher* and a *Student* of the *Common-Law* of *England*; which is a very ſingular performance, and very evidently proves, that, if Mr Hobbes had applied himſelf early to that, or indeed any other learned profeſſion, he could not have failed of making a great figure therein; though, for want of that early application, there is in it an air of poſitiveneſs, which does no honour to the author's abilities [*O*]. In the month of June the ſame year, he ſent another book of his, entitled *Behemoth*: or, *a Hiſtory*

(*w*) Vitæ Hobbianæ Auctarium, p. 191. Wood's Athen. Oxon. Vol. II. col. 645.

(31) Vita Thomæ Hobbes, p. 17.

from the author's proſe life (31). 'His adverſaries 'now ſilent, he publiſhed in the eighty-ſeventh year of 'his age, the Odyſſey of Homer, and the next year 'the Iliad in Engliſh verſe.' In leſs than ten years, both run through no fewer than three large editions. The modern poet mentioned in the text, is the celebrated Mr Pope, who in the preface to his own tranſlation of the Iliad of Homer, has given us the following free and fair character of our author's performance, 'Mr Hobbes in his verſion, ſays he, has given a cor-'rect explanation of the ſenſe in general, but for par-'ticulars and circumſtances lops them, and often omits 'the moſt beautiful. As for it's being eſteemed a cloſe 'tranſlation, I doubt not, many have been led into 'that error by the ſhortneſs of it, which proceeds not 'from the following the original line by line, but from 'the contractions abovementioned. He ſometimes 'omits whole ſimilies and ſentences, and is now and 'then guilty of miſtakes, into which no writer of his 'learning could have fallen but through careleſſneſs. 'His poetry, as well as Ogilby's, is too mean for criti-'ciſm.' We readily admit all this to be true, and that though our author's tranſlation is no longer to be conſidered as an elegant, or it may be as a paſſable poem, yet it may ſtill perhaps be looked upon as a curioſity. For though in Pope's excellent verſification, the genius, force, and majeſty of Homer, appears to an Engliſh reader, and appears to great advantage, yet poſſibly he may wiſh to ſee ſomewhat more, and think it not time at all miſ-ſpent to read a coarſer compoſition, provided it conveys the plain ſenſe of the Greek. We are in raptures at a finiſhed picture by a firſt rate painter, but even a ſketch too after ſuch a maſter has it's merit. The reader may compare the following ſpeech of Achilles, which is remarkably cloſe, and takes in juſt twenty-ſeven lines of the Greek (32), with the ſame paſſage in Pope, and he will probably both underſtand and reliſh the latter better after the compariſon.

(32) Iliad of Homer, by T. Hobbes, Lond. 1682. p. 6, 7.

Achilles ſtill, nothing but choler breath'd,
And Agamemnon thus revil'd anew.

Dog's-face, and drunkard, coward that thou art,
That hat'ſt to lead the people out to fight:
Nor yet to lie in ambuſh haſt the heart,
And painfully watch in the field all night.

But thou to take from other men their due,
(Safe lying in the camp) more pleaſure haſt;
But fools they are, that ruled are by you,
Or elſe this injury had been your laſt.

But this I'll ſay, and with an oath make good,
(Now by this ſcepter which hath left behind
The ſtock whereon it once grew in the wood,
And never more ſhall have nor leaf nor rind,

And by Achean Princes now is born,
By whom Jove's laws to th' people carried be)
You hear now what a great oath I have ſworn,
If e'er the Acheans ſhould have need of me,

And Agamemnon cannot them relieve,
When Hector fills the field with bodies ſlain,
And Agamemnon only for them grieve,
They my aſſiſtance wiſh for ſhall in vain.

This ſaid, Achilles threw the ſcepter down,
That ſtuck all over was with nails of gold;
And Neſtor roſe of Pyle that wore the crown,
Wiſe and ſweet orator and captain old.

His words like honey dropped from his tongue,
Two ages he in battle honour gain'd;
For all that while he youthful was and ſtrong,
And with the third age, now in Pyle he reign'd.

[*O*] *To the author's abilities*] Theſe two pieces of our author, which did not appear together 'till after his deceaſe, are in effect but detached branches of his general ſyſtem of philoſophy. The firſt of them is a diſplay of the art of convincing and perſuading, which, according to his doctrine, took place in civilized ſtates, of that violence which he aſcribes to a ſtate of nature, that is, mankind at large, and unreduced to ſociety. The latter is an application of his principles to the government of England. In this, no doubt, he ſhoots beyond the mark, and having been once frighted out of his wits by anarchy; entertained too favourable an opinion of abſolute power. But that he was very capable of entering into the genuine ſenſe of our laws, and ſetting them in a clearer light than that in which they appear in the works of ſome very conſiderable perſons, the unprejudiced reader will probably diſcern from the following paſſage (33).

(33) Dialogue between a Lawyer and a Philoſopher of the Common-Law of England, p. 102—105.

La. All other crimes (that is except treaſon) merely temporal, are comprehended under felony or treſpaſs.

Ph. What is the meaning of the word *felony*? Does it ſignify any thing that is in it's own nature a crime, or that only which is made a crime by ſome ſtatute? for I remember ſome ſtatutes, that make it *felony* to tranſport horſes, and ſome other things out of the kingdom, which tranſportation before ſuch ſtatutes made, and after the repealing of the ſame, was no greater crime than any other uſual traffic of a merchant.

La. Sir Edward Coke derives the word *felony*, from the Latin word *fel*, the *gall* of a living creature, and accordingly defines *felony*, to be an act done *animo felleo*, that is to ſay, a *bitter*, a *cruel act*.

Ph. Etymologies are no definitions, and yet when they are true, they give much light towards the finding out of a definition; but this of Sir Edward Coke's carries with it very little of probability, for there be many things made felony by the ſtatute law, that proceed not from any bitterneſs of mind at all, and many that proceed from the contrary.

La. This is matter for a critic, to be picked out of the knowledge of hiſtory and foreign languages, and you may perhaps know more of it than I do.

Ph. All that I, or I think any other, can ſay in this matter, will amount to no more than a reaſonable conjecture, inſufficient to ſuſtain any point of controverſy in law. The word is not to be found in any of the old Saxon laws ſet forth by Mr Lambert, nor in any ſtatute printed before that of *Magna Charta*, there it is found. Now *Magna Charta* was made in the time of Henry the Third, grand-child to Henry the Second, Duke of Anjou, a Frenchman born and bred in the heart of France, whoſe language might very well retain many words of his anceſtors, the German Franks, as ours doth of the German Saxons, as alſo many words of the language of the Gauls, as the Gauls did retain many words of the Greek colony planted at Marſeilles. But certain it is, the French lawyers at this day, uſe the word *felon* juſt as our lawyers uſe the ſame. Whereas the common people of France uſe the word *filon* in the ſame ſenſe; but

filon

(*) See that letter in note [P]. Vitæ Hobbianæ Auctarium, p. 152, 153. Wood's Athen. Oxon. Vol. II. col. 645.

a History of the Civil Wars from 1640 to 1660, to an eminent Bookseller, with a letter shewing the reasons for his communication, as well as for his request, that he would not publish it 'till a proper occasion offered (*x*). At that time, when things were fresh in memory, it was much read and admired [P]. Indeed the author gives his opinion very freely

filon signifieth not the man that hath committed such an act as they call *felony*, but the man that maketh it his *trade* to maintain himself by the breaking and contemning of all laws generally, and comprehendeth all those unruly people called cheaters, cut-purses, pick-locks, catch-cloaks, coiners of false money, forgers, thieves, robbers, murtherers, and whosoever make use of iniquity on land or sea, as a trading or living. The Greeks upon the coast of Asia where Homer lived, were they that planted the colony of Marseilles, they had a word that signified the same with *felon*, which was φιλήτης *filetes*, and this *filetes* of Homer, signifies properly the same that a *felon* signifies with us: and therefore Homer makes Apollo to call Mercury φιλήτην fileteen, and ἀρχὸν φιλήτων. I insist not upon the truth of this etymology, but it is certainly more rational than the *animus felleus* of Sir Edward Coke. And for the matter itself it is manifest enough, that which we now call murther, robbery, theft, and other practices of *felons*, are the same that we call *felony*, and crimes in their own nature without the help of statute. Nor is it the manner of punishment that distinguisheth the nature of one crime from another, but the mind of the offender, and the mischief he intendeth considered together with the circumstances of person, time, and place.

Besides these, there were some other pieces printed after his decease, such as his Ecclesiastical History in Latin verse, and also some of those pieces that had been before published from surreptitious copies, were reprinted again from his originals, by Mr William Crooke, who seems to have had the disposition of his writings in his life-time, and after his death. It must however be acknowledged, that they are very incorrectly printed, and that the sense is sometimes so much disturbed by typographical errors, that it is not easy to recover it with any tolerable certainty.

[P] *It was much read and admired.*] In reference to the Behemoth, there is no doubt that the author was very sollicitous to prevent it's coming abroad in his life-time, as will appear from the following extract of a letter (34), written in the month of June 1679. to his bookseller Mr William Crooke, at the Green Dragon without Temple-bar. But as there were several transcripts of it, this had not the effect hoped, though it did prevent the genuine copy which he had deposited with Mr Crooke, from being sent to the press; and those spurious editions were so faulty and imperfect, that they served only to raise the curiosity of the public for the true one. The letter is the more curious, from the matters of fact it contains, and because it is not printed as one might have expected, before the genuine edition.

(34) Vitæ Hobbianæ Auctarium, p. 152, 153.

CHATSWORTH, June 19th, 1679.

'I would fain have published my dialogue of the 'Civil Wars of England long ago, and to that end I 'presented it to His Majesty; and some days after, 'when I thought he had read it, I humbly besought 'him to let me print it. But his Majesty, though he 'heard me graciously, yet he flatly refused to have it 'published. Therefore I brought away the book, 'and gave you leave to take a copy of it, which when 'you had done, I gave the original to an honourable 'and learned friend, who about a year after died. The 'King knows better, and is more concerned in pub'lishing of books than I am: therefore I dare not 'venture to appear in the business, lest it should of'fend him. Therefore I pray you not to meddle in 'the business. Rather than to be thought any way to 'further or countenance the printing, I would be con'tent to lose twenty times the value of what you can 'expect to gain by it, &c.——I pray do not take it ill. 'It may be I may live to send you somewhat else, as 'vendible as that, and without offence. I rest,'

The treatise itself is likewise valuable in many respects, as being wrote by a person of great penetration, strong judgment, and extensive information; one who lived in those times, saw the events, and conversed with the people of whom he speaks. It may be, that he had his prejudices, and that he writes with prejudice; but then we have some knowledge of these too, which is abundantly sufficient to prevent us from being misled. The reader will form a judgment as to the propriety of these remarks, from the following quotation (35), in which, Mr Hobbes states the tempers and conditions of the people at the time of the breaking out of the civil war. It is to be observed, that this treatise likewise is written in dialogue; after observing that epidemic corruption preceded the civil war, he says,

(35) Behemoth, P. 3, 4, 5, 6, 7.

B. But how came the people to be so corrupted? and what kind of people were they that did so seduce them?

A. The seducers were of divers sorts. One sort were ministers, ministers (as they called themselves) of Christ, and sometimes in their sermons to the people, God's ambassadors, pretending to have a right from God to govern every one his parish, and their assembly the whole nation.

Secondly, There were a very great number, though not comparable to the other, which notwithstanding that the Pope's power in England, both temporal and ecclesiastical, had been by act of parliament abolished, did still retain a belief that we ought to be governed by the Pope, whom they pretended to be the vicar of Christ, and in the right of Christ, to be the governor of all Christian people, and these were known by the name of Papists, as the ministers I mentioned before were commonly called Presbyterians.

Thirdly, There were not a few, who in the beginning of the troubles were not discovered, but shortly after declared themselves for a liberty in religion, and those of different opinions one from another, some of them (because they would have all congregations free and independent upon one another) were called Independents: others that held baptism to infants, and such as understood not into what they are baptized to be ineffectual, were called therefore Anabaptists. Others, that held that Christ's kingdom was at this time to begin upon the earth, were called Fifth Monarchy Men, besides divers others sects, as Quakers, Adamites, &c. whose names and peculiar doctrines I do not well remember, and these were the enemies which arose against his Majesty, from the private interpretation of the scripture, exposed to every man's scanning in his mother's tongue.

Fourthly, There were an exceeding great number of men of the better sort that had been so educated, as that in their youth, having read the books written by famous men of the ancient Grecian and Roman Commonwealths, concerning their politie and great actions; in which books the popular government was extolled by that glorious name of liberty, and monarchy disgraced by the name of tyranny; they became thereby in love with their forms of government, and out of these men were chosen the greatest part of the House of Commons, or if they were not the greatest part, yet by advantage of their eloquence, were always able to sway the rest.

Fifthly, The city of London and other great towns of trade, having in admiration the prosperity of the Low-Countries after they had revolted from their monarch the King of Spain, were inclined to think that the like change of government here, would to them produce the like prosperity.

Sixthly, There were a very great number that had either wasted their fortunes, or thought them too mean for the good parts they thought were in themselves, and more there were that had able bodies, but saw no means how honestly to get their bread: these longed for a war, and hoped to maintain themselves hereafter by the lucky chooſing of a party to side with, and consequently did for the most part serve under them that had greatest plenty of money.

Lastly, The people in general were so ignorant of their duty, as that not one perhaps of ten thousand, knew what right any man had to command him, or what necessity there was of King or Commonwealth, for which he was to part with his money against his will, but thought himself to be so much master of whatsoever he possessed, that it could not be taken from him upon any pretence of common safety without his own consent. King they thought was but a title of the highest honour, which Gentleman, Knight, Baron, Earl, Duke, were but steps to ascend to with the help of riches, and had no rule of equity but precedents and custom, and he was thought wisest and fittest to be chosen

freely upon abundance of delicate and important ſubjects, and lays open very roundly the faults of ſome great bodies of men, who, in his judgment, made but an indifferent uſe of that high and general reſpect which the world paid them. This was in ſome meaſure his legacy to the Public, ſince it was the laſt piece of his that went to the preſs during his life. About the middle of October, he was afflicted with a ſuppreſſion of urine, for which he had the aſſiſtance of one of the Faculty, who promiſed to do all that was in his power to give him eaſe; but told him plainly, that, on account of his great age, he had little hopes of making a perfect cure (*y*). On the 20th of November, his patron the Earl of Devonſhire removing from Chatſworth to another ſeat of his, called Hardwick, he obſtinately perſiſted in deſiring that he might be carried too, though this could be no other way done than as he lay upon a feather-bed. He did not ſeem to be much diſcompoſed with this journey; and yet, within ſix or ſeven days afterwards, he loſt, by a ſtroke of the palſy, the uſe of ſpeech and of his right ſide entirely; in this condition he remained for ſome days, taking little nouriſhment, and ſleeping much. He ſometimes endeavoured to ſpeak, but was not able. There did not appear, in the courſe of his laſt illneſs, any ſymptoms of a fever; ſo that he ſeemed to be quite worn out, and Nature being no longer able to furniſh wherewith to feed the flame of life, he expired December 4, 1679, in the ninety-ſecond year of his age (*z*). Mr Wood tells us, that after he received the anſwer, which has been beforementioned, from the learned perſon who attended him, he made uſe of this expreſſion, *Then I ſhall be glad to find a hole to creep out of the world at* (*a*). The ſame author obſerves, that his not deſiring the company of a Miniſter to receive the Sacrament before he died, ought in charity to be imputed to his being ſo ſuddenly ſeized, and being afterwards deprived of his ſenſes; the rather, becauſe the Earl of Devonſhire's Chaplain declared, that, within the two laſt years of his life, he had often received the Sacrament from his hands with ſeeming devotion. Two days after his deceaſe, his corpſe was removed from the houſe of his noble patron, and decently attended to the pariſh of Hault Hucknall (*b*), where in an iſle he was interred, with the ſervice in the Common-Prayer-Book, cloſe to the rail of the monument of the grandmother of the then Earl of Devonſhire; and over his grave a black marble ſtone was laid, with an inſcription mentioning the place and time of his birth, and of his deceaſe [Q]. As there are

choſen for a Parliament, that was moſt averſe to the granting of ſubſidies or other public payments.

[Q] *And of his deceaſe.*] The chief and the moſt laſting monument erected to the memory of our author, is that tripartite life of him which appeared not long after his deceaſe, and concerning which, there have been great controverſies among ſome of the moſt eminent writers of literary hiſtory, the title of this work runs thus, *Thomæ Hobbes, Angli, Malmeſburienſis, Philoſophi vita.* That is, 'The life of Thomas 'Hobbes, an Engliſhman, Philoſopher of Malmeſbury;' and is ſaid to be printed, *Carolopoli, apud Eleutherium Anglicum, ſub ſigno Veritatis.* That is, 'In 'Charles's City, by Freeman Engliſh, at the Sign of 'Truth.' It may be ſuppoſed that this method of concealing, if it can be ſo called, the place where it was printed, and the perſon by whom it was publiſhed, was on account of the book's not being licenſed; and yet at the end, it is ſaid to be printed for William Crooke, at the Sign of the Green Dragon without Temple-bar. It is inſcribed to the Right Honourable William Earl of Devonſhire, by the editor: then follows a preface to the reader, wherein we are told, that a book concerning the life and manners of the deceaſed Mr Hobbes, written by ſome learned friend of his, coming by the interpoſition of J. A. i. e. John Aubrey, into his hands, he thought it his duty out of reſpect to the memory of the deceaſed to publiſh it. This preface is ſubſcribed only with the initial letters R. B. which ſome very learned foreigners underſtood to ſignify Ralph Bathurſt, Doctor of Divinity and Dean of Bath, who was indeed a great friend and admirer of Mr Hobbes, but not the perſon to whom thoſe initials refer, who was, as Mr Wood tells us (36), Richard Blackbourn, Maſter of Arts of Trinity-College in Cambridge, and afterwards Doctor of Phyſic in the Univerſity of Leyden. After this ſhort life, which contains no more than twenty pages, follows one much longer under this title, *Vitæ Hobbianæ Auctarium:* that is, 'A Supplement to the Life of Hobbes.' The account which Mr Wood gives of this matter, is in theſe words, ſpeaking of the inſcription upon the grave-ſtone of Mr Hobbes, and of the account of his perſon, which, ſays he, 'You may ſee at large in *Vitæ Hob-'bianæ Auctarium*, following the life in proſe (written 'by himſelf) and publiſhed by Richard Blackbourn.' It appears from hence, that Mr Wood aſcribes the firſt life to Mr Hobbes himſelf, and in the catalogue of our author's works, he ſets it ſo down expreſsly; and the ſupplement to that life, is what he attributes to Dr Blackbourn. He adds farther, 'that the mate-'rials for this ſupplement were all, or at leaſt the moſt 'part, taken from the Engliſh life in manuſcript of 'Thomas Hobbes, largely and more punctually writ-'ten by John Aubrey his ancient acquaintance.' This is very likely to be true, ſince beſides what is ſaid in the preface, ſuch a life in Engliſh is promiſed by an advertiſement from the bookſeller to the reader, at the end of this ſupplement. The title of the third and laſt piece in this collection, which however in point of time is the firſt, is this, *Thomæ Hobbes Malmeſburienſis vita Carmine expreſſa. Authore Seipſo:* that is, 'The 'Life of Thomas Hobbes of Malmeſbury metrically 'expreſſed. Written by himſelf.' About this there is no diſpute at all, the author ſpeaks in his own perſon, in his own ſtile, and with that pleaſant kind of confidence which was familiar to him. In the courſe of theſe memoirs we have cited all the three lives, and have treated the ſhort proſe life upon Anthony Wood's credit, as written by Mr Hobbes, to whom it has been alſo aſcribed by others; yet whoever will peruſe carefully, and reflect a little on the firſt paragraph of the ſupplement to Mr Hobbes's life, will ſee reaſon to doubt at leaſt, whether the author of that ſupplement was not the author of the ſhort life in proſe; and upon comparing both with the preface, whether the editor R. B. that is Dr Blackbourn, was the author of either, or of any thing more than that preface, and it may be the inſcription to the Earl of Devonſhire. If therefore the reader ſhould aſk, who was then the author of theſe lives, and why, if this was our opinion, we have attributed the proſe life to Mr Hobbes? We ſhall anſwer clearly, that we have heard the ſhort proſe life was written by Thomas Rymer, Eſq; the famous critic, in the life-time, and with the participation of Mr Hobbes; and our conjecture is, that he wrote the ſupplement after his deceaſe, at the requeſt and from the materials furniſhed him by Mr John Aubrey; but being deſirous that this might remain a ſecret, he ſuffered that gentleman to put them into the hands of Dr Blackbourn, who publiſhed them; and this we take to be a probable at leaſt, if not a certain account of this matter. But before we conclude this note, we will give the reader for the ſake of a reflection that he will meet with in a ſubſequent note, the Latin inſcription upon our author's tombſtone, and the rather, becauſe it is very ſhort and ſimple (37).

(36) Athen. Oxon. Vol. II. col. 647.

(37) Vitæ Hobbianæ Auctarium, p. 221.

are many particulars very worthy of remembrance in regard to his private life, we will add ſome account of his perſon, temper, and manners. In his ſtature he was pretty tall, of a ſpare habit of body, his ſkin remarkably tender; ſo that, to defend himſelf from the injuries of cold, he went commonly very warmly cloathed (*c*). His face was comely enough; his brow large and open, but, in the more advanced part of his life, it became deeply wrinkled; his eyes very quick and ſparkling; his ſight ſtrong, penetrating, and tolerably good even to the laſt; his noſe ſomewhat long, with a lively colour in his cheeks; his hair, before age turned it grey, was of a bright black, but his beard of a yellowiſh red; a little of which he preſerved on his chin; but on his lip he wore his muſtachoes thick and turning upwards. His complexion was a ſanguine melancholy, as ſome ſtile it; that is, he was ſtrong and vigorous, but, withal, of a calm and grave deportment. In his youth his health was tender, and he was frequently threatned with the jaundice; but by forty he came to have it more ſettled; however, he kept his bed but rarely through his whole life, and dealt ſparingly in Phyſic. When he was about threeſcore his hand ſhook, and he was in other reſpects affected by the palſy towards his end (*d*). He was no way nice in his eating; on the contrary, there was hardly any kind of food came amiſs to him. When he grew in years, he dined at a certain hour, ſmoaked a little tobacco, but eat no ſuppers. In the vigour of his age he was not exempt from amorous failings, but perſiſted nevertheleſs in the reſolution he had taken to continue a bachelor for the ſake of his ſtudies. He uſed a great deal of exerciſe on the ſcore of his health; he played often at hand-ball, even after he was turned of ſeventy, and would even then take long walks, and at his return cauſe his limbs to be rubbed 'till he fell aſleep. When age made this exerciſe painful to him, he contented himſelf with having his chamber artificially heated, and the circulation promoted by the ſame kind of frictions. The chearfulneſs, activity, and ſoundneſs of mind, which he maintained to upwards of ninety, make even theſe trivial circumſtances worthy of notice. In reference to his manners, religion claims the firſt place. He acknowledged GOD the author of all things, but thought, or at leaſt pretended he thought, too reverently of him to believe his nature could be comprehended by human underſtanding. But what gave a handle to ſome to treat him as an Atheiſt was, the contempt he expreſſed for many of thoſe ſcholaſtic terms, invented by aſſuming men, who would impoſe their own crude notions of the Divine Being on their fellow-creatures as ſo many articles of Faith. It is commonly reported, though without any proof, that he was afraid of ghoſts, &c. which his Philoſophy had exploded; yet it is very poſſible he might not affect ſolitude, that he might avoid expoſing himſelf to the violence of the numbers who had declared themſelves his enemies. He embraced the Chriſtian religion as taught in the reformed Church of England, as by law eſtabliſhed; and profeſſed himſelf equally ready to defend her tenets, when attacked either by Papiſts or Sectaries. He had a great averſion to theological controverſies, but was much inclined to whatever tended to promote piety or ſound morals. He thought it more pious and reverent to believe in GOD, than to pretend to comprehend him. He would often blame ſuch, whatever their profeſſion might be, as pretended to innovate the ſimplicity of the Chriſtian Faith, by intermixing vain, and ſometimes profane, ſpeculations of their own. He thought it would turn much more to the benefit of ſociety, if, after eſtabliſhing a due reverence for the Supreme Being, men, inſtead of conteſting about theſe ſpeculations, would apply themſelves to ſtudy, and perform the ſeveral offices to which they are called, in civil and ſocial life. In reſpect to this, he gave himſelf a good example, being always concerned for the welfare of his country, obſervant in his duty to his ſovereign, religiouſly faithful in his friendſhips, and truly beneficent to his relations. The paternal eſtate of the family, which was of ſome value, he made over to his brother ſome years before his death. Several other acts of kindneſs he did in his life-time to thoſe who were of kin to him, and diſtributed his little fortune very prudently amongſt them at his demiſe. To the poor, he was in diſcourſe compaſſionate, and charitable in act to the extent of his abilities; and, to the reſt of the world in general, ſtrictly juſt, and very decent in his addreſſes as far as became him. In his converſation, his cuſtom was, to mingle with that ſound language, which is ſuitable to grave ſubjects, a peculiar kind of pleaſantry, that prevented the hearer from becoming weary. He had naturally a wonderful readineſs in anſwering whatever was propounded to him; but this was regulated by his judgment, which taught him to deliberate

Here lie the Remains
Of Thomas Hobbes of Malmeſbury
Who was for many years in the Service
Of two Earls of Devonſhire
Father and Son;
A Man of Integrity and from the Fame of his Learning
At home and abroad well known.
He died in the year of our Lord 1679
On the 4th of December
Aged 91.

berate and to think well with himſelf before he ſpoke. He was of a ſimple and open diſpoſition, deſirous of inſtructing others, and very willing to communicate what he knew; mild and complaiſant to every body, except, perhaps, to ſome impertinent pretenders to learning, who, under pretence of diſplaying their abilities, came purely to contradict him. He never attacked others; but, whenever attacked himſelf, he ſhewed ſpirit enough in his own defence; yet was withal a little too tenacious of his own opinions. Theſe are the ſtrokes of a friendly pencil, inclined to draw a handſome likeneſs; but, if the reader inclines to ſee the portrait of our author in very different colours, he ſhall be gratified in that reſpect, and that too by an able hand [*R*]. The truth is, that all eminent perſons, from this very circumſtance, are liable to be repreſented in very different and even contrary lights;

[*R*] *And that too by an able hand.*] A celebrated writer, who had great opportunities of knowing the minuteſt particulars in regard to Mr Hobbes's manner of living, in his honourable retreat at Chatſworth, has been pleaſed to give them to the public in this manner (38). 'The Earl of Devonſhire, for his whole life, 'entertained Mr Hobbes in his family, as his old tutor 'rather than as his friend or confident. He let him 'live under his roof in eaſe and plenty, and in his own 'way, without making uſe of him in any public or ſo 'much as domeſtic affairs. He would often expreſs 'an abhorrence of ſome of his principles in policy 'and religion, and both he and his lady would frequently put off the mention of his name, and ſay he 'was an humoriſt, and that no body could account for 'him. There is a tradition in the family, of the 'manners and cuſtoms of Mr Hobbes, ſomewhat obſervable. His profeſſed rule of health, was to dedicate the morning to his exerciſe, and the afternoon 'to his ſtudies. And therefore at his firſt riſing he 'walked out, and climbed any hill within his reach, 'or if the weather was not dry, he fatigued himſelf 'within doors by ſome exerciſe or other, to be in a 'ſweat, recommending that practice upon this opinion, 'that an old man had more moiſture than heat, and 'therefore by ſuch motion, heat was to be acquired, 'and moiſture expelled. After this he took a comfortable breakfaſt, and then went round the lodgings to 'wait upon the Earl, the Counteſs, and the children, 'and any conſiderable ſtrangers, paying ſome ſhort 'addreſſes to all of them. He kept theſe rounds 'till 'about twelve o'cloek, when he had a little dinner 'provided for him, which he eat always by himſelf 'without ceremony. Soon after dinner he retired to 'his ſtudy, and had his candle with ten or twelve pipes 'of tobacco laid by him, then ſhutting his door, he 'fell to ſmoaking, thinking, and writing for ſeveral 'hours. He retained a friend or two at Court, and 'eſpecially the Lord Arlington, to proteſt him if occaſion ſhould require. He uſed to ſay, *That it was 'lawful to make uſe of ill* inſtruments *to do ourſelves* 'good. *If I were caſt*, ſays he, *into a deep pit, and 'the* devil *ſhould put down his* cloven foot, *I would 'take* hold *of* it *to be drawn out by it.* Towards the 'end of his life he had very few books, and thoſe he 'read but very little, thinking he was now able only 'to digeſt what formerly he had fed upon. If company came to viſit him, he would be free in diſcourſe, 'till he was preſſed or contradicted, and then he had 'the infirmities of being ſhort and peeviſh, and referring to his writings for better ſatisfaction. His friends, 'who had the liberty of introducing ſtrangers to him, 'made theſe terms with them before their admiſſion, 'that they ſhould not diſpute with the old man, nor 'contradict him.'——After mentioning the dread our author was under when the Parliament cenſured his book, he continues his account in the following terms (39). 'It is not much to be doubted, that upon this 'occaſion he began to make a more open ſhew of religion and Church communion. He now frequented 'the chapel, joined in the ſervice, and was generally 'a partaker of the Holy Sacrament. And whenever 'any ſtrangers in converſation with him, ſeemed to 'queſtion his belief, he would always appeal to his 'conformity in divine ſervices, and referred them to 'the chaplain for a teſtimony of it. Others thought it 'a meer compliance to the orders of the family, and 'obſerved that, in city and country, he never went to 'any pariſh-church, and even in the chapel on Sundays, he went out after prayers, and turned his back 'upon the ſermon; and when any friend aſked the reaſon of it, he gave no other but this, *They could teach 'him nothing but what he knew.* He did not conceal 'his hatred to the clergy, but it was viſible, that the 'hatred was owing to his fear of their civil intereſt and 'power. He had often a jealouſy that the biſhops 'would burn him, and of all the bench, he was moſt 'afraid of the Biſhop of Sarum (Dr Seth Ward) becauſe he had moſt offended him, thinking every 'man's ſpirit to be remembrance and revenge. ——— 'After the Reſtoration, he watched all opportunities 'to ingratiate himſelf with the King and his Prime 'Miniſters, and looked upon his penſion, to be more 'valuable as an earneſt of favour and protection, than 'upon any other account. His following courſe of 'life, was to be free from danger: he could not endure to be left in an empty houſe; whenever the Earl 'removed, he would go along with him, even to his 'laſt ſtage from Chatſworth to Hardwicke. When in 'a very weak condition, he dared not be left behind, 'but made his way upon a feather-bed in a coach, 'though he ſurvived the journey but a few days. He 'could not bear any diſcourſe of death, and ſeemed to 'caſt off all thoughts of it: He delighted to reckon 'upon longer life. The winter before he died, he 'made a warm coat, which he ſaid muſt laſt him three 'years, and then he would have ſuch another. In his 'laſt ſickneſs, his frequent queſtions were, *whether his 'diſeaſe was curable?* and when intimations were 'given, that he might have eaſe but no remedy, he 'uſed this expreſſion, *I ſhall be glad then to find a hole 'to creep out of the world at*, which are reported to 'have been his laſt ſenſible words; and his lying ſome 'days following in a ſilent ſtupefaction, did ſeem 'owing to his mind more than to his body. The 'only thought of death that he appeared to entertain 'in time of health, was to take care of ſome inſcription on his grave. He would ſuffer ſome friends to 'dictate an epitaph, among which, he was beſt pleaſed 'with this humour: *This is the true* PHILOSOPHER'S 'STONE, which indeed would have had as much religion in it, as that which now remains.'

(38) Biſhop Kennet in his Memoirs of the Family of Cavendiſh, p. 106—109.

(39) Ibid. p. 111—117.

It would have been very eaſy to have given the reader other accounts of the Philoſopher of Malmeſbury, that might have balanced the reflections contained in this; but we are not concerned to defend Mr Hobbes, our buſineſs is to diſtinguiſh truth. In order to this, it may not be amiſs to remark, that beſides dedications to the Earl of Devonſhire, ſome of our author's treatiſes are no other than letters to him; in which, though without the leaſt mixture of flattery, he acknowledges his kindneſs, and commends his familiarity. The manner in which he lived in his family, the giving a hundred pounds to the uſes of his will, the directing the place of his interment, and the acceptation of the lives of Mr Hobbes, publiſhed by Dr Blackmore, will ſcarce incline us to believe that he deteſted his notions. But that he deteſted the notions aſcribed to Mr Hobbes, there are the beſt grounds to believe, and his great civility to and friendſhip for, the old man, ſeem very concluſive arguments to prove, that they were only aſcribed to, and not maintained by him. His going regularly to chapel at Chatſworth, while he reſided there, is attributed to apprehenſion, but what apprehenſions had he when he deſired the aſſiſtance of Biſhop Coſins in France, or when he joined himſelf to the almoſt inviſible Church of England, in England? Wood ſays (40), that the chaplain teſtified he received the Sacrament with all exterior marks of devotion; and he accounts, as is ſaid in the text, for the manner in which he lay, and his not deſiring any ſpiritual aſſiſtance at the time of his death, from his being ſuddenly ſtruck with the palſy, and thereby loſing his ſpeech and ſenſes, which conſiſts very well with the Biſhop's account, who records the laſt ſenſible thing he ſaid; and men are not held reſponſible for their commiſſions, much leſs for their omiſſions, after they have loſt their ſenſes.

(40) Athen. Oxon. Vol. II. col. 647.

[*S*] *And*

lights; and there are very few characters tranſmitted to poſterity, which have not been flattered by ſome writers, and injured by others. The Mathematicians, not without reaſon, have handled our author roughly; for which, he not only gave them occaſion but example. This indeed was his weak part, and ſhewed the obſtinacy of his temper; for though he was over and over refuted, and his miſtakes pointed out, yet he adhered as pertinaciouſly as ever to his old opinions, and not only defended them as warmly as before, but rendered that a perſonal quarrel, which ought to have continued a literary diſpute; and perſiſted to the laſt with the ſame keenneſs and aſperity of language, as if he in reality had intended to eſtabliſh a kind of tyranny in ſcience, and to force his own opinions upon mankind, becauſe they were ſo, though contrary to their reaſon, and thoſe principles of knowledge which had been univerſally received, and which therefore no authority could ſubvert [S]. In reſpect to his moral, political, and religious ſentiments, he was no leſs poſitive,

[S] *And which therefore no authority could ſubvert.*] The hiſtory of that diſpute, which ſubſiſted for upwards of twenty years, between the Philoſopher of Malmeſbury and the moſt eminent Mathematicians of the age in which he lived, is a matter of more conſequence, in reſpect to literary Hiſtory, than any that has hitherto been diſcuſſed in this article; and yet, from the trouble and perplexity with which it is attended, has never been thoroughly or properly ſtated, though his life, and the lives alſo of Mr Hobbes's antagoniſts, have been ſo often written. We will therefore uſe our beſt endeavours to ſupply this defect. It began, then, upon our author's publiſhing the following work,

1. Elementorum Philoſophiæ, ſectio prima, de Corpore. That is, *The firſt ſection of the Elements of Philoſophy*, de Corpore, *or, of Body*, 8vo. Lond. 1655. in Latin; again in Engliſh, in 4to. 1656 and at Amſterdam in 4to. 1668. in Latin.

This is the account of the ſeveral editions given by the writer of his life, by Mr Wood, and, indeed, by every body elſe, except one writer (41); who aſſures us, that this book *de Corpore*, was publiſhed in the beginning of the year 1653. But as this writer ſent abroad his work when the parties were living, and for ſome other reaſons which will hereafter appear, he ſeems moſt to be depended upon; for, in the ſucceeding year, the Reverend Mr Seth Ward, then Aſtronomy Profeſſor in Oxford, publiſhed,

Vindiciæ Academiarum: containing ſome brief Animadverſions upon Mr John Webſter's book, entitled, The *Examen* of *Academies*; with an Appendix concerning what Mr *Hobbes* and Mr *William Dell* have publiſhed on the ſame arguments. Oxon. 1654. 4to.

Mr John Wallis, Savilian Profeſſor of Geometry in the ſame univerſity, declared in the ſtrongeſt and moſt expreſs terms againſt the mathematical part of our author's Philoſophy, in a treatiſe written directly againſt it, under the title of,

Elenchus Geometriæ Hobbianæ. That is, a Refutation of Hobbes's Geometry. Oxon. 1655, 8vo. in Latin.

Theſe attacks were very ſpeedily repulſed by Mr Hobbes, in a treatiſe entitled,

2. *Six Leſſons to the* Profeſſors *of* Mathematics *of the inſtitution of* Sir Henry Savile. Lond. 1656. 4to.

To this they both replied; Dr Wallis in Engliſh, under the following title,

Due Correction for Mr Hobbes: or, *School-Diſcipline for not ſaying his Leſſons right*, &c. Oxford, 1656. 8vo.

Dr Ward more at large, in a Latin treatiſe which bore this title,

In Thomæ Hobbii Philoſophiam, *exercitatio Epiſtolica ad Dominum* Johannum Wilkinſium, *Guardianum* Coll. Wadhami; *cum Appendicula ad Calumnias ab eodem Hobbio, in ſex documentis nuperrimè editis, in authorem congeſtas, reſponſoria*. Oxon. 1656 8vo. That is, An Epiſtolary Diſſertation againſt the Philoſophy of Thomas Hobbes, addreſſed to Dr John Wilkins, Warden of Wadham College; together with an Appendix, containing an Anſwer to the Calumnies thrown by the ſaid Hobbes, in his ſix Leſſons lately publiſhed, upon the author.

The very next year Mr Hobbes returned to the charge, and publiſhed in Engliſh, a very warm treatiſe, called,

3. ΣΤΙΓΜΑΙ, *The Marks of the abſurd Geometry, rural Language, &c. of Dr* Wallis. London, 1657. 8vo.

Dr Wallis very ſpeedily replied to this, in an Engliſh treatiſe, entitled,

Hobbiani Puncti diſpunctio: or, *An Anſwer to a late Treatiſe* &c. Oxon. 1657. 8vo.

After the Reſtoration, our author renewed this paper war, by publiſhing a new work, which was,

4. Examinatio & Emendatio Mathematicæ hodiernæ, ſex dialogis comprehenſa. That is, *The Examination and Emendation of modern Mathematics*. Londini, 1660. 4to. in Latin; and again at Amſterdam, 1668. 4to.

The next year produced the two following books,

5. Dialogus Phyſicus, ſive de Natura Aëris. That is, *A Phyſical Dialogue concerning the Nature of the Air*. London, 1661. 4to. again at Amſterdam, 1668. 4to.

Againſt which the celebrated Mr Robert Boyle wrote more than one treatiſe (42).

6. De Duplicatione Cubi. That is, *Of the* Duplication *of the* Cube. London, 1661 4to. the ſame at Amſterdam, 1668. 4to.

It appears, that, on the erection of the Royal Society, the King hoped ſome extraordinary things from Mr Hobbes; as is evident from the following paſſage, in a very uſeful work lately publiſhed (43).

'A propoſition of Mr Hobbes, for finding two mean 'proportionals between two ſtrait lines given, was de'livered into the Society, by Sir Paul Neile, from the 'King, indorſed with his Majeſty's own hand, and 'was ordered to be regiſtered; as was afterwards the 'anſwer to the problem by Lord-Viſcount Brouncker '(44).'

He publiſhed the next year,

7. Problemata Phyſica; viz. 1. De Gravitate, 2. De Æſtibus Marinis. 3. De Vacuo. 4. De Colore & Luce. 5. De Duro & Molli. 6. De Pluvia, Vento, aliiſque Cœli varietatibus. 7. De Motuum ſpeciebus. Adjunctæ ſunt etiam Propoſitiones duæ, de Duplicatione Cubi, & Dimenſione Circuli. That is, Phyſical Problems *relating to* Gravity, *to* Tides, *to a* Vacuum; *to* Colour *and* Light, *to* Hard *and* Soft, *to* Rain, Winds, *and other alterations of the* Heavens; *to the ſeveral* kinds *of* Motion. *To which are added, two Propoſitions, one concerning the* Duplication *of the* Cube, *and the other of the* Dimenſion *of the Circle*. Lond. 1662. 4to. again at Amſterdam, 1668. 4to. He alſo publiſhed this in Engliſh, under the title of *Phyſical Problems*; with an Addreſs to the King; which is commonly called Mr Hobbes's APOLOGY, which has been already frequently cited.

To this Dr Wallis returned a moſt ſarcaſtic anſwer, bearing the title of,

Hobbius Heautontimorumenos: or, *A Conſideration of Mr* Hobbes *his Dialogues*. Oxford, 1662. 8vo.

This gave our author occaſion to ſend abroad,

8. *Conſiderations upon the* Reputation, Loyalty, Manners, *and* Religion, *of* Thomas Hobbes *of* Malmeſbury, *written by himſelf by way of letter to a learned perſon*, i.e. Dr Wallis. Lond. 1662. 4to. again 1680. 8vo.

His next performance was,

9. De Principiis & Ratiocinatione Geometrarum, contra faſtum Profeſſorum Geometriæ. That is, *Of the Principles and Reaſoning of* Geometricians, *againſt the Vanity of certain* Profeſſors *of* Geometry. Londini, 1666. 4to. again at Amſterdam, 1668. 4to. Our author's ſtock of patience ſeems to have been worn out when he wrote this piece, ſince he gives us the following ſtate of the diſpute. 'With reſpect to thoſe 'who have written upon theſe kind of ſubjects, and 'myſelf either, I alone am mad, or they are all out 'of their ſenſes; ſo that no third opinion can be ta'ken, unleſs any will ſay that we are all mad.' There is a ſhort account of this piece in the Philoſophical Tranſactions

(41) R. R. in Præfat. ad Lucem Mathemat.

poſitive, but not ſo eaſily refuted; becauſe, in them, certainly there was a mixture of truth, and becauſe he conſtantly denied the conſequences which his antagoniſts endeavoured to draw from his principles. His deſire, or rather his humour, of penetrating to the bottom of all things, and of dictating in matters, which, perhaps, are beyond the reach of the human underſtanding, at once expoſed him to continual contradictions, and furniſhed him with the means of maintaining the diſpute. This will be the more eaſily comprehended, if we reflect, that ſome of his ableſt adverſaries, while they laboured to diſprove his doctrines, and to fix upon him a charge of Atheiſm, brought the ſame imputation from others upon themſelves; which afforded the cleareſt evidence, that men, with the beſt intentions in the world, may, upon certain metaphyſical ſubjects, excite notions in other men, utterly inconſiſtent with their own views, and for which notions they ought not certainly to be condemned. Beſides, in thoſe dangerous and diſtracted times, there were other wiſe and good men, as well as Mr Hobbes, who had recourſe to weapons, which they afterwards found had a double edge; and if, from their being of milder tempers, they did not perſiſt ſo long or ſo warmly as he did, yet even their apologies ſhewed, that men may be miſtaken without malice, and in certain conjunctures advance poſitions, that they may afterwards find it equally hard to retract or to defend. At leaſt this is certain, that if here at home there were many, and thoſe too, perſons of piety, learning, and honour,

Tranſactions (45). There is alſo an anſwer to it by his old antagoniſt Dr Wallis (46), written with as much acrimony as Hobbes had ſhewn in his work.

(45) No. 14. p. 253.

(46) No. 16. p. 289.

His next mathematical performance was,

10. Quadratura Circuli, Cubatio Sphæræ, Duplicatio Cubi, breviter demonſtrata. That is, *The* Quadrature *of the* Circle, *the* Cube *of the* Sphere, *and the* Duplication *of the* Cube, *briefly demonſtrated.* Lond. 1669. 4to.

To this Dr Wallis immediately gave an anſwer, which bore this title,

Tho. Hobbii Quadratura Circuli, Cubatio Sphæræ, Duplicatio Cubi, confutata. Oxon. 1669. 4to. There is ſome account of both of theſe in the Philoſophical Tranſactions (47).

(47) No. 48. p. 971.

The ſame year our author republiſhed his work, 11. together with an Anſwer to the Objections made by Dr Wallis, and dedicated it to Coſmo de Medici, Grand Prince of Tuſcany. To this Dr Wallis replied, and dedicated his work to William Lord Viſcount Brouncker. It is dated December 21, 1669.

Though our author was now in the fourſcore and fourth year of his age, he had ſpirit enough to undertake a new work, and to ſubjoin to it a criticiſm on one that had been publiſhed by his antagoniſt.

12. Roſetum Geometricum: five, Propoſitiones aliquot fruſtra antehac tentatæ, cum Cenſura Brevi Doctrinæ Wallisianæ de Motu. That is, *The* Geometrical Roſe-Garden: or, *Some Propoſitions hitherto unſucceſſfully attempted, with a brief Cenſure of the* Walliſian *Doctrine of* Motion. Lond. 1671. 4to.

The ſame year appeared,

13. *Three Papers, preſented to the* Royal Society, *againſt Dr* Wallis, *together with Conſiderations on Dr* Wallis *his Anſwer to them.* London, 1671. 4to.

The year following, the public received a preſent of another work, bearing this title,

14. Lux Mathematica, excuſſa Colliſionibus Johannis Walliſii, Theol. Doctoris Geometriæ in celeberrima Academia Oxonienſi Profeſſoris Publici, & Thomæ Hobbeſii Malmeſburienſis; multis & fulgentiſſimis aucta Radiis authore R. R. That is, *Mathematical Light, ſtruck out from the Claſhings between Dr* John Wallis, *Profeſſor of* Geometry *in the celebrated univerſity of* Oxford, *and* Thomas Hobbes *of* Malmeſbury; *augmented with many and ſhining Rays by the author* R. R. Lond. 1672. 4to.

This work contains a hiſtory of the diſputes between our author and his opponents. It is written with wonderful perſpicuity and vivacity, ſpeaks every where of Mr Hobbes in the third perſon, but gives him clearly the victory over his antagoniſt in every point. We have a very ſuccinct account of this in the Philoſophical Tranſactions (48), and a very long anſwer by Dr Wallis (49), who lets us into the ſecret who this R. R. is. Theſe letters, ſays he, ſtand for *Roſeti Repertor*, that is, the Finder of the Roſary, or Mr Hobbes himſelf; and as the book was written, ſo he ſays it ſhall be anſwered, by R. R. that is, *Roſeti Refutator*, or the Refutor of the Roſary. What ſeems to put Dr Wallis's conjecture out of doubt is, that we find this treatiſe in the liſt of our author's works, in that which is called Dr Blackbourn's Supplement to his Life.

(48) No. 86. p. 5047.

(49) No. 87. p. 5067.

The laſt mathematical treatiſe, publiſhed by our author, bears this title,

15. Principia & Problemata aliquot Geometrica, ante deſperata, nunc breviter explicata & demonſtrata. That is, *Some* Geometrical Principles *and* Problems, *heretofore looked upon as deſperate, now briefly explained and demonſtrated.* London, 1674. 4to.

We have alſo an account of this performance in the Philoſophical Tranſactions; which, becauſe it is very ſhort, and will, notwithſtanding, afford the reader ſome notion of the nature of theſe diſputes, we will ſubjoin it (50).

(50) No. 97. p. 6131.

'The famous author of this tract, having entertained 'the reader with ſome generals concerning the ſubject, 'principles, and method of mathematics, and with 'his doctrine of *ratio*, as alſo his ſenſe of algebraical 'operations, together with two chapters of quadrate 'figures, quadrate numbers, and angles, undertakes to 'confirm his former doctrine, 1. Of the ratio of the 'circumference to the radius of a circle. 2. Of mean 'proportionals. 3. Of the ratio of a quadrat to the 'quadrant of a circle inſcribed in it. 4. Of ſolids and 'their ſuperficies: to which laſt he ſubjoins another 'method of demonſtrating ſolids and their ſuperficies 'by their efficient cauſes. Which done, he concludes 'the book with a diſcourſe touching demonſtrations, 'the principal and moſt frequent cauſe of fallacies in 'the mathematics, and the notion of the word infinite: 'complaining very much that Geometry hath received 'it's greateſt prejudice, from thoſe that diſcourſe of a 'line without latitude, that take the ſide of a ſquare 'for the root of a number, that underſtand not the 'true nature of ratio, and that ſpeak unfavourly of in'finity. Which accuſations, how well they are ground'ed, we muſt leave to competent judges to determine.'

The truth of the matter is, that Mr Hobbes had talked ſo much, and thought ſo long, of matter and motion, that, notwithſtanding the quickneſs of his parts and the ſubtility of his genius, not at all impaired by his age, he could apprehend nothing inconſiſtent with theſe notions, and had perſwaded himſelf, and was deſirous of perſwading others, that, becauſe a point could not be made without quantity, a line drawn without latitude, or a ſuperficies repreſented without ſomewhat of depth or thickneſs, therefore they could not be ſo conceived; whereas, in truth, they cannot be conceived otherwiſe; for a point, a line, a triangle, as they ſubſiſt in the mind, have not quantity, latitude, or depth; though when, for the purpoſes of ſcience, they are produced to the ſenſes, they have all theſe; which yet if we conceive them to have, as he did, and reaſon upon them accordingly, it will lead us, as it led him, into an inextricable labyrinth of confuſions and abſurdities. This therefore was the plain foible of Hobbes, and which ſerved to refute and overturn whatever was falſe or dangerous in his notions as to Divinity; ſo that there was no need of exaggerating, and charging him with conſequences which he abſolutely denied; adding once with ſome heat (51), *Nor can the clamour of his adverſaries make Mr* Hobbes *think himſelf a worſe* Chriſtian *than the* beſt *of them.* He might err, as to the ſenſe of the Scriptures, without being an Apoſtate; and he might be miſtaken in his notions of the Deity, without being an Atheiſt.

(51) Conſiderations upon the Reputation, &c. of Thomas Hobbes, p. 47.

honour, who conceived very ill of Mr Hobbes, there were others, as irreproachable in point of faith as well as morals, who did not condemn our author's ſentiments, or look upon him in the light of an apoſtate from Chriſtianity, and much leſs as an Atheiſt [T]. It may be, if he

[T] *And much leſs as an Atheiſt.*] In this note, we will enumerate the antagoniſts our author met with at home, many of whom concurred in attacking his writings, even in thoſe in which they attacked each other. As for inſtance, the ingenious James Harrington in his Oceana (52), falls upon our author's ſentiments with great freedom and ſpirit, which was natural enough the repugnancy of their reſpective principles conſidered. But one would ſcarce have imagined that Sir Robert Filmer (53), ſhould ſpend a whole ſection in refuting the doctrines contained in the Leviathan, which however he has done, though he confeſſes Mr Hobbes's book to be right in the main, only it ſtood on another foundation than his own *Patriarcha*. Doctor Matthew Wren, in an excellent work of his on the ſubject of Government, juſt mentions Mr Hobbes (54); but that he who oppoſed Harrington in every thing, was ſtill far from Mr Hobbes's ſentiments, appears from the pains taken by the Earl of Clarendon, to engage the Doctor to write againſt him (55). There was a furious paper war between our author and Dr Wallis, which laſted all the life-time of the former, and it was in anſwer to a treatiſe which the Doctor publiſhed, entitled *Hobbius Heautontimoromenos*, five contra Dialogos ejus Phyſicos diſſertatio; that he wrote his *Conſiderations on the Reputation and Loyalty*, &c. which though not by name, is addreſſed to the Doctor. We have already mentioned the Primate of Ireland, Bramhall, who was one of our author's moſt early opponents, and the Biſhop of Ely, as alſo Dr Seth Ward, who is thought to be the perſon mentioned by Mr Wood (56), when he ſays, *That one who was made a Biſhop ſoon after the Reſtoration, would ſay ſome years before when this was little expected, that he had rather be the author of one of Mr* Hobbes's *books than be King of* England. At the time he ſaid this, he could not ſurely think Mr Hobbes an Atheiſt. Dr William Lucy, afterwards Biſhop of St Davids, wrote two treatiſes againſt the Leviathan (57), under the aſſumed name of William Pyke; as did alſo Dr Sharrock, whoſe books, though in other reſpects eſteemed, were not thought to anſwer the end for which they were written. Archbiſhop Tenniſon, then only a country clergymen, publiſhed a very ſuccinct and methodical performance dedicated to the Earl of Manchester (58). It is written by way of dialogue between Mr Hobbes and a Student in Divinity at Buxton Wells, and is penned with equal perſpicuity and politeneſs, as well as with great judgment and learning; but above all is remarkable for it's impartiality, there being nothing put in the mouth of Mr Hobbes, but what is taken out of his own writings, and expreſſed in his own words. Doctor, afterwards Biſhop, Cumberland's excellent treatiſe of *The* LAWS *of* NATURE (59), was likewiſe written againſt our author's ſyſtem, and is deſervedly eſteemed the cloſeſt and the beſt book of it's kind; indeed, he is the only one of all Mr Hobbes's antagoniſts that underſtood the advantages the old man had, as appears by his chuſing freſh ground, and diſputing in a manner quite different from the reſt. The famous Dr Henry Moore (60), has in different places of his numerous writings canvaſſed and refuted ſeveral propoſitions of Mr Hobbes: and the Philoſopher of Malmeſbury, is ſaid to have been ſo ingenuous as to own, that whenever he diſcovered *his* own philoſophy to be unſuſtainable, he would embrace the opinions of Dr Moore. Dr John Templar of Cambridge, publiſhed a Latin treatiſe (61) againſt our author; and Mr Shaftoe wrote likewiſe in Engliſh, in oppoſition to the notions of Mr Hobbes (62). Neither muſt we forget the two dialogues of Dr John Echard, between Timothy and Philalethes (63); or Dr Parker's, afterwards Biſhop of Oxford, large work, in which our author is very roughly handled, though in very elegant Latin (64). His notions are likewiſe combated in Dr Cudworth's Intellectual Syſtem, though there is no mention of his name (65). There was one Mr Whitehall of the Inner-Temple (66), who wrote againſt his Behemoth; and we find ſeveral parts of his philoſophy examined and refuted by the honourable Robert Boyle, Eſq (67). But in the midſt of theſe contentions, as we have already ſhewn, he wanted not patrons or friends who expreſſed a great eſteem for him and his writings; the names of many of theſe we have already mentioned in the text, to which without impropriety we may add (68), the famous Sir Kenelm Digby, who was himſelf a great philoſopher; the judicious Mr Chillingworth, Edmond Waller of Beaconsfield, Eſq; whoſe poetry will laſt as long as our language; Sir Henry Blunt, Francis Oſborne, Eſq; Mr Samuel Butler, who wrote that admirable poem entituled Hudibras; Sir William Davenant, Poet Laureat in two reigns; Dr Walter Charlton, diſtinguiſhed for his extenſive knowledge in every branch of uſeful literature; and Dr Ralph Bathurſt, Dean of Wells, who, together with Mr Jaſper Maine, Canon of Chriſt Church, were his conſtant admirers. Among later writers there have been two eminent and eloquent prelates, who, though they have hardly agreed in any thing elſe, have each had a ſtroke at the character of Mr Hobbes. Biſhop Burnet (69), who has given a dreadful character of the Leviathan; and Biſhop Atterbury, who in one of his ſermons (70), has vouchſafed to aſſign the reaſons why Mr Hobbes was continually terrified with the apprehenſions of ghoſts and apparitions. But to juſtify the great pains we have taken in this article, by ſhewing how highly our author was eſteemed by ſome men, who were themſelves diſtinguiſhed even in that learned age for ſpirit and genius; and for the reader's entertainment, we ſhall cite a few poetical complements, that if they ſhould not ſerve to ſupport his character, will at leaſt ſuffice to excuſe his vanity. The firſt of theſe ſhall be the concluſion of Dean Bathurſt's Latin poem on Human Nature (71), which has been always eſteemed a very fine performance independent of the ſubject.

Conſultor audax, & Promethæi potens
Facinoris Animé! quis Tibi dedit Deus
Hæc intueri Sæculis longè abdita,
Oculóſque luce tinxit Ambroſiâ tuos?
Tu Mentis omnis, at tuæ nulla eſt capax.
Hâc laude ſolus fruere: Divinum eſt opus
Animam creare; proximum huic, oſtendere.

The laſt ſtanza of Cowley's ode (72), is equally worthy of the reader's notice, from the perfection of it's ſenſe and the poetry; the former as ſound, and the latter as animated as is perhaps any where to be met with in that author's writings.

Nor can the ſnow which now cold age does ſhed,
Upon thy reverend head,
Quench or allay the noble fires within;
But all which thou haſt bin,
And all that youth can be, thou'rt yet;
So fully ſtill doſt thou
Enjoy the manhood and the bloom of wit,
And all the natural heat, but not the fever too.
So contraries on Ætna's top conſpire;
Here hoary froſts, and by them breaks out fire.
A ſecure peace the faithful neighbours keep;
Th' emboldened ſnow next to the flame does ſleep.
And if we weigh, like thee,
Nature, and cauſes, we ſhall ſee,
That thus it needs muſt be;
To things immortal, time can do no wrong;
And that which never is to die, for ever muſt be
young.

His Grace of Buckinghamſhire, when Earl of Mulgrave, wrote a poem on the death of our author (73), in which are the following beautiful lines.

While fame is young, too weak to fly away,
Malice purſues her, like ſome bird of prey;
But once on wing, then all the quarrels ceaſe;
Envy herſelf is glad to be at peace.
Gives over, weary'd with ſo high a flight,
Above her reach, and ſcarce within her ſight.
Hobbes to this happy pitch arriv'd at laſt,
Might have look'd down with pride on dangers paſt:
But

he had been more gently treated, if he had been commended where he was right, if his miſtakes had been ſhewn him with candour, if a proper allowance had been made for the time in, and the circumſtances under, which he wrote, and his ſubmiſſion to authority in Church and State had been accepted, he might have been better diſpoſed to the review and correction of his writings: whereas, charged as he was with a multitude of the moſt atrocious crimes, of which, very probably, no man had a greater abhorrence than he; ſuch as Atheiſm, for thinking, as he affirmed, more reverently of the Deity than moſt other men; Apoſtacy, though he made belief in the miſſion and ſatisfaction of Jeſus Chriſt a fundamental out of the power of the Church, to whoſe decrees he was for ſubmitting in in every other reſpect; with attachment to Oliver's uſurpation, before perhaps Oliver had formed in his mind the project of uſurping; of treaſon againſt a Prince to whom he was always devoted, and who always looked upon him with favour and eſteem; and, in fine, with propagating the moſt deteſtable principles, notwithſtanding he always declared that he did not hold them, and that they were propagated chiefly by thoſe who pretended to find them in his writings; we need not at all wonder, that it increaſed the natural obſtinacy of his diſpoſition, and inclined him to repel with acrimony the charges of his opponents, or to recriminate ſeverely when he ſometimes had it in his power. In foreign countries, his correct and elegant Latin ſtile recommended his writings to a very general reception; inſomuch, that the works of very few Engliſh authors, at leaſt during their life-times, were diffuſed ſo much as his; to which it might alſo contribute not a little, that his perſon and converſation were alſo well known, as having lived in great intimacy and friendſhip with ſome of the moſt conſiderable members of the republic of letters [*U*]. In

But ſuch the frailty is of human kind,
Men toil for fame, which no man lives to find;
Long rip'ning under ground this china lies;
Fame bears no fruit, 'till the vain planter dies.

[*U*] *Of the republic of letters.*] In other parts of Europe our author's writings were read, and as at home, either heavily cenſured or highly applauded; amongſt the moſt remarkable of theſe, we will mention a few only. To begin with thoſe who wrote in his life-time. Adam Oſiander (74), a German divine, inveighed againſt him with great bitterneſs. Regnerus à Manſvelt (75), Profeſſor of Philoſophy in the Univerſity of Utrecht, takes occaſion to fall very ſeverely upon the writings of Mr Hobbes. Samuel Rachelius, an eminent lawyer of Holſtein (76), in his large work concerning the law of nature and nations, declares alſo with great warmth againſt the ſentiments of our author. Dr Gilbert Cocquius (77), a Dutch divine, wrote expreſsly againſt Hobbes's treatiſe De Cive, out of which, if there be taken what he borrows from the writings of Calvin and Beza, very little worth notice will be left. The ſame author with the like view wrote another treatiſe (78), in which he attacked moſt of our author's writings, and pretended to prove that Hobbes had apoſtatized from the Chriſtian religion, by which however he gained no great reputation to himſelf, nor does it appear that he has done much hurt to that of our author, in the ſentiments of candid and impartial readers, who will always diſtinguiſh between aſſertions and evidence. The learned and laborious John George Morhoff (79), in his great and uſeful work, makes frequent mention of Thomas Hobbes and his writings, but ſpeaks of them always with ſeverity and diſlike, *from* a perſuaſion, that excluſive of their plain and natural ſenſe, they have another concealed meaning of a dark and dangerous tendency. Dr Francis Buddeus (80), fixes our author Hobbes, after Sir Thomas Brown, in his catalogue of Engliſh Atheiſts, but is ſo modeſt, as not to inſiſt, that the character abſolutely belongs to either of them. Frederick Reimmanus (81), on the other hand, places him before Sir Thomas Brown, and immediately after Edward Lord Herbert of Chirbury; adding, that as he was ſhrewder and more learned, ſo he was alſo better verſed in philoſophy than that noble perſon, which is a character that, very poſſibly, Mr Hobbes may no better deſerve, than he does that of an Atheiſt. It is not however from all foreigners, or even from all the German writers, that Mr Hobbes has received ſuch bad treatment; on the contrary, the judicious and indefatigable Gundlingius (82), in his excellent obſervations, has written a long and curious diſſertation in defence of Mr Hobbes, in which, with great judgment and by dint of ſtrong arguments, he ſhews, that he is very unjuſtly accuſed of Atheiſm. And indeed, if we conſider how many great and good men are aſperſed by the ſame writers, and abuſed with the ſame imputations that are caſt upon Hobbes, we cannot but believe, that this knowing and diſintereſted critic is in the right. The celebrated Leibnitz (83), ſeems to be however of a contrary opinion, to whoſe judgment notwithſtanding, we may oppoſe that of the no leſs famous Mr Bayle (84), who, whenever he ſpeaks of our author, treats him with candour and decency. In fine, we may conclude theſe remarks with obſerving, that it is the deductions which others have made from Mr Hobbes's writings, that render them dangerous; by their finding in them poſitions which the author abſolutely denied; and drawing from them conſequences which he never meant, at leaſt, if he knew his own meaning. There is therefore good reaſon to wiſh, that in this learned and impartial age, his philoſophy might be again reviewed, thoſe things that are good in him, ſevered and collected from whatever there may be amiſs, and the reſt rejected; for ſurely, ſo many great and able judges as have given public teſtimonies of their eſteem for him and his writings, could not be abſolutely deceived, and beſtow their applauſe on a man altogether void of merit. It is very material to do this for many reaſons. It is with falſe reaſonings in philoſophy, as with unſucceſsful experiments in chemiſtry, they have their advantages, though they are without profit; and we cannot better defend ourſelves from errors, than by contemplating and diſcovering the ſources of error in other men. It is of conſequence to glean up the hints he gives us of his conjectures, and ſometimes ſhort hiſtories of his diſcoveries, which would point out to us many things that have eſcaped notice, and may for ever eſcape notice, in the bulk of his works. It is but juſtice to expoſe the true grounds of the quarrel between him and the clergy, that the nature of the prejudices on both ſides may be known; he apprehended the ill judged ſeverities exerciſed by ſome of the prelates, to be one of the cauſes of the civil war; he aſcribed the deſtructive and moſt deplorable events that followed, to the ambition and hypocriſy of the miniſters; and that ſtate of immoral confuſion into which the nation fell under the government, and after the death of Cromwell, to the enthuſiaſm and fanaticiſm of the ſectaries. This induced him to place the ſupreme power, ſacred as well as civil, in the Sovereign, as the beſt remedy he could deviſe againſt theſe evils. The clergy, for this, repreſented him as the ſubvertor of all religion, which by expoſing and exaggerating their ill conduct, he retorted upon them. It was impoſſible for foreigners to be acquainted with this, becauſe many of his and his opponent's writings were in Engliſh, which has occaſioned their painting him in the blackeſt colours (85). Laſtly, it may be very right to ſhew, that the ſtrength of his capacity appears in his political writings, where much depended upon ſpeculation; but that in other things his abilities frequently failed, which will ſufficiently abate his credit with impartial judges, and ſhew the falſehood of that popular conceit, that atheiſtical and irreligious notions are

In ſucceeding times, when all perſonal prejudices are worn out, together with the humour of the age, and the habit of conſidering things as agreeing or diſagreeing with the reigning ſyſtem, our author's Philoſophy has met with a fairer acceptation; not that it is in higher or more general eſteem than in his own time, but that it is beheld with greater calmneſs and candour. We perceive that he had looked ſtrictly into human nature, and that, like Socrates, he perfectly well underſtood the ſtrength and weakneſs of human faculties, the ſpring and force of our paſſions, and the ſpirit and vigour of the underſtanding, independent of the helps received from religion. We diſcern, that from hence he reaſons more correctly and cloſely, in many political points, than either Tacitus or Machiavel, and gives many ſingular and ſtrong hints of the cauſes of thoſe events, in our own and in other ſtates, which we have ſince ſeen; but at the ſame time we clearly comprehend, that, notwithſtanding the vivacity of his parts, and the ſolidity of his judgment, in matters that were the proper objects of both; yet, in things that lay without and beyond his reach, unleſs with ſuch aſſiſtance as he declined, he erred as much and as wildly as any man could. So that, to defend ourſelves from following him in his miſtaken notions as to Religion, we need only acquire a thorough knowledge of his erroneous ſentiments in regard to the Mathematics; for, upon a ſtrict enquiry and proper reflection, we ſhall find them both to flow from the ſame cauſes, an overweaning opinion of his own abilities, and a ſupercilious contempt for thoſe of other men. Great weakneſſes in a Philoſopher no doubt, but no proofs of madneſs, folly, or wickedneſs, much leſs of apoſtacy, impiety, and atheiſm; and, as great as theſe weakneſſes were, we muſt allow the ſtrength of his faculties at the ſame time; and if we conſider his natural diſpoſition, the confuſions of which he was a ſpectator; the ill uſage he met with, the retired courſe of life he led for many years, and the great age to which he lived, we ſhall be the more indulgent to his failings. At all events, we have done what lay in our power to render juſtice to his fame and writings; and, if there be any defect in the performance, we hope it will be ſupplied by the candour of the reader.

are found in the writings of the ſhrewdeſt men. Whereas in truth, the love of ſingularity, and the ambition of appearing wiſer than the reſt of their ſpecies, like the other infirmities of human nature, are inherent as well in little as in great minds. E

HODY [HUMPHREY], a late learned Engliſh Divine, was born January 1, 1659, in the county of Somerſet, at Odcombe, of which his father was Rector [*A*]. The 10th of March, 1676, he was admitted, with his two elder brothers, John and Richard, into Wadham-college in Oxford (*a*), where he took the degree of Bachelor of Arts, October 23, 1679; that of Maſter, June 19, 1682 (*b*); and in 1684 was choſen Fellow of that college. In 1680 and 1681, when he was only twenty-one or twenty-two years of age, he wrote his learned Diſſertation againſt Ariſteas's Hiſtory of the LXX Interpreters [*B*]. It was received with great applauſe by the learned, except by Dr Iſaac Voſſius, who publiſhed an anſwer to it, at the end of the appendix to his Obſervations on Pomponius Mela (*c*). October 31, 1689, he took the degree of Bachelor of Divinity (*d*). The ſame year he wrote *Prolegomena*, or a preface to John Melala's Chronicle, printed at Oxford. In 1690, he was made Chaplain to Dr Edward Stillingfleet Biſhop of Worceſter, being tutor to his ſon at Wadham-college. The deprivation of the Biſhops in 1691, who had refuſed the Oaths to King William and Queen Mary, engaged our author in a controverſy

[*A*] *Of which his father was Rector.*] His father was Richard Hody, younger brother of John Hody of Northover in the ſame county, Eſq. He reckoned among his anceſtors, in the ſixth generation, Sir William Hody, Knt. whom K. Henry VII. conſtituted, in the firſt year of his reign (1485) his Attorney-General (1), and, the year following, Chief Baron of the Exchequer (2). This office he enjoyed till the 13th of Hen. VIII. when he reſigned it, on account of his great age, being above fourſcore years old (3).——The father of this Sir William, was Sir John Hody of Stawall in the ſaid county, Knight, a learned lawyer, who aſſiſted Judge Littleton, in compiling the Inſtitutes of the Laws of England (4). In the Parliaments, 9 Henry V, and 1, 3, 6, and 15, of Henry VI, he was one of the Burgeſſes for Shafteſbury in Dorſetſhire, where he had conſiderable eſtates; and, afterwards, was one of the Knights of the Shire for the county of Somerſet. In the eighteenth of Henry VI, he was conſtituted Chief Juſtice of England (5).

[*B*] *Diſſertation againſt Ariſteas's Hiſtory of the LXX Interpreters.*] The ſubſtance of that Hiſtory of Ariſteas, concerning the LXXII Greek Interpreters of the Bible, is this. Ptolemy Philadelphus, King of Egypt, founder of the noble library at Alexandria, being deſirous of enriching that library with all ſorts of books, committed the care of it to Demetrius Phalereus, a noble Athenian then living in his Court. The latter being informed, in his ſearch, of the *Law of Moſes* among the Jews, acquainted the King with it; who thereupon ſignified his pleaſure, that a copy of that book (which was then only in Hebrew) ſhould be ſent for from Jeruſalem, with interpreters from the ſame place to tranſlate it into Greek. A deputation was accordingly ſent to Eleazar the High-prieſt of the Jews at Jeruſalem; who ſent a true copy of the Hebrew original of the Law of Moſes, and LXXII Interpreters, ſix out of each of the twelve Tribes of Iſrael, to tranſlate it into Greek. They being come to Egypt, the King tried their ſkill by propoſing to them 72 queſtions; and then cauſing them to be conducted into the iſland of Pharos near Alexandria, in a houſe prepared for them, they compleated their tranſlation in LXXII days.——Such is the ſtory told by Ariſteas; who is ſaid to be one of K. Ptolemy Philadelphus's Court. Our learned author ſhews, that it is the invention of ſome Helleniſt Jew; that it is full of anachroniſms, and groſs blunders; and, in ſhort, was written on purpoſe to recommend and give greater authority to the Greek verſion of the Old Teſtament, which from this ſtory hath received the name of the *Septuagint*.—This diſſertation is highly commended by the moſt learned Cha Du Freſne, in his notes on the *Chronicon Paſchale*; and by the no leſs learned G. Menage, who ſtyles Mr Hody *eruditiſſimus, doctiſſimus, elegantiſſimus*, &c.

[*C*] *The*

controverſy [C], of which an account is given below (e). He took the degree of Doctor in Divinity in February 1692-3. And, in 1694, publiſhed 'The Reſurrection of the ſame 'Body aſſerted [D],' &c. Dr Tillotſon, Archbiſhop of Canterbury, having conceived a great opinion of him from his writings, conſtituted him his domeſtic Chaplain, May 25, 1694. The good Archbiſhop being ſnatched away the 22d of November the ſame year, by a ſudden death; his ſucceſſor Dr Tenniſon continued Dr Hody his Chaplain (f). And, ſoon after, gave him the rectory of Chart near Canterbury (g): which before he was collated to, he exchanged with Mr De l'Angle, for the united rectories of St Michael-Royal and St Martin's-Vintrey in London, being inſtituted to theſe Auguſt 15, 1695 (h). In 1696, at the command of Archbiſhop Tenniſon, he wrote 'Animadverſions on two Pamphlets lately publiſhed by Mr Collier, &c [E].' The 6th of March, 1698, he was appointed Regius Profeſſor of the Greek tongue in the univerſity of Oxford: and Auguſt 1, 1704, inſtituted to the archdeaconry of Oxford, which the Archbiſhop had made his option. He was alſo Rector of Monks-Riſborough in Buckinghamſhire (i). In 1701 he bore a part in the controverſy about the Convocation [F]. In 1704 he publiſhed his learned book Of the Original Text, and Greek, and Latin vulgate, Verſions of the Bible [G]. And left behind him in manuſcript, An account of thoſe learned Grecians, who retired to Italy before and after the taking of Conſtantinople by the Turks, and reſtored the Greek tongue and learning in theſe weſtern parts of the world [H]. It was not publiſhed 'till

[C] *The deprivation of the Biſhops in* 1691,——*engaged our author in a controverſy.*] The pieces publiſhed by him upon that occaſion, were theſe. 'The 'Unreaſonableneſs of a Separation from the new Biſhops; or, A Treatiſe out of Eccleſiaſtical Hiſtory. 'Shewing, That although a Biſhop was unjuſtly de'prived, neither he nor the Church ever made a ſepa'ration, if the ſucceſſor was not a Heretick. Tran'ſlated out of an ancient manuſcript in the publick 'library at Oxford.' [One of the Baroccian MSS.] London, 1691, 4to. 'He tranſlated it afterwards into Latin, and prefixed thereto ſome pieces out of eccleſiaſtical antiquity relating to the ſame ſubject. Mr Henry Dodwell publiſhing an anſwer to it, intituled, 'A 'Vindication of the Depriv'd Biſhops, &c.' Lond. 1692, 4to. Dr Hody replied, in a treatiſe, which he ſtyled, 'The Caſe of Sees vacant, by an unjuſt or un'canonical Deprivation, ſtated: in Reply to a Trea'tiſe, entituled, *A Vindication of the Deprived Biſhops*, '&c. Together with the ſeveral Pamphlets publiſhed 'as Anſwers to the Baroccian Treatiſe.' Lond. 1693, 4to.——Theſe two other pieces he publiſhed in the ſame controverſy. 'A Letter to a Friend concerning 'a Collection of Canons ſaid [by Mr Dodwell] to be 'deceitfully omitted in the Edition of the Oxford Trea'tiſe againſt Schiſm.' Oxon. 1692. 'Reflexions on 'a Pamphlet entituled, Remarks on the Occaſional 'Paper, Numb. VIII. relating to the Controverſy be'twixt Dr Hody and Mr Dodwell; and on another 'entitled, A Vindication of the Deprived Biſhops, 'written by Mr Dodwell; with an Anſwer to a third, 'called Hiſtorical Collections concerning Church Af'fairs.' Lond. 1698, 4to.

[D] *The Reſurrection of the ſame Body aſſerted, &c.*] Printed at London, 1694, 8vo. Mr Nicolas Beare, a clergyman in Devonſhire, wrote an anſwer to it, which he intituled, 'The Reſurrection founded on Juſtice, 'or a Vindication of this great ſtanding Reaſon aſſign'd 'by the Ancients and Moderns, wherein the Objec'tions of the learned Dr Hody againſt it are anſwered, '&c.' Lond. 1699.

[E] *He wrote animadverſions on two pamphlets lately publiſhed by Mr Collier, &c.*] Any perſon that has the leaſt acquaintance with our Engliſh hiſtory, knows, that Mr Jeremy Collier, Mr Cook, and Mr Snatt, three Nonjuring clergymen, did take upon them to pronounce to Sir William Perkins, and Sir John Friend (who were executed for the aſſaſſination-plot in 1696) the abſolution of the Church as it ſtands in the viſitation of the ſick, and accompanied this ceremony with a ſolemn impoſition of hands. For this imprudent action, they were not only indicted; but alſo the Archbiſhops and Biſhops publiſhed, 'A declaration of 'their ſenſe, concerning thoſe irregular and ſcandalous 'proceedings.' Mr Collier publiſhed ſome pamphlets to vindicate his own, and his brethren's conduct (6): in anſwer to which, Dr Hody wrote, 'Animadver'ſions on two Pamphlets lately publiſhed by Mr Col'lier, the one called, *A Defence of the Abſolution 'given to Sir William Perkins at the Place of Execu'tion*; the other, *A Vindication thereof, occaſioned by 'a Paper entitled*, A Declaration of the Senſe of the 'Archbiſhops and Biſhops, &c.'

(6) See Complete Hiſtory of England, edit. 1719. Vol. III. p. 712.

[F] *In* 1701 *he bore a part in the controverſy about the Convocation.*] He publiſhed upon that occaſion, 'A Hiſtory of Engliſh Councils and Convocations, and 'of the Clergy's ſitting in Parliament, in which is alſo 'comprehended the Hiſtory of Parliaments, with 'an Account of our ancient Laws.' Lond. 1701, 8vo.

[G] *Of the original text, and Greek, and Latin vulgate, verſions of the Bible.*] It is written in Latin, and intituled, *De Bibliorum Textibus originalibus, Verſionibus Græcis, & Latinâ vulgata: Libri* IV, &c. The firſt book, is his Diſſertation againſt Ariſtæas's Hiſtory; which is here reprinted with improvements, and an anſwer to Voſſius's objections. In the ſecond, he treats of the true authors of the Greek verſion, called *The Septuagint*, and of the time when, and the reaſons why, it was undertaken; and the manner in which it was performed. The third, is a hiſtory of the original Hebrew text, of the Greek verſion called The Septuagint, and of the Latin vulgate: ſhewing the authority of each in different ages, and that the Hebrew text hath been always moſt eſteemed and valued. In the fourth, he gives an account of the reſt of the Greek verſions, viz. thoſe of Symmachus, Aquila, and Theodotion; of Origen's *Hexapla*, and other antient editions; and ſubjoins liſts of the books of the Bible at different times, which exhibit a conciſe, but full and clear view of the Canon of holy Scripture. ——Upon the whole, he thinks it probable, that the Greek verſion, called The Septuagint, was done in the time of the two Ptolemies,—Lagi—and Philadelphus.——That it was not done by order of K. Ptolemy, or under the direction of Demetrius Phalereus, in order to be depoſited into the Alexandrine library, but by Helleniſt Jews for the uſe of their own countrymen.

[H] *An account of thoſe learned Grecians, &c.*] It remained in manuſcript 'till the year 1742, when it was publiſhed by Dr S. Jebb, under this title, *De Græcis illuſtribus Linguæ Græcæ Literarumque humaniorum Inſtauratoribus, eorum Vitis, Scriptis, et Elogiis libri duo. E. Cod. potiſſimum MSS. aliiſque authenticis ejuſdem Ævi Monimentis deprompſit Humphredus Hodius, S. T. P.* Lond. 1742, 8vo. It is divided into two books: the firſt whereof treats of thoſe who came to Italy before the taking of Conſtantinople. And the ſecond, of thoſe who came after the taking of that city. Theſe were, 1. Leontius Pilatus, Emanuel and Joan: Chryſolaras, Theodorus Gaza, Georgius Trapezuntius, Beſſarion Cardinalis, Iſidorus Cardinalis Ruthenus, and Nicolaus Secundinus. 2. Joannes Argyropylus, Demetrius Chalcondyles, Joannes Andronicus Calliſtus, Tranquillus Andronicus, Andronicus-Contoblaca, Georgius Harmonymus Charitonymus Chriſtonymus, Joannes Polo, Conſtantinus Laſcaris, Joannes Laſcaris, Michael Marullus, Manilius Rhallas, Marcus Muſurus Creticus, Angelus Calaber, Nicolaus Sophianus, Michael Sophianus, Geor. Alex. Jo. Geor. et Demetr. Moſchi, Emanuel Adramyttenus, Zacharias Calliergus, Nic. Blaſtus, Arſenius Monembaſienſis Archiepiſc: Ariſtobulus Apoſtolius, Demetrius Ducas, Nicetas Phauſtus, Juſtinus Corcyræus, &c.

'till the year 1742. In order to encourage the ſtudy of the Greek and Hebrew languages, of which he was ſo great a maſter himſelf, he founded in Wadham-college ten ſcholarſhips, of ten pounds a piece; and appointed, that five of the ſcholars ſhould apply themſelves to the ſtudy of the Hebrew, and five to the ſtudy of the Greek, languages. He died January 20, 1706, and was buried in the chapel belonging to Wadham college, where he had received his education, and to which he had been a benefactor (*k*). C

(*k*) De Vitâ, &c. ut ſupra, p. 14, 33, 38, &c.

HOLINSHED, or HOLLYNSHED [RAPHAEL], the firſt author, or compiler, of the Chronicles that go under his name. This moſt uſeful and induſtrious writer, who hath reſcued many illuſtrious perſons and facts from oblivion, is ſo unhappy as to have little or no acccount of himſelf tranſmitted to poſterity [*A*]. The beſt account therefore we can give of him, muſt conſiſt only of ſuch imperfect hints and notices, relating to him, as have been dropped occaſionally by ſome few authors. We are told (*a*), that he was deſcended from thoſe of his name that lived at Boſely in Cheſhire; educated in one of the univerſities [*B*] (but which is not certain); and that he was a Miniſter of God's Word. Others affirm, on the contrary, that he was neither a clergyman, nor even had an academical education; but that he was ſteward to Thomas Burdett of Bromcote in the county of Warwick, Eſq; or employed in ſome other ſervice in that family (*b*). However, in what place, or from whomſoever, he received his education, he appears to have been a man of conſiderable learning, and to have had a head particularly turned for Hiſtory. This he fully manifeſted in the voluminous Chronicles which go under his name [*C*]; though he was aſſiſted in that work by William Harriſon [*D*] and others [*E*]. In

(*a*) Wood Ath. edit. 1721. Vol. I. col. 312. and Nicolſon's Engl. Hiſtor. Libr.

(*b*) T. Hearne Præfat. ad Camdeni Annales, p. lxxxiii.

[*A*] *Is ſo unhappy as to have little or no account of himſelf tranſmitted to poſterity.*] Biſhop Nicolſon obſerves, that, 'Tis not certainly known where they '[he and Will. Harriſon] ſpent the moſt of their days. 'So remarkably careful have they been to benefit the 'Public, without the vanity of making their own ſtory 'known to Poſterity (1).

(1) Nicolſon, ubi ſupra.

[*B*] *Educated in one of the univerſities.*] Biſhop Tanner ſays, he was educated in Cambridge, where he commenced Maſter of Arts in 1544 *.

* Tanner Bibliotheca, &c. ex M.SS. Inett. p. 468.

[*C*] *In the voluminous Chronicles which go under his name.*] Theſe Chronicles were firſt publiſhed at London in 1577. 2 vols folio, with a great number of wooden cuts, which were all omitted in the ſecond edition. This firſt edition is very ſcarce, and ſeldom to be met with. The ſecond edition came out in 1587, being finiſhed in January that year, as it is noted in the laſt pages of the ſecond and third volumes: for, this ſecond edition is in three volumes; whereof the firſt and ſecond are generally bound in one.—And here, undoubtedly, it will be a pleaſure to the curious reader, to know what ſhare our author Holinſhed had in this large work, as it appears in the ſecond and moſt common edition. To take it, therefore, in the order wherein it ſtands; Vol. I. contains, An Hiſtoricall Deſcription of the Iland of Britaine, in three books, by William Harriſon: next, The Hiſtorie of England, from the time that it was firſt inhabited, untill the time that it was laſt conquered, by R. Holinſhed. Vol. II. contains, The deſcription, conqueſt, inhabitation, and trobleſome eſtate, of Ireland: particularly the deſcription of that kingdom, compiled by Richard Stanihurſt; the conqueſt of Ireland, tranſlated from the Latin of Giraldus Cambrenſis (2), by John Hooker, alias Vowell, of Exeter, Gent. The Chronicles of Ireland, beginning where Giraldus did end, continued untill the year 1509, from Philip Flatſburie, Henrie of Marleborow, Edm. Campian, &c by R. Holinſhed; and from thence to the year 1586, by R. Stanihurſt and J. Hooker.—The deſcription of Scotland, tranſlated from the Latin of Hector Boëthius, by R. H. or W. H. The Hiſtorie of Scotland, conteining the beginning, increaſe, proceedings, continuance, acts and government, of the Scotiſh nation, from the originall thereof unto the yeere 1571, gathered by *Raphaell Hollinſhed*: and continued, from 1571 to 1586, by Francis Boteville, alias Thin, and others. Vol. III. begins at Duke William the Norman, commonlie called the Conqueror; and deſcends, by degrees of yeeres, to all the Kings and Queenes of England. Firſt compiled by *Raphaell Holinſhed*, and by him extended to the yeare 1577; augmented, and continued to the yeare 1586, by John Stow, Fr. Thin, Abraham Fleming, and others.—How our author, R. Holinſhed, came to be engaged in this work, he acquaints us himſelf, in the dedications to his ſecond and third volumes of theſe Chronicles; which is to this effect, That Reginald Wolfe, Printer to Queen Elizabeth, having undertaken to publiſh an univerſal Coſmography of the whole world, and therewith *particular hiſtories of every known nation*, he procured our author to take in hand the collection of thoſe hiſtories. But, after five and twenty years labour ſpent in that work, Wolfe died: and his executors, willing to reap ſome fruit of what he had ſo long employed himſelf about, deſired R. Holinſhed to continue his endeavours for the furtherance of it. However, the volume growing ſo large, that the undertakers were not willing to go through the whole original deſign, they reſolved to publiſh firſt the Hiſtories of England, Scotland, and Ireland; which produced theſe three volumes.—Leland dying at Wolfe's houſe, this eminent Printer had undoubtedly his collections; of which, we are told (3), a great uſe was made in theſe Chronicles. John Stow, who expreſſes himſelf ſomewhat *envioully* about our author, ſays, that 'The Chronicle was firſt collected by Reigne 'Wolfe, and finiſhed by Raphaell Hollenſhed: that it 'was printed and reprinted without warrant or well-'liking; and that Rayne Wolfe, a grave and learned 'citizen, hired Ralphe Holinſhead to tranſlate for him '(4).' Which, however, doth not detract from *his* learning or induſtry.

(2) Otherwiſe Barry. See above, the article BARRY [GIRALD.].

(3) J. Bagford's Letter, prefixed to T. Hearne's edit. of Leland's Collectan. Vol. I.

(4) Stow's Annales, edit. 1605. 4to. p. 1277, 1438.

[*D*] *William Harriſon.*] This ingenious Hiſtorian was born in London (5), educated in Grammar-learning at Weſtminſter, under Mr Alexander Nowell, in the latter end of King Henry VIII. or beginning of Edward VI. thence ſent to Oxford, but to what college is not certainly known, unleſs it was Chriſt-church. He ſtudied alſo at Cambridge (6); and afterwards became Houſhold-Chaplain to Sir William Brooke, Knt. Baron of Cobham, and Lord-Warden of the Cinque-Ports; by whom he was preſented, in 1558, to the rectory of Radwinter in Eſſex. He was alſo admitted, in 1570, to the vicarage of Wimbiſh adjoining (7). He died in 1593 (8). What part he had in Holinſhed's Chronicle, appears from the foregoing note. And as to his manner of proceeding in that work, be pleaſed to take an account of it from himſelf, in his dedication to the Lord Cobham.——'Indeed I muſt 'needs confeſſe, that untill now of late, except it 'were from the pariſh where I dwell, unto your Ho-'nour in Kent; or out of London, where I was borne, 'unto Oxford and Cambridge, where I have bene 'brought up, I never travelled 40 miles foorthright, 'and at one journey, in all my life; nevertheleſſe, 'in my report of theſe things, I uſe their authorities, 'who either have performed in their perſons, or left 'in writing upon ſufficient ground, whatſoever is want-'ing in mine.' He ſaid before, that he 'obtained 'one helpe, and none of the ſmalleſt', from Leland's Collections, 'books utterlie mangled, defaced with 'wet and weather, and finallie unperfect through want 'of ſundrie volumes'—Beſides the *Deſcription of Britaine*, printed in theſe Chronicles, he compiled alſo a *Chronology*, never printed (9).

[*E*] *And others.*] Namely, *John Hooker*, alias Vowell, of Exeter, Gent. uncle to the famous Richard Hooker. He was born in Exeter about the year 1524, being

In the ſecond edition, ſeveral ſheets were caſtrated in the ſecond and third volumes, undoubtedly becauſe there were paſſages in them diſagreeable to Queen Elizabeth and her Miniſtry [F]. The time of Hollinſhed's death is unknown; but it appears from his Will, that it was between the firſt day of October, 1578, and the twenty-fourth of April, 1582 [G]. Biſhop Tanner ſays, he died at Bromcote, in 1580 (c).

(c) Biblioth. ut ſupra.

being the ſecond ſon of Robert Hooker, Mayor of that city in 1529, by Agnes his third wife, daughter of John Doble of Woodbridge in Suffolk. His anceſtors were gentlemen of faſhion. He was brought up in ſchool learning under Dr Moreman, Vicar of Menhinit in Cornwall, and afterwards educated at Oxford, either in Exeter or Chriſt's-Church-college. Then he travelled into Germany, where, at Cologn, he kept exerciſes in Law, and undoubtedly took his degree there. Next he went to Straſburg, and ſojourned with the famous Peter Martyr, who inſtructed him in Divinity. Returning home, after a ſhort ſtay he travelled into France, and intended alſo to have travelled into Italy and Spain; but was hindered by the declaration of war. So he retired to his native place the city of Exeter, where he married, and became the firſt Chamberlain of it in 1554 †; and was choſen one of the Citizens for the ſame, in the Parliament holden at Weſtminſter in the year 1571 ‖. His works are, 1. A tranſlation, from Latin into Engliſh, of the Epiſtle of St Auguſtin to Dardanus. 2. ——— of Eraſmi *Detectio Præſtigiarum*. 3. He wrote a book of Enſignes. 4. A book of the Order of Orphans; and a pamphlet of the Government of the city of Exeter. 5. He printed the Statutes of Ireland, and the Order of keeping a Parliament in Ireland.—Not *in England*, as Wood ſays; there being no ſuch mentioned by him in his own Catalogue. Lond. 1572. 4to. 6. He tranſlated into Engliſh, The Hiſtorie of the Conqueſt of Ireland, with Scholies, from the Latin of Giraldus Cambrenſis, inſerted in the ſecond volume of Holinſhed's Chronicles; and compiled 'The Supplie of the Iriſh Chroni-'cle continued from the death of K. Henry the eight '1546, untill the year 1586,' inſerted alſo in the ſame volume, together with The Order and Uſage how to keepe a Parlement, abovementioned. 7. A Catalogue or Hiſtory of the Biſhops of Exeter, and the Deſcription of that city, and of the ſundrie aſſaults given to the ſame; printed in the third volume of the ſaid Chronicles, &c. 8. He wrote a Synopſis chorographical: or an Hiſtorical Record of the Province of Devon. Never printed. He lived in the pariſh of St Mary the More in the city of Exeter, where ſeveral of his family lie interred. He died in November 1601, at the age of near 80, and was buried in Exeter-cathedral, as appeared from a ring with his ſeal of arms, dug out of his grave about the beginning of this century (10).

(10) Prince's Worthies of Devon, p. 388.

Another aſſiſtant in this work was *Abraham Fleming*, born in London (11), and a clergyman; being Rector of St Pancras Soperlane in that city (12). He made ſeveral additions in the ſecond edition, which are denoted by the letters A. F and Abr. Fl. in the margin. The firſt, ſecond, and fourth Tables or Indexes to Vol. I. and II. and the Index to Vol. III are alſo of his compiling. *In hiſce Chronicis detergendis atque dilatandis, una cum uberrimorum indicum acceſſione, plurimum deſudavit*, as his own words are (13). He died in 1607 (14).

(13) Holinſhed, as above, p. 1590.

(14) Newcourt, ubi ſupra.

Francis Botevile, alias *Thin*, Lancaſter-Herald, made alſo many uſeful additions to theſe Chronicles; particularly with regard to the catalogues of the Archbiſhops of Canterbury, of the Nobility, and other important articles. T. Hearne ſtyles him, a man of great learning and judgment, and a wonderful lover of Antiquities: *Virum cum ſummo ingenio, tum acerrimo judicio ornatum, admirabilique quodam ad Antiquitatem ſtudio concitatum* (15).

(15) Præfat. ad Camdeni Ann. ut ſupra, p. lxxxiv.

Finally, they received ſeveral improvements from the hand of the induſtrious and well known Antiquary *John Stow*.

[F] *Several ſheets were caſtrated in the ſecond and third volumes, undoubtedly becauſe there were paſſages in them diſagreeable to Queen Elizabeth and her Miniſtry.*] Theſe ſuppreſſed ſheets go generally under the name of *Caſtrations to Holinſhed's Chronicle*; and having been reprinted ſome years ago, are ſold by themſelves to compleat gentlemens books. They are chiefly ſome of the additions made by Fr. Thin. In the ſecond volume, there are only four ſheets ſuppreſſed, and that in the Annales of Scotland. The firſt is from page 421 to 424 incluſive; the ſecond, from p. 433 to 436; and the third and fourth together, from p. 443 to 450. What they treat of, is the violent contention which ſubſiſted in the years 1577, &c. between the two oppoſite parties in Scotland; and Queen Elizabeth's interfering therewith by her frequent Embaſſadors. Points, which ſhe did not care to have made public.—In the third volume, the caſtrations are much larger, being as follows. One ſheet, from p. 1328 to 1331 incluſive; containing, part of a libel upon Campian's execution, and a large account of the departure of the Duke of Alenſon, and his reception in Holland. The next is of thirty nine ſheets together, including four after p. 1491 that are in the common copies. And the chief contents of them are, A diſcourſe of the Earls of Leiceſter by ſucceſſion. The Earl of Leiceſter's proceedings in the Netherlands. The lives of the Archbiſhops of Canterbury by Fr Thin, in 16 ſheets, chiefly taken from Mat. Parker's. [The honourable mention he makes there of Card. Pole, was probably the cauſe of their ſuppreſſion.] A treatiſe of the Lord Cobhams. The catalogue of the Lord-Wardens of the Cinque Ports, and Conſtables of Dover caſtle. A fuller account of Sir Henry and Sir Philip Sidney, and of Tho. Lovelace. Execution of Wm. Tomſon and Richard Lea, Seminary Prieſts. Jone Caſon, a pretended witch, executed at Feverſham. A fuller account of the conſpiracy of Babington and the reſt; and of Sir Fr. Drake's return to England; with a deſcription of Hiſpaniola, and ſome verſes of Tho. Newton in his praiſe.—Theſe caſtrations were made by order of the Privy-Council, as is evident from ſome original papers of Abraham Fleming abovementioned, that were in the hands of the late Rev. Mr Francis Peck; and of which he gives this account at the end of the firſt volume of his *Deſiderata Curioſa*. '1. De 'Caſtratione Chronicorum, quæ Raphaelis Holingſhedi 'nuncupantur; & imprimis de eorundem Cenſuris; 'quando Roberto Comiti Leiceſtriæ, D. Thomæ Brom-'ley, Cancellario, & D. Gul. Cecil, Theſaurario, ob-'lata; prout ea omnia Camdenus Flemingo retulit. '2. Cenſuræ aliæ diverſorum hominum malevolentium; 'ſeu nimium ſubtilium, in eadem Chronica; cum re-'ſponſionibus Abrahami Flemingi. 3. The Council's 'Letter to Whitgift Archbiſhop of Canterbury, touch-'ing the Examination and Reformation of the Addi-'tions of the new Edition of Hollingſhed's Chronicle; 'Thurſday 1 Feb 1586. 4. Whitgift Archbiſhop of 'Canterbury's Letter to Thomas Randolph, Henry 'Killigrew, Eſqrs. and Mr Hammond, touching the 'Examination and Reformation of the Additions to 'the new Edition of Hollingſhed's Chronicle, on 'Thurſday 1 Feb. 1588. 5. Abrahami Flemingi '(qui præerat Typis & Prælo) de modo caſtrandi refor-'mandique Chronica prædicta, brevis & vera relatio.'

[G] *But it appears from his Will, &c.*] It was firſt communicated to the Public by the induſtrious Mr Hearne (16): and we ſhall give it at length here, becauſe it confirms the account we have given of our author. 'In the name of God Amen. I Raphael Hol-'lynſhed of Bromecote in the county of Warr', ordaine 'and make my laſt Will and Teſtament, in manner 'and form following: Firſt, I bequeath my ſinful 'ſoule to Almighty God, the creator of me and all 'mankind, truſting that, by the merits and blood-'ſhedding of his deareſt ſon Jeſus Chriſt, he will par-'don me of all my offences, and place my ſaid ſinfull 'ſoule, waſhed and purged from the filth of ſin, among 'the number of his Elect in the bliſs of heaven. Se-'condly, for my worldly goods, whatſoever the ſame 'be, wherein I have any property to give and beſtow 'the ſame, I give and bequeath them, and every part 'and parcel of them, unto my maſter Thomas Burdett, 'of Bromcote aforeſaid, Eſq; making and conſtituting 'him my only and ſole Executor. In witneſs where-'of, I have written my laſt Will and Teſtament with 'mine own hand, and ſubſcribed my name, and put 'to my ſeale, the firſt day of October, in the year of 'our Lord God a thouſand five hundred ſeventy-eight.

(16) Præf. ad Camd. Ann. ut ſupra, p. exliii.

'Per me RAPHAEL HOLLLYNSHED.

Prov'd Apr. 24. 1582.

HOLLAR [WENTZEL, or] WENCESLAUS, as he wrote himſelf, and as he is generally written; one of the moſt indefatigable, admired, and famous Engravers, in Germany, Holland, and England, for above fifty years in the laſt century. He was deſcended of a genteel family in Bohemia, and born in the city of Prague in that kingdom, anno 1607, as we have it teſtified under his own hand (*a*). After ſome competent qualification in ſcholaſtic learning, he was put forth to the practice of the Law; but his mild diſpoſition not reliſhing that dry, wrangling, and intricate profeſſion, together with the troubles and tumults that, invading the place of his nativity, rendered it the calamitous ſeat of war, ſoon diſengaged him from his clerkſhip; and the unfortunate adherence of his friends and relations to that party which oppoſed the imperial intereſt, ſubjecting them to plunder and ruin in the battle of Prague, which was fought in the year 1619 (*b*), they were deprived of the means to make ſuch proviſion for him as had been propoſed. Hereupon, having a great command of his pen, and following the propenſity of his own genius, though not much to the approbation of his friends, he removed from Prague in 1627; and during his abode in ſeveral towns in Germany, applied himſelf to drawing and deſigning; to copying the pictures of ſeveral great artiſts, taking geometrical and perſpective views and draughts of cities, towns, and countries, by land and water; wherein at length, he grew ſo excellent, eſpecially for his landſkips in miniature, as not to be excelled in beauty and delicacy by any artiſt of his time. He had ſome regular inſtruction, and was, for a while, under the diſcipline of Matthew Merian, who was eminent for his uſeful and numerous ſculptures of towns, landſkips, and battles, eſpecially thoſe of his own prince, the famous Guſtavus Adolphus; and we are particularly informed, that the ſoft varniſh, and ſeparating aqua fortis, were the materials he uſed upon his plates (*c*). Hence may we account for the long, conſtant, and dexterous uſe thereof, alſo by Hollar himſelf, in his own innumerable performances. As experience improved him in the art, it might alſo in the choice and management of his materials for working in it; which have been thought ſo worthy of regard, that the whole proceſs of his preparing his plates, or operation upon them, has been preſerved, and ſince his death communicated to the public; which, for the ſatisfaction of the curious, is here ſubjoined [*A*]. He was but eighteen years

(*a*) In the inſcriptions upon the prints of his own head, etched by himſelf.

(*b*) The Life of Wen. Hollar, annexed to a Deſcription of his Works, by Mr Geo. Vertue, Member of the Society of Antiquaries, Lond. 4to. 1745. p. 221.

(*c*) Sculptura: or the Hiſtory of Chalcography, and graving in copper, by John Evelyn, Eſq; 8vo. 1662. p. 71.

[*A*]. *Which, for the ſatisfaction of the curious, is here ſubjoined.*] As we have this proceſs in manuſcript, agreeing totally in ſenſe with that in print, but more correct in ſtyle, and retrenched of ſeveral ſuperfluous expreſſions, we ſhall here give a tranſcript of the former, and refer to the latter for our authority.

Mr WENCESLAUS HOLLAR's ground for etching in copper or braſs; with his directions how to uſe it.

'Take three parts of virgin wax, one part of aſphaltum, one part of the beſt maſtick; if you will, you may take away ſome third part, or thereabouts of the aſphalt, and put inſtead of it, as much roſin that is tranſparent and clear, which I hold to be better than aſphaltum altogether; for this will make the ground too black; it is true you ſhall then better ſee your ſtroke when you work, but when you are to ſtop ſome things, which you would have faint, then you ſhall hardly ſee your work, by reaſon of the blackneſs of the aſphalt, when the work doth appear black alſo; but the roſin will make the ground paler and tranſparent, through which you ſhall ſee what you do.

'Therefore, beat your aſphalt and roſin to powder, as alſo the maſtick, and mingle them well together; then put your wax into a clean pipkin, where nothing hath been before, except ſuch ground; ſet it over a gentle fire, and let it melt, 'till it begins to boil, then put the aſphalt and the maſtick into it; mingle altogether 'till they be well melted. Then take a porringer with ſome clean water, and pour that boiling ground into it, all but the dregs; and let it cool, ſo as you may work it into a ball, or what you will; then take a fine clean linen cloth double or treble folded, and put into it a piece of the ground, as big as a walnut or more, and tie it up, till you have occaſion to uſe it.

'Now for the copper, that muſt be well poliſhed, but though it be ever ſo well poliſhed, you muſt (before you put the ground upon it) rub it over with a coal, which muſt be prepared thus, viz.

'Either burn ſome charcoal; and when it is well kindled, put it into cold water; that which ſinks is the beſt, that which will ſwim is nought; and take heed that there be no outſide or cruſt left on the coal, for that will make ſcratches; therefore it muſt be well ſcraped off with a knife: or burn billets of beech wood, (according to the former directions) thoſe coals will be more gentle. And when you have rubbed the copper with theſe coals, then pour clean water over it, and let the copper ſtand ſoaping 'till it be dry; then ſcrape ſome chalk upon the copper, and rub it off with a very clean rag. That done, there muſt nothing touch the copper 'till you put the ground on, which muſt be done thus:

'Put into a fire-pan ſome ſmall-coal (for charcoal is too hot) lay down the copper over that, ſo as the fire may have air; then take your ground tied up in a linen rag and rub it up and down the copper, neither too thick nor too thin, but ſo as may ſufficiently cover the plate, then take a feather of a duck's wing or ſome other bird that has ſtiff feathers, and ſpread the ground with it as ſmooth as poſſibly you can, firſt, all one way, then croſs and croſs again, 'till it be even to your eye, and take care all the while that your copper be not too hot; for ſo the moiſture of the ground will be burned away, which will cauſe it to break in etching. Then let it cool, and grind ſome white lead with gum water, and as much gum as the quantity of a cherry ſtone, will ſerve for a piece of white lead as big as a nutmeg or more; but there muſt be ſo much water amongſt it, that the white lead may freely quit your pencil, and ſpread over the plate; then you muſt have ſuch a bruſh as the Painters uſe, the hair of which in compaſs may be about the bigneſs of a walnut or more, eſpecially for your great plates; with that, ſweep twice or thrice acroſs over the plate, 'till it lies even; then you muſt have another pencil or bruſh bigger than the firſt, but ſmooth, made of ſquirrels tails; with that you may ſmooth gently the white, which you could not do with the other bruſh, and ſo let it dry.

'Then take the deſign after which you are to work, and ſcrape on the back ſide thereof ſome red chalk all over, and rub a ſoft piece of ſmall-coal or charcoal over the red chalk, 'till both mingle together; then with a hard bruſh, or great pencil that is very ſtiff, rub it 'till all be fine and even, and ſo lay the deſign upon your copper; and with a blunt point of a needle draw the out-ſtrokes; this done, take off your deſign and ſo go to work: but if you would preſerve the print, or drawing, you would copy, from being ſoiled on the back ſide, you may rub over a piece of Venice paper with red chalk, according to the former directions, and ſo put your print on that, by which means your print will be kept clean.

'You muſt have commonly three or four ſorts of needles, ſome bigger, and ſome ſmaller, which muſt be put into little ſticks of the thickneſs of a pen, and

'on

years of age when the firſt ſpecimens of his art appeared in print; and thoſe who are connoiſſeurs in his works have obſerved, that he inſcribed the earlieſt of them with only a cypher of four letters; which, as they explain it, was intended for the initials of *Wenceſlaus Hollar, Pragenſis, Excudit* (*d*). Thus we have ſeen three of his firſt pieces marked; an Ecce Homo, in a ſmall ſquare, and a Female Penitent of the like ſize, both printed in the year 1625. Another ſmall piece of his, of the Virgin and her ſon, with a Greek verſe out of St Luke, was publiſhed, after Albert Durer, in the ſame year; and Fortune on a globe, &c. from the ſame maſter, with the like cypher, the next year: then taking ſpirit from the encouragement he met with, we ſee his other copy of the Virgin and the infant under a tree, after the ſame maſter again, printed the ſame year 1626, with his name written at length. Thus he went on, copying heads and portraits, ſometimes from Rhembrandt, Henzelman, Fœlix Biler, and other eminent hands: but his little delicate views of Straſburgh, Collen, Mentz, Bonn, Frankfort, and many other towns along the Rhine, Danube, Neccer, &c. (*e*), got him ſo much reputation, that when Thomas Howard, Earl of Arundel, was ſent Embaſſador to the Emperor Ferdinand the Second in 1636, concerning the recovery of the Palatinate, that great encourager of arts, and collector of antiquities, curioſities, &c. was ſo highly pleaſed with the performances of this ingenious artiſt, that, by little other recommendation than their own merits, he was ſoon received into his Lordſhip's retinue, and bore him company through all the towns from Collen to the Emperor's Court at Lentz, alſo to Vienna, &c. where it was then obſerved, that the taſte or fondneſs was grown ſo exceſſive in ſome perſons for fair and beautiful flowers, that three hundred and forty pounds had been given once for one tulip root, as was atteſted to his Lordſhip by a credible gentleman, named Sir Ferdinando Carey (*f*); of whom this ſhort but remarkable memorial is elſewhere recorded, that being an officer formerly at the ſiege of Burgen op Zoom by the Marquis of Spinola, and though an huge corpulent man, was ſhot through the body at the navel, without any mortal hurt, and the ſame ball killed his ſervant who ſtood behind him (*g*). In this progreſs alſo, Hollar made ſeveral draughts and prints of the places through which they travelled; as that view of Wurtzburg, under which is written, *Hollar deliniavit, in Legatione Arundeliana ad Imperatorem.* He then made alſo a curious large drawing, with the pen and pencil, of the city of Prague, in the ſame ſize with the print that was etched after it, in two large plates; which drawing, giving great ſatisfaction to his patron then upon the ſpot, is ſtill in being (*h*). After the Earl had finiſhed his negotiation in Germany, and been about nine months upon his embaſſy, he returned to the Engliſh Court, in the latter end of December the year aforeſaid, as we are informed by the Hiſtorian of his journey, who attended upon, and returned with him (*i*); when Hollar, alſo arriving in his train, then made his firſt appearance in this nation. He ſeems not to have been at that time ſo entirely confined to his Lordſhip's ſervice, but that he had liberty to accept of ſome employment from others; accordingly, we ſoon find his hand engaged by the Printſellers, &c. and Peter Stent, who was one of the moſt eminent among them in thoſe times, prevailed upon him to make an ample view or proſpect of and from the town of Greenwich in Kent to London, which he finiſhed in two plates in 1637, the earlieſt date of his works in this kingdom. 'Tis almoſt incredible to believe, that his labours ſhould have been ſo much admired, and ſo poorly rewarded; ſince we are informed, that he was paid for thoſe very etchings, which are near a yard in length, but thirty ſhillings; when if the plates were as thick and weighty as he ſometimes choſe them to work on, the very copper would amount to that ſum; and we are aſſured by a good judge of the art and pains beſtowed upon them, that they were fairly worth five times the money he received for them (*k*). In the next year appeared alſo his elegant proſpect about Richmond. In both thoſe years, and the next year following, he finiſhed ſeveral curious plates from the fine paintings, &c. in the Arundelian Collection, and ſome of them not improbably of that number which

(*i*) W. Crown's Relation, &c. as before, p. ult.

(*k*) Mr Vertue's Life of Hollar, as before, p. 13[illegible]

'on the other end, a pencil to ſweep off the ground that 'will riſe up where you have wrought it away. To 'make the bluntеſt needles, you muſt rub them on the 'backſide of a plate; the fineſt needles, you muſt whet 'gently on a fine whetſtone, 'till they have a very 'ſmall point; but let it not be too ſharp, but blunted 'on a table-book leaf, or ſome ſuch thing. And always 'when you leave your work, be ſure not to let your 'plate ſtand open, but wrap it up in a paper: for the 'air in time will corrupt the ground, and take out the 'moiſture from it, which will be prejudicial in etch-'ing, and ſubject to danger, eſpecially in winter-time, 'when you commonly muſt keep a good fire while you 'work, otherwiſe your ground will leap away.

'When you are going to etch, take ſome green wax, 'melt it in a little pipkin, and with a pencil, cover 'all the four edges of the copper; then take more of 'the wax, and frame it into long flat ſlices in the ſhape 'of a ruler, but nothing ſo broad; lay them alſo along 'the edges which you had ſwept with your pencil; 'then you muſt have a little piece of pencil-ſtick, or 'ſome ſuch thing, made ſharp underneath the broad 'way, not point way; with the help of that, make 'your wax ſtick to the copper, ſtill ſtopping it as you 'go along round about it. If the work be fine, take 'aqua-fortis of three pence the ounce, and qualify it 'with at leaſt too parts of wine vinegar; but if the 'work be coarſe, requiring much deepneſs, then you 'muſt take of the aqua-fortis alone; and from ſuch 'places as you would have faint, you muſt pour the 'aqua-fortis off the plate, and put on in it's room only 'fair water, ſo let the plate ſtand 'till it be dry; which 'done, melt ſome candle-greaſe with a little of your 'ground, and ſtop ſuch places, with a pencil dipped 'in that mixture, as you would have faint; then pour 'on your aqua-fortis again, as before, ſo often as oc-'caſion ſhall require. Then lay the copper on the 'fire 'till the ground melts, and wipe it off with a rag; 'then rub the plate with a little piece of a beaver-hat 'dipped in oil; and ſo your plate is done (*l*).' Then alſo follows, in this printed book, a *Receipt to make hard varniſh, for etching in aqua-fortis*; but as it is not expreſsly appropriated to Hollar, we chuſe rather to refer to it there, than recite it in this place.

(*l*) Albert Durer reviv'd: or, a Book of Drawing, Limning, Waſhing, or Colouring of Maps and Prints, and the Art of Painting; with the Names and Mixtures of Colours uſed by the Picture-Drawers; with directions how to paint pictures upon Glaſs, &c. printed by H. Hills for John Garret, folio, 1685. p. 20.

Which were preſented to his Lord in his late embaſſy. In the midſt of his working upon theſe pieces, arrived in London Mary de Medicis the Queen-Mother of France, to viſit her daughter Henrietta Maria Queen of England; and ſhe alſo had an Hiſtorian, who recorded the particulars of her journey and entry into this kingdom. His work, written in French, was printed in this city, and adorned with ſeveral portraits of the Royal Family, etched for the ſame, by the hand of Hollar (*l*). The ſame year that he finiſhed theſe portraits, was publiſhed, his effigies of his patron the Earl of Arundel on horſeback, as afterwards he etched another of him in armour, and ſeveral views of his country-ſeat at Albrough in Surry. In 1640, he ſeems to have been introduced into the ſervice of the Royal Family, to give the Prince of Wales ſome taſte and inſtruction in the art of deſigning; as may appear in a book, containing ſome draughts for that purpoſe, adorned with ſilver claſps, and mounted with the Prince's arms or badge engraved thereon, and ſome of Hollar's writing in it (*m*). This year appeared his beautiful ſet of figures in twenty-eight plates, containing the ſeveral habits of Engliſh women of all ranks or degrees (*n*): they are repreſented at full length, do ſignally teſtify the charming tenderneſs of his needle, and have rendered him very famous among the lovers of ſculpture. It is intimated, and not improbably by himſelf, that either before the irruption of the civil wars, or at leaſt before he was driven by them abroad, that he was in the ſervice of the Duke of York (*o*). In 1641 were publiſhed his prints of King Charles and his Queen, and ſeveral after Vandyck's moſt capital portraits; and though he could not always imitate his graceful and maſterly manner, eſpecially in his larger or half ſheet plates; yet, as other eminent artiſts have more failed in their imitation of this great maſter; as even ſome of his beſt pieces have been highly copied by Hollar, and by him only, the collectors of Vandyck's works in print are always glad of admitting Hollar's among them: and, 'To 'do juſtice to his memory (ſays Mr Vertue upon this head) ſome of his portraits may be 'obſerved to be truly well done, ſo far did he arrive to excel, from the ſmalleſt begin-'ning, in the moſt difficult branch of that profeſſion; which is, to expreſs life and like-'neſs; on which depends great application and ſtudy (*p*).' But now the civil wars being broke out, and his patron, the Earl of Arundel, leaving the kingdom about the latter end of this year, in his attendance upon the Queen and Princeſs Mary, who was to be eſpouſed to William the young Prince of Orange, his Lordſhip embarked at Dover for Holland; and there taking leave of his native country, which he never ſaw after (*q*), Hollar was left to ſhift for himſelf. And now he went on with cloſer application, if poſſible, than ever; for indeed his whole life was a rare and moſt exemplary pattern, or rather prodigy, of induſtry. Now appeared in print many other parts of his works, after Holbein, Vandyck, &c. eſpecially the portraits of ſeveral perſons of quality of both ſexes, Miniſters of State, Commanders in the Army, learned and eminent authors, both in large and ſmall prints; more eſpecially another ſet or two of female habits in divers nations of Europe (*r*). Theſe figures are leſs than thoſe beforementioned of the Engliſh habits, and etched in threeſcore plates or more; beſides many other habits afterwards of other kinds, not only of women but men, in the moſt eminent and conſiderable ſtations of life. In the year 1644, he publiſhed, beſides ſeveral others beforementioned, two prints, ſaid to be of his wife; by whom he had a ſon, whom he trained in his own art; and he proved a very promiſing genius, as may be ſeen in ſeveral of the pieces, partly graved by Mr Francis Place, who acquainted the worthy author of his father's life before quoted with this particular, as he has courteouſly informed us; and alſo that the ſaid ſon, to the great grief of his parents, died at the age of about ſeventeen (*s*). Whether he grew obnoxious, and was moleſted as an adherent to his patron aforeſaid, or as a malignant, for the honour he did to ſo many of the royal party, by his portraits of them, is not expreſsly ſaid; but it ſeems, that he was driven to take ſhelter under the protection of one or more of them, 'till they were defeated, and he taken priſoner of war with them upon the ſurrendry of their garriſon at Baſing-houſe in Hampſhire, which was on the 14th of October, 1645 (*t*): but Hollar making his eſcape, or otherwiſe obtaining his liberty, went over after the Earl of Arundel, who then, or rather lately, reſided at Antwerp [*B*] with his family, and had tranſported thither his moſt valuable collection of pictures (*u*), &c. There Hollar alſo publiſhed ſeveral prints from the works of the greateſt maſters in that collection and others; but that climate not agreeing with the Earl's ſtate of health, he had been adviſed to go to Italy, where he died at Venice in 1646. Hollar remained ſeveral years after chiefly at Antwerp, working, partly out of that collection, partly out of others, for Printſellers, Bookſellers, and publiſhers of his works; but ſeems to have cultivated no intereſt among men of fortune and curioſity in the art, to diſpoſe of them by ſubſcription, or otherwiſe moſt to his advantage. In 1647 and 1648, he etched eight or ten of the Painters heads with

[*B*] *Making his eſcape, &c. he went over to Antwerp.*] A fuller account of this circumſtance is delivered to us in theſe words, from the information of a late noted Antiquary, who was acquainted with Hollar. 'As his good fortune depended much upon his noble 'patron, ſo the misfortune of the King's friends the 'Loyaliſts, in thoſe civil wars, or grand rebellion, 'toſſed Hollar about with the loyal party; and when 'diſtraction ran ſo high, that it drove the Earl of 'Arundel out of England into Flanders, his houſes 'here and eſtates being plundered or deſtroyed, poor 'Hollar being left behind, tried in ſome way the for-'tune of war, by entering under the command of the 'noble Marquis of Wincheſter, and Colonel Robert 'Peake *, at Baſing-houſe in Hampſhire; there he 'was made priſoner of war; but made his eſcape from 'hence, and went over to Antwerp to his patron the 'Earl of Arundel (2).'

* Who had been a Painter, and dealt with, for pictures by ſome of the Royal Family.

(2) Mr Vertue's Life of Hollar, &c. as before, p. 126.

[*C*] *Hereunto*

with his own, in Myſſen's book of portraits before referred to; beſides various other curious pieces then likewiſe, as the picture of King Charles I. ſoon after his death, with ſeveral of the Royaliſts; and alſo, in the three following years, many portraits and landſkips, after Breughil, Elſheimer, and Teniers, with the triumphs of death, beſides divers others of the moſt delicate and admired part of his works, from the moſt celebrated paintings (w): he etched alſo King Charles II. ſtanding, with emblems, and afterwards publiſhed a print of James Duke of York, his young maſter, ætat. 18, anno 1651, from a picture drawn of him, when he was in Flanders, by Teniers. He was more punctual in his dates than moſt other engravers, which has given very obliging lights and directions, both to the more regular narrative of his own perſonal hiſtory and performances, and thoſe of many others. But at laſt, either not meeting with encouragement enough to engage his reſiding longer abroad, or by the intelligence of ſeveral magnificent and coſtly works, propoſed or preparing in England, wherein his ornamental hand might be employed more unrivalled, and more to his benefit, he was invited to return hither in the year 1652. After which time, ſome foreign writers ſeem to have known no more of him; though it is well known to us, that he ſince then performed many of the moſt conſiderable or inſtructive and elaborate of his publications, ſome of which he wrought while he lived with Mr William Faithorne, another famous engraver, of our own country, near Temple-bar, in 1654 (x). But though he was an artiſt of genius and aſſiduity ſuperior to moſt others, yet had he the fate, harder than many others of them, to work here as he had done abroad, ſtill in continual ſubordination, and more to the profit of others than his own; his grinding publiſhers only (y), reaping plenty from his moſt laborious and fruitful hand. The liberality of his labour has been reported by a deſcendant of one of thoſe publiſhers to have ſo grown upon him, notwithſtanding his penurious pay, that he contracted a voluntary affection to his extraordinary toil, even to the ſetting almoſt two thirds of his whole time at it, and would not be diverted or diſengaged 'till his hour-glaſs had run to the laſt moment propoſed. Thus he went on for many years in full buſineſs, ever making art a rival to nature, or abſent perſons, places, and things, preſent; reſtoring to our memory, objects long forgotten, and producing thoſe far diſtant from our ſight before our eyes; ſcarcely ſo much imitating as multiplying originals; reviving the dead, and making the living, if we may not ſay more populous, more popular we may well ſay: and this, in relation to mankind, the chief and nobleſt of thoſe objects, not under the reſtraint of his talents to any partial repreſentations; for art and ingenuity, learning and knowledge, valour and virtue, with him were of no party; and nothing, at his powerful ſummons to appearance, could make reſiſtance. Thus went he on, I ſay, though with profit or reward much inferior to his reputation or deſerts, 'till the reſtoration of Monarchy brought home many of his friends, and him into freſh views of employment. We hear of no exception taken to any part of the pains he beſtowed, during the interregnum, upon any of the heads of the predominant party; the rather, perhaps, as he was under the influence and employment of others; beſides, ſuch a public diſplay as might then be taken to their honour, might now appear to their expoſure; as the liſt of thoſe who were concerned in the King's tryal and death, is always revived by the Royaliſts to ſtigmatize their memory with infamy. It was but two years after that memorable epocha, that the learned and ingenious Mr Evelyn publiſhed his curious and intelligent Hiſtory of Engraving before-cited; in which he has left upon record ſuch an encomium of Hollar, as were it not hereunto annexed [C], might be accounted an unpardonable deficiency. Some of the firſt things

(y) Peter Stent, John Overton, &c.

[C] *Hereunto annexed.*] The encomium that author has given of this Engraver is as follows, 'Wenceſlaus Hollar, a gentleman of Bohemia, comes in 'the next place; not that he is not before moſt of the 'reſt for his choice and great induſtry, for we rank 'them very promiſcuouſly, both as to time and prehe'minence, but to bring up the rear of the Germans 'with a deſerving perſon, whoſe indefatigable works 'in aqua-fortis do infinitely recommend themſelves, by 'the excellent choice which he hath made of the rare 'things furniſhed out of the Arundelian collection; 'and from moſt of the beſt hands and deſigns; for 'ſuch were thoſe of Leonardo da Vinci, Fra Parmenſis, Titian, Julio Romano, A. Mantegnio, Corregio, 'Perino del Vago, Raph. d'Urbino, Seb. del Piombo, 'Palma, Alb. Durer, Hans Holbein, Vandyck, Rubens, Bæugel, Baſſan, Elſheimer, Brower, Artois, 'and divers other maſters of prime note, whoſe drawings and paintings he hath faithfully copied; beſides ſeveral books of landſkips, towns, ſolemnities, 'hiſtories, heads, beaſts, fowls, inſects, veſſels, and 'other ſignal pieces; not omitting what he hath etched 'after De Cleyn, Streater, and Dankers, for Sir Robert Stapleton's Juvenal, Mr (Tho.) Roſs's Silius, 'the *Polyglotta Biblia*, the *Monaſticon*, firſt and ſecond 'part, Mr Dugdale's Paul's and Survey of Warwickſhire, with other innumerable frontiſpieces and things 'by him publiſhed, and done after the life; and to 'be, *eo nomine*, more valued and eſteemed, than where 'there has been more curioſity about chimera's, and 'things which are not in nature: ſo that of Mr Hollar's works we may juſtly pronounce, *there is not a 'more uſeful and inſtructive collection to be made* (3).' In a further part of his work, the ſame author recommends, for the improvement of our engravers in this inſtructive and delightful art, the copying and publiſhing the beſt pieces in the collections of our nobility and gentry, as what would bring them into a good manner of deſigning, and render our nation famous abroad: 'Eſpecially (adds he) if, joined to this, ſuch as exceed 'in the talent, would entertain us with more landſkips 'and views of the environs, approaches, and proſpects, 'of our nobly ſituated metropolis, Greenwich, Windſor, and other parts upon the goodly Thames, in 'which Mr Hollar has ſo worthily merited, and other 'countries abound with, to the immenſe refreſhment 'of the curious, and honour of the induſtrious artiſt: 'and ſuch, we further wiſh, might now and then be 'encouraged to travel into the Levantine parts, the 'Indies, Eaſt and Weſt; from whoſe hands we might 'hope to receive innumerable and true deſigns, drawn 'after the life, of thoſe ſurpriſing landſkips, memorable places, cities, iſles, trees, plants, flowers, and 'animals, &c. which are now ſo lamely and ſo wretchedly preſented and obtruded upon us by the ignorant, 'and for want of abilities to reform them (4). To this judgment of Mr Evelyn's, of Hollar's merits, there is little need to add that of another author, who pronounces

(3) Mr Evelyn's Hiſtory of Engraving in Copper, &c. as above, p. 81, 82.

(4) Idem, p. 100, 101.

things he performed after the Reſtoration were, a map of Jeruſalem, the Jewiſh ſacrifice in Solomon's temple; maps of England, Middleſex, &c. views of St George's chapel at Windſor, the gate of St John of Jeruſalem near London, and many animals, fruits, flowers, inſects, &c. after Francis Barlow and others; beſides many heads of nobles, biſhops, judges, &c. ſeveral proſpects about London, eſpecially this metropolis itſelf, as well before the general conflagration, as after it's ruin and rebuilding; though when thoſe deplorable interruptions and diſcouragements of all arts broke out, in the fatal Plague, anno 1665, and the Fire of London in the following year, theſe public calamities muſt have very much ſtagnated all arts of this kind, and are thought to have reduced him to ſuch difficulties as he could never afterwards clearly overcome (z). Yet a number of his prints do appear, beyond all expectation, in theſe times, and even 'till he was ſent over to Tangier in Africa, in the quality of his Majeſty's Deſigner, to take the various proſpects there of the town, garriſon, fortifications, and the circumjacent views of the country. We are told that he accompanied the Lord Henry Howard, who was the Governor; and many of his drawings upon the ſpot, dated 1669, ſtill preſerved by a very worthy poſſeſſor (a), were, within three or four years after, made public in ſeveral prints; upon ſome whereof Hollar ſtyles himſelf *Stenographus Regis*. It is further recorded, upon the authority, as we are informed, of a perſon who was acquainted with him, that, in their return home, Hollar narrowly eſcaped being killed, or taken priſoner by a Turkiſh rover the ſame year, in a fight that happened between the ſhip named the Mary Roſe, in which he was, and ſeven Algerine men of war; yet after all his travels and labours, all his preferment, performances, and time ſpent in this ſervice, with the hazard of his life in a ſtorm, and by the enemy, he got no other recompence than barely one hundred pounds (b). Hollar engraved alſo a print of this engagement, and it was publiſhed the next year, with a narrative thereof, printed at the letter-preſs under it; which, for the better underſtanding of the danger he was in, is more ſuccinctly related in the note below [*D*]. After his return into England, he was variouſly employed in finiſhing his views of Tangier for publication, and taking ſeveral draughts at and about Windſor in 1671, with many repreſentations in honour of the Knights of the Garter *. About the year 1672 he travelled northward, and drew ſeveral views of Lincoln, Southwell, Newark, and York-Minſter. In 1673, a continuation of many ruins he had before publiſhed from Sebaſtian Vranck; and, except ſome other views, as thoſe about Plymouth, &c. moſt of the remainder of his time was engaged in etching of towns, caſtles, churches, and their feneſtral figures, arms, &c. beſides tombs, monumental effigies, with their inſcriptions, and alſo many beautiful proſpects, to embelliſh ſome hiſtorical and topographical works now publiſhing, as he had before done for others, in ſuch numbers, as would make the whole endleſs to enumerate [*E*]. He appears not to have had much aſſiſtance in his operations, not only from the uniformity,

pronounces him the greateſt artiſt of his time in aquafortis (5); but ſhall conclude upon this head, with the ſubſtance, or abſtract of a character given him by a French author, who was himſelf both a Painter and Engraver; where he ſays, *C'eſt un de ceux, de qui, nous voyons le plus de pieces*, &c. 'This is one of thoſe 'artiſts, of whoſe prints we behold the greateſt num'ber, as well invented as graved, upon all ſorts of 'ſubjects; and after the moſt excellent maſters. He 'has given us many enchanting proſpects, ſeveral of 'them after P. and J. Breughel, J. Wildens, and A. 'Eſheimer; and has even reformed the taſte or ſtyle 'of graving, in thoſe which he has made after J. Van. 'Artois, being much after the manner of Morin. The 'public is indebted to him for every beautiful ſcrap 'that he has etched, as well at Antwerp as in England, 'after the originals preſerved in the Earl of Arundel's 'houſe, as well in hiſtorical pieces as portraitures, 'from the year 1632 to 1650, &c. (6)' The former of which dates may be rectified from what has been before obſerved.

[*D*] *More ſuccinctly related in the note below.*] This encounter is entitled, *A true Relation of Captain Kempthorn's Engagement in the Mary Roſe with ſeven Algerine Men of War*; and the ſubſtance of it is briefly as follows. 'In the beginning of December, 1669, the Lord-Ambaſſador, Henry Howard, having obtained letters of ſecurity from Taffaletta Emperor of Barbary, reſolved to purſue his journey to his court, and ordered his baggage, with moſt of his retinue, to be embarked in the Mary-Roſe, which had tranſported him from England; purpoſing himſelf, and ſome fifteen of his attendants, to go by land, and the ſhip by ſea, to Sallee; ſo the ſhip ſet ſail along the ſhore of Barbary on Wedneſday the 8th of that month; and beyond Arzil it took an Engliſh veſſel that had been taken by an Algier man of war; but it ſo retarded their voyage, that they arrived not at Sallee 'till Saturday noon. There they were accoſted by a brigantine, with Engliſh colours, belonging to Tangier; by which they were admoniſhed not to land, but rather receive aboard all the Engliſh who were aſhore, with their effects, the ſtate of affairs at Tangier, ſince their departure, being much altered. They tarried there 'till Monday; and then, not getting any body on board, were ſtorm-beaten far at ſea. On the 18th they diſcoved ſeven Turkiſh men of war, off from La Rotta, on the Spaniſh coaſt, and there enſued an hot engagement between them; the ſaid Engliſh Captain having, beſides his own ordinary ſhip's crew, above ſeventy land-ſoldiers of Tangier, and about forty of the Ambaſſador's retinue, in all above 250 men. But after the Engliſh Captain had received five broadſides, beſides their ſmall ſhot, and returned them as briſkly as he could, the Turkiſh Admiral, juſt as he was about to board him, receiving a ſhot between wind and water, and another, which tore his main-ſail from end to end, was ſo diſabled, that with his fleet he was forced to ſheer off, though the Engliſh ſhip had eleven men killed in her, ſeventeen wounded, and was herſelf very much ſhattered. The next day in the evening they arrived in the bay of Cadiz, being the 30th of December, St. Vet. 1669 (7).

(7) Engliſh Atlas, Tom. I. containing Africa, &c. collected, tranſlated, and adorned, with maps, &c. by John Ogilby, Eſq; Maſter of his Majeſty's Revels in Ireland, fol. 1670. p. 219. (8) Evelyn's Sculptura, p. 135.

[*E*] *Would make the whole endleſs to enumerate.*] Indeed, from ſuch an univerſal genius or taſte to all objects, ſuch continual application, and ſuch an expeditious hand as he had, 'tis queſtionable, if he were alive, whether he could himſelf enumerate the productions of it. If Michael de Marolles, the Abbot of Villeloin, who in three years time collected fourſcore thouſand copper prints, by the year 1644, as a credible author before-cited informs us he did (8), from the Abbot's Memoirs of his own Life (9), had then among them the nine hundred fifty-nine of Hollar's etching, as it is aſſerted he ſome time had, in the Catalogue that was afterwards publiſhed of his Collection (10), we may well compute, not only from the labours that Hollar publiſhed after that great treaſure was amaſſed, but from the vaſt diverſity of his works ſtill in being, that he muſt have publiſhed much above thrice that number;

(10) Catalogue des Livres eſtampes & de Figures en Taille douce, Paris, 8vo. 1667. Voyez auſſi, Le Cabinet des Singularitez D. Archet. Peint. Sculp. & Grav. Tom. III. p. 282.

uniformity, but ſuperior labour; the fulneſs and cloſeneſs, the neatneſs and delicacy, in the generality of his workmanſhip; though he had ſeveral diſtant, or ſlight and looſe copyiſts

number: or if we were only to compute of them from the many large volumes, of which the greateſt collection extant conſiſts, and the catalogue of particulars in theſe volumes now before us, which, though very conciſe, makes the greateſt part of a moderate volume in quarto. To repeat ſuch a catalogue in this place cannot be expected, becauſe it would appear dry without a commentary, and with one would fill a volume: therefore, neither entirely to diſappoint the curious, nor burden thoſe readers who have but little curioſity in the art, we ſhall here mention ſuch parts of his works in ſuch manner as may give a reaſonable idea of the whole, and refer to our ſaid author's catalogue of them for the reſt. This catalogue is divided into fourteen claſſes, as follow. I. Religious ſubjects. II. Hiſtories, fables, and emblems. III. Maps, plans, views, and proſpects. IV. Ships and ſea-proſpects. V. Leonard da Vinci's, and other Italian maſters. VI. Dutch deſigns and landſkips. VII. Various habits of nations and religions. VIII. Portraits, Engliſh and foreign. IX. Churches, monuments, cenotaphs, and coats of arms. X. Inſects, flowers, and ſhells. XI Animals, hunting, fiſhing, and boys. XII. Coins, medals, ſeals, vaſes, and cups. XIII. Seaſons, muffs, fans, and ſwords. XIV. Frontiſpieces and titles of books. The whole concludes with a repertory or recapitulation of the whole, and another chapter of addenda. Out of all theſe, we ſhall here give an extract, only under three diviſions. Firſt, The heads and portraits of ſuch perſons as have been moſt eminent. Secondly, A Miſcellany, the moſt comprehenſive that we can, out of all the reſt; therefore not ſo much of ſingle prints, as thoſe which were publiſhed in, or intended for, ſets. And laſtly, ſuch of our larger printed books, as have been adorned with his ſculptures. I. Beſides his prints of the Royal Family, ſome of which are already mentioned, we have alſo ſeveral of their predeceſſors; and among them, one of the moſt curious pieces of Engliſh Antiquity, is, the portrait repreſenting King Richard II. in his youth, at his devotion. 'Tis in two tables or half-ſheet prints; the one repreſents him kneeling before his three Patron Saints, St John the Baptiſt, King Edmund, and Edward the Confeſſor; having a crown on his head, and robes, adorned with harts and broom-cods, in alluſion to his mother's arms, and his own name of *Plantageniſta*; thus he is praying to the Virgin Mary with the Infant in her arms: On the other table, ſurrounded with Chriſtian virtues, in the ſhape of angels, with collars of broom cods about their necks, and white harts pendant at their boſoms; one holds up a banner of the croſs before them; the ground is ſtrewed with lilies and roſes, and verſes at the bottom, compoſed by Henry Peacham, explaining the whole picture. It is expreſſed at top to be etched from an original painting in colours; was then dedicated to King Charles I. in 1639, and the ſaid original tables or pictures, about eighteen inches high, are now in the poſſeſſion of the Earl of Pembroke (11). Among the heads he etched out of the Arundelian collection, after Hans Holbein, are thoſe of King Henry VIII. in 1647. Mary Queen of France, and Princeſs Mary, the ſame year; Queen Jane the next year; and Queen Anne Bolen the year after. The Lord Denny, Sir Henry Guldeford, and his lady. Dr Chambers, ætat. 88. Mr Morett, the King's Jeweller, and Hans Van Zurich, Goldſmith, both etched in 1647. Anne of Cleve, in 1648. Henry Howard Earl of Surrey: Hans Holbein himſelf, from a painting by himſelf, in a circle (ætat. 45. anno 1543). Albert Durer, ſenior and junior. Pietro Aretino, from Titian, a fine, bold, and lively head, in 1647: another of him in profile, 1649. La Bella Laura, after Palma, 1650. Raphael D'Urbin, 1651. Martin Luther (nat. 1483, ob. 1546). Sir Thomas Chaloner (ætat. 28, 1548), &c. Alſo theſe, among many others, after Vandyck, beſides his patron the Earl of Arundel, in ſome pieces partly beforementioned, and the Lady Alathea his Counteſs; the Earl of Strafford and Archbiſhop Laud in 1640. Alſo, Algernoon Earl of Northumberland, Sir Peter-Paul Rubens; Vandyck himſelf, after a draught of his own, 1644. And Margaret Lemon, ſaid to be his miſtreſs, with an encomium in French verſes at bottom. Alſo Mark Gerard the Painter, in the year laſt mentioned. Inigo Jones the Architect, Jerom Lord Weſton, Earl of Portland, in 1645. Charles Lodowick, Count Palatine 1646: and ſeveral ladies. Franciſcus Junius, ætat. 49. About forty heads of the Nobility, and Members of Parliament, in ſmall ovals; ſome Royaliſts, others Republicans: Prince Rupert, William Earl of Newcaſtle, Edward Lord Herbert of Cherbury: Robert Devereux Earl of Eſſex, Robert Earl of Warwick, Sir Thomas Fairfax, 1648. Alſo Alexander Henderſon, with Engliſh verſes at bottom; Dr Baſtwick, William Prynne, Hen. Burton, Dr Leighton, and John Lilburne, with inſcriptions under them, expreſſing their ſevere ſufferings by ſentence of the Star-Chamber court, for exclaiming againſt the Popiſh clergy: the Judges, Crook, Barkley, Hutton, Clench, Heath, and Crew: Archbiſhop Spotſwood, Arthur Lake Biſhop of Bath, 1640. Lancelot Andrews Biſhop of Winton, 1647. John Overal Biſhop of Norwich, 1657. Robert Sanderſon Biſhop of Lincoln, 1668. A head of the Lord Bacon with the Great Seal, his monumental effigies at St Alban's, 1650. Mr Oughtred, ætat. 73. Tho. Hobbes the Philoſopher of Malmeſbury, W. Dugdale the Antiquary, 1656. John Tradeſcant, father and ſon, the two Virtuoſi of Lambeth, the ſame year. James Harrington, 1658; Elias Allen the Mathematician, 1666: alſo, to paſs over many others, ſome remarkable perſons; as the twin birth ſeen at Colen, the year before Hollar came into England, being the man who had his brother growing out of his ſide; alſo Francis Battalia the Italian youth, with a diſh of ſtones in one hand, which he fed upon or ſwallowed (12); and Blaiſe de Manfre, with water ſpouting out at his ear, &c. Under the II. diviſion, beſides the ſets of habits, domeſtic and foreign, already mentioned, we have many little ſets more of ſmall dreſſes, of men as well as women, in circles, ovals, and ſquares, to the number of near two hundred. Among the religious ſubjects, ſix days of the Creation, in two ſets; his ſmall ſcripture ſtories, beginning at Adam and Eve, thirty-ſix of them; cuts for the Common-Prayer, eighteen; others after Stella and Palma, in number eight; twelve others of the New-Teſtament; and a ſmaller ſize, in twenty-four cuts, as ſome foreigners reckon (13) now very ſcarce, repreſenting Chriſt's Paſſion, after Holbein; wherein the Pope, with his Biſhops, Monks, and Friars, are expoſed as the perſecutors of Chriſt, with four Engliſh verſes at the bottom of each: but it is modeſtly intimated, in a reflection upon this work, that the Eccleſiaſtics were not his executioners, by a French author before quoted (14). Though ſome have doubted whether theſe pieces were deſigned by Holbein, becauſe his name is inſcribed but on one of them, or whether etched by Hollar, becauſe his name appears not at all, nor the time when done; yet there might be good reaſon for ſuch reſervation; and thoſe who are well acquainted with his works, have made no doubt to admit them of the number, as thinking themſelves doubly guided againſt miſtaking another artiſt's for his, becauſe his hand is as well known by his writing as his etching. A more noted collection is that which is called *Holbein's Death's Dance*, through the various ſtates or conditions of life, in thirty ſmall ſquare prints: *Abr. Diepenbeck inv.* with ornamental borders; another ſet without borders, and four Latin verſes at bottom. The holy reliques at Aix la Chapelle, on a ſheet in twenty-nine compartments, &c. Among his hiſtories, &c. the print of Seleucus, beholding his rigid law againſt Adultery executed upon his own ſon, after Julio Romano, with verſes under it by Henry Peacham, is reckoned an excellent piece. The views of the diſpoſition of King Charles's army at the Leaguer in the North, on his march to Scotland, in 1639, in ſeveral ſheets. The form of Archbiſhop Laud's tryal, and the Earl of Strafford's, with the manner of his execution, in three ſheets. The funeral ſolemnities of M. Jean Baptiſte de Taſſis, in 1645. The fire-works near Stockholm, at the inveſtiture of Charles King of Sweden, with the Order of the Garter. Many fables and emblems, in the ſmaller ſize, after A. Elſheimer, Corn. Schut, &c. and about twelve of the emblems, deviſed from ſeveral ſentences in Horace, by Otho Venius (15). His five ſets of the ſeaſons, in half lengths, full lengths, &c. in twenty plates. A ſet or two of the ſeaſons. A ſet of the months; ſets of the alphabet, ſome with emblems, &c. Among his proſpects, &c. there are between fifteen

pyiſts after him. Some were indeed his ſcholars or diſciples; but their hands are very diſtinguiſhable in thoſe few plates wherein their labours were united, or thoſe pieces which they publiſhed in imitation of his; as may be ſeen in the works of Dudley, F. Carter, D. King, and R. Gaywood; which laſt, in ſome ſamples, approached the neareſt of them to his maſter, and had moſt right, after his death, to inſcribe himſelf his *Quondam Diſciple*. F. Place and P. Tempeſt received alſo inſtructions under him, and might lend him a hand in ſome of his pieces that were moſt in haſte, eſpecially now in his declining age. But though few artiſts were able to imitate his works, many lovers of the art, both abroad and at home, have, from his time to ours, diſcovered a peculiar fondneſs, and even emulation, in collecting them [*F*]. And though they were liberal in the purchaſe of his performances,

teen and twenty maps, plans, and views of the city of London both before and after the fire; one whereof is two yards and a half long, from Weſtminſter to beyond St Katherine's, with Latin verſes at bottom, by Edward Bendlowes, Eſq; dedicated to Queen Henrietta-Maria and William Prince of Orange, and ſold at Amſterdam, by Corn. Danckers, 1647. Beſides many other parts of the city and ſuburbs; as the Royal-Exchange, Tower, St Mary Over's church, Covent-garden piazza, Whitehall, Weſtminſter-hall, Lambeth, and abundance of the environs. Six ſmall proſpects of the Iſle of Man, in compartments about the map of it, Four proſpects of Elizabeth-caſtle in the Iſle of Jerſey, five of Dover, three of Plymouth, ſix of Albury, fifteen of Tangier. Proſpects of Oxford, Cambridge, Canterbury, &c. Map of Great-Britain, England and Wales, in ſix ſheets; another in one ſheet, with views about it of thirty principal cities therein. Ireland, Middleſex, Surrey, and other counties. Several of Holland, Germany, Denmark, Candia, Italy, Africa, America, &c. and perhaps more views in ſome of thoſe countries than in our own, at leaſt more than can be here recited. Among his ſea-proſpects, we have his *navium variæ figuræ & formæ*, in twelve plates: nine ſtorm-pieces: the ſea-fights, under Prince Rupert and the Duke of Albemarle, againſt the Dutch, anno 1666, in ſeven ſheets, &c. From Leonard da Vinci, and other Italian maſters, *diverſæ probæ* for learners. Twelve plates of monſtrous or deformed heads, and antick faces. as alſo twenty-three more, after F. Place. Several plates of Cupids, after Julio Romano: a drawing-book in ten plates; and landſkips, abundance after P. Vanden Avont, eſpecially his ſet of boys; Wildens, Jacques Van Artois, P. Pontius, D. Teniers, Aug. Braun, P. and J. Breughel, P. Brill, A. Elſheimer, &c. &c. As for his habits and portraits, we have touched upon them before. His churches, monuments, cenotaphs, and arms, will be found moſtly in the books mentioned under the next head. Of his animals, wild and tame, hunting and fiſhing, with fowls, after Barlow, &c. we have ſeveral ſets; alſo his flowers, fruits, plants, and trees, particularly the great hollow tree, thirty-ſix feet round, in Langley-park near Windſor; with a door in the trunk, and ſtairs within, up to the great turret at top, thirty-four feet about: and the ſtately yew-tree, in Anſley-park, with a bower at top, and a ladder to aſcend it, &c. Of his inſects, we have twenty-two plates; and his ſhells, in thirty-eight plates, are the ſcarceſt of his works; they were ſome of his laſt performances out of the Arundelian collection, and ſeveral of them have letters of reference upon them, as if they were etched to explain ſome treatiſe upon this part of Natural Hiſtory. His vaſes, wrought cups, ſeals, coins, and medals; alſo ſeveral ornaments of dreſs for men and women, as Holbein's rich deſigns of ſword-hilts, for King Henry VIII. and King Edward VI. are elegantly etched by him; alſo his fans, tippets, maſks, and muffs, in about eight plates, all delicately executed, and very much admired. III. and laſtly, if the ſculptures only which he etched, to adorn ſo many pompous and coſtly printed books as we meet with, publiſhed in his time, were to be particularly deſcribed, this part of his works alone were ſufficient to gain him a ſuperior character of genius and induſtry, and give him a preheminence above many artiſts of no ſlender reputation for both; and this obſervation was ſoon confirmed, by only turning over thoſe volumes; ſome whereof have been already mentioned, others not: as, the entry of Queen Mary of Medicis (16). The three elaborate volumes of the Monaſticon, by Mr Dodſworth and Dugdale, at ſeveral times publiſhed (17). He alſo etched about forty-five prints in Mr John Ogilby's Virgil, in the years 1652, 1654, &c. (18), ſo highly to his reputation, that they were preferred, not only for Ogilby's Latin edition of that poet (19), which volumes, in both languages, were then juſtly accounted the moſt beautiful productions, for paper, print, and ſculpture, of the Engliſh preſs; but the ſame plates were alſo choſen to ſupply the Louvre edition of this poet; and laſtly, for Mr Dryden's tranſlation of him (20), the arms, and inſcriptions at bottom, being changed. Some of his works alſo appear in Sir Henry Spelman's *Aſpilogia* (21); and in Dugdale's *Antiquities of Warwickſhire*, there are reckoned to the number of near fourſcore prints of his doing (22), many of them with great pains and accuracy. He was, not improbably, at the author's ſeat, at leaſt a conſiderable time in that county, while he was at work upon them. In the learned Dr Brian Walton's Polyglot Bible, there are ſome elaborate proofs of his art (23); and Dugdale's *Hiſtory of St Paul's Cathedral* is adorned throughout with abundance of ſepulchres, effigies, buſto's, arms, epitaphs, inſcriptions, proſpects, and perſpective views, within and without the cathedral, by his artful and unwearied hand (24). In Ogilby's Tranſlation of Homer, there are ſome plates of his etching, after Fra. Clein (25). In Sir Robert Stapleton's Tranſlation of Juvenal, his ſet of cuts, after E. Streeter, J. Dankers, and F. Barlow, etched in 1658, were two years after publiſhed (26). There is alſo, as we remember, ſome of his work in that beautiful large Bible, at leaſt ſome copies of it, which was printed by J. Field at Cambridge the ſame year (27); and in the grand ceremony of the King's cavalcade, or proceſſion to his coronation, publiſhed by Mr Ogilby the next year (28). The tranſlation of Silius Italicus his poem, on the ſecond Punic war, between Hannibal and the Romans, by Tho. Roſs, Eſq; is alſo embelliſhed by his hand (29). In Mr Ogilby's poetical verſion of Æſop's Fables, there are near threeſcore plates that he has etched, ſome of them very accurately; to which is joined, the ſtory of the Epheſian Matron, verſified alſo by the ſaid editor, from Petronius Arbiter, &c. and repreſented in ten plates by Hollar (30). In Sir William Dugdale's *Origines Juridiciales*, there are many plates performed by him, of the antient arms of our moſt eminent Lawyers, from the feneſtral paintings, &c. in the inns of court; alſo, ſome of the Judges heads, &c. beforementioned (31). Soon after appeared Mr Aſhmole's curious book of the Order of the Garter, which is enriched with many delightful proſpects, proceſſions, interviews, combats, martial ſolemnities, habits, ornaments, arms, badges, &c (32). In Ogilby's Embaſſy from the Eaſt-India Company to China (33), there are ſome of our artiſt's pieces; and in that part of his Atlas, entitled his Britannia, others (34): but in Francis Sandford's Genealogical Hiſtory of the Kings of England, there are many monuments, cenotaphs, effigies, ſeals, &c. etched by him, ſome in 1664, 1666, &c. though publiſhed later (35). And laſtly, in Dr Robert Thoroton's Antiquities of Nottinghamſhire, ſeveral views of towns, churches, country-ſeats of the nobility and gentry, monuments, inſcriptions, &c. ſome unfiniſhed, and moſt of them dated the ſame year he died (36). But if we were to mention all the books before which there appear heads, frontiſpieces, or title-pages, &c. of his doing, they would amount to a little library, at leaſt three times the number of thoſe already ſpecified.

[*F*] *Have diſcovered a peculiar fondneſs, and even emulation in collecting his works.*] It is apparent that the painters, gravers, and operators in other arts bordering upon theirs, were the moſt early and conſtant collectors of his as well as other prints; and among Sir Peter Lely's vaſt collections, *not only of paintings and drawings, but ſculptures, which were valued, as we have read, at ten thouſand pounds* (37), there ſeems to have been ſome of Hollar's moſt finiſhed and eſteemed performances. Among private gentlemen,

ſtances, the performer himſelf was ſo incompetently recompenced for them, that he could not now in his old age, with all his toils to the laſt, keep himſelf clear from the incumbrances of debt, and all thoſe diſpiriting, or, indeed, heart-breaking vexations, as they ſeem

men, Mr Evelyn, before quoted, was one of the firſt among us, that we can hear of who made a collection of copper prints, eſpecially Engliſh heads; not ſo much for the bare entertainment and curioſity there is in ſuch artful and beautiful imitations, or the leſs ſolid intelligence of the different modes, or habits and faſhions of the times, as the more important direction and ſettlement of the ideas upon the true form and features of any worthy and famous perſon repreſented; and alſo the diſtinction of families, and men of ſuperior merit in them, by their arms and mottoes, or emblematical alluſions to their actions, writings, &c. the inſcriptions of their titles of honour, preferments, and moſt ſignal ſervices, or other obſervables; with the chronological particulars thereof, as well as of their birth, age, deaths, &c. and the ſhort characters, or encomiums of them, often ſubjoined in verſe or proſe: beſides the names of the painter, deſigner, graver, &c. and the dates alſo of their performance: whereby, a ſingle print, when an artiſt is thoroughly apprehenſive, or well adviſed, in what he is about, and will embrace the advantages or opportunities he may, to anſwer the expectations of the curious, in their various taſte and enquiries, may become a rich and plenteous banquet, a full-ſpread table of choice and uſeful communications; not only moſt delightful to the eye, but moſt inſtructive to the mind: and ſo, a collection may be made, one of the moſt compendious helps to many ſciences, or rather, according to the project and practice of the ingenious La Martelay, they are all moſt expeditiouſly to be learned by ſculpture alone (38). Mr Evelyn was ſo famous, in the beginning of the civil wars, for one of the beſt collections that could be then made of this kind, that Hollar dedicates one of his portraits, as we remember of Sir Anthony Vandyck, to him, as an eminent or diſtinguiſhed patron and promoter of ſuch curious and comprehenſive memorials. Mr Aſhmole was alſo a cotemporary collector of copper prints; and beſides what Hollar etched for him in his *Order of the Garter*, part of which he had, ſeparately, in his volumes of proceſſions, proſpects, &c. he had alſo a large collection of Engliſh heads; among which probably, were many by the ſame hand, for ſome he had which were not incorporated in that collection of Hollar's doing which we have ſeen. And he had for ſeveral years ſuch an appetite to collect all curious pieces of this kind, that he would often purchaſe a volume for the ſake only of the face that was before it, which he would paſte among the reſt, and underwrite from whence it was taken (39), a practice which other collectors have ſince followed. But thoſe volumes of prints, as well as the reſt of Mr Aſhmole's curious library, with all his other antiquities and curioſities, his old evidences, charters, pedigrees, ſeals, coins, medals, &c. which he had been above thirty years gathering, to aſſiſt him in the books he was writing, were all conſumed at his chambers in the Middle-Temple, by the great fire that happened there, in January 1678 (40). Mr Samuel Pepys, Secretary of the Admiralty, had alſo in his library of MSS. and printed books, a good collection of Engliſh heads; in which Hollar's made no ordinary figure; and among them one of his own, for he had two engraved by Robert White, ſignificantly denoting his love of prints, by repreſenting his picture in a picture, or his effigies in a paper print upon a copper-plate. But the late John Bridges, Eſq; of Lincoln's-Inn, had in his copious and well-choſen library, a collection of Hollar's works alone, bound in four volumes folio, which were ſold in the auction of his books after his death, for above an hundred pounds; a price that would not compaſs a quarter of his performances according to the Dutch valuation of them that we have ſeen. As for the collectors of them, more near our preſent times, many honourable and curious perſons might be named. The Duke of Rutland has a very large collection of Hollar's in ſeveral volumes; Sir Hans Sloane bought a great volume of Hollar's works many years after his death of his widow, and he has ſince, as we heard, much increaſed them. Sir John Evelyn is poſſeſſed of his grandfather's ancient collection, and has alſo made ſome conſiderable additions to it. Sir Anthony Weſtcomb's collections of Hollar, are likewiſe admired for being of the ancient and beſt impreſſions. The late General Dormer, and Brian Fairfax, Eſq; had ſome choice pieces of his among their prints. Dr Mead and Mr Samuel Gale, are alſo remembered for their diſtinguiſhing taſte of the art, in the preſervation they have made of this artiſt's labours. And if the Hollars, in the poſſeſſion of James Weſt, Eſq; are proportionable to the great number of other prints, eſpecially Engliſh heads in his collection, they muſt fall little ſhort of the moſt numerous aſſembly that has been made of them. But the crown of all, for the moſt complete collection of Hollar's works, is without diſpute, that of the moſt noble preſerver of every thing that could contribute to the promotion of literature, Edward, late Earl of Oxford. Among the vaſt treaſures of ſculpture in his moſt magnificent library, his Hollars appeared ſo conſpicuous, that he appointed the prints and ſets he had, to be ſelected, and ſpared for no enquiry or encouragement to make them perfect. Then he had them ſtuck upon the fineſt largeſt imperial paper, more or leſs upon a leaf, according as the ſizes of them would permit, ſo had them bound in ſeveral ſpacious and ſplendid volumes of red Morocco leather, with the leaves gilt, and covers richly adorned with gold. He had thus bound up ten volumes before his death, which happened in the year 1741. And about a twelve month before, he had procured a conſiderable augmentation of them out of Holland. Theſe, the worthy poſſeſſor of them, his Lordſhip's ingenious daughter, the preſent Ducheſs of Portland, directed to be digeſted, diſpoſed of, and bound in the ſame ſize and manner, ſo that the whole collection is now in twelve volumes complete; and Mr Vertue's catalogue of them, to which we have, in this article, been much indebted, though very ſuccinctly taken, makes fifteen ſheets in quarto. It has been often wiſhed that ſome other able hand, ſince the moſt able declines it, were to do the like juſtice to his performances, before delay increaſes the difficulty; that the titles of their works might be united with their names, and the memory of Hollar and Vertue ſurvive together. In the next century, there may probably be as much enquiry after the labours of the one, as in this, of the other; and then it may poſſibly be known, that this omiſſion lay not at the door of ſuch a friend to the art, as may have been the firſt who promoted a public catalogue of our gravings, eſpecially of Engliſh heads; and we hope that the uſes which are manifeſt in the ſpecimens that have appeared, eſpecially of the late Mr John Nickols his collection, who was F. R. S. and Member of the Society of Antiquaries (41), will encourage others to proceed, and lay open this long concealed channel of knowledge, to the ſervice and benefit of the curious. All that we have more to obſerve of the grand collection of Hollar's aforeſaid, is, that in a ſpare leaf before one of the additional volumes which his Lordſhip, as we obſerved, procured from abroad, there was an encomium written in honour of the ſaid celebrated artiſt, which we ſhall here give the reader in the original, with a tranſlation thereof; as follows.

(38) Evelyn's Sculptura, p. 139.

(39) Athen Oxon. Vol. II. col. 888.

(40) Item ibid. One MS. volume in folio, however eſcaped the flames; containing the copies and draughts of many antient evidences and ſeals; which was preſerved in the Harleian library.

(41) See a Catalogue of Engliſh Heads: or an Account of about two thouſand Prints, deſcribing what is peculiar on each; as the names, title, or office, of the perſon; the habit, poſture, age, or time when done; the name of the Painter, Graver, Scraper, &c. with ſome particulars of their Lives, publiſhed by Joſeph Ames, F. R. S. and Secretary to the Society of Antiquaries, 8vo. 1748.

Qui mores hominum multorum vidit, & urbes,
Ithacus eſt digitis dignus, Homere, tuis:
At mores hominum melior qui ſculpſit, & urbes,
Solus erit digitis gloria laufque ſuis:
Qui tantum vidit, cœcum tulit ille poetam;
Qui ſculpſit, propriis claruit ex oculis.
Æternum vives, proprio tumulatus in ære,
Hollare; nec nôrunt hæc monumenta mori.

For towns, and faſhions ſeen, by ſea and land,
Ulysses got the praiſe of Homer's hand;
But who theſe towns in braſs, and faſhions fram'd,
Needs only by his own hand to be fam'd.
Blind poets ſerve to blaze the feats of ſight,
Whilſt, Hollar, thou can'ſt ſhine by thy own light;
Inſhrin'd by thy own braſs, then may'ſt thou lie,
And live; ſuch monuments can never die.

ſeem to have been in his caſe, that attend it. Yet is it viſible that he was variouſly and cloſely employed, to a very ſhort time before his death. But as many of his plates are dated that year, in the very beginning whereof, as we are informed, he died, 'tis likely they were ſomewhat antedated by him, that the ſculptures might appear of the ſame date with the book in which they are printed (*c*). Some of them appear unfiniſhed; and one page, that is entirely blank, was left ſo, probably, for a plate that he was to have ſupplied (*d*). It may be but cold encouragement for the practitioners of ſuch curious arts, to know that, while he was raiſing many a rich and royal manſion for the dead, he could ſcarcely be allowed a little homely one himſelf to die in; that he was forced to leave the ſumptuous monument of ſteel, erected in St George's chapel at Windſor for King Edward IV. St Mary's church at Nottingham, with Mr Plumtre's hoſpital, beſides other honourable and ornamental ſtructures there, unfiniſhed, becauſe the rewards of all his diligence, now that he had reached to the verge of his ſeventieth year, were ſuch and ſo inſufficient, that they could not prevent the aſſault of an execution upon him, at his houſe in Gardiner's-lane Weſtminſter; which probably haſtened his end. He deſired only the liberty of dying in his bed, and that he might not be removed to any other priſon but his grave; which was in the New-Chapel church-yard, near the place of his death; and this his final removal, as it appears in the pariſh regiſter of St Margaret's-church in that city, was on the 28th day of March, 1677, being attended to his interment by ſome few of his acquaintance; one of whom, Mr Francis Place of York beforementioned, communicated theſe particulars to the author of his life (*e*), as we have been obligingly informed by him; whoſe generous propoſition, to raiſe a decent monument over the place of his burial [G], is likely to wait 'till a more grateful age ſhall contribute to the accompliſhment thereof. Thus died this rare pattern of perſeverance in his profeſſion; a man, who, though all his life ſo averſe to all idleneſs and extravagance, has likewiſe left himſelf an example of exception againſt an often-confirmed maxim, and proved, that *Induſtry is* not always *the right hand of Fortune, nor Frugality the left.*

(*c*) Thoroton's Antiquities of Nottinghamſhire.

(*d*) Idem, p. 501.

(*e*) Life of Hollar, p. 235.

[G] *Propoſition to raiſe a monument over the place of his burial.*] The author of Hollar's life aforeſaid, conſidering how ungrateful it was, that he, who had raiſed ſo many ſumptuous monuments of great men, in the copies he has made of them, which will outlaſt the originals, ſhould now ſo long after his death, of as many fail, who might raiſe ſome little memorial of that kind in honour of him, very generouſly deſigned a decent monumental ſtone to be erected over Hollar's grave, if his impreſſion of the catalogue of his works, and the life of him annexed, ſhould meet with a ſuitable encouragement; and for that purpoſe has given us a ſculpture at the end of the ſaid life, of the form he intended the ſame ſhould be built in, with an inſcription ſetting forth, where, and when he was born; how famous he became by his indefatigable labours; how much eſteemed by the curious; and, after his peregrinations in many parts, was here depoſited to reſt in the year of our Lord, and of his age beforementioned. But no ſuch monument being erected, we may preſume there was no ſuch encouragement, by the curious who have ſo eſteemed him. After the ſaid plate was thus inſcribed, a friend of the author's ſent him the following

EPITAPH upon HOLLAR.

The Works of *Nature*, and of *Men*,
By thee preſerv'd, take life again;
And e'en thy PRAGUE ſerenely ſhines
Secure from *Ravage* in thy *Lines:*
In juſt Return, this Marble fain
Wou'd add ſome ages to thy name:
Too frail alas! 'tis forc'd to own,
Thy SHADOWS will out laſt the STONE. G

(*a*) The particulars of this article are chiefly taken from a manuſcript account of the Holles family written by Gervaſe Holles, Eſq; of Great-Grimſby in Lincolnſhire, now [1752] in the poſſeſſion of the Right Honourable Henrietta Cavendiſh Holles, Counteſs-Dowager of Oxford.

HOLLES [JOHN], the firſt Earl of Clare (*a*) of his name, was deſcended from the cadet of an antient family [*A*], being the eldeſt ſon of Denſil Holles of Erby, Eſq; by his

[*A*] *Deſcended from the cadet of an ancient family.*] In order to trace this family to it's original, Mr Gervaſe Holles begins with the etymology of the name, which he finds written variouſly both in ancient and modern records; as Holiſh, Holes, Holeys, Hollis, Hollies, Holles, and Hollys, but moſt frequently Holes (1) anciently; yet his grandfather and his father, always ſigned their names Hollys, though of late by all the family Holles, conforming in that to the firſt Earl of Clare. As to the etymology then, ſome who aver the original to be Holleys, will have the name to be French, and to ſound as much as hault-lys, in the French pronounciation Holys, the high flower de lize. Others would have it to be Holyes, gueſſing it from the creſt or *rebus*, which heretofore was uſed by the family, viz. the arm and hand holding a holly-buſh; but theſe ſeeming to be groundleſs fancies, that which my author moſt inclines to is (believing it to be truly written Holles), to ſignify as much as *concavitas*, hollowneſs; as Holland, Holcraft, &c. had likewiſe their denomination from the lowneſs or hollowneſs of their ſituation, and with this he believes the name to be local, and firſt aſſumed from a mannor called Holes or Holles in the county of Cheſter. There was a very ancient family of Holes in that county, denominated from the mannor beforementioned; whereof *Robert Holes* was Juſtice of Cheſter, anno. 1394, 20 R. II (2). He ſucceeded Robert de Veer, Duke of Ireland, Thomas Plantagenet, Duke of Glouceſter, and Thomas Moubray, Earl of Nottingham, in that office. After him was *Sir Hugh de Holles*, Knt. a Judge in the King's-bench in the reigns of Hen. IV. & V. and was buried in the church of Watford in Hertfordſhire, with this epitaph (3), as it was remaining in the laſt century.

(1) Andreas Holes, *Cancellarius Eccl. Sarum*, makes his Will anno 1467, whereby it appears, that Lady *Alianore Vernon*, the Lady of Brereton, and the Lady Joan of Fouleſhirſt, were his ſiſters. *Regiſt. Vocat. Godin. qu.* 30 *in Cur. Prærog. Cant.*

*Hic Jacet Hugo de Holes Miles Juſticiarius Banci Regis Tempore Regni—obiit—anno—*1415.

His wife is likewiſe entombed in the ſame church, with this epitaph (4).

(4) Ibid.

Hic jacet Margaretta quæ fuit Uxor Hugonis Holes——— obiit 4 *Die Martii* 1416.

Sir Wingfield Bodenham gave me (continues Mr Holles) the copy of a deed bearing date the laſt day of March, anno 16 R. II. 1392, whereby John Domville grants to Thomas de Holes his granchild and heir, the ſon of Margaret (his daughter and heir) his mannor of Modberleigh [called now Mobberley] in the county of Cheſter, to which is appendant his arms, viz. *Azure a Lyon*

his wife Eleanor, daughter of Edmund Lord Sheffield. He was born at Haughton in the county of Nottingham near the beginning of Queen Elizabeth's reign. From his childhood

o Lyon rampant, Argent collared Gules, which arms he charges him to bear upon his blessing (5). The said Thomas Holes, I take to be son of Sir Hugh de Holes and Margaret his wife beforementioned. For by inquisitions taken in 3 H. V (6). it appears that Sir Hugh de Holes held, the day he died, half of the mannors of Fordesham and Newport, and a third part of the mannor of Eggemandone in Com. Salop. of the King *in foccage*; Also the reversion of the mannor of Albrighton in the same county, held of the King *in capite* by Knight's service. And that Thomas de Holes is son and heir of the said Hugh, &c. as also to the third part of the mannor of Tillal in Com. Heref. held of the King *in capite* (7). It appears likewise that Andrew Holeys was of the bed-chamber to H. VI. who in the 13th year of his reign employed him with Adam Moleyns on an embassy to Pope Eugene, concerning the D. of Burgundy's being absolved from the oaths he took to the French King (8). From a cadet of this house, the first Earl of Clare derived himself in a pedigree written with his own hand (9), as follows: John Holles, Esq; living in the reign of Edward III. married Emma, daughter of ——— Eastleigh, and had issue John his son and heir, William second son, and a daughter Emma, wife of William de Bryanson. John the eldest had to wife, Anne, daughter to Thomas de Cornwal, by whom he had issue Edward, who had to wife Maud, daughter to Thomas de Syward, and had issue, John, James, and Richard. John the eldest wedded Jacobine, daughter to James de Grandone, and had issue Edward Holles, Esq; who married Joyce, daughter to Thomas Cantilupe, by whom he left issue John Holles of Stoke in Warwickshire, father of Thomas Holles of Stoke near Coventry, who had issue four sons and four daughters; John the eldest son, who married and left two daughters his coheirs; Sir William Holles, ancestor to the Earl of Clare; Thomas Holles a priest, and Edward Holles. Thus the Earl of Clare; but Mr Gervase Holles goes no higher than to Thomas Holles the father of the first Sir William Holles (10); and observes, that Humphry Randel of Stoke, living in the reign of H. VIII. affirmed, that he married a daughter of —— Moore, by a daughter of Thomas Holles, the father of Sir William Holles; and that the said Thomas, in the reign of K. Edward IV. dwelt in Stoke near Coventry, and was a man of good account and insight; but having slain a person there, he fled to Calais, where he staid seven years, 'till Henry VII. entered England, when he had a charge in the fight under him against K. R. III. His second son William (11), was certainly Sir William Holles, Lord-Mayor of London, who laid the foundation of the greatness of this family, and was born in Edward IVth reign at Stoke aforesaid, a village within a mile of Coventry, about the year 1471 (12). He was bound apprentice to Robert Kirvile, Citizen and Mercer of London, July 13, 8 H. VII. as appears from the register of Guild-hall cited in the margin [note 11] where he is mentioned to be the son of Thomas Holeys of Stoke yoeman. However Mr Gervase Holles thinks he was really a gentleman, persuaded thereof by the assertion of the first Earl of Clare, who in his letter to Lord Burleigh [mentioned in note 12] tells him, he was very able to give account, what the Lord-Mayor's ancestors were, when he should find them questioned. He was made free of the Mercer's company 17 Sept. 15 H. VII 1499 (13), chosen warden thereof 11 H. VIII. and master of the said company 21 H. VIII. (14). He was chosen Sheriff of Middlesex by the commonalty the last of August 19 H. VIII (15), and was elected Alderman of Aldgate ward on the last of March following in the same year of H. VIII (16). He received the honour of knighthood — October 25 H. VIII (17), and was elected Lord-Mayor of London on St Edward's day 31 H. VIII (18). Something more than a year after his mayoralty ended, and much about a year before his death he made his will, dated December 25, 1541, by which it appears among other things that he left 200 l. for the building a cross at Coventry, which beautiful cross was begun that year, and finished in 1544 (19). He died in October 1542 (20) at his house in London, and was buried in the church of St Helen's, where there is a monument of grey marble still standing over him in the midst of the north isle, but the inscription is intirely effaced. His estate that he left to his three sons was very great. I believe, says our author, as great as ever Lord-Mayor had before him. In the time of H VII. he had married Elizabeth, daughter of John [or Thomas] Scopeham, who died soon after him in London, March 13, 1543, and was buried at her own request in the same grave with her husband. By her will, among other things, it appears that she was the real foundress of those six alms houses in the parish of St Helen's, which, by Stowe (21) and others, are ascribed to Sir Andrew Judde, one of her executors. Sir William Holles had by her three sons, Thomas, William, and Francis, and a daughter Ann, who married John Whiddon, afterwards Chief Justice of the King's-bench, and it is said was the first judge who rode to Westminster-hall on a horse, the judges before his time riding on mules. Sir Thomas Holles eldest son of the Lord-Mayor, was a son of misfortune, and by his profuseness and improvidence the ruin both of himself and his posterity. His father left him a very fair estate, yet he lived to spend it all, and died in prison. But though the first branch withered, yet there remained a flourishing estate in the hands of the second, both to yield a present lustre and found a future greatness. This son William had left to him by his father, the mannor of Haughton, with the moiety of the mannors of Crumwell and Baseford, and the advowson of the church of Crumwell, with lands in Gamelston and Walesby in the county of Nottingham. The mannor and advowson of the Church of Irby, with his other mannors and lands in Castor, Cabourne, Cadney, Burgh in the Marsh, Moreton, Adlethorp, Winthorp, South Willingham, Nettleton cum Smythefield, Malton, and Whaplode in the county of Lincoln. The mannors of Pingilton, Blackwell, Whitewell, and Crossewell, with the advowson of the church of Whitewell in com. Derb. And his lands and tenements in the parish of St Clement Danes, St Giles, St Pancras, and Kentish-town in the county of Middlesex; which lands in the county of Middlesex by the improvement and building upon them, yield his heir at this present [1658] (22) 3000 l. a year, and when the leases are expired, they may treble that value. Besides he had in his father's life-time the moiety of Densel's estate with his wife (23), viz. on the partition the mannors of Densel alias Denysell, and Trenowith, with lands in Leving, Skilligorra, and Enesworgy in the county of Cornwall, and a little after his father's decease reverted to him (by the death of his younger brother Francis without issue, March 29, 33 H. VIII) the mannor of Yoxhall, with a good estate there in the county of Stafford. This Sir William Holles was born in London in the beginning of H. VIIIth's reign, and shortly after his father's decease, seated himself at Haughton in Nottinghamshire, a seat of the family of Long Villiers, from whence through Maulovel it descended upon Stanhope. He was by King Edward VI. made one of the Knights of the Carpet February 22, two days after the coronation, all those then summoned being to be made Knights of the Bath, but for want of time the ceremonies were omitted *. He was elected one of the Knights for the county of Nottingham, in the first year of Queen Mary; and was twice high-sheriff, the first time for Nottinghamshire and Derbyshire, and the second time (after the division of the counties) for Nottinghamshire alone, in the 14th of Queen Elizabeth. He kept both the shrivalties with great pomp, and appeared at the several assizes with a very numerous retinue (24), but chusing a country life, he never desired to represent the county again in Parliament. He died at Haughton, 18th of January 1590; he had lived in great hospitality, and always kept a company of stage-players of his own, which presented him with masques and plays at festival times and on days of solemnity (25). He left two sons, Denzil and Gervase (26), and a daughter *Gertude, married to* Walter Stanley of West-Bromwich in Staffordshire, a cadet of the illustrious house of the Earls of *Derby*. For the payment of

(5) In 1742 this deed was in the possession of the Lady Henrietta Cavendish Holles, only daughter and heir of John Holles Duke of Newcastle, and Countess Dowager of Oxford.

(16) Regist. at Guildhall.

(17) In 2 Court-Roll of Irby in Lincolnshire, bearing date 8 *Octo* 25 *H. VIII.* he is called only *Alderman*; and in a record, dated the last of that month and the same year, he is stiled *Miles*. (18) Stowe, p. 582. and Regist. of Guildhall, 15 Mart. 1538. where are more particulars of his mayoralty; as also in Stowe, p. 182. b. and p. 274 a. and also Baker's Chron. Vita *H.* VIII. Hall's Chron. fol. 241 and 238. and Hollinshed, p. 948, 949, 950.

(19) Dugdale's Warwickshire, p. 95. a.

(20) Cole's Esc. Lib. 2. 61 A. 13. p 26 in Bibl. Harl. and the probate of his Will bears date Dec. 18, 1542. Regist. Spert. qu. 24. Stowe in his Survey, p. 279. b. falsly sets him down buried in 1540.

(21) Survey of London, p. 90 and 182.

(22) This account by Mr Gervase Holles appears to be written in that year.

(23) Anne, eldest daughter and coheir of John Densel of Densel in the county of Cornwall, Serjeant at Law, descended from a family of great antiquity, denominated from the mannor of Densel in the parish of St Mawgan, the place of their residence; after her death he married Jane, daughter of Sir Richard Grosvenor, whom he also survived, but had no issue by her.

* N. B. John de Vere, 6th Earl of Oxford, with the Duke of Suffolk, the Earl of Hertford, and other noblemen, were then made Knights of the Bath; and being created with great royalty, were ordered to pay double fees to the Heralds. So Strype's Memorials, Vol. II. p. 23. & MS. in Offic. Arm. I. 7.

(24) His retinue was always magnificent. At the coronation of Edward VI. he appeared with 50 followers in blue coats and badges, and always went to Retford sessions, but four miles from his house, with 30 proper fellows at his heels.

(25) This was unusual in those times among the greatest subjects.

(26) Grandfather to the author who compiled this account of the family.

hood he diſcovered an extraordinary genius above moſt of his contemporaries; his underſtanding and apprehenſion being quick, and his judgment ſound and ripe, even in the morning of his life, which yet (though contrary to common obſervation) continued vivid and vigorous even to the laſt. He had not attained the age of thirteen when he was ſent to Cambridge, but ſo well fitted for the univerſity, that the Maſter of the college into which he was admitted, examining him, as uſual, both in Grammar and Greek, received ſuch unexpected ſatisfaction at thoſe years to every queſtion, that taking him up into his arms, he kiſſed him, and ſaid to the by-ſtanders, *This child, if he lives, will prove a ſingular honour and ornament to this kingdom.* From the univerſity he was ſent by his father to Gray's-Inn, where he continued ſome years, and furniſhed himſelf with ſo much knowledge in the Law, as was neceſſary both for the management of his private eſtate, and for the ſervice of his country in the diſcharge of public offices; ſo that there never was a more upright or a more able juſticiary. Thus accompliſhed, he was called to the Court, and choſen by Queen Elizabeth into the band of her Penſioners, a poſt at that time of much honour (*b*). But being reſolved to compleat himſelf in every branch of the moſt genteel education, he entered into the army, and ſerved firſt for ſome time as a volunteer, under his kinſman Sir Francis Vere, in the Netherlands. He afterwards entered into the ſea-ſervice, and was in the famous engagement in 1588. He was then but young, and without any command; yet he was called to all the councils of war *, and particularly was preſent at that great debate, whether they ſhould engage the Spaniſh fleet or no; which was with difficulty carried in the affirmative, eſpecially by the ſound and reſolute arguments of Sir Martin Forbiſher. He had ſuch ſtrength and activity at this time, that being heavily armed at all pieces he could without difficulty climb to the top of the talleſt ſhip in that fleet. In the year 1590, he loſt firſt his father and then his grandfather, whereby there devolved upon him a very fair and opulent inheritance, and with it the care of divers brothers and ſiſters [*B*]. Shortly after his grandfather's death, namely, in May 1591, being then

(*b*) See remark [*E*].

* Edward Vere, Earl of Oxford, in pure love to his country, had hired ſhips at his own charge, and joined the grand fleet. Camden's Eliz. in Hiſt. of Eng. Vol. II. P. 547.
